1955 FINAL NATIONAL SERVICE DATA

NATIONAL AUTOMOTIVE SERVICE

INSTALLING NEW DATA IN BINDER

Remove Screws and top Binder Cover. Lift off entire "Car Models" section of pages and any previous "Annual Data" down to "Carburetors" section.

Place this 1955 FINAL DATA in Binder on top of "Carburetors" section.

Replace all pages removed EXCEPT ADVANCE DATA. Make certain the metal Sleeves are installed in pages before refastening Binder Cover with Screws.

If a supplementary Binder is being used, place this FINAL DATA to follow previous "Annual Data."

▶ ***DISCARD ADVANCE DATA.*** *The Final Data contains all information given in the Advance Data plus many important changes.*

OOK FOR DATA

ion has its own Tab and separate Index.

Cross References direct you to the
lake and to separate Sections for the
ment, or Systems installed.

es for each Section.

CTS

ct appears on the Car Model Pages and
Systems. There are Special Indexes in

HOW AND WHERE TO LOOK FOR DATA

The Service Data is arranged by Sections. Each Section has its own Tab and separate Index.

All subjects appear on the Car Model Pages. Here, Cross References direct you to the "Special Data & Shop Notes" ahead of each Car Make and to separate Sections for the complete treatment of Individual Units, Types of Equipment, or Systems installed.

IMPORTANT: Use the special "Car Application" Indexes for each Section.

LOCATION OF SUBJECTS

This guide directs you to the SUB-HEADING under which the Subject appears on the Car Model Pages and to other Sections for complete treatment of Equipment Units and Systems. There are Special Indexes in each separate Section.

SUBJECT	CAR MODEL SECTION Page Sub-Heading	OTHER SECTIONS Equip. Units & Systems
ACCELERATING PUMP	Tune-Up (Carburetor)	Carburetion Section
AIR CLEANER	Carb. Equipment	
AIR CONDITIONING	Misc. Mechanical	Miscellaneous Section
ARMATURE NUMBERS	Starter & Generator

HOOD ASSEMBLY

1946-47 MODELS

HOOD ADJUSTMENT: Hood Lock. Hood fastener tension can be adjusted by loosening bolt at each side of fastener loop and adjusting clips up or down until correct tension obtained. Hood fastener handle can be adjusted for proper opening and closing by loosening three bolts (two at top, one at bottom) on anchor plate and shifting plate to front or rear until handle seats properly. Fastener lever arm on anchor plate must snap past center and against stop to lock hood (check lever arm when adjusting lock handle).

Alignment—⅛" clearance between hood and shroud, front doors, and fenders should be maintained. To adjust hood, loosen two bolts at each hinge and shift hinges to front or to rear until proper hood fit obtained. Alignment between hood and body can be adjusted by loosening attaching bolts at ends of hood reinforcement rods (bolt holes in ends of rods slotted providing variation of overall width of hood to fit hood to fender and body uniformly).

1948-49 MODELS

HOOD ADJUSTMENT: Hood Lock. The pilot plates on hood top panel reinforcements must be set flat and be drawn tight against the hinge plates when the hood is locked. When closing either side of the hood the hinge pilot pins must align with the holes in the pilot plates, so that they enter without interference. For best locking condition, the pilot plate should always contact the hinge plate along the inner edge first. If this condition does not exist, check hinge plates with straight edge to see if they are flat. If plates are not flat, they should be straightened. Check pilot plates on hood panel and see they are not distorted. Make sure the bent-down edge is straight and not curved. Check to see that the hood fastening handle seats fully. With hood open and handle in locked position there should be 1/32" clearance between both sides of the handle and body. Adjust by loosening the two center stud nuts which secure the handle body to hood panel. Place 1/32" shims each side of handle body outward. Tighten nuts and remove shims. If handle has good clearance but does not seat in handle body, loosen the three bolts on fastener plate which will permit it to be shifted forward or to rear. The fastener plate must be moved forward slightly if fastener locks properly but handle does not lock securely (past center), causing handle to snap out of recess and unlock.

1950-52 MODELS

HOOD ADJUSTMENT: Hood Lock. Hood fastener tension is non-adjustable, as the latches are spring loaded, causing them to seek a firmly locked position. The hood release rod is attached to the front fastener trunnion by means of checknuts on both sides of the trunnion. When fasteners are in full open position the shoulder on rear end of releasing rod should just contact the trunnion of rear fasteners. When the fasteners are at open position and release cable knob is pulled into its seat by the cable return spring, a distance of 3" should exist between rear end of cable pulley housing and the shoulder on releasing rod. This distance is obtained by adjusting the cable where it is anchored to the rear hood hinge.

1953-55 MODELS

HOOD ADJUSTMENT: Hood Lock. The hood latch dovetail bolt may be turned to move up or down when lock nut on upper end is loosened. Adjust bolt so that hood engages under lower latch lock lever without excessive vertical play when front end of hood rests firmly on rubber bumpers mounted on radiator grille frame. Slotted bolt holes in lower latch permit sidewise movement of latch to provide alignment with dovetail bolt in hood. Adjust so there is no sidewise strain or interference.

Flywheel to Crankshaft (70)	45-50	540-600
Manifold Studs	25-30	300-360
Timing Chain Cover	15-20	180-240
Balancer Bolt	100-110	1200-1320

V8 ENGINES

	Ft. Lbs.
Cylinder Head	63-73
Intake Manifold	25-30
Exhaust Manifold	10-15
Oil Pan	6-15
Main Bearing Caps	100-110
Flywheel	50-55
Vibration dampener	100-110
Con Rod Caps	40-45
Piston Pin Clamp Bolt	25-30
Rocker Arm Support Bracket	30-35
Rocker Arm Cover	4-5
Engine Front Cover	20-25
Water Manifold	25-30

ENGINE MOUNTINGS

1946-47 MODELS

ENGINE MOUNTINGS: Loosen all mountings on frame, loosen transmission support rod at mounting, loosen transmission support crossmember at frame ends (with mounting tight at torque ball), and center torque tube and ball joint in frame crossmember. For proper engine mounting adjustment proceed as follows: Tighten right and left front engine mountings to frame and engine. Tighten center engine mounting to transmission and frame crossmember (use shims to take up space between forward web of frame crossmember and lower mounting flange at lower bolt). Tighten transmission support mounting to transmission and crossmember. Shim transmission support at frame ends without disturbing its normal position. Tighten rod at transmission support with no 'push' or 'pull' tension on rod.

1948-53 MODELS (EXC. V8)

ENGINE MOUNTINGS: With torque tube disconnected from torque tube ball make adjustments as follows:

1) At front engine mountings. Tighten brackets at frame and crankcase, loosen front mounting pad top stud nuts at engine bracket on each side.
2) At rear mounting. Tighten at following points: a) transmission support ends at frame X-member, b) mounting pad at support and at transmission rear bearing retainer, c) thrust pad to thrust plate stud nuts **at rear.** Then loosen thrust pad to transmission support stud nuts **at front.** Remove steel shims ahead of thrust pad.
3) Then center engine as follows: Distance between front edge of crankshaft balancer (at horizontal center line) and center of nearest shock absorber bolt head at each side must be equal. If required, shift engine sidewise (oversize holes in engine bracket at rubber mounting permit engine movement) until distance equal at each side (engine centered in frame). Tighten front mounting pad top stud nuts at each engine bracket.
4) Shimming rear mounting. Insert steel shims from above (shim tabs UP on left side on Dynaflow UP on right side on Synchro-mesh Trans. cars) to snugly fill space between front face of rubber thrust pad and rear face of transmission support (CAUTION—Engine and transmission must be seated normally on mounting pads). Tighten thrust pad to transmission support stud nuts at front. Then retighten front engine mounting pad stud nuts at each side of engine. Connect torque tube to ball.

1953-55 V8 MODELS

ENGINE MOUNTINGS: The engine and transmission assembly must rest in a normal position which does not impose any side strain on the three rubber mountings. To adjust, tighten engine front mounting pad stud nuts under supports on frame and tighten mounting bracket-to-crankcase bolts. Loosen upper mounting pad-to-bracket bolts. Disconnect torque tube from torque ball, then tighten transmission support-to-frame X member attaching bolts. Tighten transmission mounting pad-to-transmission support and to transmission rear bearing retainer. Tighten thrust pad-to-thrust plate stud nuts (rear) and loosen thrust pad-to-transmission support stud nuts (front). Remove shims located between thrust pad and transmission support. Shake engine sideways to let assembly rest freely and normally on all mounting pads, then install sufficient shims between thrust pad and transmission support to snugly fill the existing space. Tighten thrust pad front stud nuts and connect torque tube to torque ball. Tighten front mounting pad-to-bracket bolts.

TORQUE BALL ADJUSTMENT

1948-55 MODELS

TORQUE BALL: Operates between inner and outer retainer bolted to transmission rear bearing retainer. Universal joint seal is provided at front of torque tube. Shims provided between front flanged ends of inner and outer retainers for adjustment.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CAUTION: Correct adjustment of the torque ball is extremely important to insure correct operation. Ball is adjusted during reassembly as directed below.*

1948 Models—Rear end of outer packing fitted with retainer packing and packing tension spring (to keep packing bearing on torque ball).

1949-55 Models—Synthetic rubber boot fitted from outer retainer to flange of torque ball (replaces spring washer and packing formerly used on inner edge of outer retainer).

Disassembly: With rear axle assembly disconnected and moved back out of way, mark edge of torque ball outer retainer to insure re-installation in original position, then remove torque ball boot, torque ball, retainers, and gaskets from rear bearing retainer (on 1948 Models, remove packing and spring washer and retainer. DO NOT REPLACE UNTIL AFTER ADJUSTMENT IS MADE). Clean and inspect spherical surface of torque ball and inner and outer retainers, inspect seal and gasket at forward end of torque tube, replace all worn or damaged parts.

Reassembly & Adjustment—Proceed as follows:

►*1948-52 OIL SEAL NOTE:* When installing a new universal joint oil seal in torque tube ball, place seal in position with feather edge pointing into torque ball, then press seal squarely into place, using a flat piece of metal to avoid disturbing seal. Press new seal flush with flange of torque ball. *NOTE*—If seal hard and dry, soak in neatsfoot oil.

►*1953-55 OIL SEAL NOTE:* Propeller shaft oil seal used on these models not interchangeable with previous models. The later seal fits tight in torque tube front flange with lip edge toward front of car, and rides on sleeve pressed shaft stub. This seal eliminates former universal joint oil seal and propeller shaft spline seal.

1)—Install guide pins in upper bolt holes in transmission rear bearing retainer.

►**NOTE**—Guide Pins are headless pins ⅜" x 1⅜" having ⅜"-16 threads ½" long and screwdriver slot cut in unthreaded end.

2)—Install one shim (with 3 notches in outer edge) and inner ball retainer (with oil drain hole and notch in edge down) on guide pins.

3)—Oil bearing surfaces of retainers and torque ball with transmission lubricant.

4)—Install torque ball (with "TOP" mark up), and outer retainer (align marks made before disassembly).

►*1948 NOTE:* Do not install the retainer packing and spring at this time (installed after the torque tube ball adjustment made).

5)—Use Installing Tool J-2597 (Except 1953 and later models with seal in propeller shaft housing—See 1953-55 Oil Seal Note above), and push tool (sleeve and plug) through rear side of torque ball until feather edge of seal is on plug (sleeve will drop off plug). Assemble torque ball and outer retainer (with TOP marks up) on guide pins, fill space between flanges of inner and outer retainers with shims (see Torque Ball Shims below). See that oil seal has seated on universal joint.

Torque Ball Shims—Five thicknesses (marked by notches on outer edge) as follows:

4 Notches .....002-.004"	3 Notches .....004-.006"
2 Notches .....009-.011"	1 Notch .....011-.013"
Unmarked.....013-.015"	

6)—Install thrust plate and bolts in retainers (remove guide pins and install short bolts at these holes). DO NOT TIGHTEN BOLTS.

►*ADJUSTING TOOL NOTE:* A "Hardwood Club" should be used to move universal joint during tightening and to measure the tightness of the torque ball for correct adjustment. Make this club to the following dimensions:

1948-50 Models—Diameter 1¼". Length 13¾". Turn 2⅝" of one end of club down to 1" diameter then measure 5⅝" from offset and cut a 3/16" groove around large diameter of club.

1951-55 Models—Diameter 1¼". Length 18½". Turn 2⅝" of one end of club down to 1" diameter then measure 14⅜" from offset and cut a 3/16" groove around large diameter of club.

7)—Tighten retainer bolts evenly while continually moving torque ball by means of hardwood club inserted in end of universal joint. Use a soft mallet and tap outer retainer if ball binds while tightening bolts. *CAUTION—For proper centering of ball and retainers, torque ball must be moved while tightening retainer bolts.*

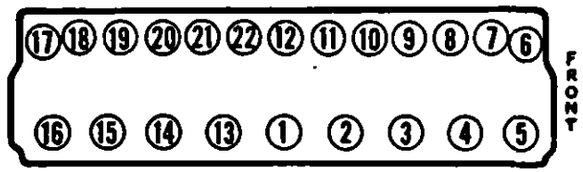
8)—Attach spring scale to club at groove located 5⅝" (1948-50); 14⅜" (1951-55) from end of universal joint and test pull required to move torque ball when all bolts are tight. A drag of 5 to 10 lbs. (1948-49 Models); 10 to 35 lbs. (1950 Models) with scale in groove 5⅝" from universal joint. 15 to 25 lbs. (1951-55 Models) with scale in groove 14⅜" from universal joint. If torque ball tension not within these limits, repeat centering operation and recheck tension. Adjust by adding or removing shims (see Torque Ball Shims above).

For 1948 Models proceed as follows:

9)—Install spring washer in retainer with gap at top, and edge away from flange. Select new packing (furnished 7/16", 5/32" and 1/2" long) to give snug fit in retainer against spring washer with thin forward edge extending into rounded portion of retainer. Re-install torque ball assembly. Spring washer will be almost flat if packing correctly installed.

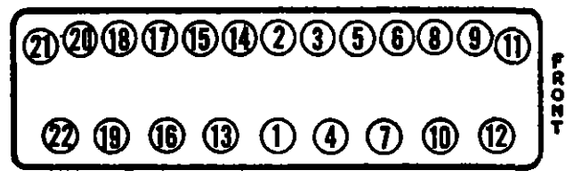
10)—Check torque ball tension. CORRECT ADJUSTMENT WITH OUTER RETAINER AND SPRING WASHER INSTALLED should be 15 to 20 lbs. with 5⅝" leverage. If tension too small, install longer packing. If tension too great, install shorter packing. *CAUTION—Always use Tool J 2597 when installing torque ball to avoid damage to universal oil seal.*

For 1949-55 Models proceed as follows:



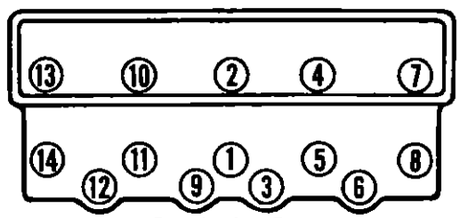
9)—Install torque ball boot by turning large end over small end, engage small end in groove on flange of torque ball then turn large end to front to engage rear end of outer retainer.

►*CAUTION: On 1949-52 Models always use Tool J-2597 when installing torque ball to avoid damaging universal joint oil seal.*



10)—Reinstall shims between thrust plate and thrust pad and tighten thrust plate stud nuts.

11)—Reinstall rear axle assembly.



CYLINDER HEAD & MANIFOLD

BUICK 1946-50 IN-LINE CYLINDER HEAD

BUICK 1951-53 IN-LINE CYLINDER HEAD

EXHAUST SIDE

BUICK V8 CYLINDER HEAD

1946-53 MODELS (EXC. V8)

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in the diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficently to bring all parts to normal operating temperature. NOTE—On models using "crimped" cylinder head gaskets cylinder head should be tightened initially and then the entire tightening procedure repeated to compensate for gradual flattening of crimping. Tightening Torque—See Tightening (Torque Wrench) Specifications above.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1953-55 V8 MODELS

MANIFOLD GASKETS: Gaskets are used on the intake manifold (to head) only. When installing a new exhaust manifold, coat the manifold with a mixture of graphite and oil. In production a special compound is used for this purpose and the original manifold can be re-installed without using additional compound.

►***CAUTION—Do not remove the exhaust manifold while it is hot because warpage is liable to occur.***

PISTONS

1951 SERIES 40 & 50

CAST IRON & ALUMINUM PISTONS (SERIES 40 & 50) PRODUCTION CHANGE & REPLACEMENT CAUTION: Beginning 1951 Series 40 Eng. No. 63319254, Cast Iron Pistons were used in partial or complete production in place of regular aluminum alloy pistons (use of aluminum pistons resumed later in 1951).

►***CAUTION—CAST IRON & ALUMINUM PISTONS INTERCHANGEABLE ONLY IN COMPLETE SETS & CORRECT TYPE CONNECTING ROD MUST BE USED. See CONNECTING ROD & BEARING data below.***

PISTON IDENTIFICATION

Cast Iron Piston Identification—Pistons are heavier and have bronze piston pin bushings with oval shaped depressions in piston skirt at piston pin holes. These pistons have "Lubrite" finish.

Aluminum Piston Identification—Pistons have rectagular depressions in piston skirt at piston pin holes with embossed part number and "Buick" designation. These pistons have anodized finish.

1953-55 V8 MODELS

►*REPLACEMENT PISTON CAUTION (1953-54-55):* Use of 1955 type Press-fit Piston Pin does not change piston specifications for these models. Pistons are interchangeable (within year model limitations) and the only precautions necessary are that the piston fit in the cylinder, and the piston pin fit in the piston, are correct as specified on the Buick car model pages.

ALL MODELS

REPLACEMENT PISTONS: Furnished Standard size, .005", .010", .020", .030" Oversize. Replacement pistons are furnished with piston pins fitted.

PISTON PINS

1953-55 V8 MODELS

►*REPLACEMENT PISTON PIN CAUTION (1953-54-55):* Press-fit Piston Pins (used in production on later 1955 cars) are furnished in Standard Size only as listed below and can be identified by absence of clamp bolt groove. These pins must be used only with Press-fit Connecting Rod Part No. 1162054. Standard Size Clamp-bolt Piston Pins can be used with both type connecting rods but should be checked for size (Diameter .9397-.9394") before any attempt is made to use them with the press-fit connecting rod. Oversize piston pins (.003" & .005" Oversize furnished in Clamp-bolt Type only with groove) can be used only with the clamp-bolt type rod. *BOTH types of pins will be furnished for service.*

Model	Press-fit Piston Pins	Part No.
Series 40 (Std. size only)		1166391
Series 50, 60, 70 (Std. Size only)		1162051

PRESS-FIT PISTON PIN REMOVAL & INSTALLATION: *CAUTION—Special tools (see Tool Note below) must be used to avoid damage to piston assembly parts.*

Pin Removal: Install Piston Support Sleeve J-6047-5 in fixture Base Plate J-6047-1 making certain that **plain flat end upward** (1955 pistons), opposite end with **two machined flats upward** (1953-54 pistons). Slide pin and rod assembly sideways in piston so that pin protrudes from piston, place assembly on fixture so that the protruding pin fits down into the piston support sleeve. Place Drive Pin J-6047-4 on upper end of piston pin with shoulder on pin against end of pin, thread power ram down until drive ball on lower end of ram engages drive pin, press piston pin out of rod and piston assembly.

Pin Installation: Install Piston Support Sleeve J-6047-5 in fixture Base Plate J-6047-1 making certain that **plain flat end upward** (1955 pistons), opposite end with **two machined flats upward** (1953-54 pistons). Install Return Spring J-6047-3 and Guide Pin J-6047-2 (small end of guide pin in spring) in base plate. Assemble rod and piston together with oil spurt hole in rod bearing parting surface on same side as valve clearance depressions on piston head, place assembly on fixture *(CAUTION*—Make certain that guide pin protrudes into connecting rod; on 1953-54 pistons, see that flats on piston support sleeve provide clearance above and below piston pin hole). Lubricate piston pin and inside diameter of rod with Lubriplate, push pin in through piston by hand until it reaches connecting rod. Place Drive Pin J-6047-4 on upper end of piston pin with shoulder on drive pin against end of pin, thread drive ram down until drive ball on end of ram engages drive pin, use just enough pressure to align all drive parts and make certain that there is no side thrust on pin, then press pin in until lower guide pin bottoms in base plate *(NOTE*—Guide pin will insure proper position of piston pin in piston and rod). Remove piston and rod assembly from press. Check pin fit in piston by rocking piston on pin to insure that fit has not been changed by pin installation. Piston should rotate freely on pin at room temperature.

►*PISTON PIN TOOL NOTE (Press-fit Pins):* Special tool set consists of Piston Pin Remover & Replacer J-6047 (Base Plate, Piston Support, Guide Pins, & Spring) used in an arbor press or with 12 Ton Ram J-6180 (with Power Screw & Cross Yoke) adapted for this use by installation of screws furnished in Ram Adapter Kit J-6208.

PISTON RINGS

1953 V8 MODELS

►***REPLACEMENT OIL RINGS (For Improved Oil Consumption Performance):*** Special type ring as used in later production furnished in sets, Part No. 1391624, for cars with low mileage. This ring is special double steel rail type with separator and expander (all temporarily cemented together for ease of installation). Install these rings in accordance with regular procedure placing expander joint in solid area of groove above either end of piston pin (away from oil return slots) with ring gap on high side of cylinder in line with valve head recesses in piston head.

ALL MODELS

REPLACEMENT PISTON RINGS: Furnished Std., .010", .020", & .030" Oversizes in the "Production Type" ring, and in Ring Sets with "Service Type" rings in the following oversizes: Std. to .019", .020" to .039".
NOTE—Manufacturer recommends that when new rings are being installed without reboring cylinders, the glazed cylinder walls should be slightly dulled with a very fine hone.

CONNECTING ROD & BEARINGS

1946-49 MODELS

REPLACEMENT CONNECTING RODS: Replacement rods furnished by the manufacturer are the insert bearing type in place of the babbitted rods used originally. The later type rods can be used either *singly or in complete sets. After the first 5,000 1949* engines, all engines have the insert bearing type rods.

1951 SERIES 40 & 50

CONNECTING RODS FOR CAST IRON & ALUMINUM PISTONS (SERIES 40 & 50) PRODUCTION CHANGE & REPLACEMENT CAUTION: Special rods and matching bearing caps used with Cast Iron pistons due to increased weight of pistons (see PISTONS above). *THESE RODS & BEARING CAPS MUST BE USED WITH CAST IRON PISTONS (can also be used with aluminum pistons if necessary).*

►***CAUTION: Connecting rods and bearing caps intended for Aluminum Pistons MUST NOT BE USED with Cast Iron pistons.***

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CONNECTING ROD IDENTIFICATION

Cast Iron Piston Type—Part No. 1390669 (Assy. with Bearing Cap). Has two raised dots on rear face of connecting rod web and forging number 1344306 on front face. Bearing cap has two ribs on rear face. **Aluminum Piston Type**—Part No. 1393912 (Assy. with Bearing Cap). Has one raised dot on rear face of connecting rod web and forging number 1339643 on front face. Bearing cap marked correspondingly.

1953-55 V8 MODELS

►*REPLACEMENT CONNECTING ROD CAUTION (1953-54-55):* New Press-fit Connecting Rod Part No. 1162054 used with press-fit type piston pin in later 1955 production will be furnished for service on all 1953-54-55 cars after previous type Clamp-bolt Connecting Rod stock exhausted. *Whenever press-fit type connecting rod installed, it must be used with a STANDARD size piston pin (either press-fit or clamp-bolt type pin can be used) and special pin removal and installation procedure (see Piston Pins above) must be followed.*

CRANKSHAFT & MAIN BEARINGS

1948-53 MODELS (EXC. V8)

CRANKSHAFT REPLACEMENT (Dynaflow Cars): It will be necessary to ream dowel pin holes and install oversize dowel pins when a new crankshaft is installed with either the old flywheel or a new one. Proceed as follows:

1) Install crankshaft, clean crankshaft flange and flywheel and remove any burrs. Install flywheel with dowel pin holes aligned and install the six bolts securely. Check flywheel for runout.

2) Remove rear main bearing cap and turn crankshaft so that a dowel hole can be reamed. Ream both dowel holes through crankshaft flange and flywheel, using Reamer J-808-4.

3) Make two dowel pins from 17/32" drill rod cut to 9/16" long. Round off ends of dowel and tap into place through flywheel and flange until ends are flush with rear face of flywheel.

4) Install main bearing cap and complete assembly of engine and transmission.

EARLY 1946 MODELS

REPLACEMENT MAIN BEARINGS (Not Reamed to Size): Replacement bearings for the following cars are not reamed to size and require special equipment for reaming and fitting:

Series 40-50—Up to 1946 Eng. No. 4625584.

Series 70—Up to 1946 Eng. No. 4675200.

LATE 1946 & 1947 MODELS

REPLACEMENT MAIN BEARINGS (Semi Precision Type): Replacement main bearings for the following cars are "Semi-Precision" type and require special fitting:

Series 40-50—After 1946 Eng. No. 4625584, up to 1947 Eng. No. 4918702, and between Eng. Nos. 4919899 and 4922786.

Series 70—After 1946 Eng. No. 4675200, up to 1947 Eng. No. 4918703, and between Eng Nos. 4919900 and 4922786.

1947-53 MODELS

REPLACEMENT MAIN BEARINGS (Full Precision Type): Replacement bearings for the following cars are "Full Precision" type. Shimming or reaming not required:

Series 40-50—After 1947 Eng. No. 4918702, up to 1947 Eng. No. 4919898 inclusive; and after 1947 Eng. No. 4922736, up to 1953 Models.

Series 70—After 1947 Eng. No. 4918703, up to 1947 Eng. No. 4919899 inclusive; and after 1947 Eng. No. 4922786, up to 1953 Models.

1946-48 MODELS

REAR MAIN BEARING OIL SEAL: (Installation)—Use new cork gaskets and special packing ring gasket. Install packing ring gasket in crankcase and allow 3/64" of gasket to protrude above face of bearing, repeat operation for cap. Packing will be compressed to a tight fit when cap tightened in place.

CAUTION—Run engine slowly when first started to prevent damage to packing.

1949-55 MODELS

CRANKSHAFT REAR OIL SEAL: Braided fabric seal fitted in groove behind slinger groove in crankcase and bearing cap. Vertical joint between cap and crankcase fitted with cork seals at each side.

Installation—With crankshaft removed, place new braided fabric seal in groove in crankcase with both ends extending out from bearing parting line, force seal in groove with hammer handle or smooth piece of wood so that seal seats within 1/16" of crankcase. Cut ends of seal off flush with crankcase (use razor blade or sharp knife). Repeat operation for bearing cap. Coat vertical grooves in cap with gasket cement (allow to set until tacky), use new cork gasket and fit into groove with putty knife (ends will project beyond cap). Place cap in vise to lightly compress seals in grooves, cut ends of cork seals flush with cap surface. Coat cork gaskets with vaseline, install cap in crankcase.

►*CAUTION—Engine must be operated at slow speed when first started after new braided seal installed.*

ENGINE FRONT COVER

1953-55 V8 MODELS

TIMING CHAIN COVER: Removal—Drain cooling system, remove radiator core, shroud, fan belt, fan and pulley, and vibration dampener. Take out all bolts attaching timing chain cover and water manifold to cylinder head heads and crankcase (DO NOT remove the five water pump mounting bolts). Remove cover and water pump as an assembly. *CAUTION—Use care to avoid damaging oil pan gasket.*

1946-51 MODELS

FRONT OIL SEAL: Installation—With timing chain cover out of engine and old seal and gasket removed from hole in cover, clean oil seal seat in cover. Install new gasket in hole, then press new seal in place with the small diameter (or side with garter spring) to rear. Timing chain cover oil seal driver, Tool J-1870 is available for properly seating seal in cover

1952-55 MODELS

FRONT OIL SEAL: Installation—*After removing* braided fabric packing with a screw driver and tapping pressed steel shedder out of timing chain cover, work the new packing into the shedder, then drive shedder into recess in timing chain cover using Installer Tool J-5250-1. Push the Packing Expander Tool J-5250-2 through the seal to expand packing into place. Apply a light coat of vaseline to packing.

►*CAUTION: Engine must be operated at slow speed when first started after new braided seal installed.*

FLYWHEEL

ALL MODELS

FLYWHEEL REPLACEMENT: Flywheel or Ring Gear can be replaced separately on Synchro-mesh Cars (gear is shrink fit on flywheel), but must be replaced as an assembly on Dynaflow Drive Cars (gear is welded in place and not furnished separately).

Ring Gear Replacement (Synchro-mesh Cars): Remove old ring gear by drilling 5/16" hole in gear between two teeth, split the gear at this point with a chisel and remove the old gear. Polish several spots on new ring gear with emery cloth, heat gear uniformly on a hot plate or with a torch until polished spots turn blue which will indicate a temperature of approximately 600°F. *(CAUTION*—Heating gear in excess of 800°F. will destroy factory heat treatment). Install ring gear on flywheel with beveled end of teeth out or away from shoulder, allow gear to cool.

►*1948-53 DYNAFLOW MODELS (EXCEPT V8) FLYWHEEL REPLACEMENT:* When replacing flywheel only, it is necessary to ream the two dowel holes to avoid deforming flywheel when bolted to crankshaft. *See "Crankshaft Replacement" under Crankshaft & Main Bearings above.*

Installation of Flywheel (All Models): Make certain that flywheel and crankshaft flange are clean and free from burrs which might cause run-out (remove burrs with a mill file). Install flywheel and tighten all bolts evenly to 50-55 ft.lbs. torque. On Dynaflow Drive Cars, check flywheel run-out (see below). On all cars, check engine for vibration after transmission installed and correct any unbalance caused by replacement of parts. *See ENGINE BALANCING*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Flywheel Run-out (Dynaflow Drive Cars): Mount dial indicator on flywheel housing so that indicating stem bears on rear ground face of flywheel at inner side of large holes in rim. Turn flywheel making certain that crankshaft end thrust held in one direction and note run-out at flywheel face. Run-out must not exceed .008". If run-out exceeds .008" and cannot be corrected by tapping high side of flywheel with a mallet, remove flywheel and check for dirt or burrs between flywheel and face of crankshaft flange. If run-out still exceeds .008" after re-installation of flywheel, check run-out of crankshaft flange rear face.

ENGINE BALANCING

1948-55 MODELS

▷*IF VIBRATION NOTED AFTER INSTALLATION OF CRANKSHAFT, FLYWHEEL, AND OTHER ROTATING PARTS, CORRECT THIS UNBALANCED CONDITION AS FOLLOWS:*

▷*CAUTION:* Procedure below will correct minor unbalance caused by replacement of individually balanced parts. Extreme vibration caused by parts abnormally out of balance, or different in weight from corresponding parts, should be corrected by replacement of these parts.

Critical Speed of Vibration—Determine speed at which vibration is most evident (use tachometer) and operate engine at this speed to check results from the following corrective procedures.

SYNCHRO-MESH ENGINE UNBALANCE CORRECTION:

1)—If clutch assembly has been removed and re-installed, make certain all clutch cover bolts are same type and length and that lockwasher used with each bolt. See that alignment marks on clutch cover and flywheel (made before clutch removal) are together. If vibration not caused by clutch, mark clutch cover and flywheel and remove clutch assembly.

2)—Operate engine with clutch removed and check for vibration. If vibration eliminated (indicating unbalance is in clutch), re-install clutch and balance the assembly as directed in step (3) following. If vibration still present, balance the flywheel as follows: Install one clutch cover bolt in successive flywheel bolt holes and operate engine with bolt in each location until a position is found in which vibration is eliminated (this test weight can be varied by using a shorter bolt or by adding washers to the bolt). When engine runs smoothly, remove bolt and drill shallow holes on DIAMETRICALLY OPPOSITE side of flywheel (*CAUTION*—use ⅜" drill and DO NOT drill any hole more than ¼" deep). When engine runs smoothly, re-install clutch as follows:

3)—Install clutch assembly (*CAUTION*—align marks made before removal), operate engine and check for vibration. If vibration noted, balance clutch by installing plain washer successively under each mounting bolt lockwasher until engine runs smoothly. *NOTE*—If necessary, plain washers can be installed on two adjacent bolts to obtain sufficient weight for clutch balance.

DYNAFLOW DRIVE ENGINE UNBALANCE CORRECTION: *See Buick "Variable Pitch Dynaflow Drive" in Transmission Section.*

VALVE SYSTEM

VALVE TAPPET ADJUSTMENT

CONVENTIONAL TYPE LIFTERS (1946-53 EXCEPT V8 MODELS): .015" setting is road operating clearance (with oil and water temperatures stabilized). Since road operating oil and water temperatures cannot be obtained by running engine in shop for warm-up, car manufacturer recommends the following procedure (with variation in setting to compensate for different temperatures) for securing this setting: Run engine in shop at fast idle (700 RPM. min.) for 20 minutes, 30 minutes maximum, then adjust tappets using a .017" feeler as "GO" gauge, .018" feeler as "NO GO" gauge (if car has been run previously and engine oil is warm when shop warming up run started), or use .001" larger gauges (if car not run previously and engine and oil are cold or at room temperature when shop warming up run started). *CAUTION*—Cars brought in from a hard run should be allowed to stand for 1 hour before tappet adjustment is made.

HYDRAULIC VALVE LIFTERS INITIAL ADJUSTMENT (1948-53 EXCEPT V8 MODELS): Required only when cylinder head has been removed, valves refaced, valve lifters removed, or when setting of adjusting ball stud disturbed.

▷*V8 ENGINE HYDRAULIC VALVE LIFTER NOTE: Initial adjustment of lifters not required on these engines.*

▷*CAUTION—Lifters must be at the lowest position (on heel of cam) when making initial adjustment.*

Adjustment—Set engine in firing position for cylinder to be worked on, this locates lifters *(if all valves being adjusted use table below to avoid setting firing position for each cylinder).* Turn adjusting ball stud to point where all play just removed at each end of push rod and all lash clearance removed from valve train, then turn adjusting ball stud down exactly two (2) turns. Oil groove on ball stud must be at least halfway down in rocker arm (ball stud can be turned down one additional turn—if this does not bring oil groove down, replace push rod or lifter).

Adjusting All Valves—By using the flywheel mark "U.D.C. 1-8" and setting engine in firing position for #1 cylinder, valves in left half of table below can be adjusted, then set #8 cylinder firing position and valves in right half of table can be adjusted.

Hydraulic Valve Adjusting Table

No. 1 Cyl. Firing		No. 8 Cyl. Firing	
Valve No.	Valve	Valve No.	Valve
1	#1 Exh.	3	#2 Int.
2	#1 Int.	5	#3 Exh.
4	#2 Exh.	6	#3 Int.
7	#4 Int.	9	#5 Exh.
8	#4 Exh.	10	#5 Int.
11	#6 Int.	13	#7 Exh.
12	#6 Exh.	15	#8 Int.
14	#7 Int.	16	#8 Exh.

ROCKER ARMS

1946-53 MODELS (EXC. V8)

ROCKER ARMS AND COVERS: Rocker arms are mounted on tubular shaft and held against side of shaft brackets by spring installed on shaft between adjacent rocker arms. Shaft retained in brackets by pilot setscrew installed in top of #2 bracket. When installing rocker arms, make certain that lug on side of arm at adjusting screw end is toward bracket (all rocker arms Series 40, 50, intake rocker arms Series 60, 70, 80, 90). Exhaust rocker arms for Series 60, 70, 80, 90 are straight (no offset or reference lug). Rocker Arm Clearance—.002-.004".

Rocker Arm Lubrication Connection:—Metering restriction for oil feed to hollow rocker arm shaft located in cylinder head and oil pipe fitted directly into top of #1 bracket. #1 and #2 brackets are same part and shaft pilot screw is self-tapping type.

1946-49 Series 40, 50 (Conventional Lifters)
1946-48 Series 70 (Conventional Lifters)

Part Number	Identification Mark① Upper	Lower	40-50-70 Intake	40-50 Exhaust
1303840	2 Dots	0	1-3-5-7	2-4-6-8
1303841	1 Dot	1	2-4-6-8	1-3-5-7
1303842	42	X	(All Series 70 Exhaust)	

1950-53 Series 40 (All Lifters)
1949-52 Series 50 (Hydraulic Lifters)
1948-52 Series 70 (Hydraulic Lifters)

Part Number	Identification Mark① Upper	Lower	50-70 Intake	50 Exhaust
1324123	2 Dots	0	1-3-5-7	2-4-6-8
1342122	1 Dot	1	2-4-6-8	1-3-5-7
1337336	42	X	(All Series 70 Exhaust)	

①—Stamped on adjusting screw end of rocker arm.

▷*VALVE PUSH ROD NOTE*—On all Early 1950 Series 40 with adjustable valve lash, and all engines with hydraulic valve lifters, the push rod ends are drilled for oil passage to lifters. On LATER SERIES 40 with adjustable valve lash, the hole in the upper end of rod is eliminated. (These rods can be identified by copper finished rod socket end.)

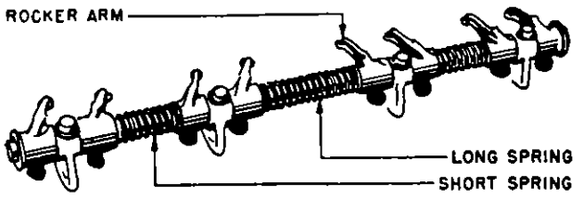
Rocker Arm Installation (Except V-8): Offset of each rocker arm is toward centerline of bracket it rests against. Install rocker arms marked "1" & "1 Dot" on front-of-engine side of bracket, and rocker arms marked "0" & "2 Dots" on rear side of bracket.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1953-55 V8 MODELS

►*1954 ROCKER ARM SHAFT PRODUCTION CHANGE FOR IMPROVED VALVE STEM LUBRICATION:* Rocker arm shaft diameter reduced .001" (First Type Diameter .810-.811", Later Type Diameter .809-.810"). Later type shaft was used in production on later cars and is furnished for replacement on ALL engines.



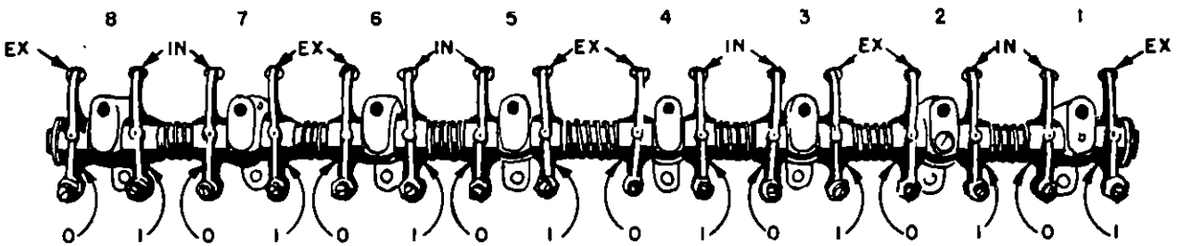
ROCKER ARM ASSEMBLY: One assembly mounted on each cylinder head (see illustration).

Disassembly: Remove cotter pin, flat washer, and spring washer from each end of shaft. Pull mounting bolts out of support brackets, slide shaft out of rocker arms and brackets.

Reassembly: See illustration for location of parts. Install longer spring at center of shaft and install rocker arms with offset (slant) toward center of shaft (two types of rocker arms used—see table below for proper location of each type). Turn shaft so that notch in one end of shaft is upward or toward top of bracket and install bolt through bracket and shaft to maintain this position *(CAUTION*—Notch must be upward to place rocker shaft oil holes in proper relationship to rocker arms).

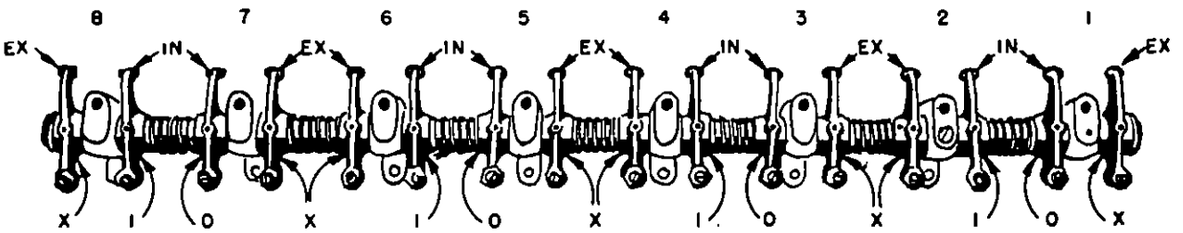
Rocker Arms

Part No.	Location
1343454	4 Right Front & 4 Left Rear
1343455	4 Left Front & 4 Right Rear



BUICK V8 ROCKER ARM ASSEMBLY (ONE ASSEMBLY FOR EACH BANK)

Installation: Make certain that notch in one end of rocker arm shaft is upward, position assembly on head with dowels engaging blind holes in brackets, tighten all bracket bolts evenly to 30-35 ft.lbs.



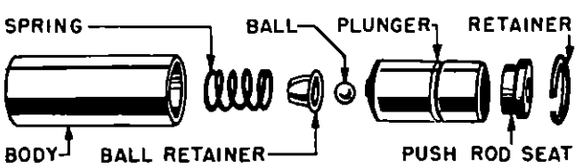
HYDRAULIC LIFTERS

1948-55 MODELS

HYDRAULIC VALVE LIFTERS: Barrel type, consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (See illustration). Oil is introduced to this unit through rocker arm and pushrod assembly (All Series Except V-8), through main oil gallery in block (All V-8 Series).

IDENTIFICATION MARKS ON LOWER SIDE OF ARM
1946-53 SERIES 40 & 1946-52 SERIES 50 ROCKER ARM ASSEMBLY

IDENTIFICATION MARKS ON LOWER SIDE OF ARM
1946-52 SERIES 70 ROCKER ARM ASSEMBLY

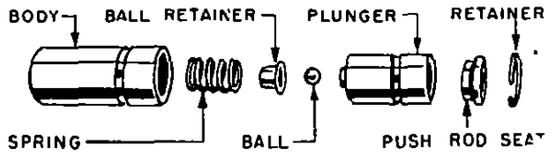


Removal (Except V-8 Series): Hydraulic lifter can be removed from crankcase by inserting the slightly bent end of a stiff wire into the oil hole in push rod seat. If carbon formation in bore above lifter prevents removal, clean with a suitable solvent being careful not to get dirt or carbon into lifter.

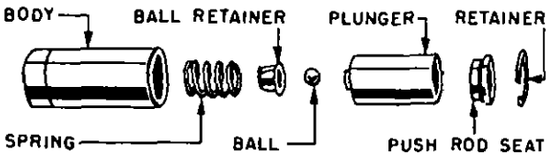
Removal (V8 Models): Remove air cleaner, disconnect all pipes and wires from carburetor and intake manifold, remove carburetor and manifold as an assembly. Thoroughly clean cylinder heads, rocker arm covers, and adjacent areas to prevent dirt entering engine. Remove rocker arm covers and rocker arm assemblies, remove pushrods. Remove valve lifter cover, lift out individual valve lifters ***and place them in numbered compartments of a holding fixture to insure re-installation in original position in engine.***

Disassembly: Use a push rod to hold down the push rod seat in lifter while removing plunger retainer from body with Retainer Remover J-5238. Remove push rod seat and plunger from lifter body. Body bore above plunger may be caked with carbon and varnish. In this case, place lifter in large end of Plunger Remover Tool J-4160-A, with plunger inward. While holding lifter with thumb, rap open end of remover against a block of wood with just enough force to jar plunger from body.

►*IMPORTANT NOTE*—Disassemble one lifter at a time to avoid interchanging parts. Be careful not to score or nick lifter parts.

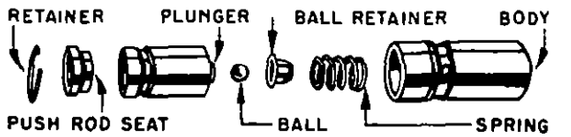


Cleaning and Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or identations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.



BUICK 1948-50 HYDRAULIC VALVE LIFTER

CONTINUED ON NEXT PAGE



CONTINUED FROM PRECEDING PAGE

BUICK 1951 HYDRAULIC VALVE LIFTER

BUICK 1952 HYDRAULIC VALVE LIFTER

BUICK 1953-55 HYDRAULIC VALVE LIFTER

Reassembly: Test check ball travel before reassembling lifter (see Testing below). It is recommended that all parts be rinsed in clean kerosene and then assembled without drying (this will eliminate all lint and dust adhering to parts). Hold plunger in vertical position with feed hole up, install check ball, ball retainer, spring, and body over the plunger. Invert assembly and install push rod seat and plunger retainer in end of body, use handle of tool J-5238 to depress these parts until retainer engages groove in body. Test lifter for "leak down rate" (see Testing below). Protect lifter assembly by wrapping in clean paper until it is installed in the engine.

Testing: (Check Ball Travel)—Install Sleeve KMO-30-K on Test Fixture J-5095, to mount dial indicator so that stem of indicator bears squarely on upper end of pin in attachment. Place a new ball check in seat in lifter plunger, then hold plunger and ball firmly against attachment arm with plunger centered over pin and stepped flange. While holding ball and plunger firmly in place, set dial indicator to "0." Remove plunger and ball, place ball in retainer, and install these parts on plunger. Center plunger over pin and stepped flange of check attachment and while pressing plunger and retainer firmly against attachment arm, note dial indicator reading. Ball travel must be .004-.008" to insure satisfactory lifter operation.

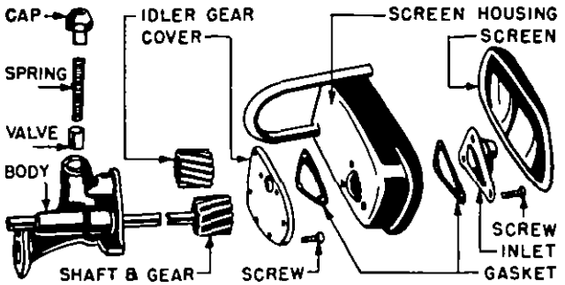
Leakdown Rate—Prepare a special test fluid by placing 20 ozs., of Special Buick Oil for Dynaflow Drive in a clean and accurate container, then fill container to the "one gallon" mark with kerosene. Stir and shake container to thoroughly mix oil and kerosene. Clean cup of Test Fixture J-5095 and fill it to within ½" of top with test fluid. Install Gauge Sleeve J-5180-5 in cup, install Gauge Rod Nose J-5182-2 in ram. Swing weight arm up out of the way, raise the ram and place the valve lifter (top side up) in the sleeve in cup. Make certain lifter is completely covered by fluid. Lower ram to rest in lifter push rod seat, then lower weight arm to rest on roller of ram. Operate lifter plunger through its full travel to force out all air by using a pumping action on weight arm. Continue pumping until considerable resistance is built up in lifter and a definite grab point is felt at top of the stroke, when indicator pointer is at bottom of the scale. Finally pump vigorously for approximately 10 additional strokes to make sure all air is out of lifter. (NOTE—If one stroke offers noticeable weak resistance during the last 10 strokes, replace the check ball in lifter and repeat leakdown test to this point). Raise arm to allow lifter plunger to come up to its retainer, then lower the arm to rest on ram roller. As the pointer starts moving upward, start rotating fluid cup by turning handle one revolution every two seconds. Use a stop watch to check time required for pointer to move from lower to upper mark on scale (upper mark labeled "8-in-line" or "V-8"). The leakdown rate, (time between marks) must be 12-14 seconds. Check doubtful lifters 3-4 times and replace any lifter which does not test within these limits.

OILING SYSTEM

OIL PUMP

1949-53 MODELS (EXC. V8)

OIL PUMP OVERHAUL: Pump removed from engine. Disassembly—Remove screen and float assembly from pump cover by removing cotter pin. Remove oil pressure valve and spring and take out idler gear. Remove pump shaft and gear assembly. Wash all parts thoroughly with solvent and blow out screen assembly with light air pressure.



Reassembly—Before reassembling pump, inspect pressure valve for free movement in pump body. Check hole in pump body for roundness (if worn, replace pump body). Replace spring if collapsed or worn. Check position of gear on drive shaft, measurement should be (Series 40 & 50) 7⅝" minus .010", (Series 70) 8" minus .010", from gear to end of shaft. Install gear and shaft assembly in pump body and then install idler gear with rounded end of teeth inward. Lay a straightedge across pump body and check clearance of gears. Clearance should not exceed .004". Install pump cover and tighten cover screws evenly. Shaft and gears must turn freely with a slight amount of endplay. Attach screen assembly, making sure it swings freely and stops permit full range of movement.

Installation—Attach pump assembly to engine using the correct gasket. Tighten attaching screws evenly. Test pump alignment by twisting shaft with fingers; shaft should turn freely within limits of gear backlash. Make this test every 180° through two full revolutions. If pump is not free, loosen attaching screws and shift pump to relieve binding. If binding continues to exist, remove pump and distributor and grind a slight amount from ends of pump and distributor shafts. Distributor gear must be removed.

V8 ENGINES

OIL PUMP: Gear Type. Driven by distributor shaft which is driven from camshaft through spiral gears.

Disassembly: Carefully pry screen out of housing, remove attaching screws and remove parts in following order: Pump Inlet, Gasket, Screen Housing, Gasket, Body Cover, Shaft & Gear, and Idler Gear. Remove plug on side of body and take out pressure regulator spring and valve.

BUICK V8 OIL PUMP

Cleaning & Inspection: Wash screen and all pump parts in solvent and dry with air. See that oil pressure valve operates freely in body and that hole is not oversize, check spring for wear, distortion or collapsed coils. Inspect pump body, gears, and shaft for wear or scoring. Check gear end clearance by installing gears in body and placing straightedge across cover flange. Clearance between straightedge and face of gears must be less than .004" and gears must turn freely. For other clearances, see table:

Oil Pump Clearances

Drive Shaft Bearing Clearance	.001-.0025"
Idler Gear Bearing Clearance	.001-.0025"
Driving Gear Backlash	.003-.006"
Pump Gears Backlash	.006-.012"
Pump Gear End Clearance in Body	.0005-.004"
Regulator Valve Clearance in Body	.003-.006"

Reassembly: Reverse disassembly procedure above.

Installation: Install oil pump with gasket on crankcase, turning pump shaft as required to engage driving tongue on distributor shaft. Install pump attaching bolts with lockwashers, then tighten bolts alternately a little at a time with one hand while turning pump shaft back and forth through gear lash with other hand. Pump shaft must be free of bind when bolts are securely tightened. If shaft binds, rap pump body lightly with a rawhide mallet.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION NOTES

V8 ENGINES

SPARK PLUG CABLE WIRING AFTER WORK ON ENGINE (To prevent mis-firing): Cables should be arranged in following order in grommets on cylinder head to prevent consecutively firing plug cables from being adjacent to each other:

Right Bank Cables—Arrange cables in following order in grommet on head and at entrance to spark plug cover: 3, 5, 7, 1 (front to rear). Arrange #1 plug cable over rear cover stud and #5 spark plug, under #3 spark plug, and over front cover stud. Arrange #3 plug cable under rear cover stud and #5 spark plug. This will prevent #1 and #3 cables from being parallel.

Left Bank Cables—Arrange cables in following order in grommet on head and at entrance to spark plug cover: 4, 6, 2, 8 (front to rear). Arrange #2 plug cable under rear cover stud and #6 spark plug, and over #4 spark plug. Arrange #4 plug cable over rear cover stud and under #6 spark plug.

DETONATION CORRECTION (ALL SERIES): Proceed as follows:

1) Check spark plug cable wiring (see above).

2) Check for excessive oil consumption. Correct as necessary.

3) Check initial distributor setting and if necessary reset to 5° BTDC.

4) Check to see if centrifugal and vacuum advance of distributor falls within specified limits. Check distributor for dwell angle variation. Dwell should not vary more than 3° total between idle speed and 1500 RPM.

5) Make sure fuel is highest octane conveniently available.

6) If the above procedures do not correct the detonation the initial distributor setting may be retarded to TDC without any noticeable loss in performance or economy. If detonation still occurs, remove all traces of carbon from combustion chambers.

LOCATING IGNITION TIMING MARK (If mark obscured or lost): Rotate the crankshaft until the flywheel counterweight cam (flat surface on crankshaft flange where it attaches to flywheel) is parallel with bottom of engine and pointing toward starter (left) side of engine. Note primary pump converter cover-to-flywheel bolt (only one should be visible), then note first converter cover bolt flywheel clearance hole to the **right** of the bolt (facing toward rear of engine), draw an imaginary line through the center of the flywheel gear and through the center of this clearance hole. Count five teeth back or to the left of the point where the line intersects the gear teeth—this **fifth** tooth is the ignition timing point and should be marked with yellow paint and have figure "5" stamped on side toward rear of car.

ELECTRICAL NOTES

1946-47 MODELS

DISTRIBUTOR SHEARED DRIVE PIN CORRECTION & IMPROVED LUBRICATION: Some distributors on early cars did not have sufficient grease or facilities for greasing. These distributors (and distributors with frozen bearings) should be replaced (replaced by manufacturer under warranty). Distributors on which drive gear pin has sheared should be repaired by installing new pin, No. 822273, with sufficient number of No. 1848595 and No. 1848596 washers for correct shaft endplay of .002-.007".

1946-47 MODELS

STARTER PINION ENGAGEMENT & DISENGAGEMENT CORRECTION: If starter drive clutch pinion does not engage with flywheel (on starters built before August 1, 1946), replace Shift Lever, Part No. 1884808, with redesigned part of same number which may be identified by zinc-plated finish (original lever painted black) which will correct interference between shift lever and collar. NOTE—Starters on which this correction has been made may be identified by spot of white paint on frame above name plate and by zinc-plated finish of lever. Starters built after Aug. 1, 1946 (Serial No. 6-H-1 up) have this new lever.

If Starter does not engage or cranks continuously (with new type Shift Lever described above)—Check for binding of solenoid contact disc and pushrod on terminal plate guide pin. Replace contact disc and pushrod assembly if guide hole is eccentric (replaced by manufacturer under warranty), straighten guide pin if bent.

1951 MODELS

►**STARTER RELAY "STICKING" CORRECTION (1951 Cars)**—The following five types of starter relays were used in production. Type #1 and Type #2 have a tendency to stick in the closed position and should be replaced by either of the Types 3, 4, or 5.

Relay Identification—
Type #1. No marks between bracket mounting screws.

Type #2. "A" stamped in ink between bracket mounting screws.

Type #3. "B" stamped in ink between bracket mounting screws.

Type #4. "C" stamped in ink between bracket mounting screws.

Type #5. A line ¼" long stamped in bracket between mounting screws.

CLUTCH NOTES

1946-50 MODELS

CLUTCH OVER-CENTER RETURN SPRING: Used on all models. Consists of spring connected to angular link attached to lower end of pedal or equalizer shaft and anchored to frame. This design allows spring to exert pressure to hold pedal down with clutch disengaged and out with clutch engaged.

Adjustment—Angular link is self positioning on pedal shaft or equalizer shaft. Tighten frame mounting bolt nut as much as possible by turning nut up to limit of threads so that maximum spring tension secured.

►*CAUTION*—Spring tension must always be relieved (by backing off eye-bolt nut) before disconnecting clutch linkage.

1946-53 MODELS (EXC. V8)

CLUTCH YOKE BOOT ASSEMBLY: Consists of a flexible boot installed on release yoke to seal opening in flywheel housing. Boot is mounted on yoke at outer end by bolt which also attaches release rod nut lock and has a retainer spring at inner end which engages rim of hole in housing. When installing boot, make certain that spring fingers are properly engaged in housing and that release rod nut lock is correctly positioned.

BRAKE NOTES

1948-53 MODELS

RECONDITIONING BRAKE DRUMS: Brake drums must not be machined to more than .060" over the original inside diameter. Brake drums requiring more than .060" to clean up should be replaced. Drums requiring more than .010" should be turned to .030", and .030" oversize lining used.

BRAKE DRUM BALANCE: Brake drums must not be out of balance more than 6 inch ounces. During manufacture, drums are balanced within this limit by welding weights (as required) to the flange near the rim. These weights must never be removed. After brake drums have been machined, or if difficulty is experienced in maintaining wheel balance, drums should be checked for static balance. Drums out more than 6inch ounces may be corrected by installation of service balance weights. Weights are installed by drilling a 17/64 hole in face of drum 4½" out from the center, and bolted to drum. ⅝ oz., 1¼ oz., and 1⅞ oz. weights are available for this purpose. Drums can be tested on any machine used for checking wheel balance.

HOOD ADJUSTMENT: *See Buick Special Data.*

MODEL IDENTIFICATION

STARTING SERIAL NUMBERS

Year	Flint Mich.	South Gate, Cal.	Linden N. J.	Kansas City, Kan.
1946	1 4364445	2 4380001	3 4390001	
1947	1 4524131	2 4530001	3 4542001	4 4536001
1948	1-4801266	2-4820001	2-4824001	4-4830001

	Atlanta Ga.
1948	6-4834001

Location—On plate on right side of cowl under hood ('46-47), on left front door hinge post ('48).
Identification—First digit of number indicates the assembly plant as follows: 1) Flint, 2) California, 3) Linden, 4) Kansas City, 6) Atlanta.

ENGINE NUMBER: Stamped on boss on right side of crankcase below pushrod cover.
1946 Numbers—First numbers as follows:
4558037 4 (for 40), 4558037 5 (for 50), 4558297 7 (70).
1948 Numbers—First numbers as follows:
49998814 (for 40), 49998815 (for 50), 49998817 (70).
Identification—Last digit of number indicates the Series: 4—Series 40, 5—Series 50, 7—Series 70.

TUNE-UP

COMPRESSION PRESSURE: 112 lbs. (for 40 and '46-47 50), 114 lbs. (1948 50 and All 70), 118 lbs. (for 1948 Dynaflow) at cranking speed.

VACUUM READING: Steady 18-20" idling at 8 MPH. or 450 RPM. for all models.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type: AC No. 48. 14 mm. Metric.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle or Dwell—31° closed, 14° open.
►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Distributor.*

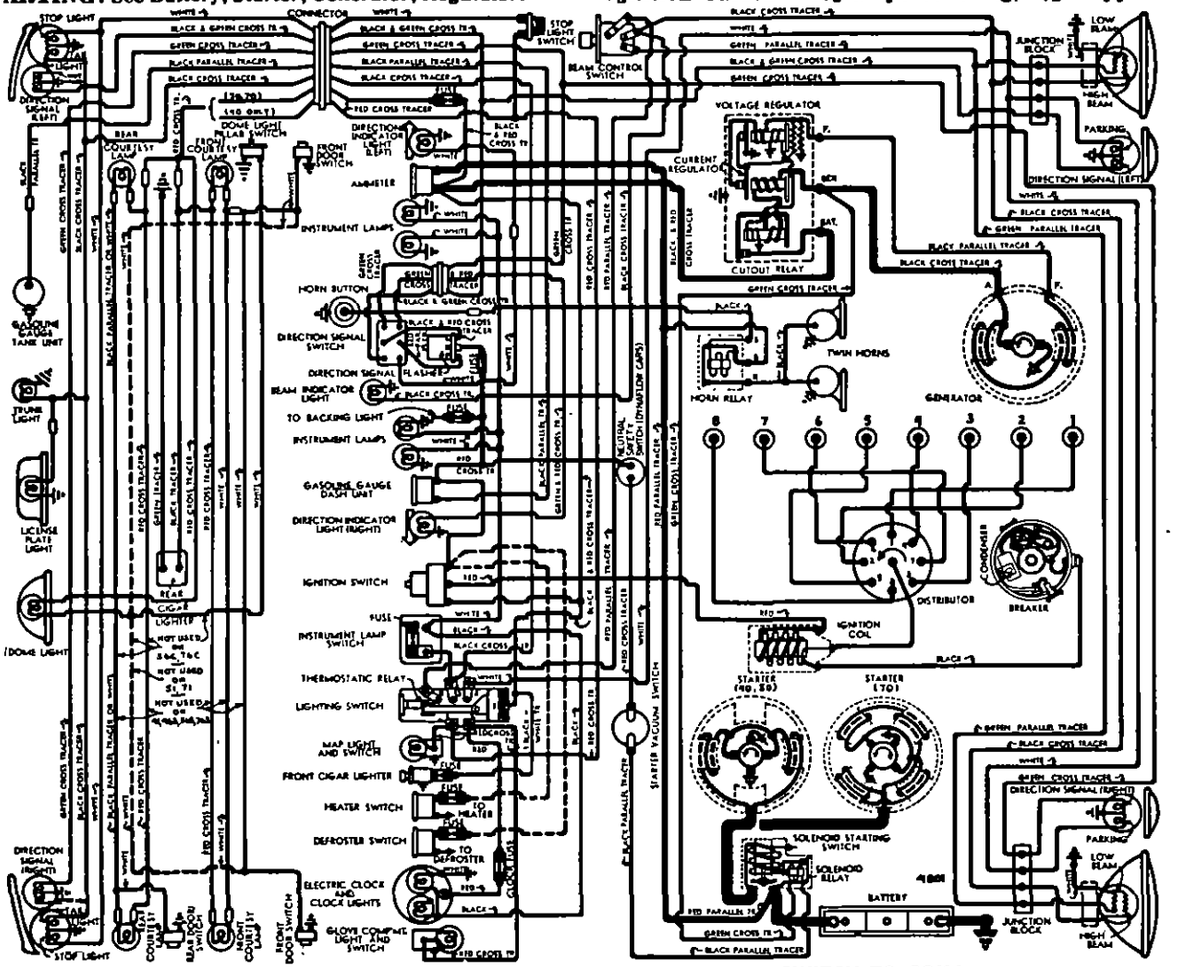
IGNITION TIMING: 4° BTDC. (40, 50), 6° BTDC. (70).
►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.*
Timing Procedure—*See Ignition Timing.*
Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.
Final Ignition Setting—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throttle.

CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—Both idle screws approximately 1 turn (½-1) turn open and set for smooth idle (turn screws out for richer mixture). Idle speed 8 MPH. or 450 RPM.
Float Level (Carter)—3/16" (608S, SA; 609S, SA), 5/32" (608SC, 609SC, 663S, 664S) top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection hole on side of float bowl with engine idling.
Float Level (Stromberg Carb.)—Fuel level 19/32" below top edge of float bowl or even with bottomof inspection hole on side of bowl, engine idling.
Accelerating Pump (Carter Carb.)—2 holes in arm. Inner hole minimum charge, Outer hole maximum. NOTE—No seasonal pump adjustment on 608S, SA and 609S, SA carburetors.
Accelerating Pump (Stromberg Carb.)—Center hole (med. stroke) normal for all-seasonal operation.
Fuel Pump Pressure—4½-5½ lbs. at pump outlet port or 4-5 lbs. at carburetor inlet.

Throttle Linkage Adjustment & Dashpot Setting: *See CARBURETOR.*

MANIFOLD HEAT CONTROL: Thermostatic coil type. Setting—Thermostatic coil wind-up should be ¼ turn at 70° F. Adjust counterweight spring clip so that edge of counterweight is approximately 7/16" past vertical center line of pivot with valve closed

►**VALVE TAPPET CLEARANCE:** *CAUTION—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.*
Valve Timing Check—*See Valve Timing.*



STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH ('46-47): D-R No. 1116296 (Series 40 LHD.), 1116297 (Series 40 RHD.), 1116325 (Series 50, 70 LHD. exc. Conv.), 1116357 (Series 50, 70 LHD. Convertible), 1116332 (Series 50, 70 RHD.).
NOTE—Armored cable used on 1946-47 cars only.

IGNITION SWITCH (1948): Delco-Remy Numbers:
Special—1116359 (LHD), 1116297 (RHD).
Super & Rdmstr.—1116360 (LHD), 1116332 (RHD).
Convertible (Super & Rdmstr.)—1116361 (LHD).
NOTE—Switch on Convertible has silver contacts.
Ignition Lock—Briggs & Stratton No. 85370 (Lock Cylinder), No. 85317 (Lock Case).
Key Series—8000 to 9499. **Groove**—No. 15.

COIL: Delco-Remy Nos.: 1115024 (Early 1946), 1115026 with radio condenser (Late 1946, All 1947, RHD Cars 1948), 1115328 (1948 LHD Cars). NOTE—Armored cable not used with 1115328 coil.
Location—On engine side of dash (1946-47 cars), on right side of engine (1948 cars).
Ignition Current—2½ amperes idling, 4½ stopped.

►1946-47 CARS HAVE ARMORED IGNITION CABLE (IGNITION SWITCH TO COIL)

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110801. Single breaker, full automatic advance type with auxiliary vacuum spark control and manual adjustment

►*1946-47 CAUTION—To Correct Sheared Drive Gear Pins and Improve Lubrication on Early Distributors, see "Electrical System Notes" in Buick Shop Notes.*

Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—31° closed, 14° open.

►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*

Breaker Arm Spring Tension—19-23 ounces.
Rotation—Counter-clockwise viewed from above.

Distributor **Automatic Advance** Engine

Degrees	R.P.M.	Degrees	R.P.M.
Start	250	3.5	500
7	400	14	800
13	1500	26	3000

Vacuum Spark Control: Delco-Remy No. 681-H. Integral type (mounted on distributor, linked directly to breaker plate). Provides additional advance at speeds above 18 MPH. except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. Maximum plunger travel ⅛".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5½°	11°	10-13"

Distributor Removal: Mounted on right side of crankcase. To remove, disconnect vacuum line, take out two hold-down screws in advance arm, lift out.

IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 40①, 50③	4° BTDC	.0063" BTDC.
Series 70②	6° BTDC	.0149" BTDC.

①—Regular Fuel. ②—Ethyl Fuel.
③—Regular Fuel 1946-47, Ethyl Fuel 1948.

►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.*

Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.

►**TIMING MARK NOTE**—On first 1946 cars, timing mark on Series 40, 50 is a ¼" wide knurled section on flywheel, painted yellow, with leading edge marked "ADV. 4°" and trailing edge marked *"2°"*; on Series 70, mark is a yellow painted line stamped "ADV. 6°". *On these early 1946 cars, set ignition at leading edge of timing mark or within ⅛" (1°) of leading edge.*

Timing (With Synchroscope)—Connect synchroscope to #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at **speed not greater than 350 RPM.**, loosen two distributor hold-down screws, rotate distributor until "ADV" mark on flywheel (see Flywheel Mark Note above) lines up with indicator, tighten hold-down screws. Refer to Final Ignition Setting

Timing (Without Synchroscope)—With #1 cylinder on compression, turn engine over until "ADV" mark on flywheel lines up with indicator in inspection hole in right front face of housing. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws.

Final Ignition Setting—*Must be within yellow band of flywheel mark (leading edge desired).* If timing advanced, engine roughness may result even with high octane fuel. If timing retarded to overcome heavy "ping", engine performance and economy will be lessened (higher octane fuel should be used). A very light "ping" may occur with part throttle on a hard pull, or during acceleration with wide open throttle between 10-20 MPH. Do not retard timing to eliminate this light "ping."

CARBURETOR

Carter WCD or Stromberg AAV types. Dual (double barrel) downdraft types with Automatic Choke.

Series	Carter WCD	Stromberg
40, 50 ('46-47)	608S, SA, SC	AAV-16 Code 7-66
40, 50 (1948)	663S	①AAV-167 Code 7-69
70 (1946-47)	609S, SA, SC	AAV-26 Code 7-57
70 (1948)	664S	①AAV-267 Code 7-70

①—Equipped with new Stromberg Vacuum Starting Switch.

Code No. (Stromberg)—Stamped either on body or on a metal tag attached to the body.
See Carburetor Section for complete data.
Adjustment (Idle Setting, Accelerating Pump Setting, and Float Level)—*See Tune-up data.*
Metering Jets & Rods—*See Carburetor Section for Carter & Stromberg Jet Specifications.*

Throttle Linkage Adjustment (Synchro-Mesh Transmission): Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

Throttle Linkage Adjustment (Dynaflow Drive Cars): With engine idling at 450 RPM., clearance between **edge of bracket** (attached to dash at lower end of vertical equalizer shaft) and ear on lever (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever stop striking boss on carburetor). Check choke unloader operation. Check Dash-Pot Setting (following).

Dash Pot Setting (Dynaflow Drive Cars): Turn adjusting screw on lever ahead of dash pot plunger for 1/64-1/32" clearance between fast idle cam and fast idle screw with choke valve held closed.

Fast Idle: Carter Dual (WCD) Carburetor type or Stromberg Type (AAV-16, 26, 167, 267 Carburetors).
See Carburetion Equipment Section for data.
Setting (Carter Carb.)—*Adjust fast idle screw on* throttle shaft lever for .012" (Ser. 40, 50: 608S, SA), .015" (40, 50: 608SC, 663S), .018" (70: All carbs.) throttle opening with choke valve tightly closed and screw on "high" step of fast idle cam.
Setting (Stromberg)—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

Automatic Choke: Carter Climatic Control (Dual Carb.) or Stromberg AAV-16, 26, 167, 267 Type.
See Carburetion Equipment Section for complete data.
Setting (Carter Carb.)—Centered (index mark on cover centered on reference mark on housing).
Setting (Stromberg)—"V" mark on cover one graduation Lean (40, 50), Centered (70).

CARB. EQUIPMENT

Air Cleaner: AC. No. 1542101 (40, 50), 1542436 (70) heavy duty oil-bath type.
Filter Element—AC 1543732 (40, 50), 1528460 (70).
Servicing—Clean and refill with 1 pint of SAE. No. 50 engine oil at 5000 mile intervals.

Fuel Pump: AC. Type AJ. Diaphragm type combination fuel-and-vacuum pump.
Exchange Pump Type—AC No. 529 (40, 50), 530 (70).
Pressure—4½-5½ lbs. at fuel pump outlet port or 4-5 lbs. at carburetor inlet.
See Carburetion Equipment Section for data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1516304 ('46-47), 1517078 ('48).
Tank Unit—AC No. 1516277.
See Carburetion Equipment Section for data.

BATTERY

Delco Type 15E2 or 15E4 (40, 50), 17E2 or 17E4 (70), 17K4 (Export 50, 70), 19E4 (Opti. Comm'l). 6 Volt.

Capacity—No. Plates	20 Hr. Rate	Starting (20 Min.)
15E2, 4	85 A.H.	120 Amperes
17E2, 4	120 A.H.	140 Amperes
17K4	115 A.H.	137 Amperes
19E4	130 A.H.	150 Amperes

Zero Capacity—	300 Amps. (0°F)	5-Second Voltage
15E2, 4	3.5 Minutes	4.25 Volts
17E2, 4	4.5 Minutes	4.4 Volts
17K4	4.3 Minutes	4.4 Volts
19E4	5.3 Minutes	4.35 Volts

Grounded Terminal—Negative (—) to engine block.
Location—On right hand side under engine hood.

STARTER

Delco Model No. 1107049 (40, 50 LHD.), 1107929 (70 LHD.), 1107057 (40, 50 RHD.), 1107935 (70 RHD.).
Armature 1867897 (1107049, 57), 820158 (1107929, 35).

►*1946-47 CAUTION—To correct Starter Shifts which will not engage or disengage, see "Electrical System Notes" in Buick Shop Notes.*

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.
Cranking Engine—40, 50) 90 RPM, 150 amperes, 4.5 volts; (70) 90 RPM, 175 amperes, 5 volts.

Performance Data—1107049, 57

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

Performance Data—1107929, 35

0 ft. lbs.	5500	5.67	65
16 "	Lock	3.0	600

Removal: Starter is flange mounted on right front face of flywheel housing. To remove, disconnect cables, remove flange mounting screws.

CONTINUED FROM PRECEDING PAGE

Starting Switch: Delco-Remy Solenoid No. 1118019 controlled by Vacuum Switch on Carburetor.
See Electrical Equipment Section for complete data.
Vacuum Switch (Carter Carburetors)—Carter Car Starter Model 192-11U.
Vacuum Switch ('46-47 Stromberg)—Delco-Remy No. 1990127 for AAV-16 & AAV-26 carburetors.
Vacuum Switch (1948 Stromberg)—Stromberg No. 385000 for AAV-167 & AAV-267 carburetors.
▷*1948 STROMBERG VACUUM SWITCH CHANGES FOR IMPROVED PERFORMANCE: See "Stromberg Starter Switch" in Electrical Equipment Section.*
Dynaflow Neutral Safety Switch—Delco-Remy 1997838. Connected in starter control curcuit so that starter operative only with selector lever in "N" Neutral or "P" Parking position.
See Dynaflow Drive article in Transmission Section for Neutral Safety Switch Adjustment.

GENERATOR

Delco-Remy Model No. 1102679 (40, 50), 1102668 (70). Two brush (shunt) type with voltage and current regulation. NOTE—Generators are interchangeable between models if correct pulley is installed.
Armature—Delco-Remy No. 1877806.
Charging Rate Adjustment—None (see Regulator).
Maximum Charging Rate—32-34 amperes, 8.0 volts, 2400 RPM or approx. 25 MPH.

Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1825

①—Not maximum output. See Current Regulator.
Brush Spring Tension—25 ounces each.
Field Current—1.75-1.9 amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Removal: Generator pivot mounted at left front of engine. To remove, disconnect leads, take out pivot and clamp bolts.
Belt Adjustment: ½" belt deflection with light pressure at point midway between generator and fan.

REGULATOR

Delco-Remy Model 1118201. Single Core Type. Voltage and current regulator.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts hot (operating temperature). Regulator over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).
Checking & Adjustment—*See Electrical Equip. Section.*

Current Regulator

Setting—34-36 amperes hot (operating temp.).
Air Gap—.080" (check same as Voltage Regulator).
Checking & Adjustment—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—In upper edge of speedometer dial. Lighted when Upper (Country) Beam in use.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—In center of right and left instrument clusters. Lighted when direction signal operating.

Switches

Lighting—Delco-Remy No. 1995016.
Beam Selector—D-R No. 1997008, 1997015 (RHD).
Instrument—Delco-Remy No. 1997762.
Glove Compt.—Delco-Remy 1997747 (40), 1997771 (50, 70).
Direction Signal ('46-47)—D-R 1995527 LHD Metallic Brown), 1995503 (LHD—Brown), 1995507 (LHD—Light Grey), 1995525 (LHD—Dark Grey), 1995528 (RHD—Metallic Brown), 1995504 (RHD—Brown), 1995508 (RHD—Light Grey), 1995526 (RHD—Dark Grey), 1995535 (LHD-Beige), 1995536 (RHD-Beige).
Direction Signal (1948)—Delco-Remy 1995537 (std. LHD), 1995539 (Dynaflow Cars), 1995538 (RHD).
Back-Up Light—Delco-Remy No. 1997825 (regular transmission), 1997839 (Dynaflow Drive Cars).

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 Watt	92500
Park & Frt. Dir. Sig.	21-3	1154

Rear License	3	63L

①—21 cp. (3 cp. filament not used).

MISC. ELECTRICAL

THERMOSTATIC RELAY: Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

FUSES: Clock—2 ampere SFE. In clock lead.
Instr. & Clock Lights—14 amp. SFE. On switch.
Direction Signal—14 ampere SFE. In flasher lead.
Cigar Lighter (Front)—15 ampere. In lighter.
Cigar Lighter (Rear) & Dome Light (50, 70)—30 ampere. In connector back of instrument panel.

HORNS: Delco-Remy No. 1999519 (Low Note—Right Horn), 1999520 (High Note—Left Horn). Vibrator type, blended tone, twin horns operated by relay.

	Current (at 6 volts)	Air Gap
1999519 (Low Note)	19-21 amperes	.044-.049"
1999520 (High Note)	18-20 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts.
Contact Gap—.025" **Air Gap** .015" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS (SERIES 40, 50): Eight Cylinder, Overhead Valve ("I" Head) type.
Bore—3 3/32". **Stroke**—4⅛".
Displacement—248 cu. ins. **Rated H. P.**—30.63.
Developed H.P. (All 40, '46-47 50)—110 at 3600 RPM.
Developed H.P. (1948 50)—115 at 3600 RPM.
Compression Ratio (All 40, '46-47 50)—6.3-1.
Compression Ratio (1948 50)—6.6-1.
1948 NOTE—.050" thick Steelbestos gasket on 40, .015" thick sheet steel gasket used on Series 50.
Compression & Vacuum Reading—*See Tune-up data.*

ENGINE SPECIFICATIONS (SERIES 70): Eight cylinder, Overhead Valve ("I" Head) type.
Bore—3 7/16". **Stroke**—4 5/16".
Displacement—320.2 cu. ins. **Rated H. P.**—37.81.
Developed Horsepower—144 (70), 150 (Dynaflow Drive) at 3600 RPM.
Compression Ratio—6.6-1 Std., 6.9-1 Dynaflow Cars.
Compression & Vacuum Reading—*See Tune-Up data.*

MANIFOLD GASKET INSTALLATION: *See "MANIFOLDS" in Buick Special Data.*

TIGHTENING TORQUES: *See Buick Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Buick Shop Notes.*
▷**New 1946-47 Type Cylinder Head & Gasket:** See Buick Shop Notes for new type Cylinder Head and Head Gasket required for use with new 1946-47 Engine
▷*CAUTION—1942 type Cylinder Head and Gasket must not be used on 1946-47 engines (smaller water passages at #8 cylinder will restrict water circulation and cause overheating).*

▷**1948 NEW "CONTROLLED FREQUENCY" ENGINE MOUNTINGS:** *See Buick Shop Notes.*

PISTONS: New light weight aluminum alloy, four ring, Turbulator Top, Cam ground, transverse slot type with Anodized finish.
Weight—13.776 ozs. (40, 50), 17.94 ozs. (70) stripped.
Length—4 21/64" (40, 50), 4 9/16" (70).
Removal—Pistons and rods removed from above.
Clearance—See Fitting New Pistons.

	Top Land	Top — Skirt — Bottom
Series 40, 50	.023-.030"	.0021"①
Series 70	.026-.033"	.0023"②

①—.00185" clearance ('46-47), .0016" ('48).
②—.0020" clearance ('46-47), .0018" ('48).
Replacement Pistons: *See Buick Shop Notes.*
Fitting New Pistons: Use feeler stock ¼" wide ("GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine centerline, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge as follows:

Clearance Limits	"GO" Feeler Gauge	"NO GO"
Series 40, 50	.0018-.0023"	.0015" .002"
Series 70	.0020-.0026"	.0015" .002"

▷NOTE—Cylinder walls on 1946-47 engines are "Lubrited" after finishing to provide protective coating and prevent scuffing and scoring during break-in. This coating is black and will wear through in service. Cylinders in service showing this black-and-bright surface are normal.
1948 Note—Cylinder walls not Lubrited (coated).
Installing Pistons: Hollow side of piston head toward camshaft side of engine.
PISTON RINGS: Two compression, two slotted oil control rings per piston, all above pin.
1948 Note—New "Flex-fit" bottom oil ring used.

1946-47 Piston Rings

Ring	Width	End Gap	Side Clearance
①Comp. (#1, 2)	3/32"	.015"	.0015-.0035"
Oil (#3, 4)	3/16"	.015"	.0015-.003"

ENGINE

CONTINUED FROM PRECEDING PAGE

1948 Piston Rings

Ring	Width	End Gap	Side Clearance
①Compr. (#1,2)	.3/32"	.015"	.0015-.0035"
Oil (#3)	.1875"	.015"	.0015-.0035"
Oil (#4)	.1860"	②	.0015-.0035"

①—Wall Thickness .160" (40, 50 Upper), .140" (40, 50 Lower), .170" (70 Upper), .150" (70 Lower).
②—Width of oil ring gap .0015" (segmental).

Replacement Rings: *See Buick Shop Notes.*

PISTON PIN: Clamped in rod (pin hole in new pistons diamond-bored and oil-grooved).
Diameter—13/16" (40, 50), 7/8" (70).
Length—2 11/16" (40, 50), 3 1/16" (70).
Pin Fit in Piston—.0003-.0004" clearance or easy finger push fit at 70°F.

Replacement Pins: Pins are fitted and furnished with new pistons (pistons not furnished without pins).

CONNECTING ROD: Length—7⅝" (40, 50), 8¼" (70).
Weight—28.464 ozs. (40, 50), 35.584 ozs. (70).
Crankpin Journal Diameter—(40, 50) 1.997-1.999". (70)—2.248-2.249".
Lower Bearing—Centrifugal cast (spun) babbitt.
Clearance—.0008-.0018". **Sideplay**—.005-.010".

Bearing Adjustment: Shims. Do not file rods or caps.

Replacement Rods & Bearings: *See Buick Special Data.*

Installing Rods: Marks on rods and bearing caps together and toward rear of engine. Oil hole toward camshaft.

CRANKSHAFT: Five bearing, counterweighted type.

►*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

►*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

semi-precision type (both with shims) during 1946, and from semi-precision to full-precision (no shim) type during 1947 production. Full-precision type bearings used on all 1948 cars.

►*CAUTION—Series 40, 50 crankshaft used with full-precision type bearings has different journal diameters.*

Line-bored Bearings (with Shims)

40, 50 (1946)	To Eng. No. 4625584 incl.
70 (1946)	To Eng. No. 4675200 incl.

Semi-precision Bearings (with Shims)

40, 50 (1946)	Eng. No. 4625585 Up
70 (1946)	Eng. No. 4675201 Up
40, 50 (1947)	To Eng. No. 4918702 & Nos. 4919899 to 4922786 incl.
70 (1947)	To Eng. No. 4918703 & Nos. 4919900 to 4922786 incl.

Full-precision Bearings (No Shims)

40, 50 (1947)	Eng. Nos. 4918703 to 4919898 & Nos. 4922787 Up
70 (1947)	Eng. Nos. 4918704 to 4919899 & Nos. 4922787 Up
40, 50, 70 (1948)	All Engines

►*CAUTION—Different Journal Diameters used on Series 40, 50 crankshaft with full-precision (no shim) bearings See Crankshaft Production Change Note above.*
Journal Diameters (40, 50—with line-bored or semi-precision Bearings)—#1, 2.3095-2.3115"; #2, 2.3725-2.3745"; #3, 2.4345-2.4365"; #4, 2.4975-2.4995"; #5, 2.5595-2.5615".
Journal Diameters (40, 50—with full-precision bearings)—#1, 2.3105-2.3115"; #2, 2.3735-2.3745"; #3, 2.4355-2.4365"; #4, 2.4985-2.4995"; #5, 2.5605-2.5615".
Journal Diameters (70)—#1, 2.5605-2.5615"; #2, 2.6235-2.6245"; #3, 2.6855-2.6865"; #4, 2.7485-2.7495"; #5, 2.8105-2.8115".
NOTE—Series 70 journal diameters same for all types of bearings.
Bearings—Steel-backed, Durex lined, slip-in type.
►*CAUTION—Three types used. See Crankshaft & Main Bearing Production Change Note (above).*
Clearance—.0007-.0025".

Bearing Adjustment: Shims (line-bored & semi-precision type bearings). No shims (full-precision bearings). Where no shims used, replace bearings. Do not file bearing caps.

Replacement Bearings: *See Buick Shop Notes for data and Rear Main Bearing Oil Seal installation.*

End Thrust: *#3 (center bearing). Endplay .004-.008"*

CAMSHAFT: 5 bearing. Non-adjustable chain drive.
Bearing Diameters (All Series)—#1, 2 5/32"; #2, 2⅛"; #3, 2 3/32"; #4, 2 1/16"; #5, 1¾".
Bearing Type—Steel-backed, babbitt bushings.
Clearance—.0005-.0035".

End Thrust: Thrust plate between front bearing and camshaft sprocket. **Endplay**—.004-.008".

Timing Chain: Link belt. Width 1". Pitch .500". Length 49 links or 24½" (40, 50), 50 links or 25" (70).

Camshaft Setting: Mesh copper-plated washers on chain (10 links apart) with sprocket marks (crankshaft and camshaft turned so that marks are up).

VALVES:

Series 40, 50

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	5 7/64"
Exhaust	1 11/32"	.3715"	5 7/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0015-.0035"
Exhaust	45°	.342"	.0021-.0039"

Valve Seat Width—Nominal width .062" (1/16"). Seats wider than 5/64" should be narrowed down using proper 20° and 70° cutters.

Series 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3720"	5¼"
Exhaust	1 7/16"	.3715"	5¼"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"	.0015-.0035"
Exhaust	45°	.348"	.0021-.0039"

Valve Seat Width—Nominal width .062" (1/16"). Seats wider than 5/64" should be narrowed down using proper 20° and 70° cutters.

Valve Guides: Press fit in head. Install with stepped end up. Ream for proper clearance of valve stem.

Valve Springs: Double Springs on all valves. Spring free length 1 29/32" (inner), 2 11/32" (outer).

	Inner Spring		Outer Spring	
	Pressure	Length	Pressure	Length
Closed	20 lbs.	1 21/32"	32 lbs.	1 15/16"
Open	51 lbs.	1 5/16"	77 lbs.	1 19/32"

Valve Lifters: Diameter .9975-.9985". Barrel type. **Clearance**—.0005-.0025".

Rocker Arms: *See Buick Shop Notes.*

VALVE TIMING

►**Tappet Clearance:** *CAUTION—Feeler gauge used depends on engine temperature (do not use .015" feeler). See "Tappet Clearance Adjustment Procedure" in Buick Shop Notes to secure .015" lash at Road Operating Temperature.*

Valve Timing: See Camshaft Setting above.

Timing Points (Valve .004" Open)

Series 40, 50
Intake Valves—Open 13° BTDC. Close 68° ALDC.
Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

Series 70
Intake Valves—Open 14° BTDC. Close 71° ALDC.
Exhaust Valves—Open 56° BLDC. Close 25° ATDC.
Valve Timing Check—With .015" tappet clearance, #2 or #7 exhaust valve should be .145" open (Series 40, 50), .155" open (Series 70), with #1 & 8 pistons at top dead center and flywheel mark "UDC/1&8" at indicator in inspection hole in right front face of housing. NOTE—This is actual valve opening and should be checked with dial indicator mounted on cylinder head.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, timing chain, and rocker arms. Oil pump mounted in crankcase. NOTE—Screen located in cylinder head under rocker arm oil lead restricted fitting should be removed and cleaned at 10000 mile intervals (disconnect oil line and remove fitting).
Crankcase Capacity—Refill—5½ qts. (40, 50), 7 qts. (70). Dry Capacity 6½ qts. (40, 50), 8 qts. (70)
NOTE—If oil filter is dry, add 1½ qts. to capacities
Normal Oil Pressure—35 lbs. at 35 MPH.
Oil Pressure Regulator—On oil pump housing. Opens at 45 lbs. No adjustment.

Oil Pump: *See Buick Shop Notes.*

Crankcase Ventilation: Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.
Servicing—Wash **both** filter elements in kerosene every 5000 miles (when carb. air cleaner serviced).

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap. Re-circulation of water through engine (with thermostat closed) is controlled by separate spring-loaded by-pass valve
Capacity—Without Heater—13 qts. (40, 50), 16¾ qts. (70). With heater—14¼ qts. (40, 50), 18 qts. (70).
Pressure Valve—AC No. 850509 (Std. pressure cap). Opens at 7 lbs. (std.), 13 lbs. (Dynaflow cars).

Water Pump: Packless, sealed ball-bearing type.
►*1948 NOTE*—2 types of pumps used (different seal design), interchangeable as assemblies (parts not furnished for first type). *NOTE—Pumps identified by casting number 1330139 (1st), 1336756 (2nd).*
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head water outlet.
Setting—Starts to open 152°F. Fully open 173°F.

Temperature Gauge: AC 1511070 '46-47, 1512091 '48.
See Miscellaneous Section for complete data.

CLUTCH

Own Make with Borg & Beck or Long Driven Member. Single plate, dry disc type. Series 40, 50 clutches are "Crown Spring" type.
See Clutch Section for complete data.
Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
Series 40, 50	6"	10"	.125" (⅛")
Series 70	6½"	10½"	.125" (⅛")

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toeboard.

Clutch Over-Center Spring Installation & Adjustment: *See Clutch Notes in Buick Special Data.*

Removal:—Remove Rear Axle & Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws. **Clutch Yoke Boot Installation**—*See Clutch Notes in Buick Special Data.*

TRANSMISSION
SYNCHRO-MESH

Own Make. All Helical Gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with steering column mounted shift control. ***See Transmission Section for complete data.***

Transmission Control: Buick type remote control. ***See Transmission Section for complete data.***

Removal (1946-47): Remove Rear Axle, then remove rear transmission support (wire shims to ends of support for correct replacement) and steady rest rod, place engine jacks (J-1580) on frame cross member with pilot end in hole in housing at each side of engine mounting, tighten jacks to take load off mounting, remove selector and shift levers, transmission mounting bolts (install guide pins J-851), remove 2 nuts freeing rear engine mounting (bolt heads seat in notches), adjust jacks to take strain off mounting bolts, remove transmission. ***See Buick Shop Notes for Transmission Support Mounting adjustment data on 1946-47 cars.***

Removal (1948): Disconnect Rear Axle (see Rear Axle), drain transmission, fill with clean gasoline or kerosene and run approx. 15 seconds in Neutral, drain cleaner. Disconnect speedometer cable, lower shift rod, and selector rod. (On 40, 50 only, take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever). Install support bar (see Note below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out 2 attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

For instructions on Shimming Rear Mounting when installing transmission on 1948 cars, see "Engine Mountings" in Buick Shop Notes.

Engine Support Bar Note—Consists of length of 2 x 4 (approx. width of frame) with hole through each end to take hooked rods (hook rests on top of frame. Raise and lower support by nuts on rods.

Lubrication Note—When transmission reinstalled in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNAFLOW DRIVE TRANSMISSION
OPTL. ON 1948 ROADMASTER SERIES 70

Own Make. Torque Converter and hydraulically operated planetary unit with manual control. ***See Transmission Section for complete data including Testing & Trouble Shooting.***

▷**Dynaflow Production Changes & Interchangeability Data for new type parts**—***See "Buick Dynaflow" in Transmission Section.***

▷*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

▷*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

Dynaflow Linkage Adjustment: *See "Buick Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment & Dashpot Setting: *See CARBURETOR.*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

▷***Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A."***

Capacity—(70) 10 quarts. NOTE—Add 1¾ pints more when transmission completely dry.

Checking Fluid Level—Engine must be idling with selector lever at "P" (Parking) and transmission oil warm. Raise right side of floor mat, take off cover in floor above transmission, lift out oil gauge rod. Add fluid to "FULL" mark level with engine idling.

Draining & Refilling—***See "Buick Dynaflow Drive" in Transmission Section.***

▷***CAUTION—Engine must be idling with transmission in Parking and transmission oil warm when checking Dynaflow Drive Fluid Level.***

Removal: ***See "Buick Dynaflow Drive" in Transmission Section.***

UNIVERSALS

Saginaw (All Series) or Spicer 202-13X (40, 50). One used (in torque ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data.*

REAR AXLE

Own Make. Hypoid Gear, Semi-floating type with Torque Tube Drive. ***See Rear Axle Section for data.***

▷**1948 Pinion Rear Bearing Production Change**—Double roller bearing used on pinion shaft on late 1948 Cars. *See "Buick Hypoid" in Rear Axle Section.*

▷**CAUTION**—Gear Set and Case Assembly on 1946-47 cars are heavier than parts used on 1942 cars. ***See Buick Rear Axle article in Rear Axle Section for parts identification and interchangeability data.***

Ratio—4.454-1: Std. 40, 50. 4.1-1: Std. 70 and Late Dynaflow, Optl. 40, 50. 3.9-1: Std. on Early Dynaflow. 3.64-1: Optl. 70.

Backlash—.006-.010". Screw adjustment.

Removal:—Hoist rear end of car. Disconnect parking brake at equalizer, hydraulic brake line at fitting anchored to left channel iron-strut, lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs (tie springs to bumper for clearance). Disconnect torque tube at universal joint ball, remove axle assembly from beneath car.

▷***CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).***

Torque Ball Adjustment—*See Buick Special Data.*

Axle Shaft Removal:—See Buick Rear Axle article.

Wheel Bearing Adjustment—None.

Rear Suspension: Coil springs & conventional axle. ***See Rear Axle Section for complete data.***

SHOCK ABSORBERS

Delco Model 1948-A (front), Model 2105-C,D (rear). Double acting, hydraulic (parallel cylinder rear).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs. ***See Front Suspension Section for complete data.***

Kingpin Inclination—4¼° crosswise for ⅜° Camber.

Camber—⅜° Positive (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ¾°. At curb weight.

Caster—⅜° Positive (¼° Pos. to 1½° Pos.) equal for both wheels within ½°. At curb weight. Adjustable.

Toe In—1/16-⅛". Adjust both tie rods equally.

Steering Geometry (Toe out on Turns)—With outer wheel turned 20°, inner wheel turned 21½° ± ¾°.

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type. ***See Steering Gear Section for complete data.***

BRAKES

Service: Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Parking "Step-on" lever applies rear wheel service brakes. ***See Brake Section for complete data.***

Drums—Cast Iron type. Diameter 12".

▷*BRAKE DRUM RECONDITIONING & BALANCING: See Brake Notes in Buick Special Data.*

Lining—Moulded type (all shoes). Width 1¾" (40, 50), 2¼" (70). Thick. 3/16". Lgth. per whl. 23 1/16". Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced against drum.

Hand (Parking) Brake: See Service Brakes (above).

NoRol: Optional. ***See Brake Section for complete data.***

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure). ***See Miscellaneous Section for complete data.***

HOOD ADJUSTMENT: *See Buick Special Data.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post and on right side of cowl.
1949 Numbers—First number for All Series:
1-5020984..... Flint
2-5030001..... Southgate
3-5036001..... Linden
4-5043001.... Kansas City
5-5050001.... Wilmington
6-5054001..... Atlanta
7-5057001.. Framingham
Identification—First digit of serial number indicates assembly plant as listed above.

ENGINE NUMBER: Stamped on boss on right side of crankcase below pushrod cover.
1949 Numbers—First numbers as follows:
52209724 (for 40), 52209725 (for 50), 52209727 (70).
Identification—Last digit of engine no. indicates Series: 4—Series 40, 5—Series 50, 7—Series 70.

TUNE-UP

COMPRESSION PRESSURE: 112 lbs. (40), 114 lbs. (50), 118 lbs. (Dynaflow 50, 70), at cranking speed.

VACUUM READING: Steady 18-20" idling at 8 MPH. or 450 RPM. for all models.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type—AC No. 48. 14 mm. Metric.

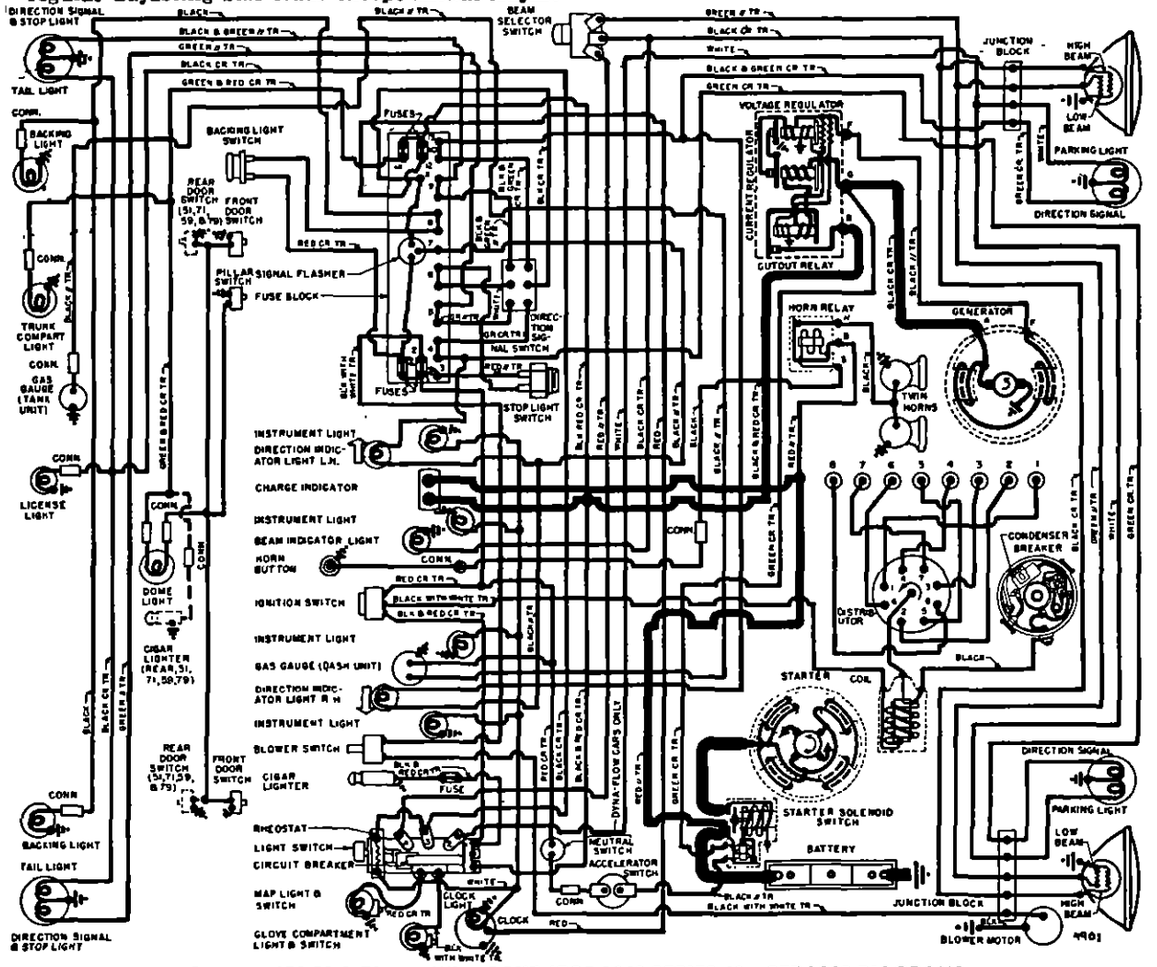
DISTRIBUTOR: Breaker Gap—.015" (.0125-.0175").
Cam Angle—Test limits with .016" gap—21-30°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
►***CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".***
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 4° BTDC. (40, 50), 6° BTDC. (70).
►***CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.***
Timing Procedure—*See Ignition Timing.*
Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.
Final Ignition Setting—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throtle.

CARBURETION:
Idle Setting (Carter)—⅞-1⅜ turns open (725S,SA); ¾-1¼ turns open (726S, SA); 1¼-1¾ turns open (882S); 1-1½ turns open (883S).
Idle Setting (Stromberg)—1¾ turns open.
Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM. (or 8 MPH. on level road in 3rd gear).
Float Level (Carter)—5/32" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection hole on side of float bowl with engine idling.
(Stromberg)—Fuel level 19/32" below top edge of float bowl or even with bottom of inspection hole on side of bowl with engine idling.
Accelerating Pump (Carter)—Two holes in arm. Inner hole minimum charge, Outer hole maximum.
(Stromberg)—3 holes. Center hole (med. stroke) normal setting.
Choke Setting (Carter): Centered (index mark on cover centered on reference mark on housing).
(Stromberg)—"V" mark on cover one graduation Lean or clockwise (40, 50), Centered (Series 70).
Throttle Linkage Adjustment & Dashpot Setting: *See CARBURETOR.*

Fuel Pump Pressure: 4½-5½ lbs. at the pump outlet, 4-5 lbs. at carburetor.

MANIFOLD HEAT CONTROL: Setting—Thermostatic coil wind-up ¼ turn at 70°F. (valve closed). To prevent valve rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending anti-rattle spring lower clip.



VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used,** Hydraulic & Conventional (*conventional type on Series 40 & 50 with synchro-mesh trans.,* Hydraulic type on Dynaflow cars).
Identification: *Hydraulic Type,* **Red lettering "BUICK FIREBALL"** on valve cover. *Conventional Type.* **Blue** lettering on valve cover.
►**HYDRAULIC TYPE SETTING:** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting ball studs except **Initial Adjustment** required when installing cylinder head or if ball studs disturbed.
►**Initial Adjustment**—*See "Valve System" in Buick Special Data.*
►**CONVENTIONAL TYPE SETTING:** To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM. min.) for 20 minutes with radiator cap removed, then adjust clearance **using .017" feeler gauge as "GO", .018" as "NO GO."**
Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116359 (40 LHD), 1116297 (40 RHD), 1116452 (50 & 70).
Ignition Lock—Briggs & Stratton or Delco-Remy. Buick No. 1393108.

COIL: Delco-Remy No. 1115328 (LHD), 1115026 (RHD).
Ignition Current—2½ amperes idling, 4½ stopped

CONTINUED ON NEXT PAGE

1949 SERIES 50 & 70 SHOWN ABOVE (FOR 1949 SERIES 40—SEE 1948 DIAGRAM)

CONTINUED FROM PRECEDING PAGE

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1110815. Automatic and vacuum advance type with new "center-bearing" breaker plate.

▷**Breaker Plate Bearing Assembly**—Plate rotates on 3 bakelite buttons on support plate with spring tension adjustment (shim washers) on underside of support plate. Pull required to move plate should be 8 oz. min., 16 oz. max. with breaker plate assembly out of housing.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—Test limits with .016" gap—21-30°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
▷*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*
Breaker Arm Spring Tension—19-23 ounces.
Rotation—Counter-clockwise viewed from above.

Distributor		Automatic Advance	Engine
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	2	500
7	400	14	800
13	1500	26	3000

Vacuum Spark Control: Delco-Remy No. 1116048.
Plunger Travel—⅛".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5½°	11°	10½-12½"

IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 40①, 50②	4° BTDC	.0063" BTDC.
Series 70②	6° BTDC	.0149" BTDC.

①—Regular Fuel. ②—Ethyl Fuel.

▷*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.*
Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.
Timing (With Synchroscope)—Connect synchroscope to #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at **speed not greater than 350 RPM.**, loosen two distributor hold-down screws, rotate distributor until "ADV" mark on flywheel (see Flywheel Mark Note above) lines up with indicator, tighten hold-down screws. Refer to Final Ignition Setting.
Timing (Without Synchroscope)—With #1 cylinder on compression, turn engine over until "ADV" mark on flywheel lines up with indicator in inspection hole in right front face of housing. Loosen two distributor hold-down screws, rotate distributor until contacts begin to open, tighten hold-down screws.
Final Ignition Setting—*Must be within yellow band of flywheel mark (leading edge desired).* If timing advanced, engine roughness may result even with high octane fuel. If timing retarded to overcome heavy "ping", engine performance and economy will be lessened (higher octane fuel should be used). A very light "ping" may occur with part throttle on a hard pull, or during acceleraion with wide open throttle between 10-20 MPH. Do not retard timing to eliminate this light "ping."

CARBURETOR

Carter WCD (All Series) or Stromberg AAV-167 (Series 40, 50), AAV-267 (Series 70). Dual downdraft types with Automatic Choke.

	Carter	Stromberg
Series 40, 50	WCD 663S	AAV-167 Code 7-69
Series 70	WCD 664S	AAV-267 Code 7-70

Casting No. (Carter)—546 (for 663S), 573 (664S) on face of flange.
Code No. (Stromberg)—Stamped either on body or on a metal tag attached to the body.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*
Metering Jets & Rods—*See Carburetor Section for Carter & Stromberg Jet Specifications.*

Throttle Linkage Adjustment (Synchro-Mesh Transmission): Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as *follows: With linkage disconnected at throttle operating* ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

▷**Throttle Linkage Adjustment (Dynaflow Drive Cars):** With engine idling at 450 RPM., clearance between **edge of bracket** (attached to dash at lower end of vertical equalizer shaft) and **ear on lever** (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever stop striking boss on carburetor). Check choke unloader operation. Check Dash-Pot Setting (following).

▷**Dash Pot Setting (Dynaflow Drive Cars):** Turn adjusting screw on lever ahead of dash pot plunger for 1/64-1/32" clearance between fast idle cam and fast idle screw with choke valve held closed.

Fast Idle: Carter Dual (WCD) Carburetor type or Stromberg Type (AAV-167, AAV-267 Carburetors).
See Carburetion Equipment Section for data.
Setting (Carter Carb.)—Adjust fast idle screw on throttle shaft lever for .015" (663S), .018" (664S) throttle opening with choke valve tightly closed and screw on "high" step of fast idle cam.
Setting (Stromberg)—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

Automatic Choke: Carter Climatic Control (Dual Carb.) or Stromberg AAV-16, AAV-26 Type.
See Carburetion Equipment Section for complete data.
Setting (Carter Carb.)—Centered (index mark on cover centered on reference mark on housing).
Setting (Stromberg)—"V" mark on cover one graduation Lean (40, 50), Centered (70).

CARB. EQUIPMENT

Air Cleaner: AC No. 1544236 (40, 50 incl. Early Dynaflow), 1544838 (50 Later Dynaflow), 1544239 (70).
Filter Element—AC No. 19 (all).
Servicing—Clean and refill with 1 pint of SAE No. 50 engine oil at 5000 mile intervals.

Fuel Pump: AC Type AJ, No. 1537337 (40, 50), 1537338 (70), diaphragm type fuel-and-vacuum pump.
Replacement Pump—AC No. 529 (40, 50), 530 (70).
Pressure—4½-5½ lbs. at fuel pump outlet port or 4-5 lbs. at carburetor inlet.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517078 (40), 1517040 (50, 70).
Tank Unit—AC No. 1516277 (40), 1517146 (50, 70).
See Carburetion Equipment Section for complete data.

BATTERY

Delco 15E4 (40, 50); 17E4 (70); 19E4 (Optl. 50, 70); 17K4 (Export 50, 70). 6 Volt, 15 plate (15E4), 17 plate (17E4, 17K4), 19 plate (19E4).
Grounded Terminal—Negative (—) to engine block.
Location—On right side under engine hood.

STARTER

Delco-Remy Model 1107049 (40 LHD), 1107078 (50 RHD), 1107953 (70 LHD), 1107057 (40, 50 RHD), 1107935 (70 RHD).
Armature—1867897 (Series 40, 50), 820158 (Series 70).
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces.
Cranking Engine (40, 50)—90-110 RPM., 150 amps., 4.5 volts.
(70)—105 RPM., 175 amperes, 5 volts.

Performance Data—1107049, 57, 78

Torque		R.P.M.	Volts	Amperes
0 ft. lbs		5000	5.7	80①
12	"	Lock	3.4	525

Performance Data—1107935, 53

0 ft. lbs		5500	5.7	80①
15	"	Lock	3.0	600

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118019 controlled by Stromberg Starter Switch No. 385000 (Cars with Stromberg Carb.), Carter Car Starter Model 192-11U (Cars with Carter Carb.).

▷*STROMBERG STARTER SWITCH CHANGES FOR IMPROVED PERFORMANCE: See "Stromberg Starter Switch" in Electrical Equipment Section.*
Starter Switch Setting: *See Electrical Equipment Section.*

▷**Dynaflow Neutral Safety Switch**—Delco-Remy No. 1997838. At lower end of steering column. Connected in starter control circuit so that starter operative only with lever in "N" Neutral or "P" Parking.

▷**Neutral Safety Switch Adjustment**—*See "Buick Dynaflow Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102679 (40), 1102709 (50), 1102708 (70). Two brush types with voltage & current regulation.
Armature—D-R 1877806 (1102679), 1912599 (1102708, 9).
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—(1102679) 34-36 amperes, 8.0 volts, 2600 RPM., 25 MPH. (1400 Eng. RPM), Hot.

(1102708, 9)—40 amperes, 8.0 volts, 2400 RPM., 25 MPH. (1250 Eng. RPM.), Hot.

Performance Data—Cold

	Amperes	Volts	R.P.M.
1102679	30①	8.0	1825
1102708, 9	40	8.0	1950

①—Not maximum output. See Current Regulator.

Brush Spring Tension—25 ounces each.
Field Current—1.75-1.9 amperes (for 1102679 generator), 1.90-2.05 amperes (1102708, 9), at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: ½" belt deflection with light pressure at point midway between generator and fan.

REGULATOR

Delco-Remy 1118301.....for 1102679 Generator
Delco-Remy 1118357.....for 1102708 & 9 Generators

►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs. *See Electrical Equipment Section for complete data.*

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustm't—*See Electrical Equip. Section.*

Current Regulator

Setting (1118301)—32-40 amps. hot (set at 36).
(1118357) 40-46 amps. hot (set at 42 amps. hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustm't—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—In upper edge of speedometer dial. Lighted when Upper (Country) Beam in use.

Direction Signal: Buick. *See Electrical Equip. Section.*
Direction Signal Indicators—Left and right arrows in left and right instrument clusters.

Switches

Lighting—D-R No. 1995016 (40), 1995031 (50, 70).
Beam Selector—D-R No. 1997008, 1997015 (RHD).
Instrument—(Series 40) Delco-Remy No. 1997762.
(Series 50 & 70) Part of Lighting Switch. Rheostat operated by turning Light Switch Knob.
Glove Box—D-R No. 1997747 (40), 1997771 (50, 70).
Direction Signal—(40) D-R 1995537, 1995538 (RHD).
(Series 50 & 70) D-R No. 1995529, 1995530 (RHD).
(Dynaflow) D-R No. 1995534, 1995545 (50 RHD).
Back-Up Light—Delco-Remy No. 1997825 (synchro-mesh transmission), 1997847 (for Dynaflow).

MISC. ELECTRICAL

►**DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS (SERIES 50 & 70):** Located on left side of dash under hood with removable plate screwed to dash.

THERMOSTATIC RELAY: Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

SERIES 40

FUSES: Clock—3 ampere SFE. In clock lead.
Instrument Lights—14 ampere SFE. On instr. switch.
Direction Signal—14 ampere SFE. In flasher lead.
Blower—14 ampere SFE. On back of switch.
Defroster—14 ampere SFE. On back of switch.

SERIES 50 & 70

►**FUSE BLOCK:** On lower flange of instrument panel at left of steering column. Four fuses:
1)—**Direction Signal.** 15 ampere 3AG for Dir. Sig. Lamps and Back-Up & Stop Lamps.
2)—**Dome.** 30 ampere SFE for Dome Lamp, Trunk Lamp, and Rear Cigar Lighter.
3)—**Blower.** 14 ampere SFE for Heater Blower.
4)—**Clock.** 3 ampere 1AG. Clock power.

HORNS: Delco-Remy No. 1999519 (Low Note—Right Horn), 1999520 (High Note—Left Horn). Vibrator type, blended tone, twin horns operated by relay.

	Current (at 6 Volts)	Air Gap
1999519 (Low Note)	19-21 amperes	.044-.049"
1999520 (High Note)	18-20 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap** .014" (contacts closed).

ENGINE

►**ENGINES WITH HYDRAULIC VALVE LIFTERS: Used on cars with Dynaflow Drive.** These engines use different camshaft, push rods, rocker arms, ball studs, and valve springs.
Identification—By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

ENGINE SPECIFICATIONS (for SERIES 40 and 50): Eight cylinder, Overhead Valve ("I" Head) type.
►**Bore**—3.091-3.094". *NOTE*—.010" Oversize production standard engine marked by stamped dash (—) approx. ¼" long following engine number.
Stroke—4⅛". **Displacement**—248.1 cu. ins.
Rated Horsepower—30.63.
Developed Horsepower—110 (40), 115 (50 std.), 120 (40, 50 with Dynaflow) at 3600 RPM.
Compression Ratio—6.3-1 (40), 6.6-1 (50 Synchro-Mesh), 6.9-1 (50 Dynaflow).

►**CYLINDER HEAD**—*CAUTION.* Two cylinder heads are used on Series 50. Different gasket and block combinations as follows:

	Head No.	Gasket No.	Thickness
40 Synchro-mesh	1336718	1333696	.050"
50 Synchro-mesh	1336718	1328773	.015"
50 Dynaflow	1338993	1328773	.015"

GASKET NOTE—Steelbestos gasket used on Series 40; Lacquered steel gasket used on Series 50.
NOTE—Cylinder Head on Series 50 (Dynaflow) is milled to provide higher compression ratio.
Compression & Vacuum Reading—*See Tune-Up.*

ENGINE SPECIFICATIONS (SERIES 70 Engines): Eight cylinder, Overhead Valve ("I" Head) type.
►**Bore**—3.436-3.439". *NOTE*—.010" Oversize production standard engine marked by stamped dash (—) approx. ¼" long following engine number.
Stroke—4 5/16". **Displacement**—320.2 cu. ins.
Rated Horsepower—37.81.
Developed Horsepower—150 at 3600 RPM.
Compression Ratio—6.9-1.
Compression & Vacuum Reading—*See Tune-Up.*

MANIFOLD GASKET INSTALLATION: *See "MANIFOLDS" in Buick Special Data.*

TIGHTENING TORQUES: *See Buick Special Data.*

CYLINDER HEAD INSTALLATION: *See Buick Special Data.*

"CONTROLLED FREQUENCY" ENGINE MOUNTINGS: *See Buick Special Data.*

PISTONS: Light weight, aluminum alloy, four ring, Turbulator top, cam ground, transverse slot type with Anodized finish.
Weight (stripped)—13.776 ozs. (40, 50), 17.94 ozs. (70).
Length—4 21/64" (40, 50), 4 9/16" (70).
Removal—Pistons and rods removed from above.
Clearance—See Fitting New Pistons below.

	Top Land	Top—Skirt—Bottom
Series 40, 50	.023-.030"	.0021" .0015"
Series 70	.026-.033"	.0023" .0017"

NOTE—Car manufacturer recommends reboring if taper exceeds .005", or out-of-round over .003".

Replacement Pistons: *See Buick Special Data.*

Fitting New Pistons: Use feeler stock ¼" wide (for "GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine center-line, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge as follows:

	Clearance Limits Top of Skirt	Feeler Gauges "GO"	Feeler Gauges "NO GO"
Series 40, 50	.0018-.0024"	.0015"	.002"
Series 70	.0020-.0026"	.0015"	.002"

Installing Pistons: Hollow side of head to camshaft.

PISTON RINGS: Two compression (upper inner edge stepped or beveled), one slotted oil ring in #3 groove, "Flex-fit" oil ring in #4 groove. All rings above pin. #1, #2, and #4 rings are coated.

Ring	Width	End Gap	Side Clearance
①Compr. (#1, 2)	3/32"	.010-.020"	.0015-.0035"
Oil (#3)	.1875"	.010-.020"	.0015-.003"
Oil (#4)	.1860"	②	.0015-.0035"

①—Wall thickness .160" Upper (40, 50), .140" Lower (40, 50); .170" Upper (70), .150" Lower (70).
②—End Gap .0015" (segmental). No checking or fitting required on this "Flex-fit" ring.

Replacement Rings: *See Buick Special Data.*

PISTON PIN: Clamped in rod (pin hole in new pistons diamond-bored and oil-grooved).
Diameter—.8124-.8129" (40, 50), .8744-.8749" (70).
Length—2 11/16" (40, 50), 3 1/16" (70).
Pin Fit in Piston—.0003-.0004" clearance or easy finger push fit at 70°F.

Replacement Pins: Std. and .003", .005" oversize. Pins fitted and furnished with new pistons (pistons not furnished without pins).

►**CONNECTING ROD (CAST BEARING): 1st 5000 Eng.**
Length—7⅝" (40, 50), 8¼" (70).
Weight—(40, 50) 1.779 lbs., (70) 2.224 lbs.
Crankpin Journal Diameter—(40, 50) 1.997-1.999". (70) 2.248-2.249".
Lower Bearing—Centrifugal cast (spun) babbitt.
Clearance—.0015-.002". **Sideplay**—.005-.010".
Bearing Adjustment: Shims. Do not file rods or caps. Remove shims until slight drag secured when rocking crankshaft or moving rod back and forth on

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

crankpin, then install 3 additional shims (shim pack should be equal on each side as near possible).

Replacement Rods & Bearings: *See Buick Special Data.*

Installing Rods: Ridge on edge of cap and boss in web of rod must be toward rear of engine. Oil hole in rod toward camshaft.

▷**CONNECTING ROD (REPLACEABLE PRECISION BEARING): After Approx. First 5000 Engines.**

Length—7⅝" (40, 50), 8¼" (70).

Weight—(40, 50) 1.804 lbs., (70) 2.224 lbs.

Crankpin Journal Diameter—(40, 50) 1.998-1.999". (70) 2.248-2.249".

Lower Bearing—Replaceable, precision type. No shims used.

Clearance—.0008-.0015" (new), .002" max. (used).

Sideplay—.005-.010".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: Undersize bearings marked with number on outer surface near tang indicating size. Furnished Std., .001", .002", .020", .021" Undersize.

Installing Rods: Same as for Cast Bearing type above.

▷**SERIES 40, 50 CRANKSHAFT PRODUCTION CHANGE:** Crankpin (connecting rod bearing) diameter changed when new type "full-precision" no-shim bearings used. *See Connecting Rod data (above).*

CRANKSHAFT: Five bearing, counterweighted type.

▷*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

▷*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

Journal Diameters—(40, 50) #1, 2.3105-2.3125"; #2, 2.3735-2.3745"; #3, 2.4355-2.4365"; #4, 2.4985-2.4995"; #5, 2.5605-2.5615".

(Series 70) #1, 2.5605-2.5615"; #2, 2.6235-2.6245"; #3, 2.6855-2.6865"; #4, 2.7485-2.7495"; #5, 2.8105-2.8115".

NOTE—Car manufacturer recommends crankshaft be replaced or reground if journal out-of-round over .0015".

Bearings—Steel-backed, Durex 100-A, slip-in type.

NOTE—Bearings "full-precision" (no shim) type.

Clearance—.0008-.0015" (new), .002" max. (used).

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

▷*CAUTION*—Arrow on main bearing caps must point toward front of engine when installed.

Replacement Bearings: Standard and .0012", .002", .020", .022" Undersize.

Rear Bearing Oil Seal Installation: *See Buick Special Data.*

End Thrust: #3 (center bearing). **Endplay** .004-.008".

CAMSHAFT: 5 bearing .Non-adjustable chain drive.

▷*CAUTION—Two types of camshafts used,* one for engines with plain sleeve valve lifters, one for engines with hydraulic valve lifters (identified by ½" wide machined cut 60% around shaft between #6 & #7 cams). *Engine operation will be rough and noisy if shafts are interchanged on either engine.*

Bearing Diameters (for All Series)—#1, 2 5/32"; #2, 2 1/8"; #3, 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

Bearings—Steel-backed, babbitt-lined.

Clearance—.0005-.0035". NOTE—Replacement bearings must be line reamed after installation.

End Thrust: Spacing ring between front bearing journal and thrust plate (on front of crankcase behind camshaft sprocket). **Endplay**—.004-.008".

Timing Chain: Link Belt. Width 1". Pitch .500". Length (40, 50) 49 links or 24½", (70) 50 links or 25".

Camshaft Setting: Mesh copper-plated washers on chain (10 links apart) with sprocket marks (crankshaft and camshaft turned so that marks are up).

▷**VALVES:** *CAUTION*—**Engines with hydraulic valve lifters** use different camshaft, push rods, rocker arms, ball studs, and valve springs.

VALVE SPECIFICATIONS—SERIES 40 & 50

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	5 7/64"
Exhaust	1 11/32"	.3711-.3719"	5 7/64"
	Seat Angle	**Lift**	**Stem Clearance**
Intake	45°	.348"	.0025" (.0015-.0035")
Exhaust	45°	.342"	.003" (.0021-.0039")

Valve Seat Width—Nominal width .062" (1/16"). Seats wider than 5/64" should be narrowed down using proper 20° and 70° cutters.

VALVE SPECIFICATIONS—SERIES 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3715-.3725"	5 1/4"
Exhaust	1 7/16"	.3711-.3719"	5 1/4"
	Seat Angle	**Lift**	**Stem Clearance**
Intake	45°	.347"	.0025" (.0015-.0035")
Exhaust	45°	.348"	.003" (.0021-.0039")

Valve Seat Width—Nominal width .062" (1/16"). Seats wider than 5/64" should be narrowed down using proper 20° and 70° cutters.

Valve Guides: Upper end of guide 1 5/32" above head. Finish ream replacement guides after installation to .374-.375" (use Valve Guide Reamer J129-3).

▷**Valve Springs:** *CAUTION*—Engines with hydraulic valve lifters use different valve springs.

Free Length—1 29/32" (inner), 2 11/32" (outer).

VALVE SPRING SPECIFICATIONS

▷**ENGINES WITH ADJUSTABLE VALVE LASH**

	Inner Spring			Outer Spring		
	Lbs. Press.		Lgth.	Lbs. Press.		Lgth.
Closed	17½-22½	—1	21/32"	29½-34½	—1	15/16"
Open	48-54	—1	5/16"	74-80	—1	19/32"

▷**ENGINES WITH HYDRAULIC VALVE LIFTERS**

Closed	22-26	—1	21/32"	49-55	—1	15/16"
Open	49-55	—1	5/16"	116-124	—1	19/32"

Valve Lifters (Engines with Adjustable Valve Lash): Plain sleeve, barrel type. Diameter .9975-.9985" **Clearance in Crankcase**—.0005-.0025".

Hydraulic Valve Lifters (Dynaflow Cars): *See "Valve System" in Buick Special Data.*

Identification—By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

▷*CAUTION*—If lifter operating properly, DO NOT disassemble when removed from engine for other work (wrap in clean paper to keep dirt out).

▷**Initial Adjustment (required only when installing cylinder head or when adjusting ball stud setting has been disturbed):** *See "Valve Tappet Clearance" in Buick Special Data.*

Rocker Arms: *CAUTION*—Engines with hydraulic valve lifters use different rocker arms and ball studs. Rocker arms used with hydraulic valve lifters do not have small oil hole on underside of arm. Ball studs used with hydraulic lifters have drilled oil hole in center for lifter oil feed (through pushrod).

Rocker Arm Installation—*See Buick Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used,** Hydraulic & Conventional (conventional type on Series 40 & 50 with synchro-mesh trans., Hydraulic type on Dynaflow cars).

Identification: *Hydraulic Type,* **Red lettering "BUICK FIREBALL"** on valve cover. *Conventional Type.* **Blue** lettering on valve cover.

▷**HYDRAULIC TYPE SETTING:** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting ball studs except **Initial Adjustment** required when installing cylinder head or if ball studs disturbed.

▷**Initial Adjustment**—*See "Valve Tappet Clearance" in Buick Special Data.*

▷**CONVENTIONAL TYPE SETTING:** To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM. min.) for 20 minutes with radiator cap removed, then adjust using .017" feeler gauge "GO," .018" "NO GO."

Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

Valve Timing: See Camshaft Setting above.

VALVE TIMING—SERIES 40 & 50

Intake Valves—Open 13° BTDC. Close 68° ALDC.
Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

VALVE TIMING—SERIES 70

Intake Valves—Open 14° BTDC. Close 71° ALDC.
Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

Valve Timing Check—For engines with adjustable valve lash set tappet clearance for .015" road operating lash (see above), on engines with hydraulic lifters run engine for approx. 1 minute to fill lifters with oil. #2 or #7 exhaust valve should be .145" open (Series 40 & 50), .155" open (Series 70), with #1 & #8 pistons at top dead center and flywheel mark "UDC/1&8" visible through inspection hole in right front face of housing. NOTE—This is actual valve opening and should be checked with dial indicator mounted on cylinder head.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and restricted flow to rocker arm bearings, push rods and hydraulic valve lifters. *NOTE*—Valve system feed taken from outlet side of oil filter.

Crankcase Capacity—Refill—5½ qts. (40, 50), 7 (70). **Dry Capacity**—6½ qts. (40, 50), 8 qts. (70).

NOTE—If oil filter is dry add 1½ qts. to capacities.

Normal Oil Pressure—35 lbs. at 35 MPH.

Oil Pressure Regulator—Non-adjustable spring and valve type on oil pump. Opens at 35 lbs.

Oil Pump: Helical gear type in crankcase.

Oil Pump Clearances—*See Buick Special Data.*

Crankcase Ventilation: Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

Oil Filter: AC with by-pass valve (opens 7-9 lbs.).

Filter Element—AC No. P-127 folded paper low-restriction type. CAUTION—Element not inter-

changeable with 1948 type. Change element 1st 2000 & 5000 miles, then every 5000 miles.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Re-circulation of water through engine (with thermostat closed) permitted by fixed bypass passage.

Capacity—No Heater—(Series 40 and 50) 13 qts., (40 & 50 Dynaflow) 14 qts., (70) 16¾ qts.

With Heater—Add 1¼ qts. to above capacities.

►**Pressure Valve**—*CAUTION—Two types used:*

1)—AC No. 850563—*7 lb. type.* For all Series 40 & 50, and Series 70 after Serial Nos. below.

2)—AC No. 850559—*13 lb. type.* For Series 70 UP TO Serial Numbers: Flint 15122924, California 25093697, Linden 35099981, Kansas City 45107724, Wilmington 55112152, Atlanta 65116047, Framingham, 75118525.

Water Pump: Packless, sealed ball-bearing type.
See Water Pump Section for complete data.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head water outlet. Buick No. 3122282 Std. 151°, No. 3122285 Hi. T. 182°. Setting—(151°) starts to open 148-155°F. Fully open not over 175°F.

Temperature Gauge: AC No. 1512091 (40), 1512013 (50, 70). Thermo (not electric) gauge.
See Miscellaneous Section for complete data.

CLUTCH

Own "Crown Spring" with Borg & Beck or Long Driven Member. Single plate, dry disc type.
See Clutch Section for complete data.

Facings—Woven type, 2 used. Inside diameter 6". Outside Diameter 10". Thickness .125" (⅛").

Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toeboard.

►**Correction of Low & Reverse Gear Clash due to Spinning Clutch Plate**—Car manufacturer permits reducing pedal lash to ½" in exceptional cases where gear clash continues (with regular ¾-1" lash) beyond normal plate stopping period.

Clutch Over-Center Spring Installation & Adjustment: *See Clutch Notes in Buick Special Data.*

Removal: Remove Rear Axle and Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

Clutch Yoke Boot Installation—See Clutch Notes in Buick Special Data.

TRANSMISSION
SYNCHRO-MESH

Own Make. All Helical Gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with steering column mounted shift control. *See Transmission Section for complete data.*

Transmission Control: Buick type remote control.
See Transmission Section for complete data.

Removal: Disconnect Rear Axle (see data following), disconnect the speedometer cable, lower gear shift rod, and selector rod. Take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Install the special engine support bar under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out 2 attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

For instructions on shimming Rear Mounting when installing transmission, see "Engine Mounting" in Buick Special Data.

Lubrication Note—When transmission reinstalled in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNAFLOW DRIVE

Own Make. Torque Converter and hydraulically operated planetary unit with manual control.
See Transmission Section for complete data including Testing & Trouble Shooting.

►*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

►*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

►**Dynaflow Production Changes & Interchangeability Data for new type parts**—*See "Buick Dynaflow" in Transmission Section.*

Dynaflow Linkage Adjustment: *See "Buick Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment & Dashpot Setting: See CARBURETOR.

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

►*Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A".*

Capacity—(50) 8½ quarts, (70) 10 quarts.

Draining & Refilling—*See "Buick Dynaflow Drive" in Transmission Section.*

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) & transmission oil warm. Raise right side of floor mat, take off cover in floor above transmission, lift out oil gauge rod. Add fluid to "FULL" mark level with engine idling.

►**Late 1949 Cars**—Oil gauge rod under right side of hood between battery and engine.

►*CAUTION—Engine must be idling with transmission in Parking position and transmission oil warm when checking Dynaflow Drive Fluid Level.*

Removal: *See "Buick Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw (All Series) or Spicer (Series 40 & 50). One used (in torque ball at rear of transmission).

►**Torque Ball Adjustment**—*See Buick Special Data.*

REAR AXLE

Own Make. Hypoid Gear, semi-floating type with Torque Tube Drive. *NOTE*—Pinion rear bearing now consists of 2 roller bearings (formerly one).
See Rear Axle Section for complete data.

Ratio—4.454-1 (49:11) Std. 40 & All 50.

4.1-1 (41:10) Std. 70, Optl. 40 & 50 S-M trans.

NOTE—Stamped nos. under housing indicate ratio.

Backlash—.008-.010" (desired), .008-.012" (limits).

Removal: Raise rear end of car and set on car stands. Disconnect parking brake cable at rear brake sheave and at bracket of front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball.

►*CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).*

Torque Ball Adjustment—*See Buick Special Data.*

Axle Shaft Removal: *See Rear Axle Section.*

Wheel Bearing Adjustment—None.

Rear Suspension: Coil springs & conventional axle.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco Model 1948-A (front), Model 2105-C, D (rear). Double acting, Hydraulic (parallel cylinder rear).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

Kingpin Inclination—4¼° crosswise for ⅜° Camber.

Camber—⅜° Positive (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ¾ °at curb weight.

Caster—¾° Positive (1¼° Pos. to 1½° Pos.) equal for both wheels within ½° at curb weight. Adjustable.

Toe In—1/16-1/8". Adjust both tie rods equally.

►*CAUTION*—Tie rod clamps must be within ⅛" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".

Steering Geometry (Toe Out on Turns)—With outer wheel turned 20°, inner wheel turns 21½° ± ¾°.

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type **without Eccentric Adjustment.** Parking brake "Step-on" lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Cast-iron with steel flange. Drum diameter 11.997-12.003". Max. rebore .060" O.S. (.030" cut).

►*BRAKE DRUM RECONDITIONING & BALANCING: See Brake Notes in Buick Special Data.*

Lining—Moulded. Width (40, 50) 1¾", (70) 2¼". Thickness 3/16". Length per shoe: Primary (40, 50) 9 15/16", (70) 10"; Secondary: (40, 50) 12 3/4", (70) 12 15/16".

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Step On (Parking Brake): See Service Brakes (above).

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type.
See Miscellaneous Section for complete data.

Windshield Wiper: Cable Operated—Vacuum type.
See Miscellaneous Section for complete data.

HOOD ADJUSTMENT: *See Buick Special Data.*

MODEL IDENTIFICATI N

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post and stamped on left front frame side rail.

1950 Numbers—First numbers:

1-5360001..... Flint	5-5388001.... Wilmington
2-5370001..... Southgate	6-5393001..... Atlanta
3-5374001..... Linden	7-5397001.. Framingham
4-5380001.... Kansas City	

1951 Numbers—First numbers:

1-6031301 ..... Flint	5-6070001 .. Wilmington
2-6050001 .... Southgate	6-6075001 ..... Atlanta
3-6055001 ..... Linden	7-6080001 ..Framingham
4-6061001 ..Kansas City	

Identification—First digit of serial number indicates assembly plant as listed above.

ENGINE NUMBER: Stamped on boss on right side of crankcase below pushrod cover.

Series	1950 Starting Number	1951
40	55680004	62401004
50	56247345	62401005
70	56350217	62401007

Identification—Last digit of engine no. indicates Series: 4—Series 40, 5—Series 50, 7—Series 70.

TUNE-UP

►*AIR CLEANER BLOW-UP PREVENTION: See "Carter WCD" and "Stromberg AAUVB & AAVB" in Carburetor Section.*

COMPRESSION PRESSURE:

	Std.	Dynaflow Cars
Series 40	114 lbs.	120 lbs.
Series 50	118 lbs.	120 lbs.
Series 70		120 lbs.

VACUUM READING: Steady 18-20" idling at 8 MPH. or 450 RPM.

FIRING ORDER: 1-6-2-5-8-3-7-4. See Diagram.

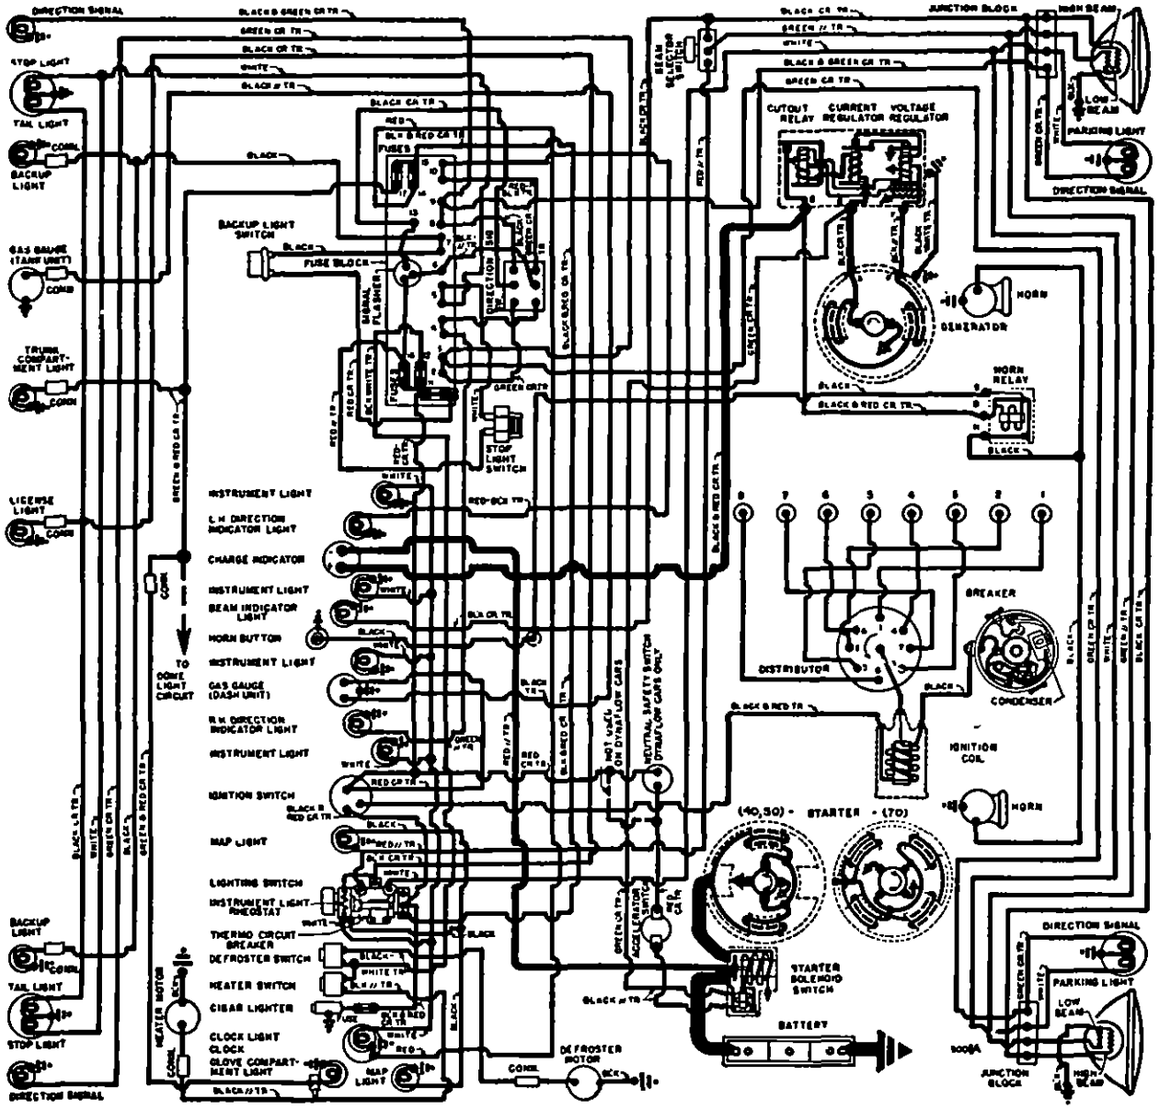
SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type—AC No. 46X. 14 mm. Metric.

DISTRIBUTOR: Breaker Gap—.015" (.0125-.0175").
Cam Angle—Test limits with .016" gap—21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*

►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*
Breaker Arm Spring Tension—19-23 ounces.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 4° BTDC. (40, 50), 6° BTDC. (70).

►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.*
Flywheel Mark—"ADV. 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.
Timing Procedure—*See Ignition Timing.*
Final Ignition Setting—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH. with wide open throttle.



CARBURETION: CARTER "WCD"

►*CARBURETOR VENTING TO PREVENT AIR CLEANER "BLOW-UP": See "Carter WCD" in Carburetor Section.*

►*725S & 726S CARBURETOR PRODUCTION CHANGE—Superseded Late 1950 by 725SA & 726SA. (To correct gasoline odors noticeable in car). See Carburetor Section for complete data.*
Idle Setting—Both screws 1 turn open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM. (or 8 MPH. on level road in 3rd gear).
Float Level—5/32" from top of each float to gasket seat on cover with valve seated (invert to check).
Fuel Level—Even with bottom of inspection hole on side of float bowl with engine idling.
Accelerating Pump—Two holes in arm. Inner hole minimum charge. Outer hole maximum charge.
Fast Idle Setting: Adjust fast idle screw on throttle shaft lever for throttle opening of .015" (All carburetors except 882S, SA), .012" (882S, SA) with choke valve closed and screw on high step of fast idle cam.
Automatic Choke Setting: 1 Point Rich (all models). *See Stromberg carburetor data (following).*
Throttle Linkage Adjustment & Dashpot Setting:
Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor.

CARBURETION:
STROMBERG "AAUVB" & "AAVB"

►*CARBURETOR VENTING TO PREVENT AIR CLEANER "BLOW-UP": See "Stromberg AAUVB & AAVB" in Carburetor Section.*

1950 MODELS

Idle Setting—1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Float Level—(On gauge No. T-24971), 5/64" above top of gauge guides.

Fuel Level—(Checked thru inspection hole). **Early type** with plain inspection hole boss, fuel should be **1/32"-1/16"** below bottom of threads on inspection hole. **Later type** with ¼" long horizontal rib on each side of hole boss, fuel should be **even** with bottom of threads in inspection hole.

Accelerating Pump—3 holes. Center hole (med. stroke) normal setting.

►*PUMP LEVER SPRING PRODUCTION CHANGE—See Carburetor Section for complete data.*

Fast Idle Setting: With choke valve closed against #53 drill, bend fast idle cam rod so that locking lever on throttle shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

Automatic Choke Setting: Centered (all models). *See Carburetion Equipment Section for complete data.*

Throttle Linkage Adjustment (Synchro-Mesh Transmission): Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

►**Throttle Linkage Adjustment (Dynaflow Drive Cars):** With engine idling at 450 RPM., clearance between **edge of bracket** (attached to dash at lower end of vertical equalizer shaft) and **ear on lever** (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever stop striking boss on carburetor). Check choke unloader operation. Check Dash-Pot Setting (following).

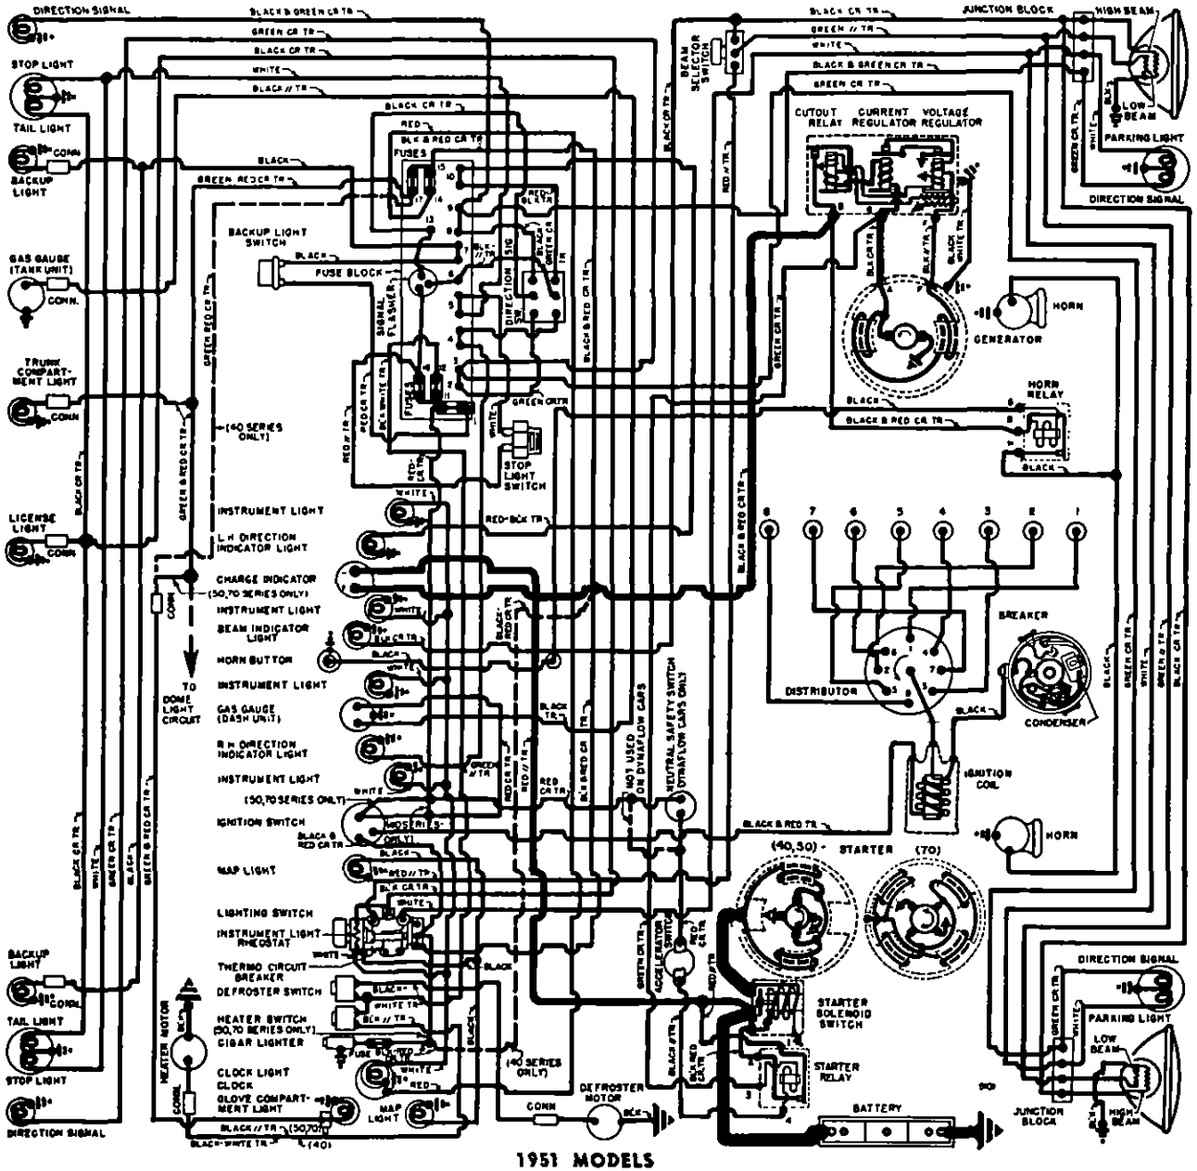
Dash Pot Setting: (Dynaflow cars). Hold choke valve in fully closed position. Insert .030" feeler gauge between the fast idle cam (at the widest part) and the idle adjusting screw. Turn the adjusting screw on the lever (ahead of the dash pot plunger) until it just contacts the dash pot plunger.

Fuel Pump Pressure: 4½-5½ lbs. at the pump outlet, 4-5 lbs. at carburetor.

MANIFOLD HEAT CONTROL: Setting—Thermostatic coil wind-up ¼ turn at 70°F. (valve closed). To prevent rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending anti-rattle spring lower clip.

VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used,** Hydraulic & Conventional (conventional type on Series 40 with synchro-mesh trans. only. Hydraulic type on all other cars). **Identification: Hydraulic Type, Red** lettering **"BUICK FIREBALL"** on valve cover. **Conventional Type, Blue** lettering on valve cover.

►**HYDRAULIC TYPE SETTING:** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting ball studs. **Initial Adjustment** required when installing cylinder head or if ball studs disturbed.



►**Initial Adjustment**—*See "Valve System" in Buick Special Data.*

►**CONVENTIONAL TYPE SETTING:** To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM. min.) for 20 minutes with radiator cap removed, then adjust clearance **using .017" feeler gauge as "GO", .018" as "NO GO."**

Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

1951 MODELS

IGNITI N

IGNITION SWITCH: Delco-Remy No. 1116452.
Ignition Lock—(Series 40 1950, Series 50, 70 1950-51) **Buick No. 1393108,** (Series 40 1950) **Buick No. 1390644.**

COIL: Delco-Remy 1115328. On pushrod cover.
Ignition Current—2½ amperes idling, 4½ stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18- 23 microfarad.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

DISTRIBUTOR: Delco-Remy 1110815. Automatic and vacuum advance type with new "center-bearing" breaker plate.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—Test limits with .016" gap—21-30°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*
Breaker Arm Spring Tension—19-23 ounces.
Rotation—Counter-clockwise viewed from above.

Distributor Automatic Advance		Engine	
Degrees	R.P.M.	Degrees	R.P.M.
Start	250	2	500
7	400	14	800
13	1500	26	3000

Vacuum Spark Control: Delco-Remy No. 1116046.
Plunger Travel—⅛".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
5½°	11°	10½-12½"

IGNITI N TIMING

Std. Setting	Flywheel Degrees	Piston Pos.
Series 40①, 50②	4° BTDC	.0063" BTDC.
Series 70②	6° BTDC	.0149" BTDC.

①—Regular Fuel. ②—Ethyl Fuel.
►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance.*
Flywheel Mark—"ADV 4°" (for 40, 50), "ADV. 6°" (for 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for 40, 50; 6-7° for 70). Index mark located on edge of timing hole under cover on housing above starter.
Timing (With Synchroscope)—Connect synchroscope to #1 spark plug lead, direct light on flywheel through inspection hole in right front face of housing. Idle engine at **speed not greater than 350 RPM.**, loosen two distributor hold-down screws, rotate distributor until "ADV" mark on flywheel (see Flywheel Mark Note above) lines up with indicator, tighten hold-down screws. Refer to Final Ignition Setting.
Final Ignition Setting—*Must be within yellow band of flywheel mark (leading edge desired).* If timing advanced, engine roughness may result even with high octane fuel. If timing retarded to overcome heavy "ping", engine performance and economy will be lessened (higher octane fuel should be used). A very light "ping" may occur with part throttle on a hard pull, or during acceleration with wide open throttle between 10-20 MPH. Do not retard timing to eliminate this light "ping."

CARBURETOR

CARTER

Carter WCD. 1⅛" (40, 50), 1¼" (70) Dual downdraft type with automatic choke.

Model	Carter Carburetor No.
1950 & Early 1951 Series 40, 50	725S, SA
1950 & Early 1951 Series 70	726S, SA
Late 1951 Series 40, 50	882S, SA
Late 1951 Series 70	883S

►*CARBURETOR VENTING TO PREVENT AIR CLEANER "BLOW-UP" (except 882SA): See "Carter WCD" in Carburetor Section.*
►*725S & 726S CARBURETOR PRODUCTION CHANGE—Superseded Late 1950 by 725 SA & 726 SA.(To correct gasoline odors noticeable in car). See Carburetor Section for complete data.*
Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*
Metering Jets & Rods—*See Carburetor Section for Carter Jet Specifications.*
Fast Idle: Carter Dual (WCD) Carburetor Type.
Setting—Adjust fast idle screw for throttle opening of .015" (All carburetors except 882S, SA), .012" (882S, SA) with choke valve closed and screw on high step of fast idle cam.
See Carburetion Equipment Section for complete data.
Automatic Choke: Carter Climatic Control.
Setting—1 Point Rich (all models).
See Carburetion Equipment Section for complete data.
See Carburetion Equipment Section for complete data.
Throttle Linkage Adjustment & Dashpot Setting: *See TUNE-UP data.*

STROMBERG

Stromberg AAUVB-267 (Series 40, 50), AAVB-267 (70). 1⅛" (40, 50), 1¼" (70) Dual downdraft types with Automatic Choke.

Model	Stromberg Code No.
1950-51 Series 40, 50	7-88, 7-88A, 7-88B
1950-51 Series 70	7-89, 7-89A, 7-89B
Late 1951 Series 40, 50	7-90, 7-90B
Late 1951 Series 70	7-91, 7-91A

►*CARBURETOR VENTING TO PREVENT AIR CLEANER "BLOW-UP": See "Stromberg AAUVB & AAVB" in Carburetor Section.*
See Carburetor Section for complete data.
►*PUMP LEVER TORSION SPRING PRODUCTION CHANGE—See Carburetor Section for complete data.*
Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*
Metering Jets—*See Stromberg Jet Specifications in Carburetor Section.*
Fast Idle: Stromberg AAUVB & AAVB type.
Setting—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever behind fast idle cam as throttle opened and closed.
See Carburetion Equipment Section for complete data.
Automatic Choke: Stromberg type.
Setting—Centered.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: (Series 40,50) AC No. 1544638. **(70)** 1544639. Oil Bath Type.
►*AIR CLEANER "BLOW-UP" PREVENTION: See "Carter WCD" and "Stromberg AAUVB & AAVB" in Carburetor Section for venting of carburetors.*
Fuel Pump: AC. Combination fuel & vacuum type.
Replacement Pump (Series 40, 50) AC No. 529. **(70)** 530.
Pressure—4½-5½ lbs. at fuel pump outlet, or 4-5 lbs. at carburetor.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517040.
Tank Unit—AC No. 1517200.
See Carburetion Equipment Section for complete data.

BATTERY

Series 40, 50 Delco Type 15E4W. 6 volt, 15 plate, 100 ampere hour capacity. (20 hour rate).
(70) 17E6W. 6 volt, 17 plate, 120 ampere hour capacity. (20 hour rate).
Grounded Terminal—Negative (—) to engine block.
Location—Under hood, right side.

STARTER

Delco-Remy	Starter No.	Armature No.
1950 Series 40, 50	1107078①	1917855
1950 Series 70	1107953	1867897
1951 Series 40, 50	1107097, 1107110②	1917855
1951 Series 70	1107981	1912697

①—No. 1107057 (RHD. Cars).
②—Nos. 1107098 & 1107114 (Series 50 RHD.).
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ounces.

Performance Data
1107057, 78, 97, 98, 110, 114

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 "	Lock	3.25	550

Performance Data—1107953, 81

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid Switch No. (1950) 1118019, (1951) 1118148, controlled by Stromberg Starter Switch No. 385000 (1950), 385611 (1951) or Carter Car Starter No. 192-11U. Solenoid Relay is integral (1950), separate Delco-Remy No. 1116855 (1951).
►*1950 STROMBERG STARTER SWITCH CHANGES FOR IMPROVED PERFORMANCE: See "Stromberg Starter Switch" in Electrical Equipment Section.*
►*1951 STARTER RELAY "STICKING" CORRECTION—See "Electrical System Notes" in Buick Special Data.*
Starter Switch Setting—*See "Carter Car Starter" and "Stromberg Starter Switch" in Electrical Equipment Section.*
►**Dynaflow Neutral Safety Switch**—Delco-Remy No. 1997838 (1950), 1998023 (1951). Connected in starter circuit so starter operative only with lever in "N" Neutral or "P" Parking position.
►**Neutral Safety Switch Adjustment**—*See "Buick Dynaflow Drive" in Transmission Section.*

GENERATOR

Delco-Remy	Generator No.	Armature No.
1950 All Series	1102709	1912599
1951 Early	1102754	1912599
1951 Later	1102774	

Two brush type with voltage & current regulation.
Charging Rate Adjustment. None. See Regulator.

Performance Data—Cold

	Amperes	Volts	R.P.M.
1102709, 1102754	40①	8.0	2150
1102774	45①	8.0	2450

①—Not maximum output. **See Current Regulator.**
Brush Spring Tension—28 ozs. each.
Field Current—1.87-2.0 amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: ½" belt deflection with light pressure at point midway between generator and fan.

REGULATOR

Delco-Remy	Regulator No.	For Gen. No.
1950-51	1118364	1102709, 54
Late 1951	1118729	1102774

►*REGULATOR NON-INTERCHANGEABILITY CAUTION—45-ampere Regulator must not be used with previous 40-ampere generator.*
See Electrical Equipment Section for complete data.

Cutout Relay
Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustm't—*See Electrical Equip. Section.*

Current Regulator

Setting (1118364)—40-46 amperes hot (set to 42).
Setting (1118729)—45-51 amperes hot (set to 47).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustm't—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—In upper edge of speedometer dial.
Direction Signal: Buick. *See Electrical Equip. Section.*

Switches

Lighting—Delco-Remy No. 1995045, (Except early 1950 Series 40; Delco-Remy No. 1995044).
Beam Selector—Delco-Remy No. 1997008.
Directional Signal—Delco-Remy No. (1950 Dynaflow) 1995546, (1950 Synchro-mesh) 1995547). (1951 Series 40 optional & Series 50) 1995561, (1951 Series 70) 1995562.

MISC. ELECTRICAL

►**DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENT PANEL:** *Located on left side of dash under hood with* removeable plate screwed to dash.

THERMOSTATIC RELAY: Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

FUSE BLOCK: On lower flange of instrument panel at left of steering column. Five fuses:
1)—**Dome, Glove Box, & Trunk Lights.** 30 ampere.
2)—**Clock.** 3 ampere.
3)—**Defroster and Heater.** 30 ampere.
4)—**Direction Signal and Stop Lamp.** 14 ampere.
5)—**Back-Up Lights.** 14 ampere.

HORNS: Delco-Remy No. 1999649 or 1999669 (Low Note), 1999650 or 1999670 (High Note). Twin Horns.

	Current (at 6 volts)	Air Gap
Low Note	19-21 amperes	.044-.049"
High Note	18-20 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027". **Air Gap**—.014" (contacts closed)

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder, in line, with overhead valves.

Series	Bore	Stroke	Displacement
40 (1950)	3 3/32"	4 1/8"	248.1 cu.in.
40 (1951)	3 3/16"	4 1/8"	263.3 cu. in.
50 (1950-51)	3 3/16"	4 1/8"	263.3 cu. in.
70 (1950-51)	3 7/16"	4 5/16"	320.2 cu. in.

Series	Rated HP	Comp. Ratio	Dev. HP①
40 (1950)	30.63	6.6-1	115
40 (1950)	30.63	7.2-1②	122
40 (1951)	32.51	6.6-1	120
40 (1951)	32.51	7.2-1②	128
50 (1950-51)	32.51	6.9-1	124
50 (1950-51)	32.51	7.2-1②	128
70 (1950-51)	37.81	7.2-1	152

①—At 3600 R.P.M. ②—With Dynaflow.

►*NOTE*—.010" oversize bore production engines are marked by stamped dash (—) approx. ¼" long following engine number.

►**SERIES 40 ENGINE (Synchro-mesh).** These engines are equipped with conventional type valve lifters, and use different camshaft, push rods, rocker arms, ball studs, and valve springs.
Identification: Conventional type lifters, Blue lettering "BUICK FIREBALL" on valve cover. **Hydraulic lifters, Red** lettering.

►**CYL. HEAD PARTIAL PRODUCTION CHANGE (1951 Series 40 & 50)**—A lower compression cylinder head is used with CAST IRON PISTONS. This head is .020" thicker than the standard head and is identified by letter "L" stamped on right front side under overhead oil line fitting. *CAUTION—This head continued in production after use of Aluminum Pistons resumed. See PISTONS below.*

►**CYLINDER HEAD:** *CAUTION*—**Different head and gasket combinations used for each particular compression ratio:**

Series	Head No.	Gasket Thickness	Comp. Ratio
40 (1950)①	1340248	.050"	6.6-1
40 (1950)②	1340830	.015"	7.2-1
40 (1951)①	1340248	.075"	6.6-1
40 (1951)②	1340248	.015"	7.2-1
50 (1950-51)①	1340248	.050"	6.9-1
50 (1950-51)②	1340248	.015"	7.2-1
70 (1950-51)②	1340868	.050"	7.2-1

①—Synchro-mesh. ②—Dynaflow.

MANIFOLD GASKET INSTALLATION: *See "MANIFOLDS" in Buick Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Buick Special Data.*

"CONTROLLED FREQUENCY" ENGINE MOUNTINGS: *See Buick Special Data.*

COMPRESSION & VACUUM READINGS: *See Tune-Up.*

PISTONS: Light weight, aluminum alloy, four ring, Turbulator top, cam ground, transverse slot type, with Anodized finish.

►*CAST IRON PISTON PARTIAL PRODUCTION CHANGE*—Cast iron pistons used in partial production on 1951 Series 40 & 50 engines. Cast iron pistons MUST NOT BE INTERMIXED with Aluminum Pistons in an engine. *See CYLINDER HEAD data above.*

►*CAST IRON & ALUMINUM PISTON IDENTIFICATION & REPLACEMENT PARTS CAUTIONS: See "Pistons" in Buick Special Data.*

►*CAUTION—Cast iron pistons must not be used with connecting rods designed for aluminum pistons. See CONNECTING RODS.*

Series	Weight (Stripped)	Length
40 (1950)	13.776 oz.	4 21/64"
40 (1951)	12.912 oz.	3 49/64"
50 (1950-51)	12.912 oz.	3 49/64"
70 (1950-51)	17.94 oz.	4 5/8"

Removal—Pistons and rods removed from above.
Clearance—See Fitting New Pistons below.

	Top Land	Top—Skirt—Bottom
Series 40, 50	.023-.030"	.0021" .0015"
Series 70	.026-.033"	.0023" .0017"

NOTE—Car manufacturer recommends reboring if taper exceeds .005", or out-of-round over .003".

Replacement Pistons: *See Buick Special Data.*

Fitting New Pistons: Use feeler stock ¼" wide (for "GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine center-line, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge as follows:

	Clearance Limits Top of Skirt	Feeler Gauges "GO"	"NO GO"
Series 40, 50	.0012-.0018"	.0015"	.002"
Series 70	.0014-.0020"	.0015"	.002"

Installing Pistons: Hollow side of head to camshaft.

PISTON RINGS: Two compression (upper inner edge stepped or beveled), one slotted oil ring in #3 groove, "Flex-fit" oil ring in #4 groove. All rings above pin. #1, #2, and #4 rings are coated.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	3/32"	.010-.020"	.0015-.0035"
Oil (#3)	3/16"	.010-.020"	.0015-.003"
Oil (#4 Flex-fit)	3/16"	.0015"①	.001-.003"

①—No fitting required for Flex-fit Ring.

Replacement Rings: *See Buick Special Data.*

PISTON PIN: Clamped in rod.
Diameter—(40, 50) .8124-.8129", (70) .8744-.8749".
Length—(40, 50) 2 11/16", (70) 3 1/16".
Pin Fit in Piston—**.0003-.0004" clearance or easy** finger push fit at 70°F.

Replacement Pins: Std. and .003", .005" oversize. Pins furnished with new pistons and separately also.

CONNECTING ROD:	Length	Weight
Series 40 (1950)	7 5/8"	29.20 ozs.
Series 40 (1951)	7 3/8"	28.096 ozs.
Series 50 (1950-51)	7 3/8"	28.096 ozs.
Series 70 (1950-51)	8 1/4"	36.272 ozs.

►*CONNECTING RODS FOR CAST IRON PISTONS (1951 SERIES 40 & 50):* Special connecting rods and mating bearing caps must be used with cast iron pistons. *CAUTION—Rods and bearing caps intended for Aluminum Pistons MUST NOT BE USED with Cast Iron Pistons. See PISTONS above.*

►*CONNECTING ROD IDENTIFICATION & REPLACEMENT PARTS CAUTION (For Cast Iron & Aluminum Pistons): See "Connecting Rod & Bearings" in Buick Special Data.*

Crankpin Journal Diameter: (Series 40 1950) 1.998-1.999", (Series 40 1951 & Series 50 1950-51) 2.125-2.126", (Series 70 1950-51) 2.248-2.249".
Bearings—Durex 100-A "full-precision" insert type without shims.
Clearance—.0005-.0018". **Sideplay**—.005-.010".

Bearing Adjustment: None. Replace bearings.

Replacement Bearings: Furnished in Std. and .001", .002", .020", .021" undersize. Undersize bearings marked with number on outer surface near tang indicating size.

Installing Rods: Ridge on edge of cap and boss in web of rod must be toward rear of engine. Oil hole in rod toward camshaft.

CRANKSHAFT: Five bearing, counterweighted.

►*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

►*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*
NOTE—Stepped journals used on Series 40 1950 & Series 70 (1950-51), uniform journals on Series 40 (1951) and Series 50 (1950-51.)

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

Main Bearing Journal Diameters

Series—	"40" 1950	"50" 1950-51	"70" (1950-51) "40" 1951
#1	2.3105-2.3115"	2.5625-2.5635"	2.5605-2.5615"
#2	2.3735-2.3745"	2.5625-2.5635"	2.6235-2.6245"
#3	2.4355-2.4365"	2.5625-2.5635"	2.6855-2.6865"
#4	2.4985-2.4995"	2.5625-2.5635"	2.7485-2.7495"
#5	2.5605-2.5615"	2.5625-2.5635"	2.8105-2.8115"

NOTE—Car manufacturer recommends crankshaft be replaced or reground if journal out-of-round over .0015".

Bearings—Steel-backed, Durex 100-A, slip-in type. *NOTE*—Bearings "full-precision" (no shim) type.

Clearance—.0005- 002".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps.

▷*CAUTION*—Arrow on main bearing caps must point toward front of engine when installed.

Replacement Bearings: Standard and .0012", .002", .020", .022" Undersize.

Rear Oil Seal Installation: *See Buick Special Data.*

End Thrust: #3 (center bearing). **Endplay** .004-.008".

CAMSHAFT: 5 bearing. Non-adjustable chain drive.

▷*CAUTION—Two types of camshafts used,* one for engines with plain sleeve valve lifters, one for engines with hydraulic lifters. *ENGINE WILL BE ROUGH AND NOISY IF WRONG SHAFT USED.*

Camshaft Identification—All shafts have ¼" land between #6 & #7 cams (visible from below with pan off) with different finish on land as follows:

Plain Sleeve Lifter Type Shaft—Land has dark rough-turned surface with 1/16" groove in center.

Hydraulic Lifter Type Shaft—Land has bright finished-ground surface without any groove.

Bearing Diameters (for All Series)—#1, 2 5/32"; #2, 2 1/8"; #3 2 3/32"; #4, 2 1/16"; #5, 1 3/4".

Bearings—Steel-backed, babbitt-lined.

Clearance—.0015-.004". *NOTE*—Replacement bearings must be line reamed after installation.

End Thrust: Spacing ring between front bearing journal and thrust plate (on front of crankcase behind camshaft sprocket). **Endplay**—.004-.008".

Timing Chain: Link Belt. **Width** 13/16", **Pitch** .500". **Length (40, 50)** 24 1/2", 49 links. **(70)** 25" 50 links.

Camshaft Setting: Two teeth on timing chain (10 links apart) are marked with copper plated washers. Facing the front of engine, center the crankshaft sprocket timing mark on right side. Set camshaft sprocket, (mark to right side) and install chain with marked teeth matching sprocket marks.

▷**VALVES:** *CAUTION*—**Engines with hydraulic valve lifters** use different camshaft, push rods, rocker arms, ball studs, and valve springs.

VALVE SPECIFICATIONS—SERIES 40 & 50

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	5 7/64"
Exhaust	1 11/32"	.3711-.3719"	5 7/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0025" (.0015-.0035")
Exhaust	45°	.342"	.003" (.0021-.0039")

VALVE SPECIFICATIONS—SERIES 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3715-.3725"	5 1/4"
Exhaust	1 7/16"	.3711-.3719"	5 1/4"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"	.0025" (.0015-.0035")
Exhaust	45°	.348"	.003" (.0021-.0039")

Valve Seat Width—Nominal width .062" (1/16"). Seats wider than 5/64" should be narrowed down using proper 20° and 70° cutters.

Valve Guides: Upper end of guide 1 5/32" above head. Finish ream replacement guides after installation to .374-.375" (use Valve Guide Reamer J129-3).

▷**Valve Springs** *CAUTION*—Engines with hydraulic valve lifters use different valve springs.

Free Length—1 29/32" (inner), 2 11/32" (outer).

Valve Spring Specifications

▷**Engines with Adjustable Valve Lash**

	Inner Spring Lbs. Press.	Lgth.	Outer Spring Lbs. Press.	Lgth.
Closed	17½-22½	—1 21/32"	29½-34½	—1 15/16"
Open	48-54	—1 5/16"	74-80	—1 19/32"

▷**Engines with Hydraulic Valve Lifters**

Closed	22-26	—1 21/32"	49-55	—1 15/16"
Open	49-55	—1 5/16"	116-124	—1 19/32"

Valve Lifters (Engines with Adjustable Valve Lash): Plain sleeve, barrel type. Diameter .9975-.9985". **Clearance in Crankcase**—.0005-.0025".

Hydraulic Valve Lifters: Used on all cars with Dynaflow Drive and Series 50 with synchro-mesh trans. *See "Valve System" in Buick Special Data.*

Identification—By RED "Buick Fireball" lettering on valve rocker arm cover and label reading "This Engine Equipped with Hydraulic Lifters."

▷*CAUTION*—If lifter operating properly, DO NOT disassemble when removed from engine for other work (wrap in clean paper to keep dirt out).

▷**Initial Adjustment (required only when installing cylinder head or when adjusting ball stud setting has been disturbed):** *See "Valve Tappet Clearance" in Buick Special Data.*

Rocker Arms: *CAUTION*—**Engines with hydraulic valve lifters** use different rocker arms and ball studs. Rocker arms used with hydraulic valve lifters do not have small oil hole on underside of arm. Ball studs used with hydraulic lifters have drilled oil hole for oil feed to lifter (through pushrod).

▷**Series 40 Pushrod Change (Engines with Adjustable Lash)**—*See "Valve System" in Buick Special Data.*

Rocker Arm Installation—*See Buick Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used,** Hydraulic & Conventional (conventional type on Series 40 with synchro-mesh trans. only. Hydraulic type on all other cars).

Identification: Hydraulic type, Red lettering "BUICK FIREBALL" on valve cover. **Conventional type,** Blue lettering on valve cover.

▷**HYDRAULIC TYPE SETTING:** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting ball studs. **Initial Adjustment** required when installing cylinder head or if ball studs disturbed.

▷**Initial Adjustment**—*See "Valve System" in Buick Special Data.*

▷**CONVENTIONAL TYPE SETTING:** To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM. min.) for 20 minutes with radiator cap removed, then adjust using .017" feeler gauge "GO," .018" "NO GO."

Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

Timing Chain Setting: *See Camshaft Setting.*

VALVE TIMING—SERIES 40 & 50

Intake Valves—Open 13° BTDC. Close 68° ALDC.
Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

VALVE TIMING—SERIES 70

Intake Valves—Open 14° BTDC. Close 71° ALDC.
Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

VALVE TIMING CHECK

Series 40 (with Adjustable Valve Lash)—Set tappet clearance for .015" road operating lash (see above), use dial indicator to check actual valve opening. #2 or #7 exhaust valve should be .145" open with #1 and #8 pistons at top dead center with flywheel mark "UDC/1&8" visible through inspection hole in right front face of housing.

All Series (With Hydraulic Lifters)—Use dial indicator set up over #2 or #7 exhaust valve to check actual valve movement. With valve fully closed, set indicator to zero, tighten adjusting ball stud until indicator reads .015", wait until leak-down allows indicator to return to zero, repeat process until indicator fails to return to zero (indicating that lifter plunger bottoming in body so that lifter is "solid"). Back off ball stud just enough so that indicator reads zero. Turn crankshaft slowly until indicator reads .145" (Series 40, 50), .155" (70). Flywheel mark "UDC/1&8" should be visible through inspection hole in right front face of housing at this point.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and restricted flow to rocker arm bearings, push rods and hydraulic valve lifters (if used).

NOTE—Valve system oil feed taken from outlet side of filter with restricted fitting in head at point where rocker shaft oil lead connected (all oil for valve system passes through filter).

Oil Filter: AC Low-restriction type. Filter has by-pass valve which opens at 7-9 lbs. (all oil for valve system passes through filter).

Replacement Element—AC No. P-127.

Crankcase Capacity—Refill—5½ qts. (40, 50), 7 (70).

Dry Capacity—6½ qts. (40, 50), 8 qts. (70).

NOTE—If oil filter is dry add 1½ qts. to capacities.

Normal Oil Pressure—35 lbs. at 35 MPH.

Oil Pressure Regulator—Non-adjustable spring and valve type on oil pump. Opens at 35 lbs.

Oil Pump: Helical gear type in crankcase.

Oil Pump Clearances—*See Buick Special Data.*

Crankcase Ventilation: Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

Oil Pressure Gauge: AC No. (1950 All Series) **1507210,** (Series 40 1951) **1507603,** (Series 50 & 701951) **1517413.**

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valves) in filler cap. Re-circulation of water through engine (with thermostat closed) permitted by fixed by-pass passage.

Water Pump Outlet Pipe for Dynaflow Drive—Separate pipe on right side below pump inlet. Used only on cars with Dynaflow Drive.

Capacity:	Without Heater	With Heater
Series 40, 50 (Std.)	12 qts.	13½ qts.
Series 40, 50 (Dynaflow)	13½ qts.	15 qts.
Series 70	18 qts.	19½ qts.

Pressure Valve—AC No. 850563 Radiator Filler Cap. 7 lb. type.

Water Pump: Packless, sealed ball-bearing type. *See Water Pump Section for complete data.*

Thermostat: Harrison. In cylinder head water outlet. Buick No. 3122282 Std. 151°, No. 3122285 Hi. T. 182°.

Setting—(151°) starts to open 148-155°F. Fully open at not over 176°F. (182° Type) Starts to open at 178-185°F., fully open at not over 211°F.

Temperature Gauge: AC No. (1950 All Series) 1512013, (Series 40 1951) 1512317, (Series 50 & 70 1951) 1512315.

CLUTCH

Own "Crown Spring" with Borg & Beck or Long Driven Member. Single plate, dry disc type.
See Clutch Section for complete data.

Facings—Woven type, 2 used. Inside diameter 6". Outside Diameter 10". Thickness .125" (⅛").

Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toeboard.

►**Correction of Low & Reverse Gear Clash due to Spinning Clutch Plate**—Car manufacturer permits reducing pedal lash to ½" in exceptional cases where gear clash continues (with regular ¾-1" pedal lash) beyond normal plate stopping period.

Clutch Over-center Spring Installation & Adjustment (1950 Cars): *See "Clutch Notes" in Buick Special Data.*

Removal: Remove Rear Axle and Transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

Clutch Yoke Boot Installation—*See "Clutch Notes" in Buick Special Data.*

TRANSMISSION
SYNCHRO-MESH

Own Make. *All Helical Gear, constant-mesh, synchro-mesh* (Second & High), sliding gear (Low & Reverse) with steering column mounted shift control. *See Transmission Section for complete data.*

Transmission Control: Buick type remote control.
See Transmission Section for complete data.

Removal: Disconnect Rear Axle (see data following), disconnect the speedometer cable, lower gear shift rod, and selector rod. Take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Install the special engine support bar under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out 2 attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.
For instructions on shimming Rear Mounting when installing transmission, see "Engine Mounting" in Buick Special Data.

Lubrication Note—When transmission reinstalled in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNAFLOW TRANSMISSION

Own Make. Torque Converter and hydraulically operated planetary unit with manual control.
PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Dynaflow Drive in Transmission Section.
TESTING & TROUBLE SHOOTING: See Dynaflow Drive in Transmission Section.

►*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

►*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

Dynaflow Linkage Adjustment: *See "Buick Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment & Dashpot Setting: *See Carburetion in TUNE-UP data.*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

►***Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A".***

Capacity—(Ser. 40, 50) 8½ qts. (Ser. 70) 10 qts.

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission oil warm. Raise right side of hood, lift out oil gauge rod between battery and engine. Add fluid to "FULL" mark level with engine idling.

►***CAUTION—Engine must be idling with transmission in Parking and transmission oil warm when checking Dynaflow Drive Fluid Level.***

OTHER DYNAFLOW SERVICE DATA: See "Buick Dynaflow Drive" in Transmission Section.

UNIVERSALS

Saginaw or Spicer. One used (in Torque Ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with Torque Tube Drive.
See Rear Axle Section for complete data.

Ratios—	Standard	Optional
1950 Synchro-mesh Cars		
41, 41D, 43, 43D, 46D, 46S	4.1-1 (41-10)	3.9-1 (43-11)
52, 56C, 56R, 59	4.1-1 (41-10)	3.9-1 (43-11)
46, 51, 56S	3.9-1 (43-11)	3.6-1 (47-13)
1951 Synchro-Mesh Cars		
41, 41D, 45R, 46, 46S, 48, 48D	3.9-1 (43-11)	3.6-1 (47-13)
46C, 52, 56C, 59, 79	4.1-1 (41-10)	3.9-1 (43-11)
51, 56R, 56S	3.9-1 (43-11)	3.6-1 (47-13)
72, 76C, 76R	4.1-1 (41-10)	3.9-1 (43-11)
1950 Dynaflow Cars		
40 (All)	3.9-1 (43-11)	3.6-1 (47-13)
52, 56C, 56R, 59	3.9-1 (43-11)	3.6-1 (47-13)
71, 75R, 76S	3.6-1 (47-13)	3.9-1 (43-11)
72, 76C, 76R, 79	3.9-1 (43-11)	3.6-1 (47-13)
1951 Dynaflow Cars		
41, 41D, 45R, 46, 46S, 48, 48D	3.6-1 (47-13)	3.9-1 (43-11)
51, 56S, 56R	3.6-1 (47-13)	3.9-1 (43-11)
46C, 52, 56C, 72, 76C, 76R	3.9-1 (43-11)	3.6-1 (47-13)
59, 79	3.9-1 (43-11)	

►**Ring Gear and Pinion Interchangeability:** All rear axle gear sets are completely interchangeable for service. That is, any 1950-51 gear set can be used in any 1950-51 Model regardless of ratio.

Ratio Identification: Axle ratio is indicated by numbers stamped on bottom center of housing (3/6 for 3.6-1, 4/1 for 4.1-1 etc.).

Backlash—.008-.010" (desired), .008-.012" (limits). Screw adjustment.

Removal: Raise rear end of car and set on car stands. Disconnect parking brake cable at rear brake sheave and at bracket of front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.

►***CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).***

Torque Ball Adjustment—*See Buick Special Data.*

Axle Shaft Removal: *See Rear Axle Section.*

Wheel Bearing Adjustment—None.

Rear Suspension: Coil springs & conventional axle.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco Model 1948-A (front), Model 2105-C, D (rear). Double acting, Hydraulic (parallel cylinder rear).

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

Kingpin Inclination—4¼° crosswise for ⅜° Camber.

Camber—⅜° Positive (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ¾° at curb weight.

Caster—¾° Pos. (¼° Pos. to 1½° Pos.) equal for both wheels within ½° at curb weight. Adjustable.

Toe In—1/16-1/8". Adjust both tie rods equally.

►***CAUTION***—Tie rod clamps must be within ⅛" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".

Steering Geometry (Toe Out on Turns)—With outer wheel turned 20°, inner wheel turns 21½° ± ¾°.

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-Servo, Single Anchor type without Eccentric Adjustment. Parking brake "Step-on" lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Cast-iron with steel flange. Drum diameter 11.997-12.003". Max. rebore .060" O.S. (.030" cut).

►*BRAKE DRUM RECONDITIONING & BALANCING: See Brake Notes in Buick Special Data.*

Lining—Moulded. Width (40, 50) 1¾", (70) 2¼". Thickness 3/16". Length per shoe: Primary (40, 50) 9 15/16", (70) 10"; Secondary: (40, 50) 12 3/4", (70) 12 15/16" (1950), (See Note).

NOTE (Series 70 1951)—Segmented lining used. Lining is bonded to shoes and not furnished separately.

Clearance—.015" at both ends of secondary (rear) shoe with primary shoe forced out against drum.

Step On (Parking Brake): See Service Brakes (above).

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure).
See Miscellaneous Section for complete data.

Windshield Wiper: Cable Operated—Vacuum type.
See Miscellaneous Section for complete data.

HOOD ADJUSTMENT: *See Buick Special Data.*

MODEL IDENTIFICATI N

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left front frame side rail.

1952 Starting Numbers—

1—6436001	Flint	5—6483001	Wilmington
2—6456001	Southgate	6—6499001	Atlanta
3—6464001	Linden	7—6696001	Framingham
4—6471001	Kansas City		

Identification—First digit of serial number indicates assembly plant as listed above.

ENGINE NUMBER: Stamped on boss on right side of crankcase below pushrod cover.

1952 Starting Numbers—

40 Series (Synchro-mesh)	6646232-4
40 Series (Dynaflow)	6646230-4
50 Series (Synchro-mesh)	6647024-5
50 Series (Dynaflow)	6646230-5
70 Series (Standard steering)	6652000-7
70 Series (Power steering)	6652220-7

Identification—Last digit of number indicates series. Dash ¼" long following engine number indicates cylinder bores are .010" Oversize.

TUNE-UP

►*SERIES 70 PROLONGED CRANKING WITH HOT ENGINE (Cars with first Carter & Stromberg 4-Barrel Carburetors): See Carburetor Section for recommended changes to shorten cranking time.*

COMPRESSION PRESSURE: At cranking speed.

	Synchro-mesh	Dynaflow
40 Series	114 lbs.	120 lbs.
50 Series	118 lbs.	120 lbs.
70 Series		120 lbs.

VACUUM READING: Steady 18-20" idling at 8 mph. or 450 RPM.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUG GAPS: .025". Limits .023-.028".

Plug Type—AC No. 46X. 14 mm. Metric.

DISTRIBUTOR: Delco-Remy 1110832. Automatic and vacuum advance. "Center. bearing" breaker plate. *See "Delco-Remy Center Bearing Breaker Plate Distributor" in Electrical Equipment Section.*

Breaker Gap—.015". Limits .0125-.0175".

Cam Angle—Test limits with .016" gap—21-30°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*

►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".*

Automatic & Vacuum Advance—*See Ignition.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

COIL: Delco-Remy 1115328. On pushrod cover.

Ignition Current—2½ amperes idling, 4½ stopped.

CONDENSER: Delco-Remy 1869704.

Capacity—.18-.24 microfarad.

IGNITION TIMING: 4° BTDC (Series 40 & 50), 6° BTDC (Series 70).

Flywheel Mark—"ADV. 4°" (Series 40), "ADV 6°" (Series 50 & 70) followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° for Series 40 & 50, 6-7° for Series 70). Index mark located on edge of timing hole under cover on housing above starter.

►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance. If timing light used, idle engine below 350 RPM.*

Timing Procedure—*See Ignition Timing.*

Final Ignition Setting—Very light "ping" may occur with part throttle on a hard pull, or during acceleration between 10-20 MPH with wide open throttle.

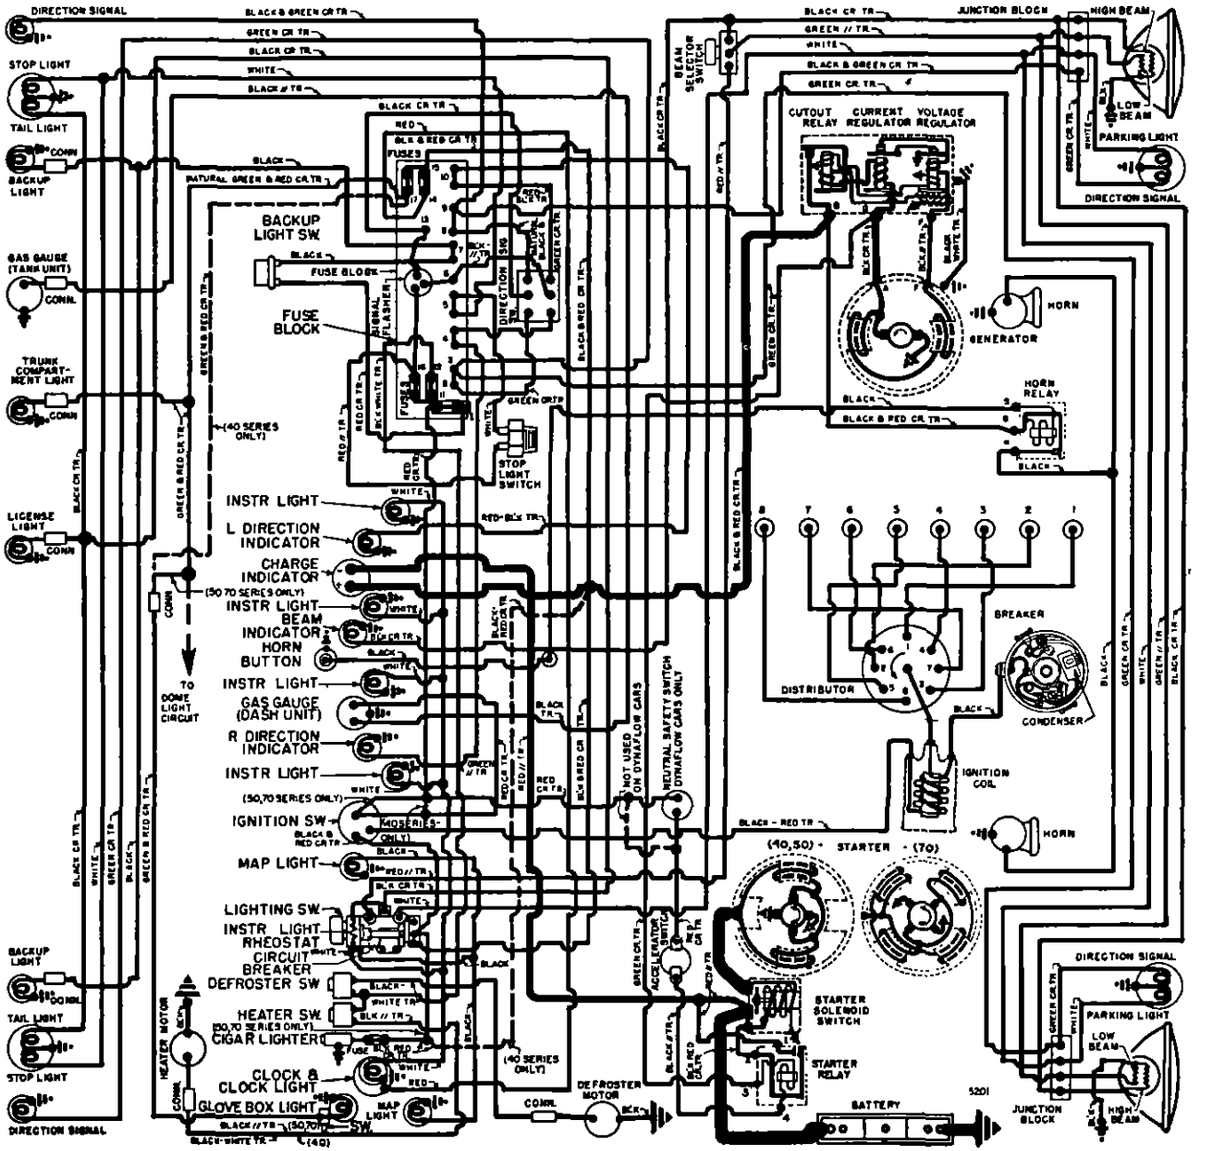
CARBURETION

SERIES 50—CARTER 2-BARREL

CARTER WCD No. 882SA. Dual (2-barrel) downdraft type with automatic choke.

Idle Setting—1¼-1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450 RPM (or 8 MPH. on level road in 3rd gear).



Float Level—5/32" from top of each float to gasket seat on cover with valve seated (invert to check).

Fuel Level—Even with bottom of inspection hole on side of float bowl with engine idling.

Accelerating Pump—Two holes in arm. Inner hole minimum charge. Outer hole maximum charge. Standard setting is inner hole.

Fast Idle: (WCD) Setting—Adjust fast idle screw on throttle shaft lever for .012" throttle opening with choke valve tightly closed and screw on high step of fast idle cam.

Automatic Choke Setting (WCD)—1 notch rich.

Throttle Linkage Adjustment & Dashpot Setting: *See "Throttle Linkage Adjustment" below.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor.

SERIES 50—STROMBERG 2-BARREL

STROMBERG AAUVB-267, Code 7-90 & 7-90B. Dual (2-barrel) downdraft type with automatic choke.

Idle Setting—1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450 RPM. or 8 MPH. on level road in 3rd gear.

Float Level—(On gauge No. T-24971), 5/64" above top of gauge guides.

Fuel Level—(Checked through inspection hole). Fuel must be level with bottom of threads in inspection hole.

Accelerating Pump—3 holes. Center hole (medium stroke) normal setting.

Fast Idle: (AAUVB-267) Setting—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on fast idle cam stud as throttle is opened and closed.

Automatic Choke Setting: (AAUVB-267), Centered.

Throttle Linkage Adjustment & Dashpot Setting: *See "Throttle Linkage Adjustment" below.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor.

SERIES 70—CARTER 4-BARREL

CARTER WCFB No. 894S, SA. Four-barrel downdraft type with automatic choke. *See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section for complete data.*

►*FLOAT LEVEL SETTING CHANGE & PARTS PRODUCTION CHANGES: See Carburetor Section.*

►*RECOMMENDED CHANGE TO SHORTEN CRANKING TIME WITH HOT ENGINE (Early Cars with first type carburetors): See Carburetor Section.*

Idle Speed—450 RPM.

Other Settings—*See Carburetor Section.*

SERIES 70—STROMBERG 4-BARREL

STROMBERG 4-AUV-267, Code 7-92 (Early), 7-92B (Later). Four-barrel downdraft type with automatic choke. *See "Stromberg 4A 4-Barrel Carburetor" in Carburetor Section for complete data.*

►*RECOMMENDED CHANGE TO SHORTEN CRANKING TIME WITH HOT ENGINE (First Code 7-92 Carburetor): See Carburetor Section.*

Idle Speed—450 RPM.

Other Settings—*See Carburetor Section.*

THROTTLE LINKAGE ADJUSTMENT (ALL)

THROTTLE LINKAGE ADJUSTMENT (Synchro-mesh Transmission): Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open throttle valve to wide open position against stop, have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

Dynaflow Drive Cars: With engine idling at 450 RPM., clearance between **edge of bracket** (attached to dash at lower end of vertical equalizer shaft) and **ear on lever** (just above shaft operating lever) should be 1/32-1/16" (adjust at ball joint end of throttle operating rod). Check wide open position of throttle valve with engine stopped and adjust at ball joint (as above) to secure wide open throttle position with pedal striking floor mat (not throttle lever striking boss on carburetor). Check choke unloader operation. Check dashpot setting:

Dash Pot Setting: (Dynaflow cars). Hold choke valve in fully closed position. Insert .030" feeler gauge between the fast idle cam (at the widest part) and the idle adjusting screw. Turn the adjusting screw on the lever (ahead of the dash pot plunger) until it just contacts the dash pot plunger.

MANIFOLD HEAT CONTROL: Setting—Thermostatic coil wind-up ¼ turn at 70° (valve closed). To prevent rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending anti-rattle spring lower anchor bracket (40, 50), loosen screw and move bracket (70).

VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used,** Hydraulic & Conventional (conventional type on Series 40 with synchro-mesh trans. only, Hydraulic type on all other cars).

Identification—Hydraulic Type, Red lettering **"BUICK FIREBALL"** on valve cover. **Conventional Type, Blue** lettering on valve cover.

►**HYDRAULIC TYPE SETTING**—*NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have adjusting ball studs. **Initial adjustment** required when installing cylinder head or if ball studs disturbed.

Initial Adjustment—*See Valve Timing.*

►**CONVENTIONAL TYPE SETTING: To secure .015" operating clearance, stabilize temperature by running engine at fast idle (700 RPM. minimum) for 20 minutes with radiator cap removed, then adjust clearance using .017" feeler gauge as "GO", .018" as "NO GO."**

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116452.

COIL: Delco-Remy No. 1115328. On pushrod cover.
Ignition Current—2½ amperes idling. 4½ stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.24 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110832. Automatic and vacuum advance type with "center-bearing" breaker plate.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—Test limits with .016" gap—21-30°.

►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used make final check that gap within .0125-.0175".*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr.	R.P.M.	Degrees	Eng.	R.P.M.
Start		275	0-4		550
5-7		400	10-14		800
9-11.		1150	18-22.		2300
12-14.		1675	24-28.		3350

Vacuum Spark Control: Delco-Remy 1116032. Integral type. **Plunger Travel**—¼".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7"
6	12	11.5-13.5"

IGNITION TIMING

Standard Setting: 4° BTDC (Series 40 & 50); 6° BTDC (Series 70).

►*CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance. If timing light used, idle engine below 350 RPM.*

Flywheel Mark—"ADV. 4°" (Series 40 & 50); "ADV. 6°" (Series 70), followed by yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5° Series 40-50, 6-7° Series 70). Index mark located on edge of timing hole under cover on housing above starter.

Timing Procedure—Use Synchroscope or Power Timing Light connected to # 1 spark plug. Idle engine at **not more than 350 RPM** (to prevent automatic advance operating). Adjust distributor so that timing mark on flywheel appears in line with index mark on housing

Final Ignition Setting—Set for very light "ping" with part throttle on hard pull, or during acceleration between 10-20 MPH. with wide open throttle.

CARBURET R

CARTER TW -BARREL

SERIES 40 & 50—CARTER WCD No. 882SA. Dual (2-barrel) downdraft type with automatic choke.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Setting and Accelerating Pump Setting): *See Tune-Up.*

Metering Jets & Rods—*See Carburetor Section for Carter Jet Specifications.*

Throttle Linkage Adjustment: *See Tune-Up.*

Fast Idle: Carter Dual (WCD) Carburetor type.

Setting—Adjust fast idle screw on throttle shaft lever for .012" throttle opening with choke valve tightly closed and screw on high step of fast idle cam.

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.

Setting—1 notch rich.

See Carburetion Equipment Section for complete data.

CARTER FOUR-BARREL

SERIES 70—CARTER WCFB No. 894S, SA. Four-barrel downdraft type with automatic choke.

►*RECOMMENDED CHANGE TO SHORTEN CRANKING TIME WITH HOT ENGINE (Early Cars with first type carburetors): See Carburetor Section.*

►*FLOAT LEVEL SETTING CHANGE & PARTS PRODUCTION CHANGES: See Carburetor Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Idle Speed—450 RPM.
Other Settings—*See Carburetor Section.*
Throttle Linkage Adjustment: *See Tune-Up.*

STROMBERG TWO-BARREL

SERIES 40 & 50—STROMBERG AAUVB-267, Code 7-90 & 7-90B. Dual (2-barrel) downdraft type with automatic choke.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*
Metering Jet Specifications: *See Stromberg Metering Jets in Carburetor Section.*
Throttle Linkage Adjustment: *See Tune-Up.*
Fast Idle: Stromberg type.
Setting—Close choke valve on #53 (.0595") drill rod, adjust by bending fast idle cam rod so that locking lever on throttle valve shaft just clears loose lever on cam stud as throttle is opened and closed.
See Carburetion Equipment Section for complete data.
Automatic Choke: Stromberg type.
Setting—Centered on index.
See Carburetion Equipment Section for complete data.
Throttle Linkage Adjustment: *See Tune-Up.*

STROMBERG FOUR-BARREL

SERIES 70—STROMBERG 4AUV-267, Code 7-92 (Early), Code 7-92B (Later). Four-barrel downdraft type with automatic choke.
▷*RECOMMENDED CHANGE TO SHORTEN CRANKING TIME WITH HOT ENGINE (First Code 7-92 Carburetor): See Carburetor Section.*
See "Stromberg 4AUV 4-Barrel Carburetor" in Carburetor Section for complete data.
Idle Speed—450 RPM.
Other Settings—*See Carburetor Section.*
Throttle Linkage Adjustment: *See Tune-Up.*

CARB. EQUIPMENT

Air Cleaner: Oil bath type.
Fuel Pump: AC. Combination fuel-and-vacuum pump.
Replacement Pump—AC No. 9761 (40, 50), 9762 (70).
See Carburetion Equipment Section for complete data.
Pressure—4½-5½ lbs., at fuel pump outlet, or 4-5 lbs. at carburetor.
Gasoline Gauge: AC Electric type.
Dash Unit—No. 1517712 (Series 40); No. 1517413 (Series 50, 70).
Tank Unit—No. 1517475 (Series 40); No. 1517200 (Series 50, 70).
See Carburetion Equipment Section for complete data.

BATTERY

Series 40, 50: Delco Type 15E6. 6 volt, 15 plate, 100 ampere hour capacity. (20 hour rate).
Series 70—Delco Type 17E6. 6 volt, 17 plate, 120 ampere hour capacity. (20 hour rate).
Grounded Terminal—Negative (—) to right engine mounting bracket.
Location—Under hood right side.

STARTER

Delco-Remy. (Series 40, 50) No. 1107110, (Series 50 RHD) No. 1107114, (Series 70) No. 1107981.
Armature—Delco-Remy No. 1917855 (for 1107110); **No. 1917857** (for 1107981).
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data—1107110, 114

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 "	Lock	3.25	550

Performance Data—1107981

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.0	65
16 "	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid Switch No. 1118148 with SEPARATE relay, Delco-Remy No. 1116855. Controlled by following switches mounted on carburetor (accelerator pedal starting):
Two-Barrel Carburetors—Stromberg Starter Switch No. 386030 (Cars with Stromberg Carburetors).
Carter Car Starter Model 192-11U (Cars with Carter Carburetors).
▷*STROMBERG SWITCH RECOMMENDED CHANGES:*
See "Stromberg Starter Switch" in Electrical Equipment Section for complete data.
Four-Barrel Carburetors—Stromberg Starter Switch No. 385611 (Cars with Stromberg Carburetors).
Carter Car Starter (Cars with Carter Carburetors).
Starter Switch Setting—*See "Carter Car Starter" and "Stromberg Starter Switch" in Electrical Equipment Section.*
Dynaflow Neutral Safety Switch: Delco-Remy No. 1998023. At lower end of steering column. Connected in starter control circuit so that starter operative only with selector lever in "N" Neutral or "P" Parking position.
Neutral Safety Switch Adjustment—*See "Buick Dynaflow Drive" in Transmission Section.*

GENERATOR

Delco-Remy No. 1102779. Two brush type with voltage and current regulation.
Armature—Delco-Remy No. 1921621.
Charging Rate Adjustment: None. See Regulator.

Performance Data—Cold

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2450

①—Not maximum charging rate. See Voltage Regulator.

Brush Spring Tension—28 ozs., each.
Field Current—1.87-2.0 amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment—½" belt deflection with light pressure at point midway between generator pulley and fan pulley.

REGULATOR

Delco-Remy No. 1118729. Voltage & Current Regulator.
See Electrical Equipment Section for complete data.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot).
Air Gap—.075" (with contacts just closed).
Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—45-51 amperes hot (set to 47 amperes hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Directional Signal: *See Electrical Equip. Section.*
Directional Signal Indicators—(Series 40) Located to the right and left of light indicator emblem. **(Series 50, 70)** Located in the gauges to the right and left of the speedometer.

Switches

Lighting—Delco-Remy No. 1995045.
Beam Selector—Delco-Remy No. 1997008.
Directional Signal—Delco-Remy. (Series 40, 50) No. 1995565, (Series 70) No. 1995566.
Back-Up Light—Delco-Remy No. 1998013 (Synchromesh); Delco-Remy No. 1998015 (Dynaflow).

MISC. ELECTRICAL

▷**DASH PANEL INSPECTION HOLE—(For access to wiring on back side of instrument panel).** Located on left side of dash under hood, with removable plate screwed to dash.
THERMOSTATIC RELAY: Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.
FUSE BLOCK: On lower flange of instrument panel at left of steering column. Five fuses as follows:
1)—**Dome, Glove Box & Trunk Lights.** 30 amperes.
2)—**Clock.** 3 amperes.
3)—**Defroster and Heater.** 30 amperes.
4)—**Directional Signal and Stop Lamp.** 14 amperes.
5)—**Back-Up Lights.** 14 amperes.
HORNS: Delco-Remy No. 1999649 (Low Note—RH); **1999650** (High Note—LH). Vibrator type, twin horns operated by relay.

	Current (at 6 volts)	Air-Gap
Low Note	19-21 amperes	.044-.049"
High Note	18-20 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027".
Air Gap—.014" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder, in line, with overhead valves.

Series	Bore	Stroke	Displacement
40 & 50	3 3/16"	4 1/8"	248.0 cu. in.
70	3 7/16"	4 5/16"	320.2 cu. in.

▷*NOTE*—.010" oversize bore production engines are marked by stamped dash (—) approximately ¼" long following engine number.

Form 28—1956-M

ENGINE

CONTINUED FROM PRECEDING PAGE

Series	Rated HP	Comp. Ratio	Dev. HP
40 (Synchro-mesh)	32.5	6.6-1	①120
40 (Dynaflow)	32.5	7.2-1	①128
50 (Synchro-mesh)	32.5	6.9-1	①124
50 (Dynaflow)	32.5	7.2-1	①128
70 (Dynaflow)	37.8	7.5-1	②168

①—At 3600 RPM. ②—At 3800 RPM.

►**SERIES 40 ENGINE (Synchro-mesh).** These engines are equipped with conventional type valve lifters and use different camshaft, pushrods and valve springs.

Identification—Conventional type lifters, **Blue** lettering *"BUICK FIREBALL"* on valve cover. Hydraulic Lifters, **Red** lettering.

►***CYLINDER HEAD CAUTION—Different head and gasket combination used for each particular compression ratio.***

Series	Head No.	Gasket Thickness	Comp. Ratio
40 (Synchro-mesh)	1340248	.075"	6.6-1
40 (Dynaflow)	1340248	.015"	7.2-1
50 (Synchro-mesh)	1340248	.050"	6.9-1
50 (Dynaflow)	1340248	.015"	7.2-1
70 (Dynaflow)	1343707	.050"	7.5-1

CYLINDER HEAD & TIGHTENING TORQUES: *See Buick Special Data.*

COMPRESSION & VACUUM READINGS: *See Tune-Up.*

PISTONS: Anodized aluminum alloy, cam ground, turbulator top. Four rings above pin.

►**Piston Note**—Series 40, 50 pistons have pin offset 1/16" toward camshaft side. Bottom oil ring groove has two transverse slots. Series 70 pistons have pin centered. Transverse slot below oil ring.

Series	Weight (Stripped)	Length
40 & 50	13.44 ozs.	3 49/64"
70	17.94 ozs.	4 9/16"

Removal—Pistons and rods removed from above.
Clearance—See Fitting New Pistons below.

Replacement Pistons—*See Buick Special Data.*

Fitting New Pistons: Use feeler stock ¼" wide (for "GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine center line, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with "GO" gauge and should hold its own weight with "NO GO" gauge, as follows:

Series	Clearance Limits Top of Skirt	Feeler Gauges "GO"	Feeler Gauges "NO GO"
40, 50	.0012-.0018"	.0015"	.002"
70	.0014-.0020"	.0015"	.002"

Installing Pistons: Hollow side of head to camshaft. *See Connecting Rods (below).*

PISTON RINGS: Two compression (upper inner edge stepped or beveled). One slotted oil ring in #3 groove, "Flex-Fit" oil ring in #4 groove. All rings above pin. #1, #2, & #4 rings are coated.

Ring	Width	End Gap	Side Clearance
Comp.	3/32"	.010-.020"	.0015-.0035"
Upper Oil	3/16"	.010-.020"	.0015-.003"
Flex-Fit	.186-.187"	①	.001-.003"

①—No checking or fitting required.

Replacement Rings: *See Buick Special Data.*

PISTON PIN: Clamped in rod.
Diameter—(40, 50) .8124-.8129", (70) .8744-.8749".
Length—Series 40,50 2 11/16". Series 70 3 1/16".
Pin Fit in Piston—.0003-.0005" at 70°F., or easy push fit at 70°F.

Replacement Pins: Std., .003", .005" oversize. Pins fitted and furnished with new pistons (pistons not furnished separately). Pins furnished separately.

CONNECTING ROD:	Length	Weight
Series 40, 50	7⅜"	28.096 ozs.
Series 70	8¼"	36.272 ozs.

Crankpin Journal Diameter: (Series 40, 50)—2.125-2.126". (Series 70)—2.248-2.249".
Bearings—Durex 100-A "full-precision" insert type without shims.
Clearance—.0005-.0016". **Sideplay**—.005-.010".

Replacement Bearings: Furnished in Std., .001", .002", .020", .021" undersize. Undersize bearings marked with number on outer surface near tang, indicating size.

Installing Rods: Install in piston with oil hole toward hollow side of piston. Install in engine with oil hole toward camshaft.

CRANKSHAFT: Five bearing, counterweighted.

►***CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.***

►***FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.***

Main Bearing Journal Diameters

Bearing No.	Series 40 & 50	Series 70
1)	2.5625-2.5635"	2.5605-2.5615"
2)	2.5625-2.5635"	2.6235-2.6245"
3)	2.5625-2.5635"	2.6855-2.6865"
4)	2.5625-2.5635"	2.7485-2.7495"
5)	2.5625-2.5635"	2.8105-2.8115"

NOTE—Car manufacturer recommends that crankshaft be replaced or reground if journal out-of-round more than .0015".
Bearings—Steel-backed, Durex 100-A.
Clearance—.0006-.0018" (Series 40, 50). .0006-.0020" (Series 70).

►***CAUTION***—Arrow on main bearing caps must point to front of engine when installed.

Replacement Bearings: Std., .0012", .002", .020", .022" Undersize.

Rear Bearing Oil Seal Installation: *See Buick Special Data.*

End Thrust: #3 (center bearing). **Endplay**—.004-.008".

CAMSHAFT: Five bearing, non-adjustable chain drive.

►***CAMSHAFT CAUTION (Different camshafts used for Conventional and Hydraulic type lifters)***—Camshafts have a ¼" land located between #6 & #7 valve cams (visible from below with oil pan off).

Conventional Lifter type Camshaft—Land has dark rough-turned surface with 1/16" groove in center.

Hydraulic Lifter type Camshaft—Land has bright finish-ground surface without any groove.

Bearing Diameters (All Series)—(1) 2 5/32"; (2) 2 1/8"; (3) 2 3/32"; (4) 2 1/16"; (5) 1 3/4".
Clearance—.0015-.004". *NOTE*—Replacement bearings must be line-reamed after installation.

End Thrust: Spacing ring between front bearing journal and thrust plate (on front of crankcase behind camshaft sprocket). **Endplay**—.004-.009".

Timing Chain: Link-belt. **Width**—13/16". **Pitch**—.500". **Length (40, 50)**—24 1/2" or 49 links. **(70)** 25" or 50 links.

Camshaft Setting: Two teeth on timing chain (10 links apart) are marked with copper plated washers. Facing the front of engine, center the crankshaft sprocket timing mark on right side. Set camshaft sprocket (mark to right side), and install chain with marked teeth matching sprocket marks.

VALVES: *CAUTION*—Engines with hydraulic valve lifters use different camshaft *(See Camshaft Caution above)*, push rods and valve springs than engine with conventional valves.

Valve Specifications—Series 40, 50

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	5 7/64"
Exhaust	1 11/32"	.3711-.3719"	5 7/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0015-.0035"
Exhaust	45°	.342"	.0021-.0039"

Valve Specifications—Series 70

	Head Diameter	Stem Diameter	Length
Intake	1 25/32"	.3715-.3725"	5 1/4"
Exhaust	1 7/16"	.3711-.3719"	5 1/4"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.347"	.0015-.0035"
Exhaust	45°	.348"	.0021-.0039"

Valve Seat Width: Nominal width 1/16". Seat wider than 5/64" should be narrowed down using the proper 20° and 70° cutters.

Valve Guides: Upper end of guide 1 5/32" above head. Finish ream guides after installation to .374-.375" use Valve Guide Reamer J-129-3).

Valve Springs: *CAUTION*—Springs used with hydraulic valve lifters are different than springs used with conventional type lifters.
Free Length (Conventional Lifters)—2 11/32" (Outer Spring). 1 29/32" (Inner Spring).
Free Length (Hydraulic Lifter)—2.380" (Outer Spring) 2.100" (Inner Spring).

Valve Spring Specifications
►Engines with Conventional Lifters

Valve	Inner Spring Lbs. Press.	Inner Spring Lgth.	Outer Spring Lbs. Press.	Outer Spring Lgth.
Open	48-54	1 5/16"	74-80	1 19/32"
Closed	17½-22½	1 21/32"	29½-34½	1 15/16"

►Engines with Hydraulic Valve Lifters

Valve	Inner Spring Lbs. Press.	Inner Spring Lgth.	Outer Spring Lbs. Press.	Outer Spring Lgth.
Open	49-55	1 5/16"	96-104	1 19/32"
Closed	22-26	1 21/32"	49-55	1 15/16"

Valve Lifters (Conventional Type): Plain sleeve, barrel type. **Diameter**—.9975-.9985".
Clearance in Crankcase—.0005-.0025".

Valve Lifters (Hydraulic Type): Used on all cars with Dynaflow Drive, and Series 50 with Synchro-mesh. *See "Valve System" in Buick Special Data.*

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

Identification—*"Buick Fireball"* lettered in RED on valve rocker arm cover and a label reading, "This Engine Equipped with Hydraulic Lifters."

▷*CAUTION*—If lifter operating properly, DO NOT disassemble when removed from engine for other work (wrap in clean paper to keep dirt out).

▷**Initial Adjustment**—Required only when installing cylinder head or when adjusting ball stud setting has been disturbed. *See "Valve System" in Buick Special Data.*

▷*ROCKER ARM NOTE*—Rocker arms used on engines with hydraulic valve lifters are the same as those used on engines with conventional lifters. *See "Valve System" in Buick Special Data.*

Series 40 Pushrod Note—Hole in upper end of push rod is eliminated on engine with conventional valve lifters. (These rods can be identified by copper finished rod socket end).

Rocker Arm Installation—*See "Valve System" in Buick Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION*—Two types of valve lifters used. **Conventional type** on Series 40 with Synchro-mesh transmission. **Hydraulic type** on all others.

Identification—Conventional type lifters, **Blue** lettering *"BUICK FIREBALL"* on valve cover. Hydraulic lifters, **Red** lettering.

Clearance (Hydraulic Type)—*NO CLEARANCE ADJUSTMENT REQUIRED IN SERVICE* although rocker arms have regular adjusting ball studs. *INITIAL ADJUSTMENT required when installing cylinder head or when ball studs disturbed.*

Initial Adjustment—*See "Valve System" in Buick Special Data.*

Clearance (Conventional Type)—To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM.) for 20 minutes with radiator cap removed, then adjust clearance using **.017" feeler gauge as "GO," .018" as "NO GO."**

Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

Timing Chain Setting—See Camshaft Setting.

VALVE TIMING: "Timing Points" below are with valve .004" off seat.

Series 40 with Synchro-Mesh

Intake Valves—Open 13° BTDC. Close 68° ALDC.

Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

All Series 50 and 70
Series 40 with Dynaflow

Intake Valves—Open 14° BTDC. Close 71° ALDC.

Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

VALVE TIMING CHECK

Series 40 (with conventional type lifters)—Set tappet clearance for .015" road operating lash, use dial indicator to check actual valve opening. No. 2 or No. 7 exhaust valve should be .145" open with No. 1 & No. 8 pistons at top dead center with flywheel mark "UDC/1-8" visible through inspection hole in right front face of housing.

All Series (with hydraulic valve lifters)—Use dial indicator set up over No. 2 or No. 7 exhaust valve to check actual valve movement. With valve fully closed, set indicator to zero, tighten adjusting ball stud until indicator reads .015", wait until leakdown allows indicator to return to zero, repeat process until indicator fails to return to zero (indicating that lifter plunger bottoming in body so that lifter is "solid"). Back off ball stud just enough so that indicator reads zero. Turn crankshaft slowly (in running direction) until indicator reads .145" (Series 40 & 50); .155" (Series 70). Flywheel mark "UDC/1-8" should be visible through inspection hole in right front face of housing.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and restricted flow to rocker arm bearings, push rods and hydraulic valve lifters (if used).

Crankcase Capacity—Refill—5½ qts. (40, 50); 7 qts. (70). **Dry Capacity**—1 additional qt.

NOTE—If oil filter is dry, add 1½ qts. to capacities.

Normal Oil Pressure—35 lbs. at 35 MPH.

Oil Pressure Regulator—Non-adjustable spring and valve type on oil pump. Opens at 35 lbs.

Oil Filter: AC low-restriction. Filter has by-pass valve which opens at 7-9 lbs., (all oil for valve system passes through filter).

NOTE—Valve system oil feed taken from outlet side of filter with restricted fitting in head at point where rocker shaft oil lead connected.

Replacement Element—AC No. P-127.

Oil Pump: *See Buick Special Data.*

Oil Pressure Gauge: AC No. 1507839 (40), 1507600 (50, 70).

Crankcase Ventilation: Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap. Recirculation of water through engine (with thermostat closed) permitted by fixed by-pass passage between water outlet and pump inlet.

Pump Outlet for Dynaflow Drive—Separate pipe on right side below pump inlet. Used only on cars with Dynaflow Drive.

Capacity (No Heater)—Series 40 & 50 12 qts., (add 1½ qts. with Dynaflow Drive. **Series 70** 18 qts.

Heater Note—Add 1½ qts. to above capacities when heater is installed.

Pressure Valve—AC No. 850563 Radiator Filler Cap. 7 lb. type.

Water Pump: Packless sealed ball-bearing type.
See Water Pump Section for complete data.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In housing above water pump. Buick No. 3122282 (Std. 151°). No. 3122283 (160°). No. 3122285 (180°).

Setting—(151°) starts to open 148-155°F. Fully open at not over 176°F. (182° Type) Starts to open at 178-185°F., fully open at not over 211°F.

Temperature Gauge: AC No. 1512317 (Series 40); **No. 1512315** (Series 50 & 70).

CLUTCH

Own "Crown Spring" with Borg & Beck or Long Driven Member. Single plate, dry disc type.
See Clutch Section for complete data.

Facings—Woven type, 2 used. Inside diameter 6", Outside diameter 10". Thickness .125".

Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toe board.

Removal: Remove rear axle and transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering column mounted shift control.

See Transmission Section for complete data.

Transmission Control—*See Transmission Section for complete data.*

Removal: Disconnect rear axle (see data following). Drain transmission, fill with clean gasoline or kerosene and run approximately 15 seconds in NEUTRAL, drain cleaner. Disconnect speedometer cable, lower shift rod and selector rod. Take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Reinstall support bar (see note below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out two attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

▷*NOTE*—To shim Rear Mounting when installing transmission, *see "Engine Mounting" in Buick Special Data.*

Engine Support Bar Note—Consists of a length of 2x4 (approx. width of frame) with hole through each end to take hooked rods (hook rests on top of frame), raise and lower support by nuts on rods.

Lubrication Note—When transmission re-installed in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNA-FL W DRIVE TRANSMISSION

Own Make. Torque Converter and hydraulically operated planetary unit with manual control.

See Transmission Section for complete data.

►*PRODUCTION & REPLACEMENT PARTS CHANGES: See Transmission Section.*
TESTING & TROUBLE SHOOTING: See Dynaflow Drive in Transmission Section.

►*CRANKSHAFT REPLACEMENT CAUTION—See Crankshaft Replacement in Buick Special Data.*

►*FLYWHEEL BALANCING DYNAFLOW CARS (To correct vibration caused by replacement parts): See BUICK DYNAFLOW DRIVE in Transmission Section.*

Dynaflow Linkage Adjustment: *See "Buick Dynaflow Drive" in Transmission Section.*

►**Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars**—*See Carburetor Data.*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

►*Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A" with AQ-ATF embossed on can.*

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission oil warm. Raise right side of hood, lift out oil gauge rod between battery and engine. Add fluid to "FULL" mark level with engine idling.

►*CAUTION—Engine must be idling with transmission in Parking and transmission oil warm when checking Dynaflow Drive Fluid Level.*

Capacity—(Series 40, 50) 8½ qts. (Series 70) 10 qts

►*NOTE—A completely dry transmission requires 1¾ pints more than amounts given above.*

►*OTHER DYNAFLOW SERVICE DATA—See "Buick Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. One used (in Torque ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with torque tube drive.

See Rear Axle Section for complete data.

Ratios—*NOTE—Ratio is stamped on bottom center of axle housing with the first two figures of the ratio placed one over the other with a bar between. (Example: 3.9-1 would appear with the 3 over the 9 and separated by a bar).*

Rear Axle Ratios

Models	Synchro-mesh	Dynaflow
41, 41D, 45R, 46, 46S	43-11 (3.9) ①	47-13 (3.6) ②
48, 48D, 56R, 72R, 76R, 76C	43-11 (3.9) ①	47-13 (3.6) ②
46C, 52, 56C	41-10 (4.1) ②	43-11 (3.9) ①
59, 79R	41-10 (4.1) ③	43-11 (3.9) ③

①—Optl. 47-13 (3.6). ②—Optl. 43-11 (3.9).
③—No optional ratios.

Backlash—.008-.010" (desired), .008-.012" (max.).

Removal: Raise rear end of car and place on car stands. Disconnect parking brake cable at rear brake sheave and at bracket of front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.

►*CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).*

Torque Ball Adjustment—*See Buick Special Data.*

Axle Shaft Removal: *See Rear Axle Section.*

Wheel Bearing Adjustment—None.

Rear Suspension: Coil springs and conventional axle. *See Rear Axle Section for complete data.*

SHOCK ABSORBERS

Delco Double Acting, Hydraulic. Parallel cylinder type used on the rear.

Front Shock Absorbers

Series	Shock Number
40 (All Models)	1948A-3.5D-4B
50 (All Models)	1948A-3.5E-4.5B
70 (All Models)	1948-3.5F-4.5D

Rear Shock Absorbers

Series	Shock Number
40, 50 (Right) (Exc. 59)	2105C-.60K-2CD5
40, 50 (Left) (Exc. 59)	2105D-.60K-2CD5
59, 70 (Right) Exc. 79)	2105C-.70L-2CD5
59, 70 (Left) (Exc. 79)	2105D-.70L-2CD5
79 (Right)	2105C-.7M-2CD5
79 (Left)	2105D-.7M-2CD5

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.

►*SERIES 40 & 50 CASTER PRODUCTION CHANGE: See Caster data below and Front Suspension Section.*

See Front Suspension Section for complete data.

Kingpin Inclination—4¼° crosswise at ⅜° camber.

Camber—⅜° Pos. (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ⅜°.

Caster (Series 40, 50)—*CAUTION—Following recommendations supersede original specifications:*

Series 40, 50 (Cars before Oct. 20, 1952)—Set caster as low as possible within adjustment range (to secure benefits of "zero" caster) without causing excessive drag. *NOTE—Original specification range was Pos. ¼° to Pos. 1½°.*

Series 40, 50 (Cars after Oct. 20, 1952)—"Zero" caster desired (0°), Limits ¾° Pos. to ½° Neg. Both wheels must be equal within ½°. *NOTE—These cars have "Zero Caster Knuckles" permitting this setting.*

Caster (Series 70)—Pos. ¾° desired. Limits Pos. ¼° to Pos. 1½° and equal for both wheels within ½°.

Toe-In—1/16-1/8". Adjust both tie rods equally.

►*CAUTION*—Tie rod clamps must be within 1/8" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".

Toe-Out on Turns—With outer wheel turned 20°, inner wheel turns 21½° ± ¾°. *NOTE*—With inner wheel turned 38°, outer wheel should be turned 31½° (right turn), 30¼° (left turn).

STEERING GEAR

Standard Equipment (All Models): Saginaw. Ball bearing Worm-and-Nut type. *See Steering Gear Section for complete data.*

Power Steering (Optional on Series 70): Saginaw. Ball bearing Worm-and-Nut type steering gear to which hydraulic power has been added. *See "Power Steering" in Steering Gear Section for complete data.*

Checking Fluid Level (Power Steering)—Remove reservoir filler plug, wipe off the attached gauge rod and insert rod in reservoir with plug seated on edge of filler opening. Remove plug and check oil level, which should be at mark on rod. Add oil as necessary to bring level to mark on rod. **Use only Buick Dynaflow Oil or Automatic Transmission Fluid, Type "A."**

BRAKES

Service: Bendix Hydraulic, duo-servo, single anchor type without eccentric adjustment. Parking brake "Step-On" lever applies rear wheel service brakes.

►*SERIES 70 BRAKE PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION (Beginning Serial No. 16668190 on Sept. 12, 1952):* FRONT brake shoes of new design (different geometry due to lowering of anchor pin 3/16") used, and these shoes furnished for replacement use on earlier cars. *WHEN INSTALLING THESE SHOES ON EARLY CARS, SPECIAL OFFSET TYPE BRAKE ANCHOR PIN MUST BE INSTALLED. See "Bendix Hydraulic Brakes" in Brake Section for replacement shoes and anchor pin.*

See Brake Section for complete data.

Drums—Cast-iron with steel flange. **Drum Diameter**—11.997-12.003". Maximum rebore .060" O.S. (.030" cut).

►*BRAKE DRUM RECONDITIONING & BALANCING: See "Brake Notes" in Buick Special Data.*

Lining—Molded type, riveted to shoe (all models).

	Front Wheels		Rear Wheels	
	Width	Thickness	Width	Thickness
40, 50 (exc. 59)	2.25"	.187"	1.75"	.187"
59	2.25"	.187"	2.25"	.187"
70	2.50"	.25"	2.25"	.187"

Length—(Primary Shoe) 10 3/32". (Secondary Shoe) 12 13/32".

Clearance—.015" at both ends of secondary shoe (rear) with primary shoe forced out against drum.

Braking Power—53% (frt. whls.), 47% (rear whls.).

Step-On (Parking) Brake: See service brakes (above).

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor driven pump supplying oil under pressure). *See Miscellaneous Section for complete data.*

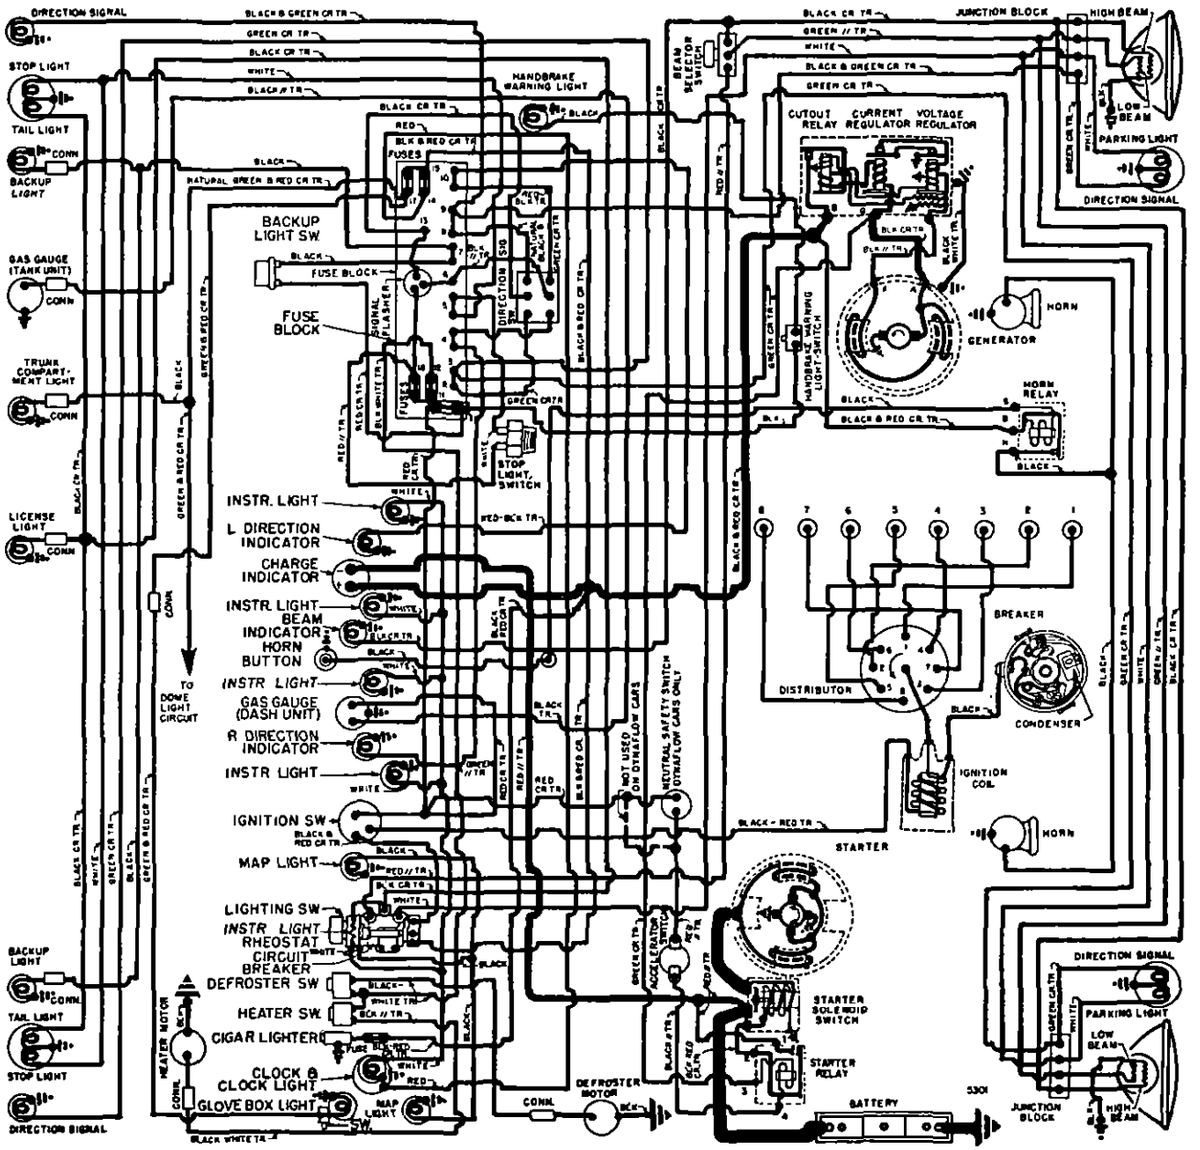
Windshield Wiper: Cable operated—Vacuum type. *See Miscellaneous Section for complete data.*

M DEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left front frame side rail.
1953 Starting Numbers—16740050. *NOTE*—First digit of number indicates assembly plant as follows:

1	Flint	5	Wilmington
2	Southgate	6	Atlanta
3	Linden	7	Framingham
4	Kansas City		

Engine Number: Stamped on boss on right side of crankcase below pushrod cover (between distributor and ignition coil).
1953 Starting Numbers (last digit indicates series).
Synchro-mesh Trans. Cars 6952425-4
Dynaflow Drive Cars 6952400-4
NOTE—Dash following engine number indicates that cylinder bores and pistons are .010" Oversize.



TUNE-UP

COMPRESSION PRESSURE: (Synchro-mesh) 120 lbs., **(Dynaflow)** 130 lbs. At cranking speed.
VACUUM READING: Steady 18-20" idling at 8 MPH. or 450 RPM.
FIRING ORDER: 1-6-2-5-8-3-7-4.
SPARK PLUG GAPS: .025". Limits .023-.028".
Plug Type—AC No. 46X. 14 mm. Metric.
COIL: Delco-Remy No. 1115380. On pushrod cover.
Ignition Current—2½ amperes idling. 4½ stopped.
CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.24 microfarad.
DISTRIBUTOR: Delco-Remy No. 1110838. Automatic and vacuum advance.
Breaker Gap—.0125-.0175".
Cam Angle—Test limits with .016" gap—26-33°.
CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*
IGNITION TIMING: 4° BTDC.
Timing Procedure—*See Ignition Timing.*
►***CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance. If timing light used, idle engine below 350 RPM.***
Flywheel Mark—"ADV. 4°" followed by yellow knurled section of flywheel ⅛" wide which gives timing range of 1° (4° to 5°). Index mark located in timing hole under housing cover above starter.
Final Ignition Setting—Very light "ping" may occur with part throttle on a hard pull, or during wide-open throttle acceleration at 10-20 MPH.
CARBURETION: CARTER WCD No. 882SA. Dual (2-barrel) downdraft with automatic choke.
Idle Setting—1¼-1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM or 8 MPH.
Float Level—5/32" from top of each float to gasket seat on cover with valve seated (invert to check).
Fuel Level—Even with bottom of inspection hole on side of float bowl with engine idling.
Accelerator Pump—Two holes in arm. Inner hole minimum charge. Outer hole maximum charge. Standard setting is inner hole.
Fast Idle: ***CAUTION—Two different settings required:*** (1) Loosen choke lever clampscrew on choke shaft. Insert gauge T109-29 (.020") between lip of fast idle cam and boss on throttle body, hold choke valve tightly closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clampscrew.

(2) With choke valve tightly closed and fast idle screw on high step of cam, adjust fast idle screw for throttle opening of .012" (Gauge T-109-200) between edge of valve and wall on side opposite idle ports.

Automatic Choke Setting (WCD)—1 notch rich.
Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor.

CARBURETION: STROMBERG AAUVB-267, Code No. 7-90B. Dual (2-barrel) with automatic choke.
Idle Setting—1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM or 8 MPH.
Float Level—(On gauge No. T-24971), 5/64" above top of gauge guides.
Fuel Level—(Checked through inspection hole). Fuel must be level with bottom of threads in inspection hole.
Accelerating Pump—3 holes. Center hole (medium stroke) normal setting.

Fast Idle (AAUVB-267) Setting: ***CAUTION—Two different Settings required:***

Fast Idle Cam—Close choke valve against #26 drill (.147"), see that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle *until stopscrew contacts fast idle cam. If screw does* not just clear edge of highest step on cam and bear against second step, adjust by bending fast idle rod at the large curve.

Lever Clearance—Close choke valve against #53 drill, adjust clearance between ear on locking lever on throttle valve shaft and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened and closed. Adjustment is made by bending end of loose lever up or down as required.

Automatic Choke Setting: (AAUVB-267), Centered.

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor.

THROTTLE LINKAGE ADJUSTMENT:

Synchro-mesh Trans. Cars—Check linkage for smooth operation of throttle valve from closed to wide open position (pedal correctly secured to floor, pedal rod free in hole in floor mat, return spring proper tension for closed position). Wide open throttle stop should be accelerator pedal striking floor mat (not throttle lever stop striking boss on carburetor). Adjust as follows: With linkage disconnected at throttle operating ball joint, open *throttle valve to wide open position against stop,* have man press accelerator against floor mat, adjust ball joint so screw will just enter upper hole in throttle lever, turn ball joint 1 or 2 turns clockwise, connect ball joint to throttle lever. Check choke unloader operation.

Dynaflow Drive Cars—***See "Dynaflow Drive" in Transmission Section for Linkage Adjustment.***

MANIFOLD HEAT CONTROL: Setting—Thermostatic coil wind-up ¼ turn at 70° (valve closed). To prevent rattles, counterweight should have 1/16-1/8" movement at extreme end positions, adjust by bending *anti-rattle spring* lower anchor bracket.

VALVE TAPPET CLEARANCE: ***CAUTION—Two types of valve lifters used:***

Synchro-mesh Cars—Conventional adjustable type.
Dynaflow Drive Cars—Hydraulic type.
Identification—(Conventional Type) RED lettering "BUICK FIREBALL" on valve cover, **(Hydraulic Type)** BLUE lettering on valve cover.

►**HYDRAULIC TYPE SETTING**—***NO CLEARANCE ADJUSTMENT REQUIRED*** although rocker arms have adjusting ball studs. **Initial adjustment** required when head or ball studs disturbed.
Initial Adjustment—***See Valve Timing.***

►**CONVENTIONAL TYPE SETTING:** To secure .015" operating clearance, stabilize temperature by running engine at fast idle (700 RPM. minimum) for 20 minutes with radiator cap removed, **then adjust clearance using .017" feeler gauge as "GO", .018" as "NO GO."**

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116499.

COIL: Delco-Remy No. 1115380. On pushrod cover.
Ignition Current—2½ amperes idling. 4½ stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.24 microfarad.

DISTRIBUTOR: Delco-Remy No. 1110838. Automatic and vacuum advance type with "center-bearing" breaker plate.

►**Breaker Plate Bearing Assembly**—Plate rotates on three bakelite buttons on support plate with spring *tension adjustment (shim washers) on underside of* support plate. Pull required to move plate should be 8 ozs. min., 16 ozs. max., with breaker plate assembly out of housing.

Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—Test limits with .016" gap 26-33°.
CAUTION—Use of Cam Angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap within .0125-.0175".
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	0-4	700
5-7	625	10-14	1250
8-10	1300	16-20	2600
11-13	2000	22-26	4000

Vacuum Spark Control: Delco-Remy No. 1116073.
Plunger Travel—13/64-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
4.5-5.5	9-11	13"

IGNITION TIMING

Std. Setting.....**4° BTDC.**

►***CAUTION—Ignition timing should be set within yellow band of flywheel mark for proper engine performance. If timing light used, idle engine below 350 RPM.***
Flywheel Mark—"ADV. 4°", following yellow knurled section on flywheel ⅛" wide which gives timing range of 1° (4-5°). Index mark located on edge of timing hole under cover on housing above starter.
Timing Procedure—Use Synchroscope or Power Timing Light connected to #1 spark plug. Idle engine at **not more than 350 RPM** (to prevent automatic advance operating). Adjust distributor so that timing mark on flywheel appears in line with index mark on housing.
Final Ignition Setting—Set for very light "ping" with part throttle on hard pull, or during acceleration between 10-20 MPH. with wide open throttle.

CARBURETOR
CARTER

Carter WCD No. 882SA. Dual down-draft type with automatic choke.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Setting and Accelerating Pump Setting): ***See Tune-Up.***
Metering Jets & Rods—***See Carburetor Section for Carter Jet Specifications.***

Fast Idle: Carter Dual (WCD) Carburetor type.
Setting—***CAUTION: Two different settings required:*** (1) Loosen choke lever clampscrew on choke shaft. Insert gauge T109-29 (.020") between lip of fast idle cam and boss on throttle body, hold choke valve tightly closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clampscrew.

See Carburetion Equipment Section for complete data.

(2) With choke valve tightly closed and fast idle screw on high step of cam, adjust fast idle screw for throttle opening of .012" (Gauge T109-200) between edge of valve and wall on side opposite idle ports.

Automatic Choke: Carter Climatic Control.
Setting—1 Point Rich.

See Carburetion Equipment Section for complete data.

Throttle Linkage Adjustment:

Synchro-mesh Trans. Cars—***See Tune-Up data.***

Dynaflow Drive Cars—***See "Dynaflow Drive" in Transmission Section for Linkage Adjustment.***

STROMBERG

Stromberg Model AAUVB-267. Code No. 7-90B. Dual, downdraft type with automatic choke.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): ***See Tune-Up.***

Fast Idle: Stromberg AAUVB type.
Setting—***CAUTION—Two different settings required:***
Fast Idle Cam—Close choke valve against #26 drill (.147"), see that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle until stopscrew contacts fast idle cam. If screw does not just clear edge of highest step on cam and bear against second step, adjust by bending fast idle rod at the large curve.

Lever Clearance—Close choke valve against #53 drill, adjust clearance between ear on locking lever on throttle valve shaft and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened and closed. Adjustment is made by bending end of loose lever up or down as required.

See Carburetion Equipment Section for complete data.

Automatic Choke: Stromberg AAUVB type.
Setting—Centered (at index).

See Carburetion Equipment Section for complete data.

Throttle Linkage Adjustment:
Synchro-mesh Trans. Cars—***See Tune-Up data.***
Dynaflow Drive Cars—***See "Dynaflow Drive" in Transmission Section for Linkage Adjustment.***

CARB. EQUIPMENT

Air Cleaner: AC Oil-bath type.
Fuel Pump: AC Combination fuel-and-vacuum pump.
Replacement Pump—AC No. 9761.

See Carburetion Equipment Section for complete data.

Pressure—4½-5½ lbs., at fuel pump outlet, or 4-5 lbs., at carburetor.

Gasoline Gauge: AC Electric type.
Dash Unit—*AC No. 1517878.* **Tank Unit**—*AC No.* 1517779.

See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15E6-W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).

Grounded Terminal—Negative (—) to right engine mounting bracket.

Location—Under hood on right side.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STARTER

Delco-Remy No. 1107110. Armature No. 1917855.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 "	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid Switch No. 1118148 with SEPARATE Relay No. 1116855 controlled by starter switches on carburetor:
Carter Carburetor—Carter No. 192-11U.
Stromberg Carburetor—Stromberg No. 386030.
Starter Switch Setting—*See "Carter WCD" and "Stromberg AAUVB" Carburetors in Carburetor Section.*

Dynaflow Neutral Safety Switch: Delco-Remy No. 1998023. At lower end of steering column. Connected in starter control circuit so that starter operative only with selector lever in "N" Neutral or "P" Parking position.
Neutral Safety Switch Adjustment—*See "Buick Dynaflow Drive" in Transmission Section.*

GENERATOR

Delco-Remy No. 1102798. Armature No. 1912599. Two brush type with voltage and current regulation.
Charging Rate Adjustment: None. See Regulator.

Performance Data—Cold

	Amperes	Volts	R.P.M.
Cold	45①	8.0	2350

①—Not maximum. See Regulator data.
Brush Spring Tension—28 ozs., each.
Field Current—1.87-2.0 amperes at 6.0 volts.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment—½" belt deflection with light pressure at point midway between generator pulley and fan pulley.

REGULATOR

Delco-Remy No. 1118729. Voltage & Current Regulator.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both contacts).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot).
Air Gap—.075" (with contacts just closed).
Regulator is over-compensated for temperature. Should be checked with cover in place and hot.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—45-51 amperes hot (set to 47 amperes hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.

Directional Signal: *See Electrical Equip. Section.*
Directional Signal Indicators—Located to the right and left of light indicator emblem. (Optional Equipment).

Switches
Lighting—Delco-Remy No. 1995045.
Beam Indicator—Delco-Remy No. 1997008.
Directional Signal—Delco-Remy No. 1995574.
Back-Up Light—Delco-Remy No. 1998013 (Synchro-mesh); Delco-Remy No. 1998015 (Dynaflow).

▷**DASH PANEL INSPECTION HOLE—(For access to wiring on back side of instrument panel).** Located on left side of dash under hood, with removable plate screwed to dash.

MISC. ELECTRICAL

THERMOSTATIC RELAY: Delco-Remy. On lighting switch (protects lighting circuits). Contacts remain closed with 30 amperes, open in 3 minutes with current of 42 amperes at 70°F. Not adjustable.

FUSE BLOCK: On lower flange of instrument panel at left of steering column. Five fuses as follows:
1)—**Dome, Glove Box & Trunk Lights.** 30 amperes.
2)—**Clock.** 3 amperes.
3)—**Defroster & Heater.** 14 amperes.
4)—**Directional Signal & Stop Lamp.** 14 amperes.
5)—**Back-Up Lights.** 14 amperes.

HORNS: Delco-Remy No. 1999639 (Low Note); 1999640 (High Note). Vibrator type, operated by relay.

Horn Relay: Delco-Remy No. 1116775.
Contacts Close—2.75-4.0 volts (set to 3.5 volts).
Contact Gap—.027".
Air Gap—.014" (contacts closed).

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder, in line, with overhead valves.
Bore—3 3/16". **Stroke**—4 1/8".
Displacement—263.3 cu. in. **Rated H.P.**—32.51.

	Compression Ratio	Developed H.P.
Synchro-mesh	7.0-1	125 at 3800 RPM.
Dynaflow	7.6-1	130 at 3800 RPM.

▷*OVERSIZE CYLINDER BORE CAUTION*—Engines with ¼" long dash following engine number have .010" Oversize cylinder bores and pistons.

▷*SYNCHRO-MESH ENGINE NOTE*—These engines are equipped with conventional type valve lifters and use different camshaft, pushrods and valve springs.
Identification—Conventional type lifters, **Blue** lettering *"BUICK FIREBALL"* on valve cover. Hydraulic Lifters, **Red** lettering.

▷**CYLINDER HEAD:** *CAUTION—Same head used with different gasket for each compression ratio:*
Cylinder Head—Part No. 1318873.

	Compr. Ratio	Head Gasket Part No.	Thickness
Synchro-mesh Cars	7.0-1	1340901	.075"
Dynaflow Cars	7.6-1	1343737	.015"

CYLINDER HEAD & TIGHTENING TORQUES: *See Buick Special Data.*

COMPRESSION & VACUUM READINGS: *See Tune-Up.*

PISTONS: Anodized aluminum alloy, cam ground, turbulator top. Four rings above pin.

▷**Piston Note**—Pistons have pin offset 1/16" toward camshaft side. Bottom oil ring groove has two transverse slots.
Weight (Stripped)—13.44 ozs. **Length**—3 49/64".
Removal—Pistons and rods removed from above.
Clearance (Top of Skirt)—.0012-.0018". See Fitting New Pistons.
Replacement Pistons—*See Buick Special Data.*

Fitting New Pistons: Use feeler stock ¼" wide (for "GO" gauge), ½" wide ("NO GO" gauge) and 12" long suspended in cylinder at right angles to engine center line, invert piston in cylinder. With piston and cylinder clean and dry and at 70°F., piston should pass through cylinder of own weight with .0015" "GO" feeler gauge, and should hold its own weight with .002" "NO GO" feeler gauge.

Installing Pistons: Hollow side of head to camshaft. *See Connecting Rods (below).*

PISTON RINGS: Two compression (upper inner edge *stepped or beveled). One slotted* oil ring in #3 groove, "U-Flex" in the #4 groove. All rings above pin, #1, #2, & #4 rings are coated.

Ring	Width	End Gap	Side Clearance
Comp.	3/32"	.010-.020"	.0015-.0035"
Upper Oil	3/16"	.010-.020"	.0015-.003"
U-Flex	.186-.187"	①	.001-.003"

①—No checking or fitting required.

Replacement Rings: *See Buick Special Data.*

PISTON PIN: Clamped in rod.
Diameter—.8124-.8129". **Length**—2 11/16".
Pin Fit in Piston—.0003-.0005" at 70°F., or easy push fit at 70°F.

Replacement Pins: Std., .003", .005" oversize. Pins fitted and furnished with new pistons (pistons not *furnished without pins). Pins also furnished* separately.

CONNECTING ROD: Length—7⅜". **Weight** 28.096 ozs.
Crankpin Journal Diameter—2.125-2.126".
Bearings—Durex 100-A "full-precision" insert type without shims.
Clearance—.0005-.0016". **Sideplay**—.005-.010".

Replacement Bearings: Furnished in Std., .001", .002", *.020", .021"* undersize. *Undersize* bearings marked with number on outer surface near tang, indicating size.

Installing Rods: Install in piston with oil hole toward hollow side of piston. Install in engine with oil hole toward camshaft.

CRANKSHAFT: Five bearing, counterweighted.

▷*CRANKSHAFT OR FLYWHEEL REPLACEMENT ON DYNAFLOW CARS: See Buick Special Data.*

▷*FLYWHEEL BALANCING ON DYNAFLOW CARS (To correct vibration caused by replacement parts): See "Buick Dynaflow Drive" in Transmission Section.*
Main Bearing Journal Diameter—2.5625-2.5635".
NOTE—Car manufacturer recommends that crankshaft be replaced or reground if journal out-of-round more than .0015".
Bearings—Steel-backed, Durex 100-A.
Clearance—.0006-.0018".

▷*CAUTION*—Arrow on main bearing caps must point to front of engine when installed.

Replacement Bearings: Std., .0012", .002", .020", .022" Undersize.

Rear Bearing Oil Seal Installation: *See Buick Special Data.*

End Thrust: #3 (center bearing). **Endplay**—.004-.008".

CAMSHAFT: Five bearing, non-adjustable chain drive.

▷*CAMSHAFT CAUTION (Different camshafts used for Conventional and Hydraulic type lifters)*—Camshafts have a ¼" land located between #6 and #7 valve operating cams. *FOR CONVENTIONAL LIFTERS*—Land has rough-turned surface, with a 1/16" x 1/16"

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

groove cut in center. *FOR HYDRAULIC LIFTERS*—Land has a bright finish ground surface and no groove. Land can be seen when oil pan is removed.
Bearing Diameters—(1) 2 5/32"; (2) 2 1/8"; (3) 2 3/32"; (4) 2 1/16"; (5) 1 3/4".
Clearance—.0015-.004". *NOTE*—Replacement bearings must be line-reamed after installation.

End Thrust: Spacing ring between front bearing journal and thrust plate (on front of crankcase behind camshaft sprocket). **Endplay**—.004-.009".

Timing Chain: Link-belt. **Width**—13/16". **Pitch**—.500". **Length**—24½" or 49 links.

Camshaft Setting: Two teeth on timing chain (10 links apart) are marked with copper plated washers. Facing the front of engine, center the crankshaft sprocket timing mark on right side. Set camshaft sprocket (mark to right side), and install chain with marked teeth matching sprocket marks.

VALVES: *CAUTION*—Engines with hydraulic valve lifters use different camshaft *(See Camshaft Caution above)*, push rods and valve springs than engines with conventional valves.

Valve Specifications

	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.3715-.3725"	5 7/64"
Exhaust	1 11/32"	.3711-.3719"	5 7/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.348"	.0015-.0035"
Exhaust	45°	.342"	.0021-.0039"

Valve Seat Width: Nominal width 1/16". Seat wider than 5/64" should be narrowed down using the proper 20° and 70° cutters.

Valve Guides: Upper end of guide 1 5/32" above head. Finish ream guides after installation to .374-.375" use Valve Guide Reamer J-129-3).

Valve Springs: *CAUTION*—Springs used with hydraulic valve lifters are different than springs used with conventional type lifters.
Free Length (Conventional Lifters)—2 11/32" (Outer Spring). 1 29/32" (Inner Spring).

Valve Spring Specifications
►Engines with Conventional Lifters

Valve	Inner Spring Lbs. Press.	Lgth.	Outer Spring Lbs. Press.	Lgth.
Open	48-54	1 5/16"	74-80	1 19/32"
Closed	17½-22½	1 21/32"	29½-34½	1 15/16"

►Engines with Hyydraulic Valve Lifters

Valve	Inner Spring Lbs. Press.	Lgth.	Outer Spring Lbs. Press.	Lgth.
Open	49-55	1 5/16"	96-104	1 19/32"
Closed	22-26	1 21/32"	49-55	1 15/16"

Valve Lifters (Conventional Type): Plain sleeve, barrel type. **Diameter**—.9975-.9985".
Clearance in Crankcase—.0005-.0025".

Valve Lifters (Hydraulic Type): Used on all cars with Dynaflow Drive.
See Buick Special Data for complete data.
Identification—*"Buick Fireball"* lettered in RED on valve rocker arm cover and a label reading, "This Engine Equipped with Hydraulic Lifters."

►*CAUTION*—If lifter operating properly, DO NOT disassemble when removed from engine for other work (wrap in clean paper to keep dirt out).

►**Initial Adjustment**—Required only when installing cylinder head or when adjusting ball stud setting has been disturbed. *See "Valve System" in Buick Special Data.*

►*ROCKER ARM NOTE*—Rocker arms used on engines with hydraulic valve lifters are the same as those used on engines with conventional lifters. *See "Valve System" in Buick Special Data.*
Push Rod Note—Hole in upper end of pushrod is eliminated on engine with conventional valve lifters. (These rods can be identifled by copper finish rod socket end).
Rocker Arm Installation—*See "Valve System" in Buick Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION*—Two types of valve lifters used. **Conventional type** on Series 40 with Synchro-mesh transmission. **Hydraulic type** on all others.
Identification—Conventional type lifters, **Blue** lettering *"BUICK FIREBALL"* on valve cover. Hydraulic lifters, **Red** lettering.
Clearance (Hydraulic Type)—*NO CLEARANCE ADJUSTMENT REQUIRED IN SERVICE* although rocker arms have regular adjusting ball studs. *INITIAL ADJUSTMENT required when installing cylinder head or when ball studs disturbed.*
Initial Adjustment—*See "Valve System" in Buick Special Data.*
Clearance (Conventional Type)—To secure .015" road operating clearance, stabilize temperatures by running engine at fast idle (700 RPM.) for 20 minutes with radiator cap removed, then adjust clearance using **.017" feeler gauge as "GO," .018" as "NO GO."**
Anti-Freeze Caution—Replace with water for warming up (will boil out if left in radiator).

Timing Chain Setting—See Camshaft Setting.

VALVE TIMING: "Timing Points" below are with valve .004" off seat.

Synchro-mesh
Intake Valves—Open 13° BTDC. Close 68° ALDC.
Exhaust Valves—Open 55° BLDC. Close 22° ATDC.

Dynaflow
Intake Valves—Open 14° BTDC. Close 71° ALDC.
Exhaust Valves—Open 56° BLDC. Close 25° ATDC.

VALVE TIMING CHECK

Series 40 (with conventional type lifters)—Set tappet clearance for .015" road operating lash, use dial indicator to check actual valve opening. No. 2 or No. 7 exhaust valve should be .145" open with No. 1 & No. 8 pistons at top dead center with flywheel mark "UDC/1-8" visible through inspection hole in right front face of housing.

Series 40 (with hydraulic valve lifters)—Use dial indicator set up over No. 2 or No. 7 exhaust valve to check actual valve movement. With valve fully closed, set indicator to zero, tighten adjusting ball stud until indicator reads .015", wait until leakdown allows indicator to return to zero, repeat process until indicator fails to return to zero (indicating that lifter plunger bottoming in body so that lifter is "solid"). Back off ball stud just enough so that indicator reads zero. Turn crankshaft slowly (in running direction) until indicator reads .145". Flywheel mark "UDC/1-8" should be visible through inspection hole in right front face of housing.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and restricted flow to rocker arm bearings, push rods and hydraulic valve lifters (if used).
Crankcase Capacity—Refill 5½ qts. Add 1 qt. if engine dry.
NOTE—If oil filter is dry, add 1½ qts. to capacities.
Normal Oil Pressure—35 lbs. at 35 MPH.
Oil Pressure Regulator—Non-adjustable spring and valve type on oil pump. Opens at 35 lbs.

Oil Filter: AC low-restriction. Filter has by-pass valve which opens at 7-9 lbs., (all oil for valve system passes through filter).
NOTE—Valve system oil feed taken from outlet side of filter with restricted fitting in head at point where rocker shaft oil lead connected.
Replacement Element—AC No. P-127. Change every 5000 miles.

Oil Pump: *See Buick Special Data.*

Oil Pressure Gauge: AC No. 1508012.

Crankcase Ventilation: Filter in oil filler breather cap and in crankcase ventilator inlet on left side of engine. Outlet pipe mounted on right side of engine.

COOLING

Cooling System: Pressure type with pressure valve and vacuum valve (relief valve) in filler cap. Recirculation of water through engine (with thermostat closed) permitted by fixed by-pass passage between water outlet and pump inlet.
Pump Outlet for Dynaflow Drive—Separate pipe on right side below pump inlet. Used only on cars with Dynaflow Drive.
Capacity (No Heater)—12 qts. (add 1½ qts. with Dynaflow Drive).
Heater Note—Add 1½ qts. to capacities when heater is installed.
Pressure Cap—AC No. 850549. Stamped 549/7#. Radiator Filler Cap, 7 lb. type.

Water Pump: Packless sealed ball-bearing type.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In housing above water pump. Buick No. 3122282 (Std. 151°). No. 3122283 (160°). No. 3122285 (180°).
Setting—(151°) starts to open 148-155°F. Fully open not over 176°.

Temperature Gauge: AC No. 1512686.

CLUTCH

Own "Crown Spring" with Borg & Beck or Long Driven Member. Single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven type, 2 used. Inside diameter 6". Outside diameter 10". Thickness .125".

Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toe board.

Removal: Remove rear axle and transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering column mounted shift control.
See Transmission Section for complete data.

Transmission Control—*See Transmission Section for complete data.*

Removal: Disconnect rear axle (see data following). Drain transmission, fill with clean gasoline or kerosene and run approximately 15 seconds in NEUTRAL, drain cleaner. Disconnect speedometer cable, lower shift rod and selector rod. Take out toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Reinstall support bar (see note below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out two attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

▷*NOTE*—To shim Rear Mounting when installing transmission, *see "Engine Mounting" in Buick Special Data.*

Engine Support Bar Note—Consists of a length of 2x4 (approx. width of frame) with hole through each end to take hooked rods (hook rests on top of frame), raise and lower support by nuts on rods.

Lubrication Note—When transmission re-installed in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNAFLOW DRIVE

"Twin Turbine" Dynaflow Drive (Torque Converter & hydraulically operated planetary transmission).
See Transmission Section for complete data.

▷*CRANKSHAFT REPLACEMENT CAUTION—See Crankshaft Replacement in Buick Special Data.*

▷*FLYWHEEL BALANCING ON DYNAFLOW CARS (To correct vibration caused by replacement parts): See "Buick Dynaflow Drive" in Transmission Section.*

▷**Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars**—*See Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.

▷*Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type "A" with AQ-ATF embossed on can.*

Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission oil warm. Raise right side of hood, lift out oil gauge rod between battery and engine. Add fluid to "FULL" mark level with engine idling.

▷*CAUTION—Engine must be idling with transmission in Parking and transmission oil warm when checking Dynaflow Drive Fluid Level.*

Capacity—10 qts. An additional 1¾ pts. required if transmission dry.

▷*OTHER DYNAFLOW SERVICE DATA—See "Buick Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. One used (in Torque ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with torque tube drive.
See Rear Axle Section for complete data.

Gear Ratios—(Synchro-mesh) 43-11 (3.9). (Dynaflow) 43-12 (3.6).

RATIO NOTE—Gear ratio stamped on bottom center of axle housing with the first two figures of the ratio placed one over the other with a bar between. (Example: 3.9-1 would appear with the 3 over the 9 and separated by a bar).

Backlash—.008-.010" (desired), .008-.012" (max.).

Removal: Raise rear end of car and place on car stands. Disconnect parking brake cable at rear brake sheave and at bracket on front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.

▷*CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).*

Axle Shaft Removal: *See Rear Axle Section.*
Wheel Bearing Adjustment—None.

Rear Suspension: Coil springs and conventional axle.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco Double Acting, Hydraulic. Parallel cylinder type used on the rear.

Delco Part Nos.

Front (left & right)	1948-A
Rear (left)	2105-D
Rear (right)	2105-C

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

Kingpin Inclination—4¼° crosswise at ⅜° camber.
Camber—⅜° Pos. (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ⅜°.
Caster—0° preferred (limits ¾° Pos. to ½° Neg.) and equal for both sides within ½°.
Toe-In—1/16-1/8". Adjust both tie rods equally.

▷*CAUTION*—Tie rod clamps must be within ⅛" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".

Toe-Out on Turns—With outer wheel turned 20°, inner wheel turns 21½° ± ¾°.

STEERING GEAR

Standard Steering Gear: Saginaw Ball-bearing Worm & Nut recirculating ball type.
See Steering Gear Section for complete data.

Optl. Power Steering: Saginaw (G.M.) Ball-bearing Worm & Nut recirculating ball type with hydraulic power.
See Steering Gear Section for complete data.

Checking Fluid Level (Power Steering)—Remove reservoir filler plug, wipe off the attached gauge rod and insert rod in reservoir **with plug seated on edge of filler opening.** Remove plug and check oil level, which should be at mark on rod. Add oil as necessary to bring level to mark on rod. **Use only Buick Dynaflow Oil or Automatic Transmission Fluid, Type "A."**

BRAKES

Service: Bendix-Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Parking brake "Step-On" lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Cast-iron with steel flange. **Drum Diameter**—12" (11.997-12.003"). Maximum rebore limit .030" cut (.060" O.S.). *See "Brake Notes" in Buick Special Data.*
Lining—Molded type riveted to shoe. **Width**—2¼" (Front wheels). 1¾" (Rear wheels). **Thickness**—3/16" (all shoes).
Length—(Primary Shoe) 10 3/32". (Secondary Shoe) 12 13/32".
Clearance—.015" at both ends of secondary shoe (rear) with primary shoe forced out against drum.

Step-On (Parking) Brake: See service brakes (above).

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor driven pump supplying oil under pressure).
See Miscellaneous Section for complete data.

Windshield Wiper: Cable operated—Vacuum type.
See Miscellaneous Section for complete data.

►*1953 AIR-CONDITIONED CAR SERVICING CAUTION: Use extreme care when disconnecting any part of air-conditioning equipment or lines. See "Air-Conditioning" in Miscellaneous Section for complete data.*

►*NOTE—These cars have 12-volt electrical system.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left front frame side rail.

1953 Starting Numbers—

1—6740001	Flint	5—6799001	Wilmington
2—6765001	Southgate	6—6808001	Atlanta
3—6774001	Linden	7—6815001	Framington
4—6783001	Kansas City		

Identification—First digit of serial number indicates assembly plant as listed above.

ENGINE NUMBER: Stamped on outside of left bank of cylinders on extension of top face of block, halfway back.

1953 Starting Numbers—

50 Series V-2415-5
70 Series V-2001-7

Identification—Last digit indicates series.

NOTE—Dash following engine number indicates that cylinder bores and pistons are .010" Oversize.

TUNE-UP

►*ACCELERATION HESITATION (First Cars): If this condition persists AFTER complete and careful tune-up of engine, see MANIFOLD HEAT CONTROL for further corrective procedure.*

►*DETONATION OR SPARK RAP ON ACCELERATION —Other than full throttle detonation caused by carbon accumulation or use of low-octane fuel.*

1) If noted during Light and Medium Throttle Acceleration—Install spacer in distributor vacuum spark control unit to increase control spring pressure. *See Vacuum Spark Control under IGNITION.*

2) If noted during Sudden Acceleration (from part-to-wide open throttle) on first Series 50 & 70 Carter Carburetors (tag dated prior to "E3"), Series 50 Stromberg Carburetor (Code 7-95), Series 70 Stromberg Carburetor (Code 7-94 or 7-94A): Condition can be improved by increasing size of vacuum spark control port in carburetor. *See "Carter WCD", "Carter WCFB", "Stromberg AAVB-267", and "Stromberg 4A" Carburetors in Carburetor Section.*

►*HIGH-SPEED PRE-IGNITION: See Distributor under IGNITION for production change limiting maximum automatic (centrifugal) advance.*

►*ENGINE IMPROVED WARM-UP & ELIMINATION OF STALLING (First cars with Stromberg Two-barrel Code 7-95 and Four-barrel Code 7-94 or 7-94A Carburetors):* Modify automatic choke and adjust Fast Idle and Unloader. *See "Stromberg AAVB-267" and "Stromberg 4A" Carburetors in Carburetor Section.*

►*ENGINE SURGE ON TURNS (Early Series 50 with Stromberg Code 7-95 Carburetor): See "Stromberg AAVB-267" Carburetor in Carburetor Section for recommended change.*

►*SPARK PLUG WIRING CAUTION (to prevent misfiring):* See "Ignition Notes" in Buick Special Data for correct grouping of spark plug cables in support grommets on engine.

COMPRESSION PRESSURE: At cranking speed (allowable variation between cylinders 10 lbs.).

	Synchro-mesh	Dynaflow
50 Series	160 lbs.	170 lbs.
70 Series		170 lbs.

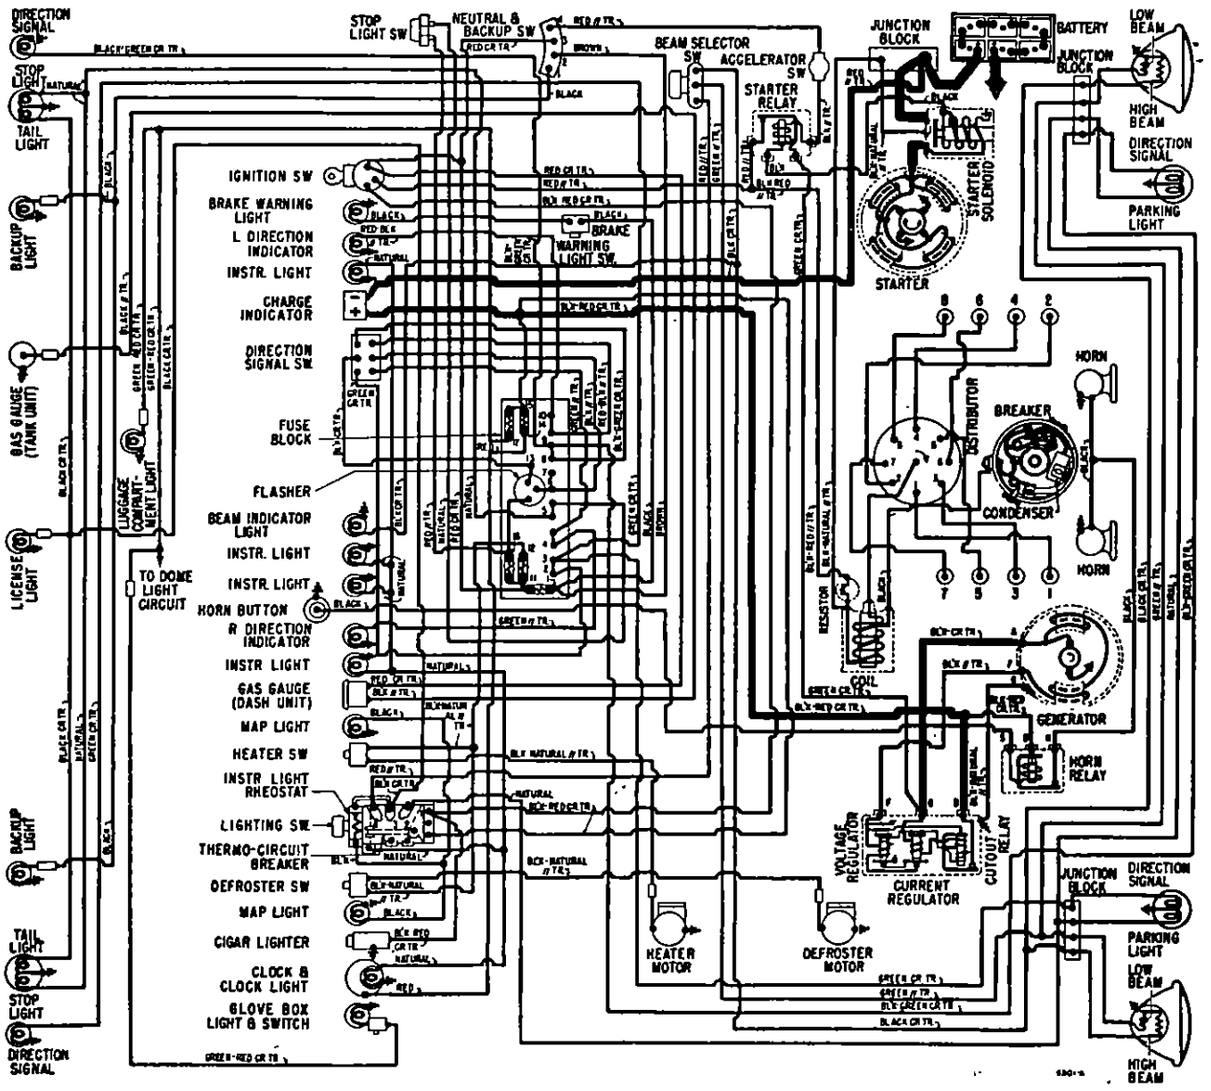
VACUUM READING: Steady 18-20" at idling speed (450 RPM).

FIRING ORDER: 1-2-7-8-4-5-6-3.
Cylinder Numbering—Right Bank 1-3-5-7. Left Bank 2-4-6-8. Viewed from front.

SPARK PLUG GAPS: .032" exactly.
Plug Type—AC No. 44-5. 14 mm.

DISTRIBUTOR: Delco-Remy No. 1107827. *Same as 6 Volt Type.* Automatic and vacuum advance type with "center bearing" breaker plate.

►*HIGH-SPEED PRE-IGNITION: See Distributor under IGNITION for production change limiting maximum automatic (centrifugal) advance.*
Breaker Gap—.015-.017". Use dial indicator.
Cam Angle—26-33° test limits with .016" gap.



►*CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap between .015-.017".*
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Delco-Remy No. 1115082. *12 Volt.* Used with resistor. On bracket directly in front of distributor.
Resistor—Delco-Remy No. 1923681. On coil bracket.

►*COIL RESISTOR NOTE*—Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from the starter solenoid-to-coil.

CONDENSER: Delco-Remy No. 1869704. *Same as 6 Volt.*
Capacity—.18-.23 microfarad.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION TIMING: 5° BTDC.
Timing Mark—Yellow mark on top edge of one flywheel ring gear tooth aligned with pointer in sight hole in left side of flywheel housing.
NOTE—Flywheel also stamped with figure "5" on side of this marked tooth facing toward rear of car.
Timing Procedure—*See Ignition Timing.*
▷***LOCATING TIMING MARK (If mark obscured or lost):*** *See "Ignition Notes" in Buick Special Data.*

CARBURETION

SERIES 50—CARTER 2-BARREL

CARTER WCD No. 2017S. Dual (2-barrel) downdraft type with automatic choke.
▷***CARBURETOR CHANGE TO CORRECT SPARK RAP ON SUDDEN ACCELERATION (Carburetors tag dated prior to "E3"):*** *See "Carter WCD" in Carburetor Section for increasing size of vacuum port.*
Idle Setting—One turn (½-1½ turns) open. Adjust both screws alike (turn out for richer mixture).
Idle Speed—450 RPM.
Float Level—15/64" from top of each float to gasket seat on cover with valve seated (invert float assembly to check). Use Gauge T109-240 installed directly under floats and adjust floats vertically to just clear horizontal portion of gauge and laterally so sides of floats barely touch uprights on gauge.
Accelerating Pump—Install connector link in outer hole of pump arm for long stroke.
Fast Idle: ***CAUTION—Two different settings required:***
(1) Loosen choke lever clampscrew on choke shaft. Insert gauge T109-29 (.020") between lip of fast idle cam and boss on throttle body, hold choke valve tightly closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clampscrew.
(2) With choke valve tightly closed and fast idle screw on high step of cam, adjust fast idle screw for throttle opening of .015" (Gauge T109-44) between valve edge and wall (side opposite idle ports).
Automatic Choke Setting: Centered (at index).
Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

SERIES 50—STROMBERG 2-BARREL

STROMBERG AAVB-267, Code 7-95 (Early), 7-95A (Later). Dual downdraft type with automatic choke.
▷***CARBURETOR CHANGES TO CORRECT SPARK RAP ON SUDDEN ACCELERATION & ENGINE SURGE ON TURNS (First Code 7-95 Carb.): See "Stromberg AAVB" in Carburetor Section for recommended procedure.***
Idle Setting—1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed—450 RPM.
Float Level—Using Gauge T-24971 installed on air horn gasket (air horn and float assembly inverted), floats should be 5/64" above vertical guides on gauge.
Accelerating Pump—Place pump rod in lower hole of throttle lever.
Fast Idle Setting: ***CAUTION—Two different settings required.***
Fast Idle Cam—Close choke valve against #41 drill, make certain that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle until stopscrew contacts fast idle cam. If screw does not just clear edge of highest step on cam and bear against second step, adjust by bending fast idle rod at the large curve.
Lever Clearance—Close choke valve against #53 drill, adjust clearance between ear on locking lever on throttle valve shaft and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened and closed. Adjustment is made by bending end of loose lever up or down
Automatic Choke Setting: Set on index.
Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

SERIES 70—CARTER 4-BARREL

CARTER WCFB, No. 996S (First), 2053S (Later). Four-barrel downdraft type with automatic choke.
▷***CARBURETOR CHANGE TO CORRECT SPARK RAP ON SUDDEN ACCELERATION (Carter 996S and first 2053S Carburetors tag dated prior to "E3"): See "Carter WCFB 4-Barrel" in Carburetor Section for increasing size of vacuum spark port.***
Idle Speed—450 RPM.
Other Data—*See "Carter WCFB 4-Barrel" in Carburetor Section.*

SERIES 70—STROMBERG 4-BARREL

STROMBERG 4AUV-267, Code 7-94 & 7-94A (Early), 7-94B (Later). Four-barrel downdraft type with automatic choke.
▷***CARBURETOR CHANGES TO CORRECT SPARK RAP ON SUDDEN ACCELERATION AND TO IMPROVE WARM-UP AND ELIMINATE STALLING (First Code 7-94 & 7-94A Carbs.): See "Stromberg 4-Barrel 4A" in Carburetor Section for recommended procedure.***
Idle Speed—450 RPM.
Other Data—*See "Stromberg 4-Barrel 4A" in Carburetor Section.*
LINKAGE ADJUSTMENT & DASHPOT SETTING (ALL DYNAFLOW CARS): *See "Buick Dynaflow Drive" in Transmission Section.*
MANIFOLD HEAT CONTROL: Thermostatic type, located in left exhaust manifold. With cold engine, and freely operating valve, valve is closed (counterweight in "up" position), and back pressure in manifold forces exhaust gases through crossover chambers to right exhaust manifold. As engine warms up, valve opens, reducing flow of hot gas into crossover chambers.
▷***ENGINE ACCELERATION HESITATION (AFTER COMPLETE TUNE-UP)***—Check for counterweight bind against starter motor splash pan. If binding, reshape pan to allow clearance. Next, check thermostat spring to determine whether on backwards or hooked on wrong peg. If hesitation still present, on first engines, make following corrections:
Engines before No. V15828—Shorten free end of thermostat coil 5/16" (form new hook, cut off excess length). ***NOTE—Later engines have free end of thermostat coil moved 25° to increase tension.***
Engines before No. V14764—Enlarge ½" heat holes in intake manifold gasket to ⅝" by redrilling or install new No. 1343631 gasket with ⅝" holes. ***NOTE—Later engines have these ⅝" heat holes.***
VALVE TAPPET CLEARANCE: None in service (Hydraulic type lifters).

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116499.
COIL: Delco-Remy No. 1115082. ***12 Volt.*** Used with resistor. On bracket directly in front of distributor.
Resistor—Delco-Remy No. 1923681. On coil bracket.
▷***COIL RESISTOR NOTE***—Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from the starter solenoid-to-coil.
CONDENSER: Delco-Remy No. 1869704. ***Same as 6 Volt.*** **Capacity**—.18-.23 microfarad.
DISTRIBUTOR: Delco-Remy No. 1110827. ***Same as 6 Volt type.*** Automatic and vacuum advance type with "center-bearing" breaker plate.
▷***DISTRIBUTOR CENTRIFUGAL ADVANCE PRODUCTION CHANGE (Limiting maximum advance to prevent possibility of pre-ignition at high speeds):*** Distributors code dated "3C23" and later have maximum advance change (see Automatic Advance below). ***Earlier carburetors cannot be converted.***
Breaker Gap—.015-.017". Use dial indicator.
Cam Angle—26-33° test limits with .016" gap.
▷***CAUTION—Use of cam angle to set point gap not recommended by car manufacturer. If dwell meter used, make final check that gap is between .015-.017".***
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	350	0-3	700
3.5-5.5	600	7-11	1200
9.5-11.5	1750	19-23	3500
14-18	2150①	28-36	4300
12.5-15.5	2000②	15-31	4000

①—Maximum for distributors before "3C23".
②—Maximum for distributors after "3C23".

Vacuum Spark Control: Delco-Remy No. 1116068 (Early), No. 1116083 (Later). Integral type.
Plunger Travel (1116068) ¼-9/32", (1116083) 17/64".
▷***INSTALLATION OF SPACER TO PREVENT SPARK RAP (Vacuum Control D-R. No. 1116068 Only):*** Make up spacer from piece of pipe with ¼" inside diameter and ⅜" long (spacer must have outside diameter of ½-17/32" and hole in center must be at least ⅛" diameter—do not use thin wall tubing). Remove spring retaining nut on vacuum unit (DO NOT allow housing to rotate while removing nut, install spacer on end of spring in housing, re-install retaining nut. Check ignition timing after installing spacer. ***CAUTION—DO NOT install spacer on later Vacuum Control Unit No. 1116083.***

Vacuum Advance—No. 1116068.

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5-7"
11-12.5	22-25°	14"

Vacuum Advance—1116083

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-8.5
11-12.5	22-25	13.5-16.5

IGNITION TIMING

Standard Setting.....Exactly 5° BTDC.
Timing Mark—Yellow mark on top edge of one flywheel ring gear tooth aligned with pointer in sight hole in left side of flywheel housing. ***NOTE—Flywheel stamped "5" on side of tooth toward rear.***
▷***LOCATING TIMING MARK (If mark obscured or lost):*** *See "Ignition Notes" in Buick Special Data.*
Timing—Turn engine over until #1 piston approaching top dead center on compression stroke, stop when yellow-marked tooth on flywheel aligned with pointer in inspection hole on left side of flywheel housing (remove inspection hole cover). Loosen distributor clamp hold-down screw, rotate distributor until contacts begin to open, tighten hold-down screw. Make certain rotor opposite #1 segment in distributor cap (see diagram).

CARBURETOR

CARTER TWO-BARREL

SERIES 50: CARTER WCD No. 2017S. Dual (2-barrel) downdraft type with automatic choke.

►***CARBURETOR CHANGE TO CORRECT SPARK RAP ON SUDDEN ACCELERATION (Carburetors tag dated prior to "E3"): See "Carter WCD" in Carburetor Section for increasing size of vacuum port.***

Settings (Idle Setting, Float Setting and Accelerating Pump Setting): *See Tune-Up.*

Metering Jets & Rods—*See Carter Jet Specifications in Carburetor Section.*

Fast Idle: Carter "WCD" type.

Setting—*CAUTION—Two different settings required:* (1) Loosen choke lever clampscrew on choke shaft. Insert Gauge T109-29 (.020") between lip of fast idle cam and boss on throttle body, hold choke valve tightly closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clampscrew.

(2) With choke lever tightly closed and fast idle screw on high step of cam, adjust fast idle screw for throttle opening of .015" (Gauge T109-44) between edge of valve and wall opposite idle ports.

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.

Setting—Centered on index.

See Carburetion Equipment Section for complete data.

Throttle Linkage Adjustment (Dynaflow Drive Cars): *See "Buick Dynaflow Drive" in Transmission Section.*

CARTER FOUR-BARREL

SERIES 70: CARTER WCFB No. 996S (Early), No. 2053S (Later). Four-barrel, downdraft type with automatic choke.

►***CARBURETOR CHANGE TO CORRECT SPARK RAP ON SUDDEN ACCELERATION (Carter 996S and first 2053S Carburetors tag dated prior to "E3"): See "Carter WCFB 4-Barrel" in Carburetor Section for increasing size of vacuum spark port.***

Idle Speed—450 RPM.

Other Data—*See "Carter WCFB 4-Barrel" in Carburetor Section.*

Throttle Linkage Adjustment: (Dynaflow Cars) *See "Buick Dynaflow Drive" in Transmission Section.*

STROMBERG TWO-BARREL

SERIES 50: STROMBERG AAVB-267, Code 7-95 (early), 7-95A (Later). Dual (2 barrel) downdraft type with automatic choke.

►***CARBURETOR CHANGES TO CORRECT SPARK RAP ON SUDDEN ACCELERATION & ENGINE SURGE ON TURNS (First Code 7-95 Carb.): See "Stromberg AAVB" in Carburetor Section for changes.***

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*

Metering Jets—*See Stromberg Downdraft Carburetor Jet Specifications in Carburetor Section.*

Fast Idle: Stromberg AAVB type.

Setting: *CAUTION—Two different settings required:*

Fast Idle Cam—Close choke valve against #41 drill, make certain that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle until stopscrew contacts fast idle cam. If screw does not just clear edge of highest step on cam and bear against second step, adjust by bending fast idle rod at the large curve.

Lever Clearance—Close choke valve against #53 drill, adjust clearance between ear on locking lever on throttle valve shaft and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened and closed. Adjustment is made by bending end of loose lever up or down *See Carburetion Equipment Section for complete data.*

Automatic Choke: Stromberg type.

Setting—Set on index.

See Carburetion Equipment Section for complete data.

Throttle Linkage Adjustment (Dynaflow Drive Cars): *See "Buick Dynaflow Drive" in Transmission Section.*

STROMBERG FOUR-BARREL

SERIES 70: STROMBERG 4AUV-267, Code 7-94 & 7-94A (Early), Code 7-94B (Later). Four-barrel, downdraft type with automatic choke.

►***CARBURETOR CHANGES TO CORRECT SPARK RAP ON SUDDEN ACCELERATION AND TO IMPROVE WARM-UP AND ELIMINATE STALLING (First Code 7-94 & 7-94A Carbs.): See "Stromberg 4-Barrel 4A" Carburetor in Carburetor Section for changes.***

Idle Speed—450 RPM.

Other Data—*See "Stromberg 4-Barrel 4A" in Carburetor Section.*

Throttle Linkage Adjustment: (Dynaflow Cars) *See "Buick Dynaflow Drive" in Transmission Section.*

CARB. EQUIPMENT

Air Cleaner: Oil-bath type.

Filter Element—AC No. 26 (50), No. 27 (70).

Fuel Pump: AC. Combination fuel-and-vacuum type.

Replacement Pump: AC No. 9763.

Pressure—4½-5½ lbs. at fuel pump.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.

Dash Unit—AC No. 1517854.

Tank Unit—AC No. 1517200.

See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 3EE70W. *12 Volt,* 11 plate, 70 ampere hour capacity.

Grounded Terminal—Negative (—).

Location—Under hood, left side.

STARTER

Delco-Remy No. 1107601. *12 Volt type.*

Armature—Delco-Remy No. 1923917.

Drive—Overruning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	6500	10.3	75
11.5 "	Lock	5.2	460

Starting Switch: Delco-Remy No. 1116499 *(12 Volt).* Solenoid controlled by SEPARATE relay No. 1116876 with Carburetor Switches as follows:

Carter Carburetors—Carter No. 192-11U.

Stromberg Carburetors—Stromberg No. 386030.

Starter Switch Setting—*See Carter and Stromberg Carburetors in Carburetor Section.*

Dynaflow Neutral Safety & Back-Up Light Switch: Delco-Remy No. 1998025. At lower end of steering column. Connected in starter control circuit so that starter operative only when selector lever in "N" Neutral or "P" Parking positions.

Adjustment—*See "Buick Dynaflow Drive" in Transmission Section.*

►***NEUTRAL SAFETY & BACK-UP SWITCH CONNECTION CAUTION: Wires must be connected in correct order as shown on wiring diagram.***

GENERATOR

Delco-Remy No. (Std. First Cars) 1102003, (Std. Later Cars) 1102008, (70 Air-conditioned Cars) 1102006. *12 Volt Types.* Two brush with voltage and current regulation.

Armature—Delco-Remy No. 1923535 (for 1102008 Gen.), No. 1925210 (for 1102006 Gen.).

Maximum Charging Rate—30 amperes, 14 volts, at 2300 RPM. (Hot).

Performance Data—Cold

Amperes	Volts	R.P.M.
30①	14	2150

①—Not necessarily maximum. See Regulator.

Brush Spring Tension—24-32 ozs.

Field Current—1.48-1.62 amperes at 12 volts.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: ⅜" deflection with normal thumb pressure midway between generator and fan pulleys.

REGULATOR

Delco-Remy No. 1118749 *(12 Volt).* Voltage and current regulator.

►***CAUTION***—Check generator for grounded field coils and leads before changing regulator settings to correct high charging rate and high voltage.

Cutout Relay

Cuts-In—11.8-13.6 volts hot (set to 12.8 volts).

Contact Gap—.020" (same for both contacts).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—14.0-15.0 volts hot (set to 14.5 volts).

Air Gap—.075" (with contacts just closed).

Regulator is over compensated for temperature. Should be checked with cover in place and hot.

Current Regulator

Setting—27-33 amperes hot (set to 30 amperes).

Air Gap—.075" with armature pressed down to point where contacts are just touching.

Checking & Adjusting—*See Elect. Equip. Section.*

LIGHTING

►***LIGHTING CAUTION—Lights are 12 volt.***

Headlamps: Guide "Sealed Beam" type.

See Electrical Equipment Section for complete data.

Directional Signal: *See Electrical Equip. Section.*

Directional Signal Indicators—Located in gauges to right and left of speedometer.

Switches

Lighting—Delco-Remy No. 1995054.

Beam Selector—Delco-Remy No. 1997008.

Directional Signal (Dynaflow) Delco-Remy No. 1995571, (50 Synchro-mesh) No. 1995575.

Back-Up Light—(50 Synchro-mesh Optl.) Delco-Remy No. 1998037, (Dynaflow) See Dynaflow Neutral Safety Switch & Back-Up Lights under Starter above.

Hand Brake Warning—Delco-Remy No. 1998028.

MISC. ELECTRICAL

THERMOSTATIC CIRCUIT BREAKER: *12 Volt.* **Delco-Remy.** On light switch (protects lighting circuits).

FUSE BLOCK: On lower flange of instrument panel to left of steering column. Five fuses.

1)—Clock. AGA 2 amperes.

2)—Blower, Defroster, Heater. SFE 9 amperes.

3)—Stop & Direction Signal Lamps. SFE 9 amps.

4)—Dome, Trunk, Glove Box Lamps. SFE 20 amps.

5)—Back-Up Lamps. SFE 9 amperes.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

HORNS: Delco-Remy No. 1999755 (Low Note), No. 1999756 (High Note). *12 volt type.* Vibrator type twin horns operated by relay.

	Current (at 12 volts)
Low Note	10.5 amperes
High Note	9.5 amperes

Horn Relay: Delco-Remy No. 1116781. *12 volt type.* **Contacts Close**—5.5-7.5 volts. **Contact Gap**—.027". **Air Gap**—.014".

ENGINE

ENGINE SPECIFICATIONS: V8, Valve-in-head. **Bore**—4". **Stroke**—3.2". **Displacement**—322 cu. in. **Rated HP**—51.2.

Series	Comp. Ratio	Developed HP
50 (Synchro-mesh)	8.0-1	164 at 4000 RPM
50 (Dynaflow)	8.5-1	170 at 4000 RPM
70 (Dynaflow)	8.5-1	188 at 4000 RPM

▷*OVERSIZE CYLINDER BORE CAUTION*—Engines with ¼" long dash following engine number have .010" Oversize cylinder bores and pistons.

▷*CYLINDER HEAD INTERCHANGEABILITY:* Same cylinder head used on right and left cylinder banks (both ends of head have threaded bolt holes for water manifold attachment and water ports). *NOTE—Water port on rear end of cylinder head must be closed by a plug.*

▷*CYLINDER HEAD CAUTION—Different head and gasket combination for each compression ratio:*

Series	Head No.	Gasket & Thickness	Comp. Ratio
50 (Synchro-mesh)	1344214	1343995 (.045")	8.0-1
50, 70 (Dynaflow)	1344214	1343484 (.015")	8.5-1

EXHAUST MANIFOLD INSTALLATION: *CAUTION*—Use special bolt locking plates No. 1162793 (7 required), and 1162795 (1 required) under bolt heads, tighten bolts to 10-15 ft. lbs. torque, lock bolts by turning up one lock plate tab against bolt head flat. *CAUTION*—Above tightening torque supersedes previous recommendation (25-30 ft. lbs.) and will allow manifold to move slightly to compensate for temperature changes (bolt holes slotted).

CYLINDER HEAD & TIGHTENING TORQUES: *See Buick Special Data.*

COMPRESSION & VACUUM READING: *See Tune-Up.*

PISTONS: Anodized aluminum alloy, cam ground, transverse slot. Three rings above pin. **Weight**—21.76 ozs. **Removal**—Pistons and rods removed from above. **Clearance**—.0007-.0017". See Fitting New Pistons. **Original Bore Size**—3.9985-4.0015". *NOTE*—Dash (¼" long) following engine number indicates cylinder bore .010" Oversize.

Fitting New Pistons (Engine in Chassis): Use .003" feeler stock ½" wide by 12" long. With piston and cylinder bore clean and dry, install feeler on lower (outer) side of bore 90° from normal piston pin location. Install piston in inverted position in bore with piston pin parallel to crankshaft. Withdraw feeler with steady pull in straight line. Pull to withdraw feeler must be within 7-13 lbs. **(Engine out of Car—with Cylinder Bore vertical).** Use .0015" feeler stock, ¼" wide for "GO" gauge, .002" stock ½" wide for "NO GO" gauge, and 12" long, suspended in cylinder at right angle to engine center line, invert piston in cylinder. With piston and cylinder dry and at 70°F., piston should pass through cylinder of own weight with .0015" "GO" gauge and should hold its own weight with .002" "NO GO" gauge.

Replacement Pistons: *See Buick Special Data.*

Installing Pistons: Assemble rod and pistons so that clamp bolt in rod is on same side as valve depression in piston head. When pistons installed, valve depressions in head of all pistons should be upward or toward inner side of cylinder block. *See Connecting Rod Installation also.*

PISTON RINGS: Three rings, all above pin. Oil ring is "Flex-S" (early—installed without end gap) or later 4-piece type consisting of two rails, spacer, and expander located in each piston third groove.

Ring	Width	End Gap	Side Clearance
Comp.	.078"	.010-.020"	.002-.004"①
Oil	.187"	Flex-S	.0002-.0025"

①—Install with groove on inner diameter UP.

Replacement Rings: *See Buick Special Data.*

▷*REPLACEMENT OIL RINGS (For Improved Oil Consumption performance): See "Piston Rings" in Buick Special Data.*

PISTON PIN: Clamped in rod. **Length**—3.40". **Diameter**—.940". **Pin Fit in Piston**—.0003-.0005" clearance or easy finger push fit at 70°F.

Replacement Pins: Std., .003", .005" oversize. New pistons are furnished with fitted pins (pistons not furnished without pins (pins furnished separately).

CONNECTING ROD: Journal Diameter—2.2490-2.250" **Length**—6.00". **Weight**—22.16 ozs. **Bearings**—Durex 100A "full-precision" insert type without shims. **Clearance**—.0002-.0022". **Sideplay**—.006-.011".

Replacement Bearings: Std., .001", .002", .020", .021" undersize. Marked with number on outer surface near tang indicating size.

Installing Rods: Install piston and rod assemblies with boss on connecting rod web pointing toward rear of engine (right bank), toward front of engine (left bank) so that valve depressions in piston head are upward or toward center on block on all pistons. Install bearing caps with boss on edge of cap on same side as boss on web of rod. This will correctly position notch in parting face of rod (oil squirt hole for cylinder wall lubrication). *See Piston Installation*

CRANKSHAFT: Five bearing, counterweighted.

▷*FLYWHEEL BALANCING ON DYNAFLOW CARS (To correct vibration caused by replacement parts): See "Buick Dynaflow Drive" in Transmission Section.*

Main Bearing Journal Diameters—2.498-2.499".

▷*CAUTION—First four bearings identical, rear bearing longer and flanged to match flanges on crankshaft.*

Bearings—Steel backed, Durex 100A slip-in type. **Clearance**—.0005-.003".

Bearing Adjustment: None (no shims) replace bearings. Do not file rods or caps.

Replacement Bearings: Std., .001", .002" undersize.

Oil Seal Installation (Front & Rear Bearings): *See "Crankshaft & Main Bearings" in Buick Special Data.*

End Thrust: #5 (Rear bearing). **Endplay**—.006".

CAMSHAFT: Five bearing, non-adjustable chain **Bearing Diameters**—#1, 1.685-1.686"; #2, 1.655-1.656"; #3, 1.625-1.626"; #4, 1.595-1.596"; #5, 1.565-1.566". **Clearance**—.0005-.0035". **End Thrust**—Taken by plate mounted behind camshaft sprocket. **Endplay**—.004-.008". Provided by spacer between sprocket and camshaft front bearing journal.

Timing Chain: Link-belt. **Width**—.688". **Pitch**—.500" **Length**—26" or 52 links.

Camshaft Setting: Timing chain must be installed so that camshaft sprocket key straight down and "0" timing marks on both sprockets toward left of engine, there will be 12 teeth between the "0" timing marks, including teeth aligned with the marks. To install chain, turn crankshaft so that Nos. 1 and 4 pistons are on top dead center. Turn camshaft so that sprocket key points straight down toward crankshaft. Place timing chain over camshaft and crankshaft sprockets so that copper plated washers on chain are aligned with "0" marks on front face of sprockets, then install chain on two shafts.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.750"	.3720"	4.346"
Exhaust	1.250"	.3715"	4.346"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.378"	.0025"
Exhaust	45°	.350"	.0030"

Valve Seat Width—1/16" (3/64" to 5/64").

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top side of head using Valve Guide Aligner J-5240-2 over guide hole and Installer J-5240-1 to drive guide down until shoulder on installer contacts top of aligner tool which will correctly position guide. Finish ream guides with Reamer J-129-2 for correct valve stem clearance.

Valve Springs: Double concentric springs used on all valves.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Lgth.	Lbs. Press.	Lgth.
Open	53.0-59.0	1.15"	85.0-91.0	1.12"
Closed	19.5-24.5	1.53"	37.5-42.5	1.50"

Hydraulic Valve Lifters: No adjustment required in service or at time of assembly. Rocker arms have no adjustment studs. **Diameter**—.8425"; **Clearance**—.0015-.003". *See Buick Special Data for complete data.*

Rocker Arm Installation: *See "Valve System" in Buick Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: No clearance adjustment required in service (Hydraulic type lifters).

VALVE TIMING: *See Camshaft Setting above.* "Timing Points" below are with valve .004" off seat. **Intake Valves**—Open 25° BTDC. Close 77° ALDC. **Exhaust Valves**—Open 70° BLDC. Close 42° ATDC.

Valve Timing Check: Timing case cover must be removed to check valve timing. *See Camshaft Setting*

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, restricted flow to rocker arm bearings, lifters, and valves. **Crankcase Capacity—Refill**—6 qts. **Dry Engine**—7 qts. Add one additional qt. for dry filter. **Normal Oil Pressure**—35 lbs. at 35 MPH.

Oil Filter: Full-flow type located on right side of crankcase. All oil passes through filter except when pressure differential between inlet and outlet ports reaches 4½-5½ lbs. when valve in filter body bypasses oil directly to engine. Replace filter element every 5000 miles or more often in dusty areas. **Replacement Filter Element**—AC Type PF-122.

Oil Pump: *See Buick Special Data.*
Oil Pressure Gauge: AC No. 1507965.
Crankcase Ventilation: Provided by ventilating type oil filler cap located at front end of valve lifter cover and the crankcase ventilator pipe connected to rear end of lifter cover. Each contains gauze filter element.

COOLING

Cooling System: Pressure type with pressure (relief valve) in filler cap. Re-circulation with thermostat closed provided by by-pass in pump body.
Capacity (No Heater)—(50 Synchro-mesh) 16.5 qts. **(All Dynaflow Cars)** 18 qts. **Heater Note**—Add 1½ qts. for cars with heater.
Pressure Valve—AC No. 850549 Radiator Filler Cap (stamped 549/7#). 7 lb. type.
Water Pump: Packless sealed ball-bearing type.
See Water Pump Section for complete data.
Thermostat: "Pellet" type. Buick No. 1391014 (Std. 160° (starts to open at 157-162°F., fully open at 182° F. max.). No. 1390992 (Optl. 180°—starts to open at 177-182°F., fully open at 202°F. max.). Located in water manifold above pump.
Temperature Gauge: AC No. 1512688.

CLUTCH

Own Make (Series 50 Synchro-mesh Cars only). Single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven type, 2 used. Inside diameter 6½", Outside diameter 10½". Thickness .125" ± .003".
Pedal Adjustment: Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod linking cross-shaft lever to clutch fork. Pedal positioned by rubber bumper under toe board.
Removal: Remove rear axle and transmission (see below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse) with steering column mounted control.
See Transmission Section for complete data.
Transmission Control: *See Transmission Section.*
Removal: Disconnect rear axle (see data following). Disconnect speedometer cable, shift rods, toggle spring and extension, remove shift lever and lock washer from selector shaft—hold shift lever in neutral when removing attaching bolt—remove outer selector lever. Reinstall support bar (see note below) under rear end of oil pan positioning left hook over frame between brake master cylinder and clutch release equalizer, tighten nuts on two hooks evenly. Remove transmission mounting as follows: Disconnect rubber thrust pad from rear of transmission support by taking off 3 nuts and bolt plate, remove shims from behind support, disconnect mounting pad on top of support by taking out two attaching bolts and bolt plate, raise engine by turning up on nuts on two support hooks evenly to take load off transmission support, take out transmission support (disconnect at frame ends), and remove thrust pad from thrust plate. Install guide pins J-851 in place of two top mounting bolts, remove remaining mounting bolts, pull transmission straight back and lower from car.

►*NOTE*—To shim Rear Mounting when installing transmission, *see "Engine Mounting" in Buick Special Data.*
Lubrication Note—When transmission re-installed in car, inject ½ pint of transmission lubricant through universal joint yoke before attaching torque tube to transmission.

DYNAFLOW DRIVE

"Twin Turbine" Dynaflow Drive. Torque Converter & hydraulically operated planetary transmission.
See Transmission Section for complete data.
►*FLYWHEEL BALANCING ON DYNAFLOW CARS (To correct vibration caused by replacement parts): See "Buick Dynaflow Drive" in Transmission Section.*
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Dynaflow Drive" in Transmission Section for data.*
►*TESTING & TROUBLE SHOOTING: See Trans. Sect'n.*
►**Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars**—*See Transmission Section.*
Lubrication—Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.
►*Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A.*
Checking Fluid Level—Engine must be idling with selector lever at "P" (parking) and transmission oil warm. Add fluid to "FULL" mark on dipstick.
►*CAUTION—Engine must be idling with transmission in Parking and oil must be warm when checking.*
Capacity—10 quarts.
►*NOTE—A completely dry transmission requires 1¾ pints more than amounts given above.*
►*OTHER DYNAFLOW SERVICE DATA—See "Buick Dynaflow Drive" in Transmission Section.*

UNIVERSALS

Saginaw or Spicer. One used (in Torque ball at rear of transmission).

Torque Ball Adjustment—*See Buick Special Data.*

REAR AXLE

Own Make. Hypoid gear, semi-floating type with torque tube drive.
See Rear Axle Section for complete data.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Rear Axle Section for complete data.*
Ratios: 3.6-1 Std. 3.9-1 Optl.
Backlash—.008-.010" (desired), .008-.012" (max.).
Removal: Raise rear end of car and place on car stands. Disconnect parking brake cable at rear brake sheave and at bracket of front end of torque tube, hydraulic brake line from pipe at frame X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.
►*CAUTION—Torque tube should not be disconnected from carrier (except for gasket replacement).*
Axle Shaft Removal: *See Rear Axle Section.*
Rear Suspension: Coil springs and conventional axle.
See Rear Axle Section for complete data.

SHOCK ABSORBERS

Delco. Double acting hydraulic type.
Front Shock Absorbers—Buick No. 5303279.

Rear Shock Absorbers

Series	Right	Left
Except 59 & 79R	5303277	5303278
59 & 79R	5394508	5394509

FRONT SUSPENSI N

Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.
Kingpin Inclination—4¼° crosswise at ⅜° camber.
Camber—⅜° Pos. (⅞° Pos. to ⅝° Neg.) and equal for both wheels within ⅜° at curb weight.
Caster—0° (½° Neg. to ¾° Pos.) equal for both wheels within ½° at curb weight.
Toe-In—1/16-1/8". Adjust both tie rods equally.
►*CAUTION*—Tie rod clamps must be within 1/8" of end of tube and ear of clamp must overlap slot in tube not less than 1/16".
Toe-Out on Turns—With outer wheel turned 20°, inner wheel should be 21½° ± ¾°.

STEERING GEAR

Standard Steering Gear: Saginaw Ball-bearing Worm and Nut recirculating ball type.
See Steering Gear Section for complete data.
Power Steering: Std. on Series 70, Optl. on others. Saginaw (G.M.) Ball-bearing Worm and Nut recirculating ball type with hydraulic power.
See Steering Gear Section for complete data.

BRAKES

Service: Bendix-Hydraulic, duo-servo, single anchor type **without eccentric adjustment.** Parking brake "Step-on" lever applies rear wheel service brakes.
See Brake Section for complete data.
►*SERIES 70 SECONDARY SHOE IDENTIFICATION NOTE (Foot Powered Brakes):* Identified by orange paint mark on edge of lining.
Drum Diameter—12" (11.97-12.003"). Maximum re-bore limit .030" cut (.060" O.S.). *See "Brake Notes" in Buick Special Data.*
►*LINING CAUTION (Power Brakes)—Special high pressure type lining must be used with power brakes. Lining can be identified by orange color and black edge.*
Lining—Molded extruded (riveted to shoes).
Width—(Series 50)—All shoes 2.25". (Series 70)—2.50" (Front wheels); 2.25" (Rear wheels).
Thickness—(Series 50) All shoes .187". (Series 70) Primary .250". Secondary .187".
Length—(Primary Shoes) 10 3/32". (Secondary Shoes) 12 31/32".
Clearance—.015" at both ends of secondary (rear) shoe with primary shoe out against drum.
Power Brakes: (Std.) Model 76X Convt. (Optional) Other Series 70 and all Series 50.
See "Buick Power Brakes" in Brake Section for complete data.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Power Brakes" in Brake Section for complete data.*

MISC. MECHANICAL

Air Conditioning: Frigidaire type Optl.
See "Air-conditioning" in Miscellaneous Section for complete data.
Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor driven pump supplying oil under pressure).
See Miscellaneous Section for complete data.
Windshield Wiper: Cable operated—Vacuum type.
See Miscellaneous Section for complete data.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Model Designation
40	SPECIAL
50	SUPER
60	CENTURY
70	ROADMASTER
M/100 (1954)	SKYLARK

SERIAL NUMBER: Stamped on plate on left front door pillar post and on left front frame side rail.

Starting Serial Number (Each Year)—001001 (at each plant).

►*1954 SERIAL NUMBER NOTE: Beginning 4/1/54, the serial number includes identification data as indicated below.*

►*SERIAL NUMBER NOTE: Serial number (example 4B-2001001) includes the following identification data in sequence:*

Series ①	Year ②	Assy. Plant ③	Serial No.
4	B	2	001001

①—See Series Designation following.

②—Year designation "A" (1954), "B" (1955).

③—See Assembly Plant Designation following.

Series Designation

4—40 Special	6—60 Century
5—50 Super	7—70 Roadmaster & M/100 Skylark

Assembly Plant Designation

1 Flint	5 Wilmington
2 South Gate	6 Atlanta
3 Linden	7 Framingham
4 Kansas City	8 Arlington

ENGINE NUMBER: Stamped on outside of left bank of cylinders on extension of top face of block between middle branches of exhaust manifold.

Starting Engine Number— **V-273956** (1954), **V-720080** (1955). Followed by a suffix numeral as indicated in Series Designation above.

►*1955 ENGINE NUMBER NOTE: The "V" Engine Number Prefix not used after Engine Number 1,000,000.*

►*ENGINE NUMBER NOTE:* Dash following engine number indicates that cylinder bores and pistons are .010" Oversize. *NOTE*—Do not confuse dash with vertical groove on pad designating Series 40 engine.

TUNE-UP

►*1954 SKYLARK MODEL 100 NOTE: All specifications for this model are same as Series 70 except as noted.*

►*DETONATION CORRECTION (ALL SERIES): See "Ignition Notes" in Buick Special Data.*

►*SPARK PLUG CABLE ROUTING (To Prevent Misfiring): See "Ignition Notes" in Buick Special Data.*

COMPRESSION PRESSURE: At cranking speed (140 RPM). All cylinders must be equal within 10 lbs.

	Synchro-mesh		Dynaflow	
Series	1954	1955	1954	1955
40	130 lbs.	140 lbs.	145 lbs.	155 lbs.
50,60,70	150 lbs.	155 lbs.	160 lbs.	170 lbs.

VACUUM READING: Steady 18-20" at idling speed.

VALVE TAPPET CLEARANCE: None in service (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in forward end of left exhaust manifold. Valve must operate freely.

Checking Thermostatic Coil Spring—With engine at 70°F., unhook end of spring from anchor stud on manifold, hold valve closed. End of spring should be 3/8 turn clockwise from anchor stud (3/8 turn "wind-up" to engage spring on stud). Replace thermostatic spring if setting incorrect or if distorted or otherwise damaged.

IGNITION

FIRING ORDER: 1-2-7-8-4-5-6-3.

Cylinders—RIGHT BANK 1-3-5-7, LEFT BANK 2-4-6-8.

SPARK PLUG GAP: .030-.035".

Spark Plugs—AC No. 44-5. 14mm. Torque to 22-28 ft. lbs.

COIL: Delco-Remy 1115082. *12 Volt.*

Ignition Current—2.5 amps. idling, 4.5 stopped.

Resistor—Delco-Remy 1927809. On cowl near ignition coil. Resistance 1.4-1.65 ohms at 75°F.

►*COIL RESISTOR NOTE*—Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by a lead from starter solenoid-to-coil.

DISTRIBUTOR: Delco-Remy 1110849. *12 Volt.*

Condenser—Delco-Remy 1869704 (Closed-end terminal), 1928111 (Open-end terminal). **Capacity** .18-.23 mfd.

Contact Point Set—Delco-Remy 1924499.

Breaker Gap—.0125-.0175".

Cam Angle—26-33° (with .016" gap).

►*BREAKER GAP CAUTION*—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set point gap.

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Clockwise viewed from above.

►*DISTRIBUTOR REMOVAL NOTE*—Removal of distributor can be facilitated by use of Special Wrench J-5727 (Kent-Moore) or S-9832 (Snap-On).

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-1.5	375	0-3	750
6-8	850	12-16	1700
9.5-11.5	1450	19-23	2900
11-13.5	1750	22-27	3500

Vacuum Spark Control: Delco-Remy 1116090.

Plunger Travel—7/32".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-8.5
9-10.5	18-21	11.5-15

IGNITION TIMING

Setting—5° BTDC exactly.

►*IGNITION TIMING CAUTION—Lower engine idle speed to not exceed 350 RPM when setting ignition timing with timing light. Reset to 450 RPM when completed.*

Timing Mark—Timing indicator marked with four lines indicating 0°, 2.5°, 5°, 7.5° BTDC, located on right side of timing chain cover below fuel pump. Line up mark on Fan Drive Pulley (Series 40), Harmonic Balancer (Other Series) with correct line (5°) on timing indicator for normal operating conditions.

CARBURETOR

►*CARBURETOR APPLICATION: Various carburetors used on 1954-55 cars as follows:*

Series	Carburetor Make & Type
40 (1954-55)	①Carter WCD or Stromberg AAVB
40 (Late 1955)	①Carter WGD or Stromberg WW
50 (1954)	① Carter WCD or Stromberg AAVB
60, 70 (1954)	②Carter WCFB or Stromberg 4AUV
50, 60, 70 (1955)	②Carter WCFB or Rochester 4GC

①—2-Barrel Carburetor. ②—4-Barrel Carburetor.

►*1954 DYNAFLOW CARS THROTTLE LINKAGE ADJUSTMENT:* The procedure for adjusting throttle linkage on 1954 Dynaflow cars is the same as for "Dynaflow Cars (Without Overtravel)" below, except for adjustment on "stretch-link".

►*1954-55 SYNCHRO-MESH THROTTLE LINKAGE ADJUSTMENT NOTE:* The procedure for adjusting throttle linkage on synchro-mesh cars is the same as for "Dynaflow Cars (Without Overtravel)" below, except for adjustment on "stretch-link", stator control linkage and dashpot.

►*1955 THROTTLE LINKAGE ADJUSTMENT (DYNAFLOW CARS):* The throttle operating rod contains an adjustable spring loaded stretch link which may be optionally adjusted to provide "overtravel" for delayed action of the variable pitch stator. In production the stretch link is locked solid to eliminate overtravel and the throttle linkage is adjusted so that the stator shifts to high angle performance position just as wide open throttle is reached. If car is operated consistently at high speed it may be preferred to have the high angle shift occur after wide open throttle is reached. In this case "overtravel" may be obtained as outlined in "Adjustment With Overtravel" below. *CAUTION—Adjust throttle linkage WITHOUT overtravel on all Synchro-mesh cars.*

THROTTLE LINKAGE ADJUSTMENT: With floor mat properly installed and all throttle linkage well lubricated and operating freely, adjust throttle stop screw for proper HOT idling speed of 450 RPM. Turn engine off and check operation of unloader (adjust if necessary). Proceed as follows:

1) Disconnect throttle return spring and throttle operating rod from lever on equalizer shaft. Back off stator pick-up lever adjusting screw until screw end is flush with lever surface.

2) Adjust throttle operating rod in rod end at carburetor so that approximately 5/8" of thread is exposed, then tighten lock nut.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

3) For Adjustment Without Over-travel—Turn rear end of throttle operating rod until stretch link is locked. While another person presses accelerator pedal firmly against the floor mat, hold throttle lever in wide open position and hold rear end of operating rod at hole in throttle lever. Rod must be approximately 1/16" **short** of entering hole in lever. Change position of lever on shaft as required to obtain this condition, then tighten clamp bolt securely.

4) For Adjustment With Over-travel (Do not Use on Synchro-mesh Cars)—Turn rear end of throttle operating rod until rod can be stretched approximately 7/16" against tension of stretch link spring, measured at forward end of link. While another person holds throttle UPWARD as far as possible, hold throttle lever closed to HOT idle position and hold rear end of throttle operating rod at hole in throttle operating lever. Rod *must extend 1/16" BEYOND hole in lever. Change* position of lever on shaft as required to obtain this condition, then tighten clamp bolt securely.

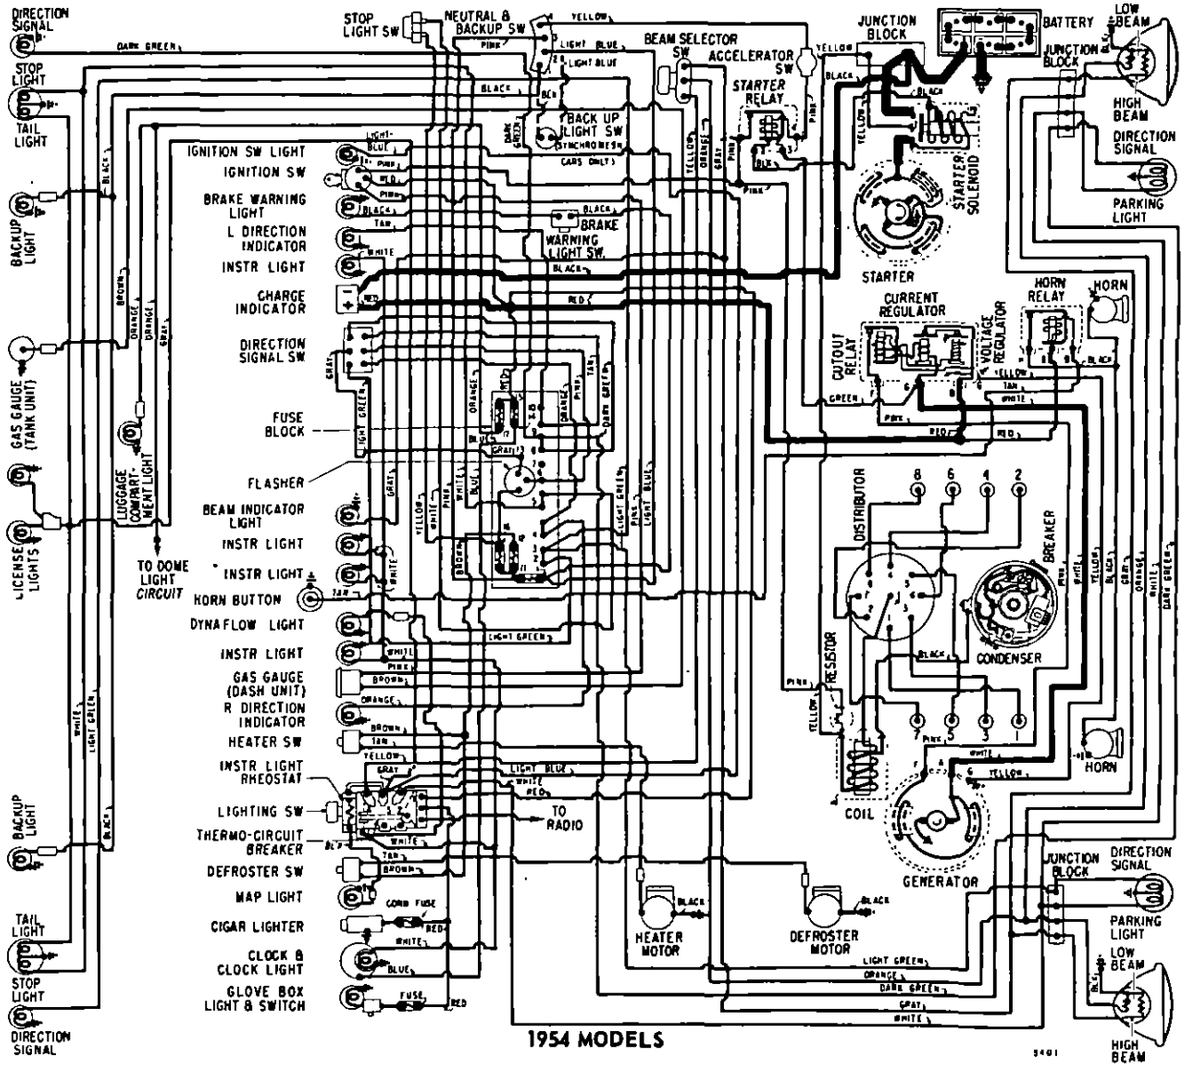
5) Connect operating rod to operating lever, snap retaining clip over rod and connect return spring. With throttle closed to HOT idle position, check clearance between equalizer shaft lower lever and the stop lug in the shaft-to-cowl mounting bracket. A minimum clearance of 1/16" (Carter), 3/16" (Rochester) must exist at this point

6) Hold choke valve closed while accelerator pedal is pressed to floor mat to check operation of unloader. If clearance between lower lever and stop lug is less than 1/16", or choke unloader does not operate properly, readjust the operating rod length at rod end on throttle lever or change position of upper lever on equalizer shaft one serration at a time until proper settings are obtained.

7) On Dynaflow Cars have accelerator pedal depressed firmly against floor mat, then turn stator pick-up lever adjusting screw against stator operating lever, raising lever until all vertical play is removed from stator operating control rod. Turn screw back ½ turn to provide a slight clearance between stator control valve operating lever and the **bottom side** of its stop pin on the high accumulator

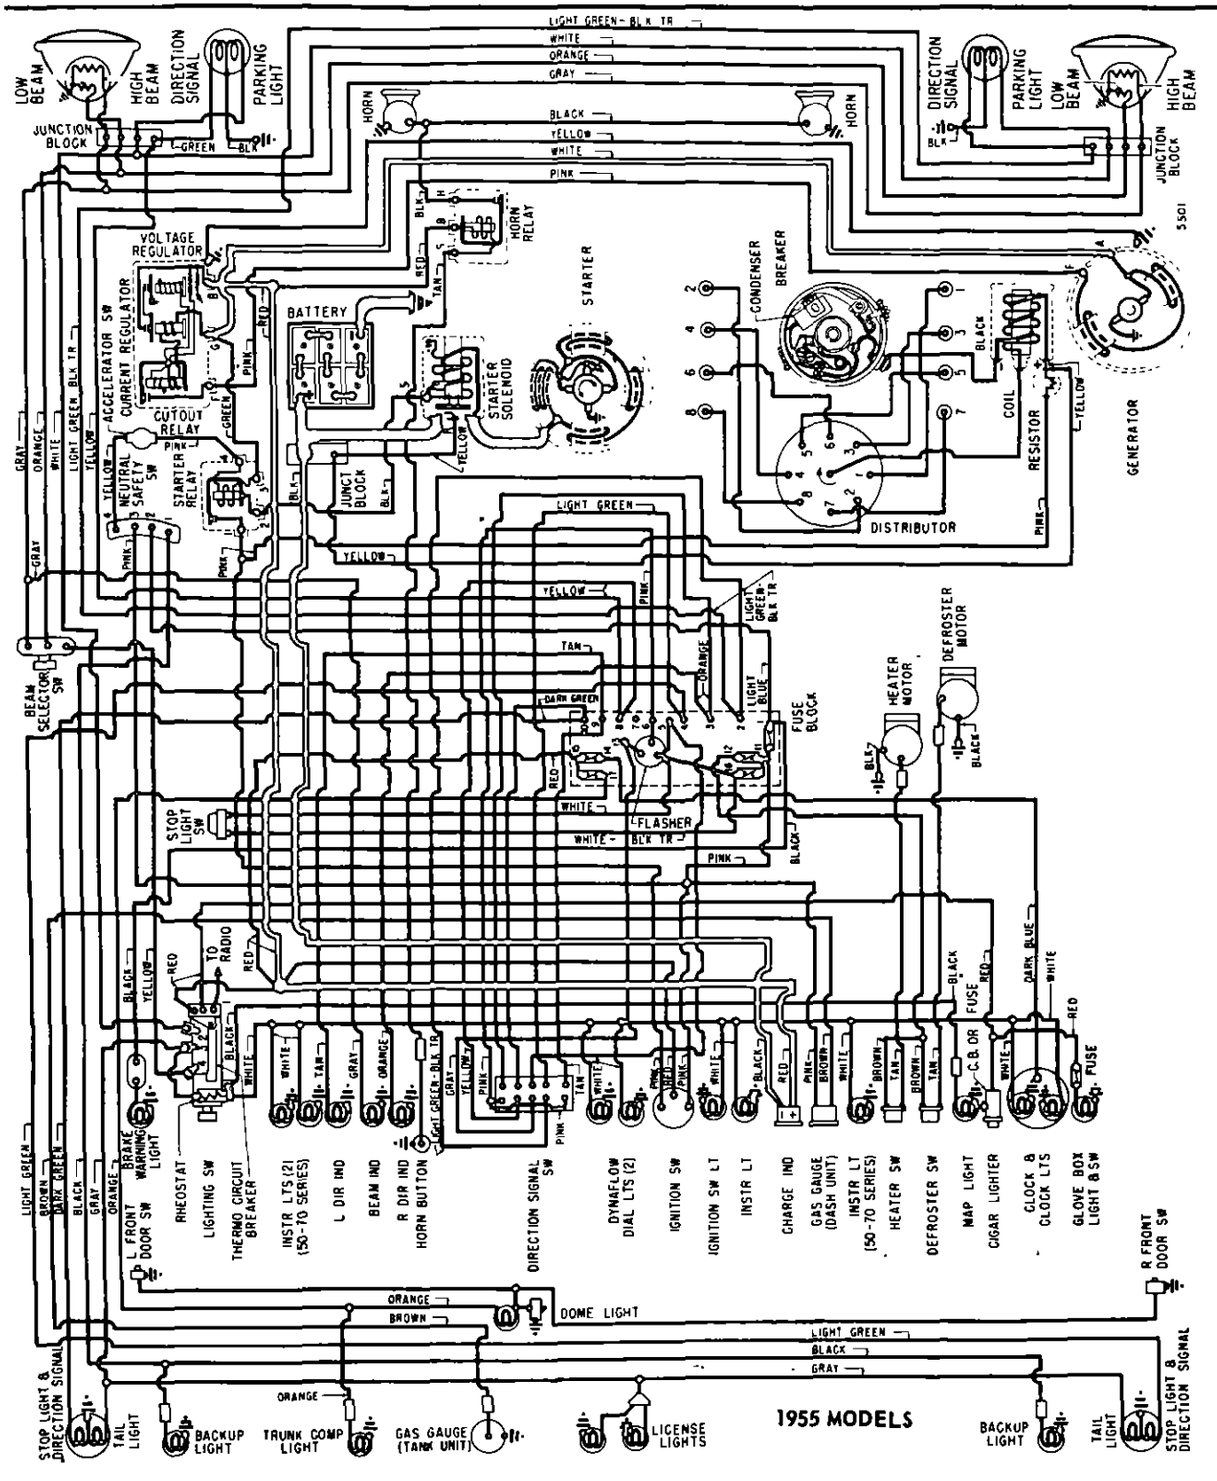
8) Finally check for smooth operation of linkage from fully closed to wide open position of throttle valve. Make sure that throttle closes firmly against stop screw. *NOTE—On Dynaflow Cars (Without Over-Travel), and on Synchro-mesh Cars, throttle valve should be wide open when accelerator pedal strikes floor mat. On Dynaflow Cars (With Over-travel), the stop on throttle lever must strike boss on throttle body before accelerator pedal can be pressed to floor against tension of stretch spring.*

DASHPOT ADJUSTMENT (Dynaflow Cars): Adjust dash pot only after throttle linkage has been adjusted and engine is at normal operating temperature. Rotate fast idle cam to extreme cold idle position (choke closed), hold throttle lever against a .030" feeler gauge placed between stop screw and highest step of fast idle cam. Adjust dash pot until it just clears arm of throttle lever, tighten lock nut. With transmission in Direct Drive and brakes firmly applied speed engine up to about 1500 RPM and *immediately release throttle, noting engine* operation as throttle valves close. If engine stalls from too rapid closing of throttle valves, move dash pot forward until its action prevents engine stalling. If excessive time is required for throttle valves to reach closed position, move dash pot rearward. Tighten lock nut after each adjustment. If proper control cannot be obtained by adjustment, replace dash pot.



CARTER 2-BARREL WCD

Carter WCD 2081S (Early 1954), 2081SA (Late 1954), 2179S (Early 1955). *NOTE—See "Carter WGD Carburetor" below for Late 1955 Carburetor.*



►*1954 METERING ROD PRODUCTION CHANGE FOR IMPROVED PERFORMANCE (Early 2081S Carburetors): Metering rods changed from No. 75-994 to 75-1107. See "Carter WCD Carburetor" in Carburetion Section.*

►*1954 COLD STUMBLE OR LOW SPEED BUCK ON SYNCHRO-MESH CARS (Cars with 2081S Carburetors):* Correct by changing Choke Cover & Coil Assembly and installing reducer bushing in choke warm air orifice hole in bowl cover. *See "Carter WCD Carburetor" in Carburetion Section. NOTE—Later 2081SA carburetors have these changes.*

CONTINUED ON NEXT PAGE

1954 MODELS

CONTINUED FROM PRECEDING PAGE

▷*1955 SERIES 40 (SYNCHRO-MESH) CARS WARM-UP PERFORMANCE IMPROVEMENT & ROUGH IDLE CORRECTION: See "Carter WCD Carburetor" in Carburetion Section.*

▷*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting—One turn (½-1½) open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450 RPM (With selector lever in Neutral on Dynaflow Cars).

Float Level—15/64" (2081S, SA); 3/16" (2179S) from top of each float to gasket seat on cover with needle valve seated (invert float assembly to check). Use Gauge T109-240 (15/64"), T109-162 (3/16") installed directly under floats and adjust floats vertically to just clear horizontal portion of gauge and laterally so side of floats barely touch gauge uprights.

Accelerating Pump—Install pump connector link in outer hole of pump arm for long stroke.

Fast Idle: *CAUTION—Two different setting required:*

1) Loosen choke lever clampscrew on choke shaft. Insert Gauge T109-29 (.020") between lip of fast idle cam and boss on throttle body, hold choke valve closed and remove slack from linkage by pressing choke lever toward closed position, tighten choke lever clamp screw.

2) With choke valve tightly closed and fast idle screw on high step of cam, adjust fast idle screw as follows: If carburetor on bench, adjust for a throttle opening of .025" (Gauge T109-189), between edge of valve and wall on side opposite idle ports. If carburetor on engine, adjust idle speed to 1800 RPM.

Automatic Choke Setting: Centered (At Index).

Throttle Linkage Adjustment: *See "Carburetor" above.*

▷*OTHER DATA: See "Carter WCD Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

CARTER 2-BARREL WGD

Carter WGD 2292S (Late 1955 Cars). *NOTE—See "Carter WCD Carburetor" above for Early 1955 Carburetor.*

▷*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting—¼-1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450 RPM (With selector lever in Neutral on Dynaflow Cars).

Float Level—¼" from top of float (center) to gasket seat on cover with needle valve seated (invert float assembly to check). Use Gauge T109-31 and adjust float so side is parallel to edge of casting.

Accelerating Pump—No seasonal adjustment.

Fast Idle: .015" (Gauge T109-44) clearance between lower edge of throttle valve and carburetor bore with adjusting screw on high step of fast idle cam.

Automatic Choke Setting: Centered (at Index).

Throttle Linkage Adjustment: See "Carburetor" above.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*OTHER DATA: See "Carter WGD Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG 2-BARREL AAVB-267

Stromberg AAVB, Code 7-96 (1954), 7-102 & 7-102A (Early 1955). *NOTE–See "Stromberg WW" below for Late 1955 Carburetors.*

►*MANIFOLD FUEL DISTRIBUTION:* Carburetor RIGHT barrel feeds Cyl. 1-4-6-7, LEFT barrel 2-3-5-8.

Idle Setting–1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With Selector Lever in Neutral).

Float Level–5/64 "above vertical guides on Gauge T-24971, or 1 7/16" from bowl cover gasket to top edge of float with assembly inverted.

Accelerating Pump–Pump rod in middle hole of throttle lever.

Fast Idle Setting: Close choke valve against a No. 51 drill (Code 7-96), No. 54 drill (Code 7-102 & 7-102A) placed between wall of air horn and center of upper edge of choke valve and hold valve firmly against drill. See that fast idle cam spring holds cam upward against end of fast idle rod. Close throttle until stop screw contacts fast idle cam. If screw does not clear edge of highest step on fast idle cam and bear against second step, adjust by bending fast idle rod at large curve.

Lever Clearance–Close choke valve against a No. 53 drill, adjust clearance between ear on locking lever and lug on loose lever on fast idle cam stud so that these levers just clear as throttle valve is opened. Adjustment is made by bending end of loose lever up or down as required.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Stromberg AAVB Carburetor" in Carburetion Section.*

Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG WW

Stromberg WW, Code 7-104 (Late 1955). *NOTE–See Stromberg AAVB Carburetor" above for Early 1955 Carburetors.*

Idle Setting–1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral on Dynaflow Cars).

Automatic Choke Setting: Centered (at index).

Throttle Linkage Adjustment: *See "Carburetor" above.*

►*OTHER DATA: See "Stromberg WW Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

STROMBERG 4-BARREL

Stromberg 4-AUV, Code 7-98 (1954). Four barrel downdraft type with automatic choke .

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 1-4-6-7. LEFT barrels 2-3-5-8.*

Idle Setting–1 1/8 turns open (two screws–primary side only). Set both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Stromberg 4A 4-Barrel Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

CARTER 4-BARREL WCFB

Carter WCFB 2082S (1954), 2197S (Early 1955), 2358S (Late 1955). Four barrel downdraft type with automatic choke.

►*1954 ACCELERATING PUMP LEATHER TURNING BACK (Causing improper acceleration performance and throttle resistance on Early Cars): See "Carter WCFB Carburetors" in Carburetor Section.*

►*1954 METERING ROD CHANGE: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*1955 CARBURETOR CHOKE PISTON CHANGE TO IMPROVE WARM-UP PERFORMANCE (First Cars): See "Carter WCFB 4-Barrel" in Carburetion Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 1-4-6-7, LEFT barrel 2-3-5-8.*

Idle Setting–½-1½ (1954) ¾-1¾ (1955) turns open (two screws–primary side only). Set both screws alike. Turn screws out for richer mixture.

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetion Section.*

Fuel Pump Pressure: *4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.*

ROCHESTER 4-BARREL 4GC

Rochester 4GC, No. 7006200 (1955). Four barrel downdraft type with automatic choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 1-4-6-7. LEFT barrel 2-3-5-8.*

Idle Setting–Adjust idle mixture needle valves for smooth idle and check for correct idle speed.

Idle Speed–450 RPM (With selector lever in Neutral).

Throttle Linkage Adjustment: *See CARBURETOR above.*

►*OTHER DATA: See "Rochester 4GC Carburetor" in Carburetion Section.*

Fuel Pump Pressure: 4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

CARB. EQUIPMENT

Fuel Pump: AC. **Replacement No. 9763** (Fuel & Vacuum). **Pressure**–4½-5½ lbs. at pump outlet, 4-5 lbs. at carburetor inlet.

See "Fuel Pumps" in Carburetion Section.

Gasoline Gauge: AC Electric type.

Dash Unit (1954)–AC No. 1518011 (Series 40, 60, 100); AC No. 1518877 (Series 50, 70).

Dash Unit (1955)–AC No. 1518212 (Series 40 & 60); AC No. 1518203 (Series 50 & 70).

Tank Unit (1954-55)–AC 1518138 (Series 40, 60, 100); AC No. 1518137 (Series 50 & 70).

See "Fuel Gauges" in Carburetion Section.

BATTERY

1954-Delco 3EM60W. *12 Volt,* 11 plate, 60 ampere hour capacity (20 hr. rate).

1955-Delco 3KM60. *12 Volt,* 9 plate, 60 ampere hour capacity (20 hr. rate).

Battery Ground–Negative (-) terminal.

Engine Ground–Between engine and cowl.

STARTER

Delco-Remy 1107621. *12 Volt.* **Armature**–1926626. **Drive**–Overrunning clutch (solenoid pinion shift). **Rotation**–Counter-clockwise at commutator end. **Brush Spring Tension**–30-40 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
11 ft. lbs.	Lock	5.2	460

Starting Switch: Delco-Remy Solenoid 1119760. *12 Volt.* Starter solenoid controlled by separate relay, Delco-Remy 1116876, and Accelerator Vacuum Switch (on carburetor). *See "Starter Controls" in Electrical Equipment Section.*

Accelerator Vacuum Switch: Carter 192-11U (Carter & Stromberg 2-Barrel), 192-21U (Carter 4-Barrel), Stromberg 386030 (Stromberg 4-Barrel) .

Accelerator Vacuum Switch Setting–*See data on each carburetor type in Carburetion Section.*

Dynaflow Neutral Safety & Back-Up Light Switch: (1954) Delco-Remy 1998025 at lower end of steering column. (1955) Delco-Remy 1998101, mounted on steering column jacket under cowl. Switches are connected in starter control circuit so that starter operative only when selector lever in "N" Neutral, or "P" Parking position.

Adjustment–*See "Buick Dynaflow Drive" in Transmission Section.*

►*NEUTRAL SAFETY & BACK-UP LIGHT SWITCH CONNECTION CAUTION: Wires must be connected in correct order as shown on wiring diagram.*

GENERATOR

Delco-Remy 1102008 (Without Air-Conditioning). 1102006 (With Air-Conditioning). *12 Volt.*

Generator No.	Armature No.
1102008 Ⓒ	1923535
1102006	1925210

Ⓒ–With pulley. Delco-Remy 1102005(without pulley).

Performance Data–Cold

Amperes	Volts	RPM
30 Ⓒ	14	2150

Ⓒ–Not maximum. See Regulator.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Brush Spring Tension—24-32 ozs.

Field Current—1.48—1.62 amperes at 12 volts.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: ¾" belt deflection with normal thumb pressure midway between generator and fan pulleys.

REGULATOR

Delco-Remy 1118825. *NOTE—Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In—12.8 volts (hot).

Contact Gap—.020".

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—14.5 volts (hot).

Air Gap—.075" with armature pressed down to point where contacts just opening.

Checking & Adjusting—*See Electrical Equip.Section.*

Current Regulator

Setting—30 amperes (hot).

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Direction Signal: *See Electrical Equip. Section.*

Lighting Switch Removal: Disconnect battery cable from junction block and disconnect wires from lighting switch. Pull switch knob out to last notch, then depress spring loaded latch button on switch body while pulling rod and knob assembly out of switch. Remove switch mounting nut with wrench J1589 and remove switch and escutcheon from instrument panel.

Stop Light Switch: (Location)—On brake pipe distributor fitting near master cylinder on left side at transmission support.

FUSES: Located on fuse panel under cowl unless otherwise specified.

Back-Up Light—9 amps.

Dome & Luggage Compartment Light—20 amps.

Electric Clock—2 amps.

Heater & Defroster—9 amps.

Parking Brake Warning Signal—9 amps.

Stop & Direction Signal Lamps—9 amps.

Cigar Lighter—Special Fuse (In back of lighter).

Glove Box Light—2 amps. (in wiring connector).

Air Conditioner Feed—20 amps. (In wiring connector near controls).

Air Conditioner Temp. Control—2 amps. (in wiring connector near controls).

Power Brake Vacuum Pump—14 amps. (in wiring connector near fuse block).

CIRCUIT BREAKER: 22 amps. Located in headlamp switch.

HORNS: Delco-Remy 1999755 (Low Note), 1999756 (High Note). *12 Volt.*

Horn Relay: Delco-Remy 1116781. *12 Volt.*

Contacts Close—2.75-4.0 volts.

Contact Gap—.025". **Air Gap**—.015" (closed).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►**1954 IMPROVED VALVE STEM LUBRICATION: Rocker Arm shaft diameter decreased on later engines. See "Valve System" in Buick Special Data.**

►**1955 ENGINE KNOCK ON STARTING CORRECTION: This noise may be present after starting an engine that has not been in operation for at least 30 minutes, and may last as long as 10 seconds. This noise is usually accompanied by a lack of oil pressure and disappears when pressure rises. It is recommended that bearing clearances be checked and undersize inserts be installed where clearance is found to exceed .0025". *Before proceeding with the above bearing check, make sure that the exhaust heat manifold control thermostat spring is not broken as this condition may cause the same noise as bearings.***

ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Series	Bore	Stroke	Displmnt.	Rated HP.
40	3.625"	3.2"	264 cu.ins	42.05
50, 60, 70	4.000"	3.2"	322 cu.ins.	51.2

Series	Compr.Ratio	Developed HP
1954 40 Synchro-mesh	7.2-1	143 at 4200 RPM
1954 40 Dynaflow	8.1-1	150 at 4200 RPM
1954 50 Synchro-mesh	8.0-1	177 at 4100 RPM
1954 50 Dynaflow	8.5-1	182 at 4100 RPM

1955 50 Synchro-mesh	8.4-1	
1955 50 Dynaflow	9.0-1	236 at 4600 RPM
1955 60 Synchro-mesh	8.4-1	
1955 60 & 70 Dynaflow	9.0-1	236 at 4600 RPM

Compression & Vacuum Reading—*See TUNE-UP.*

►*ENGINE IDENTIFICATION NOTE:* See Engine Number for suffix digit designating each series. Series 40 engine also has vertical groove 3/8" wide and 1/8" deep) cast in engine number pad approximately 1¼" to rear of pad centerline.

►*ENGINE COMPRESSION RATIO NOTE:* Same cylinder head used for all engines, different compression ratios secured by use of different pistons (Series 40), different head gaskets (50,60). *See Cylinder Head and Piston data below.*

►*ENGINE PARTS INTERCHANGEABILITY:* Parts are interchangeable on Series 50, 60, 70 engines and are also used in Series 40 engine with following exceptions: Cylinder Block, Pistons, Pins, Rings, Harmonic Balancer (Pulley used on Series 40), Camshaft, & Flywheel.

ENGINE MOUNTINGS: *See "Engine Mountings" in Buick Special Data.*

OIL PAN REMOVAL: Disconnect steering idler arm bracket from right frame side rail and lower steering linkage for clearance, then remove pan. *CAUTION*—Do not allow bracket to turn on idler arm (will change toe-in adjustment).

►*OIL PAN PRODUCTION CHANGE & REPLACEMENT PARTS NOTE:* Later type oil pans for production cars and for service replacement have 18 attaching bolt holes which replaces the early type pan having 24 attaching bolt holes. Both type pans are interchangeable

CYLINDER HEAD & GASKET: Cylinder Head No. 1391745 (1954) used on all 1954 engines. Cylinder Head No. 1391947 (1955) used on all 1955 engines. Different compression ratios secured by using special head gasket as listed below (except Series 40 where same gasket used with different pistons).

Series	Compr.Ratio	Cyl. Head Gasket No.
1954 40 (All)	7.2-1 & 8.1-1	1343484 (.015")
1954 50, 60	8.0-1	1343995 (.045")
1954 50, 60, 70	8.5-1	①1343484 (.015")
1955 40 (All)	7.5-1 & 8.4-1	1165307 (.015")
1955 50, 60	8.4-1	1391261 (.045")
1955 50,60,70	9.0-1	①1165307 (.015")

①—Low Compression (Export) No. 1343995 (.045").

Cylinder Head & Gasket Installation—*See "Cylinder Head & Manifold" in Buick Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Buick Special Data.*

PISTONS

Pistons—Aluminum alloy, dome head, cam ground, full skirt with transverse slots in oil ring groove, Anodized finish.

►*SERIES 40 PISTON CAUTION: Special HIGHER DOME pistons used in high compression (8.1-1 & 8.4-1) engines. Lower compression (7.2-1 & 7.5-1) pistons can be identified by letters "L.C." on top shoulder of piston on valve side.*

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with ½" long dash following engine number have .010" Oversize Cylinder Bore and Pistons. Standard cylinder bore size (40) 3.6235-3.6265", (50, 60, 70) 3.9985-4.0015".

►*REPLACEMENT PISTON NOTE:* Pistons not changed by Piston Pin Production Change (See Piston Pins below for later Press-fit type) and same piston and pin fitting data applies to both types.

Removal—Pistons and rods removed from above.

►*CAUTION*—Mark pistons, rods, and bearing caps with cylinder number before removal to insure correct reinstallation. Use Rod Bolt Guides (short guide J-5239-1 on lower bolt, long guide J-5239-2 on upper bolt) to retain bearing shell and assist in pushing assemblies out.

Fitting New Pistons: Clearance .0007-.0017". If micrometer used on pistons, measure at top and bottom of skirt 90° from pin hole (top diameter very slightly

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

less than bottom in service). Use .003" x ½" x 12" feeler gauge to fit pistons with cylinder block in normal position. Insert feeler on lower side of bore 90° from piston pin hole. Pull to withdraw feeler should be 7-13 lbs. at 70°F. (piston and bore clean and dry).

Replacement Pistons: Standard ("High Limit" or maximum diameter production size) and .005", .010", .020", .030" Oversize. *NOTE*—Pistons furnished only with fitted pins.

Installing Pistons: Assemble pistons on rods with valve depressions in head on same side as clamp bolt in rod. Install pistons with valve depressions toward camshaft. *See Rod Installation.*

PISTON PINS

►*1955 PISTON PIN PRODUCTION CHANGE & REPLACEMENT CAUTION:* Clamp-bolt Piston Pins (clamped in rod) used on 1954 & Early 1955 cars. Press-fit Piston Pins (pressed in rod) used on later 1955 Cars. *See "Piston Pins" in Buick Special Data for non-interchangeability cautions and special servicing data.*

Diameter—.940". **Length**—3.100" (40), 3.400" (others). **Clearance in Piston**—.0003-.0005" or easy finger push fit at 70°F. *NOTE*—Pin fit in piston is same for both early Clamp-bolt and later Press-fit pins.

Piston Pin Removal & Installation (Later Press-fit type Pins): *See "Piston Pins" in Buick Special Data. CAUTION—Pistons may be damaged if special procedure and tools not used.*

Replacement Pins: (Clamp-bolt Type) Std. & .003", .005" Oversize. **(Press-fit Type)** Std. size only. Fitted pins furnished with all pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr	.078"	.010-.020"	.002-.004"
Oil	.186"	015-.035"	.0035-.0095"

►*OIL RING NOTE:* Ring is three-piece (two rails and spacer) with expander. New rings are cemented assembly for ease in handling (will separate in service).

Replacement Rings: Production type rings furnished singly and in sets Standard & .010", .020", .030" Oversize. Special Service Ring sets furnished Standard (use up to .019" O.S.), & .020", .030" Oversize.

Installing Rings: Compression ring groove or bevel (on inner edge) upward. Oil ring expander gap ends should be at either end of piston pin (in unslotted portion of groove) and side rail gaps must be on valve depression side of piston (upward when installed in cylinder).

CONNECTING RODS

►*1955 CONNECTING ROD PRODUCTION CHANGE & REPLACEMENT CAUTION:* **Different rods used with 1954 and Early 1955 Clamp-bolt Piston Pin and Later 1955 Press-fit Piston Pin. Later type rods only will be furnished for service.** ***See "Piston Pins" in Buick Special Data for special pin removal and installation data.***

Length—6" **Weight**—22.16 ozs.
Crankpin Journal Diameter—2.249-2.250"
Out-of-round limit . 0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.

Clearance—.0002-.0023" (service limit .003").

Sidep lay—.004-.008" (total for both rods).

Replacement Bearings: Standard & .001", .002", .020", .021" Undersize. Size is stamped on back of bearing at or near tang.

Installing Rods: *See Installing Pistons above.* Install bearing cap with ridge on edge of cap on same side as conical boss on web of rod, install assemblies in engine with this ridge & boss toward other connecting rod on same crankpin and with rod clamp bolt toward camshaft (valve depressions in piston head must also be toward camshaft).

CRANKSHAFT

►*1955 WORN REAR MAIN BEARING THRUST SURFACE CORRECTION (caused by misalignment of rear main bearing cap):* **Align the thrust faces as follows: Assemble crankshaft and all main bearing caps leaving rear main bearing caps loose. Use a bar or wedge and force crankshaft as far to rear as possible (this will align front thrust faces since bearings and caps are free to move axially). Force crankshaft as far forward as possible and while holding crankshaft in the forward position, tighten rear main cap bolts to specified torque.**

►*CRANKSHAFT & FLYWHEEL UNBALANCE OR VIBRATION (After replacement of parts - Synchro-mesh & Dynaflow Cars): See "Engine Balancing" in Buick Special Data.*

Journal Diameter—2.498-2-499". Five bearings.
Out-of-round limit .0015".

Bearings—Durex 100A, steel backed, full precision type. Both halves interchangeable. No shims.

BEARING NOTE—Bearing upper halves can be rotated out and in by using tool KMO-734 in oil hole.

Clearance—.0005-.003" (service limit .0036").

Replacement Bearings: Standard & .001", .002" Undersize. *NOTE*—First four bearings identical and interchangeable. Rear bearing longer and flanged.

End Thrust: Taken by rear (#5) flanged bearing.
Endplay—.004-.008".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Buick Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Buick Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Buick Special Data.*

CAMSHAFT

►*CAMSHAFT IDENTIFICATION NOTE & NON-INTERCHANGE CAUTION:* **Camshafts are identified by grooves in land just forward of No. 3 journal as follows: 1954-55 Series 40—1 groove. 1954-55 Series 50, 60 Synchro-mesh—No groove. 1954 Series 50, 60, 70 Dynaflow—No groove. 1955 Series 50, 60, 70 Dynaflow—2 grooves. Do NOT use Series 40 camshaft in other engines.**

Journal Diameters—(1) 1.685-1.686", (2) 1.655-1.656", (3) 1.625-1.626", (4) 1.595-1.596", (5) 1.565-1.566".

Bearings—Steel-backed, babbitt lined bushings.

Clearance—.0005-.0035" (service limit .0015-.004").

End Thrust: Spacer ring installed on shaft between front bearing journal and thrust plate bolted to crankcase *behind camshaft sprocket.* **Endplay**—.004-.008".

Timing Chain: Link Belt. **Width** .688", **Pitch** .500" **Length** 26" or 52 links.

Camshaft Setting: Mesh chain on sprockets with two copper-plated washers (12 links apart) in line with "O" marks on sprockets with marks toward left side of engine. Turn camshaft so that keyway is straight downward, turn crankshaft so that #1 and #4 pistons are on top dead center, install sprockets and chain as an assembly.

Engine Front Cover Removal: *See "Engine Front Cover" in Buick Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Buick Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valve	Head Diameter	Stem Diameter	Length
Intake	1.750"	.3720"	4.704"
Exhaust	1.375"	.3715"	4.704"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	①	.0025"
Exhaust	45°	②	.0030"

①—Series 40 - .358". Series 50, 60, 70 - .378".

②—Series 40 - .350". Series 50, 60 (Synchro-mesh) .350". Series 50, 60, 70 (Dynaflow) - .378".

Valve Seat Width—1/16" (3/64-5/64").

►*VALVE GRINDING CAUTION:* If height of valve stem end raised .075" by valve grinding, height must be reduced by grinding end of stem or replacing valve to insure correct operation of hydraulic lifter.

Valve Springs: Double springs used on all valves. Install springs with closed-coil end toward cylinder head.

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs.Press.	Length	Lbs.Press.	Length
Closed	19.5-24.5	1.53"	37.5-42.5	1.5"
Open	53-59	1.15"	85-91	1.12"

Valve Guides: Drive old guides out from combustion chamber side using Driver J-269. Install new guides from top of head using Valve Guide Aligner J-5240-2 over guide hole and Installer J-5240-1 to drive guide down until installer shoulder contacts top of aligner which will position guide correctly in head. Finish ream guides with Valve Guide Reamer J-129-3.

Hydraulic Valve Lifters: Barrel type.
Diameter—.8425". **Clearance in Block**—.0015-.003".
Lifter Overhaul & Testing—*See "Valve System" in Buick Special Data.*

►*VALVE GRINDING CAUTION: See Valves (above).*

Rocker Arm Assembly: *See "Valve System" in Buick Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

1954-55 Series 40 ①
Intake Valves–Open 25° BTDC. Close 67° ALDC.
Exhaust Valves–Open 70° BLDC. Close 42° ATDC.

1954-55 Series 50, 60 (Synchro-mesh) ①
1954 Series 50, 60, 70 (Dynaflow) ①
Intake Valves–Open 25° BTDC. Close 77° ALDC.
Exhaust Valves–Open 70° BLDC. Close 42° ATDC.

1955 Series 50, 60, 70 (Dynaflow) ①
Intake Valve–Open 28° BTDC. Close 79° ALDC.
Exhaust Valves–Open 75° BLDC. Close 42° ATDC.
①–Timing points are with valve .004" off seat.

Valve Timing Check–Timing chain cover must be removed to check chain and sprocket marks. *See Camshaft Setting under CAMSHAFT above.*

OILING SYSTEM

Crankcase Capacity: 6 qts. (refill), 8 qts. (dry engine). NOTE– 1 qt. additional for dry filter.
Normal Oil Pressure: 35 lbs. at 35 MPH.
Pressure Regulator Valve: In oil pump body. Not adjustable.

Oil Pressure Indicator–(1954) AC No. 1508046 (Series 50 & 70). No. 1508115 (Series 40, 60, 100). **(1955)** AC No. 1508238 (Series 40, 60). No. 1508226 (Series 50, 70). Not electrical.

Oil Pump: Helical gear (early cars), spur gear (later cars), in crankcase at rear of engine.
Pump Overhaul–*See "Oiling System" in Buick Special Data.*

Oil Filter: Full-flow. On pad at right rear of engine. NOTE–Ball check valve in filter base by-passes oil directly to engine when pressure differential between inlet and outlet ports reaches 4½-5½ lbs.
Replacement Filter Element–AC No. PF-122.

Crankcase Ventilation: Filter element in oil filler cap (air intake) and in rear end of valve lifter cover (air outlet) to which ventilator pipe is connected.

COOLING

Water Capacity: (Synchro-mesh Cars) 16.5 qts (without heater), 18 qts. (with heater); **(Dynaflow Cars)** 18.5 qts. (without heater), 20 qts. (with heater).
Pressure Valve: AC No. 850549 (7 lb.–Without Air Conditioning). No. 850559 (13 lb.–With Air Conditioning). Radiator Filler Cap.

Thermostat: Pellet type in water manifold above pump. (Std.) Buick No. 1391226 opens at 157-162°F. (High Temp.) Buick No. 1391225 opens at 177-182°F.
Water Pump: Packless, sealed ball bearing type.
See "Buick V8" in Water Pump Section.

Pump Removal–Remove fan blade assembly, spacer, and pulley from pump shaft hub, then remove pump cover assembly and gasket from timing chain cover.

Temperature Gauge (1954): AC No. 1512808 (Series 40, 60, 100); No. 1512736 (Series 50, 70). Not electric. *See "Temperature Gauges" in Miscellaneous Section.*
Temperature Gauge (1955): AC No. 1512971 (Series 40, 60); No. 1512948 (Series 50, 70). Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

CLUTCH

Own. (Series 40) "Crown" spring, (Series 50, 60) conventional springs.
See "Buick Crown Spring" & "Buick Single Plate" in Clutch Section.
Clutch Disc No.–1393704 (Series 40), 1391632 (Series 50, 60).
Pedal Adjustment–Free travel ¾-1". Adjust by loosening locknut and turning adjusting nut on release rod at clutch fork.
Removal–Remove rear axle and transmission (See below), take off clutch underpan, disconnect linkage at yoke, remove clutch release bearing support by taking out spring washer in housing, pull out yoke (with release bearing) from fulcrum, mark clutch and flywheel, remove cover mounting screws.
►*Series 40 Installation Note – Install release bearing with rounded surface to contact "Crown" spring.*

SYNCHRO-MESH TRANSMISSION

Own. Series 40 transmission differs in design and size with series 50, 60. *See "Buick 40" and "Buick 50" Synchro-mesh in Transmission Section.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Disconnect and remove rear axle assembly. On Series 40 only, place shift lever in neutral, and remove toggle spring and extension, shift lever and selector lever for increased clearance. All cars, remove thrust pad and shims from trans. support. Disconnect discharge and suction lines from compression on "Air-Conditioned" cars, to prevent damage to flexible adapters. *See "Frigidaire Air-Conditioning" in Miscellaneous Section before disconnecting lines.* Remove nuts securing transmission to support. Lift engine to raise transmission off of support. Remove support noting location and number of shims. Remove transmission to flywheel housings bolts, pull transmission back and lower to remove.

DYNAFLOW DRIVE

1954 Series–"Twin-Turbine" Dynaflow Drive. Torque converter and hydraulically operated planetary transmission. *See "Buick (Twin Turbine) Dynaflow" in Transmission Section.*

1955 Series–"Variable Pitch" Dynaflow Drive. Torque converter and hydraulically operated planetary transmission. A two position (high & low) stator is used in the torque converter to multiply engine output torque when required (controlled by accelerator pedal at wide open position). *See "Buick (Variable Pitch) Dynaflow" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Buick Twin Turbine Dynaflow" (1954); "Buick Variable Pitch Dynaflow" (1955) in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Buick Variable Pitch Dynaflow Drive" in Transmission Section.*

Throttle Linkage Adjustment and Dash Pot Setting on Dynaflow Drive Cars. *See "Tune-up".*
Lubrication–Check fluid level in transmission every 1000 miles, drain and refill every 25,000 miles.
Checking Fluid Level–Engine must be idling with selector lever at "P" (parking) and transmission at normal operating temperature. Add oil to "Full" mark on dip stick only.
Capacity–10 quarts. (Add 1¾ pints for dry transmission). *Use only Special Buick Oil for Dynaflow Drive or Automatic Transmission Fluid Type A.*

►*OTHER DYNAFLOW SERVICE DATA: See "Buick Twin Turbine Dynaflow" (1954); "Buick Variable Pitch Dynaflow" (1955) in Transmission Section.*

UNIVERSALS

Saginaw & Spicer. One used (in torque ball at rear of transmission).
Torque Ball Adjustment–*See Buick Special Data.*

REAR AXLE

Own Make: Semi-floating type with Hypoid gear and torque tube drive.
See "Buick Hypoid" in Rear Axle Section.

►*REAR AXLE HOUSING FILLER PLUG TIGHTENING CAUTION: Plug will break if tightened excessively. Correct torque is 20-30 ft. lbs.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Buick Hypoid" in Rear Axle Section.*

►*1955 SERIES 50, 60 & 70 REAR AXLE RATIO PRODUCTION CHANGE AND SERVICE REPLACEMENT NOTE:* A 3.36-1 ratio rear axle ring gear and pinion replaces the 3.4-1 ratio unit used in early cars. *See "Buick Hypoid" in Rear Axle Section.*

Model	Rear Axle Ratio Series	Synchro-mesh	Dynaflow
1954-55	40	3.9-1	3.6-1
1954, Early 1955	50 & 60	3.9-1	3.4-1
1954, Early 1955	70		3.4-1
Late 1955	50 & 60	3.9-1	3.36-1
Late 1955	70		3.36-1
1954	100		3.6-1

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rear Axle Ratio Note—*Ratio is stamped on bottom of axle housing. Example 3/9 indicates a 3.9 to 1 ratio.* **Backlash**—.008-.010" *desired, .008-.012" maximum.*

Axle Shaft Removal: Axle shaft lock washer at inner end of axle. *See "Buick Hypoid" in Rear Axle Section for disassembly procedure.*

Rear Axle Assembly Removal: Raise rear end of car and place car on stands. Disconnect parking brake cable at rear brake sheave and at bracket on front end of torque tube, hydraulic brake line from pipe at X member and remove retainer. Disconnect lower end of shock absorber links, rear radius rod at axle end, lower end of chassis springs, and torque tube from torque ball. Hoist rear end of car and roll axle assembly out.

Wheel Bearing Adjustment—None

Rear Suspension: *See "Buick Rear Suspension" in Rear Axle Section.*

SHOCK ABSORBERS

Delco. Direct-acting hydraulic (front). Double acting "parallel cylinder" (rear). New independent front shocks mounted within coil springs.

Buick Shock Absorber Nos.

Model	Front	① Rear
40, 60 (Exc. 49, 69) Std.	5515818	5594488, 89
49, 69	5329769	5519694, 95
50, 70 Std.	5329769	5519694, 95
40, 60 (Exc. 49, 69) ②	5329769	5519694, 95
50, 70 ②	1076248	5511194, 93

①- Right and Left respectively.

②- Used with Export High & Overload Spring.

FRONT SUSPENSION

Independent. New design with Direct Acting Shock Absorbers. Independent upper control arm with Shock Absorbers within coil springs.

See "Buick" in Front Suspension Section.

►*FRONT STABILIZER BAR INTERFERENCE WITH RADIATOR OUTLET HOSE:* Install necessary spacer between bar and frame to provide a clearance of 3/16" between bar and hose. Longer bracket mounting bolts mounting bolts will be required for proper assembly.

►*ADJUSTMENT CAUTION: Check Spring height and position of Idler Arm before changing adjustments.*

King Pin Inclination—0° crosswise at 7/8° Camber.
Caster—1/4° Neg. desired. (1/2° Pos. to 3/4° Neg.).
Camber—3/8° Pos. desired. (7/8° Pos. to 5/8° Neg.) Both wheels to be within 3/4° of each other.

Toe-In: (1954) 0" to 1/16". **(1955)** 1/16" to 1/8". *1955 NOTE—This supersedes previous setting of 0"-1/16".*

Toe-out on Turns—Outer wheel 20°, inner wheel 22½° ± 3/4°.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

►*1955 STEERING COLUMN RATTLE-CORRECTION (SHIFT CONTROL HOUSING): See "Buick Variable Pitch Dynaflow" in Transmission Section.*

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder. *See "Saginaw (GM) Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix Hydraulic (Single Anchor): Conventional two shoe with short molded lining front (Primary) and long molded lining rear (Secondary). Parking "Step-On" lever applies rear wheel service brakes.
See "Bendix Hydraulic (Without Eccentric)" in Brake Section.

►*BRAKE LINING REPLACEMENT CAUTION (POWER BRAKE MODELS):* Special front wheel primary linings are used which can be identified by BROWN edge.

NOTE—Rear wheel primary linings are same as used on cars without Power Brakes and have WHITE edge All secondary linings (with & without Power Brakes) have YELLOW edge

Drums—Diameter 12" Rebore limits. .060"
Wheel Cyl. Diameter—Front 1-1/8", Rear 1".
Replacement Lining & Shoes—Linings or shoes with linings come in Standard and .030" oversize, and differ between Regular and Power brakes, as well as between car Series.

Lining Width & Thickness

Model	Front	Rear
50,60,M/100	2.25" X 0.187"	2.25" X 0.187"
40	2.25" X 0.187"	1.75" X 0.187"
70	2.50" X 0.25"	2.25" X 0.187"

Braking Power—57% Front, 43% Rear.
Clearance—Heavy drag and back off 15 to 17 notches.

Standard Master Cylinder—On bracket on left side of frame near transmission support.

Checking Fluid—Access hole in front floor pan at left corner of drivers seat. (Move seat back and fold mat to expose hole cover). Fluid level should be ½-1" below top of filler opening.
Removal—Remove from beneath car. Not necessary to disturb other parts.

Power Brakes (1954): Kelsey-Hayes Vacuum Suspended type power brake cylinder (replaces conventional master cylinder). *See "Buick Power Unit" in Brake Section.*

Power Brakes (1955): Moraine Air Suspended type power brake unit (replaces conventional master cylinder). A separate vacuum reservoir is located under hood on left side. *See "Moraine Power Unit" in Brake Section.*

Checking Fluid—Maintain fluid level 1" below top of separate reservoir tank on left side under engine hood.

Removal of Power Unit—Remove cranking motor splash pan. Disconnect return spring, loosen lock nut on cylinder push rod, remove clevis pin at brake pedal, then unscrew push rod from cylinder push rod. Disconnect air inlet hose at air filter on brake cylinder and disconnect hoses from vacuum tee on opposite side of cylinder. Disconnect reservoir to hydraulic cylinder pipe and allow reservoir and pipe to drain. Disconnect distributor to cylinder pipe and allow to drain. Discard old fluid and cover pipe ends with tape. Remove nuts and lock washers attaching power cylinder to its support and remove cylinder from car.

Electric Vacuum Pump (1954): Moraine or Trico. Pump is connected in engine intake manifold vacuum line and supplements vacuum supply or provides vacuum when engine not running. *See "Buick Power Unit" in Brake Section.*

MISC. MECHANICAL

Windshield Wipers—Cable operated Vacuum type. *See "Windshield Wipers" in Miscellaneous Section.*

Air Conditioning—Frigidaire type with solenoid controlled compressor clutch (compressor operates only with air-conditioning switch turned on. *See "Frigidaire Air-Conditioning" in Miscellaneous Section.*

Power Window Regulators: Two systems used:
Electric (1954-55)—Reversible motor in each window. *See "GM Electric Window Regulators" in Miscellaneous Section.*
Hydro-Lectric (1954)—Window raised hydraulically, lowered by return spring. Motor and pump assembly mounted on left side of firewall. *See "Hydro-Lectric Top Control (With Window & Seat Control)" in Miscellaneous Section.*

Power Seat Adjusters: Two systems used:
Electric (1954-55)—Individual motors for vertical and horizontal adjustment. *See "GM Electric Seat Regulators" in Miscellaneous Section.*
Hydro-Lectric (1954)—Hydraulic type with individual cylinders for vertical and horizontal adjustment. *See "Power Top Control (With Window & Seat Control)" in Miscellaneous Section.*

Power Top Control: Hydro-Lectric type. *See "Power Top Control" in Miscellaneous Section.*

HOOD ASSEMBLY

1946-47 MODELS

HOOD LOCK: Radiator ornament controls manual and automatic safety catch. To raise hood, tilt ornament back, lift up on forward edge of hood. CAUTION—Do not hold radiator ornament down when closing hood (will damage manual catch).

Hood Latch Bar Adjustment—Hood latch bar should be ¾" above lower edge of hood reinforcing panel (under hood nose) with radiator ornament down. This clearance can be obtained by lengthening or shortening radiator ornament link at turnbuckle. Latch bar catches on radiator shroud provided with elongated mounting holes and catches should be moved forward until hood fits snugly when closed.

1948-53 MODELS

HOOD LOCK (60S, 61, 62—1948, All Series—1949-53: Hood hinged at cowl with locking handle at lower left side of instrument panel. Safety catch under front edge of hood.

Lock Plate Adjustment—Loosen lock plate capscrews at radiator shroud, lower hood slowly to allow pilot to center lock plate, raise hood without disturbing position of plate, tighten capscrews. Check hood safety catch as directed below.

CAUTION—If lock plate tightened out of position, it is possible hood may be locked so that it cannot be opened.

Hood Lock Control Cable Adjustment—Raise hood, push hood lock handle on instrument panel in, loosen lock cable anchor block screw, adjust for 1/16" clearance between anchor block and lock plate action lever, tighten anchor block screw.

Hood Safety Lock Catch Adjustment—Raise hood, loosen 2 safety lock catch capscrews on radiator shroud, lower hood until safety latch engages catch, position catch for a minimum of ¼" engagement on latch, tighten capscrews.

1948 MODELS

HOOD LOCK (75, 76): Hood hinged at cowl with radiator ornament hood lock. Ornament controls both lock and safety catch.

Hood Ornament Adjustment—Close hood, set ornament on high point of cam (midway between locked and unlocked position), insert ¼" drill between goddess and top of ornament base just ahead of and touching ornament hook (setting correct when drill touches at these three points). To adjust, loosen lower jam nuts, shift striker pin to rear (if clearance excessive) or to front (if insufficient clearance), tighten jam nuts. Tension to unlock hood should be 25-30 lbs. (check with spring scale hooked under neck of goddess). Adjust by raising or lowering striker pin and roller (without disturbing fore-and-aft position).

1946-47 MODELS

HOOD REMOVAL: All Models except 75. To remove hood, raise hood and prop front end up. Disconnect hood prop at each side by taking out pivot pin in lower end of prop at fender alignment bracket. Mark hood hinge position on cowl (when re-assembled to these marks hood alignment will be retained). Remove three cap screws at each hinge and lift off hood assembly.

Model 75—To remove hood, raise hood, prop front end up. Remove counter-balancing springs at bottom using Tool J-1638, take out two shoulder cap screws from hood links to cowl bracket, lift off hood.

1948-49 MODELS

HOOD REMOVAL: Remove nut in strainer at hood center moulding. Take out two hood-to-hinge bolts at each hinge (if shims used at this point, replace same number when reassembling). Lift off hood panel.

Hood Alignment—Hood fit to cowl can be adjusted by adding or removing shims at hood-to-hinge bolts. Hood panel bolt holes are enlarged to permit fore-and-aft or side-to-side hood adjustments.

1950-55 MODELS

HOOD REMOVAL: Scribe location of hinge where it is attached to hood, to aid in repositioning hood on installation. Remove nut holding center of hood hinge reinforcement to hood panel center moulding. Remove three screws holding each side of hood hinge assembly to hood panel. Remove hood, being careful not to damage finish.

Hood Adjustment—Loosen hinge to cowl mounting screws, install a short ⅜" diameter pin in hole in hinge, and move hinge until pin will also enter hole in cowl. Rotate hinge assembly upward and rearward around pin as far as possible and tighten screws. Loosen three hinge to hood panel attaching screws at each side. Elongated holes at each side provide fore, aft, and side to side adjustment of hood. Loosen hinge reinforcement to hood center moulding attaching nut. Move hood forward or rearward until clearance between rear edge of hood panel and body cowl is equal on both sides. Position rubber bumpers in channel along top of cowl ledge so hood is level with body at the cowl. (NOTE—variable thickness rubber bumpers are available). Adjust hood rear guide to prevent binding when opening hood. Tighten hinge to cowl screws on both sides, and hinge reinforcement to center moulding nut. Loosen hinge to cowl screws on both sides, and with pins in locating holes, revolve hinge slightly to secure the tightness, while maintaining an even spacing between cowl and rear edge of hood. Tighten hinge to cowl screws. Adjust the rubber bumpers on each side of cowl above fenders to contact sides of hood when in closed position. Three notches in hood spring lower bracket provide additional adjustment of hood if necessary.

TIGHTENING SPECIFICATIONS

1946-47-48 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Bolts	70-75	840-900
Main Bearing Caps	140-150	1680-1800
Connecting Rod Bolts	60-65	720-780
Flywheel to Crankshaft	65-70	780-840
Engine Rear Supports	50-60	600-720
Intake & Exhaust Manifold	25-30	300-360
Crankshaft Counterweights	145-155	1620-1740
Clutch Cover Mounting Screws	20-25	240-300
Axle Shaft Hub Nuts	285-315	3420-3780
Hydra-Matic Drive Cars:		
Trans. to Bell Housing	80-90	960-1080
Bell Housing to Crankcase	45-50	540-600
Flywheel to Flywheel Cover	30-35	360-420
Flywheel to Crankshaft	70-75	840-900

1949-52 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Bolts	65-70	780-840
Main Bearing Caps	90-100	1080-1200
Connecting Rod Nuts	35-40	420-480
Flywheel to Crankshaft (H-M)	70-75	840-900
Flywheel to Crankshaft (S-M)	65-70	780-840
Manifolds to Head	25-30	300-360

1953-55 MODELS

	Ft. Lbs.
Cylinder Head	65-70
Intake Manifold	25-30
Exhaust Manifold	25-30
Oil Pan Screws	10-12
Oil Pan Nuts	15-18
Main Bearing Caps	90-100
Flywheel	80-85
Vibration Dampener	60-65
Con Rod Caps	40-45
Camshaft Sprocket	15-18
Water Pump Mounting	25-29
Oil Pump Mounting	25-30
Flywheel Housing (Upper)	45-50
Flywheel Housing (Lower)	25-30

ENGINE

1946-48 MODELS

ENGINE REMOVAL: Remove the engine assembly from car as follows: Jack up all four wheels and install a stand at each wheel, drain cooling system; disconnect battery cables, engine ground strap (at right front engine support), universal joints at each end of propeller shaft, and support engine at rear with a bar or jack. Loosen transmission and slide back into frame X-member and place support under front end of transmission. (NOTE—Hydra-Matic transmission must be removed from car—Refer to Transmission Section for the Hydra-Matic Drive article for removal data). Remove clutch release mechanism from clutch housing. Take off hood (see Hood Removal above). Disconnect and remove accessories from cowl and engine (heater hose, radio ground cables, windshield washer, etc.). Take off all water hoses, air cleaner, carburetor, carburetor control linkage, fan belt, generator and water pump belt, generator, fan, and distributor. Disconnect exhaust pipe at right manifold and gasoline line at fuel pump. Place board or piece of sheet metal over radiator core to prevent damage to core while hoisting engine out of car. Loop rope under crankshaft pulley, then up and around exhaust crossover manifold. Attach hoist to rope and tighten hoist to take slack out of rope, then disconnect front engine supports (one on each side). Engine can then be lifted out of chassis.

1948 Cars—Remove distributor on these cars to avoid hitting cowl when engine hoisted from chassis.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1949-53 MODELS

ENGINE REMOVAL: Engine and transmission assembly can be removed as follows: Drain crankcase and cooling system. Remove hood by taking out nut on center moulding-to-strainer assembly and two panel-to-hinge bolts at each side (if shims used, replace same number when re-assembling to maintain alignment). Raise front of car and place on wheel stands at each front wheel. Disconnect battery cables. Remove starter (with solenoid). Take off Backup Light switch bracket from rear of transmission. Free clutch pedal to release yoke rod (cars with synchro-mesh trans.). Take out support bolts at transmission extension housing. Disconnect shift linkage at transmission, and propeller shaft at front universal. Disconnect exhaust pipe from rear end of right exhaust manifold. Remove generator, and fan blade and pulley. Remove radiator (see Radiator Removal). Remove carburetor and air cleaner. Disconnect ignition switch wire at coil, oil pressure gauge line at rear of block, and flexible fuel pump hose at pipe. Take off windshield washer bottle and bracket, disconnect heater hoses. Loop rope (or chain) around intake manifold. Attach rope to hoist and tighten hoist to take slack out of rope, then disconnect front engine supports (one each side). Engine and transmission can then be raised out of car.

1954-55 MODELS

ENGINE REMOVAL (WITH TRANSMISSION IN CAR): *(CAUTION—If car is equipped with Air Conditioning, see Air Conditioning Section for precautions to take when removing equipment or disconnecting refrigerant lines).* Proceed as follows:

1—Drain cooling system, crankcase and transmission. Remove hood top panel (see Hood Removal above). Disconnect battery, and wires from generator. Remove upper and lower radiator hoses and remove radiator core.

2—Disconnect power steering pump to valve body hoses at pump and install caps on fittings to prevent oil leakage. Disconnect refrigerant lines (See Air Conditioning Section). Disconnect all heater hoses at water pump and remove right heater hose from thermostatic valve

3—If car is equipped with power brakes, disconnect vacuum line at intake manifold. Remove carburetor air cleaner, disconnect throttle linkage and fittings and remove carburetor. Disconnect flexible fuel line at fuel pump and remove line from clips. Disconnect ground straps, primary wire at distributor, oil pressure and cooling system temperature switch wires. Disconnect wires at porcelain resistor.

4—Disconnect windshield wiper vacuum hoses at manifold line and vacuum pump line. Raise front of car and install stands.

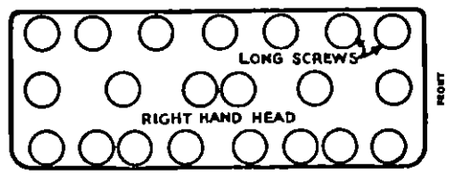
5—Disconnect propeller shaft at rear axle and remove assembly from car by sliding yoke out of transmission extension housing. Remove transmission linkage slush deflector, and disconnect speedometer cable and shift linkage at transmission. Remove starter from car.

6—Disconnect front engine supports at frame. Disconnect exhaust pipes from exhaust manifold. Remove idler arm support screws from frame and lower idler arm and steering connector link. Loosen hand brake cable at relay Remove stands from front of car and lower car to floor.

7—Install a chain or rope around intake manifold and attach chain hoist above engine. Take up all slack and then remove rear engine support bracket from frame and extension housing. Lift engine, with transmission, out of car.

1949-55 MODELS

OIL PAN REMOVAL: Remove oil level indicator, exhaust cross-under pipe nuts, pipe, gaskets, and manifold heat control valve. Take off starter and lay on frame side rail. Remove two oil pan nuts and eighteen screws, take off oil pan.



Oil Pan Installation: Cement new pan gaskets to pan, install new cork seals in rear main bearing cap and engine front cover with ends of seals seated in grooves. Coat each end of pan gaskets with chassis grease so that ends will slip over front and rear seals. Position pan over two studs on left side of crankcase, then raise right side and insert two pan screws opposite the two studs, put on washers and nuts on two studs. Tighten remaining screws, tightening two screws and nuts originally installed last.

CYLINDER HEAD & MANIFOLD

1946-48 MODELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head capscrews tighten in sequence from the center of the head outwards. Cast Iron heads should be tightened cold and rechecked after the engine has been run and thoroughly warmed up. CAUTION—Two capscrews at water outlet connection are ½" longer and must not be used at any other location (will break through water jacket and damage block). These two capscrews may be identified by larger heads.

Tightening Torque—See Tightening (Torque Wrench) Specifications below.

CADILLAC 1946-48 CYLINDER HEAD

1949-55 MODELS

CYLINDER HEAD INSTALLATION: Use a Torque Wrench and tighten cylinder head capscrews starting from the center row of bolts and working outward and toward each end.

►*CYLINDER HEAD TIGHTENING CAUTION—Loosen intake manifold before checking the cylinder head capscrew torque. This will prevent the upper row of screws from being under-torqued due to the bridging effect of the manifold.*

Cylinder Head Gasket. Install with side stamped "Top" UP

Cylinder Head Capscrews. 8 short screws in outside row, 5 medium length screws in center row, 4 long screws at rocker arm shaft.

Tightening Torque. See Tightening (Torque Wrench) Specifications.

ORIGINAL BORE & PISTONS

ALL MODELS

ORIGINAL PRODUCTION ENGINE BORE & PISTON SIZES: Piston and cylinder size variation indicated by letter ("A" through "M") stamped on top of block at outer edge of cylinder bore. Each letter indicates two sizes ("—" if letter to left of bore, "+" if to right of bore center). These letters used in production for selective fitting of pistons.

►*1951-55 OVERSIZE BORE NOTE:* An asterisk, placed before the engine unit number, indicates that cylinders bored .010" Oversize. Cylinder size variation is stamped to right and left of cylinder bore with a double letter "AA," "BB," etc., as indicated for standard size bore above.

PISTONS

ALL MODELS

REPLACEMENT PISTONS (WITH FITTED PIN): Furnished in Standard size, .010", .020", .030" Oversizes.

ALL MODELS

FITTING NEW PISTONS: Pistons should be fitted by Micrometer Gauge Method or Feeler Gauge Method as described below. Measure piston for clearance ⅛" below horizontal slot of "T" slot.

Piston Skirt Clearances

Engine	Skirt Clearance
1946-48	.0023-.0025"
1949	.0020-.0022"
1950-51	.0013-.0017"
1952-54	.0015"
1955	.0009"

Micrometer Gauge Method:—Measure cylinder bore with micrometer gauge at point 1¼" below top edge and at right angles to crankshaft. Set inside micrometer at cylinder bore size, **then measure this gauge length with same outside micrometer used to measure piston.** This method will eliminate any error introduced by using different gauges to measure cylinder and piston. Use outside micrometer to measure piston diameter at upper corner of 'T' slot (adjacent to 'T' slot and ⅛" below horizontal slot).

►*TEMPERATURE VARIATION NOTE:* Skirt clearance shown above is for block and piston at 70°F. Subtract .0001" (or add 2/5 Lb. pull on feeler gauge) for each 6° increase in piston temperature above 70°F. Add .0001" clearance (or subtract 2/5 Lb. pull) for each 6° decrease in piston temperature below 70°F.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Feeler Gauge Method:—Use ½" feeler stock .002", .0025", or .003" thick (see Feeler Gauge Note and table below) on side of piston directly over 'T' slot (center feeler on slot) with lower rounded end of feeler extending ½" down on piston skirt past horizontal slot (feeler must not extend further down on piston skirt because skirt is tapered with greater diameter at bottom). Install piston and feeler in cylinder with piston right side up and feeler toward side, measure pull required to withdraw feeler. Pull will vary in accordance with thickness of feeler gauge used and with piston temperature. See table below for correct pull for each feeler gauge thickness to obtain proper skirt clearance listed above.

Feeler Pull	Piston Clearance (70°F.)		
(In lbs.)	.002" Feeler	.0025" Feeler	.003" Feeler
1	.00225"	.00275"	.00326"
2	.002"	.00252"	.00304"
3	.00175"	.00228"	.0028"
4	.0015"	.00205"	.00258"
5	.00125"	.00182"	.00235"
6	.001"	.00157"	.00213"
7	.00075"	.00133"	.0019"

Feeler Gauge Note—Feeler gauges used for piston clearance measurement should be clean and smooth with lower end rounded. Rusted or wrinkled feelers should be discarded and rough edges should be honed to prevent scratching cylinder wall.

PISTON PINS

1946-49 MODELS

PISTON PIN FITTING: Piston pin holes in piston have bearingized finish and if oversize pins are installed, hole should be reamed to proper size as follows: Use Piston Pin Hone KMO-332 (1946-48), KMO-754 (1949). Mount hone in vise and revolve piston on hone slowly by hand *(CAUTION—Do not use electric drill to drive hone)*. Use very fine abrasive (Grit No. 240A), washing abrasive out frequently with gasoline or kerosene. *(CAUTION—Always wash piston thoroughly before inserting pin to gauge for size)*. Pins should be free hand press fit in each piston boss with no perceptible play at 70°F. (clearance .00005"-.0001").

1950-55 MODELS

PISTON PIN FITTING: *(NOTE—Special tool J-3848 is required to fit pins to connecting rods)*. See following for Removal and Installation:

Removal—Install pilot of tool J-3848 on puller screw and insert this assembly through piston and pin from side of piston stamped "REAR." Install support (part of tool J-3848) over puller screw with small end of support against front side of piston (side opposite to that stamped "REAR"). Install nut loosely on puller screw and place assembly in arbor press with support positioned over slot in press table to allow screw to extend down. Press piston pin out of piston and rod assembly. Remove tool from piston and rod

Installation—Lubricate pin holes and install pilot (part of tool J-3848) through piston and rod, lubricate pin and insert it in piston pin hole on "REAR" side of piston. Install puller screw through pin and pilot from "REAR" side of piston. Insert spacer (part of tool J-3848) between connecting rod and front side of piston until it is seated on the pilot. Install support over puller screw with smaller end toward front of piston (opposite to side stamped "REAR"). Mount piston and tool assembly in vise with side of piston stamped "REAR" down and flats of puller screw gripped in vise Install nut on threaded end of puller and tighten with torque wrench to start piston pin into connecting rod. *(CAUTION*—If pin can be started into rod with less than 15 ft.lbs. minimum torque, the clearance between piston pin and rod is excessive and either the piston and pin assembly or connecting rod must be replaced). Remove assembly from vise and install in arbor press with large side of support down. Install collar (part of tool J-3848) over piston pin and press puller screw down until top of pin is level with top of collar. *REMOVE COLLAR and SPACER*. Pin will be projecting slightly from rod, and must be guided into pin boss next to support to assure correct alignment When aligned, press pin in until pilot bottoms in support This properly positions pin in rod.

PISTON RINGS

ALL MODELS

REPLACEMENT PISTON RINGS: Rings are furnished separately and in complete sets as follows: Standard size, .010", .020", .030" Oversize.

CRANKSHAFT & MAIN BEARINGS

1946-48 MODELS

CRANKSHAFT REMOVAL (Engine in Car): Raise car and support it securely on stand at each wheel, support engine at rear on jack or cross bar. Remove driveshaft, disconnect transmission and slide it back into frame X-member *(CAUTION*—Hydra-Matic Transmission must be completely removed from car). Disconnect clutch release mechanism, remove flywheel housing lower pan, remove clutch and flywheel. Drain oil and remove oil pan, oil pump, and pan baffle. Free steering idler arm from right frame side bar and lower steering linkage to the floor. Disconnect fan, water pump, and generator belts. Remove fuel pump, fan, crankshaft pulleys, timing chain cover, camshaft sprocket and timing chain. Disconnect all connecting rods and push piston and rod assemblies up in cylinders. Remove front and rear main bearing caps, support crankshaft while removing center bearing cap, lower crankshaft from engine.

1949-55 MODELS

CRANKSHAFT REMOVAL (Engine in Car): Jack up all four wheels and install a stand at each wheel. Drain crankcase and cooling system. Remove oil pan (see Oil Pan Removal), oil pump (see Oil Pump Removal), timing chain (see Timing Chain Removal), and flywheel (see Flywheel Removal). Take off steering idler at right frame side bar and lower linkage to floor. Remove spark plugs. Take off rod caps and push rod and piston assemblies up into bores to clear shaft. Remove front and rear main bearing caps, support shaft at front and rear and remove three remaining caps, lower shaft out

1946-55 MODELS

MAIN BEARING REMOVAL: Upper bearing halves can be rotated out with flattened cotter pin inserted in oil hole in crankshaft and turning shaft clockwise. Crankshaft does not have to be taken out. Installation—Reverse removal instructions given above. *CAUTION*—Do not interchange caps. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear of engine.

1946-48 MODELS

REAR MAIN BEARING OIL SEAL INSTALLATION: Remove crankshaft and rear main bearing shells (to avoid damage), clean all old packing out of groove in crankshaft and bearing cap, use tool J-1177 to install new packing as follows: Install length of new packing in groove in crankcase, drive packing up into place with tool J-1177 by pounding on tool handle with hammer, hold tool in position and cut off each end of packing flush with bearing edge. Install packing in bearing cup in same manner. When installing rear main bearing cap in engine, install new cork plugs in grooves on each side of bearing cap to prevent oil leaks at this point. Plugs should be well greased to facilitate installation.

1949-55 MODELS

REAR MAIN BEARING OIL SEAL: Wiper seal installed in rear groove in bearing cap and block (oil slinger operates in front groove).

Oil Seal Installation—With crankshaft out of engine (see Crankshaft Removal), and bearing cap off, install length of new packing in groove in block. Use Tool J-3048 and drive seal in place. With tool in place, cut ends of packing flush at each end. Repeat operation for bearing cap.

FLYWHEEL

1949-55 MODELS

FLYWHEEL REMOVAL: Jack up car 8" off floor, install stand at each wheel. Remove Hydra-Matic Transmission (see Cadillac Hydra-Matic Drive in Transmission Section), or transmission, clutch, and flywheel housing lower cover on cars so equipped (see Transmission and Clutch Removal on car page). Remove flywheel-to-crankshaft bolts, flywheel, and gasket.

Crankshaft Pilot Bearing and Retainer—If replacement required, Tool No. J-164 can be used for removal, and Tool J-2985 for installation. Flywheel should be attached to crankshaft for this operation.

Flywheel Installation: Reverse removal instructions given above. Use new gasket on crankshaft and dip flywheel mounting bolts in sealer before installing.

CAMSHAFT & BEARINGS

1946-48 MODELS

CAMSHAFT: Removal—Remove engine front dust pan, fan, generator, carburetor and manifolds, distributor, fuel pump, valve lifter assemblies, radiator core, crankshaft pulley, and timing chain cover. Remove timing chain and sprockets as an assembly. Remove camshaft retaining plate, pull camshaft forward into radiator grille until rear end clears front end of engine, then lift camshaft out.

▷*CAUTION*—Camshaft is cast iron and must be handled carefully to prevent damage. DO NOT pry shaft out of engine and use extreme care not to drop or spring shaft.

Camshaft Alignment Check: Check camshaft for proper alignment whenever it is removed from the engine. *See "Camshaft Alignment Check" below.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Bushing Removal & Installation: Remove bronze distributor idler gear (meshs with gear on rear end of camshaft). Use Bearing Remover & Replacer Tool J-2250 to pull old bushings out. Install new bushings with same tool *(CAUTION—* make certain that oil holes in bushings line up with oil holes in block). If necessary use tool arbors and brass hammer to move bearings forward or backward slightly for alignment. Install bronze distributor idler gear.

Camshaft Installation: Re-install camshaft by reversing removal procedure as given above.

►***CAUTION—Camshaft thrust plate must be installed with widest space to left of camshaft (to the right when viewed facing front of engine).***

1949-55 MODELS

CAMSHAFT REMOVAL: Remove radiator (see Radiator Removal), radiator shroud support, timing chain (see Timing Chain Removal), valve lifters (see Valve Lifter Removal), distributor (see Ignition on car page), lift out distributor drive gear. Slide camshaft forward carefully until it is clear of the engine and lift out.

►*CAUTION*—Camshaft is cast iron and must be handled carefully to prevent damage. DO NOT pry shaft out of engine and use extreme care not to drop or spring shaft.

Camshaft Alignment Check: Check camshaft for proper alignment whenever it is removed from the engine. *See "Camshaft Alignment Check" below.*

Camshaft Bushing Removal & Installation: Use Bearing Remover & Installer Tool J-3063 to pull old bushings out. Install new bushings with same tool and see that oil holes in bushing line up with oil holes in block (check oil leads with piece of wire after tool removed).

Camshaft Installation: Re-install camshaft by reversing removal procedure as given above. Install distributor drive gear as follows:

►**Distributor Drive Gear Installation**—Turn crankshaft so that #1 piston on top dead center entering power stroke (mark "C" on dampener in line with pointer on timing case cover). Turn oil pump drive shaft until flat is on right side and parallel with center-line of engine. Install distributor drive gear over oil pump shaft with flat on gear engaging flat on shaft, lower gear until it is fully meshed with camshaft gear. NOTE—With gear installed, slot in top of gear should point about 15° to right of engine center-line. Gear must seat freely and should have slight amount of backlash with camshaft gear.

►***CAUTION—Distributor drive gear must be installed exactly as above or it will not be possible to time engine correctly.***

1946-55 MODELS

CAMSHAFT ALIGNMENT CHECK: Put shaft on surface plate and support at front and rear bearing journals on "V" blocks, or on centers. Mount dial indicator on surface plate over centerline of camshaft with pointer touching shaft. Check heel of each cam through 180° rotation with dial set at zero. Replace camshaft if dial reading greater than .0015".

TIMING CHAIN

1946-48 MODELS

TIMING CHAIN REMOVAL: Remove timing chain as a unit with the sprockets (after removing nut and fuel pump drive eccentric from camshaft).

Timing Chain Installation: Mesh sprockets in chain with marks on sprockets adjacent and in line with a straightedge across the shaft centers, install complete assembly on engine.

1949-55 MODELS

TIMING CHAIN REMOVAL: Set engine in firing position for No. 6 cylinder. Remove water pump (see Cooling on car page), oil pan (see Oil Pan Removal), crankshaft pulley and engine front cover. Take out the two camshaft sprocket screws and lockwashers. Remove sprocket with chain from camshaft, remove crankshaft sprocket.

Timing Chain Installation: Reverse removal instructions given above. Timing marks on sprocket must be together and aligned with straightedge across shaft centers.

VALVE SYSTEM

1946-48 MODELS

VALVE SERVICING: Valve Removal & Installation. Valve lifter assemblies must be removed before valves can be taken out. Use Valve Lifter Tool J-257-X to compress springs for removal and installation of valve spring retainers and locks. Check valves for correct length (before installing lifters) with Tool J-1055, measuring distance from end of valve stem to heel of cam (cam lobe turned 180° away from valve). If valve stem too long, grind off end of stem so that gauge will slide into place with valve seated. If tool not available, check clearance between end of valve stem and valve lifter plunger with plunger pressed down in lifter cylinder (lifter must be drained of oil for this check). Clearance should be .030-.070".

1949-55 MODELS

►***STICKING VALVES 1949-50 ENGINES: In engines*** where a build-up of carbon on the exhaust valve stems causes a sticking condition, remove the counterbored section of the valve guide. The removal of the counterbored section can be done with the guides in the head by using a 19/32" drill, ground almost flat, and carefully drilling out the guide to the TOP of the chamfer. *(CAUTION—*Extreme care must be exercised so that the chamfer is not removed, as any sharp edges or a reduced valve bearing surface in the guide will cause more damage than the carbon deposits).

►***NOTE—***If a modified valve guide is removed for any reason, it is important that a ferrule of equal length to the discarded guide counterbored section be added to the small diameter of special tool J-3066 so that correct guide to valve seat relationship will be maintained.

VALVE REMOVAL: With cylinder head removed, take out spark plugs. Install head upside down on Cylinder Head Holding Stand J-3064. Install Holding Strap J-3046-6 over heads of valves. Turn head right side up, compress valve springs with compressor bar and stirrup of Head Holding Tool, remove valve keepers. Release bar and remove valve spring retainer, also rubber seal from lower groove on valve stem. Turn head over, remove Holding Strap, take out valves. *CAUTION*—Note location of each valve, must be re-installed in same location.

Installation: Reverse removal procedure. *NOTE—Install long skirted valve spring retainers on intake valves.*

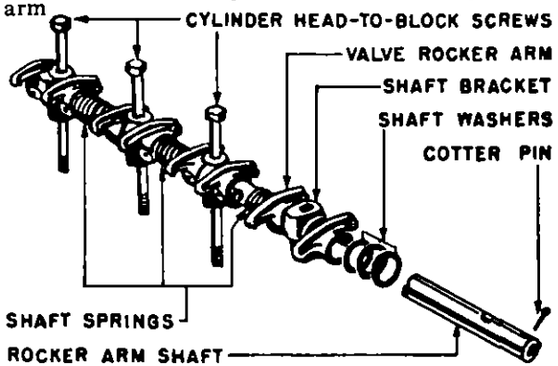
VALVE STEM SEALS

1949-55 M DELS

VALVE STEM OIL SEALS: Seals are installed in lower groove (nearest valve head) ahead of valve keepers. Check for proper sealing after keepers installed by striking end of valve stems to seat keepers, then using suction cup (similar to type used for grinding valves), compress cup on valve spring retainer. If cup will not stick, seal is broken and a new seal should be installed.

ROCKER ARMS

1949-55 MODELS



ROCKER ARM ASSEMBLIES: Drain radiator, remove radiator hoses, six radiator-to-air-deflector screws, and radiator anchor nut and spacers at frame bracket (check number of spacers and reinstall same number when radiator replaced). Lift out radiator.

Disassembly & Reassembly: See illustration for correct order of parts. Parts can be removed from shaft by removing cotter pin at end.

Installation: When installing rocker arm assemblies on cylinder head note the following precautions:

Rocker Arm Shafts—Locating notch on front end of shaft must point inward and down.

Rocker Shaft Brackets—Front and rear rocker shaft brackets have screw hole for rocker arm cover screws. These screw holes must be upward and toward outside of engine from rocker shaft center arm

CADILLAC 1949-55 ROCKER ARM ASSY.

HYDRAULIC LIFTERS

1946-48 MODELS

VALVE LIFTERS: Hydraulic. *(NOTE—2 Types of Valve Lifters used; "Body & Plunger" type 1946 to Early 1948, "Unit" type Late 1948. Lifters must be replaced with the same type that were removed).* Valve lifters are mounted on engine block in a valve lifter bracket (4 lifters in each bracket). Oil is supplied to lifters through bracket assembly by tubing from

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

main oil header. Valve lifters and bracket assemblies must be removed before valve can be taken out of engine.

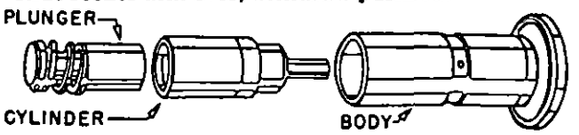
Removal: Drain cooling system and disconnect upper radiator hoses. Remove carburetor air cleaner and generator, defroster blower motor, cylinder heads, intake manifold, carburetor, and exhaust manifold. Remove valve covers, and remove oil lines to valve lifter bracket assemblies.

Disassembly ("Body & Plunger" Type): Remove lock ring from top of lifter body and slide valve lifter complete out of bottom of lifter bracket. Remove cylinder and plunger from lifter body. Remove plunger from cylinder by twisting plunger counterclockwise to release spring on plunger *(CAUTION —Cylinder and plunger are matched parts and must remain in sets).* Wash lifter parts in clean kerosene. Do not use gasoline or other fast drying agents.

Reassembly ("Body & Plunger" Type): Insert plunger in cylinder and lock plunger spring in cylinder body by twisting plunger clockwise. Insert lifter body in lifter bracket and install lock ring holding lifter in bracket. Fill lifter body with clean engine oil and insert plunger and cylinder assembly.

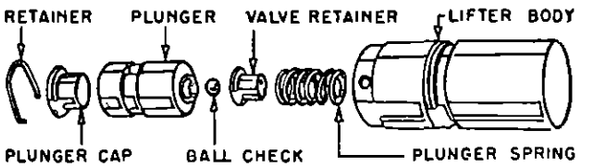
Disassembly ("Unit" Type): Remove lock ring from top of valve lifter body and slide lifter completely out of bracket. Press down on plunger cap and remove lock ring holding cap in lifter body. Turn lifter upside down and slide out plunger cap, plunger ball, ball retainer and spring. (CAUTION—Plunger is matched with lifter body and the two must remain in sets.)

Reassembly ("Unit" Type): Place ball on its seat in lower end of plunger while holding plunger upside down. Position ball retainer and spring (ends are interchangeable) over ball on lower end of plunger. Lower lifter body over plunger, ball retainer and spring assembly. Turn assembly right side up and fill plunger with oil. Jiggle ball using a small piece of wire until oil drains out of plunger into body and trapped air is released from body. Refill plunger with oil. Place plunger cap on plunger and lock in place with lock ring using Lock Wire Installer Tool J-2730. (NOTE—Do not depress plunger cap further than recess for ring before installing in engine because this will force oil out). Place lifter assembly in lifter bracket and lock in place with lock ring.



1949-55 MODELS

VALVE LIFTERS: Hydraulic, Barrel Type. Consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (See illustration). Oil is introduced to this unit from main oil gallery through hole in side of lifter plunger and body.



Removal: Remove rocker arm covers (hang on cowl), intake manifold, three valve compartment cover screws. Loosen crankcase ventilator pipe screw at flywheel housing, move pipe to permit removal of valve cover. Remove rocker arm assemblies and push rods. Take out lifters (use Tool J-3049), turn lifter while removing to remove any carbon or varnish deposit from lifter base.

***CAUTION*—Keep lifters in order—must be re-assembled in same holes.**

Partial Removal Note—If one or two lifters only to be removed, rocker arm assembly need not be removed, proceed as follows: Compress valve spring, slide rocker arm over, withdraw pushrod.

CADILLAC 1946-48 VALVE LIFTER

CADILLAC 1949-55 VALVE LIFTER

Disassembly: Press down on center of valve lifter push rod cup, and with a pointed tool, remove lockwire from groove. Invert lifter and slide out push rod cup, plunger, ball retainer and spring. *NOTE*—If plunger is stuck in body, place lifter push rod end down, in Valve Lifter Plunger Remover Tool J-4160. Holding tool firmly in hand with thumb over lifter body, strike tool sharply on block of wood until plunger falls out of body.

Cleaning & Inspection: Wash all parts in a suitable carbon solvent and remove all trace of carbon and varnish. Inspect plunger and lifter body for scoring or other damage that would prevent free movement. Inspect lower end of lifter body for nicks or indentations. If any exist, replace complete lifter assembly. Dry lifter parts with air, then install plunger in lifter body without other parts and check for free movement. Plunger should drop of own weight into body bore.

Reassembly: Place ball on its seat in lower end of plunger while holding plunger upside down. Position ball retainer and spring over ball and end of plunger. Lower lifter body over plunger assembly then turn assembly right side up and fill plunger with clean oil. Jiggle ball with small piece of wire until oil drains into body and trapped air is released from body. Refill plunger with oil, place push rod cup on plunger, and position lock wire over cup. Press lock wire into groove with Lock Wire Installer Tool J-2730.

Testing (Leak Down Rate)—Remove distributor cap, coil and rocker arm covers as an assembly. Set timing mark "C" on harmonic balancer to the pointer and observe position of distributor rotor. Check each lifter as outlined in following table, using Valve Lifter Leakdown Tool J-3074:

With rotor at No. 1 firing position (pointing toward rear of engine), check:

No. 1 Intake	No. 3 Exhaust	No. 6 Exhaust
No. 1 Exhaust	No. 4 Exhaust	No. 7 Intake
No. 2 Intake	No. 5 Intake	No. 8 Intake
No. 2 Exhaust	No. 6 Intake	No. 8 Exhaust

With rotor at No. 6 firing position (pointing toward front of engine) check:

No. 3 Intake	No. 5 Exhaust
No. 4 Intake	No. 7 Exhaust

Insert feeler gauge of tool between valve stem and rocker arm, at the same time compressing the tool "pop-out" spring against valve spring *(NOTE*—Tool should be installed as quickly as possible to avoid any unnecessary leakdown of lifter). Note the interval of time during which the tool is held in place by valve spring pressure. It will be found through this test that bad lifters or lifter will have the shortest leakdown time.

OILING SYSTEM

▷*1954-55 AIR IN OILING SYSTEM (Causing oil foaming or noisy Hydraulic Lifter operation): See Oil Pump Reassembly below for sealing of pump intake float tube and Oil Pump Installation for correct positioning of oil pan baffle.*

OIL PUMP

1946-48 MODELS

OIL PUMP REMOVAL: Drain oil and remove oil pan, remove baffle. Remove nuts on two studs retaining oil pump on rear main bearing cap, remove oil pump and float and screen assembly as a unit.

Disassembly: Remove float and screen assembly, take out cotter pin and remove pressure regulator parts. Remove pump lower cover and remove pump gears and shaft.

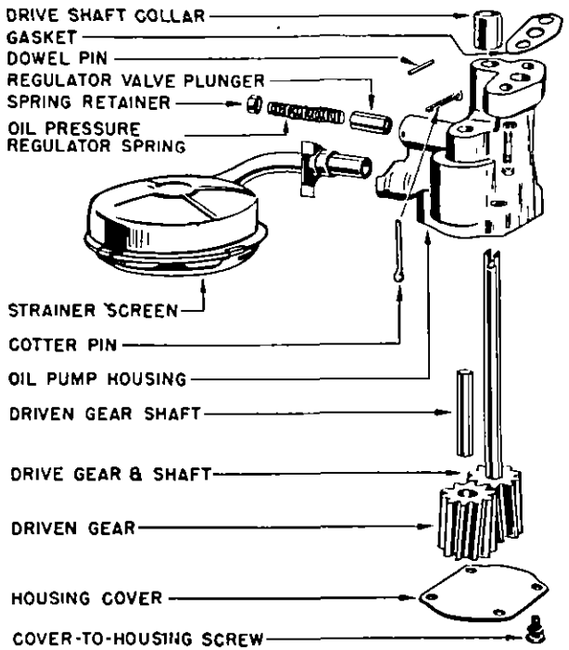
Oil Pump Specifications: Pump body and drive shaft clearance—.0010-.0025" (new), .005" (worn limit). Pump body and pump gear clearance—.002-.004" (new), .006" (worn limit). Pump gear endplay —.001-.004" (new), .006" (worn limit). Pump drive gear backlash—.008-.012" maximum.

Oil Pressure Regulator Specifications—Clearance between valve plunger and housing—.0020-.0035" (new), .005" (worn limit). Regulator spring pressure—5¾-6¼ lbs. at 1 13/32". Spring free length 2 25/64".

Oil Pump Reassembly & Installation: Reverse disassembly and removal procedure given above. Use new gasket between pump and bearing cap when installing pump.

1949-53 MODELS

OIL PUMP REMOVAL: Take off oil pan (see Oil Pan Removal). Remove oil pan baffle, and two nuts securing pump to rear main bearing cap. Remove pump and float and screen as an assembly.



Disassembly: Remove float and screen assembly. Take out retaining cotter pin and withdraw pressure regulator parts from pump body. Remove pump lower cover for pump gear and shaft removal.

Oil Pump Specifications: Backlash between gears .008-.012". Driveshaft to Body Clearance .0010-.0025" (new), .005" max. (worn). Endplay between cover and gears .001-.004" (new), .006" max. (worn). **Pressure Regulator**—Valve Plunger to Body Clearance .0020-.0035" (new), .005" (worn). Spring Free Length 2 25/64". Spring Pressure at 1 13/32"—5 3/4 to 6 1/4 lbs.

Oil Pump Reassembly & Installation: Reverse disassembly and removal procedure given above. Use new gasket between pump and bearing cap when installing pump.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CADILLAC 1949-53 OIL PUMP

1954-55 PUMP (LESS VACUUM UNIT) SIMILAR

1954-55 MODELS

OIL PUMP REMOVAL: Remove oil pan (see Oil Pan Removal). Remove oil pan and disconnect vacuum pump line at engine block. Remove nuts holding pump to rear main bearing cap and remove oil pump, vacuum pump, float and screen as an assembly. Remove drive shaft.

Dissassembly: Remove six screws holding vacuum pump to oil pump and remove vacuum pump with oil pump idler gear. Remove cotter pin holding oil pressure regulator valve and remove valve and spring. Slide idler gear off idler shaft in pump. Remove pin from collar on end of drive shaft and press collar off shaft. Slide oil pump drive gear out of pump body.

Reassembly: To correct for air in system, remove pump float and inspect float tube and tube bore in pump body for burrs, remove burrs with fine sand paper. Install an "O" ring seal, Part No. 5665829 on float tube against the shoulder 1 1/16" from end of tube. Insert float tube in body and secure with new cotter pin. Check float for free movement. Complete pump assembly by reversing disassembly procedure (above).

Installation: When installing pump, use new gasket between pump and bearing cap. Make certain that clearance between oil pan baffle and sides of pan are at least ¼" on each side. Bend baffle as necessary to secure this clearance. *CAUTION*—Insufficient clearance will prevent oil from returning to pump on hills or during sudden stops and will allow air to enter system. Install oil pump assembly over studs, guiding vacuum line into fitting in engine block. Tighten nuts to 25-30 ft. lbs.

VACUUM PUMP

1954-55 MODELS

VACUUM PUMP (Removal): Drain engine oil and remove oil pan. Remove oil pan baffle and disconnect vacuum line at engine block. Remove six screws holding vacuum pump to oil pump, and remove vacuum pump with the oil pump idler gear. Remove hexagonal drive shaft. *CAUTION*—Oil pump idler gear may fall when pump removed.

Disassembly—Remove two screws holding plate to vacuum pump and remove plate from dowels. Turn pump upside down and shake out rotor assembly. Remove springs and vanes from pump rotor.

Vacuum Pump Clearances—Vane to cover plate .002-.005". Rotor to cover plate .004-.007". Socket to cover plate .0144-.0324". Socket to rotor face .0104-.0254". Rotor to shaft .0010-.0023". Rotor to depression in body cavity .0005-.0034"

Installation—Install vacuum lines to pump and replace hexagonal shaft. Install idler gear in oil pump and install vacuum pump below oil pump with six screws. Connect vacuum line to engine block. Install oil pan baffle, then install oil pan.

Reassembly—Inspect inside of body for scores or wear Inspect plate for wear and dress down on surface plate. (CAUTION—Make sure that all parts are clean and that no foreign material is in housing). Install vanes and spring in rotor. Compress vanes and install rotor in pump body. Position plate on doweled pump body so that hole in plate lines up with hexagonal hole in rotor. Install screws in cover plate.

COOLING SYSTEM

1949-55 MODELS

RADIATOR CORE REMOVAL: Drain radiator, remove radiator hoses, six radiator-to-air deflector screws, and radiator anchor nut and spacers at frame bracket (check number of spacers and reinstall same number when radiator replaced). Lift out radiator.

Radiator Core Installation: Reverse removal instructions given above. NOTE—Core must be properly positioned for spacing between core and fan—this space must be ½" to 1".

DETONATION CORRECTION

1949-51 MODELS

To correct detonation complaint, perform the following modifications as necessary. NOTE—The complete procedure outlined should not be performed on every engine, but should be used as required.

Ignition Timing—Retard the ignition timing toward the "C" mark to provide a tolerance for fuel variables and premature detonation from a slight build-up of carbon in the combustion chambers.

Exhaust Valve Spring Seats—Prior to engine No. 24380, the new exhaust valve spring seats should be installed and the carbon removed. On later engines a suitable solvent should be used to remove carbon.

Thermostat—If the engine is equipped with a Fulton bellows type unit, remove and install a Dole thermostat, Part No. 1454979.

Manifold Heat Control—Check heat control valve located on right bank exhaust manifold for free operation and free-up if necessary.

Distributor Advance Spring—If the detonation occurs immediately after the 2-3 upshift on cars before Engine No. 50053, installing Part No. 1873551 vacuum advance spring, in place of the regular spring will reduce it. However, if detonation occurs constantly at open throttle, do not change the spring, as part throttle performance is decreased slightly by the change.

Spark Plugs—Clean and reset to .038".

Air Cleaner—Refill to proper level with SAE 40 oil.

Carburetor Metering Rods—Install modified rods and 1949 carburetor vacuum piston spring in carburetor, (furnished in kit as Cadillac No. 1458068 or Carter Unitized Package No. 75-772U).

Fuel—Use fuel with highest possible octane rating.

CLUTCH NOTES

1946-53 MODELS

CLUTCH BALANCING: Make certain that balance marks lined up when clutch installed on flywheel, then check balance by running engine at speed of 24-30 MPH with rear wheels jacked up and note if any excessive vibration apparent. If vibration noted, re-balance clutch as follows: Install one or two ⅛" washers with 5/16" hole on clutch cover mounting capscrew (start at point where clutch drilled for balancing), repeat test and note if vibration increased or decreased. Add or remove washers at each mounting capscrew until balance secured.

PROPELLER SHAFT NOTES

►*1950-55 SERIES 60S, 61, 62 UNIVERSAL JOINT FRONT YOKE REPLACEMENT TO CORRECT DRIVE LINE "THUMP":* New front yoke (as used in later 1955 production has increased spline line (no counterbore) and will prevent axial movement of the output shaft and yoke. This yoke furnished under same part number as previous type.

1) Remove propeller shaft. Inspect output shaft and remove all sharp edges from shaft splines, using a small stone. Inspect new yoke and remove all sharp edges from splines similarly.

2) Coat yoke splines with E.P. 90 hypoid rear axle lubricant, install yoke on propeller shaft, install shaft.

BRAKE NOTES

►*1954-55 SERIES BRAKE PEDAL BIND CAUSING EXCESSIVE PEDAL EFFORT (1955 Cars before Eng. No. 22750):* Check for misalignment at the following points.

1) Brake pedal moving out on shaft over lock ring in groove at end of shaft resulting in binding of pedal and misalignment with master cylinder. Correct by installing later type shaft No. 3510310 with rectangular groove, and later type lock ring No. 1463434 with larger outer diameter. *NOTE*—These parts used in 1955 production beginning Engine No. 22750.

2) Binding at brake pedal clevis and bellcrank linkage caused by misalignment in linkage. Correct by installing ⅛" flat washers between master cylinder attaching bosses and frame. Check entire linkage for binding and shim as required. NOTE—These master cylinder washers used in production beginning Engine No. 12725.

HOOD LOCK (1946-47): Press back on radiator ornament to free manual and safety catches, lift hood up.

HOOD LOCK (48-61, 62, 60S): Pull release knob at lower left side of instrument panel, release safety catch under front edge of hood, raise front end of hood.

HOOD LOCK ADJUSTMENT, HOOD REMOVAL & INSTALLATION: *See Cadillac Special Data.*

MODEL IDENTIFICATION

ENGINE SERIAL NUMBER: Stamped on right front of crankcase above water pump and on right frame side member to rear of engine support bracket.

1946-47 ENGINE SERIAL NUMBERS

Series	Wheelbase	1946 First Number:	1947
60S Special	133"	6,400,001	6,420,001
61	126"	5,400,001	5,420,001
62	129"	8,400,001	8,420,001
75	136"	3,400,001	3,420,001
75 Comm'l	163"	3,400,001	3,420,001

1948 ENGINE SERIAL NUMBERS

Series	Wheelbase	First 1948 Number
48-61	126"	486100000
48-62	126"	486200000
48-60S Special	133"	486000000
48-75	136"	487500000
48-76 Commercial	163"	487600000

Identification—First two figures indicate year, third and fourth figures indicate model (last five figures numbered consecutively regardless of series).

ENGINE UNIT NUMBER: Stamped on lower end of rough flat surface on crankcase behind right hand block (directly above boss for clutch housing locating pin).

1948 Numbers	Engine Unit Number Std. Transmission	Hydra-Matic
48-60S, 61, 62	8-K-1 up	9-K-1 up
48-75, 76	2-K-1 up	9-K-1 up

TUNE-UP

COMPRESSION: Pressure—100-105 lbs. at cranking speed (7.25-1 Std. Cast iron head).

VACUUM READING: Steady 20-21" idling at 7-8 MPH.

FIRING ORDER: 1-8-7-3-6-5-4-2 (Cyl. Nos. 1-3-5-7 Left Bank, 2-4-6-8 Right Bank, front-to-rear).

SPARK PLUG GAP: .028-.032".
Plugs—AC No. 104. 10 mm. Metric type.

▷*CAUTION—Tighten plugs just enough for good gasket seal. Do not use Torque Wrench.*

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.015" Limits .0125-.0175".
Cam Angle—31° closed (with .015" gap).
Breaker Arm Spring Tension—19-23 ozs.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 5° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—'IG/A' on timing disc behind crankshaft pulley lined up with pointer on chain case.
Manual Adjustment Setting—Set for slight ping accelerating-with wide throttle below 15 MPH.

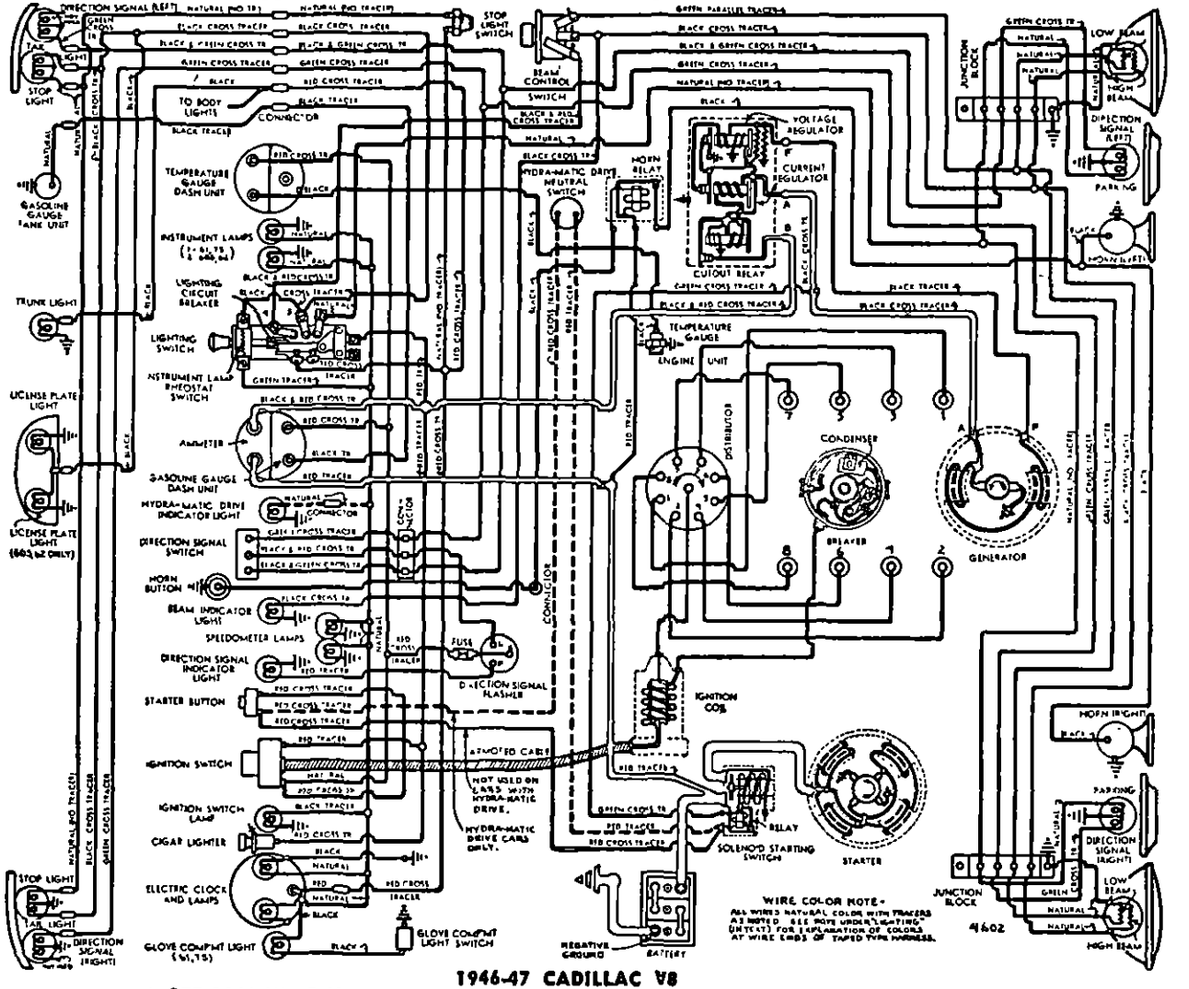
CARBURETION: *See Carburetor & Carb. Equipment.*
Idle Setting—Adjust both screws exactly alike for smooth idle (½-1½ turns open for Carter). Turning screws out gives richer mixture.

Idle Speed (standard)—375-380 RPM.
Idle Speed (Hydra-Matic)—375 RPM. with selector lever in drive (DR) position.
Float Level (Carter)—9/64" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection plug hole on side of bowl with engine idling.
Float Level (Stromberg)—Fuel level ⅝" below top edge of bowl or even with bottom of inspection hole on side of bowl with engine idling.
Accelerating Pump (Carter)—No adjustment.
Accelerating Pump (Stromberg)—Inner hole Normal, outer hole (max. stroke) used when required.

Throttle Linkage Adjustment (Hydra-Matic Cars): *See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

Fuel Pump Pressure: 4¾ lbs. (3½-5) max.

VALVE TAPPET CLEARANCE: None in service (automatic hydraulic type tappet take-up).



IGNITION

IGNITION SWITCH ('46-47) Delco-Remy 1116327 (60S 62), 1116328 (61, 75, 75 Comm'l '46), 1116383 (75 Comm'l '47). Connected to ignition coil by armored cable.
Ignition Lock—Briggs & Stratton No. 85373 (Uncoded), 85372 (Coded).
Key Series—8000 to 9499. **Groove**—No. 15.

IGNITION SWITCH (1948): Delco-Remy No. 1116451.
Ignition Lock—Briggs & Stratton No. 45791 (Uncoded), 45792 (Coded).
Key Series—8000 to 9499. **Groove**—No. 15.

COIL: Delco-Remy 1115129 ('46-47), 1115380 ('48). On dash. Armored cable on 1946-47 only.
Ignition Current—2.2 amperes idling, 4.4 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.25 microfarad.

1946-47 CADILLAC V8
▷SEE 1946 WIRE HARNESS CHANGE NOTE (UNDER LIGHTING) FOR WIRE COLORS

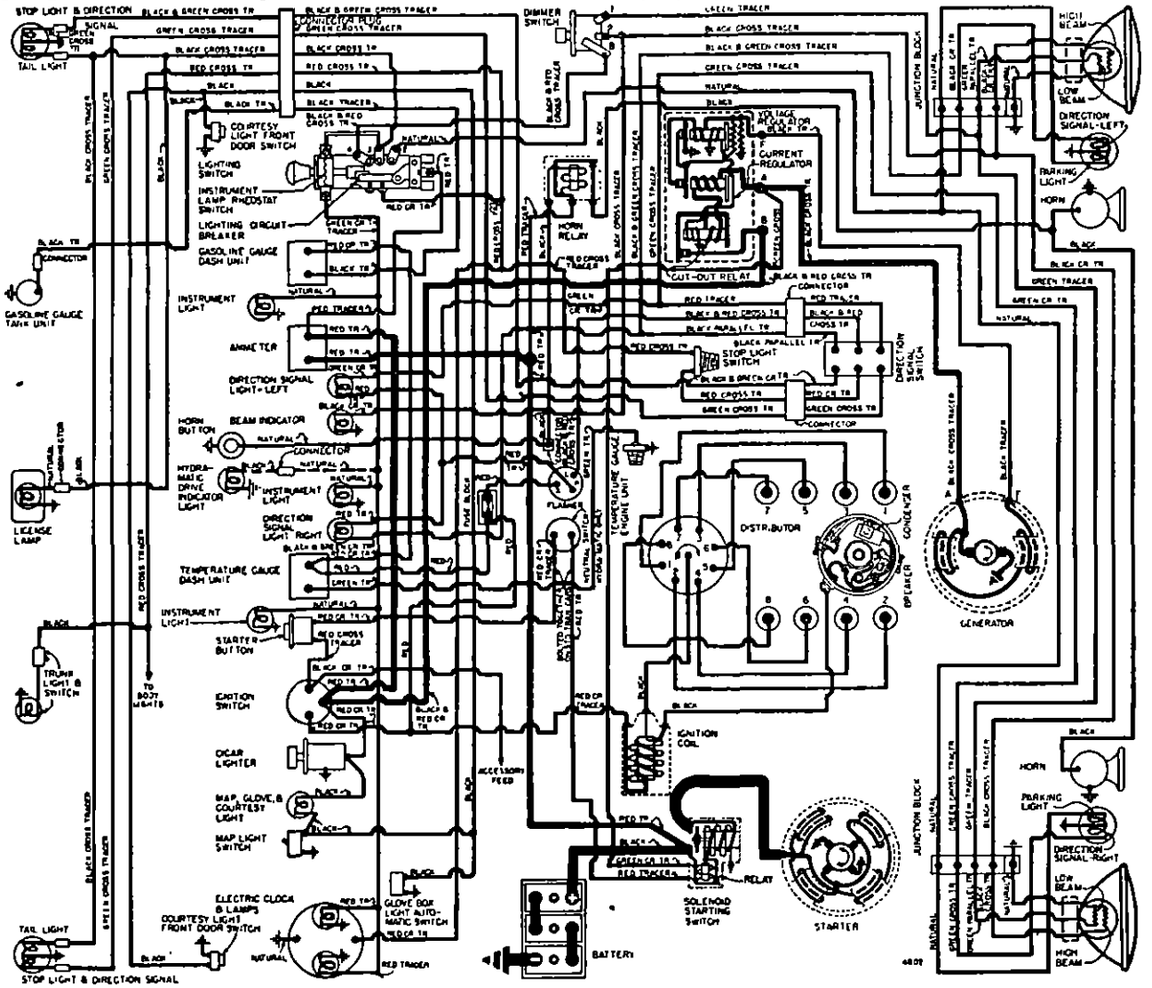
DISTRIBUTOR: Delco-Remy No. 1110807. Full automatic advance type with auxiliary vacuum spark control and manual adjustment ("octane selector").
Breaker Gap—.015". Limits .0125-.0175".
Cam Angle—31° closed (with .015" gap).
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	500	1	1000
12	2000	24	4000

Manual Adjustment—Permits 10° advance or retard from center position. See Ignition Timing (below).
Vacuum Spark Control: Delco-Remy No. 1116030. Integral type linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring within unit. **Plunger Travel**—13/64" total.

Vacuum Advance



Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5.5-7.5"
9°	18°	15-18"

Removal:—To remove distributor, disconnect vacuum line, remove 2 hold-down screws in advance arm.
Installation Note—Turn crankshaft to top dead center position for No. 1 cylinder ("C. 1/6" timing disc mark in line with pointer on chain case cover). Set distributor loosely in support, mesh distributor driven gear with bronze idler gear so that distributor rotor is at No. 1 plug wire in cap. CAUTION—See that oil pump drive shaft properly lined up (to avoid damaging pump).

IGNITION TIMING

	Flywheel Degrees	Piston Position
Std. Setting	5° BTDC	.0114" BTDC.

For 80 octane fuel. See Manual Adjustment (below) for other fuels.

1948 CADILLAC V8

Timing Mark—"IG/A" on timing disc behind crankshaft pulley lined up with pointer on chain case.
Timing (With Synchroscope)—Recommended method. Disconnect vacuum line at distributor (to avoid damage to unit), clip synchroscope lead to #1 spark plug, idle engine and direct synchroscope light on timing disc behind crankshaft pulley at front of engine. Loosen advance arm hold-down screw, center pointer on scale, tighten screw. Loosen advance arm clamp bolt, rotate distributor until 'IG/A' mark on timing disc (5° before top dead center mark 'C.1/6' lines up with pointer on chain case cover, tighten clamp bolt, reconnect vacuum line (hold connection with wrench while tightening). See Manual Adjustment (below).
Timing (Without Synchroscope)—Disconnect vacuum line at distributor (to avoid damaging vacuum unit). Turn engine over to firing position for #1 piston (front cylinder, left bank) with 'IG/A' mark (5° before top dead center mark 'C.1/6') on timing disc behind crankshaft pulley lined up with pointer on chain case cover. Adjust distributor as directed above until contacts just open.
Manual Adjustment—Should be set for slight ping when accelerating engine with wide open throttle at speeds below 15 MPH. To adjust, loosen holddown screw in advance arm, rotate distributor clockwise (if ping too severe), counter-clockwise (if no ping noted) one graduation at a time. CAUTION—Check engine for faulty spark plugs, excessive carbon deposits, localized hot spots or lean carburetor setting before changing adjustment to correct pinging.

CARBURETOR

Year	Carter WCD	Stromberg
1946-47	595S	AAV-26 Code 205-14, A, B
1948	595S, SA	AAV-26 Code 205-14B

1¼" dual (double barrel) downdraft types with automatic choke.
Casting No. (Carter)—No. 456 on face of flange.
Code No. (Stromberg)—Stamped either on the body or on a metal tag attached to body.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): ***See Tune-Up data.***
Throttle Linkage Adjustment (Hydra-Matic Cars): ***See "Hydra-Matic Linkage Adjustment" in Transmission Section.***
Metering Jets & Rods—***Refer to Carburetor Index for Carter & Stromberg Downdraft Carb. Jet Tables.***
Fast Idle: Carter Dual (WCD) Carburetor type or Stromberg Type (for AAV-26 Carburetor).
See Carburetion Equipment Section for data.
Setting (Carter)—Hold choke valve tightly closed, adjust fast idle screw (on opposite end of throttle shaft from regular throttle stopscrew) for .018" throttle opening (use Gauge T109-44).
Setting (Stromberg) Hold throttle stopscrew against high lobe of fast idle cam, move choke valve toward closed position as far as possible, check choke valve opening. Adjust by bending fast idle connector rod so that choke valve opening is .098" (#40 drill rod).
Automatic Choke: Carter Climatic Control (Dual carburetor) or Stromberg Type (AAV-26 Carburetor).
See Carburetion Equipment Section for data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Setting (Carter)—Reference mark on thermostat coil housing centered on scale on choke housing.

Setting (Stromberg)—"V" mark on thermostat cover in line with reference mark on housing.

CARB. EQUIPMENT

Air Cleaner:—AC #1542260 heavy duty oil-bath type. Use Replacement Filter Element Assembly #1542261.

Servicing—Drain, clean, and refill with 1 pint SAE No. 50 (Summer), No. 40 (Winter) engine oil at 2000 mile intervals. NOTE—Clean filter element in oil filler cap when crankcase drained.

Fuel Pump: AC Type AX. No. 1523575, 1537088, or 1539089. Fuel & Vacuum type.

Replacement Pump—AC No. 575.
Pressure—4¾ lbs. (3½-5) maximum.
See Carburetion Equipment Section for data.

Gasoline Gauge: AC. Electric type.

Dash Unit ('46-47 Series 60S, 62)—AC No. 1516372.
Dash Unit ('46-47 Series 61, 75)—AC No. 1515368.
Dash Unit (1948 All Series)—AC No. 1516971.
Tank Unit—AC 1516269 (60S, 61, 62), 1516155 (75, 76).
See Carburetion Equipment Section for data.

BATTERY

STANDARD

Delco 17K3 or 4. 6 volt, 17 plate, 115 Ampere Hour Capacity (20 hour rate).

▷*CAUTION—Battery is reversed in carrier from previous models and NEGATIVE TERMINAL is now grounded.*
Starting Capacity—137 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.3 minutes. Five second voltage, 4.4 volts.
Grounded Terminal—Negative (—) to frame.
Engine Ground—Strap connector from right front engine mounting bracket to frame bracket.
Location—In engine compartment on right side.
Dimensions Length 10⅜". Width 7". Height 8 11/16".

COMMERCIAL MODELS

Delco 19Q3 or 4. 6 volt, 19 plate, 125 Ampere Hour Capacity (20 hour rate).

Starting Capacity—145 amperes for 20 minutes.
Zero Capacity—300 amperes for 5.0 minutes. Five second voltage 4.5 volts.
Dimensions & Grounded Terminal—Same as above.

STARTER

Delco-Remy Model 1107931. Armature No. 820158.

▷NOTE—On cars with Hydra-Matic Drive, starter operative only with Selector Lever in neutral (starter solenoid relay circuit controlled by Hydra-Matic Drive Neutral Safety Switch).

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data

Torque		R.P.M.	Volts	Amperes
0	ft. lbs	5500	5.67	65
16	"	Lock	3.0	600

Removal:—Starter flange mounted on right front face of flywheel housing. To remove, take out flange mounting screws, pull starter out.

Starting Switch:—Delco-Remy Solenoid Switch No. 1118102. Mounted on starter and controlled by Push-button Switch No. 1996009 on instrument panel and Neutral Safety Switch 1997766 (on Hydra-Matic).
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy Model 1102693. Armature No. 1879002. Two brush type with voltage and current regulation.

▷*NOTE—Same generator as used on previous cars but polarity is reversed for Negative Ground.*

▷**Pulley Note to Increase Charging Rate**—Use No. 1882988 pulley (O. D. of front flange 3 1/16"—std. pulley No. 1878203 O. D. 3 17/32").

Charging Rate Adjustment—None. See Regulator.

Maximum Charging Rate—34-36 amperes at 8.0 volts, 27 MPH (current regulator setting—with load or discharged battery). Actual charging rate controlled by voltage regulator and dependent on battery condition.

Performance Data

	Amperes	Volts	R.P.M.
Cold	30①	8.0	1750

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—25 ozs. each.

Field Current—1.75-1.9 amperes at 6.0 volts.

Removal:—Generator flange mounted between cylinder banks at front of engine and belt driven in tandem with water pump (separate drive belt for fan). To remove, take out flange mounting bolts.

Belt Adjustment:—Loosen generator mounting bolts, raise generator (pivots on left bolt, right bolt hole slotted) until belt deflection is ¾-⅞" when pushing belt inward midway between generator and crankshaft pulleys.

▷*CAUTION—Belts are new heat-and-oil resistant synthetic rubber type (must be set to exact specifications).*
Fan Belt—Adjust to same specifications as Generator Belt by changing fan bracket position.

REGULATOR

Delco-Remy Model No. 1118242. Single Coro Type. Vibrating type voltage and current regulator.
See Electrical Equipment Section for complete data.

▷*CAUTION—This regulator used with Negative Battery Ground and generators used with it must be Polarized for this same polarity.*

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—6.2-6.7 volts hot, 800 gen. RPM.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts hot (operating temperature).
Regulator over-compensated for temperature. Should be checked with cover in place and hot.
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).
Checking & Adjustment—*See Electrical Equip. Section.*

Current Regulator

Setting—34-36 amperes hot (operating temp.).
Air Gap—.080" (check same as Voltage Regulator).
Checking & Adjustment—*See Electrical Equip. Section.*

LIGHTING

▷**1946 WIRE HARNESS PRODUCTION CHANGE:** Two types of harness with different wire colors used as follows:

1. Braided Loom Assembly—Individual wires in this type harness are marked with colored tracers as indicated on wiring diagram.

2. Taped Assembly—Individual wires in this type harness are any color and do not follow color code shown in wiring diagram. Ends of each wire are stained with individual colors to provide identification. These stained-end wires can be related to the color code shown in the wiring diagram as follows:

Stained End (Taped Wiring Harness)	Tracer Color (Braided Wiring Harness)
Black	Black or Natural, Black Tracer
Blue	Natural, Black Cross Tracer
Brown	Natural, Black & Red Cross Tracer
Green	Natural, Green Cross Tracer
Orange	Natural, Red Cross Tracer
Orange & Black	Natural, Black & Green Cross Tr.
Red	Natural, Red Tracer
Yellow	Natural, Green Tracer
Yellow & Orange	Natural, Green Parallel Tracer
Not stained	Natural

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—In upper left face of speedometer dial ('46-47), in center of instr. panel (1948). Lighted when Country (upper) Beam in use.

Direction Signal: *See Electrical Equipment Section.*
Dir. Signal Indicator ('46-47)—In upper right face of speedometer dial. One indicator only.
Dir. Signal Indicators (1948)—Left and Right Turn Indicators located below each end of speedometer dial.

Switches

Lighting ('46-47)—Delco-Remy No. 1995023.
Lighting (1948)—Delco-Remy No. 1995031.
Instrument—Part of Lighting Switch. Rheostat operated by turning Lighting Switch Knob.
Beam Selector—Delco-Remy No. 1997008.
Direction Signal ('46-47)—Delco-Remy No. 1995523 (1995524 for cars with Hydra-Matic Drive).
Direction Signal (1948)—Delco-Remy No. 1995531.
Stop Light—Cadillac No. 1328118.

1946-47—Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	Sealed Beam	
Park & Front Dir. Signal	21-3	1154
Rear Direction Signal①	21-3	1154
Beam & Dir. Sig. Indicators	1	51
Hydra-Matic Drive Indic.	1	51
Instr., Clock, Ign. Switch	1.5	55

Back Up Light	21	1129

MISC. ELECTRICAL

FUSES: Direction Signal—9 ampere behind panel.
Automatic Heating System—6 ampere (60S, 61, 62), 9 ampere (75). On heater switch.
Ventilating Defroster Heater—20 ampere. In blower lead.

THERMOSTATIC RELAY: Delco-Remy. On lighting switch. Contacts remain closed with 30 amperes, open in 3 minutes with 42 amps. at 70° F. Not adj.

HORNS: Delco-Remy No. 1999537 (Low Note, right horn), No. 1999538 (High Note, left horn). Vibrator type, blended tone, twin horns operated by relay.

Type	Current (at 6 volts)	Air Gap
1999537 (Low Note)	19-21 amperes	.044-.049".
1999538 (High Note)	18-20 amperes	.034-.039"

Horn Relay:—Delco-Remy Model 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: Own. 8 cylinder, 90° Vee L head type. Upper crankcase and cylinder blocks cast Enbloc. **Bore**—3½". **Stroke**—4½".
Displacement—346 cu. ins. **Rated HP**—39.20.
Developed Horsepower—150 at 3400 RPM.
Compression Ratio—7.25-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

ENGINE REMOVAL: *See Cadillac Shop Notes.*

TIGHTENING TORQUES: *See Cadillac Shop Notes.*

CYLINDER HEAD: Tightening Torque—*See Cadillac Shop Notes.*

PISTONS: Aluminum alloy, three-ring, cam ground, T-slot type with Anodized finish.
NOTE—Rings are mounted lower than on previous type pistons and piston has heat-dam groove above top ring.
Weight—1.197 lbs. (stripped), 1.593 lbs. (complete).
Length—4⅛".
Removal—Pistons and rods remove from above.
Clearance—.0023-.0025".

Original Piston & Cylinder Bore Sizes: *See Cadillac Shop Notes.*

Replacement Pistons: *See Cadillac Shop Notes.*

Fitting New Pistons: *See Cadillac Shop Notes.*

Installing Pistons: T-slot to left on all pistons.

PISTON RINGS: Two compression, one oil control ring per piston, all above pin.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	5/64"	.007-.023"	.0022-.0035"
Oil Contr. (#3)	3/16"	.007-.023"	.0013-.0026"

Installing Rings—Notched inner edge of both compression rings must be upward.

Replacement Rings: Furnished Std. Size and .010", .020", .030" Oversize.

PISTON PIN: Diameter ⅞". Length 3 1/16".
Floating type with locking ring at each end. Pin hole in piston bosses have bearingized finish.
Pin Fit in Piston—.00005-.0001" (new), .0007" (worn) or free hand-press fit at 70° F. in each boss.
Pin Fit in Rod Bushing—.0002-.0008" clearance (new), .0014" (worn limit).

Replacement Pins: Std., .001", .003" Oversize. *Piston Pin Fitting, see Cadillac Shop Notes.*

CONNECTING ROD: Length 8¾". Weight 2.355 lbs.
Crankpin Journal Diameter—2.4590-2.4595".
Lower Bearing—Removable, steel-backed, Morraine Durex 100A (copper nickel matrix with babbitt overlay) lined type. No shims.
Clearance—.0008-.0025" (new), .005" max. (worn).
Sideplay—.008-.014".

Bearing Adjustment:—None (no shims). Replace bearings. Do not file rods or caps.

Installing Rods:—Numbers on rods and bearing caps on same side and toward bottom of engine.

CRANKSHAFT: 3 bearing with 6 counterweights.
Journal Diameters—2.4990-2.[illegible]5" (all bearings).
Bearings—Removable, steel-backed, Morraine Durex "300" (copper nickel matrix with babbitt overlay) lined type. No shims.
Clearance—.0008-.0025" (new), .005" max. (worn).

Bearing Adjustment:—None (no shims). Replace bearings. Do not file bearing caps.

End Thrust:—Taken by center (#2) bearing.
Endplay—.001-.005" (new), .010" Max. (worn).

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

CAMSHAFT: 3 bearing. Non-adjustable chain drive.
NOTE—Camshaft is cast iron. Use care to prevent misalignment when removing & installing shaft. *Refer to Cadillac Shop Notes for Camshaft Removal and Camshaft Bushing servicing data.*
Journal Diameters—#1 and #2, 2.4071-2.4078"; #3, 2.0009-2.0016".
Bearing Type—Steel-backed, babbitt bushings.
Clearance—.0015-.0033" (new), .0045" Max. (worn).

End Thrust:—Taken by thrust plate behind camshaft sprocket. No endplay should be permitted.

Timing Chain:—Link-Belt Type 3766-TC-15. Width 1⅛". Pitch ⅜". Length 23¼" or 62 links. NOTE—Install chain 'endless' as an assembly with sprockets. Use Pilot Tool J-836 on end of camshaft.

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.876-1.886"	.3415-.3425"	5 33/64"
Exhaust	1.626-1.636"	.3408-.3415"	5 33/64"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.335"	.0023"①
Exhaust	45°	.345"	.0025"②

①—.0005-.0025" (new), .005" (worn limit).
②—.0015-.0035" (new), .005" (worn limit).
See Cadillac Shop Notes for Valve & Lifter servicing.

Valve Guides:—Press in block (long step end down). Guides have "Ferrox" finish for longer service.

Valve Lifters:—Wilcox-Rich 'Zero-lash' type hydraulic lifters (Mushroom type) in removable brackets.
►1948 Note—Two types of valve lifters are used:
Body & Plunger Type. Same as used on earlier models. Can be identified by exposed plunger spring at top.
Unit Type. Serviced as complete unit only. No spring used at upper end.
See "Valve System" in Cadillac Special Data.
Clearance—.0010-.0024" (new), .0035" (worn).

Valve Springs:—Free length 2.210".

	Spring Pressure	Spring Length
Valve Closed	60-67 lbs.	1 59/64"
Valve Open	139.5-150.5 lbs.	1 37/64"

VALVE TIMING

Tappet Clearance:—None in service (hydraulic type lifter). *See Valve Servicing in Cadillac Shop Notes.*

Valve Timing:—See Camshaft Setting above.
Intake Valves—Open at TDC. Close 42° ALDC.
Exhaust Valves—Open 52° BLDC. Close 10° ATDC.
Valve Timing Check—#1 cylinder (front-left bank) intake valve should open with piston at TDC and mark 'C.1/6' on crankshaft pulley aligned with chain case cover pointer (on right side).

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings and piston pins (rifle-drilled rods), camshaft bearings, timing chain, and hydraulic valve lifters. Oil pump located at rear of engine in oil pan.
►NOTE—An "Inertia type" fitting is located in the oil line to hydraulic valve lifters (oil forced to make 90° turn before entering lifter line, foreign particles in oil tend to be carried past this line).
Crankcase Capacity—7 quarts.
Normal Oil Pressure—25 lbs. at 30 MPH. (15 lbs. idling).
Oil Pressure Regulator—Located on oil pump. Opens at 30 lbs. Not adjustable.
See Cadillac Shop Notes for Oil Regulator data.

Oil Pump: *See Cadillac Shop Notes for Specifications.*

Crankcase Ventilation: Filter in oil filler (inlet) cap. Exhausts through openings in valve cover into conduit leading to cored opening in rear of block and out through outlet pipe in right rear corner of oil pan.
Servicing—Wash and re-oil filter in filler cap every 2000 miles (oil change period).

Oil Gauge ('46-47 Series 60S, 62): AC No. 1506290.
('46-47 Series 61, 75)—AC No. 1505912.
(1948 All Series)—AC No. 1507086.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap. Re-circulation (with thermostat closed) provided by by-pass from left cylinder bank outlet to water pump inlet.
Capacity—25 quarts (without heater).
27 quarts with Cadillac Automatic Heating System.
26 quarts with Cadillac Ventilating Defroster Heater.
Pressure Cap—AC No. 850558 (Radiator Filler Cap). Opens at 8¼-9¼ lbs.
NOTE—15 lb. cap available for extreme service.

Water Pump: Self-adjusting packing type.
See Water Pump Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat ('46-47): Cadillac No. 1444874. Dole.
1948 Type—Cadillac No. 1453784 (std.), No. 1454715 (high opening). Fulton Sylphon. Blocking type in radiator inlet elbow (accessible by removing elbow).
Setting (standard)—Starts to open 150-155°F.①
Setting (High Opening)—Starts to open 165-170°F.①
①—When testing at atmospheric pressure.

Temperature Gauge: AC. Electric Thermo-gauge.
Dash Unit ('46-47 Series 60S, 62)—AC No. 1511732.
Dash Unit ('46-47 Series 61, 75)—AC No. 1511737.
Dash Unit (1948 All Series)—AC No. 1511896.
Engine Unit—AC No. 1511734 ('46-47), 1512015 ('48).
See Miscellaneous Section for complete data.

CLUTCH

Long 11CF-10½TI (60S, 61, 62) 11CF-TI (75, 76). Semi-centrifugal, single plate, dry disc type.
See Clutch Section for complete data.

Facings—Woven type. I.D. 7" (all models). O.D. 10½" (60S, 61, 62), 11" (75, 76). Thickness .137" (all).

Pedal Adjustment:—Pedal free travel ⅞-1⅛" (adjusting nut on connector link at clutch fork).

Removal:—Remove transmission (see below), drop clutch housing pan, remove release yoke and sleeve, punch mark clutch cover, pressure plate and flywheel, remove 6 cover screws. NOTE—Install driven member with oil guard to rear.

Clutch Balancing: *See "Clutch Notes" in Cadillac Special Data.*

▷Replacement Clutch Caution—Clutches furnished with locking pin or block at each release lever. *Locking pins must be removed when clutch installed.*

TRANSMISSION

SYNCHRO-MESH

Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote (steering column mounted) control.
See Transmission Section for complete data.

Transmission Control: Remote (steering column mounted) type.
See Transmission Section for complete data.

Removal:—Support engine with jack under rear end of oil pan (use wooden block to avoid damage to pan), disconnect rear universal joint and remove propeller shaft, free transmission extension at engine rear support, remove crossmember with engine rear support, disconnect speedometer cable, remove shifter rods from levers at transmission, support transmission at rear, take out mounting screws, pull straight back (plug clutch connection shaft bearing drain hole as soon as accessible to prevent lubricant loss), lower front end of transmission and remove.

HYDRA-MATIC DRIVE TRANSMISSION

Own Make. Consists of Fluid Coupling and automatic self-shifting Four-Speed Transmission. Optional on all models.
See Transmission Section for complete data including Testing & Trouble Shooting.

Lubrication—Check fluid level in transmission every month or each 1000 miles. Drain and refill at 25,000 mile intervals.

Recommended Fluid—Use only "Cadillac Hydra-Matic Fluid" or Automatic Transmission Fluid Type A.

Capacity—Approximately 12½ qts. (refill).

Checking Fluid Level—Clean all sand, lint, and dirt away from sheet metal cover in floor under right front corner of front compt. rug. Run engine for approx. 1½ minutes at speed equivalent to 20 MPH, with selector lever in "Neutral". Remove sheet metal cover from floor for access to dip stick, reduce engine speed to slow idle, measure level with dip stick, add fluid until level is at "FULL" mark with engine idling.

▷*CAUTION—Engine must be running at slow idle speed when checking Hydra-Matic Drive Fluid Level.*

Throttle Linkage Adjustment (Hydra-Matic Cars): *See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

Removal: *See Hydra-Matic Drive in Transmission Section.*

UNIVERSALS

Mechanics Model 3-C. Needle bearing type. Two used (three used on Commercial Cars).

Propeller Shaft (Pass. Cars): One shaft used of one-piece design with slip joint formed on rear of transmission mainshaft in extension housing.

(Commercial Cars)—Two shafts used with center bearing support at rear of front shaft.

REAR AXLE

Own Make. Hypoid Gear, Semi-floating type with Hotchkiss Drive.
See Rear Axle Section for complete data.

NOTE—Manufacturer recommends that Carrier Assembly be serviced by the factory (see Carrier Assembly Removal below).

Ratio—Hydra-Matic Drive ratio is available as special "economy ratio" on cars with std. synchro-mesh transmission.

	Synchro-mesh Trans.	Hydra-Matic Drive
60S, 61, 62	3.77-1 (no mark)	3.36-1 (6)
75 & Comm'l	4.27-1 (4)	3.77-1 (7)

NOTE—Ratio identification mark (following ratios in table above) stamped on bottom of differential case beneath center of pinion shaft.

Backlash—.003-.010". Screw adjustment.

Removal:—Disconnect rear universal (do not disengage spline joint at transmission), remove axle shafts (see below) and carrier mounting bolt nuts.

Axle Shaft Removal:—Remove hub cap, wheel, and axle shaft nut. Pull hub and drum, disconnect brake line, remove brake backing plate. Pull shaft and bearing assembly (Tool J-838). NOTE—Install new oil seal & bleed brake line which was disconnected

Wheel Bearing Adjustment—None.

▷*CAUTION—Wheel bearings are sealed (permanently lubricated) and should be checked when axle shafts are out. Replace bearings that spin freely indicating lack of grease.*

SHOCK ABSORBERS

Delco. Double acting, opposed piston, hydraulic types (front & rear). Model Nos. as follows:

	Front	Rear
60S, 61, 62	1946-G,H	1754-N,P
75	1946-G,H	2007-N,P
Commercial (75 & 76)	1946-G,H	1751-V,W

FRONT SUSPENSION

Front Suspension:—Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.

NOTE—Specifications below correct with car at curb weight (car unloaded with full gas tank).

Kingpin Inclination—5°51' crosswise (0° Camber).

Caster ('46-47)—Neg. 1¾° to Neg. 2¾°.

Caster (Late 1947 & 1948)—Neg. ½° to Pos. ½°. Equal within ½°.

Camber—Neg. ⅜° to Pos. ⅜°. Equal within ½°.

Toe In—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

Steering Geometry (Toe-out on turns)—Outer wheel turned 20°. Inner wheel as follows:

	Left Turn	Right Turn
60S, 61, 62	25°25'	24°42'
75 & Comm'l. (75 & 76)	24°7'	23°6'

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type (re-circulating ball type).
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.

Drums—Centrifuse. Diameter 12" (11.995-12.005").

NOTE—Drum out-of-round limit is .007" and re-machining limit (to true up drums) is .030" max.

Lining—Molded type (all models).

	60S,61,62	75	Commercial
Width (Front)	2¼"	2¼"	2¼"
Width (Rear)	2"	2½"	2½"
Thickness	3/16"	3/16"	3/16"
Length (Fwd.Shoe)	11 17/32"	11 17/32"	12 31/32"
Length (Rev.Shoe)	12 31/32"	12 31/32"	12 31/32"

Fwd.—Forward or Primary (front) shoe.
Rev.—Reverse or Secondary (rear) shoe.

Clearance—.007-.010" at each end of each shoe or .015" at both ends of secondary shoe with primary shoe forced out against drum.

Braking Power—55.8% Front, 44.2% Rear (60S, 61, 62, 75); 50% Front & Rear (Commercial 75 & 76).

Hand (Parking) Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Form 38—1956-M

HOOD LOCK ADJUSTMENT, HOOD REMOVAL & INSTALLATION: *See Cadillac Special Data.*

MODEL IDENTIFICATION

ENGINE SERIAL NUMBER: Stamped on right front of crankcase below cylinder head and on right frame side member to rear of engine support bracket.
Identification—First two figures indicate year, third and fourth figures indicate model (last five figures numbered consecutively regardless of series).

Series	1949—First Nos.—1950
60S Special	496000000—506000000
61	496100000—506100000
62	496200000—506200000
75	497500000—507500000
86 Comm'l	498600000—508600000

ENGINE UNIT NUMBER: Stamped on top of crankcase, behind left hand block (behind distributor).

	Engine Unit Number	
1949 Numbers	**Std. Transmission**	**Hydra-Matic**
49-60S, 61, 62	**8-L-1 Up**	**9-L-1 Up**
49-75, 86	**2-L-1 Up**	**9-L-1 Up**
1950 Numbers		
60S, 62		9-M-1 Up
61	8-M-1 Up	9-M-1 Up
75	2-M-1 Up	9-M-1 Up
86	2-M-1 Up	7-M-1 Up

TUNE-UP

►*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

COMPRESSION PRESSURE: 120-140 lbs. at cranking speed (Std. 7.5-1 Cast Iron head).

VACUUM READING: Steady 20-21" idling at 375 RPM. (for Hydra-Matic), 400 RPM. (with Synchro-Mesh).

FIRING ORDER: 1-8-4-3-6-5-7-2. (Cyl. Nos. 1-3-5-7 Left Bank, 2-4-6-8 Right Bank, front-to-rear). See diagram.

SPARK PLUG GAPS: .033-.038".
Plugs—AC No. 48X. *NOTE*—Use 46-5 for high speed operation.

►*CAUTION—Tighten plugs to 20-25 ft. lbs. torque.*

DISTRIBUTOR: Breaker Gap—.013-.018" (new), .010-.015" (used points).
Cam Angle—31°±1½° (new), 28°±1½° (used). Test limits with .016" gap—21-30°.

►*CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell-meter used to set contact gap.*
Breaker Arm Spring Tension—19-23 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.25 microfarad.

IGNITION TIMING: 5° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—"A/" on harmonic balancer at front of engine lined up with pointer on front cover (for fuel of 80 Octane Rating).

►*CAUTION*—If fuel of less than 80 Octane Rating used, and detonation ping noted, timing may be retarded to "/C" mark on balancer (top dead center).

CARBURETION: Carter WCD. (Early 1949) No. 682S, (Late 1949) No. 722S, (1950) No. 742S.

►*SLIGHT ACCELERATION STUMBLE (1949 Cars with first 722S Carburetors): See "Carter WCD" in Carburetor Section for recommended jet changes.*

►*DETONATION COMPLAINTS (1950 Cars with 742S Carburetors): See "Carter WCD" in Carburetor Section and "Detonation Correction" in Cadillac Special Data.*

Idle Setting—Both screws ½-1½ turns open (1949 682S & 722S), ¾-1¼ turns open (1950 742S). Turn screws out for richer mixture and set for smooth idle with engine warm.
Idle Speed—375 RPM (Hydra-Matic Trans.), 400 RPM (Synchro-mesh Trans.) with engine warm and Hydra-Matic selector lever in "Dr" position.

►*CAUTION—Use tachometer to set idling speed.*
Float Level—9/64" (1949 682S, 722S), 11/64" (1950 742S) from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level should be even with bottom of inspection plug hole on side of bowl with engine idling.
Accelerating Pump—No seasonal adjustment.

Fast Idle Setting: .020" throttle opening (Gauge T109-29) with choke valve tightly closed. Adjust fast idle adjusting screw for this throttle opening.

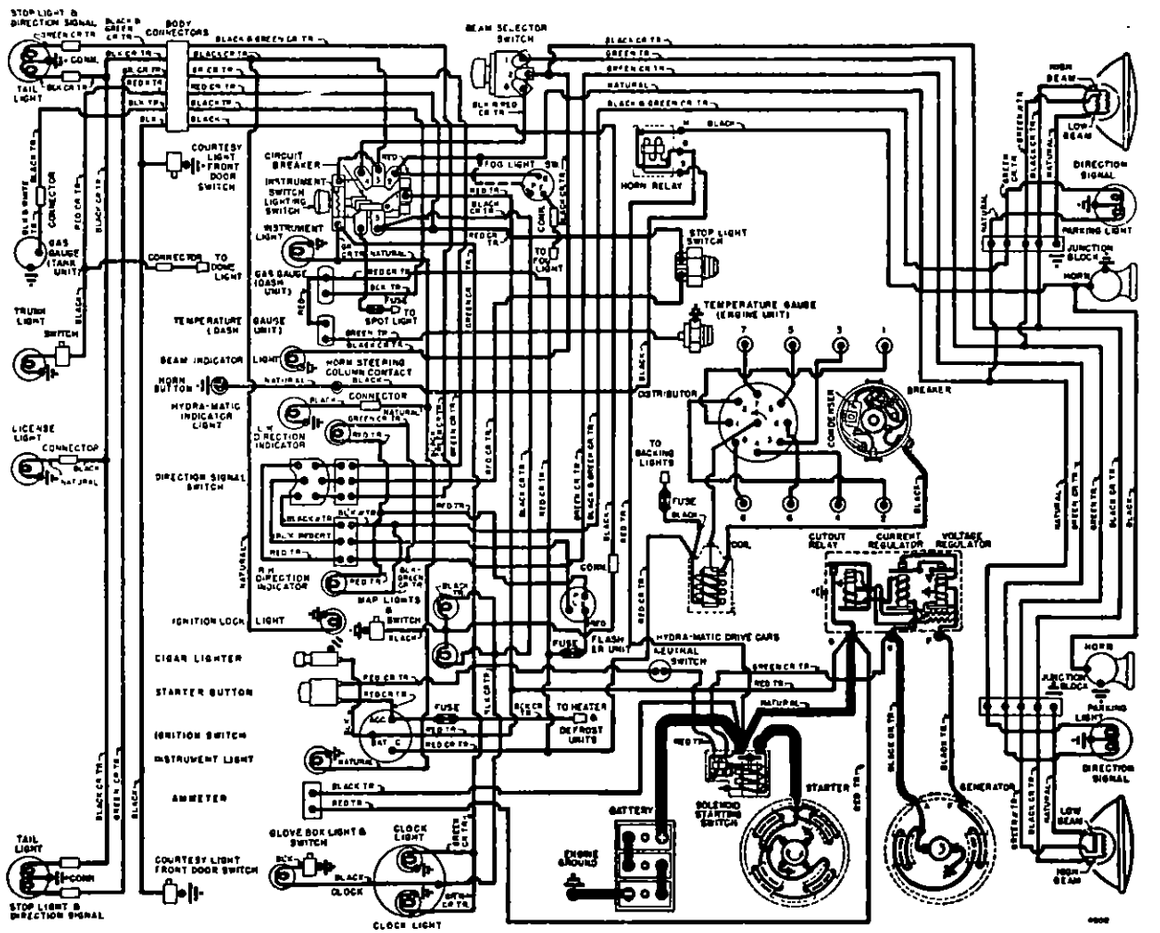
►**Choke Setting:** *CAUTION—Different setting used on each carburetor.*
(682S)—1 Point Rich.
(722S)—Centered (housing centered on scale).
742S—1 Point Lean.

Throttle Linkage Adjustment (Hydra-Matic Cars): *See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

Fuel Pump Pressure: 4-5¼ lbs. at carburetor.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Blocker type valve located between left bank exhaust manifold and cross-under pipe (diverts exhaust through bypass under intake manifold when valve closed).

►*CAUTION*—Valve assembly must be installed with coil toward left side and dampener weight toward rear of engine.



VALVE TAPPET CLEARANCE: None in service (automatic hydraulic type tappet take-up).

IGNITI N

►*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

IGNITION SWITCH: Delco-Remy No. 1116462.
Ignition Lock—Briggs & Stratton or Delco.

CONTINUED ON NEXT PAGE

1949 MODELS

CONTINUED FROM PRECEDING PAGE

COIL: Delco-Remy 1115380. Mounted on manifold directly in front of distributor.

Ignition Current—2.2 amperes (engine running).

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy. (1949) No. 1110812, (1950) No. 1110819. Automatic and vacuum advance type with "center bearing" breaker plate.
See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.013-.018" (new), .010-.015" (used points).

Cam Angle—31°±1½° (new), 28°±1½° (used). Test limits with .016" gap—21-30°.

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110812

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	375	0-3	750
6-7.5	1000	12-15	2000
12-14	1450	24-28	2900
17-19	1800	34-38	3600

Automatic Advance—1110819

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	400	0-3	800
8-10	1200	16-20	2400
14-16	1800	28-32	3600

Vacuum Spark Control: Delco-Remy No. 1116047 (1949 No. 1110812 Distr.), 1116055 (1950 No. 1110819 Distr.). Integral type on distributor.

Plunger Travel—7/32" (1949), 13/64" (1950).

Vacuum Advance—1116047

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6-8
6	12	9-11
10	20	13-15

Vacuum Advance—1116055

Start	0	4-6
10	20	12-16

Removal: Turn crankshaft to top dead center position for #1 piston (mark "/C" on vibration balancer in line with pointer on front cover), remove distributor cap, disconnect breaker lead and vacuum line, remove nut on hold-down clamp stud, hold rotor clockwise (against direction of rotation), lift distributor straight up to disengage drive tongue using care not to lose gasket or nick tongue.

▷**Installation Caution**—*If distributor drive gear disturbed* (by oil pump removal), see Oil Pump installation data.

IGNITION TIMING

▷*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

Flywheel Degrees

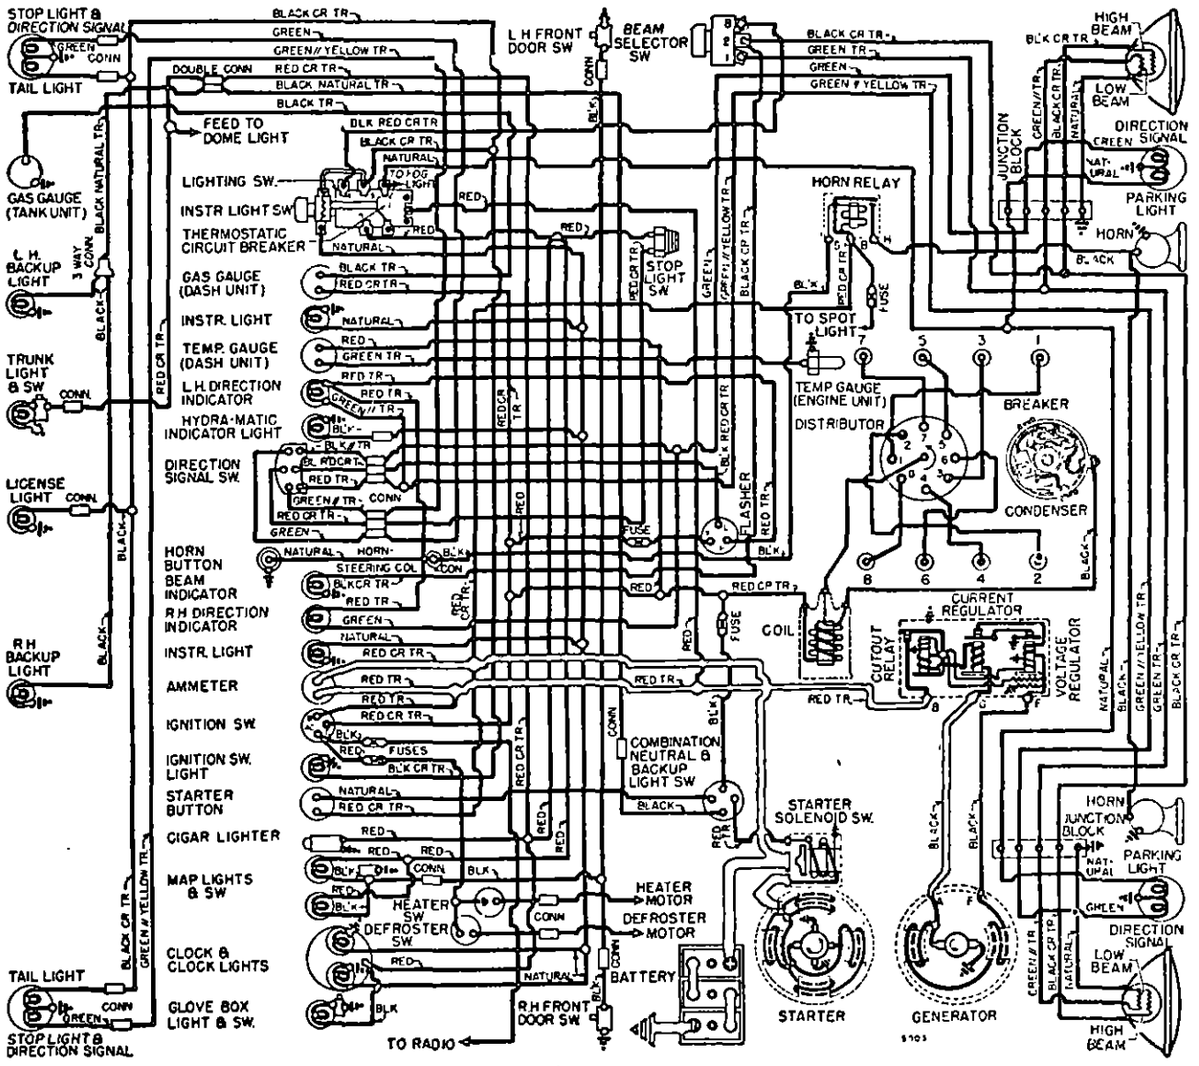
Standard Setting①.....5° BTDC.

①—For fuel of 80 Octane Rating. See Manual Adjustment (below) for other fuels.

Timing Mark—"A/" on vibration balancer (located 5° ahead of dead center mark "/C" in line with pointer on right side of engine front cover.

Timing (Using Timing Light)—Loosen distributor hold-down clamp nut just enough to permit distributor adjustment, disconnect vacuum line (to prevent vacuum advance operating), connect timing light to #1 cylinder spark plug lead, direct light on vibration balancer from right side of engine. Warm up engine. With engine idling, rotate distributor until balancer mark "A/" lines up with pointer on front cover, tighten hold-down clamp nut to 15-18 ft. lbs. Recheck timing, connect vacuum line.

Manual Adjustment—If fuel of less than 80 Octane Rating used and detonation "ping" noted with std. setting (above), timing can be retarded to "/C" mark on balancer (top dead center), by loosening hold-down clamp nut and rotating distributor counter-clockwise (in direction of rotation).



CARBURETOR

Carter WCD Models. 1¼" Dual (double barrel) downdraft types with automatic choke.

Model	Carter No.
1949 (First Cars)	682S
1949 (After 6566 Cars)	722S
1950	742S

▷*SLIGHT ACCELERATION STUMBLE (1949 Cars with first 722S Carburetors): See "Carter WCD" in Carburetor Section for recommended jet changes.*

▷*DETONATION COMPLAINTS (1950 Cars with 742S Carburetors): See "Carter WCD" in Carburetor Section and "Detonation Correction" in Cadillac Special Data. See Carburetor Section for complete data.*

1950 MODELS

Settings (Idle Setting, Float Level & Accelerating Pump): *See Tune-Up data.*
Metering Jets & Rods—*See "Carter Downdraft Carburetor Jet Specifications" in Carburetor Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.
Setting—.020" throttle opening (Gauge T109-29 with choke valve tightly closed. Adjust by turning fast idle adjusting screw.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Dual Carburetor).
►**Setting**—*CAUTION—Three different settings used.*
(682S)—1 Point Rich.
(722S)—Centered (housing centered on scale).
(742S)—1 Point Lean.
See Carburetion Equipment Section for complete data.

Hydra-Matic Throttle Linkage Adjustment: *See "Cadillac Hydra-Matic Drive" in Transmission Section.*

CARB. EQUIPMENT

Air Cleaner: AC No. 1544432 (1949), No. 1544741 (1950). Oil-bath type.
Filter Element—AC No. 20.

Fuel Pump: AC. Combination fuel-and-vacuum pump.
Replacement Pump—AC No. 9143 (1949), No. 9535 (1950).
Pressure—4-5¼ lbs. (at carburetor).
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC. Electric type.
Dash Unit—AC No. 1517131.
Tank Unit—AC No. 1517068 (1949), 1517215 (1950).
See Carburetion Equipment Section for complete data.

BATTERY

STANDARD

Delco Type 17K-4—6 Volt, 17 Plate, 115 Ampere Hour Capacity (20 hour rate).
Starting Capacity—137 amperes for 20 minutes.
Zero Capacity—300 amperes for 4.3 minutes.
Five Second Voltage—4.4 volts.
Grounded Terminal—Negative (—) terminal connected to engine at starter mounting flange.
Location—In engine compartment on right hand side (mounted outside frame side rail).

COMMERCIAL MODELS

Delco Type 19Q-4. 6 Volt, 19 Plate, 125 Ampere Hour Capacity (20 hour rate).
Starting Capacity—145 amperes for 20 minutes.
Zero Capacity—300 amperes for 5.0 minutes.
Five Second Voltage—4.5 volts.
Grounded Terminal & Location—Same as Std. models above.

STARTER

Delco-Remy	Starter No.	Armature No.
1949	1107945	820158
1950	1107969	1917855

►**Hydra-Matic Drive Car Starter**—Starter operative only with Selector lever in Neutral (Neutral Safety Switch connected in starter solenoid relay circuit).
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
15 "	Lock	3.0	600

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118141 (1949), 1118148 (1950) mounted on starter and controlled by Pushbutton Switch No. 1996009 on instrument panel. **Hydra-Matic Cars**—Neutral Safety Switch, Delco-Remy No. 1997844 (1949), No. 1997871 (1950—includes Back-up switch) connected in series with pushbutton.
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy Model 1102700. Armature No. 1880550. Two brush type with voltage and current regulation.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—40-46 amperes reached at 28 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

Performance Data

	Amperes	Volts	R.P.M.
Cold	40①	8.0	2150

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs. each.
Field Current—1.87-2.0 amperes at 6.0 volts.

Belt Adjustment: Tighten belt to 24 ft. lbs. torque measured as follows: Loosen both pivot bolts and adjusting strap screw, install Fan Belt Adjusting Tool J-3046 on head of lower front mounting bolt, rotate tool until arm contacts edge of generator end plate. Use ⅞" socket and torque wrench on tool to pull generator out away from engine until 24 ft. lb. reading secured on wrench, tighten adjusting strap screw securely, then remove tool and tighten pivot bolts to 15-18 ft. lbs. torque.

Generator Charge Indicator (Ammeter): *TWO different types used as follows:*
1949—Cadillac No. 1501179. SHUNT type ammeter (connected in parallel with main charging line, carries only proportional part of charging current).
See "Shunt Type Ammeter" in Electrical Equipment Section.
1950—Cadillac No. 1501261. Conventional type ammeter connected in main charging line.

REGULATOR

Delco-Remy (1949) No. 1118300, (1950) No. 1118357. Voltage and current regulator.
►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator
Setting—40-46 amperes hot (set to 42 hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—At center of panel above speedometer. Lighted when country (upper) beam in use.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—Left & Right Turn Indicator located at either end of speedometer dial. Lights when direction signal on same side of car operating (Stop Light flashes at rear).

Switches
Lighting—Delco-Remy No. 1995031 (1949), 1995047 (1950).
Instrument—Part of lighting switch (rheostat operated by rotating light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Map Light—Delco-Remy No. 1997848.
Direction Signal—Delco-Remy (1949-50 Synchro-mesh Cars) No. 1995541, (Later 1950 Synchro-mesh) No. 1995552, (1949-50 Hydra-Matic) No. 1995540, (Later 1950 Hydra-Matic) No. 1995551.
Back-up Light—Delco-Remy (1949-50 Synchro-mesh) No. 1997774 (1950 Hydra-Matic—combined with Neutral Safety Switch) No. 1997871.

MISC. ELECTRICAL

FUSES: Direction Signal—9 ampere. On Flasher under back of instrument panel on left side.
Defroster & Heater Motor—30 ampere. In lead from "Acc" terminal on ignition switch.
Back Up Light—20 ampere. In lead from switch terminal of ignition coil.

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy #1999621, 641 (Low Note), #1999622, 642 (High Note). Vibrator type, blended tone, twin horns operated by relay.
1949 NOTE—Welded type horns, Delco-Remy No. 1999649 (Low Note), 1999650 (High Note) also used.

Type	Current (at 6 volts)	Air Gap
1999621, 641 (Low)	19-21 amperes	.044-.049"
1999622, 642 (High)	18-20 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: New 90° V8 with Overhead Valves. Both cylinder blocks and crankcase cast Enbloc.
Bore—3 13/16" (3.8125-3.8145"). *See "Original Bore & Pistons" in Cadillac Special Data.*
Stroke—3⅜". **Displacement**—331 cu. ins.
Rated Horsepower—46.5.
Developed Horsepower—160 at 3800 RPM.
Compression Ratio—7.5-1.
Compression & Vacuum Reading—*See Tune-Up.*

TIGHTENING TORQUES: *See Cadillac Special Data.*
CYLINDER HEAD INSTALLATION: *See Cadillac Special Data.*
ENGINE REMOVAL: *See Cadillac Special Data.*
OIL PAN REMOVAL: *See Cadillac Special Data.*

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

PISTONS: Aluminum alloy, three-ring, T-slot.
Weight—19.296 ozs. (without rings or pin).
Length—3 15/16".
Removal—Pistons and rods removed from above.
Clearance—.0020-.0022" at 70° measured ⅛" below upper cross slot and at right angles to piston pin.
Original Piston & Bore Sizes—*See Cadillac Special Data.*
Replacement Pistons: *See Cadillac Special Data.*
Fitting New Pistons: *See Cadillac Special Data.*
Installing Pistons: Mark "REAR" on piston pin boss toward right (#1, 3, 5, 7), toward left (#2, 4, 6, 8) of number on boss on connecting rod when facing this numbered boss end of rod. Install pistons with mark "REAR" toward rear of engine on all pistons.

PISTON RINGS: Two compression, one oil control ring per piston, all above pin. Oil ring slotted type with oil drain holes in groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	5/64"	.010-.020"	.0017-.0035"
Oil Contr. (#3)	3/16"	.010-.020"	.0013-.0026"

Installing Rings—Beveled inner edge of compression rings must be upward.

PISTON PIN: *CAUTION—1949 Pins are "Floating Type" with lock rings, 1950 Pins are Press Fit in Rod.*

▷**1949 PISTON PINS: Diameter** 1". **Length** 2¾". "Floating" type with lock ring in piston boss at each end of pin.

▷*CAUTION*—Install lock rings with tang pointing away from pin and toward piston head at 45° angle.
Pin Fit in Piston—.00005-.0001" at 70°F. (new), .0007" (worn limit). Pin should be light push fit at 70°F.
Pin Fit in Rod Bushing—.00005-.00035" (new), .0007" (worn limit). Pin should be hand-press fit at 70°F.

▷*CAUTION*—Do not attempt to replace pin bushing (hone for oversize pin or replace connecting rod).
Fitting New Pins—*See Cadillac Special Data.*

▷**1950 PISTON PINS: Diameter** 1". **Length** 3 3/32" Pin is press-fit in rod (floats in piston but lock rings not used).

▷*PIN REMOVAL & INSTALLATION CAUTION—Requires special tools and procedure. See "Piston Pins" in Cadillac Special Data.*
Pin Fit in Piston—.00005-.0001" clearance at 70°F. (new), .0007" (worn limit).
Pin Fit in Connecting Rod—25 ft. lbs. minimum torque on puller screw should be required to start pin in rod. *See Piston Pins in Cadillac Special Data.*

Replacement Pins: (1949) Pins furnished Std. size and .001", .003" Oversize. (1950) Fitted pins furnished with new pistons (not furnished separately).

CONNECTING ROD: Length 6⅝".
▷*CAUTION—1949 rods have bushing for piston pin, 1950 rods do not have bushing (pin is press fit).*
Crankpin Journal Diameter—2.2488-2.2493" (out-of-round limit .00025" maximum). Connecting rod diameter (without bearing) 2.3740-2.3745".
Lower Bearing—Removable steel-backed, Moraine-Durex lined type. No shims.
Clearance—.0005-.0020" (new), .0045" (worn limit).
Sideplay—.008-.014" (total both rods).
Bearing Adjustment: None. Replace bearings.
▷*CAUTION*—Tang on bearings must register with grooves in rod and cap and oil spit hole register with oil groove in bearing cap.
Installing Rods: Cylinder No. mark on rod and cap (on small boss on end) must be together and installed in same numbered cylinder with piston mark "REAR" toward rear of engine (lubrication groove in rod cap will be on upper side).

CRANKSHAFT: 5-bearing, integral counterweights.
Removal & Installation—*See Cadillac Special Data.*
Journal Diameters—2.4985-2.4990" all bearings (out-of-round limit .00025" maximum).
Bearings—Removable, steel-backed, Moraine-Durex lined type. No shims.
Clearance—.0008-.0025" (new), .005" (worn limit).
Bearing Adjustment: None. Replace bearings.
▷*CAUTION*—Bearing caps must not be interchanged. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear
End Thrust: Taken by flanged rear (#5) bearing.
Endplay—.001-.005" (new), .010" (worn limit).
Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*
FLYWHEEL Removal & Installation—*See Cadillac Special Data.*

CAMSHAFT: 5-bearing, Cast-iron type with non-adjustable chain drive.
▷*CAUTION*—Handle shaft with care to avoid damage or misalignment. Check whenever removed.
Removal, Alignment & Installation—*See Cadillac Special Data.*
Bearing Type—Steel-backed, babbitt bushings.
Clearance—.001-.0022" (new), .004" (worn limit).
End Thrust: *NOTE*—Early 1949 Engines (Before Engine Unit Nos. 2-L-1102, 8-L-805, 9-L-51822) have a spring-loaded plug in forward end of camshaft bearing against thrust plate in cover. Later 1949 engines (after above nos.) and 1950 engines do not have this spring-loaded plug.
▷*1949 CAUTION*—On first engines, make certain that plug and spring in place in end of camshaft when installing chain case cover.
Timing Chain: Link-Belt side-guide type. Width 11/16". Pitch .500". Length 23" or 46 links.
Timing Chain Removal—*See Cadillac Special Data.*
Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1.745-1.755"	.3415-.3425"	4 5/8"
Exhaust	1.4325-1.4425"	.3405-.3415"	4 5/8"

	Seat Angle	Lift	Stem Clearance
Intake	44°②	.327"	.0005-.0025"①
Exhaust	44°②	.327"	.0015-.0035"①

①—New valves & guides. Worn limit .005" max.
②—New valves (valves in service can be refaced to 45° if seat width recommendations not exceeded).
▷*CAUTION*—Do not lap new valves in so that seat width is more than 1/64" (1° difference between valve and block angle to provide "hairline" contact.
▷**Valve Seat Width Recommendations**—3/64-1/16" (moderate speeds or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to valve head flange edge not more than 1/32".
▷**Valve Stem Oil Seal**—New rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation—*See "Valve Removal & Installation" in Cadillac Special Data.*
Valve Removal & Installation: *See "Valves" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover tool J-3062 to drive old guides out toward top of head, Installer tool J-3066 to drive in new guides.
Valve Springs: Free Length 1.968".

	Pressure	Length
Valve Closed	57.5-62.5 lbs.	1.696"
Valve Open	130-140 lbs.	1.366"

▷*CAUTION*—Lower end of spring must seat in recess in cylinder head.
Valve Lifters: New hydraulic type which maintains zero tappet clearance in service.
See "Valve System" in Cadillac Special Data.
Valve Lifter Removal—*See Cadillac Special Data.*
Rocker Arms: No adjustment screws on rocker arms.
Rocker Arm Installation—*See Cadillac Special Data.*

VALVE TIMING

Tappet Clearance: None in service (hydraulic type lifters which maintain zero clearance).
Valve Timing: *See Camshaft Setting above.*
Intake Valves—Open 14° BTDC. Close 58° ALDC.
Exhaust Valves—Open 48° BLDC. Close 24° ATDC.
Valve Timing Check—Not practical to check in field. Manufacturer recommends removing timing chain cover and check timing marks.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and hydraulic valve lifters and to rocker arms.
Oil Pan Removal: *See Cadillac Special Data.*
Crankcase Capacity—5 quarts.
Normal Oil Pressure—25 lbs. min. at 30 MPH. 15 lbs. with engine idling.
Oil Pressure Regulator—Located on oil pump. Opens at 30 lbs. Non-adjustable.
Pressure Regulator Spring—Free length 2 25/64". Pressure should be 5¾-6¼ lbs., at 1 13/32".
Oil Pump: Gear type. In crankcase at rear of engine.
Oil Pump Overhaul: *See Cadillac Special Data.*
▷**Pump Installation Caution**—Flat on upper end of pump driveshaft must engage flat in distributor drive gear in valve compartment. If drive shaft and gear disturbed when pump removed, install pump and driveshaft with distributor gear out, turn crankshaft until #1 piston at TDC entering power stroke, with vibration dampener mark "C" at indicator, install distributor drive gear on end of pump drive shaft engaging shaft flat in gear, turn gear and shaft until flat is on right side and parallel with engine centerline, then mesh gear with camshaft gear. Distributor drive slot in upper end of gear should be approx. 15° to right of engine centerline.
Oil Pressure Gauge: AC No. 1507364. Not electrical.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap. Re-circulation with thermostat closed provided by by-pass in pump body.
Capacity—18 qts. (1 qt. addt'l with heater).
Pressure Cap—AC No. 850559. Radiator Filler Cap. Opens at 12-15 lbs.
Radiator Removal: *See Cadillac Special Data.*
Water Pump: Packless type with ball bearing shaft.
See Water Pump Section for complete data.
Thermostat: Harrison type in water outlet connection
Setting (Std. Type)—Begins to open at 162-168°F. Fully open at 190-195°F.
Setting (High Temp. Type)—Begins to open at 177-183°F. Fully open at 205-210°F.
Temperature Gauge: AC. Electric type.
Dash Unit—AC No. 1512143.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Long 11CF-10½TI (60S, 61, 62), 11CF-TI (75, 86). Semi-centrifugal, single plate, dry disc type.
See Clutch Section for complete data.
Facings—Woven type. I.D. 7" (all), O.D. 10½" (60S, 61, 62), 11" (75, 86). Thickness .137" (all).

Pedal Adjustment: Pedal free travel ⅞-1⅛". Adjust by turning nut on connector rod at clutch fork.

Removal: Remove transmission (see Transmission Removal), remove starter, remove lower flywheel housing, remove clutch release yoke-to-lever rod. Remove flywheel housing with clutch release yoke, release bearing, and bearing retainer as an assembly. Punch mark flywheel and clutch cover to insure correct re-installation. Take out six clutch cover mounting screws (CAUTION—turn all screws out evenly), lift clutch assembly out.

►**Driven Member Installation Caution**—Oil guard must be toward rear.

►**Replacement Clutch Caution**—Clutches furnished with locking pin or block at each release lever. *Pins must be removed when clutch installed.*

Clutch Balancing: *See "Clutch Notes" in Cadillac Special Data.*

TRANSMISSION
SYNCHRO-MESH

Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote shift control.
See Transmission Section for complete data.

Transmission Control: Remote control type.
See Transmission Section for complete data.

Removal: Support engine on stand, Tool No. J-3068, or use jack under rear end of oil pan (use block of wood on jack to prevent damage to pan). Disconnect rear universal joint, remove propeller shaft. Disconnect speedometer cable and shift rods at levers on transmission case. Disconnect rear engine support at transmission extension housing and remove cross-member on which support mounted. Loosen transmission mounting capscrews (CAUTION—support transmission so that it does not hang on driveshaft in clutch), remove screws, move transmission straight back to free shaft from clutch (CAUTION—plug clutch connection shaft oil drain hole as soon as accessible to prevent loss of lubricant), lower front end of transmission and remove from car.

HYDRA-MATIC DRIVE TRANSMISSION

Own Make. Consists of Fluid Coupling and automatic self-shifting four-speed transmission.

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every month or every 1000 miles. Drain and refill after first 6000 miles and every 25000 miles thereafter.

Draining & Refilling—*See "Hydra-Matic Drive" in Transmission Section.*

Capacity—Approximately 11 qts. (refill).

Checking Fluid Level—Clean all sand, lint, and dirt away from sheet metal cover in floor under right front corner of front compt. rug. Run engine for approx. 1½ minutes at speed equivalent to 20 MPH. with selector lever in "Neutral". Remove sheet metal cover from floor for access to dip stick, reduce engine speed to normal idling speed, measure fluid level as indicated on dipstick, add fluid as required to bring level up to "FULL" mark on dipstick.

►*CAUTION—Engine must be running at slow idle speed with selector lever in "Neutral" when checking Hydra-Matic Drive fluid level.*

Linkage Adjustment: *See "Hydra-Matic Linkage Adjustment" in Transmission Section.*

►*OTHER HYDRA-MATIC DRIVE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics Model 3C. Needle bearing types, two used (3 on Comm'l Cars with center bearing).

Pinion Bearing Pre-load Adjustment: Should be adjusted whenever nut on end of pinion shaft disturbed (for universal yoke or oil seal replacement). *See Rear Axle Section for complete data.*

Propeller Shaft (Pass. Cars): One shaft used (no slip joint—front universal yoke slides on transmission mainshaft in extension housing).
(Commercial Cars)—Two shafts used with center bearing at rear of front shaft. Slip joint provided at rear end of rear shaft.

REAR AXLE

Own Make. Hypoid gear, semi-floating type with Hotchkiss Drive.
See Rear Axle Section for complete data.

►*CAUTION*—Manufacturer recommends that Carrier Assembly be serviced by replacement.

►**Axle Identification**—Axles marked by number stamped on bottom of differential case below center of pinion shaft as indicated in ratio table below.

Series	Synchro-mesh Trans. Ratio	Mark	Hydra-Matic Drive Ratio	Mark
60S, 61, 62	3.77-1	None	3.36-1	6
75	4.27-1	4	3.77-1	7
86 ('49)	4.27-1	4	3.77-1	①7
86 ('50	4.27-1	4	4.27-1	②4

①—Also has blue paint mark at spring seats.
②—Change from 3.77-1 at Eng. No. 6730 (this axle also has daub of pink paint as well as "4" mark).

►**Pinion Bearing Pre-load Caution**—Must be readjusted each time pinion shaft nut loosened. *See "Cadillac Hypoid" in Rear Axle Section.*

Backlash—.003-.010" Screw Adjustment.

Removal: Disconnect propeller shaft at rear universal joint, lower shaft out of the way. Drain rear axle. Remove axle shafts (see below). Remove nuts and washers on carrier mounting bolts, lift out carrier

Axle Shaft Removal: Remove wheel. Take out two screws holding brake drum on axle shaft flange, remove drum. Remove nuts and lockwashers from four bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer Tool J-2619 to remove axle shaft.

►*CAUTION*—Use care not to damage axle shaft oil seal when sliding shaft out and do not disturb position of backing plate on housing.

Wheel Bearings: Sealed ball-bearing type.

►*CAUTION*—Check bearings for loss of lubricant when shaft removed. If bearing spins freely indicating loss of lubricant, install new bearing.

SHOCK ABSORBERS

(1949) Delco—Double action, opposed piston, hydraulic types (front & rear). Front shock absorbers are part of front suspension system.
(1950) Delco—Direct acting hydraulic type (front and rear). Front shock absorbers are located within the front coil springs.

1949 Shock Absorbers

	Front	Rear
60S, 61 62	1946-G,H	1754-N,P
75	1946-G,H	2007-N,P
86 Comm'l	1946-G,H	1751-V,W

1950 Shock Absorbers

	Front	Rear
60S, 61, 62	1075-F	1071-Y
75, 86	968-G	961-BB

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs. *NOTE*—1949 shock absorbers form upper control arms, 1950 cars have separate upper control arms and direct acting shock absorbers located within the coil springs.
See Front Suspension Section for complete data.
NOTE—Specifications below correct with car at curb weight (car unloaded with full gas tank).
Kingpin Inclination—5°51' crosswise (0° Camber).
Caster—Neg. ½° to Pos. ½°. Equal within ½°.
Camber—Neg. ⅜° to Pos. ⅜°. Equal within ½°.
Toe In—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.
Steering Geometry (Toe-out on turns)—Outer wheel turned 20°. Inner wheel as follows:

	Left Turn	Right Turn
60S, 61 62	25°25'	24°42'
75, 86 Comm'l	24°7'	23°6'

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type (re-circulating ball type).
See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic, Duo-servo, Single Anchor type without Eccentric Adjustment. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Drums—Centrifuse (cast iron, steel back). Diameter (All 1949, 1950 75 & 86) 12" (11.995-12.005"), (1950 60S, 61, 62) 11" (10.995-11.005").
NOTE—Drum out-of-round limit .007". Remachining limit (to true up drums) .060". Use .030" oversize lining for remachined drums.
Lining—Molded type (all models).

	Width — 1949 Lining — Length			
	Frt. Wheel	Rear Wheel	Fwd. Shoe	Rev. Shoe
1949 60S, 61, 62	2¼"	2¼"	11 17/32"	12 31/32"
1949 75	2¼"	2½"	11 17/32"	12 31/32"
1949 86	2¼"	2½"	12 31/32"	12 31/32"

	Width — 1950 Lining — Length (All Whls.)	Fwd. Shoe	Rev. Shoe
1950 60S, 61, 62	2½"	10.55"	11.90"
1950 75, 86	2½"	12.92"	12.92"

Fwd.—Forward or Primary (front) shoe.
Rev.—Reverse or Secondary (rear) shoe.
Lining Thickness—3/16" (All models).
Clearance—.007-.010" at each end of each shoe or .015" at both ends of secondary shoe with primary shoe forced out against drum.

Hand (Parking) Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type.
See Miscellaneous Section for complete data.

Windshield Wiper: Cable Operated—Vacuum type.
See Miscellaneous Section for complete data.

HOOD LOCK ADJUSTMENT, HOOD REMOVAL & INSTALLATION: *See Cadillac Special Data.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on the upper right corner on the front face of the right hand block and on the right frame side bar just behind the engine support bracket.
Identification—First two figures indicate year, third and fourth figures indicate model (last five figures are numbered consecutively regardless of series).

Series	1951 First Numbers	1952
60S Special	51600000	526000000
61	516100000	①
62	516200000	526200000
75	517500000	527500000
86 Comm'l	518600000	528600000

①—This model discontinued.

ENGINE UNIT NUMBER: Stamped on top of crankcase, behind left hand block (behind distributor).

1951 Numbers	Engine Unit Numbers Std. Trans.	Hydramatic
60S, 61, 62, 75		9-N-1 Up
86	2-N-1 Up	7-N-1 Up

1952 Numbers	Engine Unit Numbers Hydra-Matic	②Power Steering
60S, 62	9R	4R
75	9R③	4R
86	7R③	5R

②—Hydra-Matic Cars with Power Steering.
③—2R for cars with Synchro-mesh Transmission.

▷*OVERSIZE BORE NOTE—Mark ° preceding Engine Unit No. indicates pistons & cylinders .010" O.S.*

TUNE-UP

▷*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

▷*POOR GASOLINE MILEAGE (1951-52 Cars with Rochester Carburetors): See Carburetor Section for installation of improved type Accelerator Pump Boot.*

▷*ENGINE STALLING DURING WARM-UP (1951 Cars with Rochester Carburetor): See Carburetor TUNE-UP data for latest setting recommendations.*

▷*STALLING ON QUICK STOPS OR THROTTLE STICKING (1952 Cars with Carter Carburetors): See "Carter WCFB" in Carburetor Section for correction.*

▷*CUTTING OUT ON SHARP TURNS OR STEEP HILLS (1952 Cars with Rochester Carburetor): See "Rochester 4GC" in Carburetor Section.*

▷*ROUGH IDLING (1952 Cars with Rochester Carburetors): See "Rochester 4GC" in Carburetor Section for recommended changes.*

COMPRESSION PRESSURE: 120-140 lbs. at cranking speed (Std. 7.5-1 Cast Iron head).

VACUUM READING: Steady 20-21" idling at 375 RPM. (for Hydra-Matic), 400 RPM. (with Synchro-Mesh).

FIRING ORDER: 1-8-4-3-6-5-7-2. (Cyl. Nos. 1-3-5-7 Left Bank, 2-4-6-8 Right Bank, front-to-rear). See diagram.

SPARK PLUG GAPS: .033-.038".
Plugs—AC No. 48X *(NOTE—"X" indicates special terminal nut).* Use No. 46-5 for high-speed operation.

▷*CAUTION—Tighten plugs to 20-25 ft. lbs. torque.*

DISTRIBUTOR: Breaker Gap—.013-.018" (new), .010-.015" (used points).
Cam Angle—31°±1½° (new), 28°±1½° (used). Test limits with .013" gap 28-34°.

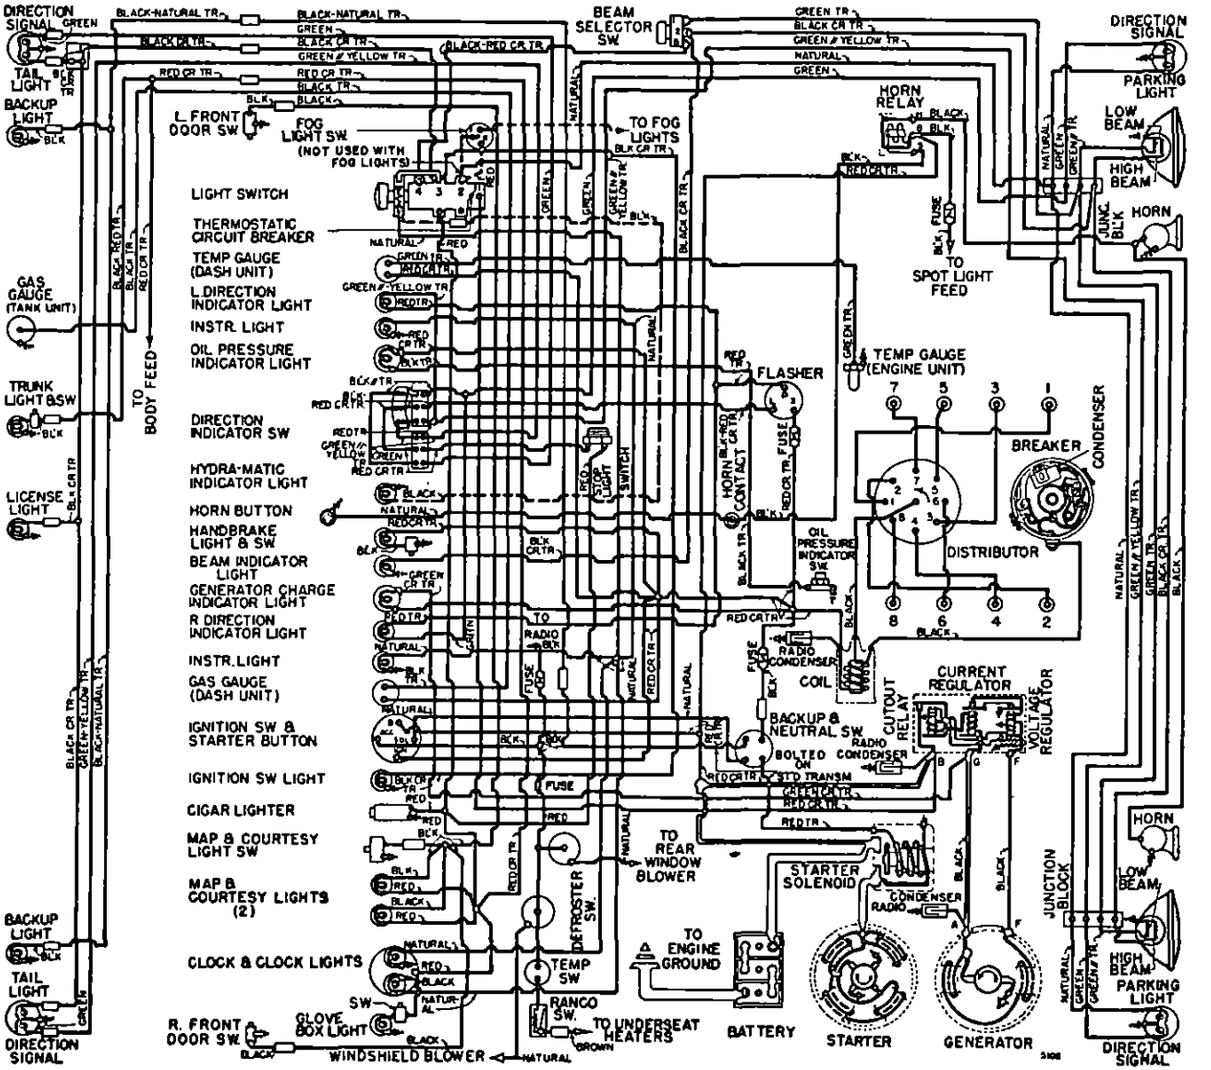
▷*CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell-meter used to set contact gap.*
Breaker Arm Spring Tension—19-23 ozs.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Delco-Remy No. 1115380. Mounted on manifold directly in front of distributor.
Ignition Current—2.2 amperes (engine running).

CONDENSER: Delco-Remy No. 1869704.
Condenser Capacity—.18-.25 microfarad.

IGNITION TIMING: 5° BTDC (80 Octane Fuel).
Timing Procedure—*See Ignition Timing.*
Timing Mark—"A/" on harmonic balancer at front of engine lined up with pointer on front cover (for fuel of 80 Octane Rating).

▷*CAUTION*—If fuel of less than 80 Octane Rating used, and detonation ping noted, timing may be retarded to "/C" mark on balancer (top dead center).



▷*IGNITION TIMING CAUTION—Timing should be checked for both No. 1 and No. 6 cylinders. First, set timing at "A" mark when checking on No. 1 cylinder, then check No. 6 cylinder. If light flashes before or after the "A" mark, set the distributor to divide the variance.*

CARBURETION

1951 CARTER 2-BARREL

Carter WCD, No. 845S. Dual downdraft type.

▷*DETONATION COMPLAINTS (Cars with 845S Carburetor). See "Carter WCD" in Carburetor Section and "Detonation Correction" in Cadillac Special Data.*

1951 MODELS

Idle Setting—Both screws ¾-1¼ turns open. Turn screws out for richer mixture and set for smooth idle with warm engine.

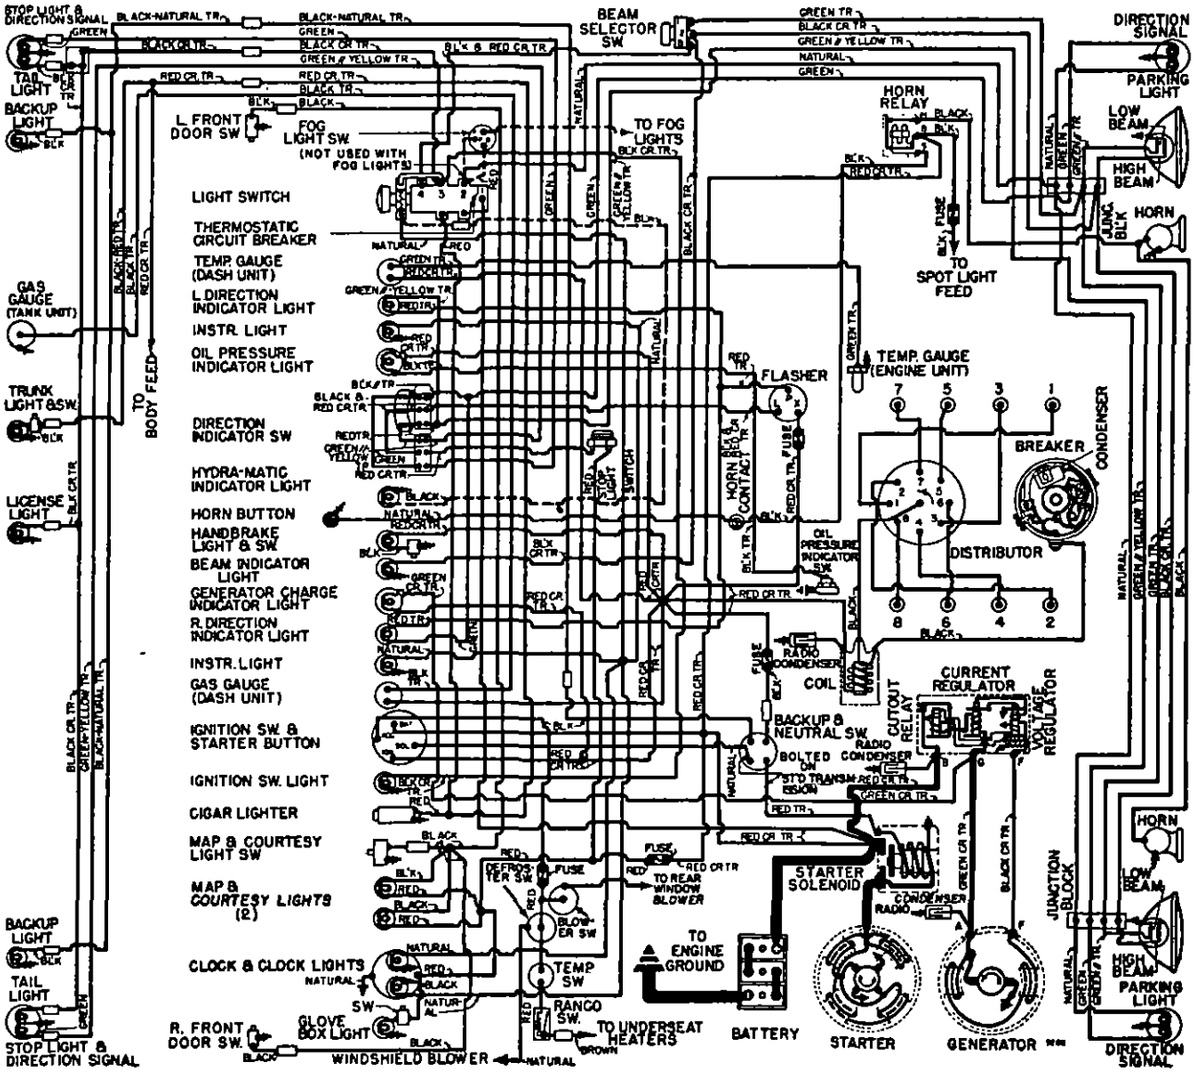
Idle Speed—375 RPM (Hydra-Matic Trans.), 400 RPM (Synchro-mesh Trans.) with engine warm and Hydra-Matic selector lever in "Dr" position.

►*CAUTION—Use tachometer to set idling speed.*

Float Level—11/64" from top of each float to gasket seat on cover with valve seated (invert to check). Fuel level even with bottom of inspection plug hole on side of bowl with engine idling.

Accelerating Pump—Outer hole (long stroke) normal setting.

Fast Idle Setting: .020" throttle opening (Gauge T109-29) with choke valve tightly closed. Adjust by turning fast idle adjusting screw.



Choke Setting: *CAUTION—Choke Modifier must be adjusted as part of choke setting adjustment.*

Carter (845S)—1 Point Rich. See Choke Modifier.

Choke Modifier Setting (845S): Disconnect throttle-to-choke rod, set choke 1 Point Rich (loosen retainer screws, rotate cover, tighten screws). Loosen modifier arm clampscrew, rotate metal pointer until it is in line with fixed pointer on cover, hold pointer in this position, rotate modifier arm until scribed line on face of arm is vertical, tighten clampscrew.

Throttle Linkage Adjustment (Hydra-Matic Cars): *See Hydra-Matic Linkage Adjustment in Transmission Section.*

Fuel Pump Pressure: 4-5¼ lbs. at carburetor.

1952 MODELS

1951 ROCHESTER 2-BARREL

Rochester BB, No. 7004200. Dual downdraft type.

►*POOR GASOLINE MILEAGE (Caused by Air Leaks due to cracking of Accelerator Pump Boot): See Carburetor Section for installation of improved boot.*

►*ROCHESTER CARBURETOR SETTING CHANGES (To Prevent Possibility of Stalling During Warm-up): Use latest settings as given below.*

Idle Setting—Screw idle adjustment needles and springs into throttle body until they are finger tight. Back out screw 1½ turns as a temporary idle adjustment, make final adjustment for smooth idling after engine warmed up.

Idle Speed—375 RPM (Hydra-Matic Trans.), 400 RPM (Synchro-mesh Trans.), with engine warm and Hydra-Matic lever in "Dr" position.

►*CAUTION—Use tachometer to set idling speed.*

Float Level: Use Gauge No. J-4715 installed over floats and resting on bowl cover gasket (cover and float assembly inverted) with locating tangs inserted in secondary venturis. Adjust each float so that it is centered in gauge cutout and just touches upper edge of cutout. Check and adjust Float Travel or Drop by holding cover and float assembly upright so that floats drop to bottom of travel, measure from underside of cover gasket to bottom of float which should be 1¾". Adjust by bending tang at rear of float.

Accelerating Pump—No seasonal adjustment.

Fast Idle Setting: With engine warm, rotate fast idle cam so that fast idle screw rests on high step of cam, adjust screw for engine speed of 1500 RPM.

Choke Setting: *CAUTION—Choke Modifier must be adjusted as part of choke setting.*

Setting—Centered (supersedes 2 Points Lean)..

Choke Modifier Adjustment—Back off idle stop screw and fast idle screw so throttle valves are fully closed, and loosen modifier lever retaining screw. Rotate index pointer counter-clockwise until choke valve closes. Index pointer should be close to scribed line on the thermostat cover at 75°. Set index pointer at scribed line (centered setting). With modifier lever pointing away from fuel inlet and throttle valve closed, tighten screws.

Throttle Linkage Adjustment (Hydra-Matic Cars): *See Hydra-Matic Linkage Adjustment in Transmission Section.*

Fuel Pump Pressure: 4-5¼ lbs. at carburetor.

1952 CARTER 4-BARREL

Carter WCFB, No. 896S. Four-barrel downdraft type with automatic choke. *See "Carter WCFB 4-Barrel" in Carburetor Section for complete data.*

►*ENGINE STALLING ON QUICK STOPS & SECONDARY THROTTLE STICKING CORRECTION: See Carburetor Section.*

►*FLOAT SETTING CHANGE & FLOAT PARTS PRODUCTION CHANGE: See Carburetor Section.*

Idle Speed—375 RPM. with selector lever in "Dr" position (Hydra-Matic Cars), 400 RPM. (Synchro-mesh Cars) with warm engine.

Other Settings—*See Carburetor Section.*

1952 ROCHESTER 4-BARREL

Rochester 4GC, No. 7004500. Four-barrel downdraft type with automatic choke. *See "Rochester 4GC 4-Barrel" in Carburetor Section for complete data.*

►*ENGINE CUTTING OUT ON SHARP TURNS OR STEEP HILLS: See Carburetor Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

▷*ROUGH IDLING (Caused by Improper Seating of Secondary Throttle Valves): See Carburetor Section.*

▷*POOR GASOLINE MILEAGE (Caused by Air Leaks due to cracking of Accelerator Pump Boot): See Carburetor Section for installation of improved type boot.*

Idle Speed—375 RPM. with selector lever in "Dr" position (Hydra-Matic Cars), 400 RPM. (Synchro-mesh Cars) with warm engine.

Other Settings—*See Carburetor Section.*

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Blocker type valve located between left bank exhaust manifold and cross-under pipe (diverts exhaust through bypass under intake manifold when valve closed).

▷*CAUTION*—Valve assembly must be installed with coil toward left side and dampener weight toward rear of engine.

VALVE TAPPET CLEARANCE: None in service (automatic hydraulic type tappet take-up).

IGNITION

▷*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

IGNITION SWITCH: Delco-Remy No. 1116470. Combination switch for ignition key starting.

COIL: Delco-Remy 1115380. Mounted on manifold directly in front of distributor.

Ignition Current—2.2 amperes (engine running).

CONDENSER: Delco-Remy Part No. 1869704.

Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy (1950) No. 1110820, (1951 to Eng. No. 13075) No. 1110829, (1951 beginning Eng. No. 13076) No. 1110833. Automatic and vacuum advance with "center bearing" breaker plate.

See "Delco-Remy Center-Bearing Breaker Plate Distributor" in Electrical Equipment Section.

Breaker Gap—.013-.018" (new), .010-.015" (used).

Cam Angle—31° ± 1½° (new), 28° ± 1½° (used). Test limits with .013" gap 28-34°.

▷*CAUTION—Car manufacturer recommends final check with feeler gauge or dial indicator if dwell-meter used to set contact gap.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance—1110820

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	400	0-3	800
8-10	1200	16-20	2400
14-16	1800	28-32	3600

Automatic Advance—1110829

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	500	1-4	1000
7.5-9	1050	15-18	2100
12-14	1550	24-28	3100
15-17	1850	30-34	3700

Automatic Advance—1110833

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	475	0-3	950
7-8.5	1100	14-17	2200
15-17	1850	30-34	3700

Vacuum Spark Control: Delco-Remy (1951 1110820 Distr.) No. 1116056, (1952 1110829 & 1110833 Distr.) No. 1116069. Integral type linked to breaker plate.

Plunger Travel—7/32" (1116056), ¼-17/64" (1116069)

Vacuum Advance—1116056

Distr. Degrees	Eng Degrees	Vacuum (" of HG)
Start	0	6-8
9-11	18-22	15

Vacuum Advance—1116069

Distr. Degrees	Eng Degrees	Vacuum (" of HG)
Start	0	6-8
10-11.5	20-23	16

Removal: Turn crankshaft to top dead center position for #1 piston (mark "/C" on vibration balancer in line with pointer on front cover), remove distributor cap, disconnect breaker lead and vacuum line, remove nut on hold-down clamp stud, hold rotor clockwise (against direction of rotation), lift distributor straight up to disengage drive tongue using care not to lose gasket or nick tongue.

▷**Installation Caution**—If distributor drive gear disturbed, see Oil Pump Installation data.

IGNITION TIMING

▷*DETONATION "PING" CORRECTION: See "Detonation Correction" in Cadillac Special Data.*

Standard Setting.....5° BTDC

Timing Mark—"A/" on vibration balancer (located 5° ahead of dead center mark "/C") in line with pointer on right side of engine front cover.

▷*IGNITION TIMING CAUTION—Timing should be checked for both No. 1 and No. 6 cylinders. First, set timing at "A" mark when checking on No. 1 cylinder, then check No. 6 cylinder. If light flashes before or after the "A" mark, set the distributor to divide the variance.*

Timing (Using Timing Light)—Loosen distributor hold-down clamp nut just enough to permit distributor adjustment, disconnect vacuum line (to prevent vacuum advance operating), connect timing light to #1 cylinder spark plug lead, direct light on right side of vibration balancer. Idle engine, rotate distributor until mark "A/" lines up with pointer on front cover, tighten hold-down clamp nut to 15-18 ft. lbs. Recheck timing, connect vacuum line.

Manual Adjustment—If detonation "Ping" noted with std. setting (above), timing can be retarded to "/C" mark on balancer (top dead center), by loosening hold-down clamp nut and rotating distributor counter-clockwise (in direction of rotation).

CARBURETOR

1951 CARTER 2-BARREL

Carter WCD, No. 845S. 1¼" Dual, downdraft type with automatic choke and Choke Modifier.

▷*DETONATION COMPLAINTS (Cars with 845S Carburetor): See "Carter WCD" in Carburetor Section and "Detonation Correction" in Cadillac Special Data. See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level & Accelerating Pump): *See Tune-Up data.*

Metering Jets & Rods: *See "Carter Downdraft Carburetor Jet Specifications" in Carburetor Section.*

Fast Idle: Carter Dual (WCD) Carburetor type.

Setting—.020" throttle opening (Gauge T109-29) with choke valve tightly closed. Adjust by turning fast idle adjusting screw.

See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Dual Carburetor). *CAUTION—Choke Modifier must be adjusted as part of choke setting.*

Setting—1 Point Rich.

Choke Modifier Setting (845S): Disconnect throttle-to-choke rod, set choke 1 Point Rich (loosen retainer screws, rotate cover, tighten screws). Loosen modifier arm clampscrew, rotate metal pointer until it is in line with fixed pointer on cover, hold pointer in this position, rotate modifier arm until scribed line on face of arm is vertical, tighten clampscrew.

See Carburetion Equipment Section for complete data.

Hydra-Matic Throttle Linkage Adjustment: *See "Cadillac Hydra-Matic Drive" in Transmission Section.*

1951 ROCHESTER 2-BARREL

Rochester Model BB, No. 7004200. Dual downdraft type with automatic choke and Choke Modifier.

▷*POOR GASOLINE MILEAGE (Caused by Air Leaks due to cracking of Accelerator Pump Boot): See Carburetor Section for installation of improved pump boot.*

▷*ROCHESTER CARBURETOR SETTING CHANGES (To Prevent Possibility of Stalling During Warm-up): See Tune-Up data for latest setting specifications. See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level & Accelerating Pump): *See Tune-Up Data.*

Metering Jets: *See "Rochester Carburetor Jet Specifications" in Carburetor Section.*

Throttle Return Check—(Rochester): *See Carburetion Equipment Section for complete data.*

Return Check Setting—Align adjusting screw on return check plunger with contact arm on throttle lever and bend return check mounting bracket, as necessary, to center adjusting screw on radius of contact arm. Open throttle valves partly by inserting 27/64" drill rod between pump rocker arm and return check mounting bracket on top of bowl cover (locate drill against head of air horn screw). Set plunger adjusting screw so that it just contacts throttle arm.

Automatic Choke: Rochester Dual "BB" type. *CAUTION—Choke Modifier must be adjusted as part of choke setting.*

Setting—Centered (supersedes 2 Points Lean setting originally specified).

Choke & Modifier Setting—Back off idle stopscrew and fast idle screw so throttle valves are fully closed, and loosen modifier lever retaining screw. Rotate index pointer counter-clockwise until choke valve closes. Index pointer should be close to scribed line on thermostat cover at 75°F. Set and hold index pointer at scribed line (centered setting). With modifier lever pointing away from fuel inlet and with throttle valves closed, tighten retainer screws.

See Carburetion Equipment Section for complete data.

Fast Idle: Rochester Dual "BB" type.

Setting—After choke modifier adjustment made (above) and with engine warm, rotate fast idle cam so that fast idle screw rests on high step of cam, adjust screw for engine speed of 1500 RPM.

See Carburetion Equipment Section for complete data.

Hydra-Matic Throttle Linkage Adjustment: *See "Cadillac Hydra-Matic Drive" in Transmission Section.*

1952 CARTER 4-BARREL

Carter WCFB, No. 896S. Four-barrel downdraft type with automatic choke. *See "Carter WCFB 4-Barrel" in Carburetor Section for complete data.*

▷*ENGINE STALLING ON QUICK STOPS & SECONDARY THROTTLE STICKING CORRECTION: See Carburetor Section.*

►*FLOAT SETTING CHANGE & FLOAT PARTS PRODUCTION CHANGE: See Carburetor Section.*

Idle Speed—375 RPM. with selector lever in "Dr" position (Hydra-Matic Cars), 400 RPM. (Synchro-mesh Cars) with warm engine.

Other Settings—*See Carburetor Section.*

1952 ROCHESTER 4-BARREL

Rochester 4GC, No. 7004500. Four-barrel downdraft type with automatic choke. *See "Rochester 4GC 4-Barrel" in Carburetor Section for complete data.*

►*ENGINE CUTTING OUT ON SHARP TURNS OR STEEP HILLS: See Carburetor Section.*

►*ROUGH IDLING (Caused by Improper Seating of Secondary Throttle Valves): See Carburetor Section.*

►*POOR GASOLINE MILEAGE (Caused by Air Leaks due to cracking of Accelerator Pump Boot): See Carburetor Section for installation of improved type boot.*

Idle Speed—375 RPM. with selector lever in "Dr" position (Hydra-Matic Cars), 400 RPM. (Synchro-mesh Cars) with warm engine.

Other Settings—*See Carburetor Section.*

CARB. EQUIPMENT

Air Cleaner: AC No. 1544741 (1951), No. 1551561 (1952). Heavy duty oil-bath type.
Filter Element—AC No. 20 (1951), 28 (1952).

Fuel Pump: AC. Combination fuel and vacuum type.
Replacement Pump—AC No. 9535 (1951 to Eng. No. 67000), No. 9648 (1951 after above No. and 1952).
Pressure—4-5¼ lbs. (at carburetor).
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1517657.
Tank Unit—AC No. 1517215 (all models).
See Carburetion Equipment Section for complete data.

BATTERY

STANDARD

Delco Type 17K4 (1951), Type 17K6 (1951-52). 6 volt, 17 plate, 115 ampere hour (20 hour rate).
Starting Capacity—137 amperes for 20 minutes.
Grounded Terminal—Negative (—) terminal connected to engine at starter mounting flange.
Location—In engine compartment on right hand side (mounted outside frame side rail).

COMMERCIAL MODELS

Delco Type 19Q4 (1951), Type 19Q6 (1951-52). 6 volt, 19 plate, 125 ampere hour (20 hour rate).
Starting Capacity—145 amperes for 20 minutes.
Grounded Terminal & Location—Same as Std. models above.

STARTER

Delco-Remy Model 1107969. Armature No. 1917855.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5500	5.7	80①
15 "	Lock	3.0	600

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118148 mounted on starter and controlled by Ignition & Starting Switch No. 1116470 (hold key full right against spring tension for starting).

►**Hydra-Matic Drive Car Starter**—Starter operative only with selector lever in Neutral "N", (Neutral Safety Switch connected in starter solenoid circuit).
Neutral Safety Switch (Hydra-Matic Drive Cars only)—Delco-Remy (1951) 1997879, (1952) 1998012.
NOTE—These switches are combined with backing light switch (separate backing light switch used on cars with Synchro-mesh Transmission).
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy	Generator No.	Armature No.
1951 (First)	1102700	1880550
1951 (Later)	1102770	1921621
1952	1102781	1921621

►*GENERATOR PRODUCTION CHANGE 1951—Beginning with Engine No. 68721 a new generator and regulator (rated at 45 amperes) was used in production. CAUTION—45 AMPERE REGULATOR MUST NOT BE USED WITH PREVIOUS TYPE 40 AMPERE GENERATOR.*

Two brush type with voltage and current regulation.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—40-46 amperes reached at 28 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

Performance Data

	Amperes	Volts	R.P.M.
1102700 (Cold)	40①	8.0	2150
1102770, 81 (Cold)	45①	8.0	2450

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs. each.
Field Current—1.87-2.0 amperes at 6.0 volts.

Belt Adjustment: Tighten belt to 24 ft. lbs. torque measured as follows: Loosen both pivot bolts and adjusting strap screw, install Fan Belt Adjusting Tool J-3046 on head of lower front mounting bolt, rotate tool until arm contacts edge of generator end plate. Use ⅞" socket and torque wrench on tool to pull generator out away from engine until 24 ft. lb. reading secured on wrench, tighten adjusting strap screw, remove tool and tighten pivot bolts to 15-18 ft. lbs. torque.

Generator Charge Indicator: Consists of red light to right of mileage indicator on instrument panel. Lights when ignition turned on, goes out when generator begins to charge.

REGULATOR

Delco-Remy	Regulator No.	For Generator
1951 (First)	1118357	1102700
1951 (Later)	1118727	1102770
1952	1118725	1102781

►*REGULATOR PRODUCTION CHANGE 1951—45 amp. regulator and generator went into production beginning Engine No. 68721. DO NOT USE 45 AMPERE REGULATOR WITH PREVIOUS TYPE 40 AMPERE GENERATOR.*

►*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator

Setting (1118357)—40-46 amperes hot (set to 42).
Setting (1118727 & 1118725)—47-51 amperes hot, (set to 47 amperes hot).
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—At center of panel above speedometer. Lighted when country (upper) beam in use.

Autronic Eye: Automatic headlight beam control.
See Electrical Equipment Section for complete data.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicators—Left & Right Turn Indicator located at either end of speedometer dial. Lights when direction signal on same side of car operating (Stop Light flashes at rear).

Switches

Lighting—Delco-Remy. ('51) 1995047, ('52) 1995051.
Instrument—Part of lighting switch (rheostat operated by rotating light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Directional Signal—Delco-Remy (1951) No. 1995558, (1952) No. 1995568.
Backing Light (Synchro-mesh Trans. Cars)—Delco-Remy. (1951) 1997774, (1952) 1998016. *NOTE*—Backing Light Switch on Hydra-Matic Cars combined with Neutral Safety Switch.
Stop-Lite Switch—Delco-Remy No. 1997901. Mechanical type, located under toe-board and operated by contact with foot brake lever.

MISC. ELECTRICAL

FUSES: Fuses located on Fuse Panel on cowl insulation board under instrument panel (to left of center line of car) except as noted:
Direction Signal—9 ampere.
Backing Light—14 ampere.
Clock, Map, & Courtesy Lights (1952)—14 ampere (same fuse as Stop Light).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Stop Light (1952)—14 ampere.
Heater & Defroster—30 ampere. *NOTE*—Individual 14 ampere fuses located on control switches.
Spot Light—14 ampere. On defroster opening cover under engine hood.
Radio—14 ampere.

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999639 or 1999675 (Low Note), No. 1999640 or 1999676 (High Note). Twin horns.

Type	Current (at 6 volts)	Air Gap
1999639, 75 (Low)	19-21 amperes	.045-.049"
1999640, 76 (High)	17-19 amperes	.035-.039"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: 90° V8 with Overhead Valves. Both cylinder blocks and crankcase cast Enbloc.
Bore—3 13/16" (3.8125-3.8145").
Stroke—3⅝". **Displacement**—331 cu. ins.
Rated Horsepower—46.5.
Developed Horsepower (1951)—160 at 3800 RPM.
Developed Horsepower (1952)—190 at 4000 RPM.
Compression Ratio—7.5-1.
Compression & Vacuum Reading—*See Tune-Up.*

TIGHTENING TORQUES: *See Cadillac Special Data.*

CYLINDER HEAD INSTALLATION: *See Cadillac Special Data.*

ENGINE REMOVAL: *See Cadillac Special Data.*

OIL PAN REMOVAL: *See Cadillac Special Data.*

PISTONS: Aluminum alloy, 3 ring, T-T slot tin plated "Slipper-Skirt" type (skirt cutaway at pin bosses). *NOTE*—Limits for new or rebored cylinders: Taper .0007", Out-of-round .0005".

Original Piston & Bore Sizes—*See Cadillac Special Data.*
Weight—19.296 ozs. (without rings or pin).
Length—3 15/16".
Removal—Pistons and rods removed from above.
Clearance—.0013-.0017" at 70° measured ⅛" below upper cross slot and at right angles to piston pin.

Replacement Pistons: *See Cadillac Special Data.*

Fitting New Pistons: Use micrometer or feeler gauges. *See Cadillac Special Data.*

Installing Pistons: Mark "REAR" on piston pin boss toward right (#1, 3, 5, 7), toward left (#2, 4, 6, 8) of number on boss on connecting rod when facing this numbered boss end of rod. Install pistons with mark "REAR" toward rear of engine on all pistons.

PISTON RINGS: Two compression, one oil control ring per piston, all above pin. Oil ring slotted type with oil drain holes in groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	5/64"	.010-.020"	.0017-.0035"
Oil Contr. (#3)	3/16"	.010-.020"	.0008-.0026"

Installing Rings—Beveled inner edge of compression rings must be upward.

PISTON PIN: Diameter 1". Length 3 3/32". Pin is locked in rod (press fit in rod—no locking rings).
▷*PIN REMOVAL & INSTALLATION CAUTION—Requires special tools and procedure. See "Piston Pins" in Cadillac Special Data.*
Pin Fit in Piston—.00005-.0001" at 70°F (new), .0007" (worn limit). Pin should be light push fit at 70° with no perceptible play.
Pin Fit in Connecting Rod—25 ft. lbs. minimum torque on puller screw should be required to start pin in rod. *See Piston Pins in Cadillac Special Data.*
Fitting Pins—*See Cadillac Special Data.*

Replacement Pins: Fitted pins furnished with new pistons. Pins not furnished separately.

CONNECTING ROD: Length 6⅝". Weight 23.95 ozs.
Crankpin Journal Diameter—2.2488-2.2493" (out-of-round limit .00025" maximum). Connecting rod diameter (without bearing) 2.3740-2.3745".
Lower Bearing—Removable steel-backed, Moraine-Durex lined type. No shims.
Clearance—.0005-.0020" (new), .0045" (worn limit).
Sideplay—.008-.014" (total both rods).

Bearing Adjustment: None. Replace bearings.
▷*CAUTION*—Tang on bearings must register with grooves in rod and cap and oil spit hole register with oil groove in bearing cap (for cylinder wall lubrication).

Installing Rods: Cylinder No. mark on rod and cap (on small boss on end) must be together and installed in same numbered cylinder with piston mark "REAR" toward rear of engine (lubrication groove in rod cap will be on upper side).

CRANKSHAFT: 5-bearing, integral counterweights.
Removal & Installation—*See Cadillac Special Data.*
Journal Diameters—2.4985-2.4990" all bearings (out-of-round limit .00025" maximum).
Bearings—Removable, steel-backed, Moraine-Durex lined type. No shims.
Clearance—.0008-.0025" (new), .005" (worn limit).

Bearing Adjustment: None. Replace bearings.
▷*CAUTION*—Bearing caps must not be interchanged. Install caps with marking numbers (not casting nos.) on left side and in order from front-to-rear.

End Thrust: Taken by flanged rear (#5) bearing.
Endplay—.001-.005" (new), .010" (worn limit).

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

FLYWHEEL Removal & Installation—*See Cadillac Special Data.*

CAMSHAFT: 5-bearing, Cast-iron type with non-adjustable chain drive.
▷*CAUTION*—Handle shaft with care to avoid damage or misalignment. Check whenever removed.
Removal, Alignment & Installation—*See Cadillac Special Data.*
Bearing Type—Steel-backed, babbitt bushings.
Clearance—.001-.0022" (new), .004" (worn limit).

Timing Chain: Link-Belt side-guide type. Width 11/16". Pitch .500". Length 23" or 46 links.
Timing Chain Removal—*See Cadillac Special Data.*
▷*CAUTION*—Install chain "endless" and as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

Camshaft Setting: Both sprockets marked "0". Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.745-1.755"	3415-.3425"	①4⅝"
Exh. (1951)	1.4325-1.4425"	3415-.3420"	①4⅝"
Exh. (1952)	1.5575-1.5675"	3415-.3420"	②4⅝"

	Seat Angle	Lift	Stem Clearance
Intake	44°③	.327"	④.0005-.0025"
Exh. (All)	44°③	.327"	④.0010-.0025"

①—4.539-4.559".
②—Eaton Valves 4.529-4.544". Rich Valves 4.539-4.559".
③—New Valves (valves in service can be refaced to 45° if seat width recommendations not exceeded).
④—New valves and guides. Worn limit .005" max.

▷*STICKING VALVE CORRECTION—See Valve System in Cadillac Special Data.*

▷**Valve Seat Width Recommendations**—3/64-1/16" (moderate speeds or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head is not more than 1/32".

▷*CAUTION*—Do not lap new valves in so that seat width is more than 1/64" (1° difference between valve and block angle designed to provide "hairline" contact).

▷**Valve Stem Oil Seal**—New rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation—*See "Valve Removal & Installation" in Cadillac Special Data.*

Valve Removal & Installation: *See "Valves" in Cadillac Special Data.*

Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover tool J-3062 to drive old guides out toward top of head, Installer tool J-3066 to drive new guides in (tool plate serves as stop for driver).

Valve Springs: Free length 1.968".

	Pressure	Length
Valve Closed	57.5-62.5 lbs.	1.696"
Valve Open	130-140 lbs.	1.366"

▷*CAUTION*—Lower end of spring must seat in recess in cylinder head.

Valve Lifters: New hydraulic type which maintains zero tappet clearance in service. Lifters operate in guide holes integral with block.
Lifter Clearance in Crankcase—.0010-.0023".
See "Valve System" in Cadillac Special Data.
Valve Lifter Removal—*See Cadillac Special Data.*

Rocker Arms: Rocker arm and shaft assemblies are mounted on each cylinder head. NOTE—No adjusting screws provided on rocker arms.
Rocker Arm Installation—*See Cadillac Special Data.*

VALVE TIMING

Tappet Clearance: None in service (hydraulic type lifters which maintain zero clearance).

Valve Timing: *See Camshaft Setting above.*
Intake Valves—Opens 14° BTDC. Close 58° ALDC.
Exhaust Valves—Opens 48° BLDC. Close 24° ATDC.
Valve Timing Check—Not practical to check in field. Manufacturer recommends removing timing chain cover and check timing marks.

LUBRICATION

Engine Oiling System: Pressure to main bearings, connecting rod lower bearings, camshaft bearings, and hydraulic valve lifters (from right and left oil channels in block); and to rocker arms (through hollow rocker arm shafts). Timing chain lubricated by oil return from forward end of right hand cylinder head (return line from rear of right block and front and rear of left block lead directly to crankcase).

Oil Pan Removal: *See Cadillac Special Data.*
Crankcase Capacity—5 quarts.
Normal Oil Pressure—25 lbs. min. at 30 MPH, 15 lbs. with engine idling.
Oil Pressure Regulator—Located on oil pump. Opens at 30 lbs. Not adjustable.
Pressure Regulator Spring—Free length 2 27/64". Pressure should be 4.3-4.8 lbs. at 1 7/16".

Oil Pump: Gear type. In crankcase at rear of engine.
Pump Removal & Overhaul—*See Cadillac Special Data.*

►**Pump Installation Caution**—Flat on upper end of pump driveshaft must engage flat in distributor drive gear in valve compartment. If drive shaft and gear disturbed when pump removed, install pump and driveshaft with distributor gear out, turn crankshaft until #1 piston at TDC entering power stroke, with vibration dampener mark "C" at indicator, install distributor drive gear on end of pump drive shaft engaging shaft flat in gear, turn gear and shaft until flat is on right side and parallel with engine centerline, then mesh gear with camshaft gear. Distributor drive slot in upper end of gear should be approx. 15° to right of engine centerline.

Oil Pressure Switch: AC No. 1997884. Sending unit mounted on engine operates warning light on instrument panel.

Crankcase Ventilation: Air intake in oil filler cap (oil-wetted type cleaner) with outlet connection at rear of valve compartment cover and outlet pipe extending down below engine at right rear corner.
Servicing—Wash filter element in gasoline and re-oil by dipping in engine oil whenever crankcase oil changed (every 2000 miles).

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap. Re-circulation with thermostat closed provided by by-pass in pump body.
Capacity—(1951) 18 qts. (1952) 19 qts. *NOTE*—1 qt. additional with heater.
Pressure Cap—AC No. 850559 (marked 859/13#). Radiator Filler Cap. Opens at 12-15 lbs.

Radiator Removal: *See Cadillac Special Data.*

Water Pump: Packless type with ball bearing shaft.
See Water Pump Section for complete data.
Removal—Drain cooling system. Loosen and remove generator drive belt. Remove upper and lower radiator hoses (and heater hose). Take out eight capscrews mounting pump and water manifold assembly on front of engine, lift out pump and fan.
NOTE—Water manifold and thermostat are part of pump body casting.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In water outlet connection on top of pump.

	Starts to Open	Fully Open
1951 Std. Type	167-169°F.	190-195°F.
1952 Std. Type	163-168°F.	188°F.
1951 High Temp.	175-177°F.	205-210°F.
1952 High Temp.	177-182°F.	202°F.

Temperature Gauge: AC Electric type.
Dash Unit—AC No. 1512323.
Engine Unit—AC No. 1512015.
See Miscellaneous Section for complete data.

CLUTCH

Long 11CF-10½TI (60S, 61, 62) 11CF-TI (75, 86). Semi-centrifugal, single plate, dry disc type.
See Clutch Section for complete data.

Facings—Woven type. I.D. 7" (all), O.D. 10½" (60S, 61, 62), 11" (75, 86). Thickness .137" (all).

Pedal Adjustment: Pedal free travel ⅞-1⅛". Adjust by turning nut on connector rod at clutch fork.

Removal: Remove transmission (see Transmission Removal), remove starter, remove lower flywheel housing, remove clutch release yoke-to-lever rod. Remove flywheel housing with clutch release yoke, release bearing, and bearing retainer as an assembly. Punch mark flywheel and clutch cover to insure correct re-installation. Take out six clutch cover mounting screws (CAUTION—turn all screws out evenly to relieve spring pressure), lift clutch and driven member out.

►**Driven Member Installation Caution**—Oil guard must be toward rear.

►**Replacement Clutch Caution**—Clutches furnished with locking pin or block at each release lever. *These locking pins must be removed when clutch installed.*

Clutch Balancing—*See Cadillac Special Data.*

TRANSMISSION

SYNCHRO-MESH

Own Make. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse), all helical gear type with remote shift control.
See Transmission Section for complete data.

Transmission Control: Remote control type mounted on steering column.
See Transmission Section for complete data.

Removal: Support engine on stand, Tool No. J-3068, or use jack under rear end of oil pan (use block of wood on jack to prevent damage to pan). Disconnect rear universal joint, remove propeller shaft. Disconnect speedometer cable and shift rods at levers on transmission case. Disconnect rear engine support at transmission extension housing and remove cross-member on which support mounted. Loosen transmission mounting capscrews (CAUTION—support transmission so that it does not hang on driveshaft in clutch), remove screws, move transmission straight back to free shaft from clutch (CAUTION—plug clutch connection shaft oil drain hole as soon as accessible to prevent loss of lubricant), lower front end of transmission and remove from car.

HYDRA-MATIC TRANSMISSION

Own Make. Consists of Fluid Coupling and automatic self-shifting four-speed type. All models have "Modulated Throttle Pressure" and Hydraulically Controlled "cone type clutch" Reverse.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TROUBLE SHOOTING & TESTING: See "Hydra-Matic Drive" in Transmission Section.*

►*OIL LEAKAGE CORRECTIONS—See "Hydra-Matic Transmission" in Transmision Section for complete data.*

►*SELECTOR LEVER STICKING IN REVERSE CORRECTION—See "Hydra-Matic Transmission" in Transmission Section for complete data.*

►*BUZZING NOISE WHEN SHIFTING INTO REVERSE (1951)—See "Hydra-Matic Transmission" in Transmission Section for complete data.*

Lubrication—Check fluid level in transmission every 2000 miles along with car lubrication. Drain and refill after 6000 miles and every 25000 miles thereafter. Use only "Cadillac Hydra-Matic Fluid."
Draining & Refilling—*See "Hydra-Matic Drive" in Transmission Section.*
Capacity—Approximately 11 qts. (refill).
Checking Fluid Level—Clean all sand, lint, and dirt away from sheet metal cover in floor under right front corner of front compt. rug. Run engine for approx. 1½ minutes at speed equivalent to 20 MPH. with selector lever in "Neutral". Remove sheet metal cover from floor for access to dip stick, reduce engine speed to slow idle, measure fluid level with dipstick, add fluid as necessary to bring level up to "FULL" mark on dipstick.

►*CAUTION—Engine must be running at slow idle speed when checking Hydra-Matic Drive fluid level.*

Linkage Adjustment: *See Hydra-Matic Drive Linkage Adjustment in Transmission Section.*

►*OTHER HYDRA-MATIC DATA: See Transmission Section.*

UNIVERSALS

Mechanics Model 3-RCR. Needle bearing type. Two used (three on Comm'l cars with center bearing).

►*CAUTION*—Do not disturb nut on end of pinion shaft retaining rear universal yoke unless yoke or oil seal being replaced. *Pinion bearing pre-load must be adjusted whenever this nut disturbed.*

Propeller Shaft (Pass. Cars): One shaft used (no slip joint—front universal yoke slides on transmission mainshaft in extension housing).
(Commercial Cars)—Two shafts used with center bearing at rear of front shaft. Slip joint provided at rear end of rear shaft.

Pinion Bearing Pre-load Adjustment: Should be adjusted whenever nut on end of pinion shaft disturbed (for universal yoke or oil seal replacement).
See Rear Axle Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REAR AXLE

Own Make. Hypoid gear, semi-floating type with Hotchkiss Drive.

See Rear Axle Section for complete data.

►*CAUTION*—Manufacturer recommends that Carrier Assembly be serviced by replacement. Do not disassemble this unit or attempt service work other than oil seal and universal yoke replacement.

►**Axle Identification**—Axles marked by number stamped on bottom of differential case below center of pinion shaft as indicated in ratio table below.

Rear Axle Ratios

Series	Ratio	Ident. Mark
60S, 61 62	3.36-1①	6
75	3.77-1②	7
86	4.27-1	4

①—3.07-1 Opti. in 1952.
②—4.27-1 used with Synchro-mesh Transmission.

►**Pinion Bearing Pre-Load Caution**—Must be readjusted each time pinion shaft nut loosened. *See "Cadillac Hypoid" in Rear Axle Section.*

Backlash—.003-.010" Screw Adjustment.

Removal: Disconnect propeller shaft at rear universal joint, lower shaft out of the way. Drain rear axle. Remove axle shafts (see below). Remove nuts and washers on carrier mounting bolts, lift out carrier.

Axle Shaft Removal: Remove wheel. Take out two screws holding brake drum on axle shaft flange, remove drum. Remove nuts and lockwashers from four bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer Tool J-2619 to remove axle shaft.

►*CAUTION*—Use care not to damage axle shaft oil seal when sliding shaft out and do not disturb position of backing plate on housing.

(Commercial Cars)—Remove wheel, remove nut and washer on end of shaft. Use puller (Snap-On No. S-4567 or similar 5-jaw type) to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out using care not to damage oil seal in housing.

Wheel Bearings: Sealed ball-bearing type.

►*CAUTION*—Check bearings for loss of lubricant when shaft removed. If bearing spins freely indicating loss of lubricant, install new bearing.

SHOCK ABSORBERS

Delco—Direct acting permanently sealed, airplane type located within coil springs (front), "Sea-Leg" type installation (rear) as follows:

Shock Absorber Part Nos.

Series	Front (1951-52)	1951—Rear—1952
60S, 62	872-F	871-Y 873-Y
61 ('51 Only)	852-F	871-Y
75, 86	968-G	961-BB 967-BB

FRONT SUSPENSION

Front Suspension: Independent type with new airplane direct acting shock absorbers located inside coil springs.

See Front Suspension Section for complete data.

NOTE—Specifications below correct with car at curb weight (car unloaded with full gas tank).

Kingpin Inclination—5°51' crosswise (0° Camber).

Caster—Neg. ½° to Pos. ½°. Equal within ½°.

Camber—Neg. ⅜° to Pos. ⅜°. Equal within ½°.

Toe In—1/32-3/32" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

Steering Geometry (Toe-out on turns)—Outer wheel turned 20°. Inner wheel as follows:

	Left Turn	Right Turn
60S, 61, 62	25°25'	24°42'
75, 86 Comm'l	24°7'	23°6'

STEERING GEAR

Saginaw. Ball bearing Worm-and-Nut type (re-circulating ball type).

See Steering Gear Section for complete data.

BRAKES

Service: Bendix Hydraulic Duo-Servo, Single Anchor type without eccentric adjustment. Hand lever applies rear wheel service brakes.

1951 "SELF-ADJUSTING" BRAKE ANCHOR PINS (SERIES 60S, 61, 62): Anchor pins are spring-loaded slipper type and are self-adjusting (brake application tends to move anchor pin upward to center brake shoes in drum). *NO ANCHOR PIN ADJUSTMENT REQUIRED FOR THESE BRAKES.*

See Brake Section for complete data.

Drums—Centrifuse (cast-iron, steel back).

	Front—Diameter—Rear
60S, 61, 62 (1951)	11"① 11"①
60S, 62 (1952)	12"② 11"①
75, 86 (1951-52)	12"② 12"②

①—10.995-11.005". ②—11.995-12.005".

NOTE—Drum out-of-round limits is .007" and re-machining limit (to true up drums) is .060" maximum (use .030" Oversize lining for these drums).

Lining—Molded type (all models).

Width—2½". **Thickness**—(1951) 3/16", (1952) 1/4".

Lining Length— (Per Shoe)	Front Whls. Fwd.	Front Whls. Rev.	Rear Whls. Fwd.	Rear Whls. Rev.
60S, 61, 62 ('51)	10.55"	11.90"	10.55"	11.90"
60S, 62 ('52)	12.92"	12.92"	10.55"	11.90"
75, 86 ('51-52)	12.92"	12.92"	12.92"	12.92"

Fwd.—Forward or Primary (front) shoe.
Rev.—Reverse or Secondary (rear) shoe.

Clearance—.007-.010" at each end of each shoe or .015" at both ends of secondary shoe with primary shoe forced out against drum.

Braking Power—55.8% Front, 44.2% Rear (60S, 61, 62, 75); 50% Front, 50% Rear (86 Comm'l).

Hand (Parking) Brake: See Service Brakes above.

MISC. MECHANICAL

Power Operated Convertible Tops, Windows, & Front Seat: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).

See Miscellaneous Section for complete data.

Windshield Wiper: Cable Operated—Vacuum type.

See Miscellaneous Section for complete data.

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system. See "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*NOTE: Electrical System is 12 Volt.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on upper right corner on the front face of the right hand block, on right frame side member just to rear of engine support bracket, and on the plate on front side of left body pillar.

Starting Serial Numbers

Series	1953	1954
60S	536000001	546000001
62	536200001	546200001
75	537500001	547500001
86 Commercial	538600001	548600001

Identification—First two figures indicate year, third and fourth indicate model (last five figures are numbered consecutively regardless of series).

Engine Unit Number Note: Use for identification. Stamped on top of crankcase to rear of left hand block with prefix indicating model:

1953 Models

Series	Prefix
60S, 62, 75 (Hydra-Matic)	9S
60S, 62, 75 (Hydra-Matic & Power Steering)	4S
75, 86 (Synchro-mesh)	2S
86 (Hydra-Matic)	7S
86 (Hydra-Matic & Power Steering)	5S

1954 Models

60S, 62, 75 (Standard)	4-T-1 Up
60S, 62, 75 (Air Conditioning)	4-TK-1 Up
86 (Standard)	7-T-1 Up
86 (Air Conditioning)	7-TK-1 Up
86 (Power Steering)	5-T-1 Up
86 (Power Strg. & Air Cond.)	5-TK-1 Up

►*ENGINE NUMBER NOTE*—"L.C." will be added as a suffix to engine unit numbers on all engines built to low compression specifications.

NOTE—Mark • preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

►*1953 CADILLAC HIGH SPEED SURGE ON CARS WITH ROCHESTER CARBURETOR (At 60-70 MPH. in "Dr. 3"): See "Rochester 4GC 4 Barrel" in Carburetor Section.*

►*1953 CADILLAC CROSSFIRE PREVENTION (First Cars):* On cars prior to Eng. No. 00657, it is recommended that **two center** spark plug wires in bracket on left side of engine be interchanged in both grommets, retaining the parallel routing of the wires and crossing the wires between the grommets and the spark plugs. This will separate No. 5 and No. 7 wires and prevent cross-firing between them (new wire arrangement 1-5-3-7; old arrangement 1-3-5-7).

►*1953 IGNITION SHORTING OUT ON FIRST CARS (Due to shorting of Radio Suppression Condenser Lead):* On first cars with condenser lead at coil terminal pointing toward coil resistor unit, lead may become pinched between resistor and coil body developing a short circuit. On cars before Engine No. 01700, this can be prevented by reversing condenser leads on coil terminal so that lead points away from resistor.

►*1954 CADILLAC STALLING (AFTER COLD START) CORRECTION: Fast idle throttle clearance between plate and bore increased from .023" to .026". See "Rochester 4GC 4-Barrel Carburetor" in Carburetor Section for complete data.*

COMPRESSION PRESSURE: 150 lbs. at cranking speed.

VACUUM READING: Not specified (varies with altitude and barometric pressure).

VALVE TAPPET CLEARANCE: None in service (Hydraulic lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Valve diverts exhaust gases of left cylinder bank through carburetor heating passage in intake manifold to right hand exhaust system.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2. *See diagram.*

SPARK PLUG GAP: .035".

Spark Plug—AC No. 46-5, 14mm. *NOTE*—AC No. 44-5 (cooler plug) can be used if electrodes burn excessively.

COIL: Delco-Remy 1115082. 12 Volt.

Ignition Current—1.25 amperes idling, 3 stopped.

Resistor—Delco-Remy 1927809. On coil bracket.

►*COIL RESISTOR NOTE—Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy No. 1110835 (1953), No. No. 1110844 (1954). 12 Volt.

Condenser—Delco-Remy 1869704. Capacity—.18-.23 mfd.

Contact Point Set—Delco-Remy No. 1918148.

Breaker Gap—.016" (new & used points).

Cam Angle—26° - 33°.

►*BREAKER GAP CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Distributor Degrees	Distributor RPM	Engine Degrees	Engine RPM
0-1.5	500	0-3	1000
7-9	950	14-18	1900
9-11	1450	18-22	2900
11-13	1950	22-26	3900

Vacuum Spark Control: Delco-Remy 1116074.

Plunger Travel—19/64-5/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6.5-9
13-14.5	26-29	16-17

IGNITION TIMING

Setting—2½° BTDC. *CAUTION—Ignition timing mark "A" is 5° BTDC and does not indicate timing point. DO NOT set at timing point "A".*

Timing Mark—With engine idling at 400 RPM, set timing at point HALF-WAY BETWEEN "A" and "C/" marks on vibration dampener in line with pointer on chain case cover.

►*CAUTION*—If fuel less than 80 Octane Rating used and detonation ping noted, timing may be retarded to "C/" mark on dampener (top dead center).

►*IGNITION TIMING NOTE—Timing should be checked for both No. 1 and No. 6 cylinders. First set timing for No. 1 cylinder (at point half-way between "A" and "C/" marks), then check timing on No. 6 cylinder. If light flashes before or after the No. 1 cylinder firing point, set distributor to divide the variance.*

CARBURETOR

►*CARBURETOR APPLICATION: "Carter" and "Rochester" 4-Barrel Carburetors used on all models.*

►*1953-54 REPLACEMENT CARBURETOR (Carter WCFB-2043S): See "Carter WCFB 4-Barrel" in Carburetor Section.*

►*IDLE SPEED (AIR CONDITIONED CARS)—Summer and Winter Idle Speed Adjustment is different and must be made as follows:*

Summer Setting (Air-Conditioner in Operation)—With transmission selector lever in either "Dr" range, and with Air-Conditioner "ON", set idle speed at 400 RPM.

Winter Setting (Air-Conditioner not in Operation)—With transmission selector lever in either "Dr" range, and with Air-Conditioner "OFF", set idle speed at 400 RPM.

Idle Speed-Up Control Adjustment (Cars With Air Conditioning)—With engine at normal operating temperature and slow idle adjustment completed (see above), turn air-conditioner "ON", and place transmission selector lever in "N" neutral position. Adjust engine idle speed to 900 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM. Tighten locknut.

Throttle Linkage Adjustment: 1) Disconnect throttle rod at throttle lever on transmission case. Check lever position by installing checking gauge J-3065-A on rear face of transmission case with long leg of tool extending forward along left side of case. Move throttle lever to extreme rear position. Insert clevis pin through hole in lever and hole in checking gauge. If pin does not enter hole in gauge freely, bend lever as required using bending tool J-2029. Remove gauge, connect throttle rod to lever.

CONTINUED ON NEXT PAGE

2) Disconnect carburetor throttle rod at dash relay lever by removing spring clip and freeing trunnion from lever. Install ¼" drill rod through hole in relay lever and hole in bracket to position lever. See that throttle lever in correct hot or slow idle position and set for correct idling speed of 400 RPM (maximum) all models. Adjust trunnion on rear end of throttle rod until it enters relay lever freely, connect trunnion and install spring clip. Back off both nuts on throttle rod at carburetor throttle lever, push on end of rod so that transmission throttle lever and valve is against stop (in transmission), turn rear nut on throttle rod up against the throttle lever trunnion, then back the nut off 3 **complete turns,** finally tighten the front nut on the rod securely against trunnion. Check to see that linkage moves freely. Remove drill rod from relay lever. Check and adjust accelerator pedal position.

3) Depress pedal fully and see that it touches floor mat with slight pressure when carburetor throttle valve wide open *(NOTE–*If floor mat removed, allow ½" clearance between pedal and floor in wide open position). Adjust pedal position as required by changing length of pedal to relay lever rod (adjust trunnion located at pedal end of rod).

CARTER WCFB

Carter Model WCFB. Four barrel downdraft type with automatic choke control. *NOTE–Idle Speed-up Control used with Air Conditioned Cars. Throttle Return Check used with Dynaflow Cars.*

Carter Carburetor Application

Car Model	Carter No.
1953 (Without Air-Cond.)	2005S,SA
1953 (Hydra-Matic & Air Cond.)	2072S
1953 (Dynaflow & Air-Cond.)	2119S,SA
1953 (Dynaflow, Without Air.Cond.)	2088S
1953-54 (Replacement Carburetor) ①	2043S
1954 (Except Air Cond.)	2109S
1954 (Air Conditioned)	2110S

①–This carburetor is a service replacement for 2109S & 2110S carburetors. Unitized Package No. 202-44U (containing Speed-up Control) must be used on Air Conditioned Cars.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

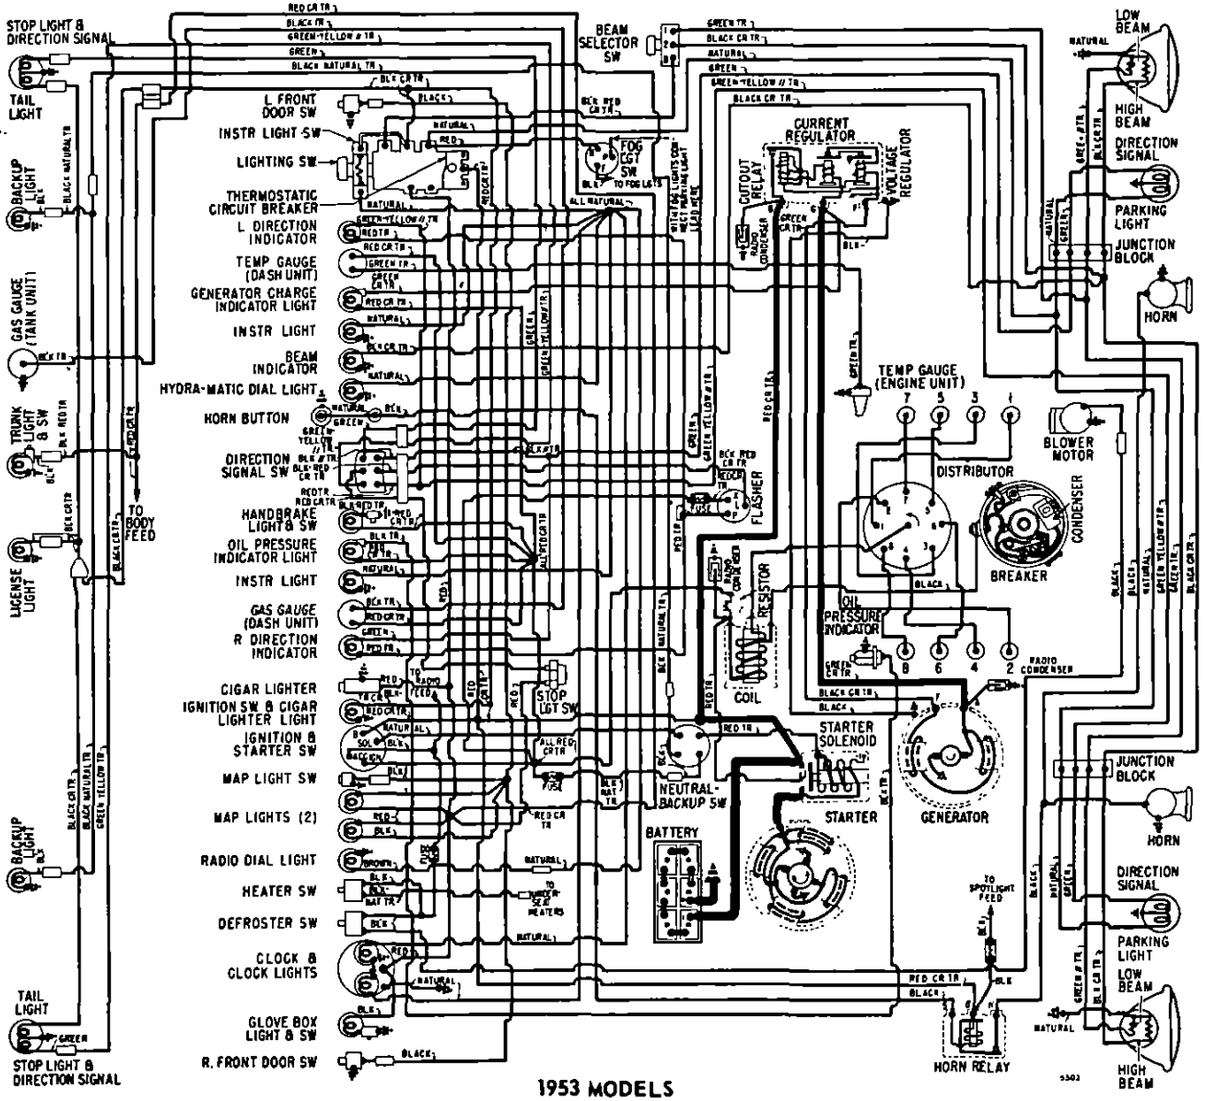
Idle Setting–¾-1¾ (Exc. 2005S, SA, 2072S); 1¼-2¼ (2005S, SA, 2072S) turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed–400 RPM maximum (with selector lever in "Dr" range on Hydra-Matic Drive Cars). *For "Idle Speed Setting" and "Idle Speed-up Control" on Air-Conditioned Cars see "Carburetor" above.*

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

Idle Speed-Up Control (Air Conditioned Cars): *See "Carburetor" above.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*



Throttle Return Check Adjustment (1953 Dynaflow Cars): With engine at normal operating temperature and carburetor adjusted to correct idle speed, loosen the locknut on the throttle return check mounting stud and turn the return check in, or out, as necessary to obtain .047" clearance between the throttle lever tang and the return check plunger (throttle lever must be in normal position and the throttle check plunger fully seated when adjusting for this clearance). Check operation by placing transmission in "Dr" range, apply brakes, and increase engine speed. Quickly release the throttle. If engine should stall, decrease the above clearance. If engine fails to return to idle immediately, increase the above clearance.

Fuel Pump Pressure: 3½-5¼ lbs., at idle speed (1953); 4-5½ lbs., at 1800 RPM (1954).

ROCHESTER 4GC

Rochester 4GC. Four barrel downdraft type with automatic choke control. *NOTE–Idle Speed-up Control used with Air Conditioned Cars. Throttle Return Check used with Dynaflow Cars).*

1953 MODELS

CONTINUED FROM PRECEDING PAGE

Rochester Carburetor Application

Car Model	Rochester No.
1953 (Hydra-Matic)	7005100
1953 (Dynaflow)	7006215
1954 (Exc. Air Conditioned) ①	7006220
1954 (Air Conditioned) ①	7006221
1954 (Exc. Air Conditioned) ②	7006962
1954 (Air Conditioned) ②	7006963

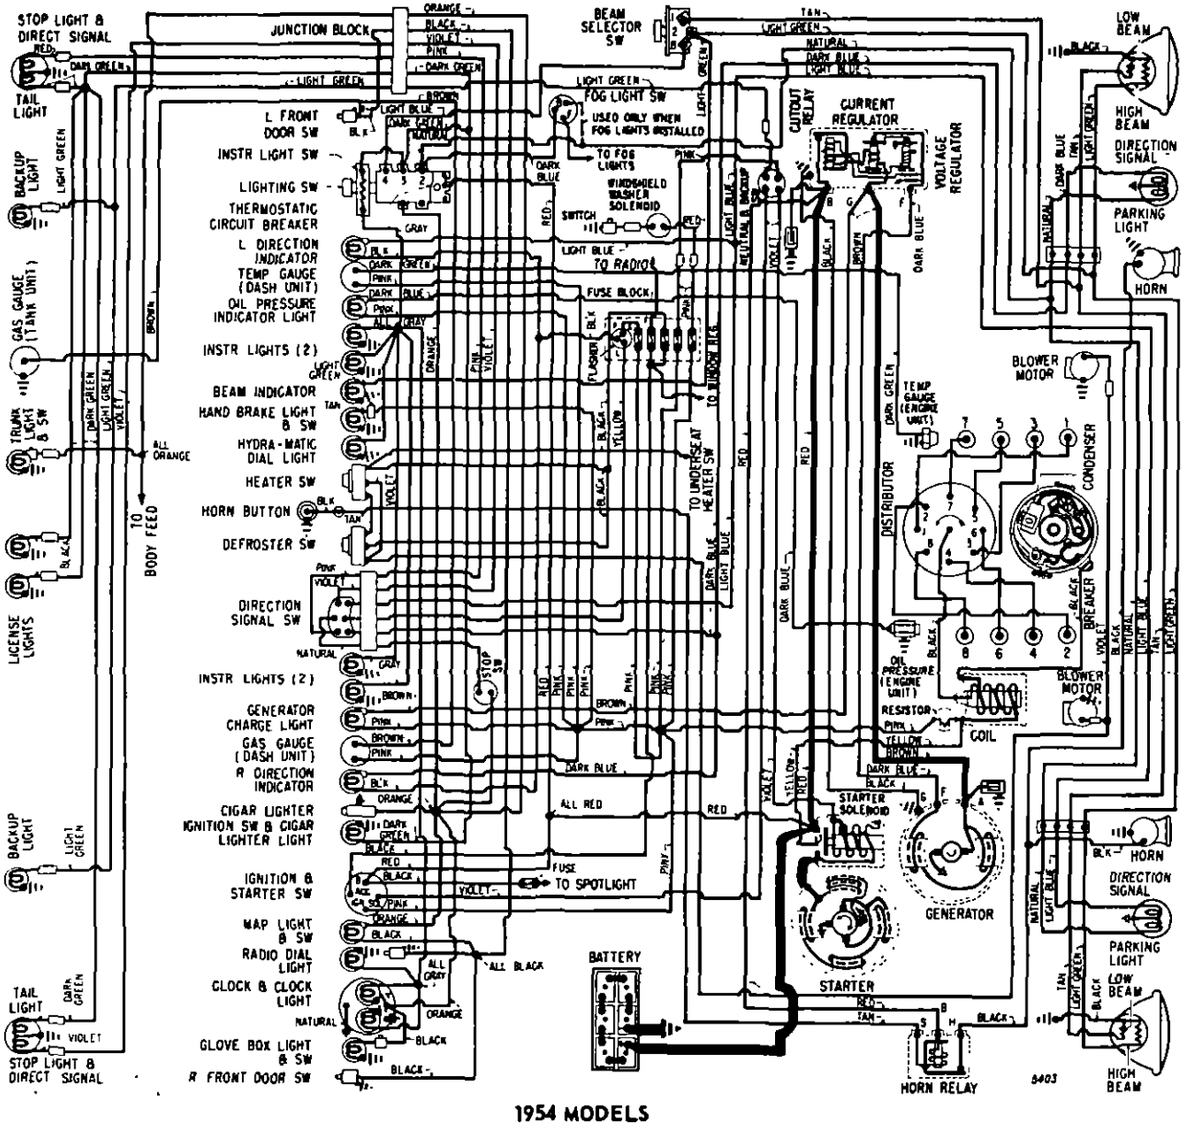
①—Before Engine No. 57962.
②—After Engine No. 57962.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*1954 CADILLAC STALLING (AFTER COLD START) CORRECTION: Fast idle throttle clearance, unloader setting and choke setting changed to prevent stalling. See "Rochester 4GC-4-Barrel Carburetor" in Carburetor Section.*

Idle Setting—Adjust with engine at normal operating temperature, automatic choke not operating and engine idling at hot or slow idle speed. Adjust idle speed (see below) to 400 RPM, then adjust each idle mixture screw (one screw for each primary throttle valve) until engine idles smoothly and RPM is at maximum. Recheck idle speed.

Idle Speed—400 RPM maximum (with selector lever in "Dr" range on Hydra-Matic Drive Cars). *For "Idle Speed Setting" and "Idle Speed-up Control" on Air-Conditioned Cars see "Carburetor" above.*



►*OTHER DATA: See "Rochester 4GC 4-Barrel Carburetor" in Carburetor Section.*

Idle Speed-up Control (Air Conditioned Cars): *See "Carburetor" above.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Throttle Return Check Adjustment (1953 Dynaflow Cars): Check alignment of adjusting screw and contact arm on secondary throttle lever, bend return check bracket as necessary to center screw on contact lever radius. Check performance with selector lever in "Dr" or "L", by opening throttle and quickly releasing accelerator pedal (*CAUTION*—Apply brakes firmly when making this test). If engine stalls, adjust by turning adjusting screw (*hold shaft with 3/8" wrench while turning screw*), repeat test and readjust until stalling condition eliminated.

Fuel Pump Pressure: 3½-5¼ lbs., at idle speed (1953); 4-5½ lbs., at 1800 RPM (1954).

1954 MODELS

Fuel Pump (1953): AC. Combination fuel & vacuum pump.
Fuel Pump (1954): AC. Fuel only. Vacuum pump is part of engine oil pump.
Replacement Pump—AC No. 9648 (1953); No. 4075 (1954).
Pressure—3½-5¼ lbs., at idle speed (1953); 4-5½ lbs., at 1800 RPM (1954).
See "Fuel Pumps" in Carburetion Equipment Section.
Gasoline Gauge: AC Electric.
Dash Unit—AC No. 1517800 (1953); No. 1517153 (1954).
Tank Unit—AC No. 1517215 (1953-54).
See "Fuel Gauges" in Carburetion Equipment Section.

CARB. EQUIPMENT

BATTERY

1953-Delco 3EE70W. *12 Volt.* 11 plate 70 ampere hour capacity (20 hr. rate).
1954-Delco 3EM60W (Exc. Comm'l). *12 Volt.* 9 plate, 60 ampere hour capacity (20 hr. rate).
1954-Delco 3EM70W (Comm'l. Models). *12 Volt.* 11 plate, 70 ampere hour capacity (20 hr. rate).
Battery Ground—Negative.
Engine Ground—Connected between engine and cowl.

CONTINUED FROM PRECEDING PAGE

STARTER

Delco-Remy 1107602 (1953); No. 1107622 (1954). *12 Volt.*
Armature–Delco-Remy 1917855 (1107602); No.1926626 (1107622).
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension– 24-28 ozs. (1107602); 30-40 ozs. (1107622).

Performance Data (1107602)

Torque	R PM	Volts	Amperes
0 ft. lbs.	6500	10.3	75
11.0 ft. lbs.	Lock	5.2	460

Performance Data (1107622)

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.3	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy Solenoid Switch No. 1118148 (1953); No. 1119760 (1954), mounted on starter and controlled by combination Starter & Ignition Switch No. 1116470. Turn key full RIGHT against spring tension to start.
See Electrical Equipment Section for complete data.

Neutral Safety & Backup Light Switch (Hydra-Matic Drive Cars): Delco-Remy 1998012 (1953); 1998054 (1954).
Adjustment: *See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102005 (Less Pulley & Fan, replacement for all models) –*12 Volt.*
Armature–Delco-Remy 1923535.
Maximum Charging Rate–See Current Regulator.

Performance Data

	Amperes	Volts	RPM
Cold	30	14	2150

Generator Charge Indicator: Red light on instrument panel. *See diagram.*
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs. each.
Field Current–1.48-1.62 amperes at 12 volts.
Belt Adjustment: Loosen both pivot bolts and adjusting strap screw, pull generator out until belt just tight enough to drive pulley without slip.

REGULATOR

1953 Models–Delco-Remy 1118750. Current & voltage regulator.
See "Delco-Remy 1118700 Series Regulator" in Electrical Equipment Section.
1954 Models–Delco-Remy 1118826. Current & voltage regulator.

►*1954 REGULATOR NOTE: Checking procedure is different than for 1953 regulators. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. Specifications below are "Normal" settings for this regulator.*

Cutout Relay
Cuts In–12.8 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator
Setting–14.5 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator
Setting–30 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Stop Light Switch: (Location)–Mechanical type mounted on underside of toe board and operated by brake pedal.
FUSES: Located on fuse panel under instrument panel on cowl insulating board just to left of car center line. NOTE–Special equipment fuses located as indicated below.
Windshield Washer–6 amps.
Back-Up Light–9 amps.
Automatic Heating System–7.5 amps.
Autronic Eye–14 amps. Located in Autronic Eye amplifier.
Air Conditioner–Two fuses, 2 amps. & 20 amps. located under instrument panel near side of glove box.
CIRCUIT BREAKERS: 22 ampere, located in main lighting switch. Protects all lighting circuits.
►*NOTE: Hydro-Lectric system (where used) has 15 amp. circuit breaker located in feed circuit.*
HORNS: Delco-Remy 1999755 (Low Note), 1999756 (High Note). *12 Volt.*
Horn Relay: Delco-Remy 1116781. *12 Volt.*
Contacts Close–2.75-4.0 volts.
Contact Gap–.025". **Air Gap**–.015" (closed).

ENGINE

►*1954 ENGINE "CLICKING" NOISE CORRECTION (Sounds like loose spark plug wire):* This condition may be caused by oil trapped in vacuum pump. Corrected by installing Divider Plate, Part No. 5593537 between vacuum and oil pump.

►*AIR CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air-conditioning system. See "Frigidaire Air-Conditioning" in Miscellaneous Section.*
ENGINE SPECIFICATIONS: Own 90° V8 (All Series).

Bore	Stroke	Displacement	Rated H.P.
3 13/16"	3 5/8"	331 Cu. Ins.	46.5

Compr. Ratio	1953 Developed HP	1954
8.25-1	210 at 4150 RPM	230 at 4400 RPM

Compression Pressure–*See TUNE-UP*
►*OVERSIZE CYLINDER BORE CAUTION*– Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize bores and pistons. *See "Original Bore & Pistons" in Cadillac Special Data.*
ENGINE REMOVAL: *See Cadillac Special Data.*
OIL PAN REMOVAL: *See Cadillac Special Data.*
CYLINDER HEAD & TIGHTENING TORQUES: *See Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size: 3.8125-3.8145".
Pistons–Aluminum alloy, T-T slot, tin plated, "Slipper Skirt" (skirt cutaway at pin bosses).
Weight–19.68 ozs.
Removal–Piston and rod assemblies removed from above. Install connecting rod guide Guide Studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching. CAUTION–*Do not nick lower edge of bore when pushing rod up.*
Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*
Replacement Pistons: Standard "High Limit" or maxi-production size), and .010", .020", .030" oversize. Pistons furnished only with fitted pins.
Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation of pistons on rods.*

PISTON PINS

Pin is pressed in connecting rod.
Diameter–1.000". **Length**–3 3/32".
Pin Fit in Piston–.00005-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).
Pin Fit in Rod–(NOTE–Special tools required). *See "Pistons" in Cadillac Special Data.*

PISTON RINGS

Top compression ring is chrome plated rolled steel and the other two rings are cast iron. An expander is not used behind the oil ring in production.

Ring	Width	End Gap	Side Clearance
Compr. (#1 & 2)	5/64"	.010-.020"	.0017-.0035"
Oil (#3)	3/16"	.010-.020"	.0008-.0026"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Rings: Standard, .010", .020", .030" oversize.

►*REPLACEMENT RING NOTE–If re-ring set is to be installed in new or low mileage bores, it is not necessary to install oil ring expander.*

Installing Rings: Chamfered face of both compression rings must be installed toward top of piston.

CONNECTING RODS

Length–6 5/8" (center-to-center).
Weight–23.49 ozs.
Crankpin Journal Diameter–2.2488-2.2493".
Out-of-Round Limits–.00025".
Bearings–Moraine-Durex, bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Clearance–.0002-.0020" (Service limit .0045").
Sideplay–.008-.014" (total both rods).
Replacement Bearings: Furnished in standard size only.
Installing Rods (In Pistons): On pistons Nos. 2-4-6-8, install rod so mark 'REAR' on piston pin boss is to **left** side of rod (with stamped number on rod facing operator). On pistons Nos. 1-3-5-7, install rod so mark 'REAR' on piston pin boss is to **right** side of rod (with stamped number on rod facing operator).

CRANKSHAFT

Journal Diameters–2.4985-2.4995". Five bearings.
Out-of-Round Limits–.00025".
Clearance–.0008.,0015" (service limit .005" max.).
End Thrust–Taken by flanged rear bearing.
End Play–.001-.005" (service limit .010" max.).
Bearings–Moraine Durex. Bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Replacement Bearings: Furnished in standard size only.
Main Bearing Removal & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

►*MAIN BEARING CAP CAUTION*–Bearing caps must not be interchanged. Install caps with marking numbers (not casting number) on left side and in order from front to rear.

Crankshaft Removal & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*
Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*
FLYWHEEL REPLACEMENT: *See "Flywheel" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION*–Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.
Removal, Alignment & Installation–*See "Camshaft" in Cadillac Special Data.*
Bearings–Steel backed babbitt bushings.
Clearance–.001-.0022" (service limit .004" max.).
Bearing Out-of-Round Limit–.002" max.
Timing Chain: Link-Belt side guide type. Width 11/16", Pitch .500", Length 23" or 46 links.
Installation & Removal–*See "Timing Chain" in Cadillac Special Data.*
Camshaft Setting: Both sprockets marked 'O'. Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.

►*CAUTION*–Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

VALVES

Tappet Clearance: None in service (hydraulic)

Valves	Head Diam.	Stem Diam.	Length
Intake	1.750"	.3415-.3425"	ℂ 4.628-4.648"
Exhaust	1.562"	.3415-.3420"	4 21/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	ℭ 44°	.365"	ℭ .0005-.0025"
Exhaust	ℭ 44°	.365"	ℭ .001-.0025"

ℂ–"Rich" Valves. "Eaton" Valves 4.628-4.653".
ℭ–New valves. (Valves in service can be refaced to 45° if seat width recommendation not exceeded).
ℭ–*New valves and guides. Worn limit. 005" max.*

►*VALVE SEATING CAUTION*–Do not lap or grind so that seat width is more than 1/64" (1° difference between valve and seat angle designed to provide "hair-line" contact.

►**Valve Seat Recommendations**–3/64-1/16" (moderate speed or city driving, 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32"
Valve Stem Oil Seal–*Rubber* oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation: *See "Valves System" in Cadillac Special Data.*
Valve Removal & Installation: *See "Valves System" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover Tool J-3062 to drive old guides out toward top of head, Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver).
Valve Springs: (Free Length)–1.968".

Valve Spring Specifications

	Pressure	Length
Valve Closed	61 lbs.	1.696"
Valve Open	140 lbs.	1.326"

►*SPRING INSTALLATION CAUTION*–Lower end of valve spring must seat in recess in cylinder head.
Valve Lifters: Hydraulic.
See "Hydraulic Valve Lifters" in Cadillac Special Data.

Valve Lifter Removal–*See "Valves System" in Cadillac Special Data.*
Rocker Arms: Rocker arm end shaft assemblies are mounted on each cylinder head NOTE–No adjustment screws provided on rocker arms.
Rocker Arm Installation–*See "Valve System" in Cadillac Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing

Intake Valves–Open 22° BTDC. Close 67° ALDC.
Exhaust Valve–*Open 63° BLDC. Close 27° ATDC.*
Valve Timing Check–Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing marks.

OILING SYSTEM

Crankcase Capacity: 5 qts. One quart additional for dry filter.

Normal Oil Pressure (1953)–25 lbs. at 30 MPH., 15 lbs. with engine idling.
Normal Oil Pressure (1954)–30-35 lbs. min. at 30 MPH. 15 lbs. with engine idling.
Pressure Regulator Valve–On oil pump. Not adjustable.
Oil Pressure Indicator–Light on instrument panel controlled by pressure switch AC No. 1998113 mounted on engine.

Oil Pump: Helical gear. In crankcase at rear of engine.
Oil Pump Removal & Overhaul: *See "Oil Pump" in Cadillac Special Data.*

Vacuum Pump (1954): Part of oil pump assembly. *See "Vacuum Pump" in Cadillac Special Data.*

Oil Filter: *Partial flow. Replace element every 6000 miles or more frequently in dusty areas.*
Replacement Filter Element–AC No. 1P-115.
Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

COOLING

►*THERMOSTAT INSTALLATION CAUTION:-Install with spring strap parallel to car center line otherwise right engine bank will operate at a higher temperature.*

Water Capacity (1953): 20 qts., with heater.
Water Capacity(1954): (Exc. Series 75) 22 qts. with heater, 19¾ qts. without heater. (Series 75) 24½ qts. with heater, 19¾ qts. without heater.

Pressure Valve: AC No. 850559. Radiator filler cap. Opens at 12-15 lbs.
Thermostat: Dole type. In water outlet at top of pump body.
Standard Setting–Starts to open at 163° to 168°F.
High Temp.–*Starts to open at 177° to 182°F.*
Water Pump: Packless, sealed ball bearing type.

See "Cadillac" in Water Pump Section.
Pump Removal–Remove upper and lower Radiator hoses after draining cooling system. Remove generator drive belt and take out capscrews mounting pump and water manifold assembly on front of engine, lift out pump and fan. NOTE–Water manifold and thermostat housing are part of pump casting.
Belt Adjustment–*See Generator Belt Adjustment.*

Radiator Removal & Installation: *See "Radiator" in Cadillac Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Temperature Gauge: AC Electric.

Dash Unit– AC No. 1512609 (1953); No. 1512789 (1954).
Engine Unit–AC No. 1512678.
See "Temperature Gauges" in Miscellaneous Section.

CLUTCH

1953 MODELS

Long 11CF-TI (75,86). Semi-centrifugal, single plate dry disc type.
See Clutch Section for complete data.
Facings–Woven type, I.D. 7", O.D. 11". Thickness .137".
Pedal Adjustment: Pedal free travel 7/8-1 1/8". Adjust by turning nut on connector rod at clutch fork.
Removal: Remove transmission (see Transmission Removal), remove starter, remove lower flywheel housing, remove clutch release yoke-to-lever rod. Remove flywheel housing with clutch release yoke, release bearing, and bearing retainer as an assembly. Punch mark flywheel and clutch cover to insure correct re-installation. Take out six clutch cover mounting screws. *(CAUTION–*Turn all screws out evenly to relieve spring pressure), lift clutch and driven member out.
►**Driven Member Installation Caution:** Oil guard must be toward rear.
►**Replacement Clutch Caution:** Clutches furnished with locking pin or block at each release lever. *These locking pins must be removed when clutch installed.*
Clutch Balancing–*See Cadillac Special Data.*

SYNCHRO-MESH TRANSMISSION

1953 MODELS

Own Make. Constant-mesh synchro-mesh (second & high), sliding gear (low & reverse), all helical gear type with remote shift control.
See Transmission Section for complete data.
Transmission Control: Remote control type mounted on steering column.
See Transmission Section for complete data.
Removal: Support engine on stand, tool J-3068, or use jack under rear end of oil pan (use block of wood on jack to prevent damage to pan). Disconnect rear universal joint, remove propeller shaft. Disconnect speedometer cable and shift rods at levers on transmission case. Disconnect rear engine support at transmission extension housing and remove crossmember on which support mounted. Loosen transmission mounting capscrews *(CAUTION–* support transmission so that it does not hang on driveshaft in clutch), remove screws, move transmission straight back to free shaft from clutch *(CAUTION–*plug clutch connection shaft oil drain hole as soon as accessible to prevent loss of lubricant), lower front end of transmission and remove from car.

DYNAFLOW DRIVE

1953 MODELS

►*FOR CARS WITH "TWIN TURBINE DYNAFLOW DRIVE", See "Buick Dynaflow" in Transmission Section.*

HYDRA-MATIC DRIVE

►*1954 CADILLAC HARD DOWN-SHIFT CORRECTION–May be caused by excessive thickness of jute under floor mat. Adjust accelerator pedal (see Linkage Adjustment in Hydra-Matic Section) and make sure that thickness of jute under floor mat is less than ½". Check wiring harness bracket, throttle relay, and speedometer cable for possible interference with throttle rod.*

►*1954 HYDRA-MATIC OIL LEAK (At Vent on Front of Transmission Case) CORRECTION: May be caused by out-of-round or undersize pressure regulator valve. See "Hydra-Matic Drive" in Transmission Section.*

Dual-Range four speed automatic transmission and fluid coupling.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*
Lubrication–Check fluid level in transmission every 2000 miles at time of car lubrication. Drain and refill after 6000 miles and every 25,000 miles thereafter. Use only "Cadillac Hydra-Matic Fluid".

Capacity–Approximately 11 qts. (1953), 10 qts. (1954).

Checking Fluid Level–With selector lever in "N" (neutral) position, run engine at a speed of 20 MPH for about 1½ minutes. Reduce engine speed to slow idle (375-400 RPM). Raise engine hood and remove transmission dipstick (located at right rear side of engine) wipe it clean and check fluid level. With engine still running, add fluid to bring level to "F" (full) mark on dipstick. CAUTION–Do not fill above "F" mark on dipstick - foaming will result.
►*OTHER HYDRA-MATIC SERVICE DATA: "See Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

►*EARLY 1954 CADILLAC DRIVE LINE VIBRATION. This sound usually develops within the 40-35 MPH range, and in some cases as low as 20 MPH and as high as 60 MPH. Insert spring seat shims, Part No. 1462614, (with thick part of shim toward front of car) between rear axle housing and spring seat supports, then weld shims to spring seat support. CAUTION–Shims should not be installed on Series 60 & 62 after Engine No. 08270, nor on Series 75 after Engine No. 18097. This correction does not apply to Series 86 cars.*
Mechanics. Needle bearing type. Two used (three on Comm'l cars with center bearing).
See Universals Section for complete data.

►*REAR UNIVERSAL YOKE CAUTION–*Do not disturb nut on end of pinion shaft retaining rear universal joint yoke unless yoke or oil seal being replaced. *Pinion bearing preload must be adjusted whenever this nut distrubed.*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Cadillac Hypoid" in Rear Axle Section.
►*OVERHAUL CAUTION–*Manufacturer recommends that Carrier Assembly be serviced by replacement. Do not disassemble this unit or attempt service work other than oil seal and universal joint replacement.
Axle Identification–Axles marked by number stamped bottom of differential case below center of pinion shaft as indicated in ratio table below.

Series	Ratio	Mark
60S, 62 (Std.)	3.07-1	"3"
60S, 62 (Optl.) Ⓒ	3.36-1	"6"
75	3.77-1	"7"
86	4.27-1	"4"

Ⓒ–Standard on 1954 Air Conditioned cars.

►*PINION BEARING PRELOAD CAUTION: Must be adjusted each time pinion shaft nut loosened. See "Cadillac Hypoid" in Rear Axle Section.*

Backlash–.003-.010" Screw adjustment.
Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum. Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft.
►*CAUTION–*Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing.
Commercial Cars–Remove wheel, remove nut and washer on end of shaft. Use Puller (Snap-On No. S-4567 or similar five jaw type), to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing.
Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing. Remove axle shafts (see above). Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket. *See "Overhaul Caution" above.*
Wheel Bearings: Sealed ball-bearing type.
*CAUTION–*Check bearings for loss of lubricant when shaft removed. If bearings spin freely indicating loss of lubricant, replace bearings.
Pinion Bearing Preload Adjustment: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement).
See "Cadillac Hypoid" in Rear Axle Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SHOCK ABSORBERS

Delco. Direct acting permanently sealed, airplane type located within coil springs (front), "Sea-Leg" type installation (rear), as follows:

1953 Shock Absorbers

Series	Front	Rear
60S, 62	872F	871Y
75, 86	968G	961BB

1954 Shock Absorbers

Series	Front	Rear
60S, 62	542G	542G
75, 86	①	542G

①—Cadillac No. 5342846.

FRONT SUSPENSION

Independent type with direct acting shock absorbers located within coil springs.

See Front Suspension Section for complete data.

NOTE—Specifications below are correct with car at curb weight (car unloaded with full gas tank).

1953 Specifications

Kingpin Inclination—5°51' with 0° Camber.
Caster—0° preferred (limits Neg. ½° to Pos. ½°, and equal within ½°).
Camber—0° preferred (limits Neg. 3/8° to Pos. 3/8°, and equal within ½°).
Toe-In—1/16-1/8" (at rest). Loosen clamp bolts and turn adjusters at outer end of each tie rod equally.
Toe Out on Turns—Outer wheel turned 20°, Inner wheel should be turned as follows:

Series	Left Turn	Right Turn
60S, 62	25°25'	24°42'
75, 86	24°7'	23°6'

1954 Specifications

Kingpin Inclination—5°51' with 0° Camber.
Caster—0° to Neg. 1°, and equal within ½°.
Camber—Pos. 3/16° (Left Wheel), Neg. 3/16° (Right Wheel) desired. Limits Neg. 3/8° to Pos. 3/8° with ¼° to ½° more positive camber on left wheel.
Toe-In—3/16" to ¼", at rest. Loosen clamp bolts and turn adjusters at outer end of each tie rod equally.
Toe-Out on Turns—With outer wheel turned 20°, inner wheel should be 22°40'.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.

See "Saginaw (GM)" in Steering Section.

►*1954 POWER STEERING GEAR CHATTER (NOT CHUCKLE) CORRECTION (Cars prior to Eng. No. 01688):* This chatter, particularly noticeable after reversing direction of steering wheel rotation when backing into parking space, correct by replacing valve body assembly.

►*1953 REPLACEMENT POWER STEERING HYDRAULIC PUMP:* Furnished in Kit, Part No. 3630359, consists of power steering pump with special return line reducing union and seal (required when used on 1952 cars).

Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*
Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix (Hydraulic) Single Anchor—Conventional two-shoe. Parking brake applies rear wheel service brakes.
Drums—Diameter 12". Regrinding limits .060".
See "Bendix Hydraulic Single Anchor (Without Eccentric) in Brakes Section.

1953 Brake Lining

	Length	Width	Thickness
All Shoes	12.92"	2½"	¼"

1954 Brake Lining

	Length	Width	Thickness
Primary	11.45"	2¼"	¼"
Secondary	12.92"	2¼"	¼"

Clearance—.010" (top), .015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Master Cylinder: On left frame member directly forward of brake pedal.

Checking Fluid Level Note—Remote fluid reservoir above master cylinder, on firewall. Maintain to within ¾" of top of container.
Master Cylinder Removal—Remove splash shield from flywheel housing, and remove master cylinder in usual manner.

Power Brakes: Bendix "Hydrovac" Power Unit connected in hydraulic brake line between master cylinder and wheel cylinders (no mechanical connection).
Removal of Power Unit—Disconnect brake lines at power cylinder end plate. Loosen vacuum line hose clamp at check valve and slide hose off check valve. Remove three nuts and lockwashers from cylinder mounting bracket and remove assembly from car.

MISC. MECHANICAL

Windshield Wipers: Cable operated—Vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Windshield Washer: Connected with windshield wiper so that when windshield washer is operated, wiper motor automatically operates to clean windshield.
See "Cadillac Windshield Washer" in Miscellaneous Section.

Window Regulators: Electric, with reversible motor in window.
See "Electric Window Regulators" in Miscellaneous Section for data.

Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling.
See "Top Controls" in Miscellaneous Section.

Power Seat Adjusters: Electric reversible motors for vertical and horizontal adjustment.
See "Electric Seat Adjusters" in Miscellaneous Section.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

ENGINE & SERIAL NUMBER: Stamped on upper right corner on front face of right hand block, on right frame side member just to rear of engine support bracket, and on the plate on front side of left body pillar.

Series	First 1955 Nos.
60S	556000001
62	556200001
75	557500001
86 Commercial	558600001

Identification—First two figures indicate year, third and fourth indicate model (last five figures are numbered consecutively regardless of series).

Engine Unit Number Note: Use for identification. Stamped on top of crankcase to rear of left hand block with prefix indicating model:

Series	Engine Unit Prefix
60S, 62, 75 (Standard)	4-V-00001 up
60S, 62, 75 (Air-Conditioning)	4-VK-00001 up
86 (Standard)	5-V-00001 up
86 (Air-Conditioning)	5-VK-00001 up
60S, 62 (Eldorado Engine) ①	7-V-00001 up
60S, 62 (Eldorado Engine) ②	7-VK-00001 up

①—Without Air-Conditioning. ②—With Air-Conditioning.

►*ENGINE NUMBER NOTE:* "L.C." will be added as a suffix to engine unit number on all engines built to low compression specifications.

►*NOTE:* Mark * preceding Engine Unit Number indicates cylinder bore and pistons are .010" oversize.

TUNE-UP

►*ROUGH IDLE & DETONATION: May be caused by excessive advance due to vacuum ports in carburetor being too low. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

COMPRESSION PRESSURE: 165 to 185 lbs., (at cranking speed). 212 to 230 lbs., (at 1000 RPM).

VACUUM READING: Not specified (varies with altitude and barometric pressure).

VALVE TAPPET CLEARANCE: None in service (Hydraulic Lifters).

MANIFOLD HEAT CONTROL: Automatic thermostatic type. Valve diverts exhaust gases of left hand cylinder bank through carburetor heating passages in intake manifold to right hand exhaust system.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035"

Spark Plugs—AC No. 44-5 (All Engines). 14mm. Torque to 20-25 ft. lbs.

►*SPARKPLUG CAUTION: AC No. 46-5 should not be used under any circumstances on 1955 engines.*

COIL: Delco-Remy 1115082. *12 Volt.*

Ignition Current—1.25 amperes idling. 3 amperes stopped.

Resistor—Delco-Remy 1927809. On coil bracket.

►*COIL RESISTOR NOTE: Resistor is connected in lead from ignition switch-to-coil. This resistor is by-passed during cranking by lead from starter solenoid-to-coil.*

DISTRIBUTOR: Delco-Remy 1110852. *12 Volt.*

Condenser—Delco-Remy 1869704.

Contact Point Set—Delco-Remy 1918148.

Breaker Gap—.016" (new & used points).

Cam Angle—26°-33°.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Counter-clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-1.5	500	0-3.	1000
9-11	1550	18-22	3100
11-13	2075	22-26	4150

Vacuum Spark Control: Delco-Remy 1116091.

Plunger Travel—19/64-5/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	6-8.5
13-14.5	26-29	15-16

IGNITION TIMING

Setting—2½° BTDC. *CAUTION—Ignition timing mark "A" is 5° BTDC and does not indicate timing point.*

Timing—Disconnect vacuum line to distributor and and with engine idling at 400 RPM, set timing at point HALF-WAY BETWEEN "A" &"C/" marks on vibration dampener in line with pointer on chain case cover.

►*IGNITION TIMING NOTE: Timing should be checked for both No. 1 and No. 6 cylinders. First set timing for No. 1 cylinder (at point half-way between "A" and "C/" marks), then check timing on No. 6 cylinder. If light flashes before or after the No. 1 cylinder firing point, set distributor to divide the variance.*

►*ROUGH IDLE & DETONATION: May be caused by excessive advance due to vacuum ports in carburetor being too low. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

CARBURETOR

►*IDLE SPEED (AIR-CONDITIONED CARS): Summer and Winter Idle Speed Adjustment is different as follows:*

Summer Setting (Air-Conditioner in Operation)—With transmission selector lever in either "Dr" range, and with Air-Conditioner "ON" set idle speed at 400 RPM (Cars with Std. Engine), 480 RPM (Cars with Eldorado Engine).

Winter Setting (Air-Conditioner not in Operation)—With transmission selector lever in either "Dr" range, and with air-conditioner "OFF", set idle speed at 400 RPM (Cars with Std. Engine), 480 RPM (Cars with Eldorado Engine).

Idle Speed-Up Control Adjustment (Cars with Air-Conditioning): With engine at normal operating temperature and slow idle adjustment completed, turn air-conditioner "ON", and place transmission selector lever in "N" neutral position. Adjust engine idle speed to 900 RPM by loosening locknut on diaphragm shaft and turning knurled nut to obtain specified RPM. Tighten locknut.

Throttle Linkage Adjustment: *CAUTION—On cars with Air-Conditioning and Rochester Carburetors, the engine must be running when throttle linkage is adjusted.*

1) Remove transmission throttle control lever clevis pin at transmission and check lever position with Tool J-3065-C. Fit tool on rear face of transmission case and insert clevis pin through lever and hole in gauge marked '49E '50, while lever is in its rearward position. If throttle lever is misaligned, correct by bending lever with Tool J-2029. Assemble linkage to transmission throttle lever and install new cotter pin.

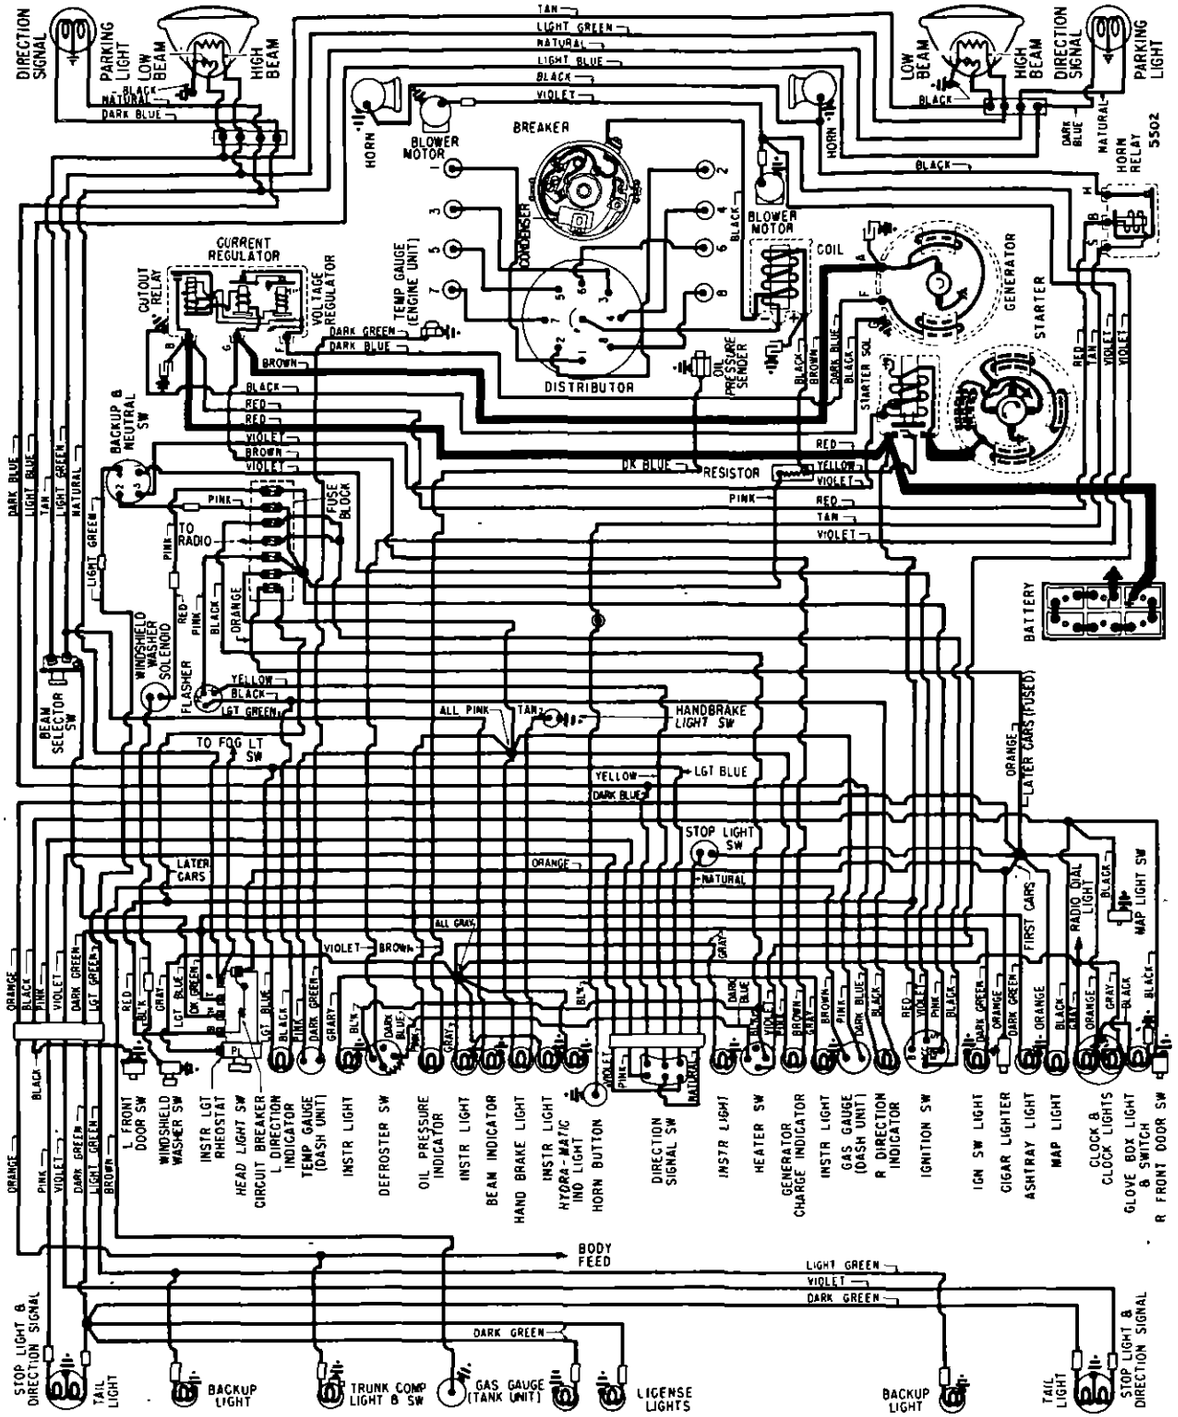
2) Disconnect spring between carburetor and relay rod at trunnion and remove trunnion from dash relay lever. Place a ¼" drill shank through gauging hole in dash relay lever and into dash relay bracket. Set Carburetor throttle in hot idle position with transmission in "Dr" range (400 RPM-Std. Engine. 480 RPM-Eldorado Engine).

3) Adjust carburetor-to-dash relay rod trunnion to allow free entry into dash relay lever. Connect spring in trunnion.

4) **On Cars With Single Carburetor:** Back off both jam nuts on throttle valve rod at carburetor to allow free movement of rod in trunnion. Push end of throttle valve rod to position transmission throttle valve against its stops. Bring rear jam nut up against trunnion and back off **8 flats** (1 1/3 turns). (NOTE—This adjustment may be changed to improve shift characteristics after road test). Tighten front jam nut, check to be sure there is no bind in linkage.

5) **On Cars With Two Carburetors:** Remove lock nut, adjusting nut and spring from forward end of throttle valve control rod. Back off rear lock nut and adjusting nut and throttle valve rod to permit free movement of rod in trunnion. Push on end of throttle valve rod to position transmission throttle valve against its stop. Bring rear adjusting nut up against trunnion and back off **3 complete turns.** Tighten rear lock nut. Install spring and adjusting nut on front end of throttle valve rod. Adjust nut until the distance between the front face of the trunnion and the rear face of the adjusting nut is 1 13/32". Hold adjusting nut in this position and install lock nut. Recheck above dimension.

6) Remove ¼" drill rod from dash relay and check position of accelerator pedal with wide open throttle. Pedal should touch floor mat with slight pressure (allow ½" clearance if mat has been removed) when throttle is wide open. Adjust accelerator pedal position at pedal end of dash relay-to-accelerator pedal rod. Road test car to insure proper shifting characteristics.



CARTER WCFB
(Standard Engine)

Carter WCFB 2185S (Early), 2266S (Later), 2354S (Latest) Without Air Conditioning. Carter WCFB 2186S (Early), 2267S (Later), 2355S (Latest) With Air Conditioning. *NOTE—Later and latest carburetors have larger secondary system (Throttle Bore, Main Venturi & Metering Jets).*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyls. 2-3-5-8, LEFT barrel 1-4-6-7.*

►*NOTE: 2186S & 2267S have Idle Speed-Up Control for use with Air-Conditioning.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Service Replacement Carburetor Note—Carter WCFB 2255S is service replacement for above carburetors. Carter Unitized Package No. 202-44U (Containing Speed-Up Control) must be used on Air-Conditioned Cars.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

►*FLAT SPOT OR SHUDDER AT 20-40 MPH. ON PART THROTTLE ACCELERATION: May be caused by over-rich Idle Mixture Setting (below).*

►*ROUGH IDLE & DETONATION OR HIGH IDLE SPEED:* May be caused by excessive advance due to vacuum ports in carburetor being too low, or by loose or improperly positioned throttle valves. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

►*CARBURETOR "ICING" CORRECTION: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for installation of radiator baffle.*

Idle Mixture & Idle Speed Setting—*Special procedure required to insure correct mixture and speed (idle air) screw settings. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for detailed procedure.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air By-Pass screw on throttle body is used to adjust idle speed. The throttle adjusting screw used on previous carburetors has been eliminated and the throttle valves are normally closed at slow idle.*

►*OTHER DATA: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5½ lbs. (First Cars), 4½-6½ lbs. (beginning Engine No. 58981).

ROCHESTER 4GC.
(Standard Engine)

Rochester 4GC No. 7006655 (Early), No. 7007970 (Late) Without Air-Conditioning. Rochester 4GC No. 7006656 (Early), No. 7007971 (Late) With Air-Conditioning. *NOTE—Later carburetors have larger secondary system (Throttle Bore, Main Venturi, & Metering Jets).*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

►*OFF-IDLE LEANNESS CORRECTION (Carburetors with brass tag stamped "A5" have had the correction made in production): This condition noted between 20-30 MPH, and is sometimes accompanied by a slight vibration. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

►*FLAT SPOT OR SHUDDER AT 20-40 MPH. ON PART THROTTLE ACCELERATION: May be caused by over-rich Idle Mixture Setting (below).*

►*ROUGH IDLE & DETONATION OR HIGH IDLE SPEED:* May be caused by excessive advance due to vacuum ports in carburetor being too low, or by loose or improperly positioned throttle valves. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CARBURETOR "ICING" CORRECTION: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for installation of radiator baffle.*

Idle Mixture & Idle Speed Setting–*Special procedure required to insure correct mixture and speed (idle air) screw settings. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for detailed procedure.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air By-Pass screw on throttle body is used to adjust idle speed. The throttle adjusting screw used on previous carburetors has been eliminated and the throttle valves are normally closed at slow idle.*

►*OTHER DATA: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5½ lbs. (First Cars), 4½-6½ lbs. (beginning Engine No. 58981).

ROCHESTER 4GC (2). (Eldorado Engine)

Rochester 4GC No. 7007240 (Front), 7007942 (Rear) Without Air-Conditioning. Rochester 4GC No. 7007440 (Front), 7007241 (Rear) With Air-Conditioning.

►*CARBURETOR INSTALLATION NOTE: Front & Rear Carburetors operate together as follows:*

►*MANIFOLD FUEL DISTRIBUTION (FRONT CARB.):* Right PRIMARY & Left SECONDARY barrels feed Cyl. 2-3-5-8, Left PRIMARY & Right SECONDARY barrels feed 1-4-6-7.

►*MANIFOLD FUEL DISTRIBUTION (REAR CARB).:* Left PRIMARY & Right SECONDARY barrels feed Cyl. 2-3-5-8, Right PRIMARY & Left SECONDARY barrels feed 1-4-6-7.

►*OFF-IDLE LEANNESS CORRECTION(Carburetors with brass tag stamped "A5" have had the correction made in production): This condition noted between 20-30 MPH, and is sometimes accompanied by a slight vibration. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

►*ROUGH IDLE & DETONATION OR HIGH IDLE SPEED:* May be caused by excessive advance due to vacuum ports in carburetor being too low, or by loose or improperly positioned throttle valves. *See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

►*FLAT SPOT OR SHUDDER AT 20-40 MPH. ON PART THROTTLE ACCELERATION: May be caused by over-rich Idle Mixture Setting (below).*

►*CARBURETOR "ICING" CORRECTION: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for installation of radiator baffle.*

Idle Mixture & Idle Speed Setting–*Special procedure required to insure correct mixture and speed (idle air) screw settings. See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section for detailed procedure.*

►*IDLE SPEED ADJUSTMENT NOTE: Idle Air-By-Pass screw on throttle body is used to adjust idle speed. The throttle adjusting screw used on previous carburetors has been eliminated and the throttle valves are normally closed at slow idle.*

►*OTHER DATA: See "Cadillac (Carter & Rochester) Carburetors" in Carburetor Section.*

Hydra-Matic Throttle Linkage Adjustment: *See "Carburetor" above.*

Fuel Pump Pressure: 4-5½ lbs. (First Cars), 4½-6½ lbs. (beginning Engine No. 58981).

CARB. EQUIPMENT

Fuel Pump: AC (Fuel only). Vacuum pump is part of engine oil pump.

Replacement Fuel Pump–AC No. 4269.

Pressure–4-5½ lbs. (first cars), 4½-6½ lbs. (beginning Engine No. 58981).

See "Fuel Pump" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit–AC No. 1517953.

Tank Unit–AC No. 1517215.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco–3EM60 (Exc. Comm'l). *12 Volt*, 9 plate, 60 ampere hour capacity (20 Hr. rate).

Delco–3EM70 (Comm'l). *12 Volt*, 11 plate, 70 ampere hour capacity (20 Hr. rate).

Battery Ground–Negative.

Engine Ground–Connected between engine and cowl.

STARTER

Delco-Remy 1107629. *12 Volt.* **Armature 1926626.**

Drive–Overrunning clutch (solenoid pinion shift).

Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	3500	10.1	95
10.5 ft. lbs.	Lock	5.4	470

Starting Switch: Delco-Remy Solenoid Switch No. 1119760 mounted on starter and controlled by Ignition & Starter Switch No. 1116470. Turn key full RIGHT against spring tension to start.

See Electrical Equipment Section for complete data.

Neutral Safety & Back-up Light Switch (Hydra-Matic Drive Cars only): Delco-Remy 1998108.

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy 1102002 (Std.), 1102011 (Air Conditioned Cars). Armature No. 1923535 (All).

►*GENERATOR ARMATURE REPLACEMENT CAUTION:* Std. Generator No. 1102002 with "N" stamped on frame next to name plate have new type armature with nylon insulated windings. If replacement of this armature required, install regular No. 1923535 armature.

►*REPLACEMENT GENERATOR:* Delco-Remy 1102005 (Less Fan & Pulley).

Maximum Charging Rate–See Current Regulator.

Performance Data

	Amperes	Volts	RPM
Cold	30	14	2150

Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–28 ozs. each.

Field Current–1.48-1.62 amperes at 12 volts.

Generator Charge Indicator: Red light on instrument panel. *See Diagram.*

Belt Adjustment: Loosen both pivot bolts and adjusting strap screw pull generator out until belt just tight enough to drive generator without slip.

REGULATOR

Delco-Remy 1118826. Service Replacement–Delco-Remy 1118825.

►*REGULATOR NOTE: Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment section. Specifications below are "Normal" settings.*

Cutout Relay

Cuts In–12.8 volts (hot).

Contact Gap–.020".

Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–14.5 volts (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting–30 amperes (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equipment Section.*

Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Stop Light Switch: (Location) –Mechanical type mounted on underside of toe board and operated by brake pedal.

FUSES: Located on fuse panel under instrument panel on cowl insulating board just to left of car centerline except as noted below

►*WIRING & FUSE PRODUCTION CHANGES:* On later cars, Courtesy & Map Light, Trunk Light, Clock Light, Glove Box Light, and Stop Lights are protected by 14 ampere fuse (see diagram). Ash tray light added.

Windshield Washer–6 amps.

Back-up Light–9 amps.

Automatic Heating System– 20 amps.

Radio–7.5 amps.

Direction Signal–6 amps.

Spotlight–9 amps. Under hood at Defroster mounting screw.

Air Conditioner–Two fuses, 6 amps., and 20 amps., located under instrument panel above air-conditioner control.

Map, Trunk, Clock, Glove Box, & Stop Light (Later Cars–see Production Change above): 14 ampere. On block located beneath instrument panel.

CIRCUIT BREAKERS: (Lighting)– 22 amps., located in main lighting switch. Protects all lighting circuits.

HORNS: (Exc. Eldorado)–Delco-Remy 1999765 (Low Note), 1999766 (High Note). *12 Volt.*

Eldorado–Delco-Remy 1999585 (Trumpet type), *12 Volt.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Horn Relay: Delco-Remy 1116908. *12 Volt.*
Contacts Close–5.0-9.5 volts.
Contact Gap–.027". **Air Gap**–.014".

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

Bore	Stroke	Displacement	Rated HP
3 13/16"	3 5/8"	331 cu. ins.	46.5

Engine	Compr. Ratio	Developed HP
Standard	9.0-1	250 at 4600 RPM
Eldorado	9.0-1	270 at 4800 RPM

►*OVERSIZE CYLINDER BORE CAUTION: Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have a .010" oversize cylinder bore and pistons.*

ENGINE REMOVAL: *See "Engine" in Cadillac Special Data.*

OIL PAN REMOVAL: *See "Oil Pan" in Cadillac Special Data.*

CYLINDER HEAD: *See "Cylinder Head & Manifold" in Cadillac Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Cadillac Special Data.*

PISTONS

►*ORIGINAL CYLINDER BORE CAUTION:* Engines with mark * preceding Engine Unit No. (on left rear of crankcase) have .010" oversize pistons and cylinder bore. Standard cylinder bore size: 3.8125-3.8145".
Original Bore & Pistons–*See "Original Bore & Pistons" in Cadillac Special Data.*
Pistons–Aluminum alloy, T-T slot, tin plated, "Slipper Skirt" (skirt cutaway at pin bosses).
Weight–19.68 ozs.
Removal–Piston and rod assemblies removed from above. Install connecting rod Guide Studs J-3224, on connecting rod bolts to guide rod out through bore without nicking or scratching. *CAUTION–Do not nick lower edge of bore when pushing rod up.*
Fitting New Pistons: Use micrometer or feeler gauge. *See "Pistons" in Cadillac Special Data.*
Replacement Pistons: Standard "High Limit" or maximum production size, and .010", .020", .030" oversize. Pistons furnished only with fitted pins.
Installing Pistons: Install in cylinder with piston pin boss marked "Rear" toward rear of engine. *See "Connecting Rods" (below) for installation of pistons on rods.*

PISTON PINS

Pin is pressed in connecting rod.
Diameter–1.000". **Length**–3 3/32".
Pin Fit in Piston–.00005"-.0001" clearance at 70°F. Not fitted in field (replace piston & pin assembly).
Pin Fit in Rod–(NOTE–Special tools required). *See "Piston Pins" in Cadillac Special Data.*

PISTON RINGS

Top compression ring is chrome plated rolled steel and the other two rings are cast iron. An expander is not used behind the oil ring in production.

Ring	Width	End Gap	Side Clearance
Compr. (#1 & 2)	5/64"	.010-.020"	.0017-.0035"
Oil (#3)	3/16"	.010-.020"	.0008-.0026"

Replacement Rings: Standard, .010", .020", .030" oversize.
►*REPLACEMENT RING NOTE–If re-ring set is to be installed in new or low mileage bores, it is not necessary to install oil ring expander.*
Installing Rings: Chamfered face of both compression rings must be installed toward top of piston.

CONNECTING RODS

Length–6 5/8" (center-to-center).
Weight–23.49 ozs.
Crankpin Journal Diameter–2.2488-2.2493".
Out-of-Round Limits–.00025".
Bearings–Moraine-Durex, bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Clearance–.0002-.0020" (Service limit .0045").
Sideplay–*.008-.014" (total both rods).*
Replacement Bearings: Furnished in standard size only.
Installing Rods (In Pistons): On pistons Nos. 2-4-6-8, install rod so mark 'REAR' on piston pin boss is to **left** side of rod (with stamped number on rod facing operator). On pistons Nos. 1-3-5-7, install rod so mark 'REAR' on piston pin boss to to **right** side of rod (with stamped number on rod facing operator).

CRANKSHAFT

►*CRANKSHAFT BEARING CAP PRODUCTION CHANGE & INSTALLATION CAUTION:* Heavier bearing caps used on later cars. These caps used WITHOUT lockwashers on retaining screws. *CAUTION–Use of lockwashers on these caps will result in insufficient thread engagement of retaining screws.*
Journal Diameters–2.4985-2.4995". Five bearings.
Out-of-Round Limits–.00025".
Clearance–.0008-.0015" (service limit .005" max.).
End Thrust–Taken by flanged rear bearing.
End Play–.001-.005" (service limit .010" max.).
Bearings–Moraine Durex. Bearing shell is steel backed aluminum. Bearing halves interchangeable. No shims.
Replacement Bearings: Furnished in standard size only.
Main Bearing Removal & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

►*MAIN BEARING CAP INSTALLATION CAUTION:* Bearing caps must not be interchanged. Install caps with marking number (not casting number) on left side and in order from front to rear. DO NOT use lockwashers on LATER HEAVIER bearing caps (see Production Change above).

Crankshaft Removal & Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

Rear Main Bearing Oil Seal Installation: *See "Crankshaft & Main Bearings" in Cadillac Special Data.*

FLYWHEEL REPLACEMENT: *See "Flywheel" in Cadillac Special Data.*

CAMSHAFT

►*CAUTION:* Handle shaft with care to avoid damage or mis-alignment. Check whenever removed.
Removal, Alignment & Installation–*See "Camshaft & Bearings" in Cadillac Special Data.*
Bearings–Steel backed babbitt bushings.
Clearance–.001-.0022" (service limit .004" max.).
Bearing Cut-of-Round Limit–.002" max.
Timing Chain: Link-Belt side guide type. Width 11/16", Pitch .500", Length 23" or 46 links.
Installation & Removal–*See "Timing Chain" in Cadillac Special Data.*
Camshaft Setting: Both sprockets marked '0'. Mesh chain with sprockets turned so that marks adjacent and in line with straightedge across shaft.
►*CAUTION:* Install chain as a unit with camshaft sprocket (sprocket press fit on shaft with locating dowel and two retaining capscrews).

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diam.	Stem Diam.	Length
Intake	1.750"	.3415-.3425"	①4.628-4.648"
Exhaust	1.562"	.3415-.3420"	4 21/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	②44°	.411"	③.0005-.0025"
Exhaust	②44°	.411"	③.001-.0025"

①–"Rich" Valves. "Eaton" Valves 4.628-4.653".
②–New valves (Valves in service can be refaced to 45° if seat width recommendation not exceeded).
③–New valves and guides. Worn limit. .005" max.

►*VALVE SEATING CAUTION:* Do not lap or grind so that seat width is more than 1/64" (1° difference between valve and seat angle designed to provide "hairline" contact.
►**Valve Seat Recommendations:** 3/64-1/16" (moderate speed or city driving), 1/16-3/32" (high speed driving). Cut seat so that distance from outer edge to edge of flange on valve head not more than 1/32".
Valve Stem Oil Seal–Rubber oil seal installed in lower groove on valve stem (below valve keeper).
Oil Seal Installation: *See "Valve System" in Cadillac Special Data.*
Valve Removal & Installation: *See "Valve System" in Cadillac Special Data.*
Valve Guides: Pressed in cylinder head with counterbored end down toward valve head. Use Remover Tool J-3062 to drive old guides out toward top of head, Installer Tool J-3066 to drive new guides in (tool plate serves as stop for driver).
Valve Springs: (Free Length) 1.980".

Valve Spring Specifications

	Pressure	Length
Valve Closed	62-68 lbs.	1.696"
Valve Open	152-162 lbs.	1.285"

►*SPRING INSTALLATION CAUTION: Lower end of valve spring must be seated in recess in cylinder head.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Valve Lifters: Hydraulic.
See "Valve System" in Cadillac Special Data.
Valve Lifter Removal—*See "Valve System" in Cadillac Special Data.*

►*LIFTER NOISE CORRECTION:* If noise noted when engine hot, oil level low, after sudden stops, or when descending steep grades, see OILING SYSTEM below for correction to prevent air entering pump.

Rocker Arms: Rocker arm end shaft assemblies are mounted on each cylinder head. *NOTE*—No adjustment screws provided on rocker arms.

Rocker Arm Installation—*See "Valve System" in Cadillac Special Data.*

►*VALVE PUSH ROD CAUTION: 1955 Push Rods are shorter (identified by single groove at upper end), and are not interchangeable with previous models.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing

Intake Valves—Open 19° BTDC. Close 70° ALDC.
Exhaust Valves—Open 60° BLDC. Close 30° ATDC.

Valve Timing Check—Not practical to check in field. Manufacturer recommends removing timing chain cover and checking timing marks.

OILING SYSTEM

►*AIR IN OILING SYSTEM (Causing oil foaming or noisy hydraulic lifter operation): See Oil Pump Installation under "Oiling System" in Cadillac Special Data for installation of "O" ring seal on float tube and inspection of oil pan baffle for clearance.*

Crankcase Capacity: 5 qts. One quart additional for dry filter.
Normal Oil Pressure: 30-35 lbs. min. at 30 MPH. 15 lbs. at idle speed.
Pressure Regulator Valve—On oil pump. Not adjustable.
Oil Pressure Indicator—Light on instrument panel controlled by pressure switch AC No. 1997884 mounted on engine.

Oil Pump: Helical gear. In crankcase at rear of engine.

Oil Pump Removal & Overhaul: *See "Oiling System" in Cadillac Special Data.*

Vacuum Pump: Part of Oil Pump assy. See *"Vacuum Pump" in Cadillac Special Data.*

Oil Filter: Partial flow. Replace element every 6000 miles or more frequently in dusty areas.

Replacement Filter Element—AC No. 1P-115

Crankcase Ventilation: Air intake in oil filler cap (oil wetted type) with outlet connection at rear of valve compartment cover, and outlet pipe extending down below engine at right corner.

CO LING

►*THERMOSTAT INSTALLATION CAUTION: Install with spring strap parallel to car center line otherwise right engine bank will operate at higher temperature.*

Water Capacity: (Exc. Series 75) 20¼ qts. with heater. 18 qts. without heater. (Series 75) 22¾ qts. with heater. 18 qts. without heater.

Pressure Valve: AC No. 850559. Radiator filler cap. Opens at 12-15 lbs.
Thermostat: Dole type. In water outlet at top of pump body.
Standard Setting—Starts to open at 163° to 168°F.
High Temp.—Starts to open at 177° to 182°F.
Water Pump: Packless, sealed ball bearing type.
See "Cadillac" in Water Pump Section.
Pump Removal—Remove upper and lower radiator hoses after draining cooling system. Remove generator drive belt and take out capscrew mounting pump and water manifold assembly on front of engine, lift out pump and fan. NOTE—Water manifold and thermostat housing are part of pump casting.
Radiator Removal & Installation: *See "Cooling System" in Cadillac Special Data.*
Temperature Gauges: AC Electric.
Dash Unit—AC No. 1512789.
Tank Unit—AC No. 1512678.
See "Temperature Gauges" in Miscellaneous Section.

HYDRA-MATIC DRIVE

Dual-Range four speed automatic transmission and fluid coupling.

►*HYDRA-MATIC CLUTCH PRODUCTION CHANGE (270 HP ENGINES):* Thinner clutch discs used in front and rear units and an extra driving disc has been installed in both units. *CAUTION—This type clutch disc is to be used only on the 270 HP Engine equipped cars.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level every 2000 miles at time of car lubrication. Drain and refill after 6000 miles and every 25,000 miles thereafter Use only Cadillac Hydra-Matic Fluid.

Capacity—Approximately 10 qts. (refill).

Checking Fluid Level—With selector lever in "N" (neutral) position, run engine at speed of 20 MPH for about 2½ minutes. Reduce engine speed to slow idle (375-400 RPM). Raise engine hood and remove transmission dipstick (located at right rear side of engine) wipe it clean and check fluid level. With engine still idling, add fluid to bring level to "F" (full) mark on dipstick. *CAUTION*—Do not fill above "F" mark on dipstick, foaming will result.

►*OTHER HYDRA-MATIC SERVICE DATA: See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Mechanics. Needle bearing type. Two used (three on commercial cars with center bearing).
See Universals Section for complete data.

►*UNIVERSAL JOINT YOKE PRODUCTION CHANGES & REPLACEMENT CAUTION:* New yokes used in production and furnished for replacement as follows:

Front Joint (Slip) Yoke—New yoke (same part number as previous type) has longer yoke splines (counterbore eliminated) which provide more contact area between output shaft and yoke splines which eliminates possibility of drive line thump developing in service. *See "Propeller Shaft Notes" in Cadillac Special Data for installation of this yoke on early cars.*

Rear Joint (Pinion Shaft) Yoke—Stronger yoke (thicker flange and without body taper) used on later cars (beginning approx. Eng. No. 27403). *When installing this yoke, longer mounting screws, No. 1463229, MUST be used (shorter screws used with previous type yoke will not have sufficient thread engagement).*

►*REAR UNIVERSAL YOKE CAUTION: Do not disturb nut on end of pinion shaft retaining rear universal joint yoke unless yoke or oil seal should be replaced. Pinion bearing preload must be adjusted whenever this nut disturbed.*

REAR AXLE

Own Make. Hypoid gear, semi-floating with Hotchkiss Drive.
See "Cadillac Hypoid" in Rear Axle Section.

►*DRIVE LINE THUMP CORRECTION: See Front Joint Yoke data under "Universal Joint Yoke Production Changes & Replacement Caution" above.*

►*OVERHAUL CAUTION:* Manufacturer recommends that Carrier Assembly be serviced by replacement. Do not disassemble this unit or attempt service work other than oil seal and universal joint replacement.

Axle Identification—Axles marked by number stamped bottom of differential case below center of pinion shaft (First Cars) or on oil return hole boss at front end of differential case (beginning Engine No. 94850). Ratios and marks are as follows:

Series	Ratio	Mark
60S, 62 (Std.)	3.36-1	"6"
60S, 62 (Optl.)	3.07-1	"3"
75	3.77-1	"7"
86	4.27-1	"4"

►**Pinion Bearing Pre-Load Caution:** Must be adjusted each time pinion shaft nut loosened. *See "Cadillac Hypoid" in Rear Axle Section.*
Backlash—.003-.010" Screw adjustment.
Axle Shaft Removal: Remove wheel and take out screws holding brake drum on axle shaft flange and remove drum. Remove nuts and lockwashers from bolts holding bearing retainer and backing plate on axle housing, use Puller J-942-1 and Slide Hammer J-2619 to remove axle shaft.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CAUTION:* Use care not to damage axle shaft oil seal when sliding axle shaft out and do not disturb position of backing plate on housing.

Commercial Cars—Remove wheel, remove nut and washer on end of shaft. Use Puller (Snap-On No. S4567 or similar five jaw type) to remove wheel hub and brake drum. Disconnect brake line. Take out retaining screws and remove dust shield (bearing retainer) and backing plate. Use Puller J-838 to pull axle shaft and bearing assembly out, using care not to damage oil seal in housing.

Differential Carrier Removal: Disconnect rear universal joint and remove lubricant from rear axle housing. Remove axle shafts (see above). Remove nuts and washers holding carrier to axle housing and remove entire assembly with gasket. *See "Overhaul Caution" above.*

Wheel Bearings: Sealed ball-bearing type.
CAUTION—Check bearings for loss of lubricant when shaft removed. If bearings spin freely indicating loss of lubricant, replace bearings.

Pinion Bearing Preload Adjustment: Pinion should be adjusted whenever nut on end of pinion shaft disturbed (for universal joint yoke or oil seal replacement).

See "Cadillac Hypoid" in Rear Axle Section.

SHOCK ABSORBERS

Delco. Direct acting permanently sealed, airplane type located within coil springs (front), "Sea-Leg" type installation (rear), as follows:

Series	Front	Rear
60S, 62	①542-G	②5513717
75, 86	②5513718	②5513719

①—Delco number. ②—Cadillac number.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within coil springs.

►*FRONT SPRING PRODUCTION CHANGE & REPLACEMENT CAUTION:* Longer coil springs WITHOUT lower insulators used on later cars. When installing this late type spring on early cars, lower insulator should be removed and discarded.

Kingpin Inclination—5°51' with 0° camber.

Caster—0° to Neg. 1°. Adjustment must be equal within ½° or less on both sides of car.

Camber—Neg. 3/8° to Pos. 3/8° with ¼-½° more positive camber on left side.

Toe-In—3/16-¼" (at rest). Loosen clamp bolts, turn adjusters at outer end of each rod equally.

Toe-Out on Turns—With outer wheel turned 20°, inner wheel should be 22°40'.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm & nut type.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM)" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Bendix (Hydraulic) Single Anchor. Conventional two-shoe. Parking lever applies rear wheel service brakes.

Drums—Diameter 12" (all Series). Regrinding limits .060".
See "Bendix Hydraulic Single Anchor (Without Eccentric)" in Brake Section.

►*BRAKE PEDAL BIND & EXCESSIVE PEDAL EFFORT (Cars before Engine No. 22750): See "Brake Notes" in Cadillac Special Data.*

	Brake Lining Length	Width	Thickness
Primary	11.52" ①	2½"	¼"
Secondary	12.98"	2½"	¼"

①—(60S & 62). 12.98" (75 & 86 Series).

Braking Power—(Exc. 86 Series) 55.8% (front), 44.2% (rear). (86 Series) 52.8% (front), 47.2% (rear).

Clearance—.010" (top), .015" (bottom). Adjusting screw backed off 14 notches from point where wheel can just be turned by hand.

Master Cylinder: On left frame member directly forward of brake pedal.
Checking Fluid Level Note—Remote fluid reservoir above master cylinder on firewall. Maintain level to within ¾' of top of container.
Master Cylinder Removal—Remove splash shield from flywheel housing and remove master cylinder in usual manner.

Power Brakes: Bendix "Hydrovac" Power Unit connected in hydraulic line between master cylinder and wheel cylinders (no mechanical connection).
See "Hydrovac Power Unit" in Brake Section.
Removal of Power Unit—Disconnect brake lines at power cylinder end plate. Loosen vacuum line hose clamp at check valve and slide hose off check valve. Remove three nuts and lock washers from cylinder mounting bracket and remove assembly from car.

MISC. MECHANICAL

Windshield Wipers: Cable operated—Vacuum type.
See "Windshield Wipers" in Miscellaneous Section.

Windshield Washer: Connected with windshield wiper so that when windshield washer is operated, wiper motor automatically operates to clean windshield.

►*WINDSHIELD WASHER PRODUCTION CHANGE:* Solenoid Switch (for wiper control when washer operated) discontinued on cars beginning Engine No. 97096.
See "Windshield Washers" in Miscellaneous Section.

Power Window Regulators: Electric, with reversible motor in each window.

See "Electric Window Regulators" in Miscellaneous Section for data.

Power Top Control: Hydro-Lectric with "sealed" system which does not require periodic draining and refilling.
See "Top Controls" in Miscellaneous Section.

Power Seat Adjusters: Electric reversible motors for vertical and horizontal adjustment.

►*POWER SEAT CHUCK & NOISE CORRECTION:* May be corrected by adjustment and by installation of Tension Springs (used in production beginning Engine No. 57610). *See "Power Seat Adjusters" in Miscellaneous Section.*

Air Conditioning: *See "Frigidaire (GM) Air Conditioning in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1946-54 MODELS

	Ft. Lbs.	In. Lbs.
Cylinder Head Capscrews	75-80	900-960
Main Bearing Bolts	100-110	1200-1320
Con. Rod Nuts	40-50	480-600
Rocker Arm Support Bolts	25-30	300-360
Crankcase Frt. End Plate	15-20	180-240
Timing Gear Cover Screws	6-7½	72-90
Manifold Clamp Bolts	15-20	180-240
Manifold Stud Nuts	25-30	300-360
Clutch Mounting Bolts	25-30	300-360
Clutch Housing Bolts	45-55	540-660
Flywheel Bolts	50-65	600-780
Oil Pan Flange Bolts	6-7½	72-90
Oil Pan Corner Bolts	12½-15	150-180
Oil Distr. Cover Screws	6-7½	72-90
Water Pump Mtg. Bolts	25-30	300-360
Fuel Pump Mtg. Bolts	15-20	180-240
Spark Plugs (14 mm.)	20-25	240-300
Spark Plugs (10 mm.)	10-12	120-144
Pitman Arm Bushing Nuts	30-40	360-480
Prop. Shaft Flange Nut	160-280	1920-3360
Axle Flange Bolts (Trucks)	85-95	1020-1140

1955 MODELS

	6 Cyl. Ft. Lbs.	V8 Ft. Lbs.
Cylinder Head	90-95	60-70
Intake Manifold	① 15-20	25-35
Exhaust Manifold	① 15-20	25-35
Oil Pan	12 1/2-15	② 12-15
Main Bearing Caps	100-110	60-70
Flywheel	50-65	55-65
Con Rod Caps	35-45	30-35
Rocker Arm Support Bracket	25-30	
Rocker Arm Cover		2 1/2
Engine Front Cover	6-7 1/2	6-8
Clutch Housing	45-55	25-35

①—Tighten two end clamp bolts to 25-30 ft. lbs.
②—Corner bolts. Tighten other flange bolts to 6-7-1/2 ft. lbs.

ENGINE

1946-48 PASSENGER CARS

ENGINE REMOVAL: Drain radiator and cylinder block of all cooling liquid and remove the hood. Remove Fenders, Radiator, and Grille as an assembly (see Front End Removal above). Disconnect generator leads and free wiring loom from support clip, remove battery and starting cables. Disconnect distributor low and high tension leads, take out ignition coil mounting screws, lay coil on cowl. Disconnect gas line at fuel pump, throttle and choke controls at carburetor, and accelerator rod at bellcrank. Disconnect exhaust pipe from manifold. Remove front floor mat and floor plate over transmission, disconnect vacuum and air lines at transmission shift cylinder. Remove outer half of the reactionary metal boot (work under car) by taking out two bolts fastening halves together. On all cars except Cabriolet proceed as follows: Loosen reactionary lever assembly-to-transmission operating shaft clamp bolt, drive assembly from shaft carefully, disconnect selector rod from selector lever by taking out cotter pin in transmission end of rod, remove 3 vacuum cylinder bracket-to-transmission capscrews and move assembly clear of transmission. On Cabriolet only proceed as follows: Disconnect vacuum cylinder piston rod and valve link from reactionary lever system (to prevent upsetting vacuum valve adjustment, replace clevis pin thru piston rod yoke and valve link). Then for all cars continue as follows: Disconnect clutch pedal link and pullback spring. Remove bolts in universal joint ball retainer, slide retainer and ball back on shaft, take out 4 screws holding universal trunnion bearings on front yoke, remove trunnion bearings. Remove 4 bolts from transmission rear support, remove front and side engine mounting bolts, remove bolts in starter cross-shaft. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this bolt hole, attach hoist and lift engine until clear of mountings, pull engine forward and lift to clear front cross-member, then roll chassis back until engine is free. When engine re-installed, adjust mountings, align hood (see above).

1949-54 PASSENGER CARS

ENGINE REMOVAL: Engine, clutch, and transmission can be removed as an assembly as follows: Drain radiator, block, oil pan, and transmission. Take off hood by disconnecting hood springs (use Tool J-3181) and removing two hinge support arm-to-hood bolts at each side (hold hood to prevent dropping down when bolts removed). Remove radiator (see Radiator Removal), battery with ground strap attached, and air cleaner. Disconnect wire harness at right junction block and pull harness through header bar. Remove header bar. Disconnect starter and generator wires, coil lead, windshield wiper vacuum line, gas line at pump, choke and throttle cables at carburetor, line at temperature gauge and oil pressure gauge, exhaust pipe flange at manifold, accelerator pedal from rod, transmission control rods from levers on side of case (work through opening in floor), speedometer cable at transmission, and clutch link to pedal arm. (On Powerglide models, disconnect transmission oil cooler lines and vacuum line). Split the universal joint retainer, sliding the ball back, taking out bearing capscrews and removing trunnion bearings. Remove transmission-to-support bolts, engine side mounting-to-frame bracket bolts, and front engine mounting bolts. Take off rocker arm cover. Remove 4th cylinder head bolt from the rear on left side, 3rd from rear on right side and install engine lifting tool No. J-2967. Use a hoist and lift engine, clutch, and transmission assembly from car.

NOTE—On all models (except Powerglide with Automatic Transmission) after engine has been installed and torque tube connected, fill universal housing through speedometer connection (remove driven gear) with ½ pint of SAE 90 transmission lubricant.

1955 6 CYL. PASSENGER CARS

ENGINE REMOVAL: Drain cooling system, crankcase, and transmission and proceed as follows:

1) Scribe alignment marks on hood around hood hinges. Disconnect right hand headlamp, parking lamp, and horn wires and remove wires from radiator core support brace. Remove both horns. Remove radiator hoses and heater hoses on models so equipped. On Powerglide models, remove and plug oil cooler lines.

2) Remove radiator core support to fender bolts, core support to fender side baffle bolts and core support to front cross member bolts. Remove radiator core and core support. Remove battery, battery support and battery cables.

3) Disconnect starter and generator wires, engine to body ground strap, oil pressure indicator wire at switch on block and coil primary lead at coil. Remove windshield wiper motor. Remove temperature indicator element from cylinder head. Remove air cleaner.

4) Disconnect gasoline feed pipe from fuel pump and disconnect vacuum lines at intake manifold. Remove exhaust pipe to manifold bolts. Disconnect carburetor control rod from dash panel bell crank. Remove transmission control rods. Remove clutch control bellcrank and control rods on conventional transmission models. On overdrive models, disconnect overdrive wires and cables. On Powerglide models, remove oil filler tube and plug opening.

5) Disconnect speedometer cable at transmission. Split universal joint. Remove propeller shaft. Remove rocker arm cover and install lifting hooks from Kit J-4536 in cylinder head bolt holes. Raise engine slightly and remove all four engine mounts. Remove the engine and transmission from chassis as a unit.

1955 V8 MODELS

ENGINE REMOVAL: Drain cooling system, crankcase, and transmission and proceed as follows:

1) Scribe alignment marks on hood around hood hinges and remove hood from hinges. Remove radiator hoses and heater hoses. Remove radiator core support to core bolts and shims. On Powerglide models, remove and plug oil cooler lines. Remove radiator core.

2) Remove battery, battery support and battery cables. Disconnect starter and generator wires, engine to body ground strap, oil pressure indicator wire at switch on block and coil primary lead at coil.

3) Remove windshield wiper motor. Remove temperature indicator element from cylinder head. Remove air cleaner, fan blade and pulley. Disconnect gasoline feed pipe from carburetor and vacuum lines from intake manifold. Remove distributor and coil. Disconnect carburetor control rod from dash panel bell crank.

4) Disconnect exhaust cross over pipe from exhaust pipe and muffler assembly. Remove transmission control rods. Remove clutch bell crank and control rods on conventional transmission models. On Overdrive models, disconnect overdrive wires and cables. On Powerglide models, remove oil filler tube, plug opening and disconnect oil cooler lines. Disconnect speedometer cable at transmission.

5) Split rear universal joint and remove propeller shaft. Remove choke heat tube and rocker arm cover

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

and install two eye bolts and spacers from Kit J-4536-A in cylinder head bolt holes. Raise engine slightly and remove all four engine mounts. Remove engine and transmission from chassis as a unit, tilting engine to clear radiator core support.

1947-53 TRUCKS

ENGINE REMOVAL (TRUCKS): Drain radiator, cylinder block, and oil pan. Remove hood assembly. Remove front end sheet metal assembly (1947 Trucks). (On later models, remove radiator support bracket and radiator.) Disconnect starter switch cables, coil lead and engine ground strap. Disconnect generator leads at generator and disconnect horn wire. Disconnect fuel line at pump, choke and throttle controls at carburetor and remove air cleaner. Disconnect oil gauge line at engine, remove temperature gauge engine unit and disconnect vacuum lines from manifold. Remove exhaust manifold bolts, remove starter pedal and disconnect accelerator pedal from rod. Remove floor pan cover in cab and disconnect transmission control rods (models with steering column shift), or remove transmission cover and gearshift lever assembly and install temporary cardboard cover on case. Remove hand brake lever, disconnect speedometer cable and clutch link to pedal arm. Drain transmission, disconnect propeller shaft. Take out bolts in rear engine mounting, remove front engine mounting. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this position, attach hoist. Remove engine, clutch and transmission from chassis as a unit. When re-installing engine, see Engine mounting instructions (following).

1954 TRUCKS

ENGINE REMOVAL (TRUCKS): Drain cylinder block, and oil pan. Remove hood assembly, radiator support bracket and radiator. Disconnect starter switch cables, coil leads and engine ground strap. Disconnect generator leads at generator and disconnect horn wire. Disconnect fuel lines at pump, choke and throttle controls at carburetor and remove air cleaner. Disconnect oil gauge line at engine, remove temperature gauge engine unit and disconnect vacuum lines at manifold. Remove exhaust manifold bolts, remove starter pedal and disconnect accelerator pedal from rod. Remove floor pan cover in cab and disconnect transmission controls (models with steering column shift), or remove transmission cover and gearshift assembly and install temporary cardboard cover on case. Remove hand brake lever, disconnect speedometer cable and clutch link to pedal arm. Drain transmission, disconnect propeller shaft. Take out bolts in rear engine mounting, remove front engine mounting. Remove third cylinder head bolt from rear on left side, install engine lifting eye bolt in this position, attach hoist. Remove engine, clutch, and transmission from chassis as a unit When re-installing engine, see Engine Mounting instructions (following).

1955 6 CYL. TRUCKS

ENGINE REMOVAL: Same as 1955 6 Cyl. Pass. Cars except as follows: Disconnect parking brake linkage at transmission where necessary. Remove propeller shaft. On 1½ & 2 Ton models remove transmission cover and gearshift lever assembly (cover opening with cardboard).

1955 V8 TRUCKS

ENGINE REMOVAL: Same as 1955 V8 Pass. Cars except as follows: Remove windshield wiper motor. Disconnect Hydra-Matic oil cooler (if so equipped)

ENGINE MOUNTINGS

1946-47 PASSENGER CARS

ENGINE MOUNTINGS: *See Replacement Mountings (following) which are adjusted like 1948 type.*

Adjustment (Original Equip. Type)—Tighten front engine mounting bolts (replace mounting if oil-soaked), tighten rear mounting bolts at transmission and frame cross-member (studs tight in case). Clearance between cross-member and "U" section plate should be .005-.015" and equally spaced fore-and-aft (limits the fore-and-aft engine movement). If clearance excessive, remove mounting and bend plate to obtain correct clearance. Tighten side engine mounting bracket bolts. Take out engine side mounting bolts, check clearance between mounting and bracket at each side, clearance must be 1/32-1/16" (if clearance excessive, use a ⅜" plain washer for proper clearance. If clearance less than 1/32", loosen bracket mounting bolts and push mounting up (if necessary, remove brackets and file mounting holes with round file to secure proper clearance). Tension on both side mountings must be equal.

1946-47 MODELS

REPLACEMENT ENGINE MOUNTINGS (1946-1947 Passenger Cars): New 1948 type Side Support Cushion Assemblies (Side Mountings) and Transmission Support Assembly (Rear Mounting) as listed below can be installed on all cars except Cabriolet models. Side mountings must be installed in pairs (can be used on 1946-47 cars). Rear Mounting can be installed separately or with new side mountings on 1946-47 cars. Rear mounting is new one-piece type and requires installation of new type lock plate which also serves as a stop for transmission countershaft. Adjust mountings as directed for 1948 cars.

NOTE—These mountings used on late 1947 cars.

1946-47 Replacement Mountings

Side Support Cushion Assy. (R. H.)	756056
Side Support Cushion Assy. (L. H.)	756057
Transmission Support Assy.	756100
Transmission Support Bolt Lockplate	3683693

1948 PASSENGER CARS

ENGINE MOUNTINGS (1948 Passenger Cars): Mountings consist of one-piece vulcanized rubber type assemblies as follows:

Front Mounting—Same as used on previous cars.

Side Mountings—New right and left hand (not interchangeable) type with rubber in "shear". These mountings must be adjusted when installed on car

Rear Mounting—New one-piece vulcanized assembly which does not require adjustment (replaces former "U" channel plate type).

Adjustment of Pass. Car Engine Mountings: Install side mountings with lug on mounting at edge of engine bracket. Shim between mounting and brackets so that clearance is zero plus or minus 1/16" before tightening mounting bolts. Bolt holes in frame bracket are offset. Rear engine mounting should be bolted to frame cross-member first and then bolted to transmission with engine and transmission weight on mounting (bolt holes slotted to provide alignment between transmission and mounting). Lock the mounting bolts in the transmission with the special lock plate. Replace engine mountings whenever they become oil-soaked.

1948-54 PASSENGER CARS

ENGINE MOUNTING REPLACEMENT: Front Mounting. Remove engine front mount bolts from engine mounting plate and frame cross-member. Raise front end of engine until front mounts can be moved out from between plate and frame. With front support mounting surfaces clean (no oil, etc.), bolt new supports to frame, lower engine, install mounting plate, bolt support to engine.

Side Mountings. Unbolt mounting from clutch housing and frame brackets and remove mounting. Install new mounting with serrated face toward frame bracket. Bolt mounting to clutch housing bracket first, then tighten mounting to frame bracket bolts (bolt hole in frame bracket slotted and serrated face of frame bracket and mounting permit proper positioning without use of shims).

Transmission Mounting (except Powerglide Cars). Remove mounting attaching bolts (tangs of lock plate must be bent back from bolt heads). Raise rear of engine until mounting can be moved out from between transmission and frame cross-member. Use new bolt lock plate and bolt new mounting to frame, lower engine, use new bolt lock plate and bolt mounting to transmission (transmission attaching bolt holes slotted permitting alignment between transmission and support).

1955 PASSENGER CARS

ENGINE MOUNTING REPLACEMENT: (Front Mounts)—Remove top and bottom stud nuts and remove washer and cushion between each nut and the cross member or engine bracket. Raise front of engine (On V8 models, remove the distributor cap before raising engine). *CAUTION—Raise engine only far enough for clearance.* Replace necessary cushions.

Rear Mounts: Support engine weight to relieve rear mounts. Remove mount attaching bolts from frame outrigger and flywheel housing (or Powerglide Transmission) and remove support. Install new support and bolts and tighten securely with engine weight resting on mounts.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1946-47 TRUCKS

ENGINE MOUNTINGS: Adjustment. Tighten front engine mounting bolts and side engine mounting bracket bolts securely.

1948-54 TRUCKS

ENGINE MOUNTINGS (Trucks): Consist of insulated type front and rear mountings as follows:

Front Mounting—Engine mounting bushings are imbedded in rubber insulator assembled between lower retainer and upper plate with a shield on top of the assembly. This mounting should be checked for clearance when installed and periodically in service.

Rear Mounting—Two insulated units. Bolted to bracket on clutch housing and bracket on frame. No adjustment required (keep mounting bolts tight).

Adjustment of Truck Engine Mountings: Check new front engine mounting, and remove and check mounting in service, as follows: With mounting removed from engine, fit insulator into lower retainer and place upper plate on top. Hold parts firmly together and make certain that rubber insulator fits tightly between retainer and plate and that engine mounting bushings project above upper plate (necessary to prevent oil shield contacting upper plate). Replace insulators which do not pass this test. Check clearance between upper edge of lower retainer and lower face of upper plate. If clearance more than 5/64", replace lower retainer. If clearance less than 3/64", grind off top edge of lower retainer. (CAUTION—do not attempt to shim the support). When installing mounting, tighten engine-to-mounting bolts tightly, mounting-to-frame bolts securely but not excessively tight (self-locking type nuts). Rear engine mountings do not require adjustment and mounting bolts should be kept tight.

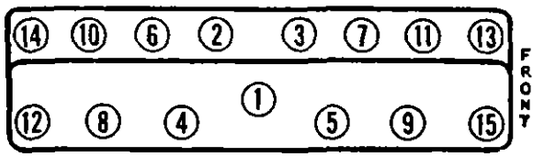
1955 TRUCKS

ENGINE MOUNTING REPLACEMENT: Same as 1955 Passenger Cars. See above.

TORQUE TUBE & BALL ADJUSTMENT

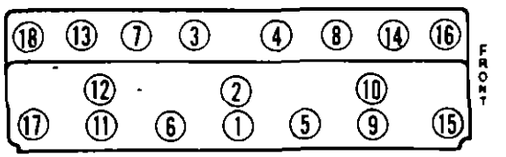
1950-54 POWERGLIDE MODELS

UNIVERSAL JOINT BALL ADJUSTMENT (POWERGLIDE MODELS): ***Due to the fact the universal joint is lubricated under pressure (fed by automatic transmission line pressure through channel in output shaft) leakage will develop if the ball joint is not properly adjusted.***



To adjust, remove universal joint ball from torque tube. Clean thoroughly, and inspect for roughness, and clean up with fine emery paper if necessary before making adjustment. Use 4 new universal ball collar shims as a starting point, install joint ball and collar to transmission case and tighten bolts to 8-12 ft. lbs. torque. **NOTE**—Do not install the ball joint collar oil seal (cork) at this time. With bolts tight grasp the ball at the sliding seal (to tube) end with both hands, and test for tightness of ball, up and down. If ball assembly can be moved and is a snug fit, the ball is properly adjusted. If it cannot be moved by hand or is too loose add or remove shims until proper adjustment is secured. After correct adjustment is made disassemble joint and install cork seal after first lubricating it with a graphite grease, and reassemble to transmission tightening bolts to 8-12 ft. lbs. torque.

CYLINDER HEAD & MANIFOLD

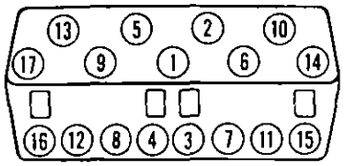


6 CYL. MODELS

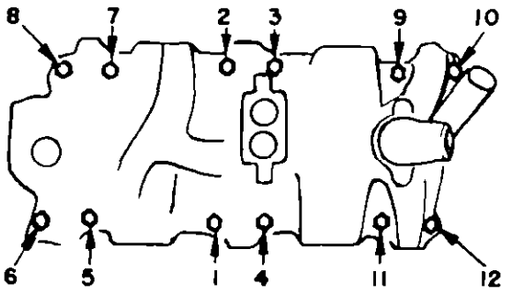
CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head capscrews, tighten in correct sequence as shown in diagram. Cast Iron heads should be tightened cold and rechecked after engine has been run sufficiently to bring all parts to normal operating temperature.

Tightening Torque—See Tightening (Torque Wrench) Specifications.

CHEVROLET 6 CYL. CYLINDER HEAD
(EXC. 1953 235" ENGINE)



CHEVROLET 6 CYL. CYLINDER HEAD
1953 & LATER 235" & 261" ENGINE



V8 MODELS

CYLINDER HEAD INSTALLATION (V8 ENGINES): Coat steel cylinder head gaskets with a good head gasket paste and install gaskets in position on cylinder block. Install heads over dowel pins in the block. Oil threads of all long cylinder head bolts and coat threads of all short bolts with Permatex No. 3 (short head bolts protrude into water passages). Use a torque indicating wrench and tighten bolts a little at a time to 60-70 ft. lbs., in the sequence shown in diagram.

INTAKE MANIFOLD INSTALLATION (V8 ENGINES): Install manifold end gaskets on cylinder block. Coat ends of intake manifold side gaskets around water passages with a good sealing compound and install heads. Tighten bolts a little at a time to 25-35 ft. lbs. torque.

CHEVROLET V8 CYLINDER HEAD

CHEVROLET V8 INTAKE MANIFOLD

PISTONS

1946-53 MODELS

►*NEW "HIGH LIMIT" STANDARD PISTONS—Available for "216" & "235" Engines (1946-53).*

REPLACEMENT PISTONS: Finished pistons with fitted pins and bushings furnished as follows:

1946-52 Pass. Cars (216" Engine)

Part No.	Size
605260	Standard
3699254	.001" Oversize
605263	.020" Oversize
605280	.030" Oversize
605281	.040" Oversize

1953 Pass. Cars (216" Engine)
1946-53 Trucks (216" Engine)

Part No.	Size
605276	Standard
3699255	.001" Oversize
605279	.020" Oversize
605280	.030" Oversize
605281	.040" Oversize

1950-52 Pass. Cars. (235" Engine)
1946-53 Trucks (235" Engine) ①

Part No.	Size
3693984	Standard
3699256	.001" Oversize
3693994	.020" Oversize
3693995	.030" Oversize
3693996	.040" Oversize

1953 Pass. Cars (235" Powerglide) ②

Part No.	Size
3707453	Standard
3703846	.001" Oversize
3704534	.020" Oversize
3704535	.030" Oversize
3704536	.040" Oversize

①—When these pistons are installed on models prior to 1950 it will be necessary to use Ring Unit which contains 3/32" top compression ring.
②—Engines with aluminum pistons.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*PISTON SIZE NOTE—Standard pistons marked S1, S2, S3, S4 to denote size limits in steps of .0005".*

PISTON PINS

V8 MODELS

PISTON PINS (V8 ENGINE): Removal—Install pilot of *Tool J-5538 on puller screw and install puller screw,* with pilot, through piston and pin. Install tool support over threaded end of puller screw with small end of support against piston. Install nut loosely on puller screw and place assembly in arbor press so that pin can be pressed out through support.

Installation: Lubricate pin holes and position connecting rod in its respective piston so that flange or heavy side of rod at bearing end will be toward **front** of piston (cast depression in head of piston and "F" marks on piston struts) on #1-#3-#5-#7 pistons and rod flange to **rear** of piston on #2-#4-#6-#8 pistons. Install piston pin on puller screw and pilot on screw. Install puller screw through piston and rod, indexing pilot through piston and rod. Install support over threaded end of puller screw with small diameter toward piston. Install nut on puller screw and tighten with a torque wrench to start piston pin into connecting rod *(CAUTION—If pin can be started into connecting rod with less than 10 ft. lbs. torque, clearance is excessive).*

CRANKSHAFT & MAIN BEARINGS

1946-54 MODELS

MAIN BEARING INSTALLATION (Without Removing Engine or Crankshaft from Chassis): Upper bearing halves can be replaced by following procedure (bearings doweled in place and cannot be "rotated" out):

Main Bearing Replacement (Pass. Cars): Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Raise car and support securely on stands so car is level and approximately 8" off floor. Remove transmission floor pan cover. Remove clutch housing underpan. Remove transmission rear support-to-crossmember bolts. Disconnect shift rods from transmission levers. Raise rear of engine, place 1" square bar behind flywheel and under clutch housing with ends resting on second cross-member brace (this will support engine weight). Release clutch fork from ball. Remove transmission mounting bolts, slide transmission back approximately ¾". Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure re-meshing gears in same relative position. Then install new bearings as follows:

Bearing Installation—Loosen but do not remove all main bearing cap bolts sufficiently to allow crankshaft to drop down approximately ⅛". Remove front intermediate and rear main bearing caps (other bearing caps will support crankshaft), remove old bearings from bearing cap and crankcase (if old bearings do not drop down with crankshaft, tap bearings lightly to free dowel). Install new bearings, locating dowel on back of bearing shell in hole in crankcase, and pressing bearing up in place (bearing should snap into place and hold if it has correct spread). Re-install bearing cap, using .006" shim thickness (three .002" shims) on each side of cap, tighten bearing caps just enough to support crankshaft. Repeat above procedure at front and rear intermediate bearings (NOTE—Rear intermediate bearing is close fit in crankcase and may not go up into place until crankshaft lifted up). After all bearings replaced, place a jack under rear intermediate bearing cap and carefully raise crankshaft into position. Keep crankshaft horizontal during this operation (CAUTION—Make certain that timing gears meshed in accordance with marks made before crankshaft dropped). Tighten all bearing caps snugly, then adjust main bearings as directed on car model page.

Main Bearing Replacement (Trucks): Remove radiator (see Radiator removal), remove fan belt and vibration dampener (see Vibration Dampener removal). Loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs. Take off transmission floor pan cover and clutch housing underpan and extension. Disconnect transmission control rods on side of transmission case (½ & ¾ Ton), remove hand brake lever from transmission mounting stud (Other Trucks). Remove transmission (see Transmission removal instructions for each model on car model page). Remove oil pan and timing gear cover. Remove oil pump and screen cover assembly. Rotate crankshaft to position allowing removal of all bearing caps. Mark timing gears to insure re-meshing of gears in same relative position. Then install new bearings as directed for Pass. Cars

1946-54 MODELS

CRANKSHAFT OIL SEALS: Rear Seal. Special rear *main bearing cap (mounted on four bolts with two* locating dowels) with wick type oil seal installed in groove in cap and crankcase used. Seal bears on outer rim of crankshaft flange (oil slinger and check valve in oil return hole in bearing cap have been discontinued). To install new seal in bearing cap, insert packing in groove and roll firmly in place with rounded tool (roll from both ends toward center). Use round block of wood (same diameter as crankshaft flange) to hold packing in place, cut both ends off evenly and flush with bearing cap face. Install upper half of seal in crankcase in same manner with engine out of car.

Front (Timing Gear Cover) Oil Seal—Spring-loaded leather type installed in pocket in timing gear cover. To install new seal, place seal on special Oil Seal Replacer J-995 with free end of leather toward end of tool, seat seal in cover with few light hammer blows on tool. NOTE—Timing gear cover must be centered on crankshaft when installed on engine to prevent balancer damaging oil seal. To install cover, coat seal with grease, install centering guide J-966 on crankshaft, install cover and tighten cover screws.

1955 6 CYL. MODELS

6 CYL. ENGINE MAIN BEARING REPLACEMENT (With Engine in Car): Upper bearing halves are doweled in position. Proceed as follows:

1) Remove radiator, harmonic balancer, and timing gear cover. Remove rocker arm cover and loosen all rocker arm screws to relieve tension on camshaft. Remove spark plugs.

2) Remove transmission (see Transmission Removal on Car Page). Drain oil, remove oil pan and oil pump. Rotate crankshaft to best possible position for removal of all bearing caps and mark the meshing teeth of timing gears for remeshing in same position.

3) Loosen all four main bearing caps evenly until crankshaft is lowered approximately 3/8". Remove front intermediate and rear bearing caps and remove upper and lower bearing shells (If upper shells do not come out with crankshaft, tap lightly to loosen).

4) *NOTE—Always replace bearings in pairs.* Install new upper half bearing shells in rear and front intermediate bearing bores by rolling into position, centering and pressing up into place *(CAUTION—*Be sure to install upper halves so smaller of the two holes will be toward camshaft when rolled into place). Install new lower half bearing shells in caps, and replace caps, using three .002" shims on each side of bearing as a starting point for adjustment. Tighten bearing *cap bolts until caps are snug to journals.*

5) Repeat this procedure with other main bearings. *NOTE*—Due to close fit the upper half of rear intermediate bearing may not go all the way into place. Start it evenly and it will go all the way when crankshaft is raised into place.

6) After all bearings have been replaced, raise crankshaft by tightening bearing cap bolts evenly and alternately *(NOTE*—At the same time, check meshing of timing gears with marks made at disassembly). With the crankshaft up in place, force it all the way fore and aft and check end clearance at rear intermediate bearing. Adjust main bearings.

7) Reassemble engine by reversing above procedure.

1955 6 CYL. M DELS

REAR MAIN BEARING OIL SEAL (6 CYLINDER ENGINE): Remove rear main bearing cap and remove old seal *from groove. Insert new packing in bearing cap* and roll firmly into place with a rounded tool (roll from both ends toward center). Use a round block of wood, same diameter as crankshaft flange, to hold packing in place. Cut off both ends of packing evenly and flush with bearing cap face. Install upper half of seal in crankcase in same manner, with engine out of car.

V8 MODELS

V8 ENGINE MAIN BEARING REPLACEMENT (With Engine in Car): Upper bearing halves can be "rolled" out for replacement. Proceed as follows:

1) Remove spark plugs and remove engine oil pan.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Remove bearing cap and bearing shell.

2) *Install main bearing shell removing and installing* tool (or use a cotter pin bent as required). Rotate crankshaft in direction of usual rotation and roll upper bearing shell out of engine.

3) Oil new bearing shell and insert plain (un-notched) end of shell between crankshaft and block on the indented or notched side. Rotate bearing into place. Install new bearing shell in bearing cap.

4) Check bearing clearance with Plastigage. Install oil pan and spark plugs.

V8 MODELS

REAR MAIN BEARING OIL SEAL (V8 ENGINE): Remove rear main bearing cap and remove old seal from groove. Insert new seal in groove with fingers, and then with Tool J-5788 (Oil Seal Installer), and a hammer, pound seal firmly into groove. Cut the small portion of the seal that protrudes from groove flush with surface of bearing cap. Replace upper half of seal in crankcase in same manner, with engine out of car.

VIBRATION DAMPENER

1946-54 MODELS

HARMONIC BALANCER: Balancer furnished as a complete assembly only. Separate parts not available for service replacement.

Removal (Passenger Cars)—Remove radiator (see Radiator Removal), and Radiator Grille and Filler Panel Baffle as an assembly. Take off fan belt. Remove engine front mounting bolts, raise front end of engine approx. ½" (to permit balancer puller head to clear radiator support cross-member) Use puller J-1287, attach puller body to balancer by means of two capscrews screwed in tapped holes in balancer, pull balancer by turning puller screw.

Removal (Trucks)—Remove Front End Sheet Metal Assembly (see Front End Sheet Metal Assembly removal preceding). Then remove balancer with puller tool as described for Passenger Cars (above).

Installation—Place drive adapter of puller tool J-1287 in starting crank jaws of balancer, install puller body (as above), line up keyway in balancer and key in crankshaft, turn puller screw down to *contact driver, then use puller screw as driver* and drive balancer in place until it bottoms against crankshaft gear.

1955 6 CYL. MODELS

VIBRATION DAMPENER (6 CYL. ENGINE): Removal—Remove radiator. On Powerglide models, remove oil cooler lines and plug outlets, Remove fan belt and install Puller J-1287-B and pull dampener assembly from crankshaft.

Installation: *Remove puller and install two 3/16" x 1"* (16 thread) capscrews in dampener to support wheel portion during installation. Position dampener on crankshaft with key and keyway on alignment and drive dampener on shaft until it bottoms against crankshaft gear. Use a heavy hammer and bar through the grille, taking care that a straight installation is made. Remove the two 3/16" capscrews previously installed. Install radiator.

1955 V8 MODELS

VIBRATION DAMPENER (V8 ENGINE): Removal—Remove radiator. On Powerglide models, remove oil cooler lines and plug outlets. Remove fan belt, fan, and pulley, and install Puller J-1287-B and pull dampener assembly from crankshaft.

Installation: Install two 3/16"—16 x 1½" capscrews to hold hub and flywheel portion of dampener together during assembly. Coat cover seal contact on dampener with engine oil and position dampener on crankshaft. Use Transmission Front Bearing Installer J-5590 and drive dampener on shaft until hub bottoms on timing sprocket. Remove the two screws installed previously and install pulley, fan, and fan belt. Install radiator.

ENGINE FRONT COVER

1955 MODELS

FRONT OIL SEAL INSTALLATION: Pry old seal out of front cover. Install new seal so that open end of seal is toward inside of cover and drive it into position with Oil Seal Driver J-996. *CAUTION—Support cover at sealing area while installing seal.*

FLYWHEEL

6 CYL. MODELS (EXCEPT POWERGLIDE)

FLYWHEEL INSTALLATION: Sealing of Mounting Bolts. To prevent oil leaks through flywheel bolt holes into clutch, it is recommended that a small amount of Permatex Formagasket No. 2 be placed in each bolt hole in crankshaft flange before installing the flywheel. Wipe face of flange and flywheel mounting surface clean (any foreign material on mounting surface will cause loosening and failure of the mounting bolts).

Installing Flywheel—Use new lock plates each time flywheel bolts are disturbed. Tighten all bolts evenly to 50-65 ft.lbs. and lock each bolt by bending corner of lock plate up against flat on bolt. Check flywheel for runout after installation with a dial indicator. Runout at face and rim of flywheel must not exceed .008".

CAMSHAFT & BEARINGS

1946-55 6 CYL. MODELS

CAMSHAFT BEARINGS: Installation. Oil groove extends 70° around bearing from oil hole. To insure proper alignment with oil hole in block, mark front of bore opposite oil hole. Align oil hole in bearing with mark (with groove toward bottom of engine away from oil hole in block), press bearings in, stake in place, and line ream (see below).

Reaming: Special reamer with four cutters on one bar *recommended by car manufacturer (for proper alignment).* Insert reamer through #1, #2, & #3 bearings. Start reamer cutter in all four bearings at the same time (wash metal cuttings away with a liberal supply of kerosene while reaming), turn reamer slowly until cutters pass through bearings. Remove reamer by rotating in same direction as when reaming bearings and withdraw from engine. Bearing cuttings must be blown out with compressed air. Install camshaft and check bearing clearances with narrow feeler gauge. Clearance should be .002-.004". Install expansion plug to rear of rear bearing.

TIMING GEARS

1946-55 6 CYL. MODELS

REPLACEMENT TIMING GEARS: Fibre type camshaft gear and steel crankshaft gear used on all passenger car and truck engines (except 2-ton models). Aluminum camshaft gear and steel crankshaft gear used on 2-ton models, and as special heavy duty equipment on all other models (except Powerglide).

►*1946-53 CAMSHAFT THRUST PLATE REPLACEMENT NOTE:* The gaskets located between thrust plate and block are no longer furnished for service replacement. Thrust plate is now furnished with a spacer ring which provides correct camshaft endplay when installed as directed below.

1946-55 6 CYL. MODELS

TIMING GEAR INSTALLATION: Gears are press fit on crankshaft and camshaft and must be removed and installed as follows:

Crankshaft Gear—To remove gear, attach Puller T126-R by threading puller screws in tapped holes in gear, pull gear off. When installing gear, make certain that two woodruff keys installed in crankshaft keyways, drive gear on shaft until it seats against shoulder on shaft.

Camshaft Gear—To remove gear, attach Gear Remover J-971-A on shaft in back of gear (remover consists of support sleeve), place camshaft assembly in arbor press (*CAUTION*—Thrust plate must be positioned so that it will not be damaged by woodruff key in shaft as shaft pressed out), press shaft out of gear. To install gear, firmly support shaft at back of front journal in arbor press. Place gear spacer ring and thrust plate over end of shaft, and install woodruff key in shaft keyway. Install camshaft gear and press it onto shaft until it bottoms against the gear spacer ring. The end clearance of the thrust plate should be .001-.005".

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

TIMING CHAIN

V8 MODELS

TIMING CHAIN: Removal—Remove vibration dampener, timing chain cover, and oil slinger. Rotate engine until timing marks on sprockets are in alignment and in alignment and adjacent. Remove three camshaft sprocket screws and remove camshaft sprocket and chain together.

Installation: Install chain on camshaft sprocket. Hold sprocket vertical with chain hanging below, and line up 'O' timing marks on both sprockets so they are adjacent and in line with a straight edge across shaft centers. Align dowel in camshaft with dowel hole in sprocket and install sprocket on camshaft. Draw camshaft sprocket onto shaft using the three mounting bolts. Tighten to 15-20 ft. lbs. *CAUTION—Do not attempt to drive sprocket onto shaft as welch plug at rear of engine can be dislodged.*

VALVE SYSTEM

►*FIRST 1954 POWERGLIDE ENGINE VALVE "SQUAWK" CORRECTION:* To provide additional lubrication of valve stems at rocker arm and in guide, drill additional holes in rocker arms as follows. *CAUTION*—Other methods of correcting this squawk (grooving arms, revolving seals, reaming guides, etc.) should not be used as they cause other adverse conditions and excessive oil consumption.

Drilling Intake Rocker Arms—Drill additional 7/64" hole in rib on top of rocker arm at point 5/16" toward *valve end of arm from present oil hole. Drill this hole* **directly into oil groove** in rocker arm bore.

Drilling Exhaust Rocker Arms—Drill additional 7/64" hole in wide side of rocker arm bearing boss 13/16" toward valve end from present oil hole and 5/16" in from edge of wide side of bearing boss. Drill this hole at an angle so that it enters rocker arm bore on valve side of bore center line. *CAUTION*—This hole **must not break into oil groove** in rocker arm bore.

NOTE—Remove all burrs from rocker arm bore. **Do not** plug original oil holes in rocker arms.

ALL MODELS

ENGINE NORMALIZING PROCEDURE (For Valve Tappet Clearance Adjustment): Clearance changes while engine is warming up. Adjust only after engine has been 'normalized' as follows: Run engine at 600 RPM and check oil temperature with thermometer at overflow pipe on valve rocker arm shaft connector until no change noted in oil temperature for a period of five minutes (oil temperature will become stabilized at some point between 150° and 225°F). This normalizing period will be from 5 to 30 minutes depending on engine temperature when started.

1946-55 TRUCKS

VALVE ROTATORS: (Std. on 1953 235" Engines, 1954 Loadmaster & Jobmaster Engines, and on all engines used in 1955 5000 & 6000 Series Trucks. Optional equipment on all other engines 1946-55). Rotators are furnished in sets of six for installation on exhaust valves.

1950-55—Rotators can be installed on present valves. *CAUTION—Valve spring height should be checked when rotators installed. See data on earlier models following:*

Earlier Models (1946-49)—On earlier models it will be necessary to use 1950 type exhaust valves (Part No. 3845606, with 45° seats), and re-working the head for these valves. Where the valve seats have been ground to such an extent that the valve spring height (*head to top of spring*), with rotators installed is greater than 1 55/64" it will be necessary to install a .060" or .065" washer under the spring seat, otherwise they will not function properly. Washers, Part No. 346704 and 355913 can be used for this purpose.

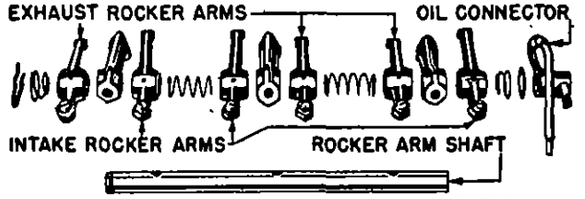
SET VALVE CLEARANCE AT .018-.020" AFTER INSTALLING ROTATORS.

VALVE TAPPET ADJUSTMENT
ALL MODELS
(WITH HYDRAULIC VALVE LIFTERS)

INITIAL ADJUSTMENT HYDRAULIC VALVE LIFTERS: *(Required when cylinder head has been removed or rocker arm or valve assemblies have been replaced).*

6 Cylinder Engines: The hydraulic lifters must be at the lowest point of travel when adjusted (piston in firing position). Remove distributor cap and turn engine until rotor is in firing position (points just breaking) for cylinder being set. Starting with #1 cylinder, turn valve adjusting screw down until rocker arm just contacts valve. This can be determined by checking push rod side play at adjusting screw end while turning the adjusting screw. At the point where no side play can be felt, continue turning the adjusting screw down 1-1/2 turns and tighten lock nut securely. Adjust each cylinder following the same sequence as the firing order (1-5-3-6-2-4).

V8 Engines: With No. 1 Cyl. at TDC firing position, adjust Exhaust valves 1-3-4-8, Intake valves 1-2-5-7 by backing off the adjusting nut on rocker arm until there is play in valve push rod, then tighten adjusting nut to just remove all push rod-to-rocker arm clearance, **then tighten adjusting nut an additional 3/4 turn** to place hydraulic lifter in center of its travel. Crank engine one revolution so that #6 cylinder is in firing position, and then proceeding as above, adjust Exhaust valves 2-5-6-7, and Intake valves 3-4-6-8.



VALVE STEM SEALS
ALL MODELS

VALVE STEM OIL SEAL INSTALLATION: *(NOTE—An additional "umbrella" type shedder is installed over valve spring and retained in place with valve spring retainer on all V8 Engines).* Install synthetic rubber seals as follows: With valve in place in cylinder head, install valve spring with closed coil end down against head and install valve cap or spring retainer. Compress spring and cap so that lower groove on valve stem is exposed and install seal in lower groove (*CAUTION*—Seal must seat in groove and be flat), install valve locks and relieve tension on spring. Check to see that cap retains spring and locks properly. *NOTE—"Umbrella" type shedders not used on 6 Cyl. Engine.*

ROCKER ARMS
1946-55 6 CYL. MODELS

ROCKER ARMS: Rocker arms are precision bored and fit directly on rocker arm shafts (no bushings).

►*ROCKER ARM IDENTIFICATION NOTE:* A number is cast on side of rocker arm (either a single digit or a casting number. If a multiple digit number, use the last digit for identification) to aid in correct assembly to rocker arm shaft. See tables below for identification numbers. Left Hand Exhaust, and Right Hand Intake rocker arms are used on Cyls. 1-3-5. Right Hand Exhaust and Left Hand Intake rocker arms used on Cyls. 2, 4, 6.

CHEVROLET 6 CYL. ROCKER ARM ASSEMBLY
(REAR ASSY. SHOWN—FRONT ASSY. SIMILAR)

Rocker Arm Identification

1946-53 Pass. Car & Truck 216" Engine
1954-55 1st Series Truck 261" Engine

Location	Ident. No.
Left Hand Exhaust	1
Right Hand Exhaust	2
Left Hand Intake	5
Right Hand Intake	6

1950-54 Pass. Car & Truck 235" Engine
1955 1st Series Truck 235" Engine
1955 Pass. Car 235" Engine (Except Powerglide)

Left Hand Exhaust	9
Right Hand Exhaust	0
Left Hand Intake	3
Right Hand Intake	4

1955 2nd Series Truck 235" Engine

Left Hand Exhaust	1
Right Hand Exhaust	2
Left Hand Intake	11
Right Hand Intake	12

1955 2nd Series Truck 261" Engine

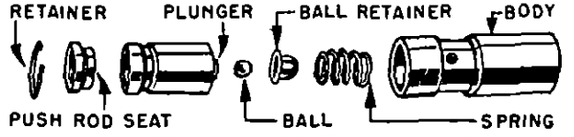
Left Hand Exhaust	3
Right Hand Exhaust	4
Left Hand Intake	7
Right Hand Intake	8

Installation: Assemble rocker arms as indicated in illustration with open end of shaft toward center, and baffle in rear shaft open end in vertical position.

CONTINUED ON NEXT PAGE

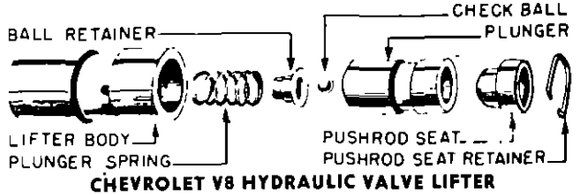
CONTINUED FROM PRECEDING PAGE

V8 MODELS



ROCKER ARM STUD REPLACEMENT (V8 ENGINES): Oversize rocker arm studs are available in .003" & .013" oversizes for service replacement. Remove old stud by placing Spacer J-5802 over stud, installing nut and flat washer and removing stud by turning nut. Ream hole for oversize stud with Reamer J-5715 (.003"), J-6036 (.013"). Coat press-fit area of stud with hypoid lubricant and install stud to correct height as follows: 1-3/4" (Early Production "Low Boss" head), 1-41/64" (Later Production "High Boss" head). See "Head Identification" & "Tool Rework" below.

►*V8 CYLINDER HEAD IDENTIFICATION NOTE:* "Low Boss" & "High Boss" heads may be identified by placing a straight edge across rocker cover gasket surfaces. The low stud boss (early head) will be approximately flush with lower edge of scale while the high stud boss (later head) will be approximately 1/4" above lower edge of scale.



►*STUD INSTALLER TOOL J-5801 REWORK (For installing Stud to 1-1/4" Height):* Grind 3/32" off bottom of tool. When installing studs in "High Boss" (later type head), use Installer Tool J-5801 to drive stud in to the 1-3/4" height, after which studs will have to be pressed in further to the 1-41/64" height.

HYDRAULIC LIFTERS
ALL MODELS

HYDRAULIC VALVE LIFTERS: Barrel type, consisting of plunger and valve assembly operating within a cylinder formed by valve lifter tappet or body (see illustration). Oil is introduced to this unit through oil gallery in block.

CHEVROLET 6 CYL. HYDRAULIC VALVE LIFTER

CHEVROLET V8 HYDRAULIC VALVE LIFTER

Removal: On 6 cylinder engines, remove rocker arm assemblies, push rods and push rod cover. On V8 engines, remove intake manifold and back off the rocker arm nuts until rocker arm can be swung away from push rods. Remove push rods.

Disassembly: Hold plunger down with a push rod and using a small screw driver or pointed awl, remove plunger retainer. Remove push rod seat, plunger, ball check valve, ball retainer and spring. Clean all parts in solvent and inspect each part carefully for nicks and burrs, or wear. Replace complete assembly if any parts are damaged.

Reassembly (6 Cyl. Engines): Invert plunger and set check valve ball into hole in plunger and place check valve ball retainer over ball and on plunger. Place check valve retainer spring over retainer and then assemble lifter body over the complete assembly, being careful to line up the feed holes in plunger and lifter body. Turn assembly over and fill with S.A.E. 10 engine oil, then insert end of Tool J-4274 through ball seat hole in bottom of plunger and press down solid, at which point holes in lifter body and plunger will be aligned. Insert pin (part of Tool J-4274) through both holes to hold plunger down against spring tension, then remove tool from top of lifter. Fill assembly with S.A.E. 10 engine oil, install push rod seat and spring retainer. Press down on push rod seat and remove pin.

Reassembly (V8 Engines): Invert plunger and set ball into hole in plunger, and place check valve ball retainer over ball and on plunger. Place check valve retainer spring over retainer. Assemble valve lifter body over the complete assembly. Turn assembly over and install push rod seat. Compress plunger with push rod and install retainer. Compress plunger to open oil holes and fill plunger with S.A.E. 10 engine oil. Work plunger up and down to refill.

Installation: Reverse removal procedure.

OILING SYSTEM
1946-53 216" ENGINE

OIL DISTRIBUTOR: Distributor is located in recess in left side of engine block (under valve cover plate).

CAUTION—Inner and outer gaskets used with valve assembly plate must not be interchanged.

Removal—To dismantle oil distributor, take out three screws in cover plate, remove cover plate, outer gaskets, valve assembly plate, inner gasket.

***CAUTION*—Do not alter oil distributor valve spring tension (will upset proper oiling of engine). If trouble suspected in oil distributor, replace oil distributor valve assembly.**

Assembly—Install cork gasket with two center holes between valve assembly plate and block, and use cork gasket with center cut out between valve assembly plate and cover, tighten cover screws.

1950-55 235" ENGINE

OIL LEAD TO VALVE ROCKER ARMS (6 CYL. ENGINES): Rocker arm shaft oil line pipe extends forward to push rod compartment from a fitting in tappet ledge just above rear camshaft bearing, to center of engine then upward to a fitting between the hollow rocker arm shafts. To replace this pipe, cut a new pipe to proper length, install new nipples at each end and install pipe to cylinder block fitting, then bend pipe to contour so that clearance is provided for the push rods and push rod cover and so that end of pipe extends straight up for cylinder head lubrication.

1946-48 MODELS

REPLACEMENT TIMING GEAR OIL NOZZLE: On these models, regular production timing gear oil nozzle is pressed and flared in place in the engine front end plate. Nozzle cannot be serviced, and if replacement is necessary, new front end plate No. 607872 must be installed..

1946-53 MODELS (EXCEPT 1953 POWERGLIDE)

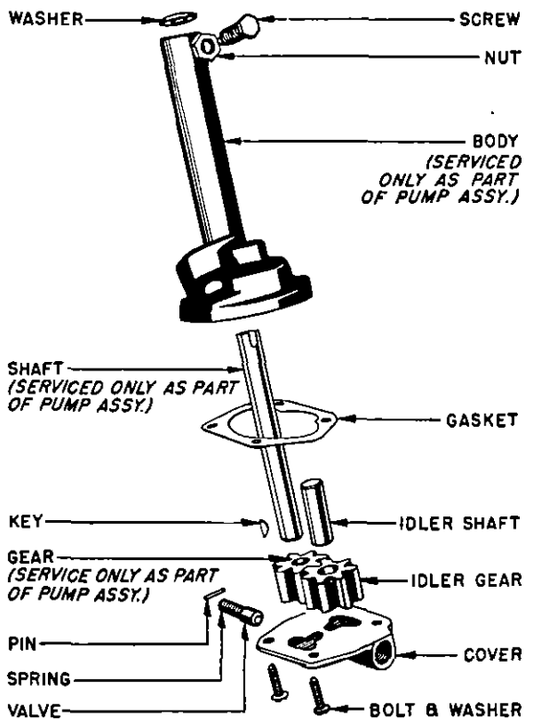
CHECKING OIL SYSTEM (Exc. 1953 Powerglide Engine): Oil nozzle height, oil trough height, aiming of nozzles, and connecting rod dipper height should be checked whenever oil pan removed. This check requires special gauges. *CAUTION*—Beginning with 1947, all engines (216" & 235") have same oil pan and special checking gauge used for each type (see below). *NOT REQUIRED ON 1953 POWERGLIDE ENGINE.*

Oil Pan Trough Height—Use combination Oil Trough Depth & Connecting Rod Dipper Height Gauge No. J-969-2A (216" Engine); J-1646-A (1941-46 235" Engine); J-1541 (1947-53 235" Engine—Except 1953 Powerglide). With oil pan gasket removed, place gauge on pan flanges with center pin extending down toward troughs. Slide pin along pan so that pin passes over edges of trough at center. Pin should clear edge of trough and clearance at this point should not exceed .015". If pin strikes trough, grind edge of trough down for clearance. If clearance greater than .015", reweld any loose trough welds or replace oil pan. Check each trough in this manner.

***Connecting Rod Dipper Height—Use same gauge* as for Oil Pan Trough Height check (above). Turn crankshaft until connecting rod is at bottom of stroke, place gauge over connecting rod with the two gauge side pins resting on the oil pan mounting face of the crankcase, slide gauge over dipper. Low "Go" step of gauge should pass over dipper and high "No Go" step should not. If low step does not pass over dipper, tap dipper down with light hammer, if high step of gauge clears dipper, install new higher dipper. Check all dippers in this manner.**

Oil Nozzle Height and Nozzle Aim—To check, with Oil Pan Target Gauge J-696-1 (for regular and heavy duty engines). Install gauge and position it with dowels engaging screw holes in pan. Install Water Nozzle J-793-3 in main oil line. Tilt oil pan 45° so that nozzles are not covered with water in troughs. Use enough water to just straighten water streams from nozzles. Nozzle streams must hit holes in gauge. Use Nozzle Wrench J-793-5 to adjust nozzles so that each water stream passes through center of its target hole. Recheck oil nozzle height.

OIL PUMP
1946-55 6 CYL. MODELS



►*1955 6 CYLINDER ENGINE OIL PUMP SUCTION PIPE PRODUCTION CHANGE & REPLACEMENT ON EARLIER MODELS (To prevent loss of oil pump prime at oil change):* The new pipe, Part No. 3836768 is bent in such a manner as to trap oil and prevent draining oil pump. Pipe can be installed on earlier engines. Tighten pipe in pump cover until lower end of pipe is 7 1/8" below pan gasket surface on block. Check pipe for clearance at side of oil pan.

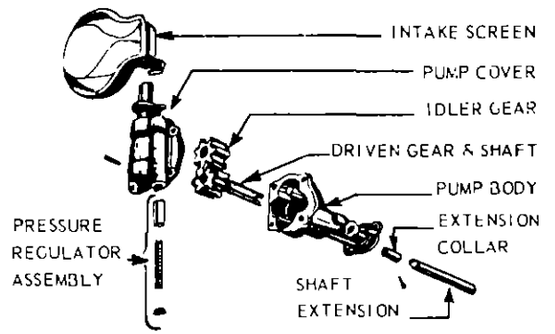
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

6 CYL. OIL PUMP (Removal & Disassembly): Drain oil, remove oil pan and disconnect oil pump-to-block oil line. Remove oil pump retaining sleeve lock screw and remove oil pump and oil pump-to-block oil line. Remove pressure oil line from pump and remove pump cover attaching screws, cover, gasket, idler gear and drive gear and shaft. Remove regulator valve pin and valve parts. Remove floating intake screen from pipe by bending tang on float travel control and sliding assembly off pipe *(CAUTION—Do not disturb pick-up pipe as this pipe is located at assembly and controls float travel level).* Wash all parts in solvent and inspect pump body for cracks or excessive wear. Check shaft for looseness in housing and gear and cover for wear.

Assembly: Install drive gear and shaft in body. Install idler gear with smooth side toward cover. Install cover and new gasket. Tighten screws securely and check to see that shaft turns free. Install pump oil line to pump, leaving it loose.

CHEVROLET 6 CYL. OIL PUMP



Installation: Install pump in block and align oil lines and install retaining sleeve lock screw and tighten securely. *(CAUTION—Make sure tapered end of lock screw draws down into hole in oil pump body).* Tighten oil pump-to-block oil line and pump-to-screen oil line connector nuts securely. Replace pump screen.

V8 MODELS

V8 OIL PUMP (Removal & Disassembly): Drain oil, remove oil pan, and remove pump-to-rear main bearing cap bolt and remove pump, extension shaft and collar. Remove pump cover attaching screws, cover, idler gear and drive gear and shaft. Remove floating intake screen from pipe by bending tang on float control and sliding float assembly off pipe. *(CAUTION—Do not disturb pick-up pipe as this pipe is located at assembly and controls float level travel).* Wash all parts in solvent and inspect pump body for cracks or excessive wear. Check shaft for looseness in housing and gear and cover for wear.

Assembly: Place drive gear and shaft in pump body and install idler gear so that smooth side of gear will be toward cover. Install cover and attaching screws. Tighten screws to 6-9 ft .lbs. and check to see that shaft turns freely. Install pick-up screen on pipe and bend float travel control tang back in place. Assemble collar end of extension shaft assembly over pump drive shaft, aligning tang of extension shaft with slot in end of pump drive shaft. Install retaining clip with flat end of clip in groove of pump drive shaft.

Installation; Assemble pump and extension shaft to rear main bearing cap, aligning slot at top end of extension shaft with drive tang on lower end of distributor drive shaft. Install pump to rear main bearing cap bolt and tighten to 45-50 ft. lbs. Install oil pan.

CHEVROLET V8 OIL PUMP

COOLING SYSTEM

1946-48 PASSENGER CARS

RADIATOR CORE REMOVAL: Passenger Cars. To remove radiator core, prop up hood in wide open position, drain cooling system, then working from under front end of car remove radiator drain cock and drain hose (on lower right front side of radiator). Disconnect radiator hoses at radiator (loosen hose clamps at water pump and cylinder head outlet so that hoses can be turned to provide clearance when lifting out core). Free wiring harness from radiator support and top tank. Remove carburetor air cleaner. Remove 4 core band-to-radiator support bolts (one at top, one at bottom, on each side). Turn fan to place wide spacing between blades at side, lift core straight up until outlet strikes cross brace on support, lay core back toward engine so outlet clears brace, lift core out.

1949-54 PASSENGER CARS & 1947-55 TRUCKS

RADIATOR CORE REMOVAL: Raise engine hood and block in open position. Drain cooling system by removing drain plug. Disconnect and remove inlet and outlet hoses. Remove radiator mounting bolts from radiator support, lift radiator up and out. NOTE—On models with radiator shroud, push shroud back and down over fan blades for clearance.

1955 PASSENGER CARS

RADIATOR REMOVAL (Passenger Cars): Drain radiator and remove radiator hoses. On models equipped with Powerglide transmission, remove oil cooler lines from radiator and plug lines and radiator fittings. Remove radiator core to radiator support bolts and lift radiator core straight up to remove. *NOTE*—When removing radiator note the shims at support bolts and install at the same location when radiator is installed.

►*POWERGLIDE OIL COOLER CAUTION:* If foreign matter of any kind is allowed to enter cooler, the core should be cleaned with an air stream and flushed thoroughly with automatic transmission oil. Serious damage will be done to transmission if dirt or foreign matter remains in cooler.

PROPELLER SHAFT NOTES

1946-47 TRUCK MODELS

PROPELLER SHAFT SUPPORT BEARING (¾ Ton Short Wheelbase and Special Models): Equipped with three universal joints (the intermediate and rear joints are exposed needle bearing types, front universal is equipped with bushing type joint enclosed in ball housing), two propeller shafts (rear shaft exposed, front shaft enclosed type), and a support bearing ahead of intermediate universal mounted in rear end of front propeller shaft housing. Support bearing Assembly consists of a single row sealed type ball-bearing on rear end of front propeller shaft ahead of intermediate universal front yoke mounted in rear end of front propeller shaft housing. A ring is assembled on the shaft ahead of bearing, and a dust shield behind the bearing. A rubber cushion is assembled on end of housing and seats in sleeve in support bracket.

Removal and Installation—Remove Front Propeller Shaft by disconnecting intermediate universal, slide front universal ball retainer back on housing after removing 4 attaching bolt, and removing support bearing bracket-to-frame bolt nuts. Remove front yoke of intermediate universal, and bearing dust shield. Wet rubber cushion (to soften

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

the soap used to install cushion), clamp the support bracket in vise and withdraw housing. Remove rubber cushion by hand. Slip ball retainer off over end of housing. Remove bearing retainer snap ring and drive shaft and bearing out of housing with a brass drift. Use arbor press to remove bearing from shaft. Wash all parts of assembly (except bearing) in good cleaner. Check bearing and replace if endplay excessive or bearing runs rough. Check leather oil seal in housing (do not remove unless a new seal to be installed—leather should be soaked in light engine oil and edge should curl towards the front when installed). Check bushing in front end of housing and replace if worn. To reassemble, press bearing on shaft with an arbor press, install shaft and bearing in housing (tap outer race of bearing with soft drift to seat bearing), insert snap ring, slip universal ball retainer over housing (a new cork packing should be shellacked to retainer), install rubber cushion on housing, coat cushion with soft soap, install support bracket over rubber cushion, install bearing dust shield and intermediate universal front yoke. When installing assembly on truck, lubricate universal ball before assembling ball retainer. Also fill front universal housing with 1 pint of S.A.E. 90 transmission lubricant (use also for intermediate joint).

1946 TRUCK MODELS

▷**Replacement Support Bearing (For 1946 Trucks):** New 1947 type (with improved sealing and greater stability) furnished for replacement use on these trucks. Complete assembly furnished in special Propeller Shaft Bearing Support Kit, Part No. 609037 (same part number as first type support kit). *See 1947 data below.*

1947 TRUCK MODELS

PROPELLER SHAFT SUPPORT BEARING: 1 Ton, 1½ Ton, 2 Ton Trucks (Except Cab-Over-Engine 109" WB Models)—Two propeller shafts with 3 needle bearing universal joints and a support bearing ahead of intermediate universal (some long wheel base School Bus models use 4 universals and 3 propeller shafts, with 2 support bearings). Support bearing is double row ball, (not sealed) with grease fitting for lubrication. Bearing Retainer is new type with wide neoprene insulator band, and is used in combination with felt-and-neoprene dust shields. Support bracket is attached to frame with two bolts.

Removal: Remove front propeller shaft by disconnecting front and intermediate universals and removing two support bolts. Remove front yoke of intermediate universal. Wet rubber cushion (to soften the soap used when cushion installed), clamp support bracket in vise and work shaft out of support. Remove rubber cushion from bearing by hand. Use screw type puller J-1619 mounted in vise to withdraw bearing from shaft (jaws on tool engage outer race of bearing). Tap dust shield off outer race of bearing. Wash all parts of assembly (except bearing) in good cleaner. Check bearing and replace if rough or excessive end play apparent.

Installation: Install double row bearing in retainer (both sides of bearing are the same), install snap ring in retainer on each side of bearing making certain that rings are seated in grooves. Install dust shield spacer in rear end of retainer with prongs in toward bearing. Soak dust shields (combination felt and neoprene) in SAE. No. 40 or 50 engine oil until thoroughly saturated (or until all bubbling stops), press one dust shield in each end of bearing retainer with **neoprene side in toward bearing**, stake dust shields in place securely at six points around retainer rim. Install retainer insulator in groove on outer surface of bearing retainer, install retainer assembly in propeller shaft bearing support (NOTE—Insulator is impregnated with paraffin to facilitate installation) making certain that lubricant fitting boss on bearing retainer engages slot in support, install lubricant fitting in this boss. Install bearing support assembly on rear end of front propeller shaft (see Propeller Shaft Note below) with lubricant fitting end of assembly toward splined end of shaft, so that bearing seats against shoulder on shaft (bearing should be snug on shaft and can be forced to seating position against shoulder with universal joint flange). Install propeller shaft flange and dust shield assembly (see Note) on shaft, inserting end of flange through bearing dust shield, until flange seats against bearing, screw flange retaining nut in threaded hole in end of shaft, tighten nut with torque of 160-280 ft.lbs., secure nut with cotter pin. Install assembly in truck. Lubricate bearing (see Lubrication data below)

Propeller Shaft Flange & Dust Shield Assembly—If dust shield not installed on propeller shaft flange, install shield as follows: Press dust shield on flange hub, with open (concave) side of shield away from yoke end of flange, until shield seats firmly against shoulder on flange. Polish hub of shaft flange with fine emery or crocus cloth to remove all rough spots which might damage support bearing dust shield when flange installed (end of flange hub passes through dust shield and bears against bearing).

Lubrication of Support Bearing: Lubricate bearing with chassis lubricant through special lubricant fitting until lubricant appears at pop-off valve in fitting. When new bearing assembly first placed in service, lubricant will leak past seals at both ends of bearing until proper clearance secured for operation of the bearing. No further leakage should occur after this initial period.

Periodic Lubrication—Lubricate this bearing at each regular chassis lubrication period.

1948-53 TRUCK MODELS

PROPELLER SHAFT SUPPORT BEARING: 1 Ton, 1½ Ton, 2 Ton Trucks (except Cab-over-Engine Short WB. Model): Support bearing is new single row permanently lubricated ball bearing in new type mounting with "grease traps" packed with water proof grease to prevent entrance of dirt and water. Propeller shaft design unchanged.

Removal & Installation: Propeller shafts are removed and installed in same manner as on previous models. Support bearing should be serviced as follows:

Removal—Split intermediate universal joint by removing two trunnion bearing "U" bolts (tape or wire bearings in place). Remove bolts attaching bearing support bracket to frame cross-member. Remove universal flange retaining nut, remove flange, pull support assembly off rear end of front propeller shaft. Place support assembly in arbor press using a piece of tubing to apply pressure on rubber cushion (tubing should clear slinger and be snug fit in bracket), press bearing and cushion assembly out of bracket. Remove cushion and grease retainers from bearing.

Servicing—Clean rubber cushion with pure denatured alcohol, replace cushion if cracked, hardened, or distorted. Check bearing by rotating inner race slowly by hand. CAUTION—Do not attempt to remove oil seal retainers from bearing and do not clean bearing with gasoline or solvent which will wash lubricant out (requiring new bearing).

Assembly & Installation—See that grease deflectors on propeller shaft and universal joint yoke are tight (staked on shaft by prick punching at two points). Assemble grease slinger on outer bearing race (one at each side), force bearing and slinger assembly into rubber cushion. Coat outer surface of rubber cushion with brake fluid, place support bracket on arbor press with flanged side up, position bearing and cushion squarely in flanged end of bracket bore, use piece of tubing to press on rubber cushion only and press assembly in bracket until face of grease retainer is flush with flanged end of bracket (CAUTION—this position important to provide clearance between grease retainers and grease deflectors, if assembly pressed too far in bracket, turn bracket over and press assembly out to correct position). Pack grease retainers on both sides of bearing with waterproof grease (grease used to keep out dirt and water—does not lubricate bearing). Install support bearing and bracket assembly on end of front propeller shaft making certain that grease slingers lined up with bearing hole and that flanged end of bracket is forward. Install intermediate universal joint yoke on end of shaft, tighten yoke retaining nut to 160-280 ft. lbs. Then check clearance between rear edge of propeller shaft dust shield and front face of bearing support bracket. This clearance should be ½" plus or minus 1/32" Install bolts, lockwashers, and nuts attaching bearing support to frame cross-member, tighten nuts

REAR AXLE NOTES

1946-54 MODELS

AXLE SHAFT (PASSENGER CARS): Installation. Assemble new oil deflector, gasket (with shellac or paint on both sides), line up extra hole (center of three closest together) with notch in hub flange in axle shaft (also oil pocket in oil deflector with this notch), insert six new bolts and peen into place in countersink around bolt holes in flange using special Peening Tool and Anvil so that these parts are riveted together. NOTE—Axle shafts are of unequal length, longer shaft used on right side.

Axle Shaft Note—Shafts unequal in length (right shaft longer). Part numbers are as follows:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1946-48 Passenger Cars

	Part No.	Length	Marking
Left Shaft	3657313	29 19/32"	"GM-13"
Right Shaft	3657314	30 19/32"	"GM-14"

1949-50 Passenger Cars

	Part No.	Length	Diam.①
Left Shaft	3687767	28 1/2"	3 1/4"
Right Shaft	3687768	29 1/2"	3 1/4"

1951-54 Passenger Cars

	Part No.	Length	Diam.①
Left Shaft	3694755	28 1/2"	2 13/16"
Right Shaft	3694756	29 1/2"	2 13/16"

①—Diameter of flange pilot.

Endplay Adjustment—When installing shaft, select correct spacer block (see below) so that when installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free Fit to .014" maximum clearance.

Passenger Car Spacer Blocks

Part No.	Type & Size
597251	Narrow (1.012")
597254	Medium (1.0195" & 1.0295")
473603①	Wide (1.0345")

①—Marked by blue paint on rough side.

Above dimensions are measured across the ground surfaces and spacers should be installed with ground surface toward the axle shaft end. Medium spacer ground on all four sides and may be installed either way to secure the two different sizes.

1946-54 HALF-TON TRUCK

AXLE SHAFT (HALF-TON TRUCK): Shafts are heavier construction than Passenger Car type.
Installation—Assemble new oil deflector, gasket (coat both sides with heavy shellac or paint), line up extra hole (center hole of closely grouped three holes) with notch in hub flange on axle shaft (oil pocket in oil deflector should also be aligned with this notch), install six special bolts, forcing heads down to deflector, and peen shoulder on bolts into countersink around bolt holes in flange using Special Peening Tool and Anvil so that these parts are riveted together. Check endplay (below).

Axle Shaft Note—Shafts unequal in length (right shaft longer). Part numbers are as follows:

1946-47 Half-Ton Truck

	Part No.	Length	Marking
Left Shaft	3652341	28 11/16"	"41"
Right Shaft	3652342	29 11/16"	"42"

Late 1947 & 1948-50 Half-Ton Truck

	Part No.	Length	Marking
Left Shaft	3683161	29 1/2"	"GM-161"
Right Shaft	3683162	30 1/2"	"GM-162"

1951-54 Half-Ton Trucks

	Part No.	Length	Marking
Left Shaft	3694769	29 9/16"	"GM-769"
Right Shaft	3694770	30 9/16"	"GM-770"

Endplay Adjustment—When installing shaft, select correct spacer block (see below) so that with spacer installed on pinion shaft between inner ends of axle shafts, shaft endplay will be from a Free fit to .014" maximum clearance.

Axle Spacer (Trucks)—Two spacer blocks furnished which provide three sizes as follows:
Part No. 370217—Narrow (1.1485").
Part No. 372515—Wide (1.1575" & 1.1675").
These dimensions are taken across ground surfaces. NOTE—Spacers should be installed with ground surface toward axle shaft end. Wide Spacers are ground on all four sides (giving two sizes listed).

1952-54 TRUCKS

Axle Shaft Removal (¾ & 1 Ton): Remove 8 capscrews and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*
CAUTION—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. Grease at this point will cause loosening of axle shaft flange capscrews.

Axle Shaft Removal (1½ & 2 Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. NOTE—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.
Axle Shaft Note—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft or lengths as follows:

¾ & 1 Ton Truck

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

1½ Ton Truck (Splined Shaft)

	Part No.	Length
Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

2 Ton & C-O-E (Splined Shaft)

	Part No.	Length
Left Shaft (stamped 01)	3702201	36½"
Right Shaft (stamped 02)	3702202	41"

Wheel Bearing Adjustment: Remove wheels and axle shaft (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

1946-48 TRUCKS

TWO-SPEED AXLE SHIFTING COMPLAINTS (With Vacuum Shift Control): If vacuum shift is hard to operate or sticks in one position, this may be caused by vacuum shift control valve shaft being tight or frozen in valve body. Correct this trouble as follows: Disconnect pipe fittings at back of valve body and speedometer adapter operating rod at lever on end of valve shaft. Take off cap nut and * washer and remove valve operating lever from valve shaft. Remove two screws mounting valve assembly on instrument panel, remove valve assembly. Remove cotter pin from valve shaft, drive valve shaft out of valve body by carefully tapping on threaded end of shaft with a soft hammer. Examine shaft for evidence of seizing (usually occurs near washer brazed on shaft). Remove excess metal from shaft with a file, then polish shaft with fine emery or crocus cloth. Lubricate shaft lightly with Gredag No. 213½ or other graphite grease (CAUTION—Do not use mineral oil—will cause failure of rubber disc in valve assembly). Re-install shaft, reassemble valve assembly and install on truck.

1946-47 TRUCKS

INCORRECT SPEEDOMETER READING (1946-47 Trucks with Two-Speed Rear Axle): If speedometer reads too high in Low Gear, and too low in High Gear, this may be caused by incorrect assembly of speedometer adapter shift lever. To correct this complaint, remove small shift lever on top of speedometer adapter case, turn lever ½ turn or 180°, re-install lever. This will reverse direction of shift and speedometer should read correctly.
NOTE—When lever correctly installed, small hole for attachment of operating rod will be toward front of truck. The other end of the operating rod should be connected in the outer hole of the lever on the vacuum shifter valve shaft.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

SUSPENSION NOTES

1946-48 PASSENGER CARS

REAR SPRING SEATS (ALL PASSENGER CARS): Bracket welded on front of housing at each spring. Spring seat attached to bracket by means of rubber bushed bolt (spacer sleeve through which bolt passes, used to prevent collapse of bracket when tightening bolts with great deal of pressure). Rubber washers used between bracket and each end of spring seat. Spring seat attached to springs through conventional U-bolts. IMPORTANT—When reassembling spring seat to bracket (when installing rear axle), eye bolt nut must not be tightened until all other connections made and car weight resting on all 4 wheels

STEERING NOTES

1953 MODELS

STEERING GEAR BRACKET REINFORCEMENT (Forward Control Models): To install bracket on earlier models proceed as follows:

1. Remove necessary body parts to make area at rear of steering gear housing and frame in that vicinity accessible for the installation.
2. Enlarge the two holes in section of reinforcement that mounts on frame to approximately ⅝" diameter so that the frame rivets will enter holes allowing reinforcement to set flat against frame.
3. Bolt reinforcement to steering gear housing and bracket using a 7/16"-20x1½" hex head bolt. Clamp reinforcement to frame and weld to frame by welding up all holes (over frame rivets and at bracket), then weld outline of reinforcement along frame, and the raised portion along steering gear bracket.

BRAKE NOTES

1955 MODELS

SLOW POWER BRAKE PEDAL RETURN CORRECTION: When this condition is encountered, check the following points and correct as necessary.

Push Rod Lever Assembly—Power brake unit pushrod has been installed on the outboard side of lever assembly at pedal linkage. Correct by assembling on inboard side. Lubricate all linkage pivot points.

Power Brake Rubber Boot—Bellows or rubber boot may be gathered at front side of dash panel causing a bind on pushrod. Correct by pulling bellows through smaller hole in dash panel and mounting plate at same time power unit is being assembled to mounting plate.

Power Unit Valve Sleeve—Remove power unit from dash. Remove rubber boot from end plate of unit and squirt rubber lubricant (Ru-Glyde) between valve sleeve into which pushrod is assembled and the sleeve bore in valve assembly to lubricate "O" ring seal on valve sleeve.

CAB-OVER-ENGINE NOTES

1946-54 MODELS

REMOTE CONTROL TYPE GEARSHIFT LEVER: Removal. Disconnect gearshift lever at top of engine cover, loosen wire on cloth boot, raise boot above transmission cover tower. Remove nut from stub gearshift lever and raise reverse latch Bowden cable support onto top of lever. Use gearshift lever removing tool K-353 to remove lever assembly from transmission cover. When installing lever, see that end of reverse latch shift rod seats in upper part of 'U' shaped bracket at end of reverse latch Bowden cable and that retaining nuts are tight so that rod anchored in bracket.

HOOD LOCK: Hood is Alligator type. To raise hood, pull out lock button on instrument panel, pull forward on safety catch under front edge of hood.

MODEL IDENTIFICATION

Series 1946	1947	1948	Model Designation
DJ	EJ	FJ	Stylemaster
DK	EK	FK	Fleet Master & Fleetline

FLEET MODEL NOTE: Special Economy Engine available for all models. May be identified by special Tune Up Specification Plate on Push Rod Cover listing special settings and Fleet Car Identification Plate on instrument panel to right of the glove compartment. Special carburetor used (has stop-pin which limits throttle opening to ½ throttle).

SERIAL NUMBER: First No. 1001 with model prefix as indicated in model designation above. Stamped on plate on right front body hinge pillar (Pass. Cars).

ENGINE NUMBER: Stamped on right side of crankcase to rear of distributor with prefix to indicate engine type and plant as follows:

Engine Type	Flint	Tonawanda
1946 Pass. Cars	DAA	DAM
1947 Pass. Cars	EAA	EAM
1948 Pass. Cars	FAA	FAM

TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (cylinders equal within 5-10 lbs.) at cranking speed of 210-220 RPM.

VACUUM READING: Steady 17-21" at idling speed.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .040".

Plug Type—AC No. M-8 (see Note). 10 mm.

►*No. 104 can be used for sustained high speeds.*

M-8 Spark Plug Note—Improved type plug with increased clearance between insulator and shell (to prevent carbon and lead deposits forming in this area and causing short or misfiring at 45-60 MPH car speed) now available and can be identified by groove at base of shell directly above threads. All M-8 plugs are new aluminum oxide insulator type with skirt at lower end around electrode designed to retain heat and burn off carbon deposits.

►M-8 Installation Caution—Use steel gasket with these plugs. Install plugs finger tight, then tighten with wrench (11/16" deep socket) an additional ½-¾ turn (with new gasket), ⅛-¼ turn (old gasket) or with torque of 15 ft. lbs. (except new type M-8 plugs with identifying groove—10-12 ft. lbs). CAUTION—Do not overtighten new type M-8 plugs (with identifying groove). These plugs have thin shell and must not be tightened more than 10-12 ft. lbs.

IGNITION: *See Coil, Condenser, and Distributor.*

Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).

Cam Angle or Dwell—39° closed, 21° open.

Breaker Arm Spring Tension—17-21 ozs.

Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: 5° BTDC.

Timing Procedure—*See Ignition Timing.*

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "0". Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETION: *See Carburetor & Carb. Equipment.*

Idle Setting—1¼-2¼ turns open (screw set for smooth idle with warm engine—turn out for richer mixture).

Idle Speed—450-500 RPM. with warm engine.

Float Level—½" top of float to gasket seat (machined surface) on cover with valve seated (invert to check).

Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure—4 lbs. maximum.

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Spring should be wound up just enough to slip end over manifold pin (approx. ½ turn). CAUTION—Excessive tension may cause valve to stick with detonation and poor performance.

►**VALVE TAPPET CLEARANCE:** *CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.*

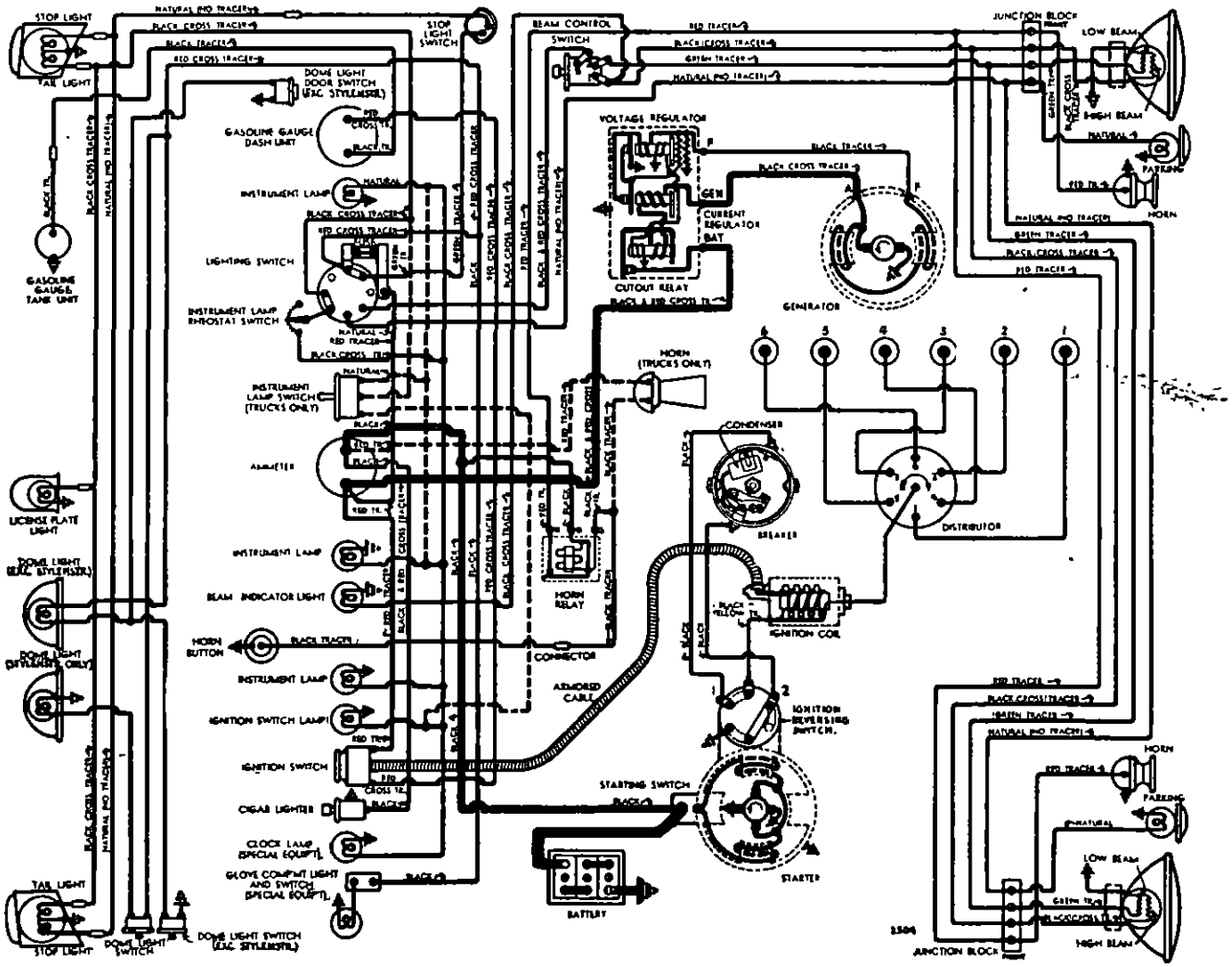
Std. Engine—.006" (.006-.008") Intake, .013" (.013-.015") Exhaust with engine normalized.

Economy Engine—.010" Intake, .016" Exhaust with engine normalized.

Valve Timing Check: *See Valve Timing.*

►*CAUTION—1948 Engines have new Valve Timing (applies also to 1946-47 Engines with new Replacement Timing Gear).*

IGNITION



1946-47-48 (WITH REVERSING SWITCH)

IGNITION SWITCH: Delco-Remy. (1946) No. 1116304, (1947) No. 1116454, (1948) No. 1116452. Armored cable (switch to coil) used on 1946 type only.

1948 Switch Note—Has special "Off-Unlocked" position (to right of "On" position).

Ignition Lock—Briggs & Stratton Lock Cylinder. (1946-47)—No. 45792 (Coded), 45791 (Uncoded). (1948)—No. 600114 (Coded), 600088 (Uncoded).

Key Series—No. 8000 to 9499. Groove—No. 15.

1946-47 CARS (SEE 1948 DIAGRAM FOR IGNITION WIRING WITHOUT REVERSING SWITCH)
►NOTE—ARMORED CABLE (IGNITION SWITCH TO COIL) NOT USED ON 1947 CARS

Ignition Reversing Switch: Delco-Remy No. 1907122. Mounted on starter and operated by starting pedal

►**Removing Reversing Switch from Ignition Circuit**—*If switch removal necessary, see "Removal of Reversing Switch" below.*

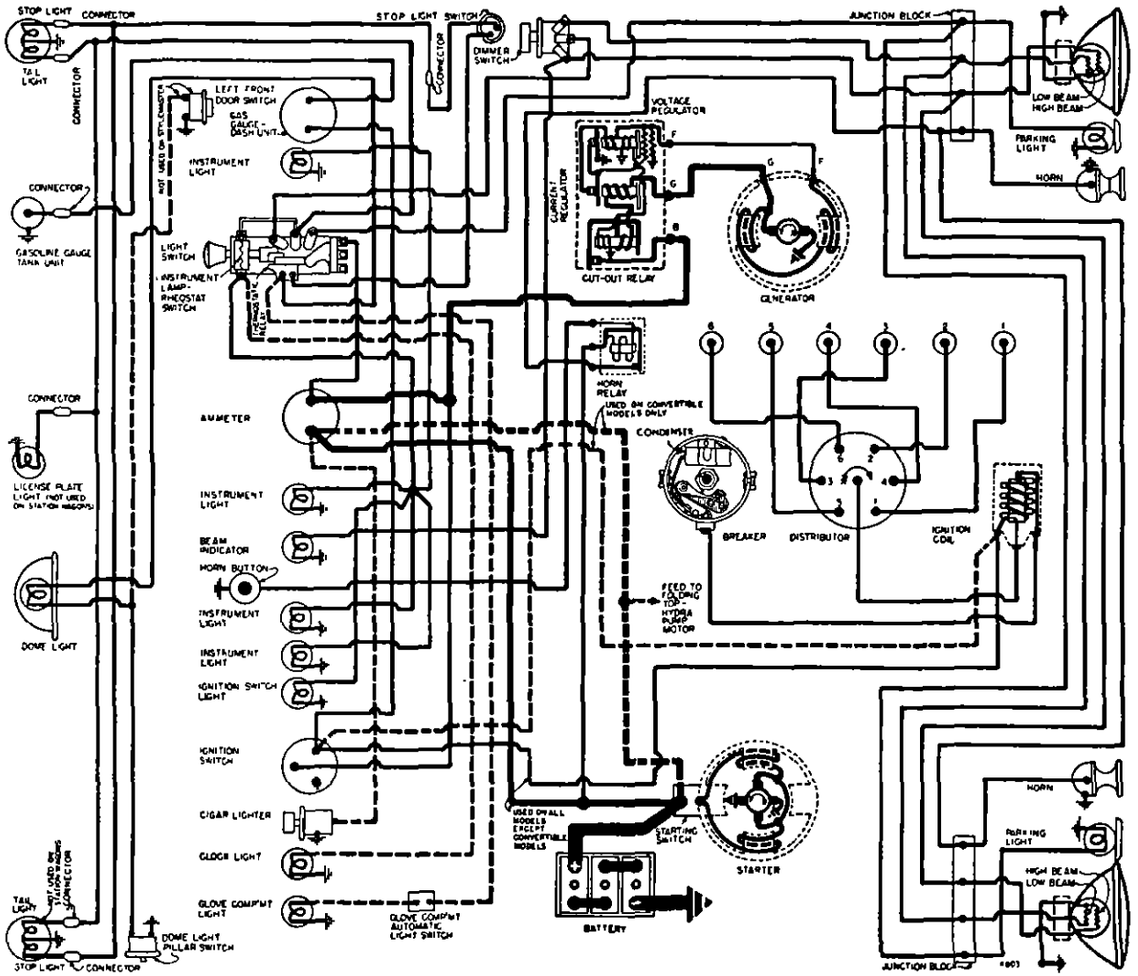
IGNITION COIL: Delco-Remy (1946) No. 1115141, ('47-48) No. 1115380. On engine above distributor.
1946 Note—Armored cable from coil to switch.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy Part No. 1882239.

►*CAUTION—This condenser used only on cars with REVERSING SWITCH. Must not be used without switch.*
Capacity—.28-.34 microfarad.

DISTRIBUTOR: Delco-Remy No. 1116090. Single breaker, 6 lobe cam full automatic advance type with vacuum spark control and Octane Selector
NOTE—Distributor has insulated breaker plate and ground terminal for use with Reversing Switch.

►**Distributor Change for use Without Reversing Switch**—*See "Removal of Reversing Switch" below.*



Breaker Point Set—Delco-Remy No. 1882391.
Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).
Cam Angle—39° closed, 21° open.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Distr. Degrees	Automatic Advance RPM	Eng. Degrees	RPM
Start	350	3	700
6.5	600	13	1200
12.25	1000	20.5	2000
19	1700	38	3400

Octane Selector—Adjustment on distributor provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment instructions.

Vacuum Spark Control: Delco-Remy No. 1116043. On Octane Selector, linked to advance arm.

Distr. Degrees	Vacuum Advance Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16-19"

1948 CARS (SEE 1946-47 DIAGRAM FOR REVERSING SWITCH USED ON FIRST CARS)

Removal:—Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

IGNITION

LATE 1948 (WITHOUT REVERSING SWITCH)

IGNITION SWITCH: Same as listed above.

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.

►*CAUTION—This condenser must be used for ignition systems without reversing switch.*
Capacity—.18-.25 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112353. Single breaker, 6 lobe cam, full automatic advance type with vacuum spark control and Octane Selector.

►**NOTE**—This distributor has larger breaker plate grounded directly to housing and special breaker point set.

Breaker Point Set—Delco-Remy No. 1855720.
Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).
Cam Angle—39° closed, 21° open.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Spark Advance—See first type No. 1100090 Distributor above.

REMOVAL OF REVERSING SWITCH

REMOVAL OF REVERSING SWITCH FROM CARS & TRUCKS: If necessary to remove the reversing switch on models equipped with this unit, make all changes as noted below (CAUTION—Condenser must be changed to new lower capacity unit when ignition system operated without reversing switch):

1. **Remove Reversing Switch from Starter**—Disconnect wires at reversing switch, remove switch from starter. Grind off unthreaded portion of switch attaching screws and re-install these screws in starter frame to plug holes.

2. **Discard Reversing Switch Harness**—Disconnect reversing switch wires at distributor and ignition coil and discard this harness.

3. **Install New Coil-to-Distributor Lead**—Connect new low tension wire, Part No. 5288968, between ignition coil terminal and outer terminal (away from engine) on distributor.

4. **Install new lower-capacity Condenser**—Remove and discard original .3 mfd. condenser, No. 1882239, (can be identified by figure .3 stamped on terminal clip). Install new .2 mfd. condenser, No. 1869704, (can be identified by longer lead), using same mounting clamp bracket.

►*CAUTION—This lower-capacity condenser must be used in all ignition systems without reversing switch.*

5. **Ground Distributor Breaker Plate**—Disassemble inner (toward engine) distributor terminal and remove insulator washer from terminal post. Remove paint and thoroughly clean distributor housing around terminal post so that a good ground secured at this point, re-install flat washer and nut on terminal post (omission of insulator washer will ground terminal to housing when nut tightened).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION TIMING

Std. Setting	Flywheel Degrees	Piston Position
All Engines	5° BTDC	.0091" BTDC

NOTE—See Octane Selector Setting (below) for final setting dependent on operating conditions

Timing (Neon Light)—Recommended method. Connect neon light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at '0'. Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector setting.

Timing (Without Neon Light)—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle. To adjust, loosen hold-down screw, move distributor and scale counter-clockwise to advance spark (if no ping), clockwise to retard spark (if too severe).

CARBURETOR

Carter (Chevrolet) Type 574S (Std.), 616S (Econ. Models). 1¼", single barrel, downdraft types with manual choke control. NOTE—Carburetors marked by Casting No. 421 (574S), 432 (616S) on flange. *See Carburetor Section for complete data.*

►**Engine Surge (22-35 MPH.) Correction (for 574S Carb.):** *See "Carter W1 (Chevrolet) Carburetor" in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Rod & Jets—*See Carter Jet Table in Carburetor Section for complete data.*

Throttle Cracker (1946): Opens throttle 1/3 for starting. To adjust, with idle speed correctly set at 450-500 RPM., loosen locknut and adjust bolt on accelerator pedal rod lug for ⅛" clearance between head of bolt and lug on starter pedal cross-shaft.

CARB. EQUIPMENT

Air Cleaner (Pass. Cars): AC No. 1529667 oil-wetted type Std. No. 1528964 heavy duty oil-bath type Optl. Filter Element AC No. 1528152.

Fuel Pump: AC Type AF, No. 1523089. Diaphragm type.
Replacement Pump—AC No. 429.
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for data.

Gasoline Gauge: AC electric type. AC Nos.:
Dash Unit—(1946) No. 1516405, (1947-48) 1516991.
Tank Unit—No. 1516280 (All Models).
See Carburetion Equipment Section for data.

BATTERY

Delco Type 15X-3 (First), 15AA-4 (Later). 6 volt, 15 Plate, 100 Ampere Hour (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.6 minutes. Five second voltage 4.2 volts.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 9", Width 7", Height 8⅝".
Location—In engine compartment on right side

STARTER

Delco-Remy—Various models used as follows:
1107061 (With Rev. Switch)—First LHD. cars.
1107055 (No Rev. Switch)—Later LHD. cars.
1107063 (With Rev. Switch)—First RHD. cars.
1107076 (No Rev. Switch)—Later RHD. cars.
Armature—Delco-Remy No. 1867897.
Drive—Overrunning clutch and manual pinion shift (LHD. Starters), solenoid pinion shift (RHD. Starters).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.
Cranking Engine—65 RPM., 150 amperes, 5.5 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.0	65
12 "	Lock	3.37	525

Starting Switch (1107055 & 1107061 Starters): Delco-Remy No. 820052. Mounted on starter. Pedal operated.
(1107063 & 1107076 Starters)—Delco-Remy solenoid switch on starter, controlled by pushbutton switch No. 1996031 on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy Model 1102667 (Std.), 1102677 (Spec. Equip.), 1106403 (City Police). Two brush (shunt) types with voltage and current regulation. Ventilated by fan on drive pulley.
Armature No.—1879002 (1102667), 1881389 (1102677).
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate (Std. Gen.)—36 amperes, 7.4 volts, 2400 RPM. or 25.7 MPH. (Pass. Cars).

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102667	30	8.0	1750
1102677	26	8.0	1450
1106403	35	8.0	1040

①—Not maximum output—See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amperes (1102667 & 1102677), 1.77-2.0 amperes (1106403) at 6.0 volts.

Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy Model 1118201 (1102667 Gen.), 1118233 (1102677 Gen.), 1118229 (1106403 Gen.). Vibrating type Voltage and Current Regulators in case with Cutout Relay.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings

Cutout Relay

Cuts In—6.2-6.7 volts hot.
Cuts Out—0-4.0 ampere discharge current.
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.2-7.4 volts Hot (1118201), 7.0-7.2 volts Hot (All Others) at operating temperature.
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.070" between center of core and armature with contacts just closing (press down on armature to open contacts, release pressure, check gap at point where contacts just close).

Current Regulator

Setting—34-36 amperes (1118201, 1118229), 24-26 amperes (1118233) Hot or at operating temperatures.
Checking & Adjustment—*See Electrical Equipment Section.*
Air Gap—.080" (check same as Voltage Regulator).

LIGHTING

Headlamps: Guide "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toeboard.
See Electrical Equipment Section for complete data.
Adjustment—Aim upper beams straight ahead (hot spot center 3" below lamp center height at 25 ft.).
Beam Indicator—Red dot on speedometer dial. Lighted when upper beams in use.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—Pilot light in switch case. Lighted when Right or Left Dir. Signal "on".

Switches

Lighting—Delco-Remy. (1946-47) No. 1994022 (1948) 1995031. Switch has instrument light rheostat (controlled by rotating switch knob).
Beam Selector—Delco-Remy No. 1997008.
Glove Box—Delco-Remy 1997742 or 1997834.
Stop Light—Delco-Remy No. 1997901 (mechanical type operated by brake pedal arm).
Stop Light (Panel & Suburban)—Delco-Remy No. 594504 or 594505.

MISC. ELECTRICAL

LIGHTING FUSE (1946-47): 30 ampere. On back of lighting switch (protects lighting circuits).

LIGHTING CIRCUIT BREAKER (1948): 30-ampere thermostatic type. On back of lighting switch (protects lighting circuits).

HORNS (Passenger Cars): Delco-Remy No. 1999533 (Low Note), 1999534 (High Note). Vibrator type twin horns operated by horn relay.

Type	Current (at 6 volts)	Air Gap
1999533 (low note)	19-21 amperes	.044-.049"
1999534 (high note)	18-20 amperes	.034-.039"

Horn Relay (Pass. Cars):—Delco-Remy No. 1116775.
Contact Gap—.025". **Air Gap**—.015" (closed).
Contacts Close—2.75-4.0 volts.

ENGINE

ENGINE SPECIFICATIONS: Own 216". Six Cylinder, Valve-in-Head type.
Bore—3½" (3.4995-3.5015"). **Stroke**—3¾".
Displacement—216.5 cubic inches. **Rated HP**—29.4.
Developed Horsepower—90 at 3300 RPM.
Compression Ratio—6.5-1 Std. Cast Iron Head.
Compression & Vacuum Reading—*See Tune-up data.*

REPLACEMENT CYLINDER BLOCK: *See "Replacement Cylinder Blocks" in Chevrolet Special Data.*

ENGINE REMOVAL: *See Chevrolet Shop Notes.*

ENGINE MOUNTINGS INSTALLATION & ADJUSTMENT (& 1946-47 REPLACEMENT MOUNTINGS): *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Shop Notes.*

CYLINDER HEAD INSTALLATION: *See Chevrolet Shop Notes.*
Cylinder Head Gasket Note—Use new gasket and install with side marked "THIS SIDE UP" as indicated. Use two cylinder head guide pins (installed in front and rear holes on manifold side) to align head with block and maintain head gasket position.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

PISTONS: Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.

Trucks—Same as Passenger Car type except heavier. Truck pistons marked with small boss on underside of each piston pin boss. CAUTION—Do not interchange pistons (must be alike in one engine).

Weight—1.56 lbs. (Pass. Cars). Length—3.75" min.

Removal—Pistons and rods removed from above.

Clearance—Top .0155-.0235". Skirt selective fit. See Fitting Pistons.

Replacement Pistons: *See Chevrolet Shop Notes.*

NOTE—To install new pistons, hone cylinder for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance below). Bore taper and out-of-round must not exceed .001".

Fitting New Pistons:—Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .0015" feeler and lock on .003" feeler.

PISTON RINGS: Two taper face compression rings (with greatest diameter at bottom), one oil control ring per piston, all above pin. Oil ring groove drilled for oil drainage. NOTE—New wide-slot, quick-seating oil rings used on 1947-48 engines.

Ring	Width	End Gap①	Side Clearance
Compr.	.1235-.1240"	.006-.015"	.0015-.003"
Oil Conr.	.1860-.1865"	.005-.015"	.002-.0035"

①—End Gap limit 1/32" max. (worn).
②—Side clearance check—smaller feeler should be free, larger feeler should produce a heavy drag.

Installing Rings—Mark "TOP" on side of compression rings must be upward.

Replacement Rings:—Furnished Standard size and .005", .020", .030", .040" Oversize.

Expander Type Rings—Furnished for use in cylinder bores of indicated oversizes as follows: Standard (Bore Std. to .009" Oversize), .020" Oversize (Bore .010" to .029" Oversize—ring gaps must be filed for bores less than .020" Oversize), .030" Oversize (Bore .030" to .039" Oversize), .040" Oversize (Bore .040" to .049" Oversize).

PISTON PIN: Diameter—.8645-.8650". Length 3.135-3.165". Pin locked in rod (piston bronze bushed). Pin Fit in Piston—Thumb push fit (at room temp.).

Replacement Pins:—Std. & .003", .005", .010" oversize. NOTE—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

CONNECTING ROD: Length 6 13/16". Weight 30.7 ozs. Crankpin Journal Diameter—2.311-2.312".
Lower Bearing—Spun high-lead babbitt lined.

▷*NOTE*—1948 bearings are new thin-wall babbitt type and rods are 1/16" narrower to fit new crankshaft.

Clearance—.0003-.0013" selective fit (see Bearing Adjustment following).

Sideplay—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).

Bearing Adjustment:—Solid shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from one side to the other with light tap of 8 oz. hammer), then replace one .002" shim on one side for clearance (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test).

Palnut Note—Palnuts used to lock rod bolt nuts. Use new palnut (install with open side toward end of bolt), turn palnut up finger tight against rod bolt nut, then tighten palnut ½ turn additional.

Installing Rods:—Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper height.

Dipper Height Adjustment—*See "Oiling System" in Chevrolet Shop Notes.*

CRANKSHAFT: 1948 crankshaft new heavier four-bearing type with integral counterweights and vibration dampener (harmonic balancer).

Vibration Dampener Data—*See Chevrolet Shop Notes.*

Journal Diameters—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".

NOTE—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 journals .002".

Bearing Type—Steel-backed, babbitt-lined type. Bearings are "doweled" in place by projection on shell engaging hole in crankcase and bearing cap.

▷*NOTE*—1948 bearings are new "Precision" type thin-wall babbitt (can be replaced singly).

▷*Precision type bearings do not require line-boring or reaming (all replacement bearings precision type).*

▷*CAUTION—#1 (front) and #2 (front intermediate) bearings similar in appearance but must not be interchanged. #2 bearing marked by letter "I" in oil groove.*

Clearance—(1946-47) .002-.004", (1948) .0007-.0024" selective fit. See bearing Adjustment (below).

▷*NOTE—Precision type bearings can be replaced singly. Entire set must be installed initially on 1946-47 engines not previously equipped with "precision" bearings.*

Bearing Adjustment:—Solid shims. Remove shims until slight drag secured when shaft turned by hand, then replace one .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side for all bearings).

Replacement Bearings: New "Precision" type bearings furnished for all engines Std. size and .002", .010", .020", .030" Undersize. NOTE—Bearings for 1947 & previous engines stamped "V" on inner surface of dowel.

▷*CAUTION—Complete bearing set (4 bearings) must be installed initially on 1946-47 engines not previously equipped with these precision bearings.*

▷**Bearing Installation**—*Not necessary to remove crankshaft or engine from car. See "Crankshaft & Main Bearings" in Chevrolet Shop Notes.*

Bearing Cap Installation—Intermediate (#2 & 3) bearing caps marked for identification. Install #2 cap with mark "FRONT" toward front of engine, #3 cap with mark "REAR" toward rear of engine.

▷*CAUTION—Rear intermediate (#3) bearing is special flanged type (takes end thrust).*

Crankshaft Oil Seal Servicing: *See Chevrolet Shop Note for Front (Timing Gear Cover) and Rear Oil Seals.*

End Thrust: Taken by #3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of #3 bearing. Adjust by replacing bearing.

Endplay—.004-.007".

FLYWHEEL REPLACEMENT: *See Chevrolet Special Data.*

CAMSHAFT: Four bearing type. Helical gear drive.

Journal Diameters—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

Bearing Type—Steel-backed, babbitt-lined bushings (staked in place). NOTE—New bearings must be line-reamed. Clearance—.002-.004".

Bearing Installation—*See Chevrolet Shop Notes.*

End Thrust:—Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

End Play Adjustment—*See Chevrolet Shop Notes.*

Endplay—Free fit to .003" maximum.

Timing Gears: Crankshaft gear steel. Camshaft gear Bakelite and Fabric composition.

Timing Gear Backlash—.003-.004".

Max. Gear Runout—.003" crankshaft, .004" camshaft.

▷1948 235" Truck Engine Timing Gear Set—New aluminum camshaft gear with bonded steel hub used with crankshaft gear having crowned teeth.

Replacement Timing Gears—*See Chevrolet Shop Notes.*

▷*CAUTION—Replacement crankshaft gear (with relocated keyway) will change Valve Timing on 1946-47 engines equipped with previous type gear. See Valve Timing.*

Timing Gear Installation & Alignment—*See "Timing Gears" in Chevrolet Shop Notes.*

▷Timing Gear Oil Nozzle Replacement—*See "Oiling System" in Chevrolet Special Data.*

Camshaft Setting:—Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

▷*CAUTION—Above timing marks correct for all engines but valve timing different on Late 1947 & 1948 engines with new crankshaft gear (and earlier engines with this gear as replacement). See Valve Timing.*

VALVES:	Head Diam.	Stem. Diam.	Length
Intake	1 41/64"	.3410-.3417"	6.205-6.235"
Exhaust	1 15/32"	.3400-.3407"	4.839-4.869"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.003"
Exhaust	30°	.3118"	.002-.004"

▷Valve Identification Note—1946-47 Valves (without valve stem oil seals) marked "41" and have 1 stem groove. 1947-48 Valves (with valve stem oil seal) marked "GM" and have 2 stem grooves.

Valve Installation (1946-47 Type without Valve Stem Oil Seals): Use special valve spring cap for each valve (INTAKE—.080" thick, round, double flanged

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

or stamped "IN", EXHAUST—Octagonal or round and stamped "X") and umbrella type cap cover (INTAKE—⅝" overall height, EXHAUST—¼" overall height). NOTE—Cap covers reduce amount of oil on valve stems, controlling oil consumption and smoking when idling.

Valve Installation (1947-48 Type with Valve Stem Oil Seals): Special synthetic rubber oil seal ring installed in groove in valve stem directly below seat locks (retained by valve cap). NOTE—New type longer valve spring cap is used (interchangeable for intake & exhaust valves—may be identified by 1/16" annular groove on top surface). No cap covers used with this type assembly.
Valve Stem Oil Seal Installation—*See "Valve System" in Chevrolet Shop Notes.*

Valve Guides: New precision type. Pressed in head.
Valve Guide Installation—*See "Valve System" in Chevrolet Shop Notes.*

Valve Springs: Install springs with closed-coil end toward cylinder head. Check springs with KMO-607 Tester, replace if outside limits of 124-140 lbs. at 1½". Spring free length 2⅛".

	Spring Pressure	Length
Valve Closed	53-63 lbs	1.821"
Valve Open	124-140 lbs	1.505"

Valve Lifters: Barrel type with pushrod seat brazed on upper end. Lifter diameter .989-.990".
Clearance—.001" (selective free fit).

Rocker Arm Assembly: Armasteel type (no bushings). Four types of rocker arms used as follows:
Intake—No. 839463 (Left), 839464 (Right).
Exhaust—No. 839459 (Left), 839460 (Right).
Rocker Shaft Diameter—.7910-.7917" (bore diameter in rocker arm .7925-.7935").
Rocker Arm Assembly & Installation—*See "Valve System" in Chevrolet Shop Notes.*

VALVE TIMING

►**VALVE TAPPET CLEARANCE:** *CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Shop Notes.*
Std. Engine—.006" (.006-.008") Intake, .013" (.013-.015") Exhaust with engine normalized.
Economy Engine—.010" Intake, .016" Exhaust with engine normalized.

VALVE TIMING: See Camshaft Setting above.

►**1946-47 VALVE TIMING CHANGE**—*On engines before 1947 Flint No. 572254, new replacement crankshaft gear (same Part No. as old type) changes Valve Timing to "1947-48 Valve Timing" given below.*

►**1947-48 NEW VALVE TIMING**—*Late 1947 Engines (Beginning Flint No. 572254) and All 1948 Engines have new Crankshaft Gear (with relocated keyway) and NEW "1947-48 Valve Timing" given below.*
NOTE—This gear same as replacement gear which changes valve timing on earlier engines.

1946-47 VALVE TIMING
►Before 1947 Flint Engine No. 572254
►(with Original Crankshaft Gear)

Intake Valves—Open 3° BTDC. Close 35° ALDC.
Exhaust Valves—Open 46° BLDC. Close 5° ATDC.

1947-48 VALVE TIMING
►Beginning 1947 Flint Engine No. 572254

►*CAUTION—This new Valve Timing applies also to 1946-1947 Engines with new Replacement Crankshaft Gear.*
Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .036" (1946 and 1947 Engines before Flint No. 572254 with original crankshaft gear only), .044" (1947 Engines beginning Flint No. 572254, All 1948 Engines, and 1946-47 engines with replacement crankshaft gear). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

LUBRICATION

Engine Oiling System: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.
CAUTION—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).
Checking Oiling System—*See "Oiling System" in Chevrolet Shop Notes.*
Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).
Normal Oil Pressure—14 lbs. at 39 MPH.
Oil Pressure Regulator—Located oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Shop Notes.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.
Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Shop Notes.*

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.
See "Oiling System" in Chevrolet Shop Notes.
CAUTION—Special checking gauges required for each type engine (Oil pan changed beginning 1947, same pan now used on all engines).

Crankcase Ventilation: Air intake through valve rocker cover (air cleaner on some models), outlet through pipe on right side of engine (combination oil filler and crankcase ventilator outlet).
Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on 1948 cars.
Pressure Valve—AC No. 850501 (Radiator Filler Cap). Opens at 4 lbs.
Capacity—15 quarts.

Radiator Core Removal: *See Chevrolet Shop Notes.*

Water Pump: Double-outlet, packless type with sealed ball bearing shaft.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.
Std.—No. 3113995 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.
Optl. (For Anti-freeze)—As follows:
3121254—stamped 151 (for Alcohol Anti-freeze), 3121251—stamped 160 (for permanent anti-freeze only), 3121280—stamped 180 (for permanent anti-freeze only).

Temperature Gauge: AC No. (1946) 1511201, (1947) 1511895, (1948) 1512078. Not electric.

CLUTCH

Own Make. Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars.
See Clutch Section for complete data.
Facings—Moulded Asbestos, 2 required as follows: 6⅛" I. D., 9⅛" O. D., .132-.138" thick.
NOTE—Borg & Beck Driven Member used on some cars.

Adjustment:—Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal:—Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

Own Make. Three-speed, all helical gear type. Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.

Transmission Control (Passenger Cars): Remote control, vacuum power type with gearshift lever mounted on steering column.
See Transmission Section for complete data.

Removal (except Cabriolet):—Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot (work under car) by taking out two bolts fastening halves together. Loosen 3 vacuum cylinder bracket-to-transmission capscrews and reactionary lever assembly-to-transmission operating shaft clamp bolt. Drive assembly from end of shaft with care. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Remove 3 vacuum cylinder bracket-to-transmission capscrews and move assembly (bracket, vacuum cylinder and reactionary levers) away from transmission. Disconnect pull rod and brake cables from brake cross shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer capscrews and slide ball back on propeller shaft housing. Remove 4 capscrews which secure front trunnion bearings to the front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

Removal (Cabriolet):—Transmission removal on this model differs from regular passenger car removal (above) due to use of special 'VK' frame. Removal procedure for Cabriolet as follows: Remove front floor mat and floor cover over transmission. Remove outer half of reactionary lever metal boot by taking out two bolts fastening halves together. Disconnect selector rod from selector lever after removing cotter pin from transmission end of selector rod. Disconnect gearshift control rod by removing cotter pin, washer and anti-rattle spring from transmission end of rod. Disconnect vacuum cylinder piston rod and valve link from reactionary levers. **To prevent upsetting vacuum valve adjustment, replace clevis pin through piston rod yoke and valve link.** Remove vacuum cylinder from mounting bracket. Disconnect pull rod and brake cables from brake cross-shaft and remove cross-shaft. Disconnect speedometer cable. Remove 4 universal joint ball collar-to-retainer capscrews and slide ball back on propeller shaft housing. Remove 4 capscrews which secure front trunnion bearings to front yoke. Remove 2 front yoke trunnion bearings and split the joint. Push front end of propeller shaft down for clearance. Remove 4 rear transmission mounting-to-frame cross member bolts. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back until clutch shaft just free of driven member, raise rear end sufficient to remove transmission rear mounting (free mounting from transmission and move it forward enabling removal of mounting through opening in frame). Pull transmission back and turn it toward the left for clearance and lift out through opening in floor.

UNIVERSALS

Passenger Cars: Own Make. No. 606779. Cross type with surface treated trunnions and bearings. One used (in torque ball behind transmission).

▷*TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Pass. Car & Half-Ton" Rear Axle in Rear Axle Section.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. NOTE—Passenger car axles have Revacycle differential pinion and side gears. Revacycle and Involute type gears must not be used together (noise & premature gear failure will result). Interchangeable in complete sets only.
See Rear Axle Section for complete data.
Ratio—4.11-1 Std., 3.73-1 Optl. on Pass. Cars.
NOTE—Axle ratios may be identified by prefix letters of serial number stamped on front face of carrier mounting flange on right side as follows:

▷4.11-1 Axle Identification Mark
Detroit Production—('46) DA, ('47) EA, ('48) FA.
Tonawanda—('46) DB, ('47) EB, ('48) FB.

▷3.73-1 Axle Identification Mark
Detroit Production—('46) DC, ('47) EC, ('48) FC.
Tonawanda—('46) DD, ('47) ED), ('48) FD.
Backlash—.005-.007". Screw adjustment.

Removal:—Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber links from anchor plate. Remove spring 'U' bolts, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

▷*INSTALLATION CAUTION: See "Rear Spring Seat & Shackle" in Chevrolet Special Data.*

Axle Shaft Removal:—Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum (on second wheel stud at either side of drain hole in drum), remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.
Axle Shaft Endplay—Free fit to .014" maximum.
Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Shop Notes.*

SHOCK ABSORBERS

Passenger Cars—Delco Models 2200-A, B (Front), 2100-A, B (rear). Double acting, Hydraulic, Parallel Cylinder type. NOTE—Front shock absorbers are part of front suspension (upper control arms).

FRONT SUSPENSION

Passenger Cars—Front Suspension: Independent, linked parallelogram type with coil springs.
See Front Suspension Section for complete data.
NOTE—Make checks with car weight on wheels and special gauge installed at front to provide proper frame height.
Kingpin Inclination—4¾° ± ½°.
Caster—0° ± ½°. Adjustable.
Camber—Negative ¼° ± ½°. Adjustable.
Toe In—0-⅛". To adjust, loosen clamp bolts at each end of left tie rod and turn rod. When tightening clamp bolts, tie rod ends must be in alignment with ball studs (to prevent binding).
Steering Geometry (toe-out on turns)—Outer wheel turned 20°. Inner wheel turned 24° ± 2°.

STEERING GEAR

Passenger Cars—Saginaw Model. Special Chevrolet Passenger Car) Worm-and-Roller type. Chevrolet Part No. 267164 (marked by casting No. 265759).
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Own Make, Hydraulic type. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Wheel Cylinders—Diameter: 1¼" (front), 1 3/16" (rear). Sizes stamped under adjusting cup lock spring on wheel cylinder housing.
Drums—Cast iron rim, steel web. Diameter 11".
Lining—Moulded type. Width 1¾". Thickness 3/16". Length per wheel 22⅝".
Clearance—Adjusting Cover (on wheel cylinder) backed off 4 Notches from slight drag position.
Braking Power—47½% rear wheels, 52½% front.
Hand Brake:—See Service brakes above.

MISC. MECHANICAL

CONVERTIBLE TOP CONTROL: Hydro-Lectric type (top mechanism operated by two hydraulic cylinders actuated by oil under pressure supplied by motor driven pump).
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

Serial Prefix

①—Late 1947.
②—Forward Control.
③—Special.

SERIAL NUMBER: Stamped on plate on cab left front hinge pillar (Flat Face Cowl models have plate on left hand cowl inner panel).
1949 Serial Numbers—First number 1001 with Serial Prefix for each Series as indicated in table above.

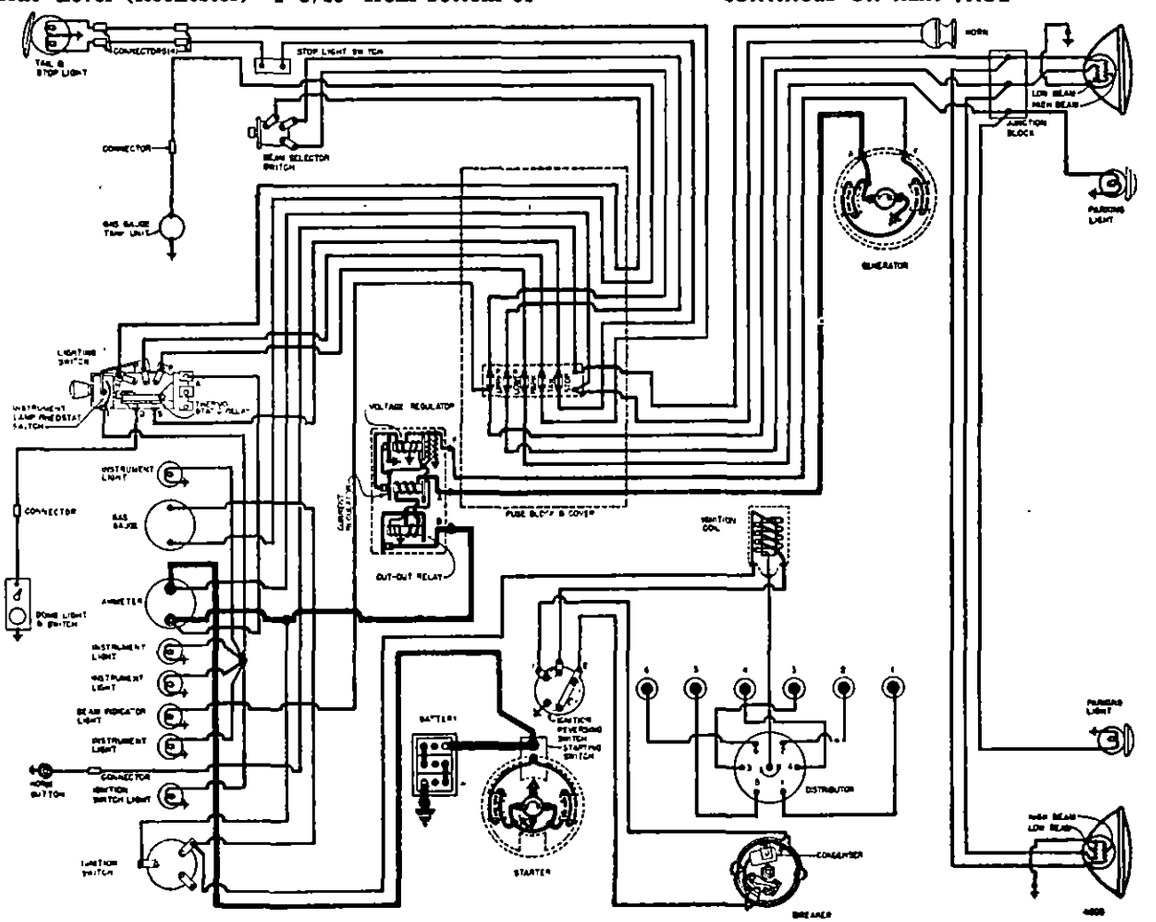
ENGINE NUMBER: Stamped on right side of crankcase to rear of distributor.
1949 Engine Numbers—First number 1001 with prefix indicating year, engine type & plant as follows:

Late 1947 & 1948 Series

Engine Type	Flint	Tonawanda
Half-Ton Truck	FBA	FBM
¾ & 1 Ton (216" Eng.)	AFCA	AFCM
1½ Ton (216" Engine)	FCA	FCM
1½ & 2 Ton (235" Eng.)	FEA	FEM
Cab-over-Engine Mdls.	FDA	FDM

1949 Truck Engine No. Prefixes

Engine Type	Flint	Tonawanda
Half-Ton Truck	GBA	GBM
¾ & 1 Ton (216" Eng.)	AGCA	AGCM
1½ Ton (216" Engine)	GCA	GCM
1½ & 2 Ton (235" Eng.)	GEA	GEM
Cab-over-Engine Mdls.	GDA	GDM



TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.
VACUUM READING: Steady 17-21" at idling speed.
FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAPS: (1947-48) .040", (1949) .035".
Plugs—(1947-48) AC No. 104. 10 mm. (1949) AC No. 46-5. 14 mm.
►*1947-48 SPARK PLUG NOTE—For sustained low speed operation use M-8 plugs.*
►*CAUTION—Tighten 10 mm. plugs to 10-12 ft. lbs., and 14 mm. plugs to 20-25 ft. lbs. torque.*
DISTRIBUTOR: Breaker Gap—.018" (limits .018-.022") standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.
IGNITION TIMING: 5° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "O". Then adjust Octane Selector as follows:
Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

►**CARBURETION Downdraft Carburetors**
Conventional Trucks
►*ROCHESTER CARBURETOR TROUBLE SHOOTING & CORRECTIONS: See "Rochester B (Chevrolet)" in Carburetor Section.*
Idle Setting—(Carter) 1¼-2¼ turns, (Rochester) 1½ turns open (turn out for richer mixture).
Idle Speed—450-500 RPM. with warm engine.
Float Level (Carter)—½" top of float to gasket seat on cover with valve seated (invert to check).
Float Level (Rochester)—1 5/16" from bottom of each float to cover gasket (**do not remove gasket**) with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly. *Above specifications supersede earlier data.*
►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*
Accelerating Pump—No seasonal adjustment.
Fuel Pump Pressure: 4 lbs. maximum.

►**CARBURETION: Updraft Carburetor**
Cab-Over-Engine & Forward Control Trucks
Idle Setting—½-1¼ turns open (517S, 699S), ½-1½ turns open (745S). Turn out for richer mixture.
Idle Speed—450-500 RPM. with warm engine.
Float Level—Top of float 1/32-1/16" (517S, 599S), 0-1/32" below top edge of bowl with needle valve seated.

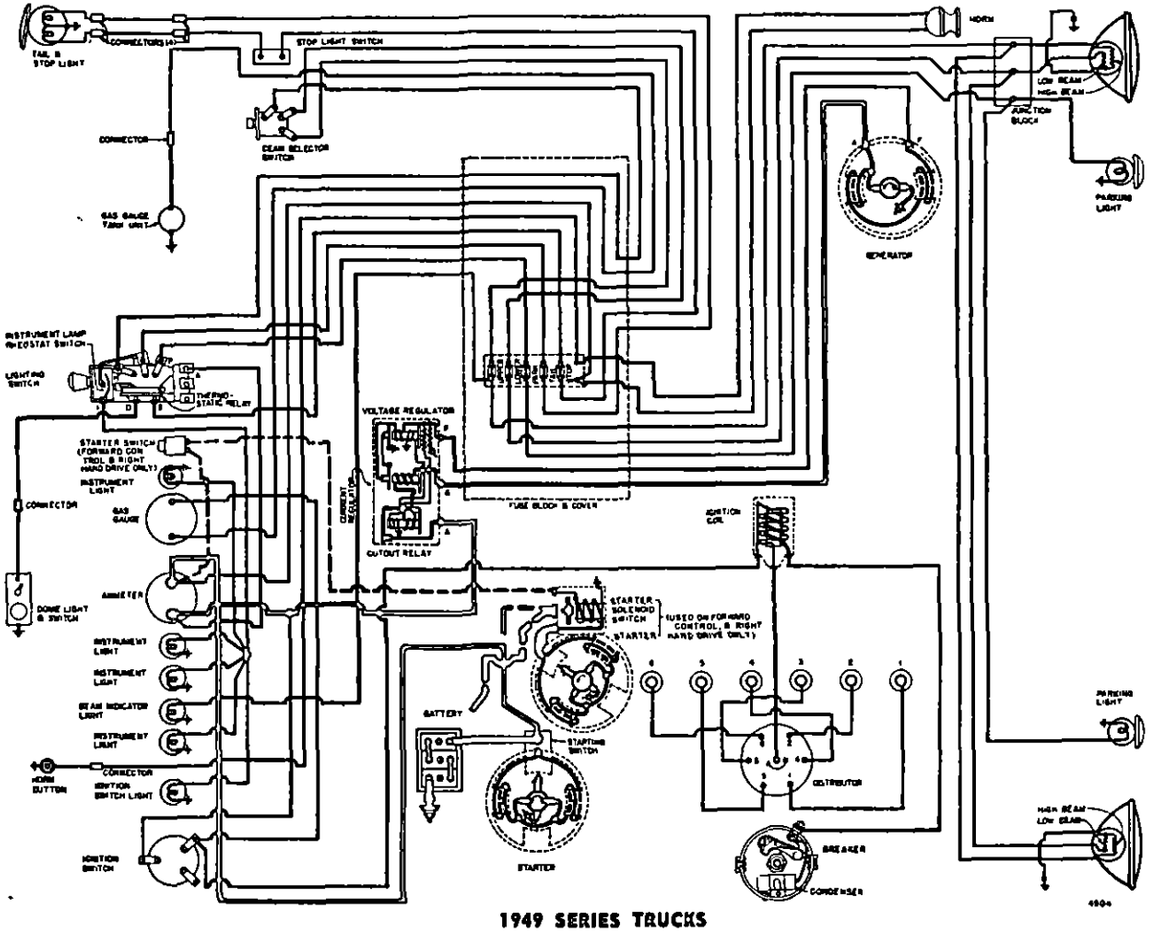
CONTINUED ON NEXT PAGE

LATE 1947 & 1948 SERIES TRUCKS
►SEE 1949 TRUCK DIAGRAM FOR IGNITION WIRING WITHOUT REVERSING SWITCH

CONTINUED FROM PRECEDING PAGE

Accelerating Pump—Inner hole Summer, Outer hole Winter.
Fuel Pump Pressure: 4 lbs. maximum.
MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Spring should be wound up just enough to slip end over manifold pin (approximately ½ turn).
▷*CAUTION*—Excessive spring tension may cause valve to stick (causes detonation and poor performance).
▷**VALVE TAPPET CLEARANCE:** *CAUTION—Engine must be "normalized" by running at fast idle of approximately 600 RPM. for 30 minutes or until oil temperature stabilized before adjusting.*
Normal Operation—.006-.008" Intake. .013-.015" Exhaust, with engine "normalized."
Heavy Duty (Full Throttle) Operation—.010" Intake, .020" Exhaust, with engine "normalized."

IGNITION



1947-48 (WITH REVERSING SWITCH)

IGNITION SWITCH: Delco-Remy No. 1116452. NOTE—This switch has special "Off-Unlocked" position (to right).
Ignition Lock—Briggs & Stratton. No. 600114 (Coded), 600088 (Uncoded).
Key Series—No. 8000 to 9499. **Groove**—No. 15.
Ignition Reversing Switch: Delco-Remy No. 1907122. Mounted on starter and operated by starting pedal linkage (reverses ignition circuit each time starter operated—see wiring diagram for connections).
▷**Removing Reversing Switch from Ignition Circuit:** *If switch removal necessary, see "Removal of Reversing Switch" under IGNITION on Chevrolet 1946-47-48 Pass. Car Model page.*
COIL: Delco-Remy No. (1947-48) 1115380. On right side of engine above distributor.
Ignition Current—2.5 amperes idling, 4.5 stopped.
CONDENSER: Delco-Remy No. 1882239.
▷*CAUTION—This condenser used only on cars with REVERSING SWITCH. Must not be used without switch.*
DISTRIBUTOR: Delco-Remy No. 1110090. Single breaker, 6 lobe cam full automatic advance type with vacuum spark control and Octane Selector.
NOTE—Distributor has insulated breaker plate and ground terminal for use with Reversing Switch.
▷**Distributor Change for use without Reversing Switch:** *See "Removal of Reversing Switch" under IGNITION on Chevrolet 1946-47-48 Pass. Car Model page.*
Breaker Point Set—Delco-Remy No. 1882381.
Breaker Gap—.018" in service. Limits .015-.022". Set new points at .020-.024" (to allow for seating).
Cam Angle—39° closed. 21° open.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	R.P.M.
Start	350	3	700
6.5	600	13	1200
12.25	1000	24.5	2000
19	1700	38	3400

Octane Selector—Adjustment on distributor provides 10° advance or retard from center '0' position. See Ignition Timing for adjustment instructions.
Vacuum Spark Control: Delco-Remy No. 1116043. On Octane Selector, linked to advance arm.
Plunger Travel—17/64".

Distr. Degrees	Vacuum Advance Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16-19"

1949 SERIES TRUCKS

IGNITION

LATE 1948 & 1949 (WITHOUT REVERSING SWITCH)

IGNITION SWITCH: Delco-Remy No. (Late 1948 without Reversing Switch) 1116452, (1949) 1116464.
COIL: Delco-Remy No. 1115380. Mounted directly above distributor.
CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.
DISTRIBUTOR: Delco-Remy No. 1112353. Automatic and vacuum advance with Octane Selector.
Breaker Gap—.018" standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—No. 1112353

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	3	700
6.5	600	13	1200
12.0	1200	24	2400
19.0	1700	38	3400

Octane Selector—Adjustment on distributor provides 10° advance or retard from center "0" position. See Ignition Timing for adjustment instructions.
Vacuum Spark Control: Delco-Remy No. 1116043. On Octane Selector, linked to advance arm.
Plunger Travel—17/64".

Distr. Degrees	Vacuum Advance Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16.5-18.5"

Removal: Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

IGNITION TIMING

	Flywheel Degrees	Piston Position
Std. Setting①	.5° BTDC	.0091" BTDC.

①—Adjust Octane Selector for grade of fuel being used. See Octane Selector Setting below.
Timing (Neon Light)—Recommended method. Connect neon light to #1 spark plug, direct light in fly-

wheel through inspection hole in right front face of housing. Set Octane Selector pointer at "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).
Timing (without Neon Light)—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor as directed above.
Octane Selector Setting—Set for the grade of fuel being used to produce slight "ping" on acceleration.

CARBURETOR
CARTER (CHEVROLET) W1

Carter (Chevrolet)—(1947-48) Type 574S (Std.) 616S (Economy Model). (1949) Carter W1, No. 684S 1¼" Single barrel, downdraft type with manual choke control.
Casting No. on Flange—421 (574S), 432 (616S), 603 (684S).
See Carburetor Section for complete data.
Settings: (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Rods & Jets—*See Carter Jet Tables in Carburetor Section for complete data.*
Fast Idle: (684S) Linkage connected to choke and operates whenever choke closed to open throttle. No adjustment.

CARBURETOR
ROCHESTER

Rochester G.M. Model B. ***CAUTION—Different carburetor used on each engine:***
216" Engine—Chevrolet No. 7002050. 1½" Bore.
235" Engine—Chevrolet No. 7002051. 1 9/16" Bore.
Single Barrel downdraft type with concentric bowl and twin floats. Choke is manual type with throttle kicker and fast idle.
See Carburetor Section for complete data.
►*ROCHESTER CARBURETOR TROUBLE SHOOTING & CORRECTIONS: See "Rochester B (Chevrolet)" in Carburetor Section.*
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Throttle Kicker: Operates by cam on choke lever—opens throttle when choke closed—no adjustment.

CARBURETOR
CARTER (B&B) UPDRAFT

Carter (BB) Modsl 517S or 699S. 1¼" single barrel, updraft types with manual choke control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Jets—*See Carter (BB) Updraft Jet Table in Carburetor Section for data.*

CARB. EQUIPMENT

Air Cleaner: AC types as follows:
864133—Spec. Equip. (¾ Ton).
1529264 oil-wetted—Std. All (exc. 2 Ton & C-O-E).
1529192 oil-bath—Optl. All (exc. 2 Ton & C-O-E).
1542078 oil-bath—Std. on 2 Ton Conventional Truck.
1543889 oil-bath—Std. on Cab-Over-Engine.
Filter Element—AC #2 (1529264), #9 (1529192), #7-S (for 1542078), None (for 1543889).
Fuel Pump: AC Type AF, No. 1523089. Diaphragm type. **Optl.** AC No. 1539126 or 1539448 combination fuel-and-vacuum pumps.
Replacement Pump—AC No. 429 (for 1523089), 9126 (for Optl. 1539126 or 1539448 combination pumps).
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: AC Electric type. AC Nos.:
Dash Unit—(*1947-48*) *No. 1516973,* (*'49*) *No. 1517169.*
Tank Unit—Various Types as follows:
1947-49—Half-Ton & ¾ Ton Std., No. 1515466.
1947-48—¾ Ton Panel & Chassis, No. 1516280.
1947-48—1, 1½, 2 Ton, No. 1516983.
1947-48—C-O-E, No. 1515467.
1947-48—School Bus, No. 1516334.
1949—¾ Ton Panel & Chassis, 1 Ton Chassis, Cab and Pickup, No. 1516999.
1949—1 Ton Panel, 199" School Bus, No. 1516334.
1949—1 Ton (other Models), No. 1516983.
1949—1½, 2 Ton C-O-E, 110" WB, 2 Ton Cab, No. 1517140.
1949—2 Ton (Others) & 2 Ton C-O-E, No. 1515467.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 9". Width 7". Height 8 11/16".
Location—Under front floor on right side (Forward Control Trucks on frame on right side of engine).
School Bus—Delco Type 19Q-4. 6 Volt, 19 Plate, 125 Ampere Hour Capacity (20 hour rate).
Starting Capacity—145 amperes for 20 minutes.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 10 3/8". W. 7". Height 8 11/16".
Location—Under hood.

STARTER

Delco-Remy No. (1947-49 Exc. Forward Control Models) 1107055.
Forward Control Models—Delco-Remy No. (1947-48) 1107076, (1949) 1107075.
Drive—Overrunning clutch with manual pinion shift (1107055), solenoid pinion shift (1107075 & 1107076).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	65
12 "	Lock	3.4	525

Removal: Flange mounted on right side of flywheel housing. To remove, take out mounting screws.
Starting Switch (1107055): Delco-Remy No. 820052. On starter. Operated by pedal.
(1107075 & 1107076 Starter). Delco-Remy Solenoid Switch No. 1118135 (no relay used) mounted on starter and controlled by pushbutton switch No. (1947-48) 1996031, (1949) 1106037).
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy. Two-brush types (as listed below) with voltage and current regulation.

	Gen.—D-R Nos.—Arm.
1947-48 (Standard)	1102667—1879002
1947-48 (Spec. Equip.)	1102671—1881389
1949 (Standard)	1102710—1879002
1949 (Door-to-Door Del.)	1102677, 726—1881309
1949 (Optional 50 Amp.)	1106751, 757—1881309
Optl. (50-amp.) Equip.	**1106751 & 757**

Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate (Reg. Gen.)—36 amperes, 7.4 volts, 2400 RPM.

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102677	30	8.0	1750
1102710	30	8.0	1750
1102677 & 726	26	8.0	1450
1106751 & 757	50	7.5	1410

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amps. (1.70-1.95 amps. on 1106751 & 757) at 6.0 volts.
Removal: Generator pivot mounted at left front of engine. To remove, take out pivot and clamp bolts.
Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy. Voltage-current types as follows:

Standard	1118301
Door-to-Door (for 1102677 Gen.)	1118349
Door-to-Door (for 1102726 Gen.)	1118361
Optional (50 Amp.)	1118334

►*"1118300 SERIES" REGULATORS* have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

Current Regulator

Settings (hot):	Set to:	Range
1118301	36 amps.	32-40 amps.
1118334	50 amps.	48-52 amps.
1118349	25 amps.	23-27 amps.
1118361	25 amps.	23-27 amps.

Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—*See Electrical Equipment Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—Red dot on lower edge of speedometer. Lighted when upper beams in use.

Switches

Lighting—Delco-Remy No. 1995031.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Stop Light—D-R No. 1997901 (mechanical type).
NOTE—Hydraulic switch used on some models.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

FUSES: Lighting. Five 20-ampere fuses in fuse box on engine side of dash. Protects individual light circuits as follows:

Top Fuse Upper Beams	**4th Fuse** Tail Lights
2nd Fuse Lower Beams	**5th Fuse** Stop Lights
3rd Fuse Parking Lights	

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable. Protects lighting circuits together with fuses listed

HORNS: Delco-Remy No. 1999801. Vibrator type.
Horn Current—7-9 amperes at 6.0 volts.
Air Gap—.027-.033".

ENGINE

▷**ENGINE SPECIFICATIONS:** *TWO ENGINES USED:*
216" Thrift-Master—Std. on ½, ¾, 1, 1½ Ton, and 137" & 161" WB. School Bus.
235" Load-Master—Std. on 2 Ton, C-O-E Trucks, and 199" School Bus. Optl. on 1½ Ton and 161" WB. School Bus.

Engine	Bore	Stroke	Displacement
"216"	3 1/2"①	3 3/4"	216.5 cu. in.
"235"	3 9/16"②	3 15/16"	235.5 cu. in.

①—3.4995-3.5015". ②—3.5620-3.5640".

Engine	Comp. Ratio	Rated HP	Developed HP
"216"	6.6-1	29.4	90 at 3300 RPM
"235" Std.	6.7-1	30.4	93 at 3100 RPM
"235" C-O-E	6.7-1	30.4	90 at 3100 RPM

Compression & Vacuum Reading—*See Tune-Up.*

▷**Non-Interchangeable Parts:** Parts interchangeable between the 216" and 235" engines except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Motor), Push Rods (approx. ¾" longer on 235" Engine and identified by shoulder just below cup at top end), Valve Lifters, Camshaft, Piston and Pin Assembly, Piston Rings, Crankshaft, Oil Pan Pipe Assembly, Oil Distributor to Valve Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support Assembly.

▷**VALVE ROTATORS AVAILABLE FOR TRUCK ENGINES:** To promote longer valve life. *See "Valve System" in Chevrolet Special Data.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS INSTALLATION & ADJUSTMENT: *See Chevrolet Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1948 and 1949 Passenger Car pages for all engine data (Pistons, Connecting Rods, Crankshaft, Bearings, Valves, etc.).*

VALVE TIMING

▷**VALVE TAPPET CLEARANCE:** *CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Special Data.*
Normal Operation—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."
Heavy Duty (Full Throttle) Operation—.010" Intake, .020" Exhaust, with engine "normalized."

▷*CAUTION—If Valve Rotators are used set Exhaust Valve Clearance at .018-.020".*

VALVE TIMING: Camshaft Setting. Timing gears punchmarked. Punchmarked tooth of camshaft gear must be meshed with punchmarked space on crankshaft gear.

Valve Timing
Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004".

LUBRICATION

Engine Oiling System: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.
CAUTION—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed (requires special gauges).
Checking Oiling System—*See "Oiling System" in Chevrolet Special Data.*
Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).
Normal Oil Pressure—14 lbs. at 2000 RPM.
Oil Pressure Regulator—Located in oil pump cover Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.
Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.
See "Oiling System" in Chevrolet Special Data.
CAUTION—Special checking gauges required for each type (216" & 235") engine.

Crankcase Ventilation (All Trucks except Forward Control Models): Regular velocity type with air intake through valve rocker cover (air cleaner on some models) and outlet pipe on right side of engine.
Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

▷**Positive Crankcase Ventilation (Forward Control Truck Models only):** Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring-loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling speed to maintain proper air fuel mixture.**
Servicing. Every 5000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Oil filler cap gasket must seal tightly. Test vacuum valve as follows:
Vacuum Valve. With valve disassembled, check spring tension—must be 7.5 ozs. with spring compressed to .418-.432". If defective replace with new valve assembly, Part No. 1543979.

▷*CAUTION*—When assembling valve, make certain end coil of spring engages groove under head of valve.

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on Cab-Over-Engine Trucks.
Pressure Valve (C-O-E Trucks)—AC No. 850501 (Radiator Filler Cap). Opens at 4 lbs.
Capacity—15 qts. (with 216" Engine), 17½ qts. (with 235" engine). NOTE—Heavy Duty 17½ qt. radiator Optl. on ¾, 1, 1½ Ton and 137" & 161" WB. School Bus.

Radiator Core Removal: *See Chevrolet Special Data.*

Water Pump: Double-outlet, packless type with sealed ball-bearing shaft.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat. Harrison. In cylinder head water outlet.
Setting—No. 3113995 stamped "143". Starts to open 140-147°F. Fully open 170°F.

Temperature Gauge: AC No. (1947-48) 1511898 (exc. COE), 1512011 (COE). (1949) 1512148 (exc. COE), 1512150 (COE).

CLUTCH

Own Make. Diaphragm spring, single plate, dry disc type. NOTE—Half-Ton Trucks use 9" clutch, all other models 10¾" type.
See Clutch Section for complete data.
Facings—Moulded Asbestos, 2 required as follows:

	I. D.	O. D.	Thickness
9" type	6⅛"	9⅛"	.132-.138"
10¾" type	7"	10¾"	.137-.143"

Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

1947 3-SPEED TRUCK TYPE

Own Make. Three-speed, all helical gear type; Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse) with floor-mtd. gearshift.
NOTE—4-Speed transmission optional equipment.
See Transmission Section for complete data.

▷**Low Speed Disengagement Complaints (with Replacement Cover Plate Assembly)**—*See Chevrolet Special Data.*

Removal (½-Ton): Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from

transmission. Remove 4 universal joint ball collar-to-retainer capscrews, slide ball back on propeller shaft housing. Remove 4 capscrews from trunnion bearings on front yoke, remove these bearings and split the universal joint. Push front end of propeller shaft down for clearance (NOTE—On 4-speed transmission, frame cross member must be removed to drop shaft). Remove 2 upper transmission-to-clutch housing capscrews and insert guide pins, remove clutch underpan and take out 2 lower mounting capscrews and slide transmission out and remove. NOTE—On 4-speed type transmission, 2 brake master cylinder bracket capscrews must be removed.

Removal (¾-Ton): Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split center universal joint by removing two trunnion bearing 'U' clamps (tape or wire trunnions together to prevent losing bearings) Remove 4 universal ball retainer-to-transmission bolts and slide retainer back on tube. Remove center bearing support bracket-to-frame cross member bolt nuts. Pull front propeller shaft assembly to rear, free of front universal. Remove transmission in same manner as on ½-Ton model.

TRANSMISSION

1948-49 3-SPEED TRUCK TYPE

Own Make. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

See Transmission Section for complete data.

Transmission Control: Mechanical type with shift lever mounted on steering column.

See Transmission Section for complete data.

Removal (Half-Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven member, lift transmission up and remove through floor opening.

Removal (¾ Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split intermediate universal by removing trunnion bearing "U" bolts, lower rear propeller shaft to floor. Remove four capscrews holding universal joint collar on rear bearing retainer, slide ball collar and retainer back on housing. Remove two bolts and nuts mounting intermediate universal support bracket on frame cross-member, pull front propeller shaft assembly to rear and free of front universal joint. Remove transmission in same manner as on Half-Ton (above).

1947 4-SPEED TRUCK TYPE

(1, 1½, 2 TON TRUCKS)

Own Make. Four Speed, sliding spur gear type with floor mounted gear shift lever.

See Transmission Section for complete data.

Removal (C-O-E 109" WB.): Split front universal, remove transmission as given for ¾-Ton.

Removal (All Others): Remove floor boards. Disconnect speedometer cable. Remove hand brake lever from transmission. Split front universal joint by removing two trunnion bearing 'U' clamps (tape or wire trunnions together to prevent losing bearings). Remove center bearing support bracket-to-frame cross member bolts. Unscrew oil seal retainer from rear yoke of center universal. Pull front propeller shaft assembly to front to free from rear shaft. Remove transmission as given for 3-Speed (above).

1948-49 4-SPEED TRUCK TYPE

(1, 1½, 2 TON TRUCKS)

Own Make. Four-speed, constant-mesh, synchro-mesh, helical gear (2nd, 3rd, and 4th), sliding spur gear (Low & Reverse). Floor mounted gearshift.

See Transmission Section for complete data.

►**Locking in 3rd & 4th Gear Correction**—New design 3rd & 4th speed clutch hub and clutch keys used.

See Chevrolet 4-Speed Helical Gear Transmission in Transmission Section.

►**Gear Disengagement & High Gear Noise Correction:** *See "Chevrolet 4-Speed Helical Gear Transmission" in Transmission Section.*

Transmission Control (Cab-Over-Engine): *See Chevrolet Special Data for Removal & Installation data.*

NOTE—Floor-mtd. gearshift used on Other Trucks.

Removal (½ & ¾ Ton): See 3-speed Transmission data above. NOTE—On Forward Control Models shift lever and rear floor pan must be removed.

Removal (Other Trucks): Free steering gear grommet from floor, remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split front universal joint by removing trunnion bearing "U" bolts (tape or wire trunnions together to prevent losing bearings), slide shaft down to one side to clear transmission. Remove two top transmission mounting capscrews, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove 2 lower transmission mounting capscrews, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven-member, remove transmission.

UNIVERSALS

Half-Ton: Own Make. No. 591642 (3-Spd. Trans.), 605118 (4-Spd. Trans.). Same type as Pass. Car. One used (in torque ball back of transmission).

►*TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Pass. Car & Half-Ton" Rear Axle in Rear Axle Section.*

¾ Ton Truck: Front Universal—Own Make. Chevrolet No. 591646 (3-Spd. Trans.), 3689288 (4-Spd. Trans.). Same type as used on Half-Ton (above).

Intermediate & Rear Universal—Spicer Model No. 1351-5107X (Intermediate—slip joint), 1358-5104X (rear—permanent joint). Needle bearing type.

See Universals Section for complete data.

1, 1½, 2 Ton Trucks (Regular & C-O-E): Spicer Needle bearing type. Slip-joint used at intermediate position, permanent type at transmission and rear axle.

Spicer Model Nos.	Front	Intermediate	Rear
C-O-E 110" WB	1351-5107X	①	1358-5105X
Bus 199" WB	1358-5104X	②	1358-5104X
All Others	1358-5104X	1351-5107X	1358-5104X

①—No intermediate joint used (1 propeller shaft).
②—Two intermediate universals as follows: First—1358-5104X, Second 1351-5107X (3 section shaft).

See Universal Section for complete data.

Propeller Shaft Intermediate Bearing & Support. *See "Propeller Shaft" in Chevrolet Special Data.*

NOTE—Support Bearing is sealed single-row ball bearing with "grease traps" packed with waterproof grease to prevent entrance of dirt and water.

REAR AXLE

SEMI-FLOATIN TRUCK TYPE

(HALF-TON)

Own Make. Semi-floating, hypoid gear type with Torque Tube drive.

NOTE—This axle same design as passenger car type.

See Rear Axle Section for complete data.

Ratio—4.11-1 Standard.

Axle Identification—Can be identified by prefix letter of axle serial number stamped on front face of carrier flange on right side as follows:

Detroit Prod.—(1947) EE, (1948) FE, (1949) GE.
Tonawanda—(1947) EF, (1948) FF, (1949) GF.

Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

Axle Shaft Endplay—Free fit to .014" maximum.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

FULL-FLOATIN TRUCK TYPE

(ALL EXCEPT HALF-TON)

Own Make. Full-floating, hypoid gear (straddle mounted pinion) with Hotchkiss Drive.

►**¾ & 1 Ton Note**—"Revacycle" differential side gears and pinions used.

►**1½ & 2 Ton Note**—Axle shaft splined to wheel hubs.

See Rear Axle Section for complete data.

►**Axle Identification**—Axles can be identified by prefix letters of axle serial number stamped on top of carrier housing between reinforcing ribs as follows:

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1947 Axle Markings

	Ratio	Marking①
¾-Ton	4.57-1	EG or EH
1 Ton (Single tires)	5.14-1	QA or QB
1 Ton (Dual tires)	5.14-1	QC or QD
1½-Ton	5.43-1	"Q"②
1½-Ton	6.17-1	"Q"②
2 Ton & C-O-E	6.17-1	QG or QH

1948 Axle Markings

¾ Ton (exc. Dubl-Duti)	4.57-1	FG or FH
1 Ton (Single Tires)	5.14-1	RAB or RB
1 Ton (Dual Tires)	5.14-1	RC or RD
1½ Ton	6.17-1	RE or RF
1½ Ton	5.43-1	RL or RM
2 Ton & C-O-E	6.17-1	RG or RH

1949 Axle Markings

¾ Ton (exc. Fwd. Contr.)	4.57-1	GG or GH
1 Ton (Single Tires)④	5.14-1	SAB or SB
1 Ton (Dual Tires)④	5.14-1	SC or SD
1½ Ton	6.17-1	SE or SF
1½ Ton	5.43-1	SL or SM
2 Ton & C-O-E③	6.17-1	SG or SH

①—First mark—Detroit, or Second—Tonawanda.
②—Std. axle ratio changed from 5.43-1 to 6.17-1 in August, 1947 (axle markings changed—see 1948).
③—1½ Ton Special Model also.
④—3/4 Ton Forward Control Models also.

Backlash—.005-.008". Screw Adjustment.

Removal:—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1 Ton): Remove 8 capscrews and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, discard gasket.

Axle Shaft Removal (1½ & 2 Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. NOTE—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align **Axle Shaft Note**—Shafts unequal length (right shaft longer) and may be identified by part number

¾ & 1 Ton Truck

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

1½ Ton Truck (Splined Shaft)

Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

2 Ton & C-O-E (Splined Shaft)

Left Shaft (Stmpd. 05)	3702205①	36½"
Right Shaft (Stmpd. 06)	3702206②	40¾"

①Supersedes No. 3685193. ②Supersedes No. 3695194.

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

REAR AXLE

TWO-SPEED TRUCK TYPE

Own Make (2 Ton Optl.). Full-floating, Two-speed Double reduction type with Hypoid Gears (First reduction), Helical Gears (Second reduction) and new vacuum shift control.

▷*HARD SHIFTING OR STICKING OF SHIFT CONROL: See "Rear Axle Notes" in Chevrolet Special Data.*

Identification Note—Serial number prefix (on flat top of carrier on right side) is "RN" (1947-48), "SN" (1949), (Detroit). "RP" (1947-48), "SP" (1949), (Tonawanda).

See Rear Axle Section for complete data.

Ratio—6.13-1 (High), 8.10-1 (Low).

Two-Speed Shift Control: Vacuum power type with selector valve on instrument panel.

See Rear Axle data in Rear Axle Section for data.

Removal: Carrier Assembly can be removed (without disturbing axle housing) as follows: Remove axle shaft flange mounting bolts, pull both axle shafts out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearing, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier by means of long punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing.

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for regular rear axle (see above).

SHOCK ABSORBERS

Delco Hydraulic type. Single or double acting piston types, or Direct acting type.

Direct Acting Types

Front—1052-M (½, ¾, 1 Ton).
Rear—1066-Z (½ Ton), 1066-T (¾ Ton).

Single Acting Types

Front—1430-CA, DA (½ & ¾ Ton).
Rear—1430-MA, LA (½ Ton), 1431-Y, X (¾ Ton).

Double Acting Types

Front—1730-B, A (exc. C-O-E), 1730-C, D (C-O-E).
Rear—1731-U, T (½ Ton), 1722-D, C (¾ Ton), 1722-F, E (1 & 1½ Ton), 2000-W, V (1½ Ton & School Bus).

FRONT SUSPENSION

Front Suspension: Conventional "I" beam section front axle

Kingpin Inclination—7°10'±1° crosswise (All).

Camber—1°±½° (All). Bend axle for corrections (when kingpin inclination is likewise off).

Caster—See table below. All specifications ±½°.

	Caster	Toe-In
½ & ¾ Ton exc. Fwd. Contr.	1¾°	1/16-3/16"
¾ Ton Fwd. Control	3¼°	1/16-1/4"
1 Ton Fwd. Control	2¼°	1/16-1/4"
1, 1½, 2 Ton exc. C-O-E	2¾°	1/16-1/4"
C-O-E Trucks	3°	1/16-1/4"

Toe-In—See table above. Adjust by turning tie rod. *CAUTION*—Tie rod ends must be aligned with studs.

Steering Geometry—Outer wheel turned 20°, inner wheel 23°±2° (All Models).

STEERING GEAR

Saginaw Model. Ball bearing (re-circulating ball) Worm-and-Nut. Chevrolet Part Nos. as follows: 270927 (½ Ton & ¾ Ton with 3-Spd. Transmission), 270221 (¾, 1, 1½ Ton with 4-Spd Transmission), 270224 (2 Ton & School Bus), 270635 (C-O-E).

See Steering Gear Section for complete data.

BRAKES

Service Brakes: Own Make. Hydraulic type. Hand Lever (Pedal type on ½ & ¾ Ton and all Forward Control Models) applies rear wheel service brakes.

See Brake Section for complete data.

Wheel Cylinders—Size stamped on housing under adjusting cup lock spring as follows:

	Front Wheels	Rear Wheels
Half-Ton	1 1/4"	1 3/16"
3/4 Ton	1 1/4"	1 3/8"
1 Ton	1 3/8"	1 3/8"
All Others	1 1/4"	1 1/2"

Drums—Cast iron rim with steel web.

	Front		Rear	
	Diam.	Width	Diam.	Width
Half-Ton	11"	1¾"	11"	1¾"
¾-Ton①	11"	1¾"	12"	2"
" Fwd. Cont.	12"	2"	12"	2"
1-Ton②	12"	2"	14"	2½"
137" Sch. Bus	12"	2"	14"	2½"
1½, 2-Ton	14"	2"	16"	3"

①—Except Fwd. Cont. ②—Includes Fwd. Cont.

Lining—Moulded type (bonded type on ½ & ¾ Ton).

Width—See Drum width above.

Thickness: .187-.194" (11"), .265-.272" (Others).

Clearance (½ & ¾ Ton)—Adjusting cover on wheel cylinder backed off **4 Notches** from slight drag position (All shoes—front and rear wheels).

Clearance (All Others)—Front Wheels: Adjusting cover on wheel cylinder backed off **4 Notches** from slight drag position.

Rear Wheels: Adjusting pinion shaft backed off **2/3 turn** from slight drag position.

HAND BRAKE

Hand Brake (Pedal Type used on ½ Ton, ¾ Ton and Forward Control Models): Pedal applies rear wheel service brakes. Release lever below instrument panel, **Adjustment**—This pedal-operated brake adjusted in same manner as other trucks (below) and release rod handle (under instrument panel) must be adjusted for ½" minimum clearance at support bracket.

Hand Brake (Lever Type used on Other Models): Place hand lever in fully released position, disconnect rear wheel cables at cross-shaft levers on frame by taking out clevis pin, loosen locknut, pull cable out of conduit by hand until a positive stop is felt, adjust clevis on cable end, tighten locknut and install clevis pin.

HYDROVAC

Hydrovac Brake System: Std. on 2 Ton, Cab-Over-Engine, and 1½ Ton Special Models. Consists of special power unit (vacuum power used to augment regular hydraulic brake actuation) in hydraulic regular hydraulic brake actuation) in hydraulic line between master cylinder and wheel cylinders.

See Brake Section for complete data.

M DEL IDENTIFICATION

Series	Serial Prefix	Model Designation
1500	GJ	Special Styleline & Fleetline
2000	GK	Deluxe Styleline & Fleetline
1508	GJ	Sedan Delivery

SERIAL NUMBER: Stamped on plate on left front body hinge pillar post.
1949 Serial Numbers—First number 1001 with model prefix as indicated in model identification above.

ENGINE NUMBER: Stamped on right side of crankcase to rear of distributor.
Engine Number Prefix—Indicates manufacturing plant as follows: GAA—Flint, GAM—Tonawanda.
1949 Engine Numbers—First number 1001 with engine plant prefix as indicated above.

TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.
VACUUM READING: Steady 17-21" at idling speed.
FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAPS: .035".
Plugs—AC No. 46-5. 14 mm.
►*CAUTION—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.*

DISTRIBUTOR: Breaker Gap—.018" (limits .018-.022") standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 5° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "0".
Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETION (Carter W1 & Rochester):
►*ROCHESTER CARBURETOR TROUBLE SHOOTING & CORRECTIONS: See "Rochester B (Chevrolet)" in Carburetor Section.*
Idle Setting—(Carter) 1-2 turns, (Rochester) 1½ turns open. Turn screw out for richer mixture.
Idle Speed—450-500 RPM. with warm engine.
Float Level (Carter)—½" top of float to gasket seat on cover with valve seated (invert to check).
Float Level (Rochester)—1 5/16" from bottom of each float to cover gasket **(do not remove gasket)** with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.
►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*
Accelerating Pump—No seasonal adjustment.

Fuel Pump Pressure: 3-4 lbs. (1523089), 3½-4½ lbs. (1539126, 448).

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

VALVE TAPPET CLEARANCE: .006-.008" Intake, .013-.015" Exhaust *after engine "normalized" by running at fast idle of approximately 600 RPM. for 30 minutes or until oil temperature stabilized.*

Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

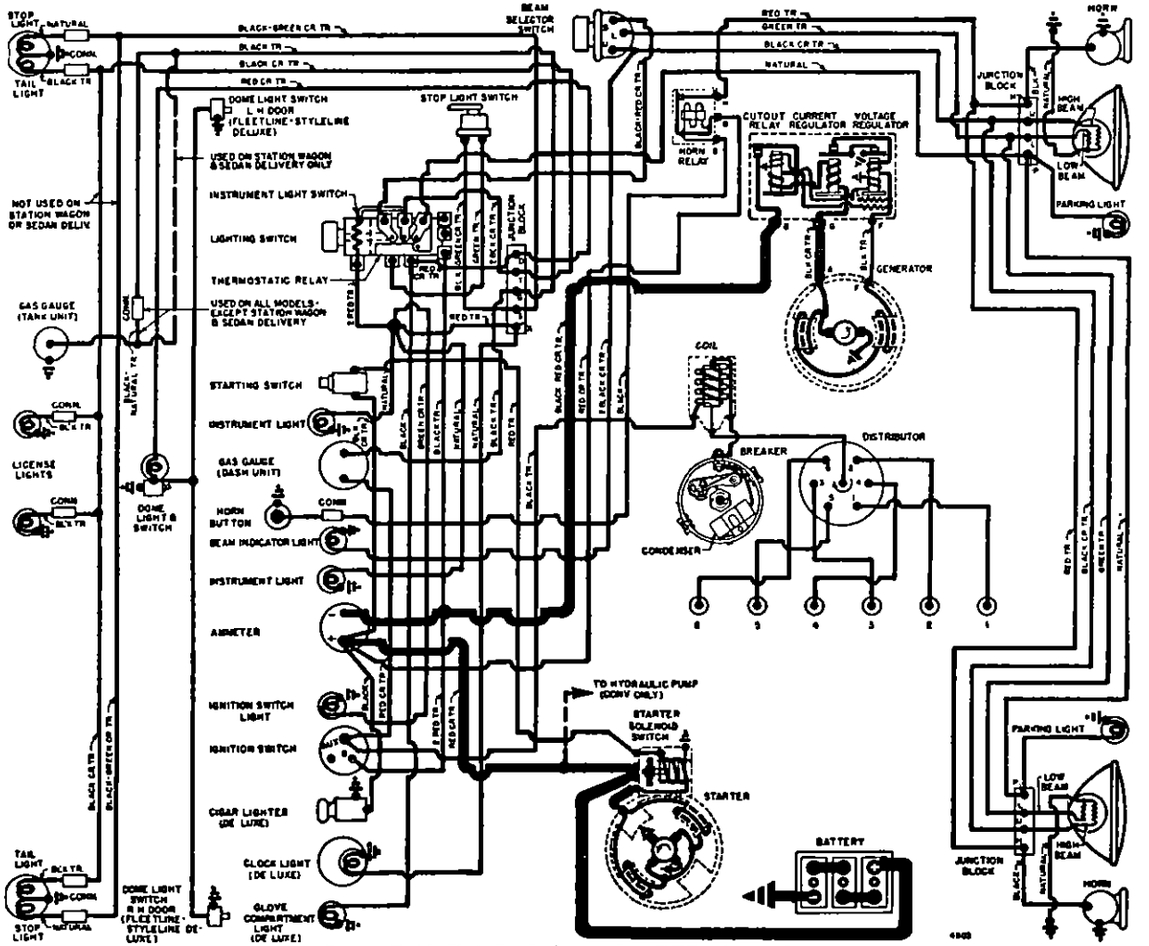
IGNITION

IGNITION SWITCH: Delco-Remy No. 1116452.
Ignition Lock—Chevrolet No. 3692503 less keys.

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy 1112353. Automatic and vacuum advance with Octane Selector.
Breaker Gap—.018" standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.



Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	Eng. R.P.M.
Start	350	3	700
6.5	600	13	1200
12.0	1200	24	2400
19.0	1700	38	3400

Octane Selector—Adjustment on distributor provides 10° advance or retard from center "0" position.
Vacuum Spark Control: Delco-Remy No. 1116043. On Octane Selector, linked to advance arm. Provides additional advance at speeds above idling except when accelerating or with wide open throttle.
Plunger Travel—17/64".

Distr. Degrees	Vacuum Advance Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16.5-18.5"

Removal: Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt

CONTINUED ON NEXT PAGE

►*Gas Gauge Tank Unit lead changed to RED wire on later cars.*

CONTINUED FROM PRECEDING PAGE

IGNITION TIMING

	Flywheel Degrees	Piston Position
Std. Setting①	5° BTDC	.0091" BTDC.

①—Adjust Octane Selector for fuel used.

Timing (Neon Light)—Recommended method. Connect neon light to #1 spark plug, direct light in flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).

Timing (without Neon Light)—With #1 piston on compression, turn engine over until piston is 5° or .0091" before top dead center with ignition mark (steel ball insert in flywheel) at pointer in inspection hole in right front face of housing. Adjust distributor so contacts just opening.

Octane Selector Setting—Set for the grade of fuel being used to produce slight "ping" on acceleration.

CARBURETOR

CARTER (CHEVROLET) W1

Carter (Chevrolet) W1, No. 6848. 1¼" single barrel, downdraft type with manual choke control and new fast idle and accelerating pump design.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Metering Rods & Jets—*See Carter Jet Table in Carburetor Section for complete data.*

Fast Idle: Linkage connected to choke and operates when choke closed to open throttle. No adjustment.

CARBURETOR

ROCHESTER

Rochester Model B No. 7002050. Single, downdraft type with manual choke control and fast idle.
See Carburetor Section for complete data.

▷*ROCHESTER CARBURETOR TROUBLE SHOOTING & CORRECTIONS: See "Rochester B (Chevrolet)" in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Throttle Kicker: Operates by cam on choke lever—opens throttle when choke closed—no adjustment.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544448 oil-wetted type (std.). 1544498 (or 1529264 with governor) oil bath types.
Filter Element—AC #6 (std.), #22 (heavy duty), #2 (heavy duty with governor).
Servicing—Clean and re-oil std. cleaner (use SAE 50 oil) every 2000 miles. On heavy duty, clean and refill oil reservoir with SAE 50 oil (1 pint) every 2000 miles.

Fuel Pump (Std.): AC Type AF, No. 1523089. Diaphragm type. (Optl.) AC No. 1359126 or 1539448 combination fuel-and-vacuum pump.
Replacement Pump—AC #429 (Std.), 9126 (Optl.).

Fuel Pump Pressure: 3-4 lbs. (1523089), 3½-4½ lbs. (1539126, 448).
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. 1516931.
Tank Unit—AC 1516280 (1517100 Sta. Wn., Sed. Del.).
See Carburetion Equipment Section for complete data.

▷**Tank Unit Production Change:** On Cars after June 1, 1949, Tank Unit lead was changed from a natural black tracer to all RED.

BATTERY

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Grounded Terminal—Negative (—) terminal.
Location—In engine compartment on right side.

STARTER

Delco-Remy Model 1107075. Armature No. 1867897.

▷*CAUTION—Starter operates whenever pushbutton depressed.*

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	80①
12 "	Lock	3.4	525

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118135 (no relay used) mounted on starter and controlled by Pushbutton Switch No. 1996037.

▷*CAUTION*—Overrunning clutch pinion clearance must be adjusted whenever solenoid removed from starter. *See Electrical Equipment Section for data.*

GENERATOR

Delco-Remy. Two-brush types (as listed below) with voltage and current regulation.

	Generator—D-R Nos.	Armature
Passenger Cars	1102710	1879002
Taxi	1102729	———
Taxi & City Police	1106752 & 758	———
State Police	1106751 & 757	———

Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate (Pass. Cars)—32-40 amperes reached at car speed of 25 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102710	30	8.0	1750
1102729	40	8.0	1900
1106751 & 757	50	7.5	1410
1106752 & 758	40	7.5	1165

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. (1102710 and 729, 1106751 and 757), 20 ozs. (1106752 and 758).
Field Current—1.75-1.9 amps. at 6 volts (1102710), 1.9-2.05 amps. at 6 volts (1102729), 1.70-1.95 amperes at 6.0 volts (1106751, 52, 57, 58).

Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy. Voltage-current types as follows:

Passenger Cars	1118301 (for 1102710 Gen.)
Taxi	1118300 (for 1102729 Gen.)
Taxi & City Police	1118343 (for 1106752, 8 Gen.)
State Police	1118334 (for 1106751, 7 Gen.)

▷*NEW "1118300 SERIES"* regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjust'mt—*See Electrical Equip. Section.*

Current Regulator

Settings (hot): Set to	Range
1118301 — 36 amps.	32-40 amps.
1118300 — 42 amps.	40-46 amps.
1118334 — 50 amps.	48-52 amps.
1118343 — 40 amps.	37-41 amps.

Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjust'mt—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—Red dot below 50 figure on speedometer. Lighted when upper beams in use.
Direction Signal: Optl. *See Electrical Equipment Section.*

Switches
Lighting—Delco-Remy No. 1995031.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Stop Light—D-R No. 1997901 (mechanical type).

MISC. ELECTRICAL

▷**DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS:** Located on left side under hood with removable door

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999627 or 643 (Low Note, Right), No. 1999628 or 644 (High Note, Left). Vibrator

Type	Current (at 6.0 volts)	Air Gap
1999627 (Low Note)	19-21 amperes	.044-.049"
1999628 (High Note)	17-19 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Own 216". Six Cylinder, Valve-in-Head type.
Bore—3½" (3.4995-3.5015"). **Stroke**—3¾".
Displacement—216.5 cubic inches. **Rated HP**—29.4.
Developed Horsepower—90 at 3300 RPM.
Compression Ratio—6.6-1 Std. Cast Iron Head.
Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS (Installation & Adjustment): *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

CYLINDER HEAD INSTALLATION: *See Chevrolet Special Data.*

PISTONS: Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.
Truck Pistons. Same as Pass. Cars except heavier. Truck pistons marked with small boss on underside of each pin boss. *CAUTION*—Do not interchange pistons (must be same type in one engine).

ENGINE

CONTINUED FROM PRECEDING PAGE

Weight—1.56 lbs. (Pass. Cars). **Length**—3.75" (min.).
Removal—Pistons and rods removed from above.
Clearance—Top: .0155-.0235", Skirt: Selective Fit. See Fitting New Pistons below.

Replacement Pistons: *See Chevrolet Special Data.*
NOTE—To install new pistons, hone cylinder for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".

Fitting New Pistons: Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .002" feeler, and lock on .003" feeler.

PISTON RINGS: Two taper face compression rings (with greatest diameter at bottom), one slotted oil ring per piston, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap①	Side Clearance
Compr.	.1235-.1240"	.005-.015"	.0015-.003"②
Oil Cont.	.1860-.1865"	.005-.015"	.002-.0035"②

①—*End Gap Worn Limit—1/32" max.*
②—Side Clearance Checking—smaller feeler should be free, larger feeler should give a heavy drag.

Installing Compr. Rings—Side marked "TOP" up.

Replacement Rings: Furnished Standard size and .005", .020", .030", .040" Oversize.
Expander Type Rings—Furnished for use in cylinder bores of indicated oversizes as follows: Standard (Bore Std. to .009" Oversize), .020" Oversize (Bore .010" to .029" Oversize—(ring gaps must be filed for bores less than .020" Oversize), .030" Oversize (Bore .030" to .039" OS.), .040" OS. (Bore .040" to .049" OS.).

PISTON PIN: Diameter—.8645-.8650". **Length** 3.135-3.165". Pin locked in rod (piston bronze bushed).
Pin Fit in Piston—Thumb push fit (at room temp.).

Replacement Pins: Std. & .003", .005", .010" oversize. NOTE—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

CONNECTING ROD: Length—6 13/16". **Wgt.** 30.7 ozs.
Crankpin Journal Diameter—2.311-2.312".
Lower Bearing—Spun high-lead, thin-wall babbitt.
Clearance—.0003-.0013" selective fit (see Bearing Adjustment following).
Sideplay—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).

Bearing Adjustment: Solid shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from one side to the other with light tap of 8 oz. hammer), **then replace one .002" shim on one side for clearance** (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test).
Palnut Note—Palnuts used to lock rod bolt nuts. Use new palnut (install with open side toward end of bolt), turn palnut up finger tight against rod bolt nut, then tighten palnut ½ turn additional.

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper height.

Dipper Height Adjustment—*See "Oiling System" in Chevrolet Special Data.*

CRANKSHAFT: Four-bearing type with integral counterweights and vibration dampener.
Vibration Dampener—*See Chevrolet Special Data.*
Journal Diameters—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775".
NOTE—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 journals .002".
Bearing Type—Steel-backed "Precision" type thin-wall babbitt. *Do not require line-boring or reaming.*

►***CAUTION—#1 (front) and #2 (front intermediate) bearings similar in appearance but must not be interchanged. #2 bearing marked by letter "I" in oil groove.***
Clearance—.0007-.0024" selective fit. See Bearing Adjustment (below).

►***NOTE—Precision type bearings can be replaced singly.***

Bearing Adjustment: Solid shims. Remove shims until slight drag secured when shaft turned by hand, **then replace one .002" shim on one side for clearance** (if unequal number of shims used, place extra shim on same side for all bearings).

Replacement Bearings: New "Precision" type bearings furnished for all engines Std. size and .002", .010", .020", .030" Undersize.

►**Bearing Installation**—*Not necessary to remove crankshaft or engine from car. See "Crankshaft & Main Bearings" in Chevrolet Special Data.*
Bearing Cap Installation—Intermediate (#2 & 3) bearing caps marked for identification. Install #2 cap with mark "FRONT" toward front of engine, #3 cap with mark "REAR" toward rear of engine.

►***CAUTION—Rear intermediate (#3) bearing is special flanged type (takes end thrust).***

Crankshaft Oil Seal Servicing: *See Chevrolet Special Data for Front (Timing Gear Cover) and Rear Oil Seals.*

End Thrust: Taken by #3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of #3 bearing. Adjust by replacing bearing. **Endplay**—.003-.009".

FLYWHEEL REPLACEMENT: *See Chevrolet Special Data.*

CAMSHAFT: Four bearing type. Helical gear drive.

►***CAMSHAFT CAUTION: Camshafts on 216" and 235" engines NOT interchangeable and can be identified by Forging No. (same as Part No.) as follows:***
216" Eng.—No. 838733 (forged on shaft).
235" Eng.—No. 3660474 (forged on shaft).
Journal Diameters—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".
NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).
Bearing Type—Steel-backed, babbitt-lined bushings (staked in place). NOTE—New bearings must be line-reamed. **Clearance**—.002-.004".
Bearing Installation—*See Chevrolet Special Data.*

End Thrust: Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).
Endplay Adjustment—*See Chevrolet Special Data.*
Endplay—Free fit to .003" maximum.

Timing Gears: Crankshaft gear steel. Camshaft gear Bakelite and Fabric composition.
Max. Gear Runout—.003" crankshaft, .004" camshaft.

►**235" Truck Engine Timing Gear Set**—Aluminum camshaft gear with bonded steel hub used with crankshaft gear having crowned teeth.
Replacement Timing Gears, and Gear Installation & Alignment—*See Chevrolet Special Data.*
Timing Gear Backlash—.003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3410-.3417"	.6.260-6.290"
Exhaust	1 15/32"	.3400-.3407"	.4.839-4.869"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.003"
Exhaust	30°	.3118"	.002-.004"

NOTE—Intake valves have flat head.

Valve Installation (with rubber Valve Stem Oil Seals): Special synthetic rubber oil seal ring installed in groove in valve stem directly below seat locks (retained by valve cap).
NOTE—Longer valve spring cap is used (interchangeable for intake & exhaust valves—may be identified by 1/16" annular groove on top surface). No cap covers used with this type assembly.
Valve Stem Oil Seal Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Guides: New precision type. Pressed in head.
Valve Guide Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed-coil end toward cylinder head. Check springs with KMO-607 Tester, replace if outside limits of 124-140 lbs. at 1½". Spring free length 2⅛".

	Spring Pressure	Length
Valve Closed	53-63 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Valve Lifters: Barrel type with pushrod seat brazed on upper end. Lifter diameter .989-.990".
Clearance—.001" (selective free fit).

Rocker Arm Assembly: Armasteel type (no bushings). Four types of rocker arms used as follows:
Intake—No. 839463 (Left), 839464 (Right).
Exhaust—No. 839459 (Left), 839460 (Right).
Rocker Shaft Diameter—.7910-.7917" (bore diameter in rocker arm .7925-.7935").
Rocker Arm Assembly & Installation—*See "Valve System" in Chevrolet Special Data.*

VALVE TIMIN

VALVE TAPPET CLEARANCE: .006-.008" Intake, .013-.015" Exhaust *after engine "normalized" by running at fast idle of approximately 600 RPM, for 30 minutes or until oil temperature stabilized.*

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet clearance at correct running figure (above).

LUBRICATI N

Engine Oiling System: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.
CAUTION—**Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be checked each time the oil pan is removed** (requires special gauges).
Crankcase Capacity—5½ qts. (dry), 5 qts. (refill)
Normal Oil Pressure—14 lbs. at 2000 RPM.
Oil Pressure Regulator—Located in oil pump cover Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.
Oil Pump Overhaul: *See Chevrolet Special Data.*
Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.
See "Oiling System" in Chevrolet Special Data.

Crankcase Ventilation: Air intake through valve rocker cover (air cleaner on some models), outlet through pipe on right side of engine.
Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type radiator filler cap used (with relief valve).
Pressure Valve—AC No. 850501 Radiator Filler Cap. Marked "501." Opens at 4 lbs.
Capacity—16 quarts.

Radiator Core Removal: *See Chevrolet Special Data.*

Water Pump: Double-outlet, packless type with sealed ball bearing shaft.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.
Std.—No. 3121301 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.

Temperature Gauge: AC No. 1511842. Not electric.

CLUTCH

Own Make—Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars.
See Clutch Section for complete data.
Facings—Moulded Asbestos, 2 required as follows: 6⅛" I. D., 9⅛" O. D. .132-.138" thick.

Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

Own Make. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). Similar to 1948 3-Spd. Truck.

▷ *HIGH GEAR DISENGAGEMENT: Can be corrected by installing 1953 type parts. See "Chevrolet 3-Speed Tranmission" in Transmission Section.*

Transmission Control: New mechanical type with shift lever mounted on steering column. NOTE—Similar to 1948 ½ & ¾ Ton 3-Speed Truck type.
See Transmission Section for complete data.

▷**Gearshift Control Lever Rattle Correction**—New spring released to correct this condition. *See "Chevrolet Pass. Car Transmission" in Transmission Section.*

Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint collar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove 4 capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts, install support under rear of engine. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.
Convertible Note—Transmission support must be removed and transmission turned for removal.

UNIVERSALS

Own Make. No. 591642. Cross type with surface treated trunnions and bearings. One used (in torque ball behind transmission rear support).

▷*TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Pass. Car & Half-Ton" Rear Axle in Rear Axle Section.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. "Revacycle" differential side gears and pinions used.
See Rear Axle Section for complete data.
Ratio—4.11-1 standard. 3.73-1 optional.

▷**Axle Ratio Identification**—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratio as follows:
4.11-1—GA Detroit, GB Tonawanda.
3.73-1—GC Detroit, GD Tonawanda.
Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.
Axle Shaft Endplay—Free fit to .014" maximum.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco. Chevrolet No. 5383591 (front), 5394330 (rear). Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

FRONT SUSPENSION

Front Suspension: New linked parallelogram type with direct acting shock within each coil spring.
See Front Suspension Section for complete data.

▷**Lower Control Arm Production Change**—Two types used. *See "1949 Chevrolet" in Front Susp. Section.*
Kingpin Inclination—4° ± ½° crosswise.
Caster—Pos. ½° ± ½°. Adjustable.
Camber—Pos. ½° ± ½°. Adjustable.
Toe In—0-⅛". Loosen clamp bolts at each end of **left hand tie-rod** and turn rod, tighten clamp bolts.
CAUTION—Align tie rod ends before tightening clamp bolts (ball studs will bind if not aligned).
Steering Geometry (toe-out on turns)—Outer wheel turned 20°. Inner wheel turned 24° ± 2°.

STEERING GEAR

Saginaw. Chevrolet No. 5660113. New worm-and-roller type with push-pull lash adjustment.
See Steering Gear Section for complete data.

▷**STEERING GEAR CHANGE FOR EASIER STEERING:** Late 1950 steering gear, Part No. 5662113 (with 19.4-1 ratio), can be installed on 1949 cars for easier steering, especially when parking. *This steering gear can be identified by embossed "X" ½" wide on top of steering gear housing.*

BRAKES

Service Brakes: Own Make, hydraulic type. Hand lever applies rear wheel service brakes.
NOTE—Bonded brake lining used.
See Brake Section for complete data.
Wheel Cylinder Bore—Front wheels 1 5/16", Rear 1 1/8". Sizes stamped under adjusting cup lock spring on wheel cylinder housing.
Drums—Cast iron rim, steel web. Diameter: 11".
Lining—Moulded type (bonded). Width 1¾". Thickness .187-.194". Length per wheel 22⅝".
Clearance—Adjusting cover (on wheel cylinder) backed off 4 Notches from slight drag position.
Braking Power—57.7% front wheels, 42.3% rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

Series	Serial Prefix 1950	1951	Model Designation
1500	HJ	JJ	Spec. Styleline & Fleetline
2100①	HK	JK	Deluxe Styleline & Fleetline
1508	HJ	JJ	Sedan Delivery

①—Deluxe models with Powerglide Automatic transmission and "235" engine.

SERIAL NUMBER: Stamped on plate on left front body hinge pillar post.

First Serial Number: 1001 for each year with model prefix listed above. *NOTE*—Number preceding prefix is plant designation (see data below), letter following serial prefix indicates month of manufacture (A January, etc.).

Assembly Plant Designation—1 Flint, 2 Tarrytown, 3 St. Louis, 5 Kansas City, 6 Oakland, 8 Atlanta, 9 Norwood, 14 Balitimore, 20 Los Angeles, 21 Janesville.

ENGINE NUMBER: Stamped on right side of crankcase to rear of distributor.

First Engine Number—1001 for each year with model and plant prefix as follows:

Engine No. Prefix	Flint 1950	Flint 1951	Tonawanda 1950	Tonawanda 1951
"216" Engine	HAA	JAM	HAM	JAM
"216" Eng. Spec.①	HAC	JAC	HAP	JAP
"235" Eng. (Powerglide)	HAD	JAD	HAQ	JAQ

①—With Heavy Duty 10¾" Clutch Disc.

TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.

VACUUM READING: Steady 17-21" at idling speed.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035".

Plugs—AC No. 46-5. 14 mm.

►***CAUTION—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.***

DISTRIBUTOR: Breaker Gap—.018" (limits .018-.022") standard setting, or .022-.024" for new points (to allow for seating).

Cam Angle—34°. Test limits with .022" gap 31-37°. *See "Delco-Remy Cam Angle" in Electrical Equipment Section.*

Automatic & Vacuum Advance—*See Ignition.*

Breaker Arm Spring Tension—17-21 ozs.

Condenser Capacity—.18-.23 microfarad.

IGNITION TIMING: 5° BTDC.

Timing Procedure—*See Ignition Timing.*

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "O". Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETION (Rochester Carburetors):

►*CARBURETOR TROUBLE SHOOTING & RECOMMENDED CORRECTIONS: See "Rochester B (Chevrolet)" Carburetor in Carburetor Section.*

Idle Settings—1-2 turns open.

Idle Speed (conventional trans.)—450-500 RPM.

Idle Speed (Powerglide trans.)—430-450 RPM.

Float Level (Rochester)—1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly. *Above specifications supersede earlier data.*

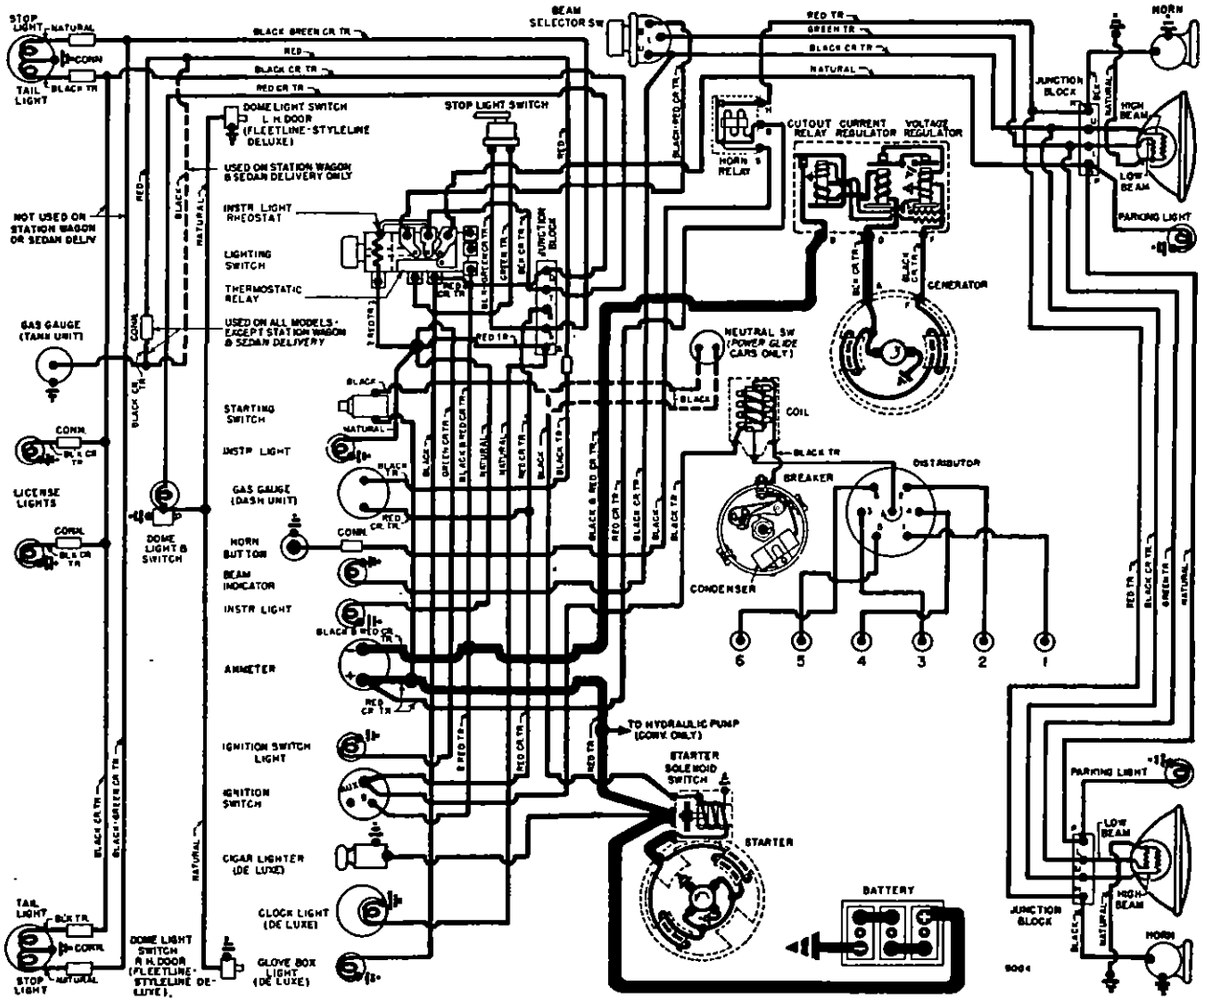
►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump—No seasonal adjustment.

Throttle Return Check (Powerglide Cars): Not used on first carburetors but can be installed.

Adjustment—With engine warm and carburetor correctly adjusted (use tachometer to set idle speed at 430-450 RPM.), insert .090" feeler between carburetor choke lever and fast idle lever on air horn, turn throttle return check adjusting screw in until it just contacts throttle lever arm (*CAUTION*—use 9/32" wrench on shaft to prevent it turning).

Fuel Pump Pressure: 4 lbs. maximum.



MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

VALVE TAPPET CLEARANCE: *CAUTION*—Two types of valve lifters used. CONVENTIONAL TYPE in 216" Engines with Synchro-mesh Transmission. HYDRAULIC TYPE in 235" Engines with Powerglide.

►**CONVENTIONAL TYPE SETTING (216" Eng.):** .006-.008" Intake, .013-.015" Exhaust *after engine "normalised" by running at fast idle for approximately 30 minutes or until oil temperature stabilised.*

►**HYDRAULIC TYPE SETTING (235" Eng.):** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting screws. Initial

CONTINUED ON NEXT PAGE

1950 MODELS

CONTINUED FROM PRECEDING PAGE

Adjustment required when installing cylinder head or when adjusting screws disturbed.

►**Initial Adjustment**—*See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

►**Hydraulic Valve Lifter Noise.** Lifters may be noisy when first starting cars that have been idle for a considerable length of time. This noise will disappear as soon as the oil pressure refills the lifters. This is due to the "leakdown" on lifters holding valves open when the engine was stopped.

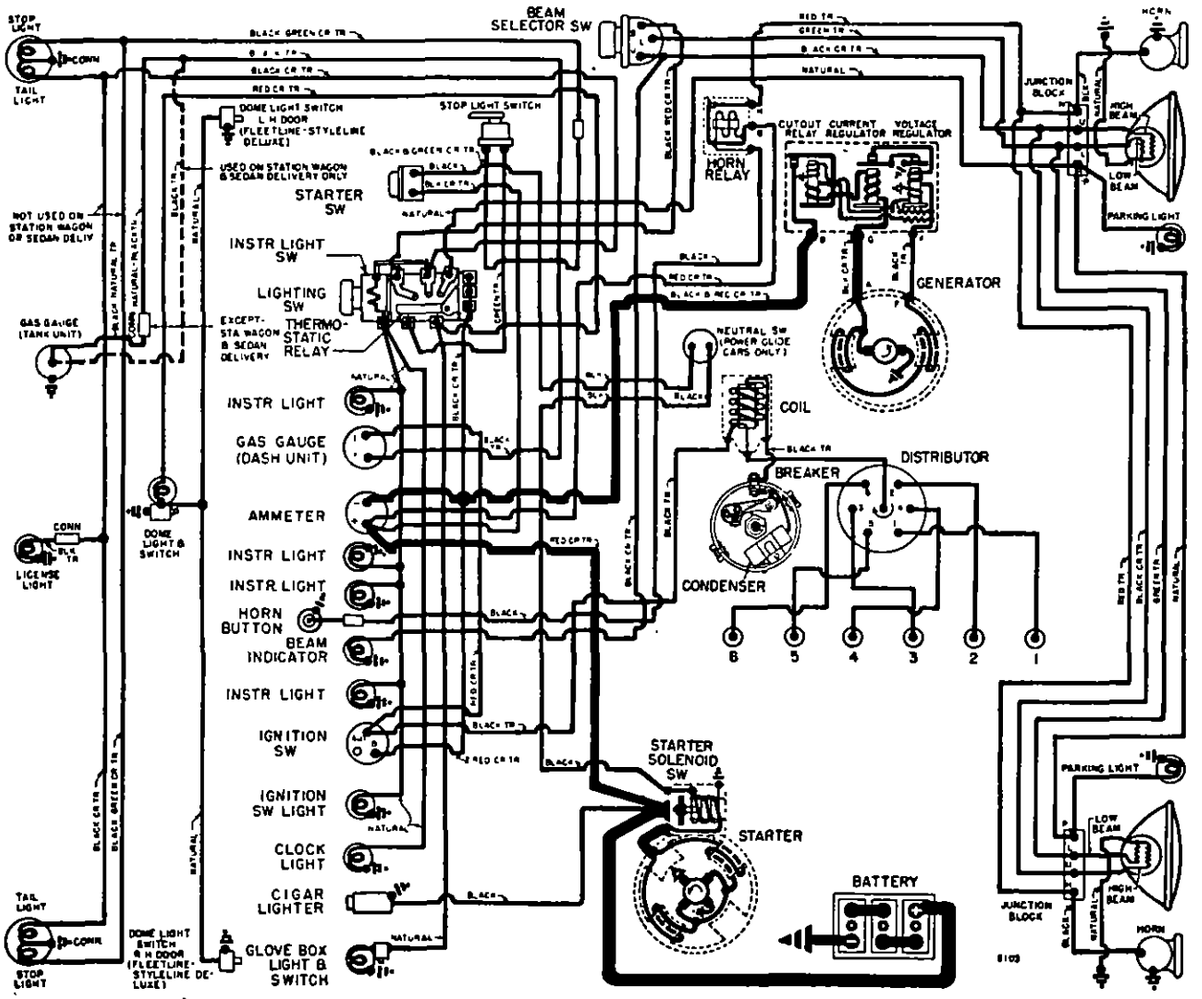
IGNITION

IGNITION SWITCH: Delco-Remy No. (1950) 1116452, (1951) 1116469.

Ignition Lock—Chevrolet No. (1950) 3692503, (1951) 3696338 (less keys uncoded).

Key Series—No. 8000 to 9499. **Groove**—No. 15.

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling. 4.5 stopped.



CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy. Automatic and vacuum advance with Octane Selector.

Delco-Remy No.	1950	1951
"216" Engine	1112353	1112362
"235" Engine	1112358	1112363

Breaker Gap—.018" standard setting or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.

Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

1951 MODELS

Automatic Advance—1112353, 1112362

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
1.5	350	3	700
6.5	600	13	1200
12	1200	24	2400
19	1700	38	3400

Automatic Advance—1112358, 1112363

1	300	2	600
6	700	12	1400
16.5	1850	33	3700

Octane Selector—Adjustment on distributor provides 10° advance or retard from center "0" position. See Ignition Timing for adjustment instructions.

Vacuum Spark Control: Delco-Remy No. 1116043. On Octane Selector, linked to advance arm. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle when spark retarded by return spring.
Plunger Travel—17/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16.5-18.5"

Removal: Distributor mounted on right side of crankcase. To remove, loosen advance arm clamp bolt (does not disturb vacuum connections).

IGNITION TIMING

	Flywheel Degrees	Piston Position
Std. Setting①	5° BTDC	.0091" BTDC.

①—Adjust Octane Selector for grade of fuel being used. See Octane Selector Setting below.

Timing (Neon Light)—Recommended method. Connect neon light to #1 spark plug, direct light in flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).

Octane Selector Setting—Set for the grade of fuel being used to produce slight "ping" on acceleration.

CARBURETOR

Rochester Model B—Single barrel, downdraft type, with concentric bowl and twin floats. Manual choke with throttle kicker and fast idle.

Rochester Carb. No.	216" Eng.	235" Eng.
1950 (First)	7002050	7002051
1950 (Later)	7002050	7003060
1951 (First)	7003152	7003160
1951 (Later)	7003865	7004495

See Carburetor Section for Replacement Carburetor Packages (including Automatic Choke Carburetors).

►*CARBURETOR TROUBLE SHOOTING & RECOMMENDED CORRECTIONS: See "Rochester B (Chevrolet)" Carburetor in Carburetor Section.*

Settings (Idle Settings, Float Level, and Accelerating Pump): *See Tune-Up.*

Throttle Kicker: Operates by cam on choke lever. Opens throttle when choke closed, no adjustment.

Throttle Return Check (Powerglide Cars): Can be installed on 7002051 Carb., used on later carburetors.
Adjustment—*See Carburetion under TUNE-UP.*
See Carburetor Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Std. AC No. 1544734 Oil wetted type. Optional Heavy Duty Oil Bath type. AC No. 1544754. (1544771 with governor).

Filter Element—Std. AC No. 6. Heavy Duty No. 23.

Servicing—Clean and re-oil Standard type cleaner (use SAE 50 engine oil) every 2000 miles. On Heavy Duty type, clean and refill oil reservoir (1 pint SAE 50) every 2000 miles.

Fuel Pump: AC Type AF. No. 1523089. Diaphragm type.
Replacement Pump—AC No. 429.
Optl. Fuel & Vacuum type AC No. 1539126 or 1539448. (Replacement No. AC -9126)
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.
Dash Unit—AC No. (1950) 1517341, (1951) 1517255.
Tank Unit—Pass. Car AC No. 1560280. Sed. Del. & Sta. Wgn. AC No. 1517100.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 9". Width 7". Height 8 11/16".
Location—In engine compartment on right side.

STARTER

Delco-Remy Model 1107075. Armature No. 1867897.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—*24-28 ozs. each.*

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	80①
12 "	Lock	3.4	525

①—Includes current draw of starter switch.

Starting Switch: Delco-Remy Solenoid Switch No. 1118135 (no relay used) mounted on starter and controlled by Push-Button Switch No. 1996045.

►*CAUTION*—Overruning clutch pinion clearance must be adjusted whenever solenoid removed from starter. *See Electrical Equipment Section for data.*

►**Neutral Safety Switch (Powerglide transmission cars)**—Delco-Remy No. 1997845. Connected in starter control circuit. Prevents starter operation unless selector lever is in "N" or "P" position. Located at lower end of steering column.

►**Neutral Safety Switch Adjustment**—*See "Powerglide Automatic Transmission" in Transmission Section.*

GENERATOR

Delco-Remy. Two-brush types (as listed below) with voltage and current regulation.

Model	Generator (D-R No.)	Armature
Pass. Cars (1950)	1102710	1879002
Pass. Cars (1951)	1102749	1879002
Taxi (1950-51)	1102629	1880550
City Police & Taxi (1950-51)	1106758	1909996
State Police (1950 & 1951)	1106757	1910073

Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate (Pass. Cars)—32-40 amperes reached at car speed of 25 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102710	30	8.0	1750
1102729	40	8.0	1900
1106751 & 757	50	7.5	1410
1106752 & 758	40	7.5	1165

①—Not maximum output. See current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. (1102710 and 729, 1106751 and 757), 20 ozs. (1106752 and 758).
Field Current—1.75-1.9 amps. at 6 volts (1102710), 1.9-2.05 amps. at 6 volts (1102729), 1.70-1.95 amperes at 6.0 volts (1106751, 52, 57, 58).

Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy. Voltage-current types as follows:

Model	Delco-Remy No.	For Generator No.
Pass. Cars (1950)	1118301	1102710
Pass. Cars (1951)	1118301	1102749
Taxi	1118300	1102629
Taxi & City Police	1118343	1106758
State Police	1118334	1106757

►*"1118300 SERIES"* have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay
Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator
Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjust'mt—*See Electrical Equip. Section.*

Current Regulator Settings (hot):	Set to	Range
1118301	36 amps.	32-40 amps.
1118300	42 amps.	40-46 amps.
1118334	50 amps.	48-52 amps.
1118343	40 amps.	37-41 amps.

Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjust'mt—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Headlamp Adjustment—Aim upper beam straight ahead (hot spot 3" below lamp center height).
Beam Indicator—Red dot below 50 figure on speedometer. Lighted when upper beams in use.

Direction Signal: Optl. *See Electrical Equipment Section.*
Direction Signal Indicator—Pilot light on switch case. Lighted when Right or Left Dir. Signal "on".

Switches
Lighting—Delco-Remy No. (1950) 1995031, (1951) 1995048.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Glove Box—Delco-Remy No. 3693641.
Back-Up Light—Delco-Remy No. 1997911.
Stop Light—Delco-Remy No. (1950) 1997901, (1951) 1997913 (mechanical type).

MISC. ELECTRICAL

►**DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS:** Located on left side under hood with removable door screwed to dash.

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999643 (Low Note, Right), No. 1999644 (High Note, Left). Vibrator types operated by relay.
NOTE—1999643 and 644 are welded.

Type	Current (at 6.0 volts)	Air Gap
1999643 (Low Note)	19-21 amperes	.044-.049"
1999644 (High Note)	17-19 amperes	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Own make. Two used.
"216" Engine—Used with Synchro-mesh transmission cars.
New "235" Engine—Used with Powerglide Automatic transmission cars. Has larger bore, longer stroke, larger valves, hydraulic valve lifters, and improved manifolding.

Eng.	Bore	Stroke	Displacement
216	3 1/2"	3 3/4"	216.5 cu. in.
235	3 9/16"	3 15/16"	235.5 cu. in.

	Comp. Ratio	Rated H.P.	Developed H.P.
216	6.6-1	29.4	92 at 3400 RPM
235	6.7-1	30.4	105 at 3600 RPM

Compression & Vacuum Readings—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS (Installation & Adjustment): *See Chevrolet Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS: Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.

Truck Pistons. Same as Pass. Cars except heavier. Truck pistons marked with small boss on underside of each pin boss. *CAUTION*—Do not interchange pistons (must be same type in one engine).
Weight—1.56 lbs. (Pass. Cars). **Length**—3.75" (min.).
Removal—Pistons and rods removed from above.
Clearance—Top: .0155-.0235". Skirt: Selective Fit. See Fitting New Pistons below.

Replacement Pistons: *See Chevrolet Special Data.*
NOTE—To install new pistons, hone cylinder for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize ,finish by honing

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".

Fitting New Pistons: Use feeler gauge between piston and cylinder wall at right angles to pin bosses. Piston should pass through bore with light pressure on .002" feeler, and lock on .003" feeler.

PISTON RINGS: Three used per piston.

216 Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.③	1/8"	.005-.015"	.0015-.003"
#2 Comp.②	1/8"	.005-.015"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

235 Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.③	3/32"	.005-.015"	.0015-.003"
#2 Comp.②	1/8"	.007-.020"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

①—End Gap Worn Limit 1/32" maximum.
②—Taper Face type. ③—Deep section twist type.

Installing Compr. Rings—Side marked "TOP" up.

Replacement Rings: Furnished Standard size and .005", .020", .030", .040" Oversize.

Expander Type Rings—Furnished for use in cylinder bores of indicated oversizes as follows: Standard (Bore Std. to .009" Oversize), .020" Oversize (Bore .010" to .029" Oversize—(ring gaps must be filed for bores less than .020" Oversize), .030" Oversize (Bore .030" to .039" OS), .040" OS. (Bore .040" to .049" OS.).

PISTON PIN: Diameter—.8645-.8650". **Length** 3.135-3.165". Pin locked in rod (piston bronze bushed).

Pin Fit in Piston—Thumb push fit (at room temp.).

Replacement Pins: Std. & .003", .005", .010" oversize. NOTE—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

CONNECTING ROD: Length—6 13/16". **Weight** 31.2 ounces.

Crankpin Journal Diameter—2.311-2.312".

Lower Bearing—Spun high-lead, thin-wall babbitt. **Clearance**—.0003-.0013" selective fit (see Bearing Adjustment following).

Sideplay—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).

Bearing Adjustment: Laminated shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from one side to the other with light tap of 8 oz. hammer), **then replace one .002" shim on one side for clearance** (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test).

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rods with mouth toward camshaft side of engine. Check dipper height.

Dipper Height Adjustment—*See "Oiling System" in Chevrolet Special Data.*

CRANKSHAFT: Four-bearing type with integral counterweights and vibration dampener.

Vibration Dampener—*See Chevrolet Special Data.*

Journal Diameters—#1, 2.6835-2.6845"; #2, 2.7145-2.7155"; #3, 2.7455-2.7465"; #4, 2.7765-2.7775". NOTE—Journal taper or out-of-round limits .001". Run-out limits for #2 and #3 journals .002".

Bearing Type—Steel-backed "Precision" type thin-wall babbitt. *Do not require line-boring or reaming.*

▷***CAUTION—#1 (front) and #2 (front intermediate) bearings similar in appearance but must not be interchanged. #2 bearing marked by letter "I" in oil groove.***

Clearance—.0007-.0024" selective fit. See Bearing Adjustment (below).

▷***NOTE—Precision type bearings can be replaced singly.***

Bearing Adjustment: Solid shims. Remove shims until slight drag secured when shaft turned by hand, **then replace one .002" shim on one side for clearance** (if unequal number of shims used, place extra shim on same side for all bearings).

Replacement Bearings: New "Precision" type bearings furnished for all engines Std. size and .002", .010", .020", .030" Undersize.

▷**Bearing Installation**—*Not necessary to remove crankshaft or engine from car. See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Bearing Cap Installation—Intermediate (#2 & 3) bearing caps marked for identification. Install #2 cap with mark "FRONT" toward front of engine, #3 cap with mark "REAR" toward rear of engine.

▷***CAUTION—Rear intermediate (#3) bearing is special flanged type (takes end thrust).***

Crankshaft Oil Seal Servicing: *See Chevrolet Special Data for Front (Timing Gear Cover) and Rear Oil Seals.*

End Thrust: Taken by #3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of #3 bearing. Adjust by replacing bearing. **Endplay**—.003-.009".

FLYWHEEL REPLACEMENT: *See Chevrolet Special Data.*

CAMSHAFT: Four bearing type. Helical gear drive.

▷***CAMSHAFT CAUTION: Different camshaft used on each type engine. NOT INTERCHANGEABLE. Identify camshafts as follows:***

216" Engine Camshaft—Forging No. 838733 (same as Part No.) located between #11 and #12 cams.

235" Powerglide Engine—Forging No. 3660474 (not same as Part No. 3835771) located between #10 and #11 cams. Shaft also has "X" stamped on front end and painted green. *CAUTION*—Forming number is same as 235" Truck engine.

235" Truck Engine—Forging No. 3660474 (same as Part No.) located between #11 and #12 cams. Shaft has NO other identification (see 235" Powerglide camshaft identification above).

Journal Diameters—#1, 2.0282-2.0292"; #2, 1.9657-1.9667"; #3, 1.9032-1.9042"; #4, 1.8407-1.8417".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

Bearing Type—Steel-backed, babbitt-lined bushings (staked in place). NOTE—New bearings must be line-reamed. **Clearance**—.002-.004".

Camshaft Bearing Replacement: *See Chevrolet Special Data.*

End Thrust: Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

Endplay Adjustment—*See "Timing Gear Installation" in Chevrolet Special Data.*

Endplay—Free fit to .003" maximum.

Timing Gears: Crankshaft gear steel. Camshaft gear Bakelite and Fabric composition.

Timing Gear Runout—.003" (crankshaft), .004" (camshaft) maximum.

Timing Gear Backlash—.003-.004".

Replacement Timing Gears, and Gear Installation & Alignment—*See Chevrolet Special Data.*

Camshaft Setting: Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

VALVES:

"216" Engine

	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3410-.3417"	6.26-6.29"
Exhaust	1 1/2"	.3400-.3407"	4.917-4.947"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.0027"
Exhaust	45°	.3118"	.002-.0037"

235 Engine

	Head Diam.	Stem Diam.	Length
Intake	1 15/16"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3400-.3407"	4.904-4.934"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3275"	.001-.0027"
Exhaust	45°	.3275"	.002-.0037"

Valve Stem Oil Seal Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down. Check with spring tester and replace if outside limits shown below.

Valve Springs—"216" Engine

	Spring Pressure	Length
Valve closed	53-63 lbs.	1.821"
Valve open	124-140 lbs.	1.505"

216 Engine—Valve spring free length 2 1/8".

▷***CAUTION—Aluminum colored valve springs used on 235 (Powerglide) engine must not be used on other models.***

Valve Springs—"235" Engine

	Spring Pressure	Length
Valve closed	62-68 lbs.	1.821"
Valve open	155-165 lbs.	1.505"

235 Engine—Valve spring free length 2 5/32".

Valve Lifters (216" Engine): Plain barrel type with pushrod seat brazed on upper end.

Diameter—.989-.990".

Clearance—.001" (selective free fit).

Hydraulic Valve Lifters (235" Engine): Used with Powerglide Transmission.

See "Valve System" in Chevrolet Special Data.

▷**Initial Adjustment (required only when installing cylinder head or when adjusting screw setting has been disturbed):** *See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

▷***REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and push rods use a rack to keep them in proper sequence. They should be installed in their original location when re-assembling.***

Rocker Arm Assembly & Installation: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION*—**Two types of valve lifters used. CONVENTIONAL TYPE in 216" Engines with Synchro-mesh Transmission. HYDRAULIC TYPE in 235" Engines with Powerglide Transmission.**

►**CONVENTIONAL TYPE SETTING (216" Eng.):** .006-.008" Intake, .013-.015" Exhaust *after engine "normalized" by running at fast idle for approximately 30 minutes or until oil temperature stabilized.*

►**HYDRAULIC TYPE SETTING (235" Eng.):** *NO CLEARANCE ADJUSTMENT REQUIRED* although rocker arms have regular adjusting screws. **Initial Adjustment** required when installing cylinder head or when adjusting screws disturbed.

►**Initial Adjustment**—*See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

Timing Gear Settings—*See Camshaft Setting.*

VALVE TIMING: "216" Engine

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

"235" Engine

"Theoretical" Valve Timing with Hydraulic Lifters.

Intake Valves—Open 16° BTDC. Close 48° ALDC.

Exhaust Valves—Open 46°30' BLDC. Close 17°30' ATDC.

Valve Timing Check—"216" Engine. Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right face of flywheel housing, mount dial indicator on rocker shaft with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappet to correct running clearance.

"235" Engine—Use same procedure as for the "216" engine except that it is necessary to replace the hydraulic lifter operating #1 exhaust valve with a conventional type lifter while making the check.

LUBRICATION

Engine Oiling System: "216" Engine. Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by the Oil Distributor Valve on left side of engine.

"235" Engine—Lubrication system similar to "216" engine except that the rocker arms are fed from an extension of the passage to the rear camshaft bearing. This same extension also feeds the oil channel supplying the hydraulic lifters.

CAUTION—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be **checked each time the oil pan is removed** (requires special gauges).

Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).

Normal Oil Pressure—14 lbs. at 2000 RPM.

Oil Pressure Regulator—Located in oil pump cover Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.

Oil Pump Overhaul: *See Chevrolet Special Data.*

Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.

See "Oiling System" in Chevrolet Special Data.

Crankcase Ventilation: Air intake through valve rocker cover (air cleaner on some models), outlet through pipe on right side of engine.

Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type radiator filler cap used (with relief valve).

Pressure Valve—AC No. 850501 Radiator Filler Cap. Marked "501." Opens at 4 lbs.

Capacity—15 quarts.

Radiator Core Removal: *See Chevrolet Special Data.*

Water Pump: Double-outlet, packless type with sealed ball bearing shaft.

See Water Pump Section for complete data.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.

Std.—No. 3123992 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.

Temperature Gauge: AC No. (1950) 1511842, (1951) 1512241.

CLUTCH

Own Make—Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars.

See Clutch Section for complete data.

Facings—Moulded Asbestos, 2 required as follows: 6⅛" I.D., 9⅛" O.D. .132-.138" thick.

Adjustment: Pedal free travel ¾-1". To adjust loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

SYNCHRO-MESH

Synchro-mesh Transmission—Three-speed, synchro-mesh (Second & High), sliding gear (Low & Reverse).

► *HIGH GEAR DISENGAGEMENT: Can be corrected by installing 1953 type parts. See "Chevrolet 3-Speed Transmission" in Transmission Section.*

Transmission Control & Linkage: *See Transmission Section for complete data.*

Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint collar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove 4 capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts, install support under rear of engine. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

POWERGLIDE TRANSMISSI N

Powerglide Automatic Transmission (used with "235" Engine only). Torque Converter type, hydraulically operated planetary unit with manual control.

►*POWERGLIDE PRODUCTION CHANGES, CORRECTIONS, & REPLACEMENT PARTS CAUTION:* *See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when the oil gets down to the "Add One Quart" mark on the dipstick. Change oil, remove and clean oil suction screen every 25000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing a "AQ-ATF" marking on container.

Capacity—9 qts. (10 qts. dry).

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in the "D" range when taking dipstick readings. Dipstick is located under hood right side just opposite starter.

Draining and Refilling—*See "Chevrolet Powerglide Automatic Transmission" in Transmission Section.*

Removal—*See "Transmission Removal" under Chevrolet Powerglide Automatic Transmission in Transmission Section.*

Transmission Control & Linkage—*See Transmission Section for complete data.*

►**Neutral Safety Switch, Powerglide Automatic transmission cars:** Connected in starter control circuit to prevent starter operating unless shift lever is in "N" Neutral or "P" position. Located at lower end of steering column.

►**Neutral Safety Switch Adjustment**—*See "Powerglide Automatic Transmission" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

UNIVERSALS

Own Make. Cross type with surface treated trunnions and bearings. One used in torque ball behind transmission rear support).

►*TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Pass. Car & Half-Ton" Rear Axle in Rear Axle Section.*

►**UNIVERSAL JOINT BALL ADJUSTMENT (POWERGLIDE MODELS):** Improper adjustment will cause leakage. *See "Torque Tube & Ball" in Chevrolet Special Data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. "Revacycle" differential side gears and pinions used.
See Rear Axle Section for complete data.

Ratio—(Synchro-mesh Cars) 4.11-1.
(Powerglide Cars) 3.55-1.

Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratios as follows:

	Detroit		Tonawanda	
Ratio	1950	1951	1950	1951
4.11-1	HA	JA	HB	JB
3.55-1	HJ	JJ	HK	JK

Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axle Shaft Endplay—Free fit to .014" maximum.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco. Chevrolet No. 5394583 (front), 5394584 (rear). Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

FRONT SUSPENSION

Front Suspension: New linked parallelogram type with direct acting shock within each coil spring.
See Front Suspension Section for complete data.

Kingpin Inclination—4° ± ½° crosswise.

Caster—Pos. ½° ± ½°. Adjustable.

Camber—Pos. ½° ± ½°. Adjustable.

Toe In—0-⅛". Loosen clamp bolts at each end of left hand tie-rod and turn rod, tighten clamp bolts.
CAUTION—Align tie rod ends before tightening clamp bolts (ball studs will bind if not aligned).

Steering Geometry (toe-out on turns)—Outer wheel turned 20°. Inner wheel turned 24° ± 2°.

STEERING GEAR

Saginaw. Worm and roller type with push-pull lash adjustment.
See Steering Gear Section for complete data.

►**STEERING GEAR PRODUCTION CHANGE:** Steering Gear assembly, Part No. 5662075 supersedes previous assemblies Part No. 5661893 & 5662113, on 1950 & 1951 cars. This later assembly provides easier steering (ratio 19.4-1). *Can be identified by embossed "X" ½" wide on top of steering gear housing. Parts not interchangeable with earlier assemblies.*

►**STEERING GEAR CHANGE FOR EASIER STEERING ON EARLY 1950 CARS:** Late 1950 steering gear (above) can be installed on first cars with No. 5661893 gear (with 17.4-1 ratio) for easier steering.

BRAKES

1950 CARS

Service Brakes: Own Make, hydraulic type. Hand lever applies rear wheel service brakes.
NOTE—Bonded brake lining used.
See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1 5/16", Rear 1 1/8". Sizes stamped under adjusting cup lock spring on wheel cylinder housing.

Drums—Cast iron rim, steel web. Diameter: 11".

Lining—Moulded type (bonded). Width 1¾". Thickness .187-.194". Length per wheel 20⅝".

Clearance—Adjusting cover (on wheel cylinder) backed off 4 Notches from slight drag position.

Braking Power—57.7% front wheels, 42.3% rear.

Hand Brake: See Service Brakes above.

1951 CARS

Service Brakes: Chevrolet-Bendix Duo-Servo single anchor hydraulic type. Hand lever applies rear wheel secondary shoe.
NOTE—Bonded brake lining used.
See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1⅛", Rear 1". Sizes stamped under adjusting cup lock spring on wheel cylinder housing.

Drums—Cast iron, steel web. Diameter: 11".

Lining—Molded type, (bonded). Width 2" (Front) 1¾" (Rear). Thickness .202-.222". Length per wheel 21".

Clearance—Single adjusting screw located at bottom of backing plate. A snap plate covers hole in backing plate. Back off adjusting screw 7 notches from slight drag position. If wheels not free of drag, Major Adjustment is required. *NOTE—This setting supersedes original specifications.*

Braking Power—55.9% front wheels, 44.1% Rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.

Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATI N

SERIAL NUMBER: Stamped on plate on cab left front hinge pillar (Flat Face Cowl models have plate on left hand cowl inner panel).

First Serial Number—1001 for each year with series prefix as indicated in model identification table above. *NOTE*—Number preceding serial prefix is plant designation (see data below), letter following serial prefix indicates month of manufacture (A—January, etc.).

Assembly Plant Designation—1 Flint, 2 Tarrytown, 3 St. Louis, 5 Kansas City, 6 Oakland, 8 Atlanta, 9 Norwood, 14 Balitimore, 20 Los Angeles, 21 Janesville.

ENGINE NUMBER: Stamped on right side of crankcase to rear of distributor.

First Engine Number—1001 for each year with model and plant prefix as follows:

Truck Series	216" ENGINE Flint 1950	Flint 1951	Tonawanda 1950	Tonawanda 1951
3100 Std.	HBA	JBA	HBM	JBM

5000 C-O-E③	HDA	JDA	HDM	JDM
6000 Std.	HEA	JEA	HEM	JEM

①—With Heavy Duty 10¾" Clutch Disc.
②—With "Hydrovac" Brake Power Unit.
③—With Updraft Carburetor.

TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.

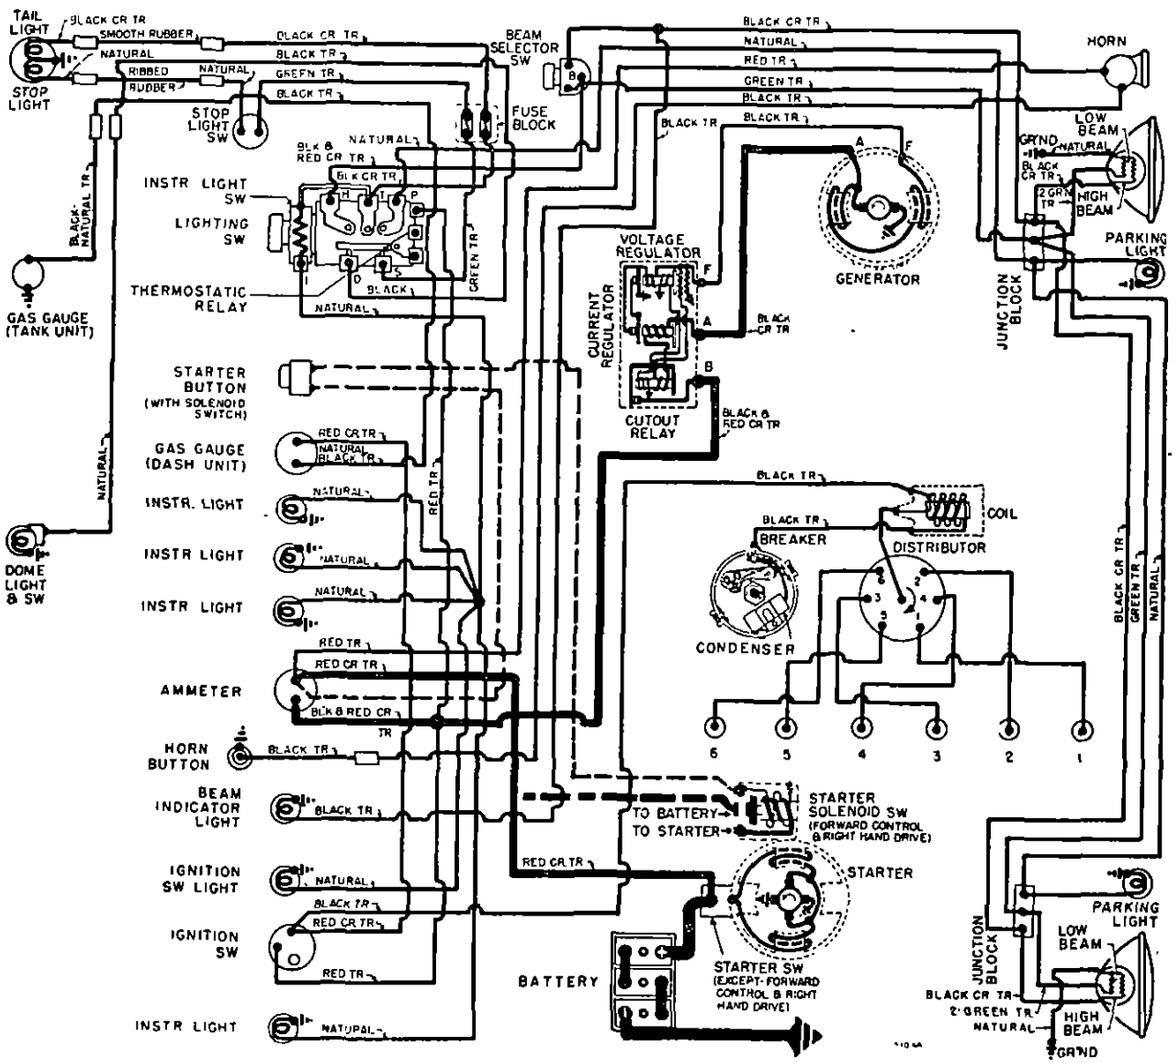
VACUUM READING: Steady 17-21" at idling speed.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035".
Plugs—AC No. 46-5. 14 mm.

►*CAUTION—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.*

DISTRIBUTOR: Breaker Gap—*.018" (limits .018-.022")* standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. *Test limits with .022" gap 31-37°.*
See Delco-Remy Cam Angle in Elec. Equip. Section.
Breaker Arm Spring Tension—17-21 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.18-.23 microfarad.



IGNITION TIMING: 5° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at "O". Then adjust Octane Selector as follows:
Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETION: Rochester—Downdraft type. (Conventional Trucks).

►*IMPORTANT CARBURETOR CORRECTIONS: See Carburetor Section for complete data.*
Idle Setting—1½ turns open (turn out for richer mixture).
Idle Speed—450-500 RPM. with warm engine.
Float Level (Rochester)—1 5/16" from bottom of each float to cover gasket **(do not remove gasket)** with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Accelerating Pump—No seasonal adjustment.
Fuel Pump Pressure: 4 lbs. maximum.
CARBURETION: Carter—Updraft type. (Cab-Over-Engine & Forward Control Trucks).
Idle Setting—½-1½ turns open. Turn out for richer mixture.
Idle Speed—450-500 RPM. with engine warm.
Float Level—Top of float 0-1/32" below edge of bowl with needle valve seated.
Accelerating Pump—Inner hole Summer, Outer hole Winter.
Fuel Pump Pressure: 4 lbs. maximum.
MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Spring should be wound up just enough to slip end over manifold pin (approximately ½ turn).
▷*CAUTION*—Excessive spring tension may cause valve to stick (causes detonation and poor performance).
▷**VALVE TAPPET CLEARANCE:** ***CAUTION—Engine must be "normalized" by running at fast idle of approximately 600 RPM. for 30 minutes or until oil temperature stabilized before adjusting.***
Normal Operation—.006-.008" Intake. .013-.015" Exhaust, with engine "normalized."
Heavy Duty (Full Throttle) Operation—.010" Intake. .020" Exhaust, with engine "normalized."

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116464.
Key Series—No. 8000 to 9499. **Groove**—No. 15.
COIL: Delco-Remy No. 1115380. Mounted directly above distributor.
Ignition Current—2.5 amperes idling, 4.5 stopped.
CONDENSER: Delco-Remy Part No. 1869704.
Capacity—.18-.23 microfarad.
DISTRIBUTOR: Delco-Remy. Automatic and vacuum advance with Octane Selector.

Delco-Remy No.	1950	1951
"216" Engine	1112353	1112362
"235" Engine	1112358	1112363

Breaker Gap—.018" standard setting, or .022-.024" for new points (to allow for seating).
Cam Angle—34°. Test limits with .022" gap 31-37°.
See "Delco-Remy Cam Angle" in Electrical Equipment Section.
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1112353 & 1112362

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	3	700
6.5	600	13	1200
12.0	1200	24	2400
19.0	1700	38	3400

Automatic Advance—1112358 & 1112363

Start	300	2	600
6	700	12	1400
16.5	1850	33	3700

Octane Selector—Adjustment on distributor provides 10° advance or retard from center "0" Position.
Vacuum Spark Control: Delco-Remy No. 1116043.
Plunger Travel—17/64".

Vacuum Advance		
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	16.5-18.5"

IGNITION TIMING

	Flywheel Degrees	Piston Position
Std. Setting①	5° BTDC	.0091" BTDC.

①—Adjust Octane Selector for grade of fuel being used. See Octane Selector Setting below.

Timing (Neon Light)—Recommended method. Connect neon light to #1 spark plug, direct light in flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at "O". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball insert in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).

CARBURETOR

ROCHESTER DOWNDRAFT

Rochester G.M. Model B (as listed below). Single barrel downdraft type with manual choke control.
▷***CAUTION—DIFFERENT carburetor used on each engine.***

	216" Eng.	235" Eng.
1950	7002050	7002051
1951 (First)	7003152	7002051
1951 (Later)	7003863	7003864

▷***ROCHESTER CARBURETOR TROUBLE SHOOTING & RECOMMENDED CORRECTIONS: See "Rochester Model B (Chevrolet)" Carburetor in Carburetor Section. See Carburetor Section for complete data.***
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Throttle Kicker: Operates by cam on choke lever—opens throttle when choke closed—no adjustment.

CARTER UPDRAFT

Carter (BB) Model 745S (First), 871S (Later). 1¼" Single Barrel, Updraft type with manual choke control.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Jets—*See Carter (BB) Updraft Jet Table in Carburetor Section for data.*

CARB. EQUIPMENT

Air Cleaner: AC types as follows:
864133—Forward Control Models.
1529264 oil-wetted—Std. All (exc. 2 Ton & C-O-E).
1529192 oil-bath—Optl. All (exc. 2 Ton & C-O-E).
1542078 oil-bath—Std. on 2 Ton Conventional Truck.
1543889 oil-bath—Std. on Cab-Over-Engine.
Filter Element—AC #2 (1529264), #9 (1529192), #7-S (for 1542078), None (for 1543889).
Fuel Pump: AC Type AF, No. 1523089. Diaphragm type.
Optl. AC No. 1539126 or 1539448 combination fuel-and-vacuum pumps.
Replacement Pump—AC No. 429 (for 1523089), 9126 (for Optl. 1539126 or 1539448 combination pumps).
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for complete data.
Gasoline Gauge: AC Electric type. AC Nos.:
Dash Unit—No. 1517169 (all models).
Tank Unit—AC types as follows:

Model	AC Tank Unit No.
Forward Control	1515466
School Bus Chassis	1516334
1 Ton (with Cab)	1515566
All Others (with Cab)	①1517500
½ Ton Chassis	1515466
¾ Ton Chassis	1516999
1 Ton Chassis	②1516983
1½ & 2 Ton Chassis (exc. Sch. Bus)	③1515467

①—1950 No. 1517140.
②—Inside Tank. ③—Outside Tank.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA-4. 6 Volt, 15 Plate, 100 Ampere Hour Capacity (20 hour rate).
Starting Capacity—120 amperes for 20 minutes.
Zero Capacity—300 amperes for 3.6 minutes.
Five Second Voltage—4.2 volts.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 9". Width 7". Height 8 11/16".
Location—Under front floor on right side (Forward Control Trucks on frame on right side of engine).
School Bus—Delco Type 19Q-4. 6 Volt, 19 Plate, 125 Ampere Hour Capacity (20 hour rate).
Starting Capacity—145 amperes for 20 minutes.
Zero Capacity—300 amperes for 5.0 minutes.
Five Second Voltage—4.5 volts.
Grounded Terminal—Negative (—) terminal.
Dimensions—Length 10⅜". W. 7". Height 8 11/16".
Location—Under hood.

STARTER

Delco-Remy 1107055 (1107075 on Forward Control Trucks). Armature No. 1867897.
Drive—Overrunning clutch with manual pinion shift (1107055), solenoid pinion shift (1107075).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs. each.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5000	5.7	65①
12 "	Lock	3.4	525

①—80 amperes on 1107075 (includes current draw of solenoid starter switch).
Starting Switch (1107055): Delco-Remy No. 820052. On starter. Operated by pedal.
(1107075 Starter). Delco-Remy Solenoid Switch No. 1118135 (no relay used) mounted on starter and controlled by pushbutton switch No. 1996045.
See Electrical Equipment Section for complete data.

GENERATOR

Delco-Remy:	Generator No.	Armature No.
Std. Equip. (1950)	1102710	1879002
Std. Equip. (1951)	1102749	1879002
	1102761	1879002
Door-to-Door	1102726	1879002
Spec. Equip. (55 amp.)	1106757	1910073
Spec. Equip. (50 amp.)	1106758	1909996

2 Brush types with voltage and current regulation.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate (Reg. Gen.)—36 amperes, 7.4 volts, 2400 RPM.

Performance Data—Cold

	Amperes①	Volts	R.P.M.
1102710, 49, 61	30	8.0	1750
1102726	26	8.0	1450
1106757	50	7.5	1410
1106758	40	7.5	1165

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—25 ozs. each.
Field Current—1.75-1.9 amps., (1.70-1.95 amps. on 1106757 & 1106758) at 6.0 volts.

Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy Regulator No.	Used With Generator No.
1118301	1102710, 1102749, 1102761
1118361	1102726
1118334	1116757
1118343	1116758

►***"118300 SERIES"*** regulators have screw adjustment for settings and single regulator springs.
See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct High Charging Rate or High Voltage.

Cutout Relay

Cuts In—5.9-6.8 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts hot (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Electrical Equipment Section.***

Current Regulator

Settings (hot)	Set to	Range
1118301	36	32-40
1118361	25	23-27
1118334	50	48-52
1118343	40	37-41

Air Gap—.075" with armature pressed down to point where contacts are just touching.
Checking & Adjustment—***See Electrical Equipment Section.***

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 4½" below lamp center height).
Beam Indicator—Red dot on lower edge of speedometer. Lighted when upper beams in use.

Switches

Lighting—Delco-Remy No. (1950) 1995031, (1951) 1995048.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Stop Light—D-R No. 1997901 (mechanical type).
NOTE—Hydraulic switch used on some models.

MISC. ELECTRICAL

FUSES: Lighting—Fuse box mounted on engine side of dash (under instrument panel on Forward Control Models) contains two fuses and spare fuse mounted on inside of cover. Fuses protect circuits as follows:
Tail Light—20 ampere. In fuse box.
Stop Light—20 ampere. In fuse box.
NOTE—These fuses used together with circuit breaker.

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999801. Vibrator type.
Horn Current—7-9 amperes at 6.0 volts.
Air Gap—.027-.033".

ENGINE

►**ENGINE SPECIFICATIONS:** ***TWO DIFFERENT ENGINES:***

216" Thrift-Master—Std. on ½, ¾, 1, 1½ Ton, and 137" & 161" WB. School Bus.
235" Load-Master—Std. on 2 Ton, C-O-E Trucks, and 199" School Bus. Optl. on 1½ Ton and 161" WB. School Bus.

Engine	Bore	Stroke	Displacement
216"	3½" ①	3¾"	216.5 Cu. In.
235"	3 9/16" ②	3 15/16"	235.5 Cu. In.

①—3.4995-3.5015". ②—3.520-3.5640".

Engine	Comp. Ratio	Rated HP.	Developed HP.
216"	6.6-1	29.4	92 at 3400 RPM
235"	6.7-1	30.4	105 at 3600 RPM
235" (1950 COE)	6.7-1	30.4	102 at 3600 RPM
235" (1951 COE)	6.7-1	30.4	100 at 3500 RPM

Compression & Vacuum Reading—***See Tune-Up.***

►**Non-Interchangeable Parts:** Parts interchangeable between the 216" and 235" engines except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Motor), Push Rods (approx. ¾" longer on 235" Engine and identified by shoulder just below cup at top end), Valve Lifters, Camshaft, Piston and Pin Assembly, Piston Rings, Crankshaft, Oil Pan Pipe Assembly, Oil Distributor to Valve Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support Assembly.

►**VALVE ROTATORS AVAILABLE FOR TRUCK ENGINES:** To promote longer valve life. ***See "Valve System" in Chevrolet Special Data.***

ENGINE REMOVAL: ***See Chevrolet Special Data.***

ENGINE MOUNTINGS (Installation & Adjustment): ***See Chevrolet Special Data.***

CYLINDER HEAD & TIGHTENING TORQUES: ***See Chevrolet Special Data.***

OTHER ENGINE DATA: ***See 1950-51 Passenger car pages for all engine data (Pistons, Connecting Rods, Crankshaft, Bearings, Valves, etc).***

VALVE TIMING

►**VALVE TAPPET CLEARANCE:** ***CAUTION—Engine temperature must be "normalized" before adjusting. See "Tappet Clearance Adjustment" in Chevrolet Special Data.***
Normal Operation—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."
Heavy Duty (Full Throttle) Operation—.010" Intake, .020" Exhaust, with engine "normalized."
►***CAUTION—If Valve Rotators are used set Exhaust Valve Clearance at .018-.020".***

VALVE TIMING: Camshaft Setting. Timing gears punchmarked. Punchmarked tooth of camshaft gear must be meshed with punchmarked space on crankshaft gear.

Valve Timing

Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set indicator dial at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004".

LUBRICATION

Engine Oiling System: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by Oil Distributor Valve on left side of engine.
CAUTION—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs and nozzles which must be **checked each time the oil pan is removed** (requires special gauges).
Checking Oiling System—***See "Oiling System" in Chevrolet Special Data.***

Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).
Normal Oil Pressure—14 lbs. at 2000 RPM.
Oil Pressure Regulator—Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: ***See "Oiling System" in Chevrolet Special Data.***

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.
Oil Pump Overhaul: ***See Chevrolet Special Data.***
Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: ***See "Oiling System" in Chevrolet Special Data.***

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time oil pan removed.
See "Oiling System" in Chevrolet Special Data.
CAUTION—Special checking gauges required for each type (216" & 235") engine.

Crankcase Ventilation (All Trucks except Forward Control Models): Regular velocity type with air intake through valve rocker cover (air cleaner on some models) and outlet pipe on right side of engine.
Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

►**Positive Crankcase Ventilation (Forward Control Truck Models only):** Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring-loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling speed to maintain proper air fuel mixture.**
Servicing. Every 5000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Oil filler cap gasket must seal tightly. Test vacuum valve as follows:
Vacuum Valve. With valve disassembled, check spring tension—must be 7.5 ozs. with spring compressed to .418-.432". If defective replace with new valve assembly, Part No. 1543979.
►*CAUTION*—When assembling valve, make certain end coil of spring engages groove under head of valve.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on Cab-Over-Engine Trucks.
Pressure Valve (C-O-E Trucks)—AC No. 850501 Radiator Filler Cap). Open at 4 lbs.
Capacity—15 qts. (with 216" Engine), 17½ qts. (with 235" engine). NOTE—Heavy Duty 17½ qt. radiator Optl. on ¾, 1, 1½ Ton and 137" & 161" WB. School Bus.
Radiator Core Removal: *See Chevrolet Special Data.*
Water Pump: Double-outlet, packless type with sealed ball-bearing shaft.
See Water Pump Section for complete data.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat. Harrison. In cylinder head water outlet.
Setting—No. 3113995 stamped "143." Starts to open 140-147°F. Fully open 170°F.
Temperature Gauge: AC No. 1512148 (1512150 for C-O-E Trucks). Not electric.

CLUTCH

Own Make. Diaphragm spring, single plate, dry disc type. NOTE—Half-Ton Trucks use 9" clutch, all other models 10¾" type.
See Clutch Section for complete data.
Facings—Moulded Asbestos, 2 required as follows:

	I. D.	O. D.	Thickness
9" type	6⅛"	9⅛"	.132-.138"
10¾" type	7"	10¾"	.137-.143"

Adjustment: Pedal-free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.
Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

3-SPEED

Own Make. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
▷ *HIGH GEAR DISENGAGEMENT: Can be corrected by installing 1953 type parts. See "Chevrolet 3-Speed Tranmission" in Transmission Section.*
Transmission Control: Mechanical type with shift lever mounted on steering column.
See Transmission Section for complete data.
Removal (Half-Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven member, lift transmission up and remove through floor opening.
Removal (¾ Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split intermediate universal by removing trunnion bearing "U" bolts, lower rear propeller shaft to floor. Remove four capscrews holding universal joint collar on rear bearing retainer, slide ball collar and retainer back on housing. Remove two bolts and nuts mounting intermediate universal support bracket on frame cross-member, pull front propeller shaft assembly to rear and free of front universal joint. Remove transmission in same manner as on Half-Ton (above).

4-SPEED

Own Make. Four-speed, constant-mesh, synchro-mesh, helical gear (2nd, 3rd, and 4th), sliding spur gear (Low & Reverse). Floor mounted gearshift.
See Transmission Section for complete data.
▷**Locking in 3rd & 4th Gear Correction**—New design 3rd & 4th speed clutch hub and clutch keys used.
See Chevrolet 4-speed Helical Gear Transmission in Transmission Section.
▷**Gear Disengagement & High Gear Noise Correction:** *See "Chevrolet 4-Speed Helical Gear Transmission" in Transmission Section.*
Transmission Control (Cab-Over-Engine): *See Chevrolet Special Data for Removal & Installation data.*
NOTE—Floor-mtd. gear shift used on Other Trucks.
Removal (½ & ¾ Ton): See 3-speed Transmission data above. NOTE—On Forward Control Models shift lever and rear floor pan must be removed.
Removal (Other Trucks): Free steering gear grommet from floor, remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split front universal joint by removing trunnion bearing "U" bolts (tape or wire trunnions together to prevent losing bearings), slide shaft down to one side to clear transmission. Remove two top transmission mounting capscrews, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove 2 lower transmission mounting capscrews, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven-member, remove transmission.

UNIVERSALS

Half-Ton: Own Make. No. 591642 (3-Spd. Trans.), 605118 (4-Spd. Trans.). Same type as Pass. Car. One used (in torque ball back of transmission).

▷*TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Pass. Car & Half-Ton" Rear Axle in Rear Axle Section.*
¾ Ton Truck: Front Universal—Own Make. Chevrolet No. 591646 (3-Spd. Trans.), 3689288 (4-Spd. Trans.). Same type as used on Half-Ton (above).
Intermediate & Rear Universal—Spicer Model No. 1351-5107X (Intermediate—slip joint), 1358-5104X (rear—permanent joint). Needle bearing type.
See Universals Section for complt data.
1, 1½, 2 Ton Trucks (Regular & C-O-E): Spicer Needle bearing type. Slip-joint used at intermediate position, permanent type at transmission and rear axle.

Spicer Model Nos.	Front	Intermediate	Rear
C-O-E 110" WB	1351-5107X	①	1358-5105X
Bus 199" WB	1358-5104X	②	1358-5104X
All Others	1358-5104X	1351-5107X	1358-5104X

①—No intermediate joint used (1 propeller shaft).
②—Two intermediate universals as follows: First—1358-5104X, second 1351-5107X (3 section shaft).
See Universal Section for complete data.

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own Make. Semi-floating, hypoid gear type with Torque Tube drive.
NOTE—This axle same design as passenger car type.
See Rear Axle Section for complete data.
Ratio—4.11-1 Standard.
▷**Axle Identification**—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratio as follows:
Detroit—(1950) HE, (1951) JE.
Buffalo—(1950) HF, (1951) JF.
Backlash—.005-.007". Screw adjustment.
Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.
Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.
Axle Shaft Endplay—Free fit to .014" maximum.
Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

FULL-FLOATING (EXC. HALF-TON)

Own Make. Full-floating, hypoid gear (straddle mounted pinion) with Hotchkiss Drive.
▷**1½ & 2 Ton Note**—Axle shaft splined to wheel hubs.
See Rear Axle Section for complete data.
Ratios: The following rear axle ratios are standard equipment as indicated.

		Detroit		Buffalo	
Series	Ratio	1950	1951	1950	1951
3600 Std.	4.57-1	HG	JG	HH	JH
3600 Optl.	5.14-1	HQ	JQ	HR	JR
3742 Std.	5.14-1	HQ	JQ	HR	JR
3800 Std.	5.14-1	TJ	UJ	TK	UK
3800 Optl.①	5.14-1	TQ	UQ	TR	UR
3942 Std.	5.14-1	TC	UC	TD	UD
3942 Optl.①	5.14-1	TA	UA	TB	UB
4000 Std.	6.17-1	TL	UL	TM	UM
4000 Optl.	5.43-1	TE	UE	TF	UF
5000, 6000	6.17-1	TG	UG	TH	UH

①—Dual wheel type.
▷**Axle Identification**—Axles can be identifed by prefix letters of axle serial number stamped on top of carrier housing between reinforcing ribs as listed in Ratio table above (different prefix for Detroit & Buffalo plants as indicated).

Backlash—.005-.008". Screw adjustment.

Removal:—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). *Slide shaft forward and lower to* floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1 Ton): Remove 8 capscrews and lockwashers in axle shaft flange, install two ½" x 13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. NOTE—Use new gasket when re-installing shaft.

CAUTION—Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. Grease at this point **will cause loosening of axle shaft flange capscrews.**

Axle Shaft Removal (1½ & 2 Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. NOTE—When re-installing shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

Axle Shaft Note—Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft or lengths as follows:

¾ & 1 Ton Truck

	Part No.	Length
Left Shaft	3680977	31 3/16"
Right Shaft	3680978	37 1/16"

1½ Ton Truck (Splined Shaft)

Left Shaft	3685191	34 3/32"
Right Shaft	3685192	40 15/32"

2 Ton & C-O-E (Splined Shaft)

Left Shaft (Stmpd. 05)	3702205①	36½"
Right Shaft (Stmpd. 06)	3702206②	40¾"

①Supersedes No. 3685193. ②Supersedes No. 3695194.

Wheel Bearing Adjustment: Remove wheels and axle shaft (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1 Ton), J-870 (1½ & 2 Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

REAR AXLE
TWO-SPEED

Own Make (2 Ton Optl.). Full-floating, Two-speed Double reduction type with Hypoid Gears (First reduction), Helical Gears (Second reduction) and vacuum shift control.

See Rear Axle Section for complete data.

Ratio—6.13-1 (High), 8.10-1 (Low).

►**Axle Identification**—Serial No. prefix (stamped on flat top of carrier on right side) for each year and plant is as follows:

Detroit—(1950) TN, (1951) UN.
Buffalo—(1950) TP, (1951) UP.

Two-Speed Shift Control: Vacuum power type with selector valve on instrument panel.

Removal: Carrier Assembly can be removed (without disturbing axle housing) as follows: Remove axle *shaft flange mounting bolts, pull both axle shafts* out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearing, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier by means of long punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath tuck.

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for regular rear axle (see above).

SHOCK ABSORBERS

Delco Hydraulic type. Single or double acting piston types or Direct acting type.

Direct Acting Types

Front—1052-M (½, ¾, 1 Ton).
Rear—1066-Z (½ Ton), 1066-T (¾ Ton).

Single Acting Types

Rear—1431-Y, Z (¾ Ton 1950).

Double Acting Types

Front—1730-B (exc. C-O-E), 1730-C, D (C-O-E.)
Rear—1722-F, E (1 Ton Dubl. Duty), 2000-W, V (1½ Ton, School Bus, & C-O-E).

FRONT SUSPENSION

Front Suspension: Conventional "I" beam section front axle with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° 10' ± 1° crosswise (All).

Camber—1° ± ½° (All). Bend axle for corrections (when kingpin inclination is likewise off).

Caster—See table below. All specifications ± ½°. Use wedge shims for minor corrections (up to 2°), bending tools for greater corrections.

	Caster	Toe-In
½ Ton	1¾°	1/16-3/16"
¾ Ton (exc. Fwd. Contr)	2½°	1/16-3/16"
¾ Ton Fwd. Contr.	3¼°	1/16-¼"
1 Ton Fwd. Contr.	2¼°	1/16-¼"
1, 1½, 2 Ton (exc. (C-O-E)	2¾°	1/16-¼"
C-O-E Trucks	3°	1/16-¼"

Toe-In—See table above. Adjust by turning tie rod.

CAUTION—Tie rod ends must be aligned with studs.

Steering Geometry—Outer wheel turned 20°, inner wheel 23° ± 2° (All Models).

STEERING GEAR

Saginaw Model. Ball bearing (re-circulating ball) Worm-and-Nut. Chevrolet Part Nos. as follows:

270927 (½ Ton & ¾ Ton with 3-Spd. Transmission), 270221 (¾, 1, 1½ Ton with 4-Spd. Transmission), 270224 (2 Ton & School Bus), 270635 (C-O-E).

See Steering Gear Section for complete data.

BRAKES

Service Brakes: Three different hydraulic types used as follows:

Chevrolet Hydraulic—(1950) All Models, (1951) ¾ & 1 Ton (Front & Rear), 1½ & 2 Ton (Front only).
Chevrolet Bendix—(1951) ½ Ton.
Chevrolet Twinplex—(1951) 1½&2 Ton (Rear only).
See Brake Section for complete data.

Wheel Cylinders—Size stamped on housing under adjusting cup lock spring.

Drums—Cast iron rim with steel web.

	Diameter Front	Rear
½ Ton	11"	11"
¾ Ton	11"	12"
1 Ton	12"	14"
1½ & 2 Ton (1950)	14"	16"
1½ & 2 Ton (1951)	14"	15"

Lining—Molded type. (Riveted on 1½ & 2 Ton), Bonded on others.

Thickness—.187-.194" (11" Drum except 1951 ½ Ton), .202-.222" (11" Drum 1951 ½ Ton), .265-.272" (12", 14" & 16" Drum), .392-.412" (15" Drum, 1951 Twinplex).

Clearance—Adjust for clearance as follows:

½ Ton 1950 (Front & Rear), ¾ Ton 1950-51 (Front & Rear), 1, 1½ & 2 Ton (Front Only)—Turning adjusting wheel until shoe drags slightly, then turn wheel back 5 notches.

1 Ton 1950-51 (Rear Only), 1½ & 2 Ton 1950 (Rear Only)—Turn adjusting pinion stud in clockwise direction (facing flange plate from center of truck) until shoe drags slightly, then back off stud 2/3 of a turn or 4 sides of the hex stud.

½ Ton 1951 (Front & Rear)—Remove adjusting hole cover and turn brake adjusting screw until light drag is felt (Tap backing plate until drag remains constant), then back off adjusting screws 7 notches. If wheel not free of drag, Major Adjustment needed.

1½ & 2 Ton 1951 (Rear Only)—Remove adjusting covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw. (2 adjustments on each wheel).

Parking Brake (Except 1951 1½ & 2 Ton): Hand lever or Foot pedal operated. Applies rear wheel service brakes. ***See Service Brakes above.***

Parking Brake (1951 1½ & 2 Ton): Hand brake consists of brake drum attached to output shaft of transmission ahead of universal joint, and an internal and external shoe which grips the drum between them, contacting about ¼ of drum circumference.

Adjustment—Set hand lever in fully released position. Loosen locknut and tighten adjusting bolt on bracket under outer brake shoe for clearance of .010-.015" between outer shoe facing and drum at point directly above adjusting bolt. Loosen locknut on operating link (directly above shoe operating lever) and tighten nut on lower end of link for clearance of .010-.015" between inner shoe lining and drum. Tighten locknuts securely and recheck clearances.

Hydrovac Brake System: Std. on 2 Ton, Cab-Over-Engine, and 1½ Ton Special Models. Consists of special power unit (vacuum power used to augment regular hydraulic brake actuation) in hydraulic line between master cylinder and wheel cylinders.

See Brake Section for complete data.

MODEL IDENTIFICATION

Series	Serial Prefix	Model Designation
1500	KJ	Special Styleline
2100①	KK	Deluxe Fleetline & Styleline
1508	KJ	Sedan Delivery

①—*Powerglide & "235" Engine optional on deluxe models.*

SERIAL NUMBER: Stamped on plate on left front body hinge pillar post. **First Number 1001** with model prefix as indicated in model identification above.

NOTE—Number preceding serial prefix designates assembly plant (as listed below), letter following serial prefix indicates month of manufacture (A—January, etc.).

Assembly Plant Designation

1—Flint, 2—Tarrytown, 3—St. Louis, 5—Kansas City, 6—Oakland, 8—Atlanta, 9—Norwood, 14—Baltimore, 20—Los Angeles, 21—Janesville.

prefix designating engine type and plant as listed in table below.

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor. **First Number 1001** with

Engine	Flint	Tonawanada
216" Std.	KAA	KAM
216" Spec.①	KAC	KAP
235" Powerglide	KAD	KAQ

①—With Heavy Duty 10¾" Clutch Disc.

TUNE-UP

COMPRESSION PRESSURE: 110 lbs. minimum (with cylinders equal within 5-10 lbs.) at cranking speed.

VACUUM READING: Steady 17-21" at idling speed.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .035".

Plugs—AC No. 46-5. 14 mm.

►***CAUTION—Tighten plugs to 20-25 ft.lbs. torque or finger tight plus one-half turn.***

DISTRIBUTOR: Delco-Remy No. (216" Eng.) 1112362, (235" Eng.) 1112363. Automatic and vacuum advance with Octane Selector adjustment.

Breaker Gap—.018" (.015-.022") Std. setting or .022" (.018-.024") for new points to allow for seating.

Cam Angle—34°. Test limits with .022" gap 31-37°. ***See "Delco-Remy Cam Angle" in Electrical Equipment Section.***

Automatic & Vacuum Advance—***See Ignition.***

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Clockwise viewed from above.

Octane Selector: Adjustment on distributor provides 10° advance or retard from center '0' position.

COIL: Delco-Remy No. 1115380. Above distributor.

Ignition Current—2.5 amperes idling. 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.

Capacity—.18-.23 microfarad.

IGNITION TIMING: 5° BTDC.

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set at '0'. Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

Timing Procedure—***See Ignition Timing.***

CARBURETION (216" ENG.): Rochester No. 7004477. Downdraft type with manual choke control.

Idle Setting—1-2 turns open.

Idle Speed—450-500 RPM.

Float Level—1 5/16" from bottom of each float to cover gasket (**do not remove gasket**) with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

►***CAUTION—Both floats must be set alike and must not be twisted out of alignment.***

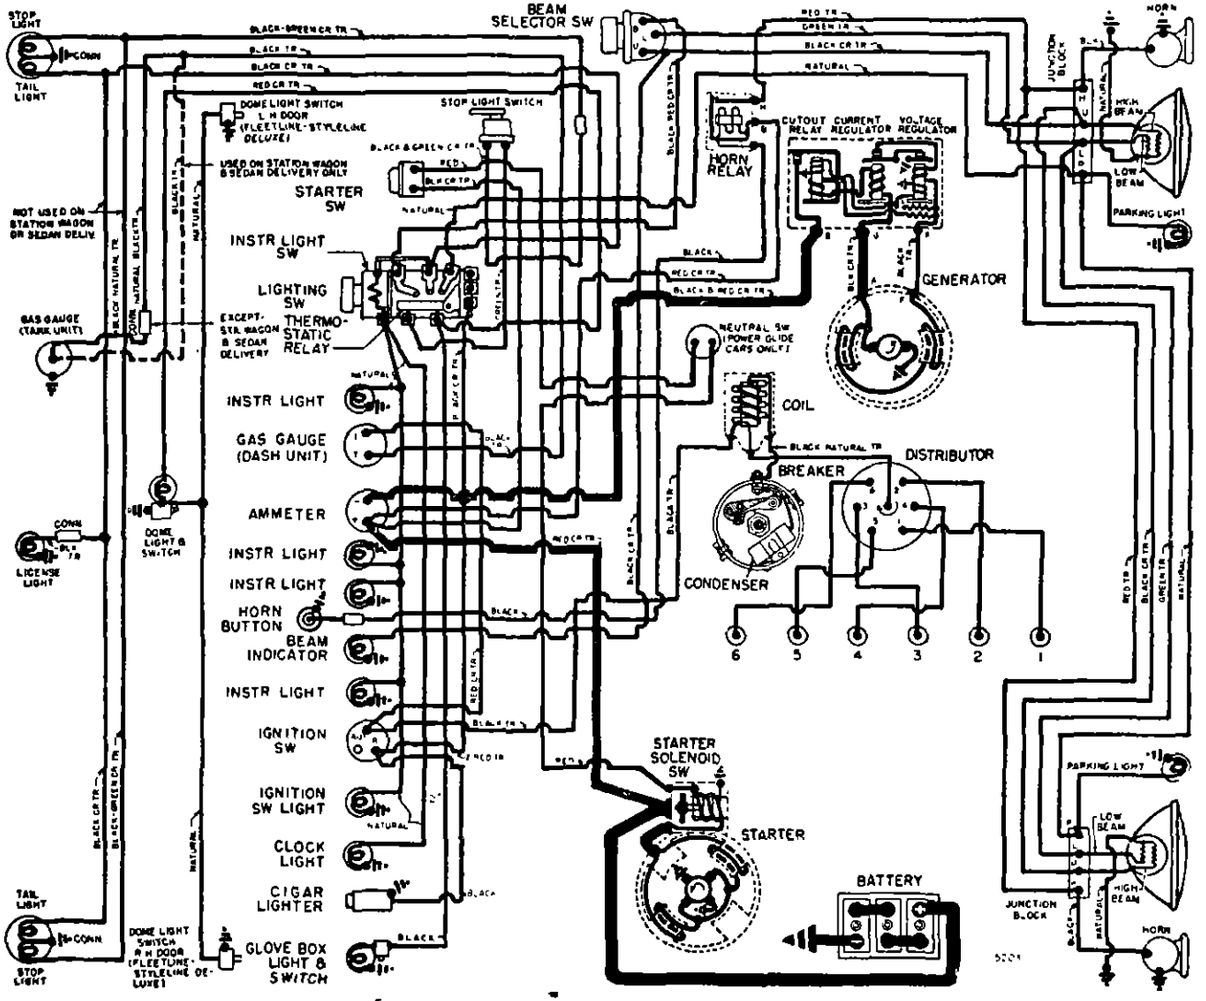
Accelerating Pump—No seasonal adjustment.

Throttle Kicker: Operates by cam on choke lever. Opens throttle when choke closed, no adjustment.

Fuel Pump Pressure: 4 lbs. maximum.

CARBURETION (235" POWERGLIDE ENG.): Rochester No. 7003526. Downdraft type with automatic choke control and Throttle Return Check.

Idle Setting—1 to 2½ turns open.



Idle Speed—425 RPM.

Float Level—Use Gauge M-250. Invert bowl cover and float assembly but **do not remove gasket.** Place gauge in position over floats with gauge tang engaged in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cut-out. Tilt assembly 90° to each side and see that floats do not touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

►***CAUTION—Both floats must be set alike and must not be twisted out of alignment.***

Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.

Fast Idle: With idle adjusting screw on next to highest

step of fast idle cam, Gauge J-5150 (.073") should just slide between lower edge of choke valve and bore of carburetor. Adjust by bending choke rod.

Throttle Return Check Adjustment: Have engine at full operating temperature. Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket. With parking brake set tight, place selector lever in "D" range and adjust throttle stop screw and idle adjusting screw in combination with each other to obtain a smooth idle at 425 RPM., this adjustment should be made with choke valve in wide open position with throttle stop screw resting on low step of fast idle cam. Shut off engine. Close choke valve and position throttle stop screw on highest step of cam. Using a 9/32" wrench, on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench, turn the adjusting screw until it just contacts the throttle lever contact arm.

►***NOTE—If screw projects more than ½" from shaft when head of screw just touches lever contact arm, reposition throttle check on manifold stud.***

►**MANIFOLD HEAT CONTROL:** Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. ***Distorted springs should be replaced.***

VALVE TAPPET CLEARANCE: ***CAUTION—Two type of valve lifters used.***

►**Conventional Type (216" Engine)**—.006-.008" Intake, .013-.015" Exhaust after engine "normalized" by running at fast idle for approximately 30 minutes or until oil temperature stabilized.

►**Hydraulic Type (235" Engine)**—No clearance adjustment required in service. ***If head removed or rocker arms or valve lifters replaced see Initial Setting (below).***

Initial Adjustment of Hydraulic Valves: Lifters must be at lowest point of travel when adjusted (piston in firing position). Remove distributor cap and turn engine until rotor is in firing position for cylinder being set. Starting with #1 cylinder, turn adjusting screw down until rocker arm just contacts the valve. This can be determined by checking push rod side play at adjusting screw end while turning the adjusting screw. At the point where no side play can be felt, continue turning the adjusting screw down 1½ turns and tighten locknut securely. Adjust each cylinder following the same sequence as the firing order (1-5-3-6-2-4).

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116469 Std., No. 1116452 (RHD. Cars).

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling. 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112362 (216" Engine); Delco-Remy No. 1112363 (235" Engine). Automatic and vacuum advance type with Octane Selector.

►***CAUTION—These distributors have different advance.***

Breaker Gap—.018" (.015-.022") Std. setting for used points, or .022" (.018-.024") for new points to allow for seating.

Cam Angle—34°. Test limits with .022" gap 31-37°. ***See "Delco-Remy Cam Angle" in Electrical Equipment Section.***

Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1112362

Degrees Distr.	RPM.	Degrees Eng.	RPM.
0-2	375	0-4	750
4.5-6.5	600	9-13	1200
10-12	1200	20-24	2400
17-19	1700	34-38	3400

Automatic Advance—1112363

Degrees Distr.	RPM.	Degrees Eng.	RPM.
0-2	375	0-4	750
4-6	700	8-12	1400
10-12	1350	20-24	2700
14.5-16.5	1850	29-33	3700

Octane Selector: Adjustment on distributor provides 10° advance or retard from center "0" position.
See Ignition Timing for adjustment instructions.

Vacuum Spark Control: Delco-Remy No. 1116061. On Octane Selector, linked to advance arm.
Plunger Travel—17/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	7.0-8.5
9-11	18-22	18.5

IGNITION TIMING

Standard Setting① ..... **5° BTDC**

①—Adjust Octane Selector with grade of fuel being used. See Octane Setting below.

Timing (with Timing Light)—Connect Timing Light to No. 1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer on "0." Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball inserted in flywheel) lines up with pointer. Tighten clamp bolt and check Octane Selector Setting (see below).

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETOR

ROCHESTER MODEL B, No. 7004477. Single barrel down-draft type, with concentric bowl and twin floats. Manual choke wiht throttle kicker and fast idle.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Settings): ***See Tune-Up.***

Metering Jets: ***See "Rochester Jet Specifications" in Carburetor Section.***

Throttle Kicker—Operated by cam on choke lever. Opens throttle when choke closed, no adjustment.

ROCHESTER MODEL BC, No. 7003526. Down-draft type with automatic choke control and Throttle Return Check.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): ***See Tune-Up.***

Metering Jets: ***See "Rochester Jet Specifications" in Carburetor Section.***

Throttle Return Check—***See Tune-Up.***

CARB. EQUIPMENT

Air Cleaner: AC Oil Wetted Type (Std.); Oil Bath Type (Optional).
Filter Element—AC No. 6 (Std.), No. 23 (Optl.).

Fuel Pump: AC Diaphragm Type, Fuel pump Std., Combination fuel-and-Vacuum Optl.
Replacement Pump—AC No. 9798 (Fuel Pump), No. 9803 (Early 1952), No. 9797 (Late 1952) Fuel-and-vacuum pump.
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC. Electric type.
Dash Unit—AC No. 1517255.
Tank Unit—AC No. 1516280 (Pass. Car), No. 1517100 (Sedan Del. and Station Wagon).
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA6—6 volt, 15 plate, 100 ampere hour capacity.
Starting Capacity—120 amperes for 20 minutes.
Grounded Terminal—Negative.
Location—In engine compartment on right side.

STARTER

Delco-Remy No. 1107109. Armature No. 1917855.
Drive—Overrunning Clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
11 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid (no relay type) mounted on starter and controlled by Push-button Switch No. 1996055.
Neutral Safety Switch (Powerglide Cars)—Delco-Remy No. 1997845. Connected in starter control circuit, prevents starter operating unless selector lever in "N" or "P" position.
►**Neutral Safety Switch Adjustment**—***See "Powerglide Transmission" in Transmission Section.***

GENERAT R

Delco-Remy. Two-brush with voltage and current regulation. Various models used as follows:

Model	Generator (D-R No.)	Armature
Pass. Cars (Early)	1102749	1921235
Pass. Cars (Late)	1100013	1921351
Taxi	1102786	1912599
State Police	1105001	1918009
City Police	1105002	1920909

►***CAUTION—1951 Armature No. 1879002 (4 turn type) MUST NOT BE USED on 1952 generator Model No. 1102749 with Regulator No. 1118720 (will be overloaded). See Regulator data.***
Maximum Charging Rate (Pass. Cars)—34-42 amperes reached at car speed of 25 MPH. Actual charging rate controlled by regulator and dependent on battery condition.

Performance Data—Cold

Generator	Amperes①	Volts	RPM
1102749③	30	8.0	2050
1100013④	35	8.0	2650
1102786	45	8.0	2350
1105001	50	7.0	2100
1105002	40	7.0	1700

①—Not maximum output. See Current Regulator.
③—Current & Voltage Regulators Nos. 1118720 or 1118301 MUST BE USED WITH THIS GENERATOR.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Brush Spring Tension—28 ozs.
Rotation—Counterclockwise at commutator end.
Field Current—1.75-1.95 amperes (1102749 Gen.), 1.85-2.03 amperes (1100013 Gen.), 1.87-2.0 amperes (1102786 Gen.), 1.77-1.93 amperes (1105001 & 1105002 Gen.), all at 6.0 volts.
Belt Adjustment: Loosen clamp bolt, swing generator out for ¾" belt deflection (light pressure) midway between generator and fan pulleys.

REGULATOR

Delco-Remy. Voltage and current type.

Model	Regulator (D-R No.)	For Generator No.
Pass. Cars (Early)	1118720	1102749
Pass. Cars (Late)	1118720	1100013
Taxi	1118725	1102786
State Police	1118722	1105001
City Police	1118721	1105002

▷*CAUTION—Regulator No. 1118720 used only with 1952 Generators Nos. 1102749 & 1100013 and Armatures Nos. 1921235 & 1921351 (3½ turn type). Use Regulator No. 1118301 for replacement (can be used on both 4 turn and 3½ turn armatures).*
See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct high charging rate or high voltage.

Cutout Relay (All)

Cuts In—5.9-6.7 volts hot (set to 6.4 hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Regulator No.	Setting (Hot)①	Set To (Hot)
1118720, 1118725	7.0-7.7 volts	7.4 volts
1118721, 1118722	6.8-7.5 volts	7.2 volts

①—Regulator is over compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Regulator No.	Set To (Hot)	Range
1118720	38 amps.	34-42 amps.
1118725	47 amps.	45-51 amps.
1118722	50 amps.	48-52 amps.
1118721	42 amps.	40-46 amps.

Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" type.
See Electrical Equipment Section for complete data.
Beam Indicator—Red dot below '50' figure on speedometer. Lighted when upper beams in use.
Directional Signal: *See Electrical Equipment Section.*
Directional Signal Indicator—Pilot light on switch case. Lighted when right or left signal on.

Switches

Lighting—Delco-Remy No. 1995048.
Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Stop Light—Delco-Remy No. 1997913 Std., No. 1997901 (RHD. Cars). Mechanical type. Mounted under toeboard, operated by brake pedal.

MISC. ELECTRICAL

▷*DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS—Located on left side under hood with removable door screwed to dash.*

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assembly). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999643 (Low Note, Right); No. 1999644 (High Note, Left). Vibrator types operated by relay.

Type	Current (at 6 volts)	Air Gap
1999643 (R.H.)	19-21 amps.	.044-.049"
1999644 (L.H.)	17-19 amps.	.034-.039"

Horn Relay: Delco-Remy No. 1116775.
Contact Gap—.027". **Air Gap**—.014" (closed).
Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

ENGINE SPECIFICATIONS: Own make, 6 Cylinder, Valve-in-head. *TWO DIFFERENT ENGINES USED:*

216" ENGINE—With Synchro-mesh transmission.

235" ENGINE—With Powerglide transmission.

Engine	Bore	Stroke	Displacement
216"	3½"	3¾"	216.5 cu. in.
235"	3 9/16"	3 15/16"	235.5 cu. in.

	Comp. Ratio	Rated HP	Developed HP
216"	6.6-1	29.4	92 at 3400 RPM
235"	6.7-1	30.4	105 at 3600 RPM

Compression & Vacuum Readings—*See Tune-Up.*
ENGINE REMOVAL: *See Chevrolet Special Data.*
ENGINE MOUNTINGS: *See Chevrolet Special Data.*
CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS: Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.
Truck Piston—Same as Pass. cars except heavier. Truck pistons marked with small boss on under side of each pin boss. *CAUTION*—Do not interchange pistons (must be same type in one engine).
Weight—(216" Engine) 28 ozs.; (235" Engine) 32 ozs.
Removal—Pistons and rods removed from above.
Clearance—Top: .0155-.0235". Skirt: Selective fit. See Fitting New Pistons below.

Replacement Pistons: Furnished Std. size, .005", .010", .020", .030", .040" oversize.
NOTE—To install new pistons, hone cylinders for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".

Fitting New Pistons: Use feeler gauge between piston and cylinder wall at right angle to pin bosses. Piston should pass through bore with light pressure on .0015" feeler, and lock on .003" feeler.
NOTE—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

PISTON RINGS: Three rings used per piston.

216" Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.②	⅛"	.005-.015"	.0015-.003"
#2 Comp.②	⅛"	.005-.015"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

235" Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.③	3/32"	.005-.015"	.0015-.003"
#2 Comp.②	⅛"	.007-.020"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

①—End gap worn limit 1/32" maximum.
②—Taper face type. ③—Deep section twist type.

▷*NOTE*—Install Comp. Rings with side marked "TOP" up.

Replacement Rings: Std. & .005", .010", .020", .030", .040" Oversize.

PISTON PIN: Diameter—.8645-.8650". **Length**—3.135-3.165". Pin locked in rod (piston bronze bushed).
Pin Fit in Piston—Thumb push fit (at room temp.).

Replacement Pins: Std., .003", .005", .010" oversize.
NOTE—New pistons fitted with pins and bushings. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.

CONNECTING ROD: Length—6 13/16". **Weight**—31.2 ozs.
Crankpin Journal Diameter—2.311-2.312".
Lower Bearing—Spun high-lead, thin-wall babbitt.
Clearance—.0003-.0013" selective fit (see Bearing Adjustment following).
Sideplay—.004-.012" at lower end (rod to crankpin), .015" min. at upper end (rod to piston pin boss).

Bearing Adjustment: Laminated shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from side to side with light tap of eight ounce hammer), then replace one .002" shim on one side for clearance (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and finger to test).

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rod with mouth toward camshaft side of engine. Check dipper height.
Dipper Height Adjustment—*See "Oiling System" in Chevrolet Special Data.*

CRANKSHAFT: Four bearing type with integral counterweights and vibration dampener.
Vibration Dampener—*See Chevrolet Special Data.*
Journal Diameters—(1) 2.6835-2.6845"; (2) 2.7145-2.7155"; (3) 2.7455-2.7465"; (4) 2.7765-2.7775".
NOTE—Journal taper or out-of-round limits .001". Run-out limits for Nos. 2 & 3 journals is .002".
Bearing Type—Steel-backed precision type thin-walled babbitt. *Boring or reaming not required.*

▷*CAUTION—Bearing Nos. 1 & 2 are similar in appearance but MUST NOT BE INTERCHANGED. No. 2 marked by letter "I" in oil grooves.*
Clearance—.0007-.0024" selective fit. See Bearing Adjustment below.

▷*NOTE—Precision bearings can be replaced singly.*

Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).

Replacement Bearings: Precision type bearings furnished for all engines Std. size and .002", .010", .020", .030" undersize.
Bearing Installation—Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

ENGINE

CONTINUED FROM PRECEDING PAGE

Bearing Cap Installation—Bearings caps Nos. 2 & 3 marked for identification; (2) marked "Front"; (3) marked "Rear." Install in engine with "**Front**" to front of engine, and "**Rear**" to rear of engine. *NOTE—Rear intermediate bearing (3) is special flanged type, and takes crankshaft end thrust.*

Crankshaft Oil Seal Servicing: *See Chevrolet Special Data for Front and Rear Oil Seals.*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**—.003-.009".

FLYWHEEL REPLACEMENT: *See Chevrolet Special Data.*

CAMSHAFT: Four bearing type. Helical gear drive.

CAMSHAFT CAUTION: CAMSHAFTS IN 216" & 235" ENGINE ARE NOT INTERCHANGEABLE and can be identified by marks and forging numbers as follows:

216" Engine Camshaft—Forging No. 838733 (same as Part No.) located between #11 and #12 cams.

235" Powerglide Engine—Forging No. 3660474 (not same as Part No. 3835771) located between #10 and #11 cams. Shaft also has "X" stamped on front end and painted green. *CAUTION*—Forging number is same as 235" Truck engine camshaft.

235" Truck Engine—Forging No. 3660474 (same as Part No.) located between #11 and #12 cams. Shaft has NO other identification (see 235" Powerglide camshaft identification above).

Journal Diameters—(1) 2.0282-2.0292"; (2) 1.9657-1.9667"; (3) 1.9032-1.9042"; (4) 1.8407-1.8417".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

Bearing Type—Steel-backed, babbitt-lined bushings (staked in place). *NOTE*—New bearings must be line-reamed.

Clearance—.002-.004".

Camshaft Bearing Replacement: *See Chevrolet Special Data.*

End Thrust—Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

Endplay Adjustment—*See "Timing Gear Installation" in Chevrolet Special Data.*

Endplay—Free fit to .003" maximum.

Timing Gears: Steel crankshaft gear. Bakelite and fabric composition camshaft gear.

Maximum Gear Runout—.003" crankshaft gear. .004" camshaft gear.

Replacement Timing Gears & Installation—*See Chevrolet Special Data.*

Timing Gear Backlash: .003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

VALVES:

216" Engine

	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3410-.3417"	6.26-6.29"
Exhaust	1 1/2"	.3400-.3407"	4.917-4.947"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.0027"
Exhaust	45°	.3118"	.002-.0037"

235" Engine

	Head Diam.	Stem Diam.	Length
Intake	1 15/16"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3400-.3407"	4.904-4.934"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3275"	.001-.0027"
Exhaust	45°	.3275"	.002-.0037"

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down. Check with spring tester and replace if not within limits shown below.

Free Length—2⅛" (216" Engine). 2 5/32" (235" Engine).

►*CAUTION—Aluminum colored valve springs used on 235" Engine must not be used on other models.*

Spring Specifications—216" Engine

	Pressure	Length
Valve Closed	53-63 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Spring Specifications—235" Engine

	Pressure	Length
Valve Closed	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	1.505"

Valve Lifters (Conventional): 216" Engine—Plain barrel type with pushrod seat brazed on upper end.

Diameter—.989-.990".

Clearance—.001" (Selective free fit).

Valve Lifter (Hydraulic): 235" Engine—Used with Powerglide transmission.

See "Valve System" in Chevrolet Special Data.

Initial Adjustment—(Required only when installing cylinder head or when adjusting screw setting has been disturbed). *See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

►*REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and pushrods use a rack to keep them in proper sequence. Install in their original locations when reassembling.*

Rocker Arm Assembly & Installation: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

VALVE TAPPET CLEARANCE CAUTION—Two types of valve lifters used. Conventional type in 216" Engine with synchro-mesh transmission. Hydraulic type in 235" Engine with Powerglide transmission.

►**CONVENTIONAL TYPE SETTING (216" Engine):** .006-.008" Intake; .013-.015" Exhaust *(after running engine for approximately 30 minutes at fast idle), or until oil temperature stabilized (to "normalize" engine).*

►**HYDRAULIC TYPE SETTING (235" Engine): NO CLEARANCE ADJUSTMENT REQUIRED IN SERVICE.** *See "Valve Tappet Clearance Adjustment" in Chevrolet Special Data.*

Initial Adjustment—Required when cylinder head removed or when adjusting screws disturbed. *See "Valve Tappet Clearance Adjustment" in Chevrolet Special Data.*

VALVE TIMING: See Camshaft Setting Above.

216" Engine Valve Timing

Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

①235" Engine Valve Timing

Intake Valves—Open 16° BTDC. Close 48° ALDC.
Exh. Valves—Open 46°30' BLDC. Close 17°30' ATDC.
①—Theoretical timing with Hydraulic Lifters.

Valve Timing Check (216" Engine): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right face of flywheel housing, mount dial indicator on rocker arm shaft with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO, plus or minus .004". Reset tappet to correct running clearance.

235" Engine—Use same procedure as for the "216" engine except that it is necessary to replace the hydraulic valve lifter operating #1 exhaust valve with a conventional type lifter while making the check.

LUBRICATION

Engine Oiling System: 216" Engine. Pressure and positive splash system. Pressure to main bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from trough (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by the Oil Distributor Valve on left side of engine.

235" Engine—Lubrication system similar to 216" engine except that the rocker arms are fed from an extension of the passage to the rear of the camshaft bearings. This same extension also feeds the oil channel supplying the hydraulic lifters.

►*CAUTION*—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs, and nozzles which must be **checked each time the oil pan is removed** (requires special gauges). *See "Oiling System" in Chevrolet Special Data.*

Crankcase Capacity—5½ qts. (dry); 5 qts. (refill).

Normal Oil Pressure—14 lbs. at 2000 RPM.

Oil Pressure Regulator—Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.

Oil Pump Overhaul: *See Chevrolet Special Data.*

Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil Pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Checking Oiling System: Check entire system (Dipper Height, Oil Pan Trough Height, Oil Nozzle Height & Aim) each time pan removed.

See "Oiling System" in Chevrolet Special Data.

Crankcase Ventilation: Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure system.
Capacity—15 qts.
Pressure Cap—AC No. 850501. Radiator Filler Cap. 4 lb. type.
Radiator Core Removal: *See Chevrolet Special Data.*
Water Pump: Double outlet, packless type with sealed ball-bearing shaft.
See Water Pump Section for complete data.
Thermostat: Harrison. In cylinder head outlet.
Standard—No. 3123992 stamped "143". Starts to open at 140-147°F. Fully open at 170°F.
Temperature Gauge: AC No. 1512241.

CLUTCH

Own Make—Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars (except Powerglide).
See Clutch Section for complete data.
Facings—Moulded asbestos. 2 required as follows: 6⅛" I.D., 9⅛" O.D., .132-.138" thick.
Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.
Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own Make. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).
See Transmission Section for complete data.
▷*HIGH GEAR DISENGAGEMENT: Can be corrected by installing 1953 type parts. See "Chevrolet 3-Speed Synchro-mesh" in Transmission Section.*
Transmission Control & Linkage: *See Transmission Section for complete data.*
Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint collar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove four capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts, install support under rear of engine. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

POWERGLIDE TRANSMISSION

Powerglide Transmission used only with 235" Engine. Consists of Torque Converter and hydraulically operated planetary gear unit with manual control.
▷*POWERGLIDE PRODUCTION CHANGES, CORRECTIONS, & REPLACEMENT PARTS CAUTION: See "Chevrolet Powerglide" in Transmission Section.*
▷*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*
Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when the oil gets down to the "Add One Quart" mark on the dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing a "AQ-ATF" marking on container.
Capacity—9 qts. (10 qts. dry).
Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in the "D" range when taking dipstick readings. Dipstick is located under hood right side just opposite starter.
▷*OTHER POWERGLIDE SERVICE DATA—See "Chevrolet Powerglide" in Transmission Section.*
▷**Neutral Safety Switch, Powerglide Automatic transmission cars:** Connected in starter control circuit to prevent starter operating unless shift lever is in "N" Neutral or "P" position. Located at lower end of steering column.
▷**Neutral Safety Switch Adjustment**—*See "Powerglide Automatic Transmission" in Transmission Section.*

UNIVERSALS

Own. No. 591642 (Synchro-mesh Cars), No. 3693692 (Powerglide Cars). Cross type with surface treated trunnions and bearings. One used (in torque ball at rear of transmission).

TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Semi-floating Hypoid" Passenger Car & Half-Ton Rear Axle in Rear Axle Section.
UNIVERSAL JOINT BALL ADJUSTMENT (POWERGLIDE CARS): Improper adjustment will cause oil leakage. See "Torque Tube & Ball" in Chevrolet Special Data.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. "Revacycle" differential side gears and pinions used.
NOTE—Axles with "Double Row Pinion Bearing" are a factory option (same gear ratios).
See Rear Axle Section for complete data.
Ratio—(Synchro-mesh Cars) 4.11-1.
(Powerglide Cars) 3.55-1.
Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratios and plant as follows:

Ratio	Detroit	Buffalo
4.11-1	KA	KB
4.11-1①	KL	KM
3.55-1	KJ	KK
3.55-1①	KS	KT

①—With "Double Row Pinion Bearing."
Backlash—.005-.007". Screw adjustment.
Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.
Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.
Axle Shaft Endplay—Free fit to .014" maximum.

SHOCK ABSORBERS

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*
Delco. Chevrolet No. 5394583 (front), 5394584 (rear). Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

FRONT SUSPENSION

Front Suspension: Linked parallelogram type with direct acting shock within each coil spring.
See Front Suspension Section for complete data.
Kingpin Inclination—4° ± ½° crosswise.
Caster—Pos. ½° ± ½°. Adjustable.
Camber—Pos. ½° ± ½°. Adjustable.
Toe In—0-⅛". Loosen clamp bolts at each end of **left hand tie-rod** and turn rod, tighten clamp bolts.
CAUTION—Align tie rod ends before tightening clamp bolts (ball studs will bind if not aligned).
Toe-out on Turns—With outer wheel turned 20°, inner wheel should turn 24° ± 2°.

STEERING GEAR

Saginaw. Worm and roller type with push-pull lash adjustment.
See Steering Gear Section for complete data.

BRAKES

Service Brakes: Chevrolet-Bendix Duo-Servo single anchor hydraulic type. Hand lever applies rear wheel service brakes.
NOTE—Bonded brake lining used.
See Brake Section for complete data.
Wheel Cylinder Bore—Front wheels 1⅛", Rear 1".
Drums—Cast iron, steel web. Diameter: 11".
Lining—Molded type (bonded). Width 2" (Front), 1¾" (Rear). Thickness .202-.222". Length per wheel 21".
Clearance—Single adjusting screw located at bottom of backing plate. A snap plate covers hole in backing plate. Back off adjusting screw 7 notches from slight drag position. If wheels not free of drag, a Major Adjustment is required.
Braking Power—55.9% front wheels, 44.1% Rear.
Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders).
See Miscellaneous Section for complete data.
Windshield Wiper: Vacuum Link-&-Crank Arm type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATI N

Model Designation

Series	Serial Prefix	Model
1500	A	①ONE-FIFTY
2100	B	①②TWO-TEN
2400	C	①②BEL-AIR
1508	D	③SEDAN DELIVERY

①—CONVENTIONAL ENGINE (108 H.P.) Standard.
②—POWERGLIDE ENGINE (115 H.P.) Used when Powerglide option is added.
③—216" ENGINE (92 H.P.) Standard.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.
Starting Serial Number—001001 up, at each assembly plant.

►***SERIAL NUMBER NOTE—Serial number (example B53F 001025) includes following identification data in sequence:***

Series①	Year	Assy. Plant②	Serial No.
B	53	F	001025

①—See "Serial Prefix" in Model Designation above.
②—See "Assembly Plant Designation" following:

Assembly Plant Designation

A—Atlanta	**J**—Janesville	**O**—Oakland
B—Baltimore	**K**—Kansas City	**S**—St. Louis
F—Flint	**L**—Los Angeles	**T**—Tarrytown
		N—Norwood

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.
Starting Engine Number—1001 Up (All Engines) with prefix indicating type and plant as follows:

Engine Type & Plant Designation

Engine —	Flint	Tonawanda
235" Conventional	LAA	LAM
235" Conventional①	LAC	LAP
235" Conventional②	LAE	LAR
235" Conventional③	LAF	
235" Powerglide		LAQ
235" Powerglide③		LAS
216"	LAG	LAT
216"①	LAJ	LAV

①—With 10¾" clutch disc.
②—With Power Steering.
③—With aluminum timing gears.

TUNE-UP

►***ENGINE SURGE ON FIRST CARS (Part-throttle Float Operation at 20-25 MPH. or during 40-25 MPH. overrun):*** May be caused by too much vacuum advance or by slightly lean carburetor. Correct as follows:
1) Limit Vacuum Advance—On engines before No. LAA-391110 (without Powerglide), No. LAQ-178807 (with Powerglide), with 20° Vacuum Spark Advance Link (stamped "774"), limit link travel to 15° by inserting 1/8" cotter pin in link slot. ***See IGNITION for new type link used on later engines.***
2) Change Carburetor Metering Jet (All Engines), change Carburetor Main Well & Power Valve Support Assembly (First Powerglide Engines): ***See "Rochester B & BC" Carburetors in Carburetor Section.***

►***ENGINE PING OR COMBUSTION CHAMBER RATTLE (Engines before No. LAA-283230 (without Powerglide), No. LAQ-117209 (with Powerglide):*** Correct by retarding ignition timing at distributor, as necessary, to meet individual requirements. ***See IGNITION TIMING for different ignition setting used on later cars.***

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed (for Std. engine).

VACUUM READING: 17-21" at idling speed.
FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAPS: .035". **Plugs**—AC No. 44-5 14 mm.

►***CAUTION—Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.***

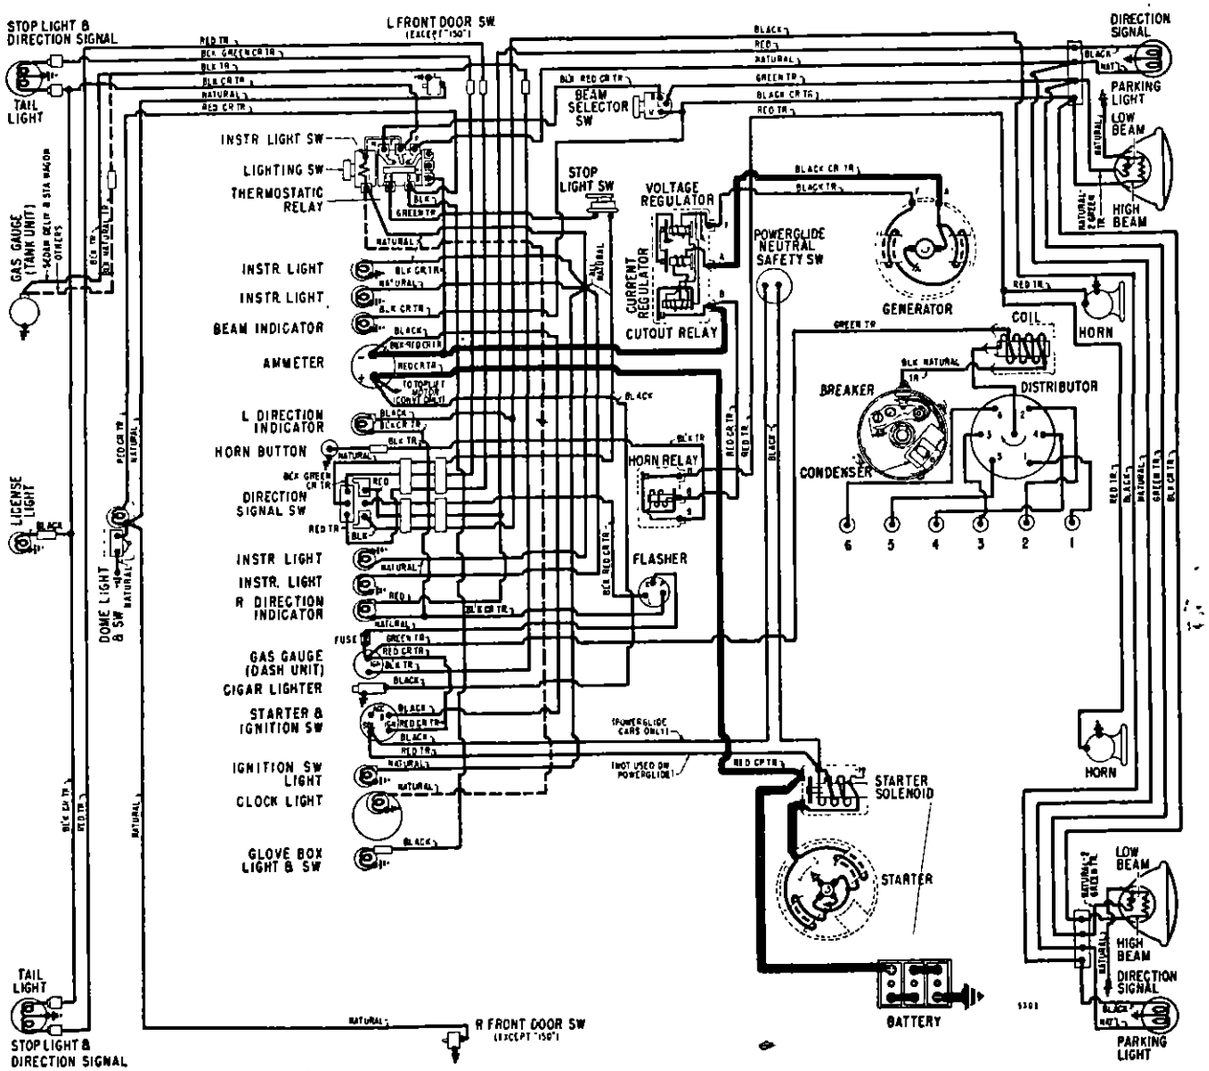
DISTRIBUTOR: Delco-Remy. As follows:

Delco-Remy No.	
1112362	216" Engine
1112389	235" Reg. Car & Trk. Engine
1112388	235" Powerglide Engine

Breaker Gap	New Points	Used Points
1112362 Distr.	.018-.024"	.015-.022"
1112388, 9 Distr.	.016-.021"	.0125-.0175"

Cam Angle—(1112362) 34° (new points), 39° (used). (1112388, 9) 38° (new points), 42° (used).
Automatic & Vacuum Advance—***See Ignition.***
Breaker Arm Spring Tension—(1112362) 17-21 ozs., (1112388 & 1112389) 19-23 ozs.

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling. 4.5 stopped.



CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: ***CAUTION—Timing changed in production as follows:***

All 216" Engines	5° BTDC.
First 235" Engines①	5° BTDC
Later 235" Engines②	2° ATDC.

①—Before Engine No. LAA-283230 (without Powerglide), No. LAQ-117209 (with Powerglide).
②—After above Engine Numbers.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

▷*ENGINE PING OR COMBUSTION CHAMBER RATTLE (First 235" Engines):* Correct by retarding ignition timing at distributor (see Octane Selector Setting) as necessary to meet individual requirements.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on '0'.

▷*TIMING MARK CAUTION:* On cars with 2° ATDC. setting, DO NOT use steel ball as timing point if ball is located between letters "UC" (will give TDC. ignition timing). On these cars, set ignition at point 7/32" after timing ball. If steel ball is located AFTER "UC," use mark for timing.
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

▷*VACUUM ADVANCE LINK CHANGE (To correct engine surge)—See Ignition for production change and recommended change on first type link.*

CARBURETION (216" Engine): Rochester No. 7004475. Downdraft type with manual choke control.
Idle Setting—1-2 turns open.
Idle Speed—450-500 RPM.
Float Level—1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle valve closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that float drops down. Distance from gasket on cover to bottom of each float must be 1 3/4". Adjust by bending tang at rear of float assembly.

▷*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*
Accelerator Pump—No seasonal adjustment.

Fuel Pump Pressure: 4 lbs. maximum.

CARBURETION (235" Conventional Engine): Rochester No. 7004915. (235" Powerglide Engine)—Rochester No. 7004478. Downdraft type with automatic choke control.

▷*CARBURETOR PRODUCTION & RECOMMENDED CHANGES (for Engine Surge correction): See "Rochester B & BC" Carburetor in Carburetor Section.*
Idle Setting—1-2½ turns open.
Idle Speed—(Synchro-mesh Cars) 475 RPM, (Powerglide Cars) 425 RPM. selector lever in "D."
Float Level—Use Gauge No. 3696192. Invert bowl cover and float assembly **but do not remove gasket.** Place gauge in position over floats with gauge tang engaged in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cut-out. Tilt assembly 90° to each side and see that floats do not touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

▷*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*

Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.

Fast Idle: With idle adjusting screw on next to highest step of fast idle cam, Gauge J-5150 (.073") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

Powerglide Throttle Linkage Adjustment: *See "Chevrolet Powerglide Transmission" in Transmission Section.*

Throttle Return Check Adjustment (235" Powerglide Engine): Have engine at full operating temperature. Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket. With parking brake set tight, place selector lever in 'D' range and adjust throttle stop screw and idle adjusting screw in combination with each other to obtain a smooth idle at 425 RPM, this adjustment should be made with choke valve in wide open position with throttle stop screw resting on low step of fast idle cam. Shut off engine. Close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench turn the adjusting screw until it just contacts the throttle lever contact arm.

▷*NOTE—If screw projects more than ½" from shaft when head of screw just touches lever contact arm, reposition throttle check on manifold stud.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

VALVE TAPPET CLEARANCE: *CAUTION—Two types of valve lifters with DIFFERENT tappet settings.*

▷**216" Engine & 235" Conventional Engine**—.006" Intake, .013" Exhaust, after engine "normalized" by running at fast idle for approximately 30 minutes or until oil temperature stabilized.

▷**235" Powerglide Engine**—No clearance adjustment required in service. If head removed or rocker arms or valve lifter replaced see Initial Setting below.

Initial Adjustment of Hydraulic Valves: Lifters must be at lowest point of travel when adjusted (piston in firing position). Remove distributor cap and turn engine until rotor is in firing position for cylinder being set. Starting with #1 cylinder, turn adjusting screw down until rocker arm just contacts the valve. This can be determined by checking push rod side play at adjusting screw end while turning the adjusting screw. At the point where no side play can be felt, continue turning the adjusting screw down 1½ turns and tighten locknut securely. Adjust each cylinder in firing order sequence (1-5-3-6-2-4).

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116478. Combination Ignition and Starting switch.

COIL: Delco-Remy No. 1115380. Above distributor.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy (as listed below). Automatic advance type with separate Vacuum Spark Control and Octane Selector.

Delco-Remy No.	
1112362	216" Engine
1112389	235" Reg. Car & Truck Engine
1112388	235" Powerglide Engine

Breaker Gap	New Points	Used Points
1112362 Distr.	.018-.024"	.015-.022"
1112388, 9 Distr.	.016-.021"	.0125-.0175"

Cam Angle—(1112362) 34° (new points), 39° (used). (1112388, 9) 38° (new points), 42° (used).

Breaker Arm Spring Tension—(1112362) 17-21 ozs., (1112388 & 1112389) 19-23 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance—1112362

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	375	0-4	750
4.5-6.5	600	9-13	1200
10-12	1200	20-24	2400
17-19	1700	34-38	3400

Automatic Advance—1112388

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

0-2	350	0-4	700
7-9	750	14-18	1500
11-13	1200	22-26	2400
16-18	1800	32-36	3600

Octane Selector: Adjustment on distributor provides 10° advance or retard from center position.

Vacuum Spark Control: Delco-Remy No. 1116076 (use with Distributor Nos. 1112388 & 1112389). Delco-Remy No. 1116061 (use with Distributor No. 1112362).

▷*VACUUM ADVANCE LINK PRODUCTION CHANGE 235" Engine beginning Eng. No. LAA-391110 (without Powerglide), No. LAQ-178807 (with Powerglide):* New link with stop at 15° point used to limit vacuum advance to 15° instead of 20°. This link stamped "845" for identification. See Surge Correction following for recommended change on earlier cars.

▷*VACUUM ADVANCE LINK RECOMMENDED CHANGE ON FIRST CARS (For Engine Surge Correction):* On cars with first type 20° link (stamped "774"), insert a 1/8" cotter pin in slot in link which will limit advance to 15° (same as later type link). See Production Change above.
Plunger Travel—(1116076) 15/64-9/32" with first type 20° link, 11/64-15/64" with later 15° link. (1116061) 17/64".

Vacuum Advance—Distr. No. 1112362

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	7-8.5
9-11	18-22	18.5

Vacuum Advance—Distr. No. 1112388 & 1112389
(First type with 20° Link)

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
9-11	18-22	13

(Later type with 15° Link)

Start	0	4-6
6.5-8.5	13-17	10

IGNITION TIMING

▷*IGNITION TIMING CAUTION: Timing changed in production as follows:*

All 216" Engines	5° BTDC.
First 235" Engines①	5° BTDC
Later 235" Engines②	2° ATDC.

①—Before Engine No. LAA-283230 (without Powerglide), No. LAQ-117209 (with Powerglide).
②—After above Engine Numbers.

▷*ENGINE PING OR COMBUSTION CHAMBER RATTLE (First 235" Engines):* Correct by retarding ignition timing at distributor (see Octane Selector Setting) as necessary to meet individual requirements.

▷*TIMING MARK CAUTION:* On cars with 2° ATDC. setting, DO NOT use steel ball as timing point if ball is located between letters "UC" (will give TDC.

ignition timing). On these cars, set ignition at point 7/32" after timing ball. If steel ball is located AFTER letters "UC," it may be used as the timing point.

Timing (with Timing Light)—Connect Timing Light to No. 1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer on "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until steel ball insert in flywheel lines up with pointer (see TIMING MARK CAUTION above), tighten clamp bolt. Check Octane Selector setting

Octane Selector Setting—Set for slight ping when accelerating engine with wide open throttle.

CARBURETOR

216" ENGINE TYPE

ROCHESTER MODEL B, No. 7004475. Single barrel down-draft type, with concentric bowl and twin floats and manual choke control.

►*CARBURETOR PRODUCTION & RECOMMENDED CHANGES (for Engine Surge correction): See "Rochester B & BC" Carburetor in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*

Metering Jets: *See "Rochester Jet Specifications" in Carburetor Section.*

Throttle Kicker—Operated by cam on choke lever. Opens throttle when choke closed, no adjustment.

235" ENGINE TYPE

ROCHESTER MODEL BC, No. 7004478 & 7004915. Downdraft type with automatic choke control. (Throttle Return Check used on No. 7004478).

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump Setting): *See Tune-Up.*

Metering Jets: *See "Rochester Jet Specifications" in Carburetor Section.*

Throttle Return Check—*See Tune-Up.*

Powerglide Throttle Linkage Adjustment: *See "Chevrolet Powerglide Transmission" in Transmission Section.*

CARB. EQUIPMENT

Air Cleaner: AC Oil-wetted type or Oil-bath type.

Filter Elements—Oil Wetted Type, AC No. 6 (Cars), No. 2 (Trks.). Oil Bath Type, AC No. 23 (Cars), No. 9 (½, ¾, 1, 1½ Ton Trks.), No. 7S (2 Ton Trks.).

Fuel Pump: AC Type AF. Diaphragm type Std.

Replacement Pump—AC No. 9798 (Fuel only). AC No. 9797 (Fuel & Vacuum) optional.

Pressure—4 lbs. maximum.

See Carburetion Equipment Section for complete data.

Gasoline Gauge: AC Electric type.

Dash Unit—AC No. 1517598.

Tank Unit—*AC No. 1517761 (Pass. Cars), No. 1517100* (Sta. Wgn. & Sedan Del.).

See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA6-W—6 volt, 15 plate, 100 ampere hour capacity.

Starting Capacity—120 amperes for 20 minutes.

Grounded Terminal—Negative.

Location—In engine compartment on right side.

STARTER

Delco-Remy No. 1107109. Armature No. 1917855.

Drive—Overrunning Clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid Switch No. 1118135 mounted on starter and controlled by Ignition & Starting Switch No. 1116478. Turn key full RIGHT against spring tension to start.

Neutral Safety Switch (Powerglide Cars only): Delco-Remy No. 1997845 (without Back-up Light & Power Steering). No. 1998040 (with Back-up Light and Power Steering). Connected to starter control circuit, prevents starter operating unless selector lever in "N" or "P" position.

►**Neutral Safety Switch Adjustment**—*See "Powerglide Transmission" in Transmission Section.*

GENERATOR

Delco-Remy. Two-brush types as listed below.

Model	Generator No.	Armature No.
Standard	1100018	1925348
Taxi	1102793	1924893
State Police	1105008	1925556
City Police	1105009	1925630

Performance Data—Cold

Generator	Amperes①	Volts	R.P.M.
1100018	45	8.0	3000
1102793	45	8.0	2250
1105008	50	7.0	1900
1105009	40	7.0	1540

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—28 ozs.

Field Current—1.87-2.0 amps. (1100018, 1102793). 1.77-1.93 amps. (1105008, 1105009). All at 6.0 volts.

Belt Adjustment: Loosen clamp bolt, swing generator out for 7/16"-1/2" belt deflection at point midway between pulleys with 15 lbs. pressure. *CAUTION*—Above setting applies to new narrow fan belts. Recheck new belts after 1000 miles of operation.

REGULATOR

Delco-Remy. Voltage and current regulators.

Model	Regulator No.	For Generator No.
Standard	1118725	1100018
Taxi	1118725	1102793
State Police	1118722	1105008
City Police	1118721	1105009

See Electrical Equipment Section for complete data.

CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct high charging rate or high voltage.

Cutout Relay (All)

Cuts In—5.9-6.3 volts hot (set to 6.4 volts hot).

Contact Gap—.020" (same for both sets).

Air Gap—.020" (with contacts just closed).

Voltage Regulator

Regulator No.	Setting (Hot)①	Set to (Hot)
1118725	7.0-7.7 volts	7.4 volts
1118722	6.8-7.5 volts	7.2 volts
1118721	6.8-7.5 volts	7.2 volts

①—Regulator is over-compensated for temperature.

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Regulator No.	Set To (Hot)	Range
1118725	47 amps.	45-51 amps.
1118722	50 amps.	48-52 amps.
1118721	42 amps.	40-46 amps.

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: *Guide "Sealed Beam" type.*

See Electrical Equipment Section for complete data.

Beam Indicator—Red dot below '50' figure on speedometer. Lighted when upper beams in use.

Autronic Eye: Automatic beam deflector. *See Electrical Equipment Section for complete data.*

Directional Signal: *Std. See Elect. Equip. Sect.*

Switches

Lighting—Delco-Remy No. 1995048.

Instrument—Part of Lighting Switch (Rheostat operated by turning light switch knob).

Beam Selector—Delco-Remy No. 1997008.

Stop Light—Delco-Remy No. 1997913. Mechanical type on underside of toeboard.

MISC. ELECTRICAL

►*DASH PANEL INSPECTION HOLE FOR ACCESS TO WIRING ON BACK SIDE OF INSTRUMENTS—Located on left side under hood with removable door screwed to dash.*

►*WIRE HARNESS INTERFERENCE (CONVERTIBLE)—Make sure that wire harness is secured behind clip in left door hinge lower hinge box. If not enough slack, remove kick-pad for access to other harness clips.*

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assembly). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable.

HORNS: Delco-Remy No. 1999681 (Low note, Right); No. 1999682 (High note, Left). Vibrator type operated by relay.

Horn Relay: Delco-Remy No. 1116775.

Contact Gap—.027". **Air Gap**—.014" (closed).

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

ENGINE

216" & 235" C NVENTIONAL

ENGINE SPECIFICATIONS: *Own make. 6 cyl., valve-in-head. Used on all models except Powerglide.*

►*TWO ENGINE SIZES USED: 216" & 235". See Passenger Car & Truck Model Identification for engine application.*

Engine	Bore	Stroke	Displacement
216"	3½"	3¾"	216.5 cu. in.
235"	3 9/16"	3 15/16"	235.5 cu. in.

Engine	Comp. Ratio	Rated HP	Developed HP
216"	6.6-1	29.4	92 at 3400 RPM
235"	7.1-1	30.4	108 at 3600 RPM

Compression & Vacuum Readings—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS: *See Chevrolet Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*

FRONT END SHEET METAL REMOVAL (For Engine Work): *See Chevrolet Special Data.*

PISTONS: Passenger Cars. Cast alloy iron, flat head, cam ground, tin plated type with slipper skirt.

Truck Piston—Same as Pass. cars except heavier. Truck pistons marked with small boss on under side of each pin boss. *CAUTION*—Do not interchange pistons (must be same type in one engine).

Weight—(216" Engine) 27.392 ozs. (235" Engine) 31.456 ozs. Without pin.

CONTINUED ON NEXT PAGE

ENGINE
216" & 235" C NVENTIONAL (Cont.)

Removal—Pistons and rods removed from above.
Clearance—Top: .0155-.0235". Skirt: Selective fit. See Fitting New Pistons below.
Replacement Pistons: Furnished Std. size, .005", .010", .020", .030", .040" oversize.
NOTE—To install new pistons, hone cylinders for .005" oversize, rebore and hone for other sizes (rebore .002" less than piston oversize, finish by honing for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".
Fitting New Pistons: Use feeler gauge between piston and cylinder wall at right angle to pin bosses. Piston should pass through bore with light pressure on .0015" feeler, and lock on .003" feeler.
NOTE—New pistons fitted with bushings and pins. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.
PISTON RINGS: Three rings used per piston.

216" Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.③	1/8"	.005-.015"	.0015-.003"
#2 Comp.③	1/8"	.005-.015"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

235" Conventional Engine

Ring	Width	End Gap①	Side Clearance
#1 Comp.③	3/32"	.007-.017"	.0015-.003"
#2 Comp.③	1/8"	.005-.015"	.0015-.003"
#3 Oil	3/16"	.005-.015"	.002-.0035"

①—End gap worn limit 1/32" maximum.
③—Taper face type. ③—Deep section twist type.

►*SERIES 5000 & 6000 TRUCK RING CHANGE:* Chrome upper compression ring used beginning with Engine No. LEA-58005.
RING INSTALLATION NOTE: Install compression rings with side marked "TOP" up.
Replacement Rings: Furnished Std. and .005", .010", .020", .030", .040" Oversize. *NOTE*—Chrome upper compression ring (as used on later trucks—above) may be used on all 1950-53 "235" engines except Powerglide engines with aluminum pistons.
PISTON PIN: Diameter—.8645-.8650". **Length**—3.135-3.165". Pin locked in rod (piston bronze bushed).
Pin Fit in Piston—Thumb push fit (at room temp.).
Replacement Pins: Std., .003", .005", .010" oversize. NOTE—New pistons fitted with pins and bushings. If bushings reamed, use piston pin bushing fixture to insure reaming at right angles to piston skirt.
CONNECTING ROD: Length 6 13/16". **Weight** 30.88 ounces.
Crankpin Journal Diameter—2.311-2.312".
Lower Bearing—Spun high-lead, thin-wall babbitt.
Clearance—.0003-.0013" selective fit (see Bearing Adjustment following).
Sideplay—.004-.012" at lower end (rod to crankpin), .015" minimum at upper end (rod to piston pin boss).
Bearing Adjustment: Laminated shims. Remove shims equally at both sides to secure 'snap fit' (rod tight to hand but should snap from side to side with light tap of eight ounce hammer), then replace one .002" shim on one side for clearance (if unequal number, place extra shim on camshaft side). Bearing clearance correct when rod can be snapped back and forth on crankpin with one hand (grasp bearing cap between thumb and index finger to test).
Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinder with numbers and pin clamp bolt toward camshaft side. Install oil dippers on rod with mouth toward camshaft side of engine. Check dipper height.
Dipper Height Adjustment—*See "Oiling System" in Chevrolet Special Data.*
CRANKSHAFT: Four bearing type with integral counterweights and vibration dampener.
Vibration Dampener—*See Chevrolet Special Data.*
Journal Diameters—(1) 2.6835-2.6845"; (2) 2.7145-2.7155"; (3) 2.7455-2.7465"; (4) 2.7765-2.7775".
NOTE—Journal taper or out-of-round limits .001". Run-out limits for Nos. 2 & 3 journals is .002".
Bearing Type—Steel-backed precision type thin-walled babbitt. *Boring or reaming not required.*
►*CAUTION—Bearing Nos. 1 & 2 are similar in appearance but MUST NOT BE INTERCHANGED. No. 2 marked by letter "I" in oil grooves.*
Clearance—.0005" min., .003" max. (new bearings). Service limits .0005" min., .0045" max.
►*NOTE—Precision bearings can be replaced singly.*
Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).
Replacement Bearings: Precision type bearings furnished for all engines Std. size and .002", .010", .020", .030" undersize.
Bearing Installation—Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*
Bearing Cap Installation—Bearings caps Nos. 2 & 3 marked for identification; (2) marked "Front"; (3) marked "Rear." Install in engine with "Front" to front of engine, and "Rear" to rear of engine. *NOTE—Rear intermediate bearing (3) is special flanged type, and takes crankshaft end thrust.*
Crankshaft Oil Seal Servicing: *See Chevrolet Special Data for Front and Rear Oil Seals.*
End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**—.003-.009".
CAMSHAFT: Four bearing type. Helical gear drive.
►*CAUTION—Camshafts used in these engines are different and are not interchangeable. Camshaft for 235" Powerglide Engine must not be used in 235" Conventional Engine.*

Camshaft Identification

Engine	Camshaft No.	Forging No.
216"	838733	①838733
235" Conventional	3660474	②3660474
235" Powerglide	3701414	3701414

①—Number stamped on shaft between #11 & #12 cams.
②—Number stamped on shaft between #10 & #11 cams.
Journal Diameters—(1) 2.0282-2.0292"; (2) 1.9657-1.9667"; (3) 1.9032-1.9042"; (4) 1.8407-1.8417".
NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).
Bearing Type—Steel-backed, babbitt-lined bushings (staked in place). *NOTE*—New bearings must be line-reamed.
Clearance—.002-.004".
End Thrust—Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).
Endplay Adjustment—*See "Timing Gear Installation" in Chevrolet Special Data.*
Endplay—Free fit to .003" maximum.
Timing Gears: Steel crankshaft gear. Bakelite and fabric composition camshaft gear.
Maximum Gear Runout—.003" crankshaft gear. .004" camshaft gear.
Replacement Timing Gears & Installation—*See Chevrolet Special Data.*
Timing Gear Backlash: .003-.004".
Camshaft Setting: Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.
VALVES:

216" Engine

	Head Diam.	Stem Diam.	Length
Intake	1 41/64"	.3410-.3417"	6.26-6.29"
Exhaust	1 1/2"	.3400-.3407"	4.917-4.947"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.0027"
Exhaust	45°	.3118"	.002-.0037"

235" Conventional Engine

	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3400-.3407"	4.902-4.932"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.2941"	.001-.0027"
Exhaust	45°	.3118"	.002-.0037"

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*
Valve Guides: Precision type. Pressed in head.
Valve Guide Installation—*See "Valve System" in Chevrolet Special Data.*
Valve Springs: Install springs with closed coil end down. Check with spring tester and replace if not within limits shown below.
Free Length—2 1/8" (216" Engine). 2 5/32" (235" Engine).

Spring Specifications—216" Engine

	Pressure	Length
Valve Closed	53-63 lbs.	1.821"
Valve Open	124-140 lbs.	1.505"

Spring Specifications—235" Engine

	Spring Pressure		Length
	Intake	Exhaust	
Valve Closed	53-63 lbs.	62-68 lbs.	1.821"
Valve Open	120-140 lbs.	155-165 lbs.	1.505"

Valve Lifters: Plain barrel type with push rod seat brazed on upper end.
Diameter—.989-.990".
Clearance—.001" (Selective free fit).

ENGINE
235" POWERGLIDE

ENGINE SPECIFICATIONS: Own make. 6 cyl., valve-in-head, with hydraulic valve lifters, aluminum pistons, and force-feed lubrication.
►*ENGINE NOTE—This engine used on Powerglide Models only.*
Bore—3 9/16". **Stroke**—3 15/16".
Displacement—235.5 cu. ins.
Rated Horsepower—30.4.
Developed Horsepower—115 at 3600 RPM.
Compression Ratio—7.5-1.
Compression & Vacuum Reading—*See Tune-Up.*
ENGINE REMOVAL: *See Chevrolet Special Data.*
CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*
PISTONS: Aluminum alloy, cam ground, tin plated.
Removal—Pistons and rods removed from above.

ENGINE
235" POWERGLIDE (Cont.)

Clearance—Top Land: .0115-.0135". Skirt: .0005-.0011" Selective fit. See Fitting Pistons below.
NOTE—When installing new pistons, hone cylinders for .005" Oversize, and rebore and hone for greater oversizes (rebore cylinders .002" less than piston oversize, then finish by honing for piston clearance—see fit below). Cylinder bore taper and out-of-round must not exceed .001".

Replacement Pistons: Furnished Std. size, .020", .030", .040" Oversize. *STD. PISTON NOTE*—Std. pistons furnished in four sizes with size stamp and size range as follows: S4 (3.5625-3.5630"), S5 (3.5630-3.5635"), S6 (3.5635-3.5640"), S7 (3.5640-3.5645").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

►*CAUTION—Above procedure supersedes original fitting instructions for aluminum pistons.*

PISTON RINGS: Three rings used per piston.

Ring	Width	End Gap①	Side Clearance
#1 Comp.②	3/32"	.007-.017"	.0015-.003"
#2 Comp②	3/32"	.007-.017"	.0015-.003"
#3 Oil③④	3/16"	.005-.015"	.002-.0036"

①—End Gap Worn Limit 1/32" max.
②—Taper face type. ③—Deep section twist type.
④—Expander behind oil ring.
NOTE—Compression ring side marked "TOP" up.

►*CHROME EXPANDER TYPE REPLACEMENT RINGS:* Ring sets furnished Std., .020", .030", .040" Oversize. Use these rings only with Powerglide aluminum pistons.

Replacement Rings: Std., & .005", .010", .020", .030", .040" oversize.

PISTON PIN: Diameter—.8660-.8665". **Length**—3.198-3.228". Locked in rod. No bushing used in piston.
Pin Fit in Piston—Thumb push fit (at room temp.). *To check fit, with piston and pin at 70°F,* apply light oil film to pin, insert pin vertically in one piston boss (one end of pin in either piston boss). Pin should hold own weight but should install easily with thumb pressure.

Replacement Pins: Furnished Std., .0015", .003", .005" oversize.

CONNECTING ROD: Length 6 13/16". **Wgt.** 31.76 ozs.

►*CONNECTING ROD BOLT CAUTION:* Bolts are No. 3701531 special type with knurled section to pilot bearing cap (special type for pressure lubrication). *CAUTION*—DO NOT use regular No. 3835449 bolts as used in other engines (May cause early bearing failure).
Crankpin Journal Diameter—2.311-2.312".
Lower Bearing—Replaceable precision type. Replace bearing, do not file rod or cap.
Clearance—.0007-.0028" (see bearing adjustment below).
Sideplay—.005-.012", at lower end.

Replacement Bearings: Std., .001", .002", .010", .020" Undersize.

Bearing Adjustment: Not adjustable. Replace bearings.

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CRANKSHAFT: Four bearing type with integral counter-weights and vibration dampener.

►*MAIN BEARING PRODUCTION CHANGE—Beginning with Serial No. LAQ96435 main bearings have wider grooves than used in early production.*
Vibration Dampener—*See Chevrolet Special Data.*
Journal Diameters—(1) 2.6835-2.6845"; (2) 2.7145-2.7155"; (3) 2.7455-2.7465"; (4) 2.7745-2.7775".
NOTE—Journal taper or out-of-round limits .001". Run-out limits for Nos. 2 & 3 journals is .002".
Bearing Type—Steel backed precision type thin-walled babbitt. *Boring or reaming not required.*
Clearance—.0005" min., .003" max. (new bearings). Service limits .0005" min., .0045" max.

►*NOTE—Precision type bearings can be replaced singly.*

Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).

Replacement Bearings: Precision type bearings furnished for all engines Std. size, and .002", .010", .020", .030" undersize.

Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Oil Seal Servicing: *See Chevrolet Special Data for Front & Rear Oil Seals.*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**—.0035-.0095".

CAMSHAFT: Four bearing type. Helical gear type.

►*CAMSHAFT BEARING PRODUCTION CHANGE—Rear bearing has new wider groove beginning with Engine Serial No. LAQ73552.*

►*CAUTION—CAMSHAFT USED IN POWERGLIDE 235" ENGINE NOT INTERCHANGEABLE WITH CAMSHAFT USED IN CONVENTIONAL 235" ENGINE.*
Identification—Forging No. 3701414 cast in shaft.
Journal Diameters—(1) 2.0282-2.0292"; (2) 1.9657-1.9667"; (3) 1.9032-1.9042"; (4) 1.8407-1.8417".
NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).
Bearing Type—Steel-backed, babbitt lined bushing (staked in place). *NOTE*—New bearings must be line-reamed.
Clearance—.002-.004".

End Thrust: Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).
Endplay Adjustment—*See "Timing Gear Installation" in Chevrolet Special Data.*
Endplay—Free fit to .003" maximum.

Timing Gears: Steel crankshaft gear. Bakelite and fabric composition camshaft gear.

Replacement Timing Gears & Installation: *See Chevrolet Special Data.*

Timing Gear Backlash: .003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must be lined up and directly opposite each other.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1⅞"	.3410-.3417"	6.364-6.394"
Exhaust	1½"	.3400-.3407"	4.902-4.932"

	Seat Angle	Lift	Stem Clearance
Intake	30°	.3275"	.001-.0027"
Exhaust	45°	.3275"	.002-.0037"

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.
Valve Guides Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install valve springs with closed coil end down. Check with spring tester and replace if not within limits shown below.
Free Length—2 5/32".

Spring Specifications

	Pressure		Length
	Intake	Exhaust	
Valve Closed	62-68 lbs.	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	155-165 lbs.	1.505"

Valve Lifters: Hydraulic type.
See Miscellaneous Section for complete data.
Initial Adjustment—(Required only when installing cylinder head or when adjusting screw setting has been disturbed). *See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

►*REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and pushrods use a rack to keep them in proper sequence. Install in their original location when reassembling.*

VALVE TIMING

►*VALVE TAPPET CLEARANCE CAUTION—Two types of valve lifters used. Conventional type in 216" Engine and in 235" Conventional Engine. Hydraulic type used in 235" Powerglide engine.*

►**CONVENTIONAL TYPE SETTING (216" & 235" Conventional Engine):** .006" Intake, .013" Exhaust, after engine 'normalized' by running at fast idle for approximately 30 minutes or until oil temperature stabilized.

►**HYDRAULIC TYPE SETTING (235" Powerglide Engine):** NO CLEARANCE ADJUSTMENT REQUIRED IN SERVICE. *See "Valve Tappet Clearance Adjustment" in Chevrolet Special Data.*
Initial Adjustment (Hydraulic Lifters)—Required when cylinder head removed or when adjusting screws disturbed. *See "Valve Tappet Clearance Adjustment" in Chevrolet Special Data.*

VALVE TIMING: See Camshaft Setting above.

Valve Timing (Except Powerglide)

Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

Valve Timing (Powerglide Engine)①

Intake Valves—Open 16° BTDC. Close 48° ALDC.
Exhaust Valves—Open 46° 30' BLDC. Close 17° 30' ATDC.
①—**Theoretical valve timing test with Hydraulic valve lifters.**

Valve Timing (Conventional Type Lifter): Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right face of flywheel housing, mount dial indicator on rocker arm shaft with stem contacting #1 exhaust valve adjusting screw, set dial indicator at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO, plus or minus .004". Reset tappet clearance to correct running clearance.
Hydraulic Type Lifters—Use same procedure as with conventional lifter except that it is necessary to replace the hydraulic lifter operating #1 exhaust valve with a conventional type lifter while making the check.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

LUBRICATION
216" & 235" CONVENTIONAL

Engine Oiling System (216" & Conventional 235" Engine): Pressure and positive splash system. Pressure to main bearings, timing gears, and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from trough (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by the Oil Distributor Valve on left side of engine.

▷*CAUTION*—Engine lubrication dependent on adjustment of connecting rod dippers, oil troughs, and nozzles which must be **checked each time the oil pan is removed** (requires special gauges). *See "Oiling System" in Chevrolet Special Data.*

Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).

Normal Oil Pressure—14 lbs. at 2000 RPM.

Filter Element—AC No. P115 or C115. Change element every 5000 miles.

Oil Pressure Regulator (Exc. Powerglide Engine): Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine, which opens at 15 lbs.

Oil Pressure Gauge: AC No. 1507701 (Not electric).

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.

Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil Pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation: Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

235" POWERGLIDE

235" Powerglide Engine—Full pressure lubrication to main & connecting rod bearings, camshaft bearings, hydraulic valve lifters, timing gears, and to valve rocker arm assembly. Piston and cylinder walls lubricated by oil squirt holes in connecting rod.

▷*OIL PRESSURE PRODUCTION CHANGE (POWERGLIDE ENGINE)—New Oil Pump Relief Valve Spring, Part No. 3702367 entered production at Serial No. LAQ-63342. Pump pressure is increased with new spring to 45 lbs. This change made to overcome hydraulic valve lifter leakdown at high speeds.*

Crankcase Capacity—5½ qts. (dry), 5 qts. (refill).

Normal Oil Pressure—35 lbs. (first cars), 45 lbs. (later cars). *See Oil Pressure Production Change.*

Oil Pressure Regulator: Located in oil pump cover. Non-adjustable type. Relief Spring is No. 3702367 (45 lb. type), superseding No. 3835896 (35 lb. type).

Oil Pressure Gauge: AC No. 1507960 (not electric).

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.

Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil Pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Crankcase Ventilation: Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

COOLING

Cooling System: Positive circulation with water pump. (235" Engines have "by-pass" cooling which allows a more even engine warm-up).

Capacity—15 qts. (16 qts. with heater).

Pressure Cap—AC No. 850501 (marked 501/4#) Radiator Filler Cap. 4-lb. type.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.

See Water Pump Section for complete data.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: Harrison. In cylinder head outlet.

Std.—No. 3123993 (stamped 151). 151° type. Can be used for alcohol anti-freeze.

Opti.—No. 3123994 (stamped 160) 160° type or No. 3123995 (stamped 180) 180° type. Use for permanent anti-freeze.

Temperature Gauge: AC No. 1512456 (not elec.).

CLUTCH

Own Make—Diaphragm spring, single plate, dry disc type. NOTE—9" clutch used on all cars (except Powerglide).

See Clutch Section for complete data.

Facings—Moulded asbestos. 2 required as follows: **6⅛" I.D., 9⅛" O.D., .132-.138" thick.**

Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Synchro-mesh Transmission—Three-speed, synchro-mesh (2nd. & High), sliding gear (Low & Rev.).

▷*PRODUCTION CHANGE TO REDUCE GEAR RATTLE IN 2ND. & HIGH AND REPLACEMENT PARTS CAUTION: See "Chevrolet Synchro-mesh" in Transmission Section.*

▷*GEARSHIFT LEVER RATTLE: May be caused by loose spring in lever. See "Chevrolet Synchro-mesh Transmission" in Transmission Section.*

Transmission Control & Linkage: *See Transmission Section for complete data.*

Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint collar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove four capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts, install support under rear of engine. Remove two upper transmission-to-clutch housing capscrews and insert guide pins. Remove clutch underpan and two lower transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

POWERGLIDE TRANSMISSION

Powerglide Transmission with Automatic Shift (used with 235" Powerglide Engine): Torque Converter and hydraulically operated planetary gear unit with manual control. This unit different from previous type in having AUTOMATIC SHIFTING and new Torque Converter.

▷*GEARSHIFT LEVER RATTLE: May be caused by loose spring in lever. See "Chevrolet Synchro-mesh Transmission" in Transmission Section (corrective procedure same regardless of transmission type).*

▷*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS—See "Chevrolet Powerglide" in Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when the oil gets down to the "Add One Quart" mark on the dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing a "AQ-ATF" marking on container.

Capacity—10 qts. (refill), 11 qts. (after overhaul).

▷*POWERGLIDE DRAINING CAUTION*—Converter drain plug eliminated on transmissions beginning No. LT-123492 D-7-D. On these transmissions, drain transmission case only, add 5 qts. of fluid initially, recheck after idling engine.

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in the "D" range when taking dipstick readings. Dipstick is located under hood right side just opposite starter.

▷*OTHER POWERGLIDE SERVICE DATA—See "Chevrolet Powerglide" in Transmission Section.*

▷**Neutral Safety Switch, Powerglide Automatic transmission cars:** Connected in starter control circuit to prevent starter operating unless shift lever is in "N" Neutral or "P" position. Located at lower end of steering column.

Neutral Safety Switch Adjustment—*See "Powerglide Automatic Transmission" in Transmission Section.*

UNIVERSALS

Own Make. No. 591642 (exc. Powerglide), No. 3704232 (Powerglide Cars). Cross type with surface-treated trunnions and bearings. One used (in torque ball behind transmission rear support).

TORQUE TUBE BUSHING INSTALLATION: *See Rear Axle Section for complete data.*

▷**UNIVERSAL JOINT BALL ADJUSTMENT (POWERGLIDE MODELS):** Improper adjustment will cause leakage. *See "Torque Tube & Ball" in Chevrolet Special Data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. "Revacycle" differential side gears and pinions used.

►*PROPELLER SHAFT COUPLING PRODUCTION CHANGE:* Later axles have coupling which is loose fit on rear axle pinion shaft (changed from hard press fit) and this coupling must be used with new type Pinion Bearing Nut No. 3703782 and Coupling Spring No. 3703792 (to provide tension on shaft). *See Rear Axle Section for complete data.*

Ratio—As follows (see Identification Note).

	Axle Ratio	Serial No. Prefix
Cars (exc. Powerglide)	3.70-1	LL- or LM-
Powerglide Cars	3.55-1	LS- or LT-
Sedan Delivery	4.11-1	LA- or LB-

Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratios (see Ratio table above).

Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out. **Axle Shaft Endplay**—Free fit to .014" maximum.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco Chevrolet No. 5519443 (front), 5519444 (rear). Direct acting, non-adjustable, sealed (non-refillable) type. Serviced by replacement.

FRONT SUSPENSION

Front Suspension: Linked parallelogram type with direct acting shock within each coil spring. *See Front Suspension Section for complete data.*

Kingpin Inclination—4° ± ½° crosswise.

Caster—Pos. ½° ± ½°. Adjustable.

Camber—Pos. ½° ± ½°. Adjustable.

Toe-In—¼" ± 1/16. *This setting supersedes previous specification.* Adjust by loosening clamp bolts at each end of left hand tie-rod and turning rod.

CAUTION—Align tie rod ends before tightening clamp bolts (ball studs will bind if not aligned).

Toe-out on Turns—With inner wheel turned 20°, outer wheel should be turned 17°40'.

STEERING GEAR

Standard (All Models): Saginaw. Worm and roller type with push-pull adjustments. *See Steering Gear Section for complete data.*

Power Steering (Optl. Pass. Cars): Saginaw (G. M.). Ball-bearing Worm and Nut type steering gear with hydraulic power. *See "Saginaw (G. M.) Power Steering" in Steering Section for complete data.*

BRAKES

Service Brakes: Chevrolet-Bendix Duo-Servo single anchor hydraulic type. Hand lever applies rear wheel service brakes.
NOTE—Bonded brake lining used.
See Brake Section for complete data.

Wheel Cylinder Bore—Front wheels 1⅛", Rear 1".

Drums—Cast iron, steel web. Diameter: 11".

Lining—Molded type (bonded). **Width**—2" (Front Wheels), 1¾" (Rear Wheels). **Thickness** .202-.222".

Length per Shoe—9.3125" (Primary), 11.6875" (Secondary).

Clearance—Single adjusting screw located at bottom of backing plate. A snap plate covers hole in backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjusting.

CAUTION—Above clearance setting supersedes previous specifications.

Braking Power—55.9% front wheels, 44.1% Rear.

Hand Brake: See Service Brakes above.

MISC. MECHANICAL

Convertible Top Control: Hydro-Lectric type (hydraulic actuation with motor-driven pump supplying oil under pressure for power cylinders). *See Miscellaneous Section for complete data.*

Windshield Wiper: Vacuum type, cable operated.

►*WINDSHIELD WIPER PRODUCTION CHANGE & ADJUSTMENT CAUTION:* Wiper drive changed approximately February 1953, and first and later types adjusted differently. *See Miscellaneous Section for complete data.*

MODEL IDENTIFICATION

Serial Prefix

Series	1952	1953	Wh'lbase	Type
3100	KP	H	116"	Half-Ton

6500S	VYS	SX	179"	1½-Ton Spec.

SERIAL NUMBER: Stamped on plate on cab left hinge pillar (On plate on left hand cowl inner panel on Flat Face Cowl Models). *NOTE—DIFFERENT numbering system used each year as follows:*

▷**1952 SERIAL NUMBERS:** 1001 Up (All Models) with Serial Prefix as listed in model table above. *NOTE*—Number preceding serial prefix indicates Assembly Plant as listed below, letter following serial prefix indicates month (A—January, etc.).

1952 Assembly Plant Designation

1—Flint, 2—Tarrytown, 3—St. Louis, 5—Kansas City, 6—Oakland, 8—Atlanta, 9—Norwood, 14—Baltimore, 20—Los Angeles, 21—Janesville.

▷**1953 SERIAL NUMBER:** 001001 Up (All Models). *NOTE—Complete serial number (Example "V53K001-001") includes following data in sequence:*

Series①	Year	Assy. Plant②	Serial No.
V	53	K	001083

①—Serial Prefix in model table above.
②—See 1953 Assembly Plant designation below.

1953 Assembly Plant Designation

A—Atlanta, B—Baltimore, F—Flint, J—Janesville, K—Kansas City, L—Los Angeles, N—Norwood, O—Oakland, S—St. Louis, T—Tarrytown.

ENGINE NUMBER: Stamped on boss on right side of engine block to rear of distributor.

First Engine Number—1001 for **each year** with prefix indicating model and engine plant:

216" ENGINE

	Flint		Tonawanda	
Truck Series	1952	1953	1952	1953

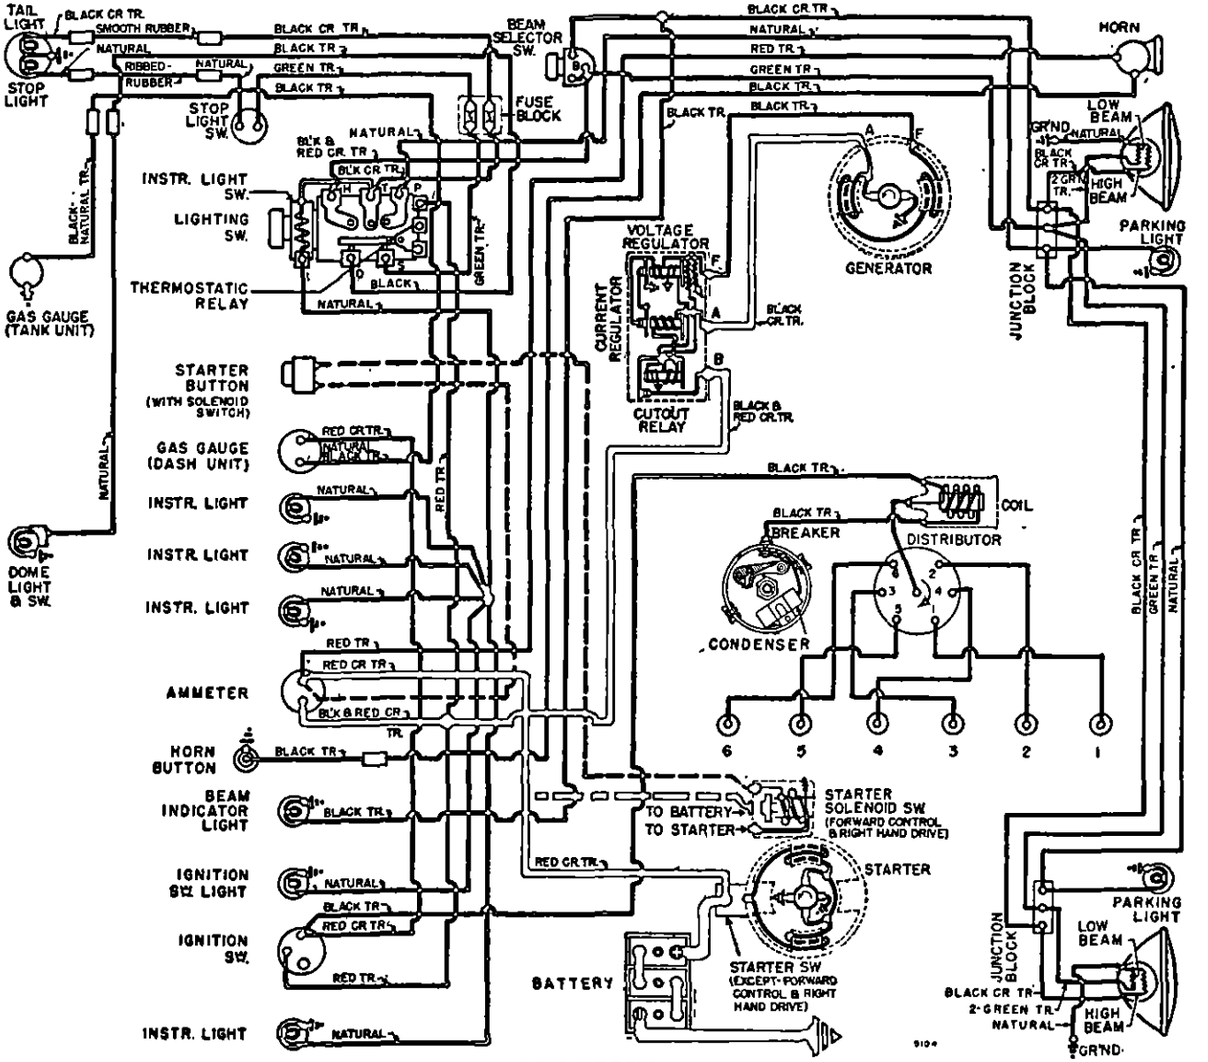
①—With Heavy Duty 10¾" Clutch Disc.
②—With "Hydrovac" Brake Power Unit.
③—With Positive Crankcase Ventilation.
④—With Positive Crankcase Ventilation (1953 only) and "Hydrovac" Brake Power Unit.
⑤—With Updraft Carburetor.

TUNE-UP



COMPRESSION PRESSURE: 110 lbs. minimum (all cylinders equal within 5-10 lbs.) at cranking speed.
VACUUM READING: Steady 17-21" at idling speed.
FIRING ORDER: 1-5-3-6-2-4.
SPARK PLUG GAPS: .035".
Plugs—AC No. 44-5 Comm. 14 mm. type.
▷***CAUTION—Tighten plugs to 20-25 ft. lbs. torque or finger-tight plus one-half turn.***

DISTRIBUTOR: Delco-Remy No. 1112362 (216" Engine), No. 1112363 (1952 235" Engine), No. 1112389 (1953 235" Engine). Automatic and vacuum advance type with Octane Selector adjustment.

Breaker Gap:	New Points	Used Points
1112362, 63 Distr.	.018-.024"	.015-.022"
1112389 Distr.	.016-.021"	.0125-.0175"

Cam Angle—(1112362, 63) 34°, new points; 39°, used. (1112389 Distr.) 38° (new points), 42° (used points).
Breaker Arm Spring Tension—(1112362, 63) 17-21 ozs. (1112389) 19-23 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

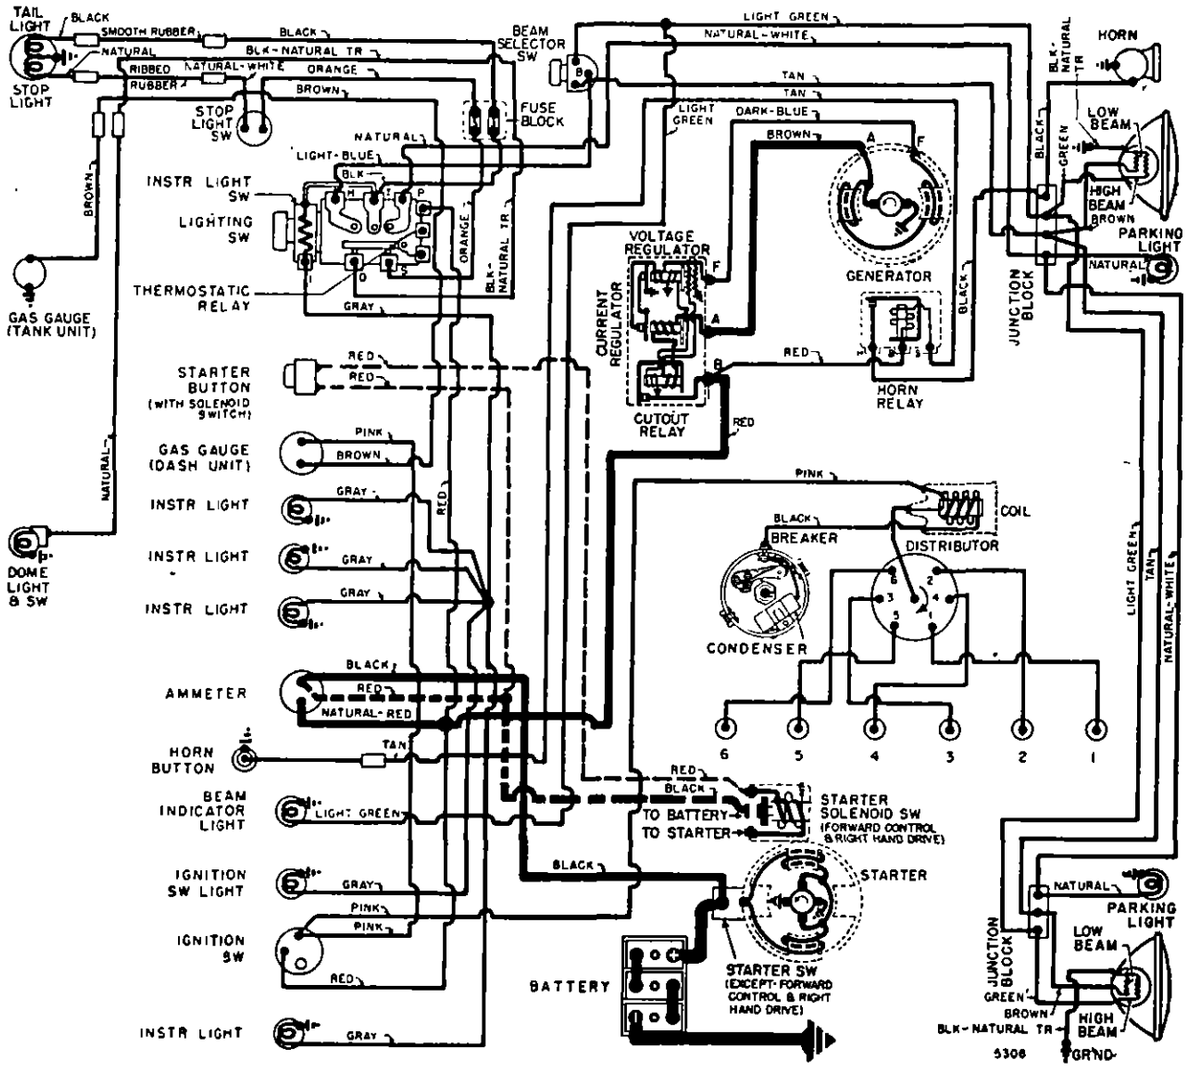
COIL: Delco-Remy No. 1115380 (Exc. C.O.E. Models). Delco-Remy No. 1115378 (C.O.E. Models). On right side of engine above distributor.

1952 MODELS

Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

IGNITION TIMING: 5° BTDC.
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O.'
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.
Timing Procedure—*See Ignition Timing.*



CARBURETION: (Except C.O.E. & Fwd. Control)—Rochester B, (216" Engine) No. 7004475, (1952 235" Engine) No. 7004476, (1953 235" Engine) No. 7004468. Downdraft type with manual choke control.

Idle Setting—1-2½ turns open (turn screw out for richer mixture).

Idle Speed—450-500 RPM.

Float Level—1 5/16" from bottom of each float to cover gasket **(do not remove gasket)** with cover inverted so that needle closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.

►***CAUTION—Both floats must be set alike and must not be twisted out of alignment.***

1953 MODELS
PLASTIC COVERED WIRE COLORS SHOWN. SEE "EARLY PRODUCTION WIRE COLORS."

Accelerating Pump—No seasonal adjustment.

Throttle Kicker: Operated by cam on choke lever. Opens throttle when choke closed. No adjustment.

CARBURETION: (COE & Fwd. Control)—Carter (BB) No. 871SA & 871SB. Updraft type.
Idle Setting—½-1½ turns open (turn screw out for richer mixture).
Idle Speed—450-500 RPM.
Float Level—Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed), press float lever lip firmly against needle.
Accelerating Pump—Inner holes (in plunger shaft and throttle lever) Summer, Outer holes Winter.

Fuel Pump Pressure: 4 lbs. maximum.

CRANKCASE VENTILATOR VALVE (Std. on FWD. Control, Optional on other Trucks): Remove and clean valve and tube (from valve to oil filler pipe) at 10,000 mile intervals or more often if required. *See LUBRICATION for servicing data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Spring should have approximately ½ turn wind-up from free position. ***CAUTION—Replace distorted springs. Excessive tension will cause valve sticking.***

VALVE TAPPET CLEARANCE: ***CAUTION—Engine must be "normalized" by running at fast idle of approximately 600 RPM for 30 minutes or until oil temperature stabilized. Then set as follows:***
Normal Operation—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized."
Heavy Duty (Full-Throttle) Operation—.010" Intake, .020" Exhaust, with engine "normalized."

CONTINUED ON NEXT PAGE

WIRE COLORS—EARLY PRODUCTI N

►***1953 WIRING COLOR CHANGE & IDENTIFICATION***

CAUTION: Both FABRIC covered and PLASTIC covered wires used in production. DIFFERENT wire colors used with each type and wires can be identified as follows:

Plastic Covered Wires—Colors are shown on the 1953 wiring diagram.

Fabric Covered Wires—All wires are NATURAL with tracer colors. The equivalent Plastic covered wire colors (as shown on diagram) are as follows:

Fabric Colors	Plastic Colors
10 Gauge Wire	
Red or Red Cross Tracer	Red
Red & Black Cross Tracer	Red
Black Cross Tracer	Brown
12 Gauge Wire	
Red Tracer	Black
Black Cross Tracer	Light Green
Black & Red Cross Tracer	Light Blue
14 Gauge Wire	
Red Tracer	Red
Green Tracer	Tan
Black Cross Tracer	Light Green
16 Gauge Wire	
Natural	Natural White or Gray
Black Tracer	Light Green
Black Cross Tracer	Black
Green Tracer	Tan or Orange
18 Gauge Wire	
Natural	Natural White
Black Tracer	Tan, Dark Blue, or Brown
Black Cross Tracer	Black
Red Cross Tracer	Pink
Green Tracer	Orange

IGNITION

IGNITION SWITCH: Delco-Remy No. 1116464.

COIL: Delco-Remy No. 1115380 (Exc. COE); No. 1115378 (COE). On right side of engine.
Ignition Current—2.5 amperes idling, 4.5 stopped.

CONDENSER: Delco-Remy No. 1869704.
Capacity—.18-.23 microfarad.

DISTRIBUTOR: Delco-Remy No. 1112362 (216" Engine), No. 1112363 (1952 235" Engine), No. 1112389 (1953 235" Engine). Automatic and vacuum advance type with Octane Selector adjustment.

Breaker Gap:	New Points	Used Points
1112362, 63 Distr.	.018-.024"	.015-.022"
1112389 Distr.	.016-.021"	.0125-.0175"

Cam Angle—(1112362, 63) 34°, new points; 39°, used. (1112389 Distr.) 38° (new points), 42° (used points).
Breaker Arm Spring Tension—(1112362, 63) 17-21 ozs. (1112389) 19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1112362

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
0-2	375	0-4	750
4.5-6.5	600	9-13	1200
10-12	1200	20-24	2400
17-19	1700	34-38	3400

Automatic Advance—1112363

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	375	0-4	750
4-6	700	8-12	1400
10-12	1350	20-24	2700
14.5-16.5	1850	29-33	3700

Automatic Advance—1112389

16-18	1800	32-36	3600

Vacuum Spark Control: Delco-Remy No. 1116043 (All Trucks). Separate unit linked to advance arm.
Plunger Travel—17/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
9-11°	18-22°	18.5"

IGNITION TIMING

Standard Setting① ..... **5° BTDC**
①—Adjust Octane Selector for grade of fuel being used. See Octane Selector Setting below.
Timing (with Timing Light)—Connect timing light to No. 1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Set Octane Selector pointer at "0". Idle engine, loosen advance arm clamp bolt, rotate distributor until ignition mark (steel ball inserted in flywheel) lines up with pointer. Tighten clamp bolt.
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

R CHESTER

CONVENTIONAL TRUCKS—ROCHESTER Model B, (216" Engine) No. 7004475, (1952 235" Engine) No. 7004476, (1953 235" Engine) No. 7004468. Single barrel downdraft type with manual choke control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Metering Jets—*See Rochester Jet Specifications in Carburetor Section.*

Throttle Kicker: Operates by cam on choke lever—opens throttle when choke closed. No Adjustment.

CARTER (B&B)

C.O.E. & FORWARD CONTROL—CARTER (BB) No. 871SA & 871SB. 1¼" Single barrel updraft type with manual choke control.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Metering Jets—*See Carter (BB) Updraft Jet Specifications in Carburetor Section.*

CARB. EQUIPMENT

Air Cleaner: AC Oil Bath & Oil-Wetted types.

Fuel Pump: AC. Type AF diaphragm type Std. Combination fuel-and-vacuum type Optl.
Replacement Pump—AC No. 9798 (Std. pump), No. 9803 (Early 1952 Optl. Fuel-and-Vacuum), No. 9797 (Late 1952 & 1953 Optl. Fuel-and-Vacuum).
Pressure—4 lbs. maximum.
See Carburetion Equipment Section for complete data.

Crankcase Ventilator: AC Valve No. 1544935 or No. 1543979. Optl. *See Tune-Up.*

Gasoline Gauge: AC Electric type.
Dash Unit—1517169 (all models).

Tank Unit—	AC Number
½ & ¾ Ton	①1517500 & ②1515466
¾ Ton (3602, 3612)	1516999
1 Ton (3803, 4, 8)	1515466, (Other) 1516983
1½ Ton (4102 thru 4112)	1516983, (4502) 1516334
(Others)	1517500
2 Ton exc. COE (6702)	6103, 8; 6403, 8, 18) 1517500
(Others)	1516334
2 Ton COE (VP & S 5100)	1517500, (Other) 1515467

①—11 1/32" float travel. ②—12 1/16" travel.
See Carburetion Equipment Section for complete data.

BATTERY

Delco Type 15AA-6. 6 volt, 15 plate, 100 ampere hour capacity (20 hour rate).
Grounded Terminal—Negative (—).
Location—Under front floor on right side (Forward Control Trucks on frame on right side of engine).

School Bus: Delco Type 19Q6. 6 volt, 19 plate, 125 ampere hour capacity (20 hour rate).
Grounded Terminal—Negative (—).
Location—Under hood.

STARTER

Model	Delco-Remy Starter	Armature
All (exc. Fwd. Control)	1107108	1917855
Fwd. Control Models	1107109	1917855

Drive—(Exc. Fwd. Control)—Overrunning clutch and pedal operated manual pinion shift.
Drive—(Fwd. Control Models)—Overrunning clutch and solenoid pinion shift with pushbutton control.
Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Starting Switch: 1107108 Starter—Delco-Remy No. 820052. On starter, operated by starting pedal.
(1107109 Starter) Delco-Remy Solenoid No. 1118102 (no relay) mounted on starter and controlled by Pushbutton No. 1996055 on instrument panel.

GENERATOR

Delco-Remy. Two brush type with voltage and current regulation as listed below.

Model	Delco-Remy Nos. Generator	Armature
1952 Early Trucks	1102749	①1921235
1952 Later Trucks	1100013	①1921235
1953 ½, ¾, 1 Ton	1100018	1925348
1953 1½, 2 Ton	1102793	1924893
Optl. Dr.-to-Dr. ('52)	1105002	1918009
Optl. Dr.-to-Dr. ('53)	1105009	1925630
Optl. (Heavy Duty)	1106757	1920909

①*CAUTION—1951 Armature No. 1879002 (4 turn type) must not be used on these 1952 generators with Regulator No. 1118720 (will be overloaded).*
Maximum Charging Rate—Controlled by regulator and dependent on battery condition.

Performance Data—Cold

Generator	Amperes①	Volts	RPM
1102749②	30	8.0	2050
1100013②	35	8.0	2650
1100018	45	8.0	3000
1102793	45	8.0	2450
1105002, 9	40	7.0	1700
1105008	50	7.0	2100
1106757	50	7.5	1410

①—Not maximum output. See Current Regulator.
②—*Current and Voltage Regulator Nos. 1118720 or 1118301 MUST BE USED WITH THESE GENERATORS.*
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs. (Exc. 1106757). 20 ozs. (1106757).
Field Current—1.85-2.03 amperes (1100013), 1.87-2.0 amperes (1100018, 1102793), 1.75-1.95 amperes (1102749), 1.77-1.93 amperes (1105002, 8, 9), 1.70-1.95 amperes (1106757), all at 6.0 volts.

Belt Adjustment: *CAUTION "Narrow" belts require special setting:*
Narrow Belt (½, ¾, 1 Ton)—Adjust to 7/16-½" deflection with thumb pressure midway between generator and fan pulleys. **Recheck new belts after 1000** miles service, and readjust if deflection (as above) more than ½" with 15 lbs. pressure.
Regular Belt (Other Trucks)—Adjust to ¾" deflection midway between generator and fan pulleys. These belts not as critical as narrow type.

REGULATOR

Delco-Remy. Current and voltage regulator.

Regulator No.	For Generator No.
1118720 (See Caution)	1102749 & 1100013
1118725	1100018 & 1112793
1118722	1105001 & 1105008
1118390	1106757
1118721	1105002 & 1105009

▷*CAUTION—Regulator No. 1118720 used only with 1952 Generator Nos. 1102749 & 100013 with Armature Nos. 1921235 & 1921351 (3½ turn type). Regulator No. 1118301 can be used for replacement on these generators.*
See Electrical Equipment Section for complete data.
CAUTION—Check generator for grounded field coils and leads before changing regulator settings to correct for high charging rate or high voltage.

Cutout Relay (All)
Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Regulator No.	Setting (Hot)①	Set (Hot)
1118720	7.0-7.7 volts	7.4 volts
1118725	7.0-7.7 volts	7.4 volts
1118722	6.8-7.5 volts	7.2 volts
1118721	6.8-7.5 volts	7.2 volts
1118390	6.8-7.4 volts	7.2 volts

①—Regulator is over compensated for temperature.

Check after 15 minutes charging at 8-10 amperes.

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Regulator No.	Set To (Hot)①	Range
1118720	48 amps.	34-42 amps.
1118725	47 amps.	45-51 amps.
1118722	50 amps.	48-52 amps.
1118721	42 amps.	40-46 amps.
1118390	55 amps.	53-57 amps.

①Regulator is over compensated for temperature.

Check after 15 minutes charging at 8-10 amperes.

Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: Guide "Sealed Beam" Type.
See Electrical Equipment Section for complete data.
Beam Indicator—Red dot on lower edge of speedometer. Lighted when upper beams in use.

Switches

Lighting—Delco-Remy No. 1995048.
Instrument—Part of lighting switch (rheostat operated by turning light switch knob).
Beam Selector—Delco-Remy No. 1997008.
Stop Light—Delco-Remy No. 1997901 (mech. type). On underside of toe pan between brake and clutch pedals.

MISC. ELECTRICAL

FUSES: Fuse Block No. 1998781 (with snap-on cover) located on engine side of dash (exc. Forward Control), under instrument panel (Forward Control).
NOTE—Spare fuse mounted in fuse block cover.
Stop Light—20 ampere (in fuse box).
Tail Light—20 ampere (in fuse box).

THERMOSTATIC CIRCUIT BREAKER: Delco-Remy. On back of light switch (part of switch assy.). Contacts remain closed with 30 amperes but open in 3 minutes with 42 amperes at 70°F. Not adjustable. Protects lighting circuits together with fuses listed

HORNS: Delco-Remy. (1952) No. 1999801, (1953) No. 1999657. Vibrator type.

HORNS: Delco-Remy No. 1999657. Vibrator type.
Horn Current—7-9 amperes at 6.0 volts.
Air Gap—.027-.033".

ENGINE

ENGINE SPECIFICATIONS: 6 Cyl. Valve-in-head.

►*TWO DIFFERENT ENGINES USED:*

216" **Thrift-master**—Std. on Half-Ton, ¾ Ton, 1 Ton, 1½ Ton, except Forward Control Models.
235" **Load-Master**—Std. on 2 Ton, Forward Control Models & C.O.E. Models. Optional on all 1½ Ton Models. *NOTE*—Engines on C.O.E. & Forward Control Models have updraft type carburetors and different horsepower output.

Engine	Bore	Stroke	Displacement
216"	3½"	3¾"	216.5 cu. ins.
235"	3 9/16"	3 15/16"	235.5 cu. ins.

1952 Engines

Engine	Compr. Ratio	Rated H.P.	Developed H.P.
216"	6.6-1	29.4	92 at 3400 RPM
235"	6.7-1	30.4	105 at 3500 RPM
235" C-O-E	6.7-1	30.4	100 at 3500RPM
235" Fwd. Cntr.	6.7-1	30.4	92 at 3500 RPM

1953 Engines

Engine	Compr. Ratio	Rated HP	Developed HP
216"	6.6-1	29.4	92 at 3400 RPM
235"	7.1-1	30.4	108 at 3600 RPM
235"①	7.1-1	30.4	107 at 3600 RPM

①—C.O.E. & Forward Control Models.

Compression & Vacuum Reading—*See Tune-Up.*

►**Non-Interchangeable Parts**—Parts interchangeable between the 216" and 235" engines except as follows: Cylinder Block and Crankcase, Cylinder Block Assembly (Short Block), Push Rods (approx. ¾" longer on 235" engine and identified by shoulder just below cup at top end), Valve Lifters, Camshaft, Piston and Pin Assemblies, Piston Rings, Crankshaft, Oil Pan Pipe assembly, Oil Distributor to Valve Rocker Shaft Pipe Assembly, Oil Pump Screen Cover Support assembly.

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS (Installation & Adjustment): *See Chevrolet Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Chevrolet Special Data.*

►*CAMSHAFT CAUTION: See 1952 and 1953 Chevrolet Passenger Car Engine Data for Camshaft used in each engine. CAMSHAFTS NOT INTERCHANGEABLE.*

OTHER ENGINE DATA: *See 1952 and 1953 Chevrolet Passenger Car pages for all engine data (Pistons, Connecting Rods, Crankshaft, Camshaft, Bearings, Valves, etc.).*

VALVE TIMING

VALVE TAPPET CLEARANCE: *CAUTION—Engine temperature must be "normalized" by running at fast idle of approximately 600 RPM. for 30 minutes or until oil temperature stabilized before adjusting tappet clearance. See "Tappet Clearance Adjustment" in Chevrolet Special Data.*
Normal Operation—.006-.008" Intake, .013-.015" Exhaust, with engine "normalized".
Heavy Duty (Full Throttle Operation)—.010" Intake, .020" Exhaust, with engine "normalized".

►*CAUTION—If Valve Rotators are used set Exhaust Valve Clearance at .018-.020".*

VALVE TIMING: Camshaft Setting—Timing gears punchmarked. Punchmarked tooth of camshaft gear must be meshed with punchmarked space on crankshaft gear.

Valve Timing

Intake Valves—Open 1° ATDC. Close 39° ALDC.
Exhaust Valves—Open 42° BLDC. Close 9° ATDC.
Valve Timing Check—Remove all tappet clearance from #1 exhaust valve, turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer in right front face of flywheel housing, mount dial indicator on rocker shaft support with stem contacting #1 exhaust valve adjusting screw, set dial indicator at .044". Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004".

LUBRICATI N

Engine Oiling System: Pressure and positive splash system. Pressure to main bearings, camshaft bearings, timing gear and to overhead valve system (low pressure). Connecting rod bearings lubricated by oil dippers which scoop oil from troughs (low speed) and directly from nozzles (high speed). Oil is divided between high and low pressure systems by OIL DISTRIBUTOR VALVE on left side of engine.
CAUTION—Engine lubrication dependent upon adjustment of connecting rod dippers, oil troughs and nozzles which must be **checked each time oil pan is removed** (requires special gauges).
Crankcase Capacity—5½ qts. (dry), 5 qts (refill).
Normal Oil Pressure—14 lbs. at 2000 RPM.
Oil Pressure Regulator—Located in oil pump cover. Opens at 60 lbs. Non-adjustable type. Pressure normally controlled by Oil Distributor Valve on left side of engine which normally opens at 15 lbs.

Rocker Arm Oil Lead & Overflow Pipe Servicing: *See "Oiling System" in Chevrolet Special Data.*

Oil Pump: Located in crankcase. Driven independently through short shaft by gear on camshaft.
Oil Pump Overhaul: *See Chevrolet Special Data.*
Oil Pump Installation—Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered setscrew. See that screw seated firmly in tapered hole in pump housing before tightening locknut.

Oil Distributor: *See "Oiling System" in Chevrolet Special Data.*

Checking Oiling System: Check entire system (Dipper height, Oil pan trough height, Oil nozzle height & aim) each time oil pan removed.
See "Oiling System" in Chevrolet Special Data.

Oil Filter: Optl. Replace filter cartridge every 5000 miles or more often if required.
Filter Cartridge—AC No. P-115 or C-115.

Crankcase Ventilation (All Trucks except Forward Control Models): Regular velocity type with air intake through valve rocker cover (air cleaner on some models), outlet pipe on right side of engine.
Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and reoil at 2000 mile intervals or more often if required by operating conditions.

►**Positive Crankcase Ventilation (Std. on all Forward Control Models, Optional equipment on others):** Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air fuel mixture.**
Servicing—Every 5000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Oil filler cap gasket must seal tightly. Test vacuum valve as follows:

Vacuum Valve—With valve disassembled, check spring tension—must be 7.5 ozs. with spring compressed to .418-.432". If defective, replace with new valve assembly, Part No. 1543979.

►*CAUTION—Make certain that spring attached to valve (end coil pushed over ridge and into groove under head of valve) to insure valve closing properly when idling (mixture will be too lean if valve not closed).*

Oil Pressure Gauge: AC No. 1507401. Not electric.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Cooling System: Positive circulation with water pump on front of engine. Pressure type (relief valve) radiator cap used on Cab-Over-Engine Trucks.
Capacity—15 qts. (with 216" Engine), 17½ qts. (with 235" engine). NOTE—Heavy Duty 17½ qt. radiator Optl. on ¾, 1, 1½ Ton & 137" & 161" School Bus.

Pressure Valve (All Models exc. Forward Control): AC No. 850501 (stamped 501/4#). Radiator Filler Cap. Opens at 4 lbs.

Radiator Core Removal: *See Chevrolet Special Data.*

Water Pump: Double-outlet, packless type with sealed ball-bearing shaft.
See Water Pump Section for complete data.

Thermostat. Harrison. In cylinder head water outlet.
Std.—No. 3123993 (stamped 151). 151° type. Can be used for alcohol anti-freeze.
Optl.—No. 3123994 (stamped 160) 160° type or No. 3123995 (stamped 180) 180° type. Use for permanent anti-freeze.

Temperature Gauge: AC. Not Electric.

	1952	1953
All exc. C-O-E & Fwd. Contr.	1512148	1512701
C-O-E & Fwd. Contr.	1512150	1512703

CLUTCH

Own Make. Diaphragm spring, single plate, dry disc type. NOTE—Half-Ton Trucks use 9" clutch, all other models 10¾" type.
See Clutch Section for complete data.
Facings—Moulded Asbestos, 2 required as follows:

	I.D.	O.D.	Thickness
9" type	6⅛"	9⅛"	.132-.138"
10¾" type	7"	10¾"	.137-.143"

Adjustment: Pedal-free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

3-SPEED

Own Make. Three-speed, all helical gear type, Constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse).

▷*GEARSHIFT LEVER RATTLE: May be caused by loose spring in lever. See "Chevrolet Synchro-mesh Transmission" in Transmission Section.*

▷*1952 HIGH GEAR DISENGAGEMENT: Can be corrected by installing 1953 type parts. See "Chevrolet 3-Speed Synchro-mesh" in Transmission Section.*

▷*1953 TRANSMISSION PRODUCTION CHANGE (TO MINIMIZE GEAR RATTLE) & REPLACEMENT PARTS CAUTION: See "Chevrolet 3-Speed Synchro-mesh" in Transmission Section.*

Transmission Control: Mechanical type with shift lever mounted on steering column.
See Transmission Section for complete data.

Removal (Half-Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven member, lift transmission up and remove through floor opening.

Removal (¾ Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split intermediate universal by removing trunnion bearing "U" bolts, lower rear propeller shaft to floor. Remove four capscrews holding universal joint collar on rear bearing retainer, slide ball collar and retainer back on housing. Remove two bolts and nuts mounting intermediate universal support bracket on frame cross-member, pull front propeller shaft assembly to rear and free of front universal joint. Remove transmission in same manner as on Half-Ton (above).

4-SPEED

Own Make. Four-speed, constant-mesh, synchro-mesh, helical gear (2nd, 3rd, and 4th), sliding spur gear (Low & Reverse). Floor mounted gearshift.
See Transmission Section for complete data.

▷*1952 TRANSMISSION PRODUCTION CHANGE (Eccentric Adjustment for Reverse Idler Gear): See "Chevrolet Truck 4-Speed Synchro-mesh" in Transmission Section.*

▷*1953 TRANSMISSION GEAR RATTLE CORRECTION & PRODUCTION CHANGE: Transmissions beginning Serial No. WP-34357 have Friction Dampener in Low & Reverse Sliding Gear. See "Chevrolet Truck 4-Speed Synchro-mesh" in Transmission Section.*

Transmission Control (Cab-Over-Engine): *See Chevrolet Special Data for Removal & Installation data.*
NOTE—Floor-mtd. gear shift used on Other Trucks.

Removal (½ & ¾ Ton): See 3-Speed Transmission data above. NOTE—On Forward Control Models shift lever and rear floor pan must be removed.

Removal (Other Trucks): Free steering gear grommet from floor, remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Split front universal joint by removing trunnion bearing "U" bolts (tape or wire trunnions together to prevent losing bearings), slide shaft down to one side to clear transmission. Remove two top transmission mounting capscrews, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove 2 lower transmission mounting capscrews, slide transmission straight back on guide pins until main drive gear shaft is free from clutch driven-member, remove transmission.

UNIVERSALS

▷*1953 UNIVERSAL JOINT PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION (3800 & 4000 Series, 3942, 5403, 5703 Models—Part Production):* Have modified universal joints for propeller shaft (larger-diameter trunnion with increased number of smaller-diameter rollers). *SPECIAL KITS (replacing both Old and New Style Joints as a unit, or individual new style assemblies are furnished as follows:*

Part	Old Part No.	New Part No.
Universal Joint Kit	609515	3707163
Cup & Roller Assy.	3661395	3707472
Trunnion Assy.	3660990	3705376

Half-Ton: Own Make. No. 591642 (3-Speed Trans.), 3689266 (4 Spd.). Same type as on Pass. Car. One used (in torque ball back of transmission).

▷*TORQUE TUBE BUSHING INSTALLATION (½ Ton Truck). See "Chevrolet Pass. Car & Half-Ton Truck Rear Axle" in Rear Axle Section.*

¾ Ton Truck: Front Universal—Own Make. Chevrolet No. 591646 (3-Spd. Trans.), 3689288 (4-Spd. Trans.). Same type as used on Half-Ton (above).
Intermediate & Rear Universal—Spicer Model No. 1351-5107X (Intermediate—slip joint), 1358-5104X (rear—permanent joint). Needle bearing type.

1, 1½, 2 Ton Trucks (Regular & C-O-E): Spicer Needle bearing type. Slip-joint used at intermediate position, permanent type at transmission and rear axle.

Spicer Model Nos.	Front	Intermediate	Rear
C-O-E 110" WB	1351-5107X	①	1358-5105X
Bus 199" WB	1358-5104X	②	1358-5104X
All Others	1358-5104X	1351-5107X	1358-5104X

①—No intermediate joint used (1 propeller shaft).
②—Two intermediate universals as follows: First—1358-5104X, second 1351-5107X (3 section shaft).

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own Make. Semi-floating, hypoid gear type with Torque Tube drive. *NOTE*—Axle is same design as passenger car type.

▷*PROPELLER SHAFT COUPLING PRODUCTION CHANGE:* Later axles have coupling which is loose fit on rear axle pinion shaft (changed from hard press fit) and this coupling must be used with new type Pinion Bearing Nut No. 3703782 and Coupling Spring No. 3703792 (to provide tension on shaft).
See Rear Axle Section for complete data.

Ratio—4.11-1 Standard.

IDENTIFICATION NOTE—Axle may be identified by Serial No. prefix stamped on front face of carrier flange on right side as follows:
Detroit—(1952) KE, (1953) LU.
Buffalo—(1952) KF, (1953) LV.

▷**Axle Shaft Note**—Shafts unequal length (right shaft longer) and may be identified by identification mark stamped on shaft or by length as follows:

	Part No.	Length
Left (stamped "GM 769")	3694769	29 9/16"
Right (stamped "GM 770")	3694770	30 9/16"

Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel brake cylin-

ders, disconnect hand brake cables from idler lever and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolt and anchor plate. Remove spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove "C" washer on inner end, pull shaft out.

Axle Shaft Endplay—Free fit to .014" maximum.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

FULL-FLOATING (EXC. HALF-TON)

Own Make. Full-floating, hypoid gear (straddle mounted pinion) with Hotchkiss Drive.

►**1½ & 2 Ton Note**—Axle shaft splined to wheel hubs. *See Rear Axle Section for complete data.*

Ratios—As follows:

		Serial No. Prefix			
		Detroit		Buffalo	
Series	Ratio	1952	1953	1952	1953
3600 Std.	4.57-1	KG	LG	KH	LH

3742 Std.	5.14-1	KQ	LQ	KR	LR
3800 Std.	5.14-1	VJ	WJ	VK	WK
3800 Optl.①	5.14-1	VQ	WQ	VR	WR
3942 Std.	5.14-1	VC	WC	VD	WD
3942 Optl.①	5.14-1	VA	WA	VB	WB
4000 Std.	6.17-1	VL	WL	VM	WM
4000 Optl.	5.43-1	VE	WE	VF	WF
5000, 6000	6.17-1	VG	WG	VH	WH

①—Dual Wheel type.

Axle Identification Note—Axles may be identified by Axle serial number prefix letters stamped on top of carrier housing between reinforcing ribs. *See "Serial No. Prefix" in Ratio table above.*

Backlash—.005-.008". Screw adjustment.

Removal—Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal & Wheel Bearing Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

TWO-SPEED REAR AXLE

Own Make (2 Ton Optl.). Full-floating, Two-speed Double reduction type with Hypoid Gears (First reduction), Helical Gears (Second reduction) and vacuum shift control.

See Rear Axle Section for complete data.

Ratio—6.13-1 (High), 8.10-1 (Low).

Axle Identification Note—Axle may be identified by Axle serial number prefix letters stamped on flat top of carrier on right side as follows:

Detroit—(1952) VN, (1953) WN.

Buffalo—(1952) VP, (1953) WP.

Two-Speed Shift Control: Vacuum power type with selector valve on instrument panel.

Removal: Carrier Assembly can be removed (without disturbing axle housing) as follows: Remove axle shaft flange mounting bolts, pull both axle shafts out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearings, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier by means of long punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath truck.

Axle Shaft Removal & Wheel Bearing Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco Hydraulic type. Single or double acting piston types or Direct acting type.

Direct Acting Types

Front—1052-M (½, ¾, 1 Ton).

Rear—1066Z (½ Ton), 1066T (¾ Ton), 967U (1 Ton).

Double Acting Types

Front—1730-A & B (Exc. C-O-E), 1730-C & D (C-O-E).

Rear—1722-E & F (1 Ton Forward Control), 2000-V & W (All models exc. 1 Ton Forward Control).

NOTE—Nos. shown as 1730-A & B indicate **Right** and **left** hand shock absorbers.

FRONT SUSPENSION

Front Suspension: Conventional "I" beam section front axle with Reverse Elliott ends and semi-elliptic springs.

Kingpin Inclination—7° 10' ± 1° crosswise (All).

Camber—1° ± ½° (All). Bend axle for corrections (when kingpin inclination is likewise off).

Caster—See table below. All specifications ± ½°. Use wedge shims for minor corrections (up to 2°), bending tools for greater corrections.

	Caster	Toe-In
½ Ton	1¾°	1/16-3/16"
¾ Ton (exc. Fwd. Contr.)	2½°	1/16-3/16"
¾ Ton Fwd. Contr.	3¼°	1/16-¼"
1 Ton Fwd. Contr.	2¼°	1/16-¼"
1, 1½, 2 Ton (exc. (C-O-E)	2¾°	1/16-¼"
C-O-E Trucks	3°	1/16-¼"

Toe-In—See table above. Adjust by turning tie rod. *CAUTION*—Tie rod ends must be aligned with studs.

Toe Out on Turns—Outer wheel turned 20°, inner wheel turned 23° ± 2° (all models).

STEERING GEAR

Saginaw Model. Ball bearing (re-circulating ball) Worm-and-Nut. Chevrolet Part Nos. as follows:

Truck Model	Part No.
½, ¾, 1½ Ton (exc. following)	270927
¾ & 1 Ton Forward Control	5660833
2 Ton & School Bus	270224
C-O-E Models	5662982

See Steering Gear Section for complete data.

►*STEERING GEAR BRACKET (FORWARD CONTROL MODELS) PRODUCTION CHANGE—New steering gear bracket reinforcement to increase the stability is now in production and can be used on previous models. See Chevrolet Special Data.*

BRAKES

Service Brakes: *THREE different types used:*

1) **Chevrolet Hydraulic (1952 only)**—¾ & 1 Ton (Front & Rear), 1½ & 2 Ton (Front Only).

2) **Chevrolet-Bendix Hydraulic**—(1952) ½ Ton (Front & Rear), (1953) All Models (exc. 1½ & 2 Ton Rear).

3) **Chevrolet Twinplex Hydraulic**—1½ & 2 Ton (Rear only).

See Brake Section for complete data.

Drums—Cast iron rim with steel web.

Model	Front — Diameter	— Rear
½ Ton	11"	11"
¾ Ton	11"	12"
1 Ton	12"	14"
1½ & 2 Ton	14"	15"

Lining—Molded type. (Riveted on 1½ & 2 Ton), Bonded on others.

Thickness—.202-.222" (11" Drum). .265-.272" (12 & 14" Drum). .392-.412" (15" Drum).

Clearance—Adjust for clearance as follows:

(1952 ¾-Ton Front & Rear, 1-Ton, 1½-Ton & 2-Ton Front Only)—Turn adjusting cover at end of wheel cylinder until shoe drags, then back off 5 notches (separate adjustment for each shoe).

(1952 1-Ton Rear Only)—Turn adjusting pinion stud in clockwise direction (facing flange plate from center of truck) until shoe drags slightly, then back off stud 2/3 turn (or four sides of the hex. head stud). Separate adjustment for each shoe.

(1952-53 ½-Ton Front & Rear, 1953 ¾ & 1-Ton Front & Rear, 1953 1½ & 2-Ton Front Only)—Remove adjusting hole cover on backing plate and turn notched adjusting screw until light drag is felt, then back off adjusting screw 7 notches and check for drag. If any drag noted, a Major Adjustment is required.

1½ & 2 Ton (Rear Only)—Remove adjusting covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw, (2 adjustments on each wheel).

Hand Brake: ½, ¾, 1 Ton—Step-on pedal applies rear wheel service brakes. **1½ & 2 Ton**—Hand lever applies independent brake on propeller shaft.

Adjustment—Adjust each type as follows:

Half-Ton—With parking brake pedal released, adjust pedal pull rod clevis for ⅛" clearance between cross-shaft and frame cross-member at center. Depress foot pedal 1½", adjust clevis on forward end of each wheel cable to remove all slack (pull cable out of conduit by hand until positive stop is felt, adjust clevis and reconnect cable). Release rod handle under instrument panel must have ½" minimum clearance at support bracket.

¾ & 1 Ton—With parking brake pedal released, adjust brake pedal pull rod clevis until hole in end of cross shaft outer lever is correct distance to rear of center of cross-shaft: 29/32" (¾ Ton), ¾" (¾ Ton Fwd. Control), 11/32" (1 Ton), 19/32" (1 Ton Fwd. Control). Then adjust each wheel cable clevis at cross shaft lever end in same manner as Half-Ton (above).

1½ & 2 Ton—.010-.015" clearance between each shoe and brake drum (adjust the adjusting bolt for outer shoe clearance, nut on link rod for inner shoe.

Hydrovac Brake System—Standard on 2 Ton, Cab-Over-Engine and 1½ Ton Special Models. *See "Hydrovac Power Unit" in Brake Section of Manual for data.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.
Starting Serial Number—001001 up.
Serial Number Prefix—'E', designating Series 2934.

►*SERIAL NUMBER NOTE—Serial Number example (E54F 001025) includes following identification data in sequence.*

Series ①	Year	Assy Plant ②	Serial No.
E	54	F	001025

①—See Serial Number Prefix above.
②—Assembled only at the Flint Plant.

ENGINE NUMBER: Stamped on boss on right side of cylinder block to rear of distributor.
Starting Engine Number—0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ('F' for Flint, and 'T' for Tonawanda), Model Year, and Model Type.
Model Type Designation—'YG', Corvette 235" engine.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs., at cranking speed.

VACUUM READING: At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral). At 450 RPM. 14.5" (with transmission in Drive Range), 16.3" (with transmission in Neutral).
NOTE—Manifold vacuum reading at idle speed is lower than for 235" Conventional engine because of "high lift" cam used.

VALVE TAPPET CLEARANCE: .008" Intake. .020" Exhaust.

MANIFOLD HEAT CONTROL: Located in forward half of divided exhaust manifold.

►*MANIFOLD HEAT CONTROL NOTE*—Under normal operating conditions the heat control is not used and manifold is shielded by a plate installed between exhaust and intake manifolds to divert gases away from intake manifold. Manifold heat control valve spring has been reversed to hold valve in "off" position. If operation of manifold heat control valve is desired, it will be necessary to remove manifold shield and install heat control valve spring in correct position.

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See Diagram.

SPARK PLUG GAP: .035".
Spark Plug—AC 44-5 (Use AC COM for continuous high speed driving).

COIL: Delco-Remy 1115394.
Ignition Current—3.0 amperes (idling), 5.4 amperes (stopped).

DISTRIBUTOR: Delco-Remy 1112314.
Condenser—Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set—Delco-Remy 1925852.
Breaker Gap—.019" (new points), .016" (used points).
Cam Angle—40.5-47.5° with .016" gap.

►*BREAKER GAP CAUTION*—Manufacturer recommends *final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	2500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

Vacuum Spark Control: Delco-Remy 1116076
Plunger Travel—11/64-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
7.5	15.0	7.5-10

IGNITION TIMING

Setting—2° ATDC.
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing, with Octane Selector set on '0'. Then set Octane Selector as follows:
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

Carter YH 2066S (1953 & Early 1954), YH 2066SA (Late 1954 & 1955). Horizontal type with manual choke control. *Three Carburetors Used per Engine.*

Idle Setting—½-1½ turns open. Turn screws out for richer mixture. *See Throttle Valve Synchronization below.*
Idle Speed—450 RPM with selector lever in "D" (Drive) position. *See Throttle Valve Synchronization below.*
Float Level—3/8" from bowl cover to top of float with bowl cover inverted and gasket removed.
Float Drop—With bowl cover in upright position, distance between float seam (at free end) and bowl cover should be 2". Adjust by bending stop tab on float arm.

Throttle Valve Synchronizing: (Preliminary)—With engine turned off and all three choke valves in wide open position, remove the throttle lever stop screw from each carburetor. Loosen the fillister head screws on carburetor shaft universal which secures couplings to throttle shaft at forward end of both center and rear carburetors. Snap accelerator pedal several times to allow couplings to find their normal position so there is no end pressure on throttle valves. Then tighten fillister-head screws. Loosen the two Allen head screws at front end of rear carburetor (*NOTE*—Clearance provided for throttle valve adjustment by holes in flexible couplings being larger than Allen head screws). Manually close throttle valve in rear carburetor, hold it tightly closed and then tighten the two Allen head screws on rear carburetor flexible coupling. Loosen the two Allen head screws at front end of center carburetor and manually close throttle valve in FRONT carburetor. Hold valve tightly closed and tighten the two Allen head screws on flexible coupling on front of center carburetor.

Checking Throttle Valve Synchronization: Throttle valves must be checked separately and in the following sequence and manner.

Rear Carburetor—Check closing of **rear** throttle valve by twisting (in closing direction) the **rear** lever of **rear** carburetor. *There should not be any noticeable signs of rotating on front end of REAR carburetor throttle shaft.* If rotation is noticeable, loosen Allen screws on rear of **center** carburetor and hold throttle valve in **rear** carburetor closed and tighten Allen screws. If rotation is still noticeable, loosen Allen screws at front of **rear** carburetor and hold **rear** carburetor throttle valve closed and tighten Allen screws.

Front Carburetor—Check closing off of front carburetor throttle valve by twisting (in closing direction) front lever of **front** carburetor. *There should not be any noticeable signs of rotating on rear end of FRONT carburetor throttle shaft.* If rotation is noticeable, loosen Allen screws at rear of **front** carburetor and hold throttle valve in **front** carburetor closed and tighten Allen screws. If rotation is still noticeable, loosen Allen screws on front of **center** carburetor and hold throttle valve in **front** carburetor closed and tighten Allen screws.

Center Carburetor—Check **center** carburetor throttle valve as follows: Disconnect accelerator rod at **center** carburetor. Close throttle valve in **rear** carburetor manually at rear end of **rear** carburetor. Hold closed and press throttle lever on **center** carburetor and check for rotation of **center** throttle shaft at front end. *There should not be any noticeable signs of rotating on front end of CENTER carburetor throttle shaft.* If rotation noticeable, correct by the Allen screws between **center** and **rear** carburetors. Close throttle valve in **front** carburetor manually at front end of front carburetor and check as outlined above. Correct by the four Allen screws between **center** and **front** carburetors.

Idle Speed & Mixture Adjustment: Assemble throttle lever stop screw and spring on center carburetor only, and adjust so throttle valves are slightly open. Set Idle Adjustment (mixture) screws ¾ turns open. Start engine and run until warm. Pull hand brake lever on and move transmission selector lever to "P" (Park) position. Adjust throttle lever stop screw on center carburetor for 500 engine RPM. Turn idle mixture screw on **rear carburetor 1/8 turn - no more,** in either direction to increase engine RPM or manifold vacuum. If there is no change, leave adjustment at ¾ turn. Repeat same with center and front carburetors. If RPM changed, correct speed adjustment on center carburetor. Repeat this adjustment more than once to make sure engine RPM or manifold vacuum remain at their highest point. Assemble throttle lever stop screws and springs in front and rear carburetors. Turn front and rear throttle lever stop screws until engine speeds up slightly, then back off screw at least one turn. **The center throttle lever stop screw is the only one which should control engine idle speed.**

Accelerating Pump—No seasonal adjustment required.

Fast Idle: With choke valve held tightly closed, there should be .020" (Gauge T109-29) clearance between throttle lever and bore of carburetor (side opposite idle port). Adjust by bending offset portion of choke connector link (use bending tool T109-213).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

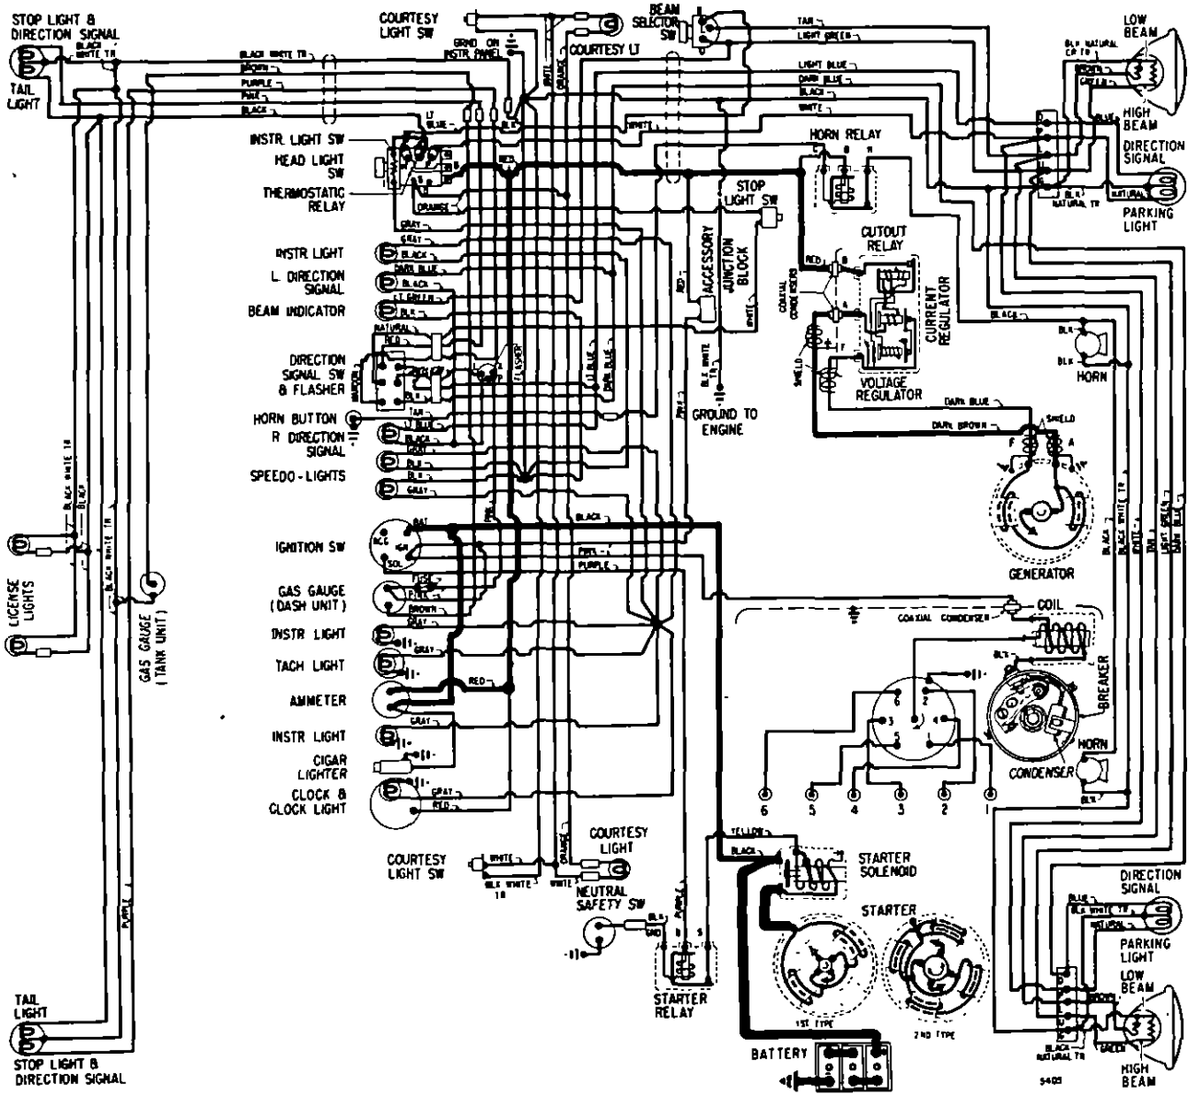
►*OTHER DATA: See "Carter YH Carburetor" in Carburetor Section.*

Powerglide Throttle Linkage Adjustment: *See "Chevrolet Powerglide" in Transmission Section.*

Fuel Pump Pressure: 3½-5 lbs.

CARB. EQUIPMENT

Fuel Pump: AC (Fuel & Vacuum).
Replacement Pump—AC No. 4132.
Pressure—3½-5 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.
Gasoline Gauge: AC Electric.
Dash Unit—AC No. 1517901.
Tank Unit—AC No. 1517911.
See "Fuel Gauges" in Carburetion Equipment Section.



BATTERY

Delco 15AA6. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Negative terminal.

STARTER

Delco-Remy 1107109 (First Cars), 1108035 (Later Cars).

►*STARTER NOTE: First 1107109 (two-coil) starter was superseded by later 1108035 (four-coil) starter.*

Armature No.—Delco-Remy 1917855 (All).
Drive—Overrunning clutch (solenoid pinion shift).
Brush Spring Tension—24-28 ozs.
Rotation—Counter-clockwise at commutator end.

Performance Data—1108035

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Performance Data—1107109

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Starting Switch: Delco-Remy Solenoid Switch 1118135 *mounted on starter with separate relay,* Delco-Remy 1116886. Controlled by Starter & Ignition Switch, Delco-Remy 1116478. Turn key full RIGHT against spring tension to start.
See "Starter Controls" in Electrical Equipment Section.
Neutral Safety Switch: Delco-Remy 1998053.
Adjustment—See "Chevrolet Powerglide" in Transmission Section.

GENERAT R

Delco-Remy 1100018 (Early), 1100028 (Later).
Armature—Delco-Remy 1925348 (Gen. No. 1100018), 1929558 (Gen. No. 1100028).

Performance Data

Gen. No.	Ⓒ Amperes	Volts	RPM
1100018	45	8.0	3000
1100028	40	8.0	3000

Ⓒ—Not maximum output. See Regulator.
Brush Spring Tension—28 ozs.
Field Current—1.87-2.0 at 6.0 volts.
Rotation—Counter-clockwise at commutator end.
Belt Adjustment: 7/16-1/2" belt deflection at point midway between pulleys with 15 lbs. pressure.

REGULATOR

1953 MODELS

Delco-Remy 1118725 (Use with Gen. No. 1100018).
►**Regulator Note**—Regulators have screw adjustment for settings and single regulator spring.
►*CAUTION—Check generator for grounded field coils and leads before changing regulator setting to correct high voltage or high charging rate.*

Cutout Relay

Cuts In—5.9-6.7 volts hot (set to 6.4 volts hot).
Contact Gap—.020" (same for both sets).
Air Gap—.020" (with contacts just closed).

Voltage Regulator

Setting—7.0-7.7 volts (set to 7.4 volts hot). Regulator is over-compensated for temperature. Check with cover in place and regulator hot.
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Setting—45-51 amperes (set to 47 amperes hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

1954-55 MODELS

Delco-Remy 1118827 (Use with Gen. No. 1100018), No. 1118843 (Use with Gen. No. 1100028).

►*REGULATOR NOTE–Checking procedure is different than for previous regulators. See "Delco-Remy 1118825 Series Regulators" in Electrical Equipment Section. Following Specifications are for "Normal" settings.*

Cutout Relay

Cuts In–5.9-6.7 volts (hot).

Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–6.9-7.4 volts (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

Setting (1118827)–42-47 amperes (hot).
Setting (1118843)–37-42 amperes (hot).

Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel). Remove switch retaining nut and switch assembly.

Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.

FUSES: Located as indicated below.

Direction Signal–14 amperes. Located at end of lead at gasoline gauge terminal.
Radio–14 amperes. Located at end of lead at accessory junction block.
Heater–14 amperes. Located at end of lead at gasoline gauge terminal.
Parking Brake Alarm–14 amperes. Located at end of lead at accessory junction block.

CIRCUIT BREAKER: Located in main lighting switch. Protects all lighting circuits not protected by fuses.

HORNS: Delco-Remy 1999681 (Low Note). 1999682 (High Note).

Horn Relay: Delco-Remy 1116775.
Contacts Close–2.75-4.0 volts (set to 3.5 volts).
Contact Gap–.027". **Air Gap**–.014 " (closed).

ENGINE

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.
Bore–3 9/16". **Stroke**–3 15/16".
Displacement–235.5 cu. ins. **Rated H.P.** 30.4
Developed Horsepower–150 at 4200 RPM.
Compression Ratio–8.0-1
Compression & Vacuum Reading–*See Tune-Up.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1954-55 Chevrolet 6 Cyl. Pass. Car Pages and note the following:*

CAMSHAFT: *NOTE–1953 & Early 1954 camshafts are different than later 1954 and 1955 camshafts. Later type camshafts are identified by 3 large raised dots located between No. 5 and No. 6 inlet cams.*
Camshaft Setting–Timing gears are punch marked, and punch marks on both gears must be lined up and directly opposite each other.

VALVES: *CAUTION–1954 & 1955 Exhaust valves are longer than 1953 valves. See below.*

Valves	Head Diam.	Stem Diam	Length
Intake	1 7/8"	.3410-.3417"	①6.364-6.394"
Exhaust	1 1/2"	.3400-.3407"	①4.902-4.932"

①–1953 valve length is 4.628".

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°	.405"	.001-.003"
Exhaust	45°	.414"	.002-.004"

Valve Springs: Two springs used per valve. Install springs with closed coil end down.

Outer Spring Specifications ①

	Spring Pressure	Length
Valve Closed	55.0 lbs.	1.880"
Valve Open	150.0 lbs.	1.490"

Inner Spring Specifications ①

	Spring Pressure	Length
Valve Closed	25.0 lbs.	1.810"
Valve Open	57.0 lbs.	1.420"

①–Intake and exhaust valve springs.

Valve Lifters: Barrel type identified by shallow groove around lifter. Not hydraulic.

VALVE TIMING

►*VALVE TIMING CAUTION: Timing is different with early and late type camshaft. See "Camshaft Setting" under CAMSHAFT above.*

First Type Camshaft

Intake–Opens 19°30' BTDC. Close 44°30' ALDC.
Exhaust–Opens 59° BLDC. Close 5° ATDC.

Later Type Camshaft

Intake–Opens 11°30' BTDC. Close 52°30' ALDC.
Exhaust–Opens 51° BLDC. Close 13° ATDC.
Valve Timing Check–Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting #1 exhaust valve adjusting screw and set dial indicator to .090". Turn crankshaft until indicator reading is ZERO plus or minus .004". Reset tappet clearance to correct running clearance.

OILING SYSTEM

Crankcase Capacity: 5½ qts. (dry), 5 qts. (refill).
Normal Oil Pressure: 45 lbs. maximum.
Pressure Regulator Valve–In oil pump body. Not adjustable.
Oil Pressure Indicator–AC No. 1508063. Not electric.
Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oil Pump" in Chevrolet Special Data.*
Oil Pump Installation–Assemble ground side of idler gear toward cover (use Chevrolet cover gasket only - controls pump clearance). Pump assembly mounted in crankcase by tapered screw. See that tapered screw seated firmly in hole in pump housing before tightening locknut.
Rocker Arm Lead & Overflow Pipe: *See "Oiling System" in Chevrolet Special Data.*
Crankcase Ventilation: Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

Water Capacity: 17.8 qts. (without heater), 18.3 qts. (with heater).
Pressure Valve: AC No. 850778 (Chrome). Radiator filler cap. 4 lb. type.
Thermostat: Harrison. Cylinder head water outlet.
Standard–No. 3123993 (stamped 151), 151°.
Temperature Gauge: AC No. 1512756. Not electric. *See "Temperature Gauges" in Miscellaneous Section.*
Water Pump: Double outlet, packless type with sealed ball-bearing shaft.
See "Chevrolet" in Water Pump Section.
Belt Adjustment–See Generator Belt Adjustment.

POWERGLIDE TRANSMISSION

Torque converter and hydraulically operated planetary gear unit with manual controls. Selector lever is mounted directly on transmission.

►*POWERGLIDE TORQUE CONVERTER DRIVE LUG PRODUCTION CHANGE: Three additional drive lugs have been added to cars in production (beginning with Serial No. C-409-D) and can be installed in cars before this serial number. See "Chevrolet Powerglide" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing and "AQ-ATF" marking on container.

Capacity—(Refill) 10 qts. (Cars with converter drain plug). 5 qts. (cars without converter drain plug (See "Powerglide Draining Caution" below). **After Overhaul** 11 qts. (all cars).

►*POWERGLIDE DRAINING CAUTION: Converter drain plug eliminated during 1953 production. Drain transmission case only on cars without drain plug. Converter and transmission case on cars with drain plug.*

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and control lever in "N" position when taking dipstick readings.

►*OTHER "POWERGLIDE" SERVICE DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Two used, with open propeller shaft.

REAR AXLE

Own. Semi-floating hypoid gear type with Hotchkiss Drive.

See "Chevrolet Hypoid" in Rear Axle Section.

Ratio—3.55-1. **Serial Prefix**—NW.

Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratio. See Serial Prefix (above).

Backlash—.005-.007". Screw adjustment.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washers on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove brake drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

Front—Delco No. 538F. **Rear**—Delco No. 561P.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil spring.

See "Chevrolet" in Front Suspension Section.

Kingpin Inclination—3½-4½° plus or minus ½° crosswise.

Caster—Pos. ½°±½°. Adjustable.

Camber—Pos. ½°±½°. Adjustable.

Toe-In—0-1/8".

►*CAUTION—Align tie rods before tightening clamp bolts (ball studs will bind if not aligned).*

STEERING

Manual Steering: Saginaw Worm & Roller. With push-pull adjustment.

See "Saginaw Worm & Roller" in Steering Section.

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section.

Drums—Diameter 11".

Wheel Cylinder Diameter—Front 1 1/8". Rear 1".

	Brake Lining Width	Thickness
Front Wheels	2"	.202-.222"
Rear Wheels	1¾"	.202-.222"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).

Braking Power—55.9% (front wheels), 44.1% (rear wheels).

Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

MISC. MECHANICAL

Windshield Wipers: Vacuum, cable operated.

See "Windshield Wipers" in Miscellaneous Section.

MODEL IDENTIFICATI N

Model Designation

Series	Serial Prefix	Wheelbase	Type
3100	H	116"	Half Ton
3600	J	125¼"	¾ Ton
3700	K	125¼"	⑦¾ Ton
3800	L	137"	One Ton
3900	M	137"	① One Ton
4100	N	137"	1½ Ton
4400	P	161"	1½ Ton
4500	R	161"	②1½ Ton
5100	S	110"	⑤2 Ton
5400	T	134"	⑤2 Ton
5700	U	158"	⑤2 Ton
6100	V	137"	2 Ton
6400	W	161"	2 Ton
6400	X	179"	2 Ton
6700	Y	199"	⑦2 Ton
6800	Z	212"	⑦2 Ton
5100S	SS	110"	⑦1½ Ton
5400S	ST	134"	③1½ Ton
5700S	SU	158"	③1½ Ton
6100S	SV	137"	⑨1½ Ton
6400S	SW	161"	⑨1½ Ton
6500S	SX	179"	⑨1½ Ton

⑦—Forward Control. ⑦—School Bus Chassis. ⑦—C.O.E. Special. ⑨—Special. ⑤—C.O.E.

SERIAL NUMBER: Stamped on plate on cab left hinge pillar post (Flat Face Cowl models have number on left hand cowl inner panel).

Starting Serial Number: 001001 (each plant—all models).

►*SERIAL NUMBER NOTE: Serial number (example V54K 001083) includes following identification data in sequence.*

Series①	Year②	Assy. Plant③	Serial No.
V	54	K	001083

①—Serial Prefix (see Model Designation above).
②—Year (1954) 54, (Early 1955) 55.
③—Assembly Plant Designation (see below).

Assembly Plant Designation

A—Atlanta	K—Kansas City	S—St. Louis
B—Baltimore	L—Los Angeles.	T—Tarrytown
F—Flint	N—Norwood	O—Oakland
J—Janesville		

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

Starting Engine Number: 0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year, and Model Type. See following for Model Type Designation:

Series	Engine	Type Designation
3100-3600-3800	Thriftmaster 235"	①X
3100-3600-3800	Thriftmaster 235"②	⑦U
3100-3600-3800	Thriftmaster 235"③	⑦M
3700-3900	Loadmaster 235"⑧	⑤T
3700-3900	Loadmaster 235"③④	⑤L
4000	Thriftmaster 235"⑥	S
5000	Loadmaster 235"	R
5000	Jobmaster 261"	Q
6000	Loadmaster 235"	P
6000	Jobmaster 261"	N

⑦—"A" stamped following suffix when this engine used in 3600 Series, and "B" when used in 3800 Series.
②—With Heavy Duty Disc Clutch.
③—With Hydra-Matic Transmission.
④—With Updraft Carburetor.
⑤—"A" stamped following suffix when this engine in 3900 Series.
⑥—"A" stamped following suffix when "P" engine in 4000 Series.

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs., at cranking speed.

VACUUM READING: *CAUTION—Vacuum reading on 235" Thriftmaster & Loadmaster engines is different than on 261" Jobmaster engine.*

235" Thriftmaster & Jobmaster—17-21" at idling speed.

261" Jobmaster—At 500 RPM. 16.7" (in Neutral), **At 450 RPM.** 16.3" (in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than other models because of the "high lift" cam used.*

VALVE TAPPET CLEARANCE: (3000 Series Trucks)—Intake .006", Exhaust .016". **(All Others)**—Intake .006", Exhaust .020".

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. Distorted springs should be replaced.

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See Diagram.

SPARK PLUG GAP: .035".

Spark Plug—AC No. 44-5 (Exc. 2-Ton). AC No. 43-5 (2-Ton). 14mm. types.

►*CAUTION: Tighten plugs to 20-25 ft. lbs. torque or finger tight plus one-half turn.*

COIL: Delco-Remy 1115380.

Ignition Current—2.5 amperes idling. 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1112388 (Exc. 261" Engine), Delco-Remy 1112392 (261" Engine).

Condenser—Delco-Remy 1869704 (First type), Delco-Remy 1928111 (Second type with spade terminal).

Capacity—.18-.23 microfarad.

Contact Point Set—Delco-Remy 1924571.

Breaker Gap—.016-.021" (New Points), .0125-.0175" (Used points).

Cam Angle—38-45° with .016" gap.

►*BREAKER GAP CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—17-21 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance—1112388

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Automatic Advance—1112392

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	350	0-4	700
7-9	750	14-18	1500
11-13	1200	22-26	2400
16-18	1800	32-36	3600

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

VacuumSpark Control: Delco-Remy 1116043. Used with all truck distributors.

Plunger Travel—17/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	7-8.5"
10°	20°	18.5"

IGNITION TIMING

Setting (235" Engines)—2° ATDC. **261" Engines**—5° BTDC.

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'. Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR
ROCHESTER

Downdraft types with automatic or manual choke.

Models	Rochester No.
235" Engine ⑦	②7004468
235" Engine ③	⑨7005921
261" Engine ⑤	②7005140

⑦—Except Forward Control, C.O.E. & Automatic Transmission models.

②—With Manual Choke.

③—With Automatic Transmission (Except Forward Control models).

⑨—With Automatic Choke.

⑤—Except C.O.E. models.

Idle Setting (Exc. 7005140)—1 to 2½ turns open, (turn screw out for richer mixture).

Idle Setting (7005140)—1 to 1½ turns open, (turn screw out for richer mixture).

Idle Speed—400-450 RPM. (Exc. Automatic Trans. models), 425 RPM. with Selector Lever in "N" position (Automatic Transmission models).

Float Level (All Models)—1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so floats drop down. Distance from gasket on cover to bottom of each float should be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump—No seasonal adjustment.

Fast Idle (7005921): To check setting, hold throttle in wide open position, check choke valve opening or clearance between lower edge of valve and air horn

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

wall. This clearance should be .073" (Gauge BT-64 or Chevrolet Gauge J-5120). If clearance not correct, adjust by bending connector rod using tool BT-18 (Chevrolet Tool J-4552).

Throttle Kicker (Not used on 7005921)—Operated by cam on choke lever. Opens throttle when choke closed. No adjustment.

►*OTHER DATA–See "Rochester 'B' & 'BC' Carburetors" in Carburetor Section.*

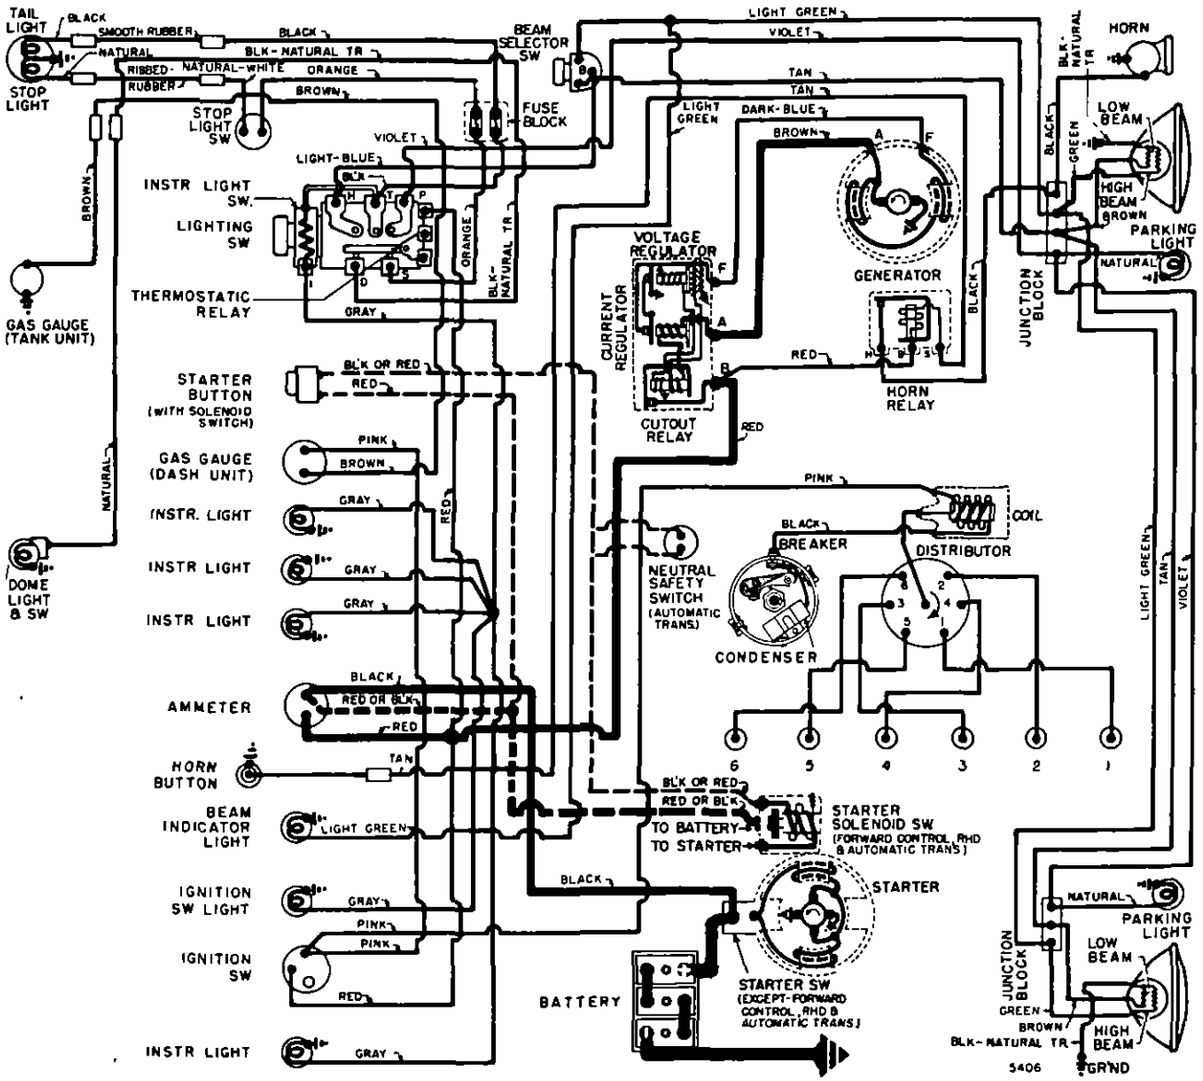
Fuel Pump Pressure: 4 lbs. maximum.

Throttle Linkage Adjustment (Hydra-Matic): *See "Hydra-Matic Drive" in Transmission Section.*

CARTER

Carter (BB) 2075S (C.O.E), 8715B (Forward Control). Single barrel updraft type with manual choke control.

Idle Setting—½-1½ turns open (turn screw out for richer mixture).



Idle Speed—450-500 RPM.

Float Level—Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed), press float lever lip firmly against needle.

Accelerating Pump—Inner holes (in plunger shaft and throttle lever) Summer, Outer hole Winter.

►*OTHER DATA–See "Carter (BB) Carburetors" in Carburetor Section.*

Fuel Pump Pressure: 4 lbs. maximum.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.

Replacement Pump—AC No. 9798 (Fuel only), AC No. 9797 (Fuel & Vacuum).

Pressure—4 lbs. maximum.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit—AC No. 1517880 (Exc. Flat Face Cowl). No. 1517168 (Flat Face Cowl).

Tank Unit—AC No. 1517951 (Exc. Forward Control, and Flat Face Cowl). No. 1517952 (Forward Control), No. 1517950 (Flat Face Cowl).

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco–15AA6 (Std. Exc. School Bus). 6 volt, 15 plate. 100 ampere hour capacity (20 hr. rate).

Delco–19Q6 (School Bus). 6 volt, 19 plate.

Battery Ground—Negative terminal.

Engine Ground— Engine to cowl.

STARTER

Model	Delco-Remy No.
All (Exc. F.C., Hydra-Matic & R.H.D.)	1107108
Forward Control & R.H.D.	1107109
Hydra-Matic Trucks	1107135

Armature—Delco-Remy 1917855 (All Starters).

Drive–(Exc. Forward Control & Hydra-Matic Models)—Overrunning clutch and pedal operated manual pinion shift.

Drive–(Forward Control & Hydra-Matic Models)—Overrunning clutch with solenoid pinion shift.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—24-28 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Starting Switch: 1107108 Starter—Delco-Remy 820052. On starter, operated by starting pedal.

1107109 & 1107135 Starter—Delco-Remy Solenoid 1118135 (no relay) mounted on starter and controlled by Pushbutton Switch 1996055 on instrument panel.

Hydra-Matic Neutral Safety Switch: Delco-Remy 1997845. Connected to starter control circuit prevents starter operating unless selector lever in "N" position.

Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Different generators used as follows:

Model	Generator No.	Armature No.
½, ¾, 1-Ton (Early)	1100018	1925348
½, ¾, 1-Ton (Late)	1100028	©1929558
2-Ton	1102793	1924893
Optl	1105008	1925556
Optl	1105009	1925630
Optl	1106757	1910073

©—Alternate wound (3½ turn) armature.

Maximum Charging Rate—Controlled by regulator and dependent on battery condition.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data—Cold

Generator	Amperes ①	Volts	RPM
1100018	45	8.0	3000
1100028	40	8.0	2850
1102793	45	8.0	2450
1105008	50	7.0	2100
1105009	40	7.0	1700
1106757	50	7.5	1410

①—Not maximum output. See Current Regulator.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—(Exc. 1106757)—28 ozs. (1106757) —20 ozs.

Field Current—(1100018, 1100028, 1102793) 1.87-2.0 amps.; (1105008, 1105009) 1.77-1.93 amps.; (1106757) 1.70-1.95 amps. All at 6.0 volts.

Belt Adjustment: (½, ¾, 1-Ton Models)—7.16-½" deflection with thumb pressure midway between generator and fan pulleys. Recheck new belt after 1000 miles service, and readjust if deflection (as above) more than ½" with 15 lbs. pressure.

1½ & 2-Ton Models—Adjust to ¾" deflection midway between generator and fan pulleys.

REGULATOR

Delco-Remy Regulator No.	Generator No.
1118827	1100018
1118843	1100028
1118827	1102793
1118835	1105008
1118831	1105009
1118833	1106757

►*REGULATOR NOTE—Checking procedure is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. All Specifications are "Normal" settings.*

Regulator "Normal" Settings

Regulator Number	Cutout Relay Closing Volts	Voltage Regulator Volts	Current Regulator Amperes
1118827	6.4	7.3	47
1118843	6.4	7.3	42
1118835	6.4	7.3	52
1118831	6.4	7.3	42
1118833	6.4	7.3	55

Cutout Relay Air Gap—.020". (with contacts just closed).

Cutout Relay Contact Gap—.020".

Voltage & Current Regulator Air Gap—.075" with armature pressed down to point where contacts just touching.

Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel). Remove switch retaining nut and switch assembly.

Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.

FUSES: Fuse block (with snap on cover) located on engine side of dash (exc. Forward Control), under instrument panel (Forward Control). *NOTE*—Spare fuse located in fuse block cover.

Stop Light—20 amps. (in fuse box).

Tail Light—20 amps. (in fuse box).

CIRCUIT BREAKER: 42 amps. Located in Lighting Switch (part of switch assembly). Protects lighting circuits together with fuses listed above.

HORNS: Delco-Remy 1999639 (Low Note), 1999640 (High Note).

Horn Relay: Delco-Remy 1116774.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap**—.014" (closed).

ENGINE

►*THREE ENGINES USED ON TRUCKS: 235" Thriftmaster, 235" Loadmaster, & 261" Jobmaster. See Truck Model Identification for engine application.*

►*1954 THRIFT MASTER & LOADMASTER ENGINE CAMSHAFT PRODUCTION CHANGE: See "Camshaft" in Engine Section of 1954 Passenger Car pages.*

►*1954 261" JOBMASTER ENGINE ROCKER ARM PRODUCTION CHANGE: See "Rocker Arms" in Chevrolet Special Data.*

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.

Engine	Bore	Stroke	Displacement
235" Thriftmaster	3 9/16"	3 15/16"	235.5"
235" Powermaster	3 9/16"	3 15/16"	235.5"
261" Jobmaster	3 3/4"	3 15/16"	261.0"

Engine	Compr. Ratio	Developed H.P.
235" Thriftmaster	7.5-1	①112 at 3700
235" Powermaster	7.5-1	①112 at 3700
261" Jobmaster	7.17-1	②135 at 4000

①—107 at 3600 RPM., on Fwd. Control & C.O.E. models.

②—125 at 4000 RPM., on C.O.E. models.

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

ENGINE MOUNTINGS: *See Chevrolet Special Data.*

CYLINDER HEAD: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1954 Chevrolet Passenger Car pages for all engine data and note the following:*

►*LOADMASTER 235" ENGINE PISTON RING NOTE*—Upper compression ring is chrome plated, and oil control ring is new design with spiral piano wire expander.

VALVES: *NOTE*—Valve Rotators used on 235" Loadmaster, 261" Jobmaster engines, and on all Forward Control models. *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING: Camshaft Setting—Timing gears are punchmarked. Marks on both gears must be lined up and adjacent to each other.

Valve Timing

Thriftmaster & Loadmaster

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

Jobmaster

Intake Valves—Open 11°30' BTDC. Close 52°30' ALDC.

Exhaust Valves—Opens 51° BLDC. Close 13° ATDC.

Valve Timing Check—Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting #1 exhaust valve adjusting screw, set dial indicator to .044" (Thriftmaster & Loadmaster); .063" (Jobmaster). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset #1 exhaust valve to correct running clearance.

OILING SYSTEM

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*

Oil Pump Installation—Assemble ground side of idler gear towards cover (use Chevrolet cover gasket only - controls pump clearance). Oil pump assembly mounted in crankcase by tapered screw. See that tapered screw seated firmly in tapered hole in pump housing before tightening locknut.

Crankcase Capacity—5 qts. (refill), 5½ qts. (dry).

Normal Oil Pressure—45 lbs. maximum.

Pressure Regulator—In pump body. Not adjustable.

Oil Pressure Indicator—AC No. 1508014 (Exc. Flat Face Cowl Models). AC No. 1507953 (Flat Face Cowl Models). Not electric.

Crankcase Ventilation (Except Forward Control Models): Regular velocity type with air intake pipe through valve rocker cover, (air cleaner on some models), outlet pipe on right side of engine.

Servicing—On all models with air cleaner mounted on valve rocker cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.

Positive Crankcase Ventilation (Std. on all Fwd. Control Models, Optional on others): Vacuum operated ventilator consisting of vacuum pipe from oil filler pipe to a ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**

Servicing—Every 5000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly. Test vacuum as follows:

Vacuum Valve—With valve disassembled, check spring tension (must be 7.5 ozs., with spring compressed to .418-.432"). If defective, replace with new valve assembly.

►*CAUTION*—When assembling valve, make certain end of spring engages groove under valve head.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Water Capacity: (½, ¾-Ton, & Fwd. Control) 16 qts. **(1, 1½-Ton)** 17 qts. **(2-Ton & C.O.E.)** 18 qts.

Pressure Valve: AC No. 850501. Opens at 4 lbs.

Thermostat: Harrison. In water outlet of cylinder head.

Standard—No. 3123993 (stamped 151) 151° type. Can be used for alcohol anti-freeze.

Optional—No. 3123994 (stamped 160) 160° type or No. 3123995 (stamped 180) 180° type. Use for permanent anti-freeze.

Temperature Gauge: AC No. 1512692 (Exc. Fwd. Control, C.O.E. & Flat Face Cowl). AC No. 1512750 (Fwd. Control, & C.O.E.L. AC No. 1512701 (Flat Face Cowl). Not electric.

See "Temperature Gauges" in Miscellaneous Section.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.

See "Chevrolet" in Water Pump Section.

Belt Adjustment: See Generator Belt Adjustment.

CLUTCH

Own. Diaphragm spring, single plate, dry disc type. *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc No. 3836097 (10" molded—Exc. Hvy. Duty, and Forward Control Models). Identified by No. 3836097 stamped on metal part of disc. No. 3836021 (11" woven—Fwd. Control and Hvy. Duty). Identified by pink paint on hub.

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. NOTE—Use finger pressure only when checking clutch free travel.

Removal: Remove transmission (see Transmission Removal) Remove throw-out bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove assembly from below. CAUTION—Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align 'X' mark on cover with 'X' mark on flywheel.

TRANSMISSION

3-SPEED (LIGHT DUTY)

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (Half-Ton): Remove accelerator pedal, floor mat, and transmission cover on floor. Disconnect speedometer cable from rear bearing retainer, remove hand brake lever from transmission case. Drain transmission. Remove battery. Remove four capscrews holding universal joint collar on rear bearing retainer, remove bolts holding transmission support on frame cross-member. Support propeller shaft with jack, slide universal joint ball and collar back on shaft, split front universal by removing capscrews retaining front trunnion bearings on front yoke. Raise propeller shaft as far as possible with jack to provide clearance. Remove two top transmission mounting screws, install special J-1116 guide pins in these holes. Take off clutch housing underpan. Remove two lower transmission mounting screws, slide transmission straight back on guide pin until main drive shaft is free from clutch driven member, lift transmission up and remove through floor opening.

Removal (¾-Ton): Remove accelerator pedal, floor mat and transmission cover from floor. Disconnect speedometer cable from driven gear on transmission housing. Disconnect shift control rods from shifter levers at transmission. Disconnect front universal joint. Remove propeller shaft intermediate bearing support and lower propeller shaft to floor. Remove the two top transmission to clutch housing capscrews and insert two J-1116 guide pins. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear shaft is free of splines in clutch disc. Remove transmission through opening in floor.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).

See "Chevrolet (3-Speed Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.

See "Transmission Controls" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

See "Chevrolet 4-Speed" in Transmission Section.

Transmission Control: (All Models exc. Forward Control)—Floor mounted gearshift lever.

Transmission Control: (Forward Control Models)—*See "Cab-Over-Engine Notes" in Chevrolet Special Data.*

Removal (½ & ¾-Ton): See "3-Speed (Light Duty)" above.

Removal (Other Trucks): Remove screws fastening steering jacket grommet and slide grommet up out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor and remove cover. On Forward Control models remove both front and rear floor pans. Remove speedometer cable from transmission rear bearing retainer. On 1-Ton, remove cotter key and pin attaching parking brake pull rod to parking lever. On 1½ & 2-Ton, disconnect parking brake lever return spring from parking brake operating lever, and remove cotter key and pin attaching inner and outer levers to parking brake operating lever. Remove parking brake lever lock, flat washer and spring and remove parking brake lever. Drain lubricant from transmission. On 1-Ton, break universal joint at transmission joint flange and tape trunnions and bearings together. On 1½ & 2-Ton, disconnect intermediate universal joint by removing two trunnion bearing "U" clamps, split joint and lower front end of rear propeller shaft to floor. Remove the four universal joint flange nuts. Remove nuts attaching propeller shaft bearing support bracket to frame cross member and remove front propeller shaft and bearing assembly. On all models, remove the two capscrews attaching transmission to clutch housing and insert two Guide Pins J-1126 in these holes. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until transmission free of splines in clutch disc. Remove transmission.

HYDRA-MATIC DRIVE

"Dual-Range" four speed automatic transmission and fluid coupling.

►*HYDRA-MATIC OIL LEAK AT UNIVERSAL JOINT (¾ & 1-TON TRUCKS): See "Hydra-Matic Drive" in Transmission Section.*

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Hydra-Matic Drive" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication—Check fluid level in transmission every day. Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level—With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission up to "F" mark on dipstick (with engine at idling speed). *CAUTION—Do not overfill transmission.*

Capacity—8½ qts. (refill), 9 qts. (after overhaul). *NOTE—Add 1 quart extra on trucks equipped with oil cooler.*

►*OTHER HYDRA-MATIC SERVICE DATA—See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Half-Ton: Own. Bushing type.

►*TORQUE TUBE BUSHING INSTALLATION (Half-Ton Truck): See "Chevrolet Pass. Cars & Half-Ton Truck Rear Axle" in Rear Axle Section.*

¼, 1, 1½, 2-Ton Trucks: Spicer needle bearing types.

See "Spicer" in Universals Section.

REAR AXLE

SEMI-FLOATING (HALF-TON).

Own. Semi-floating, hypoid gear with Torque Tube drive.

NOTE—Axle is same design as passenger car.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio—3.90-1 (37:9) (Synchro-mesh & Hydra-Matic).

►*IDENTIFICATION NOTE*—Axle is identified by Serial No. Prefix stamped on front face of carrier flange on right side: **MU, MV** (Synchro-mesh), **MA, MB** (Hydra-Matic).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769 ①	29 5/8"
Right	3694770 ①	30 5/8"

①–Part No. Stamped on axle for identification.
Backlash–.005-.007". Screw adjustment.

Removal: Raise rear of car, remove rear wheels and brake drums, install clamps on wheel cylinders, disconnect hand brake cable from idler levers and remove cables from cable clamps on frame, disconnect brake line at axle housing and shock absorber from rear spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly from beneath car.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of axle in differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, install clamp on wheel cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axle Shaft Endplay–Free fit to .014" maximum.

FULL-FLOATING (EXC. HALF-TON)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►**1½ & 2-Ton Note**–Axle shaft splined to wheel hubs. *See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.*

►*IDENTIFICATION NOTE:* Axles are identified by Axle Serial Number prefix letters stamped on top of carrier housing between reinforcing ribs. The letter indicates model year "M" or "X" (1954); "N" or "Y" (1955). The second letter indicates axle model. See Axle Ratio table following:

Axle Ratios & Identification

Truck Model	Ratio	①Ident. Prefix
¾-Ton (Std.) ②	4.57-1	G or H
¾-Ton (Dual)	4.57-1	D
¾-Ton (Dual)	5.14-1	C
¾-Ton (Optl.)	5.14-1	Q
¾-Ton (Fwd. Cont.)	5.14-1	Q
1-Ton ②	5.14-1	J or Q
1-Ton (Fwd. Cont.)	5.14-1	C or A
1½-Ton (Std.)	6.17-1	L
1½-Ton (Optl.)	5.43-1	E
2-Ton	6.17-1	G or K

①–See Identification above.

②–Except Forward Control Models.

Backlash–.005-.008". Screw adjustment.

Removal: Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two U-bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½X13 screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

CAUTION–Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. *Grease at this point will cause loosening of axle shaft flange capscrews.*

Axle Shaft Removal (1½ & 2-Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*–When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

Axle Shaft Note–Shafts unequal length (right shaft longer) and may be identified by part number stamped on shaft, or by length as follows:

TWO-SPEED

Own. Full-floating, two-speed double reduction with hypoid gears (first reduction), helical gears (second reduction). Vacuum shift control.

See "Chevrolet Two-Speed Hypoid Gear" in Rear Axle Section.

►*IDENTIFICATION NOTE*–Axle identified by Serial Number stamped on flat top of carrier on right side.

NOTE–Two ratios available as follows:

Two-Speed Shift Control: Vacuum power type with selector valve on instrument panel.

Carrier Assembly Removal: Remove axle shaft flange mounting bolts, pull both axle shafts out of housing approximately 8" (to clear differential). Drain axle lubricant and remove inspection plate. Loosen hose clamps and slip hoses off vacuum cylinder hose connections. Disconnect rear universal joint by removing trunnion bearing "U" bolts from rear flange, slide propeller shaft assembly forward, tape universal bearing trunnions in place to prevent loss of needle bearings, swing propeller shaft out of the way (tie up to frame side rail). Remove capscrews mounting carrier on axle housing (support carrier with a punch inserted through one upper mounting screw hole in housing before removing last mounting screw). Place support jack under carrier assembly, roll assembly straight forward until differential clears housing, remove carrier assembly from beneath truck.

Axle Shaft Removal & Wheel Bearing Adjustment: Same as for regular rear axle (see above).

Ratio	①Ident. Prefix
6.13-1 (High), 8.10-1 (Low)	N or R
6.7-1 (High), 8.86-1 (Low)	S or D

¼ & 1-Ton Trucks

Axle Shaft	Part No.	Length
Left	3680977	31¼"
Right	3680978	37"

1½-Ton Truck (Splined Shaft)

Axle Shaft	Part No.	Length
Left	3685191	34¼"
Right	3685192	40 5/8"

2-Ton Truck (29 Splines)

Axle Shaft	Part No.	Length
Left	3702295	36¾"
Right	3702296	41¼"

Wheel Bearing Adjustment: Remove wheels and axle shaft (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ & 2-Ton) while turning hub by hand, then back nut off 45°, check for free turning, install adjusting nut lock (with lock tangs aligned with slots in adjusting nut), bend tang down into notch in adjusting nut, install locknut and tighten securely, bend tang of lock down into notch of locknut.

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type), or Double Acting (Piston Type) hydraulic shock absorbers as follows:

Direct Acting

Location & Model	Delco No.
Front (½, ¾, 1-Ton)	808M
Front (1½, 2-Ton Exc. C.O.E.)	682P
Front (C.O.E.)	682K
Rear (½-Ton)	843V
Rear (¾-Ton)	843T
Rear (1-Ton Utility)	660V

Double Acting

Location & Model	Delco No.
Left Rear (1-Ton Fwd. Control)	1722 F
Right Rear (1-Ton Fwd. Control)	1722 E

FRONT SUSPENSION

Conventional "I" Beam Section, with Reverse Elliot ends and semi-elliptic springs.
Kingpin Inclination–7°10'±1° crosswise (all).
Camber–1°±½° (all). Bend axle for correction (when kingpin inclination is likewise off).
Caster–See Table below. All specifications ±½°.
Toe-In–See Table below. Adjust by turning tie rod.
CAUTION–Tie rod ends must be aligned with studs.

Model	Caster	Toe-In
½-Ton	1°±½°	1/16-3/16"
¾-Ton (Exc. Fwd. Cont.)	¾°±½°	1/16-3/16"
¾-Ton Fwd. Control	2¼°±½°	1/16-1/4"
1-Ton (Exc. Fwd. Cont.)	1¾°±½°	1/16-1/4"
1-Ton Forward Control	1¼°±½°	1/16-1/4"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Model	Caster	Toe-In
1½-Ton	1¾°±½°	1/16-1/4"
2-Ton (Exc. C.O.E.)	¾°±½°	1/16-1/4"
2-Ton C.O.E.	2¾°±½°	1/16-1/4"

Toe Out on Turns—Outer wheel turned 20°, inner wheel turned 23°±2°.

STEERING GEARS

Saginaw. Ball Bearing Worm & Nut. (re.circulating ball). *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

NOTE—Two different type brakes used as indicated below:

Chevrolet-Bendix (Except Rear Wheels of 1½ & 2-Ton Models)—Duo-servo, single anchor, hydraulic (without eccentric adjustment).
See "Chevrolet-Bendix Hydraulic" in Brake Section.

Chevrolet Twinplex (Rear Wheels 1½ & 2-Ton Models)—Two-cylinder, four anchor type hydraulic. Shoes are self-centering and self-energizing.

See "Chevrolet Twinplex" in Brake Section.

Wheel Cylinders—Size stamped on housing under adjusting cup lock spring.

Drums—Cast iron with steel web.

Model	Front - Diameter - Rear
½-Ton	11" - 11"
¾-Ton	12" - 12"
1-Ton	12" - 14"
1½ & 2-Ton	14" - 15"

Lining—Molded type. Riveted on 1½ & 2-Ton Models and bonded on all others.

Thickness—.202-.222" (11"Drum); .264-.284" (12" Drum); .267-.287" (14" Drum); .392-.412" (15" Drum).

Clearance—Adjust for clearance as follows:

All (Exc. 1½ & 2-Ton Rear Brakes)—Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (½-Ton), just enough to eliminate drag (Other models) but not more than 7 notches.

Rear Wheels 1½ & 2-Ton Models—Remove adjusting covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).

Hand Brake: Step-on pedal applies rear wheel service brakes on ½, ¾, 1-Ton Models. Hand lever applies independent brake on propeller shaft on all other models.

Adjustment: Adjust each type as follows:

½-Ton—With parking brake pedal released, adjust pedal pull rod clevis for 1/8" clearance between cross shaft and frame cross member at center. Depress foot pedal 1½", adjust clevis on forward end of each wheel cable to remove all slack (pull cable out of conduit by hand until positive stop is felt, adjust clevis and reconnect cable). Release rod handle under instrument panel must have ½" minimum clearance at support bracket.

¾ & 1-Ton—With parking brake pedal released, adjust brake pedal pull rod clevis until hole in end of cross shaft outer lever is correct distance to rear of center of cross shaft: 29/32" (¾-Ton), ¾" (¾-Ton Fwd. Control), 11/32" (1-Ton), 19/32" (1-Ton Fwd. Control). Then adjust each wheel cable clevis at cross shaft lever end in same manner as ½-Ton above.

1½ & 2-Ton—.010-.015" clearance between each shoe and brake drum (adjust the adjusting bolt for outer shoe clearance, nut on link for inner shoe).

Power Brakes: *See "Hydrovac Power Unit" in Brake Section.*

MODEL IDENTIFICATION

Series	Serial Prefix	Model
1500①	A	②ONE-FIFTY
2100	B	②③TWO-TEN
2400	C	②③BEL-AIR
1508	D	②SEDAN DELIVERY

①—Except Sedan Delivery.
②—CONVENTIONAL ENGINE (115 H.P.) Standard.
③—POWERGLIDE ENGINE (125 H.P.). Used when Powerglide option added.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.
Starting Serial Number—001001 (at each plant), for all models except the Corvette.

►*SERIAL NUMBER NOTE—Serial Number (example B54F 001025) includes following identification data in sequence.*

Series①	Year	Assy. Plant②	Serial No.
B	54	F	001025

①—See Model Designation above.
②—See Assembly Plant Designation below.

Assembly Plant Designation

A—Atlanta	J—Janesville	O—Oakland
B—Baltimore	K—Kansas City	S—St. Louis
F—Flint	L—Los Angeles	T—Tarrytown
		N—Norwood

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.
Starting Engine Number—0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year, and Model Type. See following for model type designation.

Engine	Suffix
Regular "235"	Z
Regular "235" (With H.D. Clutch)	ZC
Regular "235" (with aluminum cam gear)	ZH
Powerglide "235"	Y

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed.

VACUUM READING: *CAUTION—Vacuum reading on Standard transmission Cars and Powerglide Cars is different as follows:*
Standard Transmission Cars—17-21" at idling speed.
Powerglide Cars—At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral). **At 450 RPM.** 14.5" (with transmission in Drive Range). 16.3" (with transmission in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than previous models because of "high lift" cam used.*

VALVE TAPPET CLEARANCE: (Pass. Cars & 3000 Series Trucks with Conv. Valve Lifters)—.006" Intake. .016" Exhaust.
Other Trucks—.006" Intake. .020" Exhaust.

►*POWERGLIDE ENGINE NOTE—Hydraulic valve lifters used in these models and adjustment required only when cylinder head removed or valve lifters replaced. See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See Diagram.

SPARK PLUG GAP: .035".
Spark Plug—AC No. 44-5. 14mm.

COIL: Delco-Remy 1115380.
Ignition Current—2.5 amperes idling. 4.5 stopped.

DISTRIBUTOR: Delco-Remy 1112388 (With Std. Trans.); Delco-Remy 1112396 (With Powerglide).
Condenser—Delco-Remy 1869704 (first type), Delco-Remy 1928111 (Second type with spade terminal).
Capacity—.18-.23 microfarad.
Contact Point Set—Delco-Remy 1924571.
Breaker Gap—.016-.021" (New points), .0125-.0175" (Used points).
Cam Angle—38-45° with .016" gap.

►*BREAKER GAP CAUTION—Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*
Breaker Arm Spring Tension—17-21 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.
Vacuum Spark Control: Delco-Remy 1116076
Plunger Travel—11/64"-15/64".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6"
7.5	15	7.5-10"

IGNITION TIMING

Setting—2° ATDC.
Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'. Then adjust Octane Selector as follows:
Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

Model	Rochester No.
Standard Transmission	7005921
Powerglide	7005922

Downdraft types with automatic choke. Throttle Return Check used on Powerglide Models.
Idle Setting—1-2½ turns open.
Idle Speed (Synchro-mesh)—475 RPM.
Idle Speed (Powerglide)—425 RPM with Powerglide selector lever in 'D' position.
Float Level—Use Gauge No. 3696192. Invert bowl cover and float assembly **but do not remove gasket.** Place gauge in position over floats with gauge tang in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cut-out. Tilt assembly 90° to each side and see that floats do not touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¾". Adjust by bending tang at rear of float assembly.
►*CAUTION—Both floats must be set alike and must not be twisted out of alignment.*
Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.
Fast Idle: With idle adjusting screw on next to highest step of fast idle cam, Gauge J-5150 (.073") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.
Throttle Return Check Adjustment (235" Powerglide Engine): Have engine at full operating temperature. Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket. With parking brake set tight, place selector lever in 'D' range and adjust throttle stop screw and idle adjusting screw in combination with each other to obtain a smooth idle at 425 RPM, this adjustment should be made with choke valve in wide open position with throttle stop screw resting on low step of fast idle cam. Shut off engine. Close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench turn the adjusting screw until it just contacts the throttle lever contact arm.
►*NOTE—If screw projects more than ½" from shaft when head of screw just touches lever contact arm, reposition throttle check on manifold stud.*
►*OTHER DATA: See "Rochester B & BC" Carburetors in Carburetor Section.*
Powerglide Throttle Linkage Adjustment: *See "Chevrolet Powerglide Transmission" in Transmission Section.*
Fuel Pump Pressure—4 lbs. maximum.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Fuel Pump—AC No. 9798 (Fuel only), AC No. 9797 (Fuel & Vacuum).
Pressure—4 lbs. maximum.
See "Fuel Pumps" in Carburetion Equipment Section.
Gasoline Gauge: AC Electric.
Dash Unit—AC No. 1517598.
Tank Unit—AC No. 1517761.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco—15AA6-W. 6 volt, 15 plate, 100 ampere hour capacity (20 hr. rate).
Battery Ground—Negative terminal.
Engine Ground—Engine to cowl at rear head bolt.

STARTER

►*POWERGLIDE CAR STARTER PRODUCTION CHANGE: In later 1954 production, a four coil starter motor replaced the two coil starter. See following for starter motor application.*

Model	Delco-Remy No.
All Std. Trans. & Early Powerglide	1107109
Later Powerglide Cars	1108035

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Armature—Delco-Remy 1917855 (1107109, 1108035).
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—24-28 ozs.

Performance Data—1107109

Torque	RPM	Volts	Amperes
0 ft. lbs.	5500	5.65	70
12 ft. lbs.	Lock	3.25	550

Performance Data—1108035

Torque	RPM	Volts	Amperes
0 ft. lbs.	6000	5.0	60
15 ft. lbs.	Lock	3.0	600

Starting Switch: Delco-Remy Solenoid Switch No. 1118135 mounted on starter and controlled by Ignition & Starter Switch No. 1116478. Turn key full RIGHT against spring tension to start.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.

Neutral Safety Switch: (Powerglide Cars only). Delco-Remy 1997845 (without Back-Up Light & Power Steering). Delco-Remy 1998040 (with Back-Up Light & Power Steering).

Adjustment—See *"Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Delco-Remy. *CAUTION—Alternate wound (3½ turn) armature used on late production passenger cars. Correct regulator must be used with each model generator as indicated below.*

Model	Generator No.	Armature No.
Standard (Early)	1100018	1925348
Standard (Late)	1100028	①1925558
Taxi	1102793	1924893
State Police	1105008	1925556
City Police	1105009	1925630

①—Alternate wound (3½ turn) armature.

Performance Data

Generator	Amperes ①	Volts	RPM
1100018	45	8.0	3000
1100028	40	8.0	2850
1102793	45	8.0	2450
1105008	50	7.0	2100
1105009	40	7.0	1700

①—Not maximum output. See Current Regulator.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—28 ozs.
Field Current—1.87-2.0 amperes (1100018, 1100028, 1102793). 1.77-1.93 amperes (1105008, 1105009). All at 6.0 volts.
Belt Adjustment: 7/16-½" deflection with light pressure midway between generator and pump pulleys.

REGULATOR

Delco-Remy. *"1118825 SERIES" REGULATORS.*

Regulator No.	For Generator No.
1118827	1100018, 1102793
1118843	1100028
1118835	1105008
1118831	1105009

►*REGULATOR NOTE: Checking procedure for "1118825 Series" is different than for previous models. See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section. All specifications below are "Normal" settings.*

Cutout Relay (All Regulators)
Cuts In—6.4 volts (hot).
Contact Gap—.020".
Air Gap—.020" (with contacts just closed).

Voltage Regulator (All Regulators)
Setting—7.3 volts (hot).
Air Gap—.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

Regulator No.	Setting (hot)
1118827	27 amps.
1118843	42 amps.
1118835	52 amps.
1118831	42 amps.

Air Gap—.075" (with armature pressed down to point where contacts just touching).
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identi-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

fication). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.

Stop Light Switch Location (Manual Brakes): Mechanical type mounted on underside of toeboard and operated by brake pedal.

Stop Light Switch Location (Power Brakes): Pressure switch located in fitting at forward end of master cylinder.

FUSES: Located as indicated below.

Direction Signal—Fuse located on front side of instrument panel adjacent to gasoline gauge terminal.

Autronic Eye—14 amps. Located in Autronic Eye amplifier.

CIRCUIT BREAKER: 30 amperes. Located in lighting switch.

HORNS: Delco-Remy 1999681 (Low Note), 1999682 (High Note).

Horn Relay: Delco-Remy 1116775.

Contacts Close—2.75-4.0 volts (set to 3.5 volts).

Contact Gap—.027". **Air Gap**—.014" (closed).

ENGINE

►*TWO ENGINES USED ON PASSENGER CARS: Conventional 235" & Powerglide 235". See Passenger Car & Truck Model Identification for engine application.*

►*1954 235" (POWERGLIDE) & 261" (JOBMASTER) ENGINE ROCKER ARM PRODUCTION CHANGE: See "VALVES" (below) for rocker arm identification.*

►*NOTE—The following repair data applies to all Pass. Car & Truck Engines.*

ENGINE SPECIFICATIONS: Own 6 cylinder valve-in-head.

Bore—3 9/16". **Stroke**—3 15/16".

Displacement—235.5 cu. in. **Rated H.P.** 30.4.

Developed Horsepower—115 at 3700 RPM (Conventional). 125 at 4000 RPM (Powerglide).

Compression Ratio—7.4-1

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See Chevrolet Special Data.*

OIL PAN REMOVAL: Remove bolts attaching steering idler and third arm and bracket assembly to frame cross member and drop down. *CAUTION— Note number of shims between bracket and cross arm and replace this same amount at reassembly.*

ENGINE MOUNTINGS: *See Chevrolet Special Data.*

CYLINDER HEAD: *See Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with piston pin offset 5/64".

Weight—1.18 lbs. (235" Engine), 1.36 lbs. (261" Engine).

Removal—Pistons and rods removed from above.

Clearance—.0005-.0011" at bottom of skirt, .0115-.0135" at top land. Selective fit.

Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize. *STANDARD SIZE PISTON NOTE*—Std. *pistons furnished in four sizes with size stamp and* size range as follows: **S4**(3.5625"-3.5630"), **S5**(3.5630"-3.5635"), **S6** (3.5635"-3.5640"), **S7** (3.5640"-3.5645").

Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.

Installing Pistons: Install piston with notch in piston and mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.

Diameter—.8660-.8665" (exc. Jobmaster), .9270-.9275" (Jobmaster). **Length**—3.198-3.228" (All).

Pin Fit in Piston—Thumb push fit (at room temp.). To check fit, with piston and pin at 70°F, apply light oil film to pin, insert pin vertically in one piston boss (one end of pin in either piston boss). Pin should hold own weight but should install easily with thumb pressure.

Replacement Pins: Furnished Std. .0015", .003", .005 oversize.

PISTON RINGS

Passenger Cars

Ring	Width	End Gap	Side Clearance
Compr. ①	3/32"	.007-.020"	.002-.0035"
Oil ②	3/16"		③

Trucks

Compr. ①	3/32"	.007-.020"	.002-.0035"
Oil ③	3/16"	⑤	.0015-.003"

①—Deep section, twist type. Top Ring on Loadmaster & Jobmaster engines is Chrome plated.

②—4-Piece type (Upper & Lower Rails, Steel Spacer, & Expander Spring behind rails and spacer).

③—Wide slot expander type. Expander is flat spring (Thriftmaster), coil spring type (Loadmaster & Jobmaster—ring has semi-circular seat for spring).

④—Free fit to .010" maximum.

⑤—.005-.015" (Thriftmaster), .010-.018" (Loadmaster & Jobmaster).

►*RING INSTALLATION CAUTION—Install compression rings with side marked "TOP" upward.*

Replacement Rings: Furnished Std. .005", .010", .020", .030", .040" oversize.

CONNECTING RODS

►*CONNECTING ROD REPLACEMENT CAUTION— Rods for 261" Jobmaster engine not interchangeable with other engines. Casting No. 3701491 (Exc. 261" Engine), No. 3702448 (261" Engine).*

Length—6 13/16". **Weight**—31.76 ozs. (Exc. 261").

Crankpin Journal Diameter—2.311"-2.312", all engines.

Lower Bearing—Replaceable precision type.

Clearance—.0007-.0028". *Not adjustable.*

Sideplay—.005-.012" at lower end.

Replacement Bearings: Std. .001", .002", .010", .020" undersize.

Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CRANKSHAFT

►*CAUTION—No. 1 (front) and No. 2 (front intermediate) bearings similar in appearance but must not be interchanged. No. 2 bearing marked by "1" in oil groove.*

Journal Diameters—(1) 2.6835" 2.6845". (2) 2.7145"-2.7155", (3) 2.7455"-2.7465", (4) 2.7765"-2.7775".

NOTE—Journal taper or out-of-round limits .001". Run-out Limits for Nos. 2 & 3 journals is .002".

Clearance—.0005" minimum. .003 "maximum (new bearings), Service limits .0005" min. .0045" maximum. Adjustment below.

NOTE—Precision type bearings can be replaced singly.

Bearings—Steel backed thin wall babbitt.

Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).

Replacement Bearings: Furnished Std. .002", .010", .020", .030" undersize.

Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Bearing Cap Installation—No. 2 & No. 3 bearing caps marked for identification. Install No. 2 cap with mark "FRONT" toward front of engine, No. 3 cap with mark "REAR" toward rear of engine.

Crankshaft Oil Seal Servicing: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**—.0035"-.0095".

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT CAUTION—Different camshafts used in Conventional and Powerglide engines (261" Truck engine uses same camshaft as used on Corvette). Early type Conventional engine camshaft is forged steel. Later Conventional engines and all Powerglide engines have a cast iron alloy camshaft and a cast iron alloy distributor drive gear.*

Camshaft Part Numbers	Camshaft	Dist. Gear
235" Pass. (Powerglide)	④ 3836045	⑫ 1929578
235" Pass. (Powerglide)	⑬ 3836386	⑫ 1929578
235" (Exc. P.G. & Corvette)	⑭ 3836489	⑤ 1865180
235" (Exc. P.G. & Corvette)	⑥ 3713919	⑫ 1929578
235" Corvette	⑦ 3836484	⑫ 1929578
261" Truck	⑦ 3836484	⑫ 1929578
235" Truck (Early)	⑧ 3836490	⑤ 1865180

④—**Used on First 10,000 cars.** Identified by 7/16" wide cam lobes. NOTE—This camshaft not furnished for service replacement. *See "Camshaft No. 3836045 Replacement Caution" below.*

⑫—Cast Iron distributor gear identified by circular groove between teeth and rivet hole.

⑬—**Used after First 10,000 cars.** Identified by 9/16" wide cam lobes and **two large raised dots** between #5 & #6 inlet cams.

⑭—**Used before 3-1-54 on Pass. Cars & Trucks** (*See "Early 1954 Truck Camshaft Caution" below*). Forged steel. Identified by large journal, and No. 3836366 forged on shaft.

⑤—Steel distributor gear.

⑥—**Used after 3-1-54 on Pass. Cars & Trucks** (*See "Early 1954 Truck Camshaft Caution" below*). Cast Iron. Identified by 9/16" wide cam lobes and **one large raised dot** between #5 & #6 inlet cams.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

⑦—Cast iron. Identified by 9/16" cam lobes and **three large raised dots** between #5 & #6 inlet cams.

⑧—**Used on 15,000 Early 235" Truck engines.** Forged steel. Identified by 1/8" smaller journal than Camshaft No. 3836489. *See "Early 1954 Truck Camshaft Caution".*

►*CAMSHAFT NO. 3836045 REPLACEMENT CAUTION:* When replacing this camshaft with No. 3836386, connecting rods must be relieved approximately 1/16" by grinding rear side of lower end of connecting rod adjacent to bolt on camshaft side. This will allow connecting rod to clear larger (9/16") cam lobes.

►*EARLY 1954 TRUCK CAMSHAFT CAUTION:* Approximately 15,000 235" Truck engines were equipped in production with Camshaft No. 3836490, which have a smaller journal than later production.

Journal Diameters (Camshaft No. 3836490)—(1) 2.0282"-2.0292", (2) 1.9657-1.9667", (3) 1.9032-1.9042", (4) 1.8407-1.8417".

Journal Diameters (All Others)—(1) 2.1537-2.1547", (2) 2.0912-2.0922", (3) 2.0287-2.0297" (4) 1.9662-1.9672".

NOTE—Journal out-of-round limits .001". Run-out limits .002" (straighten if run-out excessive).

Bearing Type—Steel backed babbitt lined bushing (staked in place). *NOTE*—New bearings must be line reamed.

Clearance—.002-.004" (Camshaft No. 3836490), .0015-.0035" (All Others).

End Thrust: Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

Endplay Adjustment—*See "Timing Gears" in Chevrolet Special Data.*

Endplay—Free fit to .003" maximum.

Timing Gears: Fibre (Pass Cars, Exc. Corvette), Aluminum (Corvette and Trucks). Steel crankshaft gear.

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Timing Gear Backlash—.003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must line up directly opposite each other.

VALVES

Tappet Clearance: (Pass Cars & 3000 Series Trucks with Conv. Valve Lifters)— .006" Intake. .016" Exhaust.

Other Trucks: .006" Intake. .020" Exhaust.

►*EARLY POWERGLIDE ENGINE VALVE "SQUAWK" See "Valve System" in Chevrolet Special Data.*

►*NOTE: "XCL" exhaust valves used in 235" Powerglide, H.D. Trk. & 261" Engine (stamped "XCL").*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	①	4.902-4.932"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30° ②	④	.001-.0027"
Exhaust	45° ③	⑤	⑥

①—.3400-.3407" (Pass. Cars), .339-.3397" (Trucks).

②—Valve seat (Seat Angle in Block 31°).

③—Valve Seat (Seat Angle in Block 46°).

④—.294" (Conv. 235"), .400" (Powerglide 235"), .405" (Corvette & 261" Jobmaster).

⑤—.312" (Conv. 235"), .400" (Powerglide 235"), .414" (Corvette & 261" Jobmaster).

⑥—.002-.0037" (Pass. Cars), .003-.0047" (Trucks).

Valve Seat Width—3/64-1/16" (Intake), 1/16-3/32" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation—*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down.

Free Length—2 5/32" (Conv. 235"), 2 9/32" (Powerglide 235" & Jobmaster 261").

Spring Specifications
(235" Conventional Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	1.505"

Spring Specifications
(235" Powerglide & 261" Jobmaster Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.908"
Valve Open	177-187 lbs.	1.518"

Valve Lifters (Conventional 235" Engine): Plain barrel type. Identified by plain barrel and spot of yellow paint below push rod seat. *NOTE*—Valve Lifters used on Corvette has shallow groove around barrel.

Valve Lifters Powerglide 235" Engine): Hydraulic type. 1954 lifter is different than previous lifters and is identified by two raised rings below oil holes in barrel.

Hydraulic Lifter Adjustment—Required only when installing cylinder head or when adjusting screw setting has been disturbed. *See "Tappet Clearance Adjustment" in Chevrolet Special Data.*

Hydraulic Lifter Overhaul & Testing—*See "Hydraulic Valve Lifters" in Chevrolet Special Data.*

►*REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and push rods use a rack to keep them in proper sequence. Install in their original location when reassembling.*

Rocker Arm Assembly: *See "Rocker Arms" in Chevrolet Special Data.*

►*235" POWERGLIDE ENGINE & 261" JOBMASTER ENGINE ROCKER ARM PRODUCTION CHANGE: See "Rocker Arms" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

235" Conventional Engine

Intake Valves—Open 1° ATDC. Close 39° ALDC.

Exhaust Valves—Open 42° BLDC. Close 9° ATDC.

235" Powerglide Engine

Intake Valves—Open 10° 30' BTDC. Close 53° 30' ALDC.

Exhaust Valves—Open 49° BLDC. Close 15° ATDC.

Valve Timing Check—(*CAUTION*—On 235" Powerglide engine with hydraulic valve lifters, it will be necessary to replace the hydraulic valve lifter and pushrod operating #1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from #1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing. Mount dial indicator on rocker arm shaft with stem of indicator contacting #1 exhaust valve adjusting screw and set dial indicator to **.044"** (235" Conventional Engine), **.058"** (235" Powerglide Engine). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset tappel to correct running clearance.

OILING SYSTEM

Crankcase Capacity: 5½ qts. (dry), 5 qts. (refill).

Normal Oil Pressure: 45 lbs. maximum. Full pressure system of all engines.

Pressure Regulator Valve—In oil pump body. Not adjustable.

Oil Pressure Gauge—AC No. 1507960. Not electric.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*

Oil Pump Installation—Assemble ground side of idler gear towards cover (use Chevrolet cover gasket only—controls pump clearance). Oil pump assembly mounted in crankcase by tapered screw. See that tapered screw seated firmly in tapered hole in pump housing before tightening locknut.

Rocker Arm Oil Lead & Overflow Pipe: *See "Oiling System in Chevrolet Special Data.*

Crankcase Ventilation: Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

COOLING

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC No. 850549. Radiator filler cap. 7 lb. type.

Thermostat: Harrison. In cylinder head water outlet.

Standard—No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.

Optional—No. 3123994 (stamped 160) 160°, or No. 3123995 (stamped 180) 180°. Use for permanent anti-freeze.

Temperature Gauge: AC No. 1512818. Not electric. *See "Temperature Gauges" in Miscellaneous Section.*

Water Pump: Double outlet, packless type with sealed ball-bearing shaft. *See "Chevrolet" in Water Pump Section.*

Belt Adjustment—*See Generator Belt Adjustment.*

Radiator Removal & Installation: *See "Radiator" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars). Diaphragm spring type. *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc—Chevrolet No. 3835216 (moulded), No. 3835343 (woven), No. 3835454 (heavy duty).

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch fork. *NOTE*—Use finger pressure only when checking pedal free travel.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*—Do not allow pressure plate to hang from retracting springs, (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Remove floor mat and floor cover over transmission. Disconnect speedometer cable, and shifter rods from levers on transmission. Drain lubricant. Disconnect hand brake pull back spring, and hand brake cable clevis from idler lever, remove idler lever. Remove universal joint dollar-to-support capscrews and slide ball back on propeller shaft housing. Place jack under propeller shaft, remove four capscrews securing front trunnion bearings to front yoke, split joint and lower front end of propeller shaft. Remove rear transmission support-to-frame cross member bolts. Remove two upper transmission-to-clutch housing capscrews. Slide transmission back and lift out through opening in floor.

POWERGLIDE TRANSMISSION

Powerglide Transmission (Used with 235" Powerglide Engine)—Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS—See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.
Capacity—5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION—There is no drain plug on converter. Drain transmission case only, add 5 qts. of fluid initially, recheck after idling engine.*
Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings. Dipstick is located under hood on right side just opposite starter.

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. One used (in torque ball at rear of transmission).

TORQUE TUBE BUSHING INSTALLATION: See "Chevrolet Rear Axle" in Rear Axle Section.

►*UNIVERSAL BALL JOINT ADJUSTMENT (POWERGLIDE MODELS): Improper adjustments will cause leakage. See "Torque Tube & Ball" in Chevrolet Special Data.*

REAR AXLE

Own. Semi-floating, hypoid gear type with Torque Tube drive.
See "Chevrolet Hypoid" in Rear Axle Section.

Axle Ratios

Car Model	Axle Ratio	Serial Prefix
Without Powerglide	3.70-1	ML or MM
With Powerglide	3.55-1	MS or MT
Optional Without Powerglide	4.11-1	ME or MF

Axle Identification—Prefix of axle serial number (stamped on front face of carrier flange on right side) indicates ratios (see Ratio table above).
Backlash—.005-.007". Screw adjustment.

Removal: Raise rear of car and remove rear wheels and brake drums, install clamps on wheel brake cylinders, disconnect hand brake cables from idler lever and remove cables from cable clamp on frame. Disconnect brake line at axle housing and shock absorbers from rear spring 'U' bolts and plate, disconnect spring shackles and drop springs. Pull axle assembly back to free front end of torque tube, withdraw assembly.

Axle Shaft Removal: Wheel bolted directly on flange on outer end of axle shaft. Shaft retained by 'C' washer on inner end of differential case. To remove axle shaft, remove wheel, take out two 'zipon' nuts retaining brake drum, remove drum, install clamp on wheel brake cylinder. Remove axle housing cover, differential pinion shaft lock screw, pinion shaft and axle shaft spacer. Push axle shaft in, remove 'C' washer on inner end, pull shaft out.

Axle Shaft Installation & Endplay Adjustment: *See "Rear Axle Notes" in Chevrolet Special Data.*

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacment.

Model	Front	Rear
All	5519443 Ⓒ	5519444 Ⓒ

Ⓒ—Chevrolet Part No.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs.
See "Chevrolet" in Front Suspension Section.
Kingpin Inclination—4° plus or minus ½° crosswise.
Caster—Pos. ½ ±½°. Adjustable.
Camber—Pos. ½° ± ½°. Adjustable.
Toe-In—0-1/8". Loosen clamp bolts at each end of left hand tie rod and turn rod, tighten clamp bolts.

►*CAUTION—Align tie rods before tightening clamp bolts (ball studs will bind if not aligned).*
Toe-Out On Turns—With inner wheel turned 20°, outer wheel should be 17°40'.

STEERING

Manual: Saginaw Worm & Roller. With push-pull adjustment.
See "Saginaw Worm & Roller" in Steering Section.

Power Steering: Saginaw (GM) Hydraulic. Recirculating ball nut and worm type plus extended pitman shaft with gear sector in mesh with power rack. Power rack pinned to piston rod of hydraulic power cylinder.
See "Saginaw (GM) Power Steering" in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw Worm & Roller" in Steering Section.*
Steering Gear Removal: *See "Saginaw Worm & Roller" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic. Hand lever applies rear wheel service brakes.
See "Chevrolet Bendix Hydraulic" in Brake Section.
Drums—Diameter 11".
Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

Brake Lining

	Width	Thickness
Front Whl	2"	.202"-.222"
Rear Whl	1¾"	.202"-.222"

Length Per Shoe—9.3125" (Primary), 11.6875" (Secondary).
Braking Power—55.9% (front wheels), 44.1% (rear wheels).
Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.
Std. Master Cylinder: On bracket at left side of frame below front floor boards. Master cylinder supports clutch and brake pedal levers.
Checking Fluid—Access hole in front floor board directly under steering wheel. Maintain level in master cylinder to lower edge of filler hole.
Removal—Disconnect hydraulic line and remove eccentric bolt from brake pedal extension and main cylinder push rod. Remove clutch link from clutch pedal extension. Remove plug from forward end of master cylinder and insert a stiff wire into shaft lock pin and remove lock pin. Remove clutch and brake pedal extension pivot shafts from master cylinder body. Remove master cylinder to frame mounting bolts and remove cylinder from below.
Brake Pedal Clearance: Toe board clearance is 7/16" obtained by turning eccentric bolt at forward end of master cylinder. *NOTE*—If proper clearance cannot be obtained by turning eccentric bolt, place shims under front or rear master cylinder mounting bolts as necessary.
Power Brakes: Bendix vacuum type power brake cylinder (replaces conventional Master Cylinder).
See "Bendix Power Unit" in Brake Section.

MISC. MECHANICAL

Windshield Wipers: Cable operated vacuum type.
See "Windshield Wipers" in Miscellaneous Section.
Window Regulators: (Front Door Windows)—Electric with reversible motor in each front door. Not used on rear doors.
See Miscellaneous Section for type and Model application.
Power Top Control: Hydro-Lectric with reversible pump motor.
See "Power Top Controls" in Miscellaneous Section.
Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement.
See "Electric Seat Controls" in Miscellaneous Section.

MODEL IDENTIFICATION

Series	Serial Prefix	Model
1500①	A	ONE-FIFTY
2100	B	TWO-TEN
2400	C	BEL-AIR
1508	D	SEDAN DELIVERY

①—Except Sedan Delivery.

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.

Starting Serial Number—001001 (at each plant).

►*SERIAL NUMBER NOTE: Serial Number (example B55F001025) includes following identification data in sequence.*

Series①	Year	Assy. Plant②	Serial No.
B	55	F	001025

①—See Model Designation above.

②—See Assembly Plant Designation below.

Assembly Plant Designation

A—Atlanta	**J**—Janesville	**O**—Oakland
B—Baltimore	**K**—Kansas City	**S**—St. Louis
F—Flint	**L**—Los Angeles	**T**—Tarrytown
	N—Norwood	

ENGINE NUMBER: Stamped on right side of engine block to rear of distributor.

Starting Engine Number—0001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint, and "T" for Tonawanda), Model Year and Model Type as follows:

Engine	Suffix
Regular "235"	Z
Regular "235" (With H.D. Clutch)	ZC
Regular "235" (With aluminum cam gear)	ZH
Regular "235" (With H.D. Clutch & Alum. gear)	ZJ
Powerglide "235"	Y

TUNE-UP

COMPRESSION PRESSURE: 130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed.

VACUUM READING: *CAUTION—Vacuum reading on Standard transmission Cars and Powerglide Cars is different as follows:*

Standard Transmission Cars—At 500 RPM.—17-21" at idling speed.

Powerglide Cars—At 500 RPM.—14.4" (with transmission in Drive Range). 16.7" (with transmission in Neutral) **At 450 RPM.**—14.5" (with transmission in Drive Range). 16.3" (with transmission in Neutral). *NOTE—Manifold vacuum reading at idle speed is lower than previous models because of "high lift" cam used.*

VALVE TAPPET CLEARANCE: (Pass. Cars With Conv. Valve Lifters)—.006" Intake, .016" Exhaust, with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

(Powerglide Cars with Hydraulic Lifters)—Adjustment required only when cylinder head removed or lifters replaced. *See Tappet Clearance Adjustment under "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. Should require ½ turn from unhooked to hooked position. *Distorted springs should be replaced.*

IGNITION

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAP: .035".

Spark Plug—AC No. 44-5. 14mm. Torque to 20-25 ft. lbs.

COIL: Delco-Remy 1115087. *12 Volt.*

Ignition Current—2.5 amperes idling. 4.5 stopped.

Resistor—Delco-Remy 1927809. On firewall.

►*COIL RESISTOR NOTE:* Resistor connected to ignition switch by two leads and is by-passed during cranking (second lead provides direct connection to coil when **key turned to "Start Engine" position).**

DISTRIBUTOR: Delco-Remy 1112403. *12 Volt.*

Condenser: Delco-Remy 1928111. **Capacity**—.18-.23 mfd.

Contact Point Set—Delco-Remy 1924571.

Breaker Gap—.016-.021" (New points), .0125-.0175" (Used points).

Cam Angle—28-35° with .016" gap.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension—19-23 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Octane Selector: Adjustment on distributor provides 10° spark advance or retard from center 'O' position.

Vacuum Spark Control: Delco-Remy 1116089.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	4-6
7.5	15	7.5-10

IGNITION TIMING

Setting—TDC.

Timing Mark—Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing with Octane Selector set on 'O'. Then adjust Octane Selector as follows:

Octane Selector Setting—Set for slight ping when accelerating with wide open throttle.

CARBURETOR

THROTTLE LINKAGE ADJUSTMENT (POWERGLIDE CARS): Engine must be at normal operating temperature and transmission warm (choke valve wide open and fast idle inoperative with throttle stopscrew against low step of fast idle cam) when adjustments are made.

►*POWERGLIDE LINKAGE ADJUSTMENT PRODUCTION CHANGE:* On later cars the part throttle upshift has been lowered to 12-18 MPH by changing the angle of the transmission throttle control outer lever, and shortening the throttle valve control rod. **Throttle Linkage Adjustment differs from early cars** as indicated in the procedure following. To identify early and late type cars it will be necessary to check the part throttle upshift speed. Early cars will be 26-28 MPH. **Later cars will be 12-18 MPH.**

►*DECREASING PART THROTTLE UPSHIFT ON EARLY CARS:* If it is desired to decrease part throttle upshift from 26-28 MPH to 12-18 MPH, replace the early type Throttle Valve Outer Lever, Part No. 3710634, with later type Part No. 3720323. Replace early type Throttle Valve Control Rod, Part No. 3710632 with later type Part No. 3715711. Adjust throttle linkage as indicated below for later type cars.

1) Adjust engine idle speed to 425 RPM with selector lever in "D" range (set hand brake firmly to hold car while making adjustments).

2) *Disconnect control rod from throttle lever on transmission cover.* On early type cars (see Production Change above), remove the extreme lower rear transmission side cover bolt. On later type cars remove the top bolt at rear edge of transmission side cover. Rotate throttle valve control outer lever assembly counter-clockwise to the open throttle position.

3) Hold lever in this position and with throttle valve outer lever positioning gauge J-5906 (See "Rework of Transmission Outer Lever Positioning Gauge J-5906" below) set at 7 3/32" (early cars), 6" (late cars), measure distance between bolt hole in side cover and hole in throttle lever. If pins of gauge will enter holes, adjustment is correct. If necessary to adjust, loosen lever to clamp attaching bolt and adjust lever on throttle shaft as necessary. Reconnect control rod.

4) Disconnect bellcrank-to-carburetor throttle rod at throttle valve lever. Disconnect accelerator-to-bellcrank rod at bellcrank.

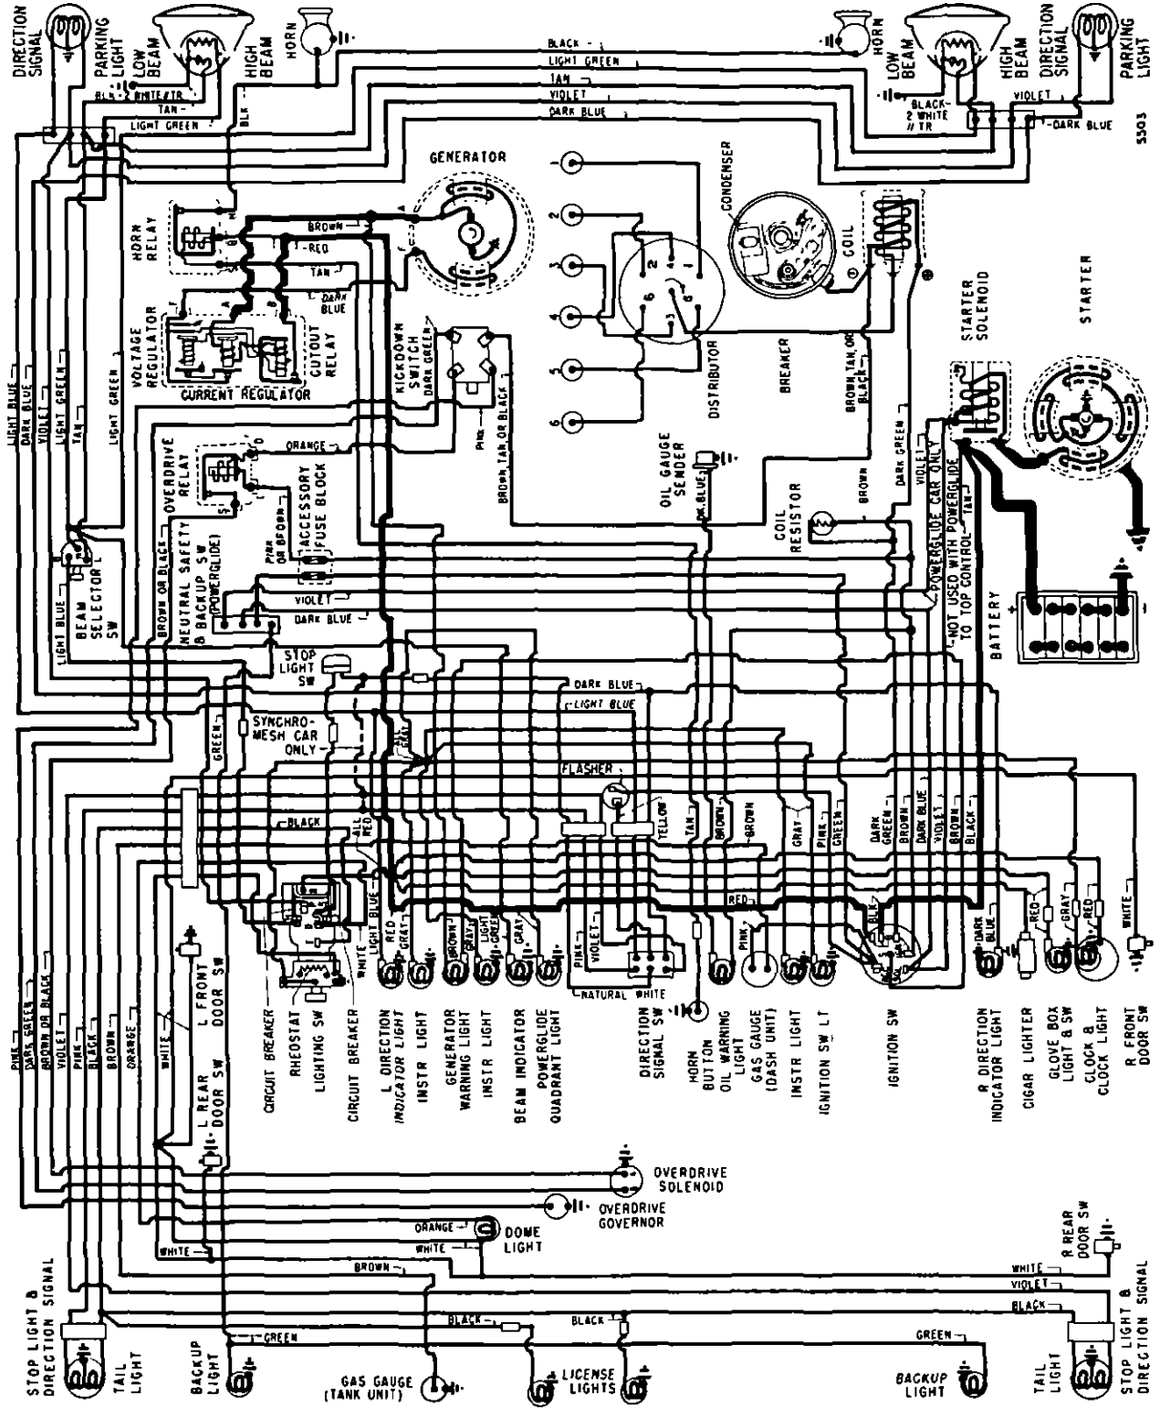
5) Force bellcrank-to-transmission throttle lever rod forward against stop in transmission (open throttle position) and adjust bellcrank-to-carburetor throttle rod for free entry of swivel pin in throttle valve lever, with carburetor throttle valve in wide open position.

6) With carburetor throttle valve held in wide open position and accelerator fully depressed, adjust accelerator-to-bellcrank rod for free entry of swivel pin into hole in bellcrank.

►*REWORK OF TRANSMISSION OUTER LEVER POSITIONING GAUGE J-5906 (For use on both 6 Cyl. & V8 Cars):* Remove bolt hole locating pin (larger pin) from gauge, pressing pin from back of lever leg to remove. Cut 5/16" from pin and replace pin in lever leg, pressing it into place to allow apex of pin to project ¾" above lever leg surface. Stake pin in place securely. Separate lever leg and place a 3/16" spacer between legs. Reassemble lever gauge. *NOTE—In some cases it may be necessary to grind a beveled radius on the outer end of bolt lever leg as required. It will also be necessary to elongate the pivot hole slightly to provide the recommended 7 3/32" setting on earlier cars with first type lever and rod (this 7 3/32" setting supersedes previous 6 3/8" setting).*

ROCHESTER BC

Model	Rochester No.
Std. Transmission	7007181
Powerglide	7007180



Idle Setting—1-2½ turns open.

Idle Speed (Synchro-mesh)—475 RPM.

Idle Speed (Powerglide)—425 RPM with Powerglide Selector lever in 'D' position.

Float Lever—Use Gauge No. 3696192. Invert bowl cover and float assembly **but do not remove gasket.** Place gauge in position over floats with gauge tang in discharge nozzle. Adjust each float vertically so they just touch top portion of gauge and bend float arms horizontally to center each float in gauge cutout.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Tilt assembly 90° to each side to see that floats do not touch gauge. Check float drop or travel by turning cover right side up so that floats drop down. Distance from gasket on cover to bottom of each float must be 1¼". Adjust by bending tang at rear of float assembly.

Choke Adjustment: Index mark on cover aligned with long cast mark on top of choke housing casting.

Fast Idle: With idle adjusting screw on next to highest step of fast idle cam, Gauge J-5120 (.073") should just slide between lower edge of choke valve and carburetor bore. To adjust, bend connector rod.

Throttle Return Check Adjustment (235" Powerglide Engine): With the engine idle speed set at 425 RPM, shut off engine, close choke valve and position throttle stop screw on highest step of fast idle cam. Using a 9/32" wrench on the flat section of throttle return check shaft, hold shaft from turning, and with a 3/8" wrench turn the adjusting screw until it just contacts the throttle lever contact arm.

►*OTHER DATA: See "Rochester B & BC Carburetors" in Carburetor Section.*

Powerglide Throttle Linkage Adjustment: *See "CARBURETOR" above.*

Fuel Pump Pressure: 4 lbs. maximum.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Fuel Pump—AC No. 4149 (Fuel only), No. 4138 (Fuel & Vacuum).
Pressure—3½-4½ lbs.
See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.
Dash Unit—AC No. 1518407.
Tank Unit—AC No. 1518158 (Exc. Sed. Del. & Sta. Wgn.). AC No. 1518180 (Sed. Del. & Sta. Wgn.).
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco 2SM50. *12 Volt.* 9 Plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground—Negative terminal.
Engine Ground—Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107626. *12 Volt.* **Armature**—1926626.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Delco-Remy Solenoid Switch 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116512.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.

Neutral Safety & Back-Up Light Switch: Delco-Remy 1998105 (Powerglide Cars only).
Adjustment—*See "Chevrolet Powerglide" in Transmission Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

GENERATOR

Delco-Remy 1100310 (Std.), 1102020 (Power Steering).
Armature–Delco-Remy 1928952 (Gen. 1100310), Delco-Remy 1929640 (Gen. 1102020).
Maximum Charging Rate–*See Voltage Regulator.*

Performance Data

Generator	Amperes	Volts	RPM
1100310	25	14.0	2780
1102020	30	14.0	2150

Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs.
Field Current–(1100310) 1.5-1.62 amps. (1102020) 1.48-1.62 amps. at 12 volts.
Belt Adjustment: 5/16" belt deflection with light thumb pressure midway between generator and pump pulleys.

REGULATOR

Delco-Remy 1118945 (Use with Gen. 1100310), Delco-Remy 1118826 (Use with Gen. 1102020). *NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
Air Gap–. 020" (with contacts just closed).

Voltage Regulator

Setting–13.8-14.8 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section*

Current Regulator

Setting (1118945)–23-27 amperes (hot).
Setting (1118826)–27-33 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly
Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever.
Adjustment–Adjust position of switch so that stop light goes on when brake pedal is depressed 5/8" from fully released position.

FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.
Overdrive–14 amps. Located in Lucite cartridge in overdrive relay feed line on engine side of dash to left of steering column.
Radio–In feed line adjacent to radio.
Back-up Light–On accessory fuse block.

CIRCUIT BREAKER: Two 13 amp. circuit breakers located on main light switch, protects all lighting circuits.

HORNS: Delco-Remy 1999759 (Low Note), 1999760 (High Note).
Horn Relay: Delco-Remy 1116781
Contacts Close–5.0-9.5 volts **Contact Gap**–.027".

ENGINE

►*TWO ENGINE USED ON PASSENGER CARS: Conventional 235" & Powerglide 235". See Passenger Car & Truck Model Identification for engine application.*
►*NOTE: The following repair data applies to all Pass. Car & Truck Engines.*

Bore	Stroke	Displacement	Rated HP
3 9/16"	3 15/16"	235.5 cu. ins.	30.4

Engine	Compr. Ratio	Developed HP
Standard	7.5-1	123 at 3800 RPM
Powerglide	7.5-1	136 at 4200 RPM

Compression & Vacuum Reading–*See Tune-Up.*
ENGINE REMOVAL: *See Chevrolet Special Data.*
OIL PAN REMOVAL: Remove bolts attaching steering idler arm bracket to frame side rail and drop for clearance. Remove pan retaining bolts and remove pan.
CYLINDER HEAD: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*
ENGINE MOUNTINGS: *See Chevrolet Special Data.*
TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Aluminum alloy, cam ground, tin plated, with pin offset 5/64".
Weight–1.18 lbs. (235" Engine), 1.36 lbs (261" Engine).
Removal–Pistons and rods removed from above.
Clearance–.0005-.0011" at bottom of skirt, .0115-.0135" at top land. Selective fit.
Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize. *STANDARD SIZE PISTON NOTE*–Std. pistons furnished in four sizes with size stamp and size range as follows: **S4**(3.5625"-3.5630"), **S5** (3.5630"-3.5635"), **S6**(3.5635"-3.5640"), **S7**(3.5640"-3.5645").
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install piston with notch in piston mark "Front" toward front of engine.

PISTON PINS

Locked in rod. No bushing used in piston.
Diameter–.8660"-.8665". **Length** 3.198"-3.228".
Pin Fit in Piston–Thumb push fit (at room temp.). To check fit, with piston and pin at 70°F, apply light oil film to pin, insert pin vertically in one piston boss (one end of pin in either piston boss). Pin should hold own weight but should install easily with thumb pressure.
Replacement Pins: Furnished Std. .0015", .003", .005" oversize.

PISTON RINGS

Passenger Cars

Ring	Width	End Gap	Side Clearance
Compr. ①	.0930-.0935"	.007-.020"	.001-.003"
Oil ②	.180-.185"	.015"-.035" ③	④

Trucks

Ring	Width	End Gap	Side Clearance
Compr. ①	.0930-.0935"	.007-.020"	.002-.0035"
Oil ⑤	181-.188"	.015-.055" ③	.000-.008"

①–Deep section "Twist" type. Top ring on Loadmaster & Jobmaster Engines is chrome-plated.
②–4-piece type (two steel rails, spacer, and expander).
③–Gap on rails.
④–Free fit to .010" clearance.
⑤–3-piece type (two chrome-plated steel rails and spacer).
►*RING INSTALLATION CAUTION–Install compression rings with side marked "TOP" upward.*
Replacement Rings: Furnished Std. .005", .010", .020", .030", .040" oversize.

CONNECTING RODS

►*CONNECTING ROD REPLACEMENT CAUTION–Rods for 261" Jobmaster engine not interchangeable with other engines. Casting No. 3701491 (Exc. 261" Engine), No. 3702448 (261" Engine).*
Length–6 13/16". **Weight**–31.76 ozs. (Exc. 261" Engine).
Crankpin Journal Diameter–2.311"-2.312", all engines.
Lower Bearing–Replaceable precision type
Clearance–.001-.003" (new), .001-.004" (used). No adjustment. Replace bearings.
Sideplay–.005-.012" at lower end.
Replacement Bearings: Std. .001", .002", .010", .020" undersize.
Installing Rods: Numbers on rods and caps must be together and installed in same numbered cylinders with numbers and pin clamp bolt toward camshaft side.

CRANKSHAFT

►*CAUTION: No. 1 (front) and No. 2 (front intermediate) bearings similar in appearance but must not be interchanged. No. 2 bearing marked by "1" in oil groove.*
Journal Diameters–(1) 2.6835"–2.6845", (2) 2.7145"–2.7155", (3) 2.7455"–2.7465", (4) 2.7765"–2.7775". *NOTE*–Journal taper or out-of-round limits .001". Run-out Limits for Nos. 2 & 3 journals is .002".
Clearance–.0005" minimum,. .003" maximum (new bearings), *Service limits* .0005" min. .0045" maximum. See Adjustment below.
NOTE–Precision type bearings can be replaced singly.
Bearings–Steel backed thin wall babbitt. *Boring or reaming not required*
Bearing Adjustment: Solid shims. Remove shims until light drag secured when shaft turned by hand, then replace .002" shim on one side for clearance (if unequal number of shims used, place extra shim on same side of all bearings).
Replacement Bearings: Furnished Std. .002", .010", .020", .030" undersize.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Bearing Cap Installation–No. 2 & No. 3 bearing caps marked for identification. Install No 2 cap with mark "FRONT" toward front of engine, No. 3 cap with mark "REAR" toward rear of engine.

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*

End Thrust: Taken by No. 3 (rear intermediate) bearing. To check endplay, force crankshaft to rear, check clearance at rear of No. 3 bearing. Adjust by replacing bearing. **Endplay**–.0035"-.0095".

Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT REPLACEMENT CAUTION: Different camshafts used in Conventional and Powerglide Engines. The 261" Truck Engine uses same camshaft as used in Corvette (6 Cyl.).*

Camshaft Identification

Model	Camshaft No.	Cast No.①
235" Pass. (Powerglide)②	3836483	3836386
235" All (Exc. Powerglide)②③	3836489	3836366
235" Corvette	3636484	3836390
261" Truck	3636484	3836390

①–Number forged or cast on camshaft.
②–Except Corvette.
③–When replacing cast iron camshaft (Identified by one large raised dot between No. 5 & No. 6 inlet cams), Steel Distributor Drive Gear, Part No. 1865180 MUST BE USED.

Journal Diameters–(1) 2.1537–2.1547". (2) 2.0912–2.0922". (3) 2.0287–2.0297". (4) 1.9662-1.9672".

►*NOTE:* Journal out-of-round limits .001". Run-out limits .002".

Bearing Type–Steel backed babbitt lined bushing (staked in place). *NOTE*–Bearings must be line reamed. *See "Camshaft & Bearings" in Chevrolet Special Data.*

Clearance–.0015-.0035".

End Thrust: Taken by thrust plate behind camshaft gear (gear position on shaft controls endplay).

Endplay Adjustment–*See "Timing Gears" in Chevrolet Special Data.*

Endplay–Free fit to .003" maximum.

Timing Gears: Fibre (Pass. Cars. Exc. Corvette), Aluminum (Corvette and Trucks). Steel crankshaft gear.

Replacement Timing Gears & Installation: *See "Timing Gears" in Chevrolet Special Data.*

Timing Gear Backlash–.003-.004".

Camshaft Setting: Gears punch marked. Punch marks on both gears must line up directly opposite each other.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance (Pass. Cars with Conventional Valve Lifters): .006" Intake, .016" Exhaust, with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

(Powerglide Cars with Hydraulic Lifters)–Adjustment required only when cylinder head removed or lifters replaced. *See Tappet Clearance Adjustment under "Valve System" in Chevrolet Special Data.*

►*NOTE: "XCR" exhaust valves used in 235" Powerglide, H.D. Trk. & 261" Engine (stamped "XCR").*

Valve	Head Diam.	Stem Diam.	Length
Intake	1 7/8"	.3410-.3417"	6.364-6.394"
Exhaust	1 1/2"	.3410-.3417	4.905-4.930"

Valve	Seat Angle	Lift	Stem Clearance
Intake	30°③	①	.001-.0027"
Exhaust	45°③	②	.001-.0027"

①–.294" (Conventional 235"), .400" (Powerglide 235"), .405" (Corvette & 261" Jobmaster Engine).
②–.312" (Conventional 235"), .400' (Powerglide 235"), .414" (Corvette & 261" Jobmaster Engine).
③–Seat angle in block 1° additional.

Valve Seat Width–.035-.060" (Intake), .062-.093" (Exhaust).

Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*

Valve Guides: Precision type. Pressed in head.

Valve Guide Installation–*See "Valve System" in Chevrolet Special Data.*

Valve Springs: Install springs with closed coil end down. Check with spring tester and replace if not within limits shown below. *NOTE–Conventional Engine and Powerglide Engine valve springs are different.*

Spring Specifications (235" Conventional Engine)

	Pressure	Length
Valve Closed	62-68 lbs.	1.821"
Valve Open	155-165 lbs.	1.505"

Free Length–2 5/32".

Spring Specifications (235" Powerglide Engine)

	Pressure	Length
Valve Open	194-210 lbs.	1.462"

Free Length–2 15/64".

Spring Specifications (261" Truck Engine)

	Pressure	Length
Valve Closed	74-82 lbs.	1.858"
Valve Open	177-187 lbs.	1.518"

Free Length–2.281".

Valve Lifters (Conventional 235" Engine): Plain barrel type. Identified by plain barrel and spot of yellow paint below push rod seat. *NOTE*–Valve Lifters used on Corvette has shallow groove around barrel.

Valve Lifters (Powerglide 235" Engine): Hydraulic type. Identified by rib around oil groove.

Hydraulic Lifter Adjustment–*Required only when installing cylinder head or when adjusting screw setting has been disturbed. See "Valve System" in Chevrolet Special Data.*

Hydraulic Lifter Overhaul & Testing–*See "Valve System" in Chevrolet Special Data.*

►*REMOVING HYDRAULIC VALVE LIFTERS: When removing lifters and push rods use a rack to keep them in proper sequence. Install in their original location when reassembling.*

Valve Lifters (261" Truck Engine): Conventional type lifter identified by single groove around body.

Rocker Arm Assembly: *See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

235" Conventional Engine

Intake Valves–Open 1° ATDC. Close 39° ALDC.
Exhaust Valves–Open 42° BLDC. Close 9° ATDC.

235" Powerglide Engine

Intake Valves–Open 10° 30' BTDC. Close 53° 30' ALDC.
Exhaust Valves–Open 49° BLDC. Close 15° ATDC.

Valve Timing Check–*(CAUTION–On 235" Powerglide engine with hydraulic valve lifters, it will be necessary to replace the hydraulic valve lifter and pushrod operating No. 1 exhaust valve, with a conventional lifter and pushrod). Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve just starts to close and until triangular flywheel mark lines up with pointer on right face of flywheel housing.* Mount dial indicator on rocker arm shaft with stem of indicator contacting No. 1 exhaust valve adjusting screw and set dial indicator to .044" (235" Conventional Engine), .058" (235" Powerglide Engine). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004'. Reset tappet to correct running clearance.

OILING SYSTEM

►*ENGINE OIL PUMP SUCTION PIPE PRODUCTION CHANGE (To Prevent Oil Pump Losing Prime at Oil Change): See "Oiling System" in Chevrolet Special Data.*

Crankcase Capacity: 5½ qts. (dry), 5 qts. (refill).

Normal Oil Pressure: 35 lbs. (approx.).

Pressure Regulator Valve–In oil pump body. Not adjustable.

Oil Pressure Indicator–Light located at right side of instrument cluster, controlled by a pressure operated switch AC No. 1508245, located in main oil gallery on left side of engine. Switch closes at 4-6 lbs. pressure.

Oil Pump: Gear type. Located in crankcase, driven by distributor gear.

Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*

Oil Filter Element: AC P-115.

Rocker Arm Oil Lead & Overflow Pipe: *See "Oiling System" in Chevrolet Special Data.*

Crankcase Ventilation–Air intake through valve rocker arm cover (air cleaner on some models), outlet through pipe on right side of engine.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*

Water Capacity: 16 qts. (17 qts. with heater).

Pressure Valve: AC No. 850549. Radiator filler cap, 7 lb. type.

Thermostat: Harrison. In cylinder head water outlet.

Standard—No. 3123993 (stamped 151) 151°. Can be used for alcohol anti-freeze.

Optional—No. 3123994 (stamped 160) 160°, No. 3133597 (stamped 170) 170°, No. 3123995 (stamped 180) 180°.

NOTE—Do not use a 180° thermostat with 7 lb. radiator cap.

Temperature Gauge: AC No. 1512931. Not electric.

Water Pump: Double outlet, packless type with sealed ball-bearing shaft.

See "Chevrolet" in Water Pump Section.

►*WATER PUMP & FAN PULLEY REINFORCEMENT:* Part No. 3720616 has been released for installation on engines where greater pulley durability is required. Later type pumps have this reinforcement. On early type pumps when the reinforcement is installed a slight fan belt misalignment will result, in any case clearance between pulley and pump body should not be less than .065".

Radiator Removal & Installation: *See "Radiator" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars)—Diaphragm spring type.

See "Chevrolet (Own)" in Clutch Section.

Clutch Disc—Chevrolet No. 3836103 (Molded), 3836121 (Woven), 3836119 (Hvy. Duty).

Pedal Adjustment: Pedal free travel ¾-1". Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.** Tighten check nut.

Removal: Remove transmission (see Transmission Removal below). Remove throwout bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*—Do not allow plate to hang from retracting springs, (support by hand). When installing clutch, align 'X' mark on cover with 'X' mark on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.

See "Chevrolet 3-Speed" in Transmission Section.

►*HARD SHIFTING CORRECTION: See "Chevrolet Transmission Control" and "Chevrolet 3-Speed" in Transmission Section for shift linkage rework and installation of new transmission parts.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Drain Transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch spines are disengaged. Remove transmission from below car.

OVERDRIVE

Warner Model AS1-R10H. Solenoid operated type with governor control and throttle operated kickdown. Lockout Switch not used.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh transmission (above) after disconnecting control cable and wiring.

POWERGLIDE TRANSMISSION

Powerglide Transmission (Used with 235" Powerglide Engine)—Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTIONS: See "Chevrolet Powerglide" in Trans. Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication: Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity—5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION—There is no drain plug on converter. Drain transmission case only, add 5 qts, of fluid initially, recheck after idling engine.*

Checking Fluid Level—Engine must be idling with the parking brake set, transmission warm, and the control lever in "N" range when taking dipstick readings. Dipstick is located under hood on right side just opposite starter.

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Needle Bearing type.

►*CAUTION:* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive) in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models.

See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Car Model	Axle Ratio	Serial Prefix
Std. Transmission	3.70-1	AA or BA
Overdrive	4.11-1	AC or BC
Powerglide	3.55-1	AB or BB

Backlash—.005-.008".

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cables from clamps at frame. Disconnect hydraulic brake lines at rear axle housing. Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*—If bearing retainer and parking brake strut interfere, raise strut slightly with screw driver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and new spherical type joints connecting control arms and steering knuckles.

See "Chevrolet (Spherical Joint)" in Front Suspension Section.

Kingpin Inclination—3½°±½°.
Caster—0°±½°.
Camber—Pos. ½°±½°.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*CAMBER & CASTER ADJUSTMENT NOTE: Adjusted by shims located between upper control arm inner support shaft and support bracket.*

Toe-In–1/8-3/16".

Toe-Out on Turns–With outer wheel turned 20°, inner wheel should be 22½°±2".

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.
See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding shoes to the true drum diameter on bench grinders will cause heel and toe contact, resulting in erratic brake action. *NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

Drums–Diameter 11".

Wheel Cylinder Diameter–Front 1 1/8", Rear 1".

	Brake Lining Width	Thickness
Front Whl.	2"	.187-.194"
Rear Whl.	1 3/4"	.187-.194"

Length Per Shoe–9.3125" (Primary), 11.6875" (Secondary).

Braking Power–55.9% (front wheels), 44.1% (rear wheels).

Clearance–Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid–Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal–Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation–Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push-rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake push rod (approximately 1/16" pedal clearance).

Power Brakes: Bendix Vacuum Type Power Unit replaces conventional master cylinder.
See "Bendix Power Unit" in Brake Section.

►*SLOW POWER BRAKE PEDAL RETURN CORRECTION:*
See "Brake Notes" in Chevrolet Special Data.

MISC. MECHANICAL

Windshield Wipers: Cable operated type (Std.). Electric type (Optional).
See "Windshield Wipers" in Miscellaneous Section.

Window Regulators: Electric type with reversible motor operating each door window assembly.
See "Power Window Regulators" in Miscellaneous Section.

Power Top Control: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Series	Serial Prefix	Model
1500	VA	ONE-FIFTY
2100	VB	TWO-TEN
2400	VC	BEL-AIR

SERIAL NUMBER: Stamped on plate on left front door hinge pillar post.

Starting Serial Number–001001 (at each plant) for all models except Corvette.

►*SERIAL NUMBER NOTE: Serial Number (example VB55F001025) includes following identification information in sequence.*

Series ①	Year	Assy. Plant ②	Serial No.
VB	55	F	001025

① –See Model Designation above.
② –See Assembly Plant Designation below.

Assembly Plant Designation

A–Atlanta	**J**–Janesville	**O**–Oakland
B–Baltimore	**K**–Kansas City	**S**–St. Louis
F–Flint	**L**–Los Angeles	**T**–Tarrytown
	N–Norwood	

ENGINE NUMBER: Stamped on pad at front right hand side of cylinder block behind water pump.

Starting Engine Number–001001 (at each plant). Suffix letters and numerals indicate plant at which engine built ("F" for Flint), Model Year and Model Type.

Type	Suffix
V8 with 3-Speed Trans.	G
V8 with Overdrive	GC
V8 with 4-Barrel Carburetor	GD
V8 with 4-Barrel Carburetor & Overdrive	GE
V8 with 3-Spd. Trans. & Air Cond.	GF
V8 with 3-Spd. Trans., Air Cond. & 4-Bbl. Carb.	GG
V8 with Hvy. Duty Clutch	GJ
V8 with H.D. Clutch & Air. Cond.	GK
V8 with H.D. Clutch & 4 Bbl. Carb.	GL
V8 with H.D. Clutch, Air Cond. & 4 Bbl. Carb.	GM
V8 with Powerglide	F
V8 with Powerglide & 4-Bbl. Carb.	FB
V8 with Powerglide & Air Cond.	FC
V8 with Powerglide, Air Cond. & 4-Bbl. Carb.	FD

TUNE-UP

COMPRESSION PRESSURE: 130 lbs., minimum with all cylinders within 10 lbs., at cranking speed.

VACUUM READING: 17-21" at idling speed.

VALVE TAPPET CLEARANCE: *(NOTE–Conventional lifters used on first Synchro-mesh cars, Hydraulic lifters used on later Synchro-mesh and all Powerglide cars.*

Cars with Conventional Lifters–.008" Intake, .016" Exhaust, with engine "normalized".

Cars with Hydraulic Lifters–No adjustment required unless cylinder head removed or lifters replaced. *See "Valve Tappet Adjustment" under VALVE SYSTEM in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders–RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".

Spark Plug–AC 44-5 (Std.), AC 46-5 (Use for continuous city driving), AC 43-5 (Use for heavy duty operation). *14mm. Torque to 20-25 ft. lbs.*

COIL: Delco-Remy 1115087. *12 Volt.* At distributor. **Ignition Current**–1.8 amps. idling, 4.0 amps. stopped. **Resistor**–Delco-Remy 1927809 (1.40-1.65 ohms). On firewall.

►*COIL RESISTOR NOTE:* Resistor is connected to ignition switch by two leads and is by-passed during cranking (2nd. lead provides direct connection to coil when key turned to "Start Engine" position).

DISTRIBUTOR: Delco-Remy 1110847.

Condenser–Delco-Remy 1869704, **Capacity** .18-.23 mfd.

Contact Point Set–Delco-Remy 1924499.

Breaker Gap–.019" (new points), .016" (used points).

Cam Angle–26-33° *with .016" gap.*

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*

Breaker Arm Spring Tension–19-23 ozs.

Rotation–Clockwise viewed from above.

Automatic Advance

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	400	0-4	800
8-10	1150	16-20	2300
15-17	1800	30-34	3600

Vacuum Spark Control: Delco-Remy 1116085 (early), 1116100 (later). **Plunger Travel**–19/64-5/16" (1116085), 15/64-1/2" (1116100).

Vacuum Advance–No. 1116085

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
14	28	13.5-15.5

Vacuum Advance–No. 1116100

Start	0	5-7
11 75	23.5	12-20.5

IGNITION TIMING

Setting–4° BTDC. Set timing to 8° BTDC at 1000 Engine RPM using suggested procedure following:

►*SUGGESTED TIMING SETTING PROCEDURE:* Disconnect distributor vacuum advance and run engine at 1000 RPM. Rotate distributor body until index line on harmonic balancer lines up with **8° BTDC** mark on indicator bolted to left side of timing chain cover.

Timing Mark–Mark on vibration dampener and an indicator on left side of valve chain cover. Indicator marked with 5-2° lines each side of "O" TDC mark.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: Rochester 2GC Dual carburetor is Std. on all models. Carter WCFB 4-Barrel Carburetor is Optl. "Power Package".*

THROTTLE LINKAGE ADJUSTMENT: *(POWERGLIDE NOTE–Adjust Transmission Throttle Control Linkage BEFORE adjusting carburetor throttle linkage).*

Carburetor Throttle Linkage (All Models)–With accelerator pedal depressed full and with throttle valve wide open, adjust accelerator-to-throttle lever rod (upper throttle rod) swivel for free entry into throttle lever. Then lengthen throttle rod by turning swivel **two full turns.** Connect rod to throttle lever.

Transmission Throttle Lever Adjustment (Powerglide Models)–With selector lever in "D" (Drive) range and with hand brake applied, adjust engine idle speed to 425 RPM (engine and transmission at normal operating temperature). Turn engine off and check choke valve to make sure it is fully open and that throttle stop screw is against low step of fast idle cam. Disconnect transmission throttle rod at lever on transmission. Remove extreme lower rear bolt in side cover on transmission. Rotate transmission throttle valve outer lever counter-clockwise to the open throttle position (against stop). Hold in this position and with throttle valve outer lever positioning gauge J-5906 set to 2-7/8", measure the distance between the bolt hole in side cover and hole in throttle lever. If pin of gauge enters hole, adjustment of lever is correct. If necessary to adjust, loosen lever to clamp attaching screw and adjust outer lever to obtain correct adjustment. Install bolt in side cover and attach throttle rod to transmission lever. Disconnect upper and lower rods from carburetor throttle lever. Force transmission throttle control rod forward against stop in transmission (open throttle) and adjust lower rod on carburetor throttle lever until swivel pin freely enters hole in lever with throttle valves wide open. Adjust upper throttle rod (see Carburetor Throttle Linkage above).

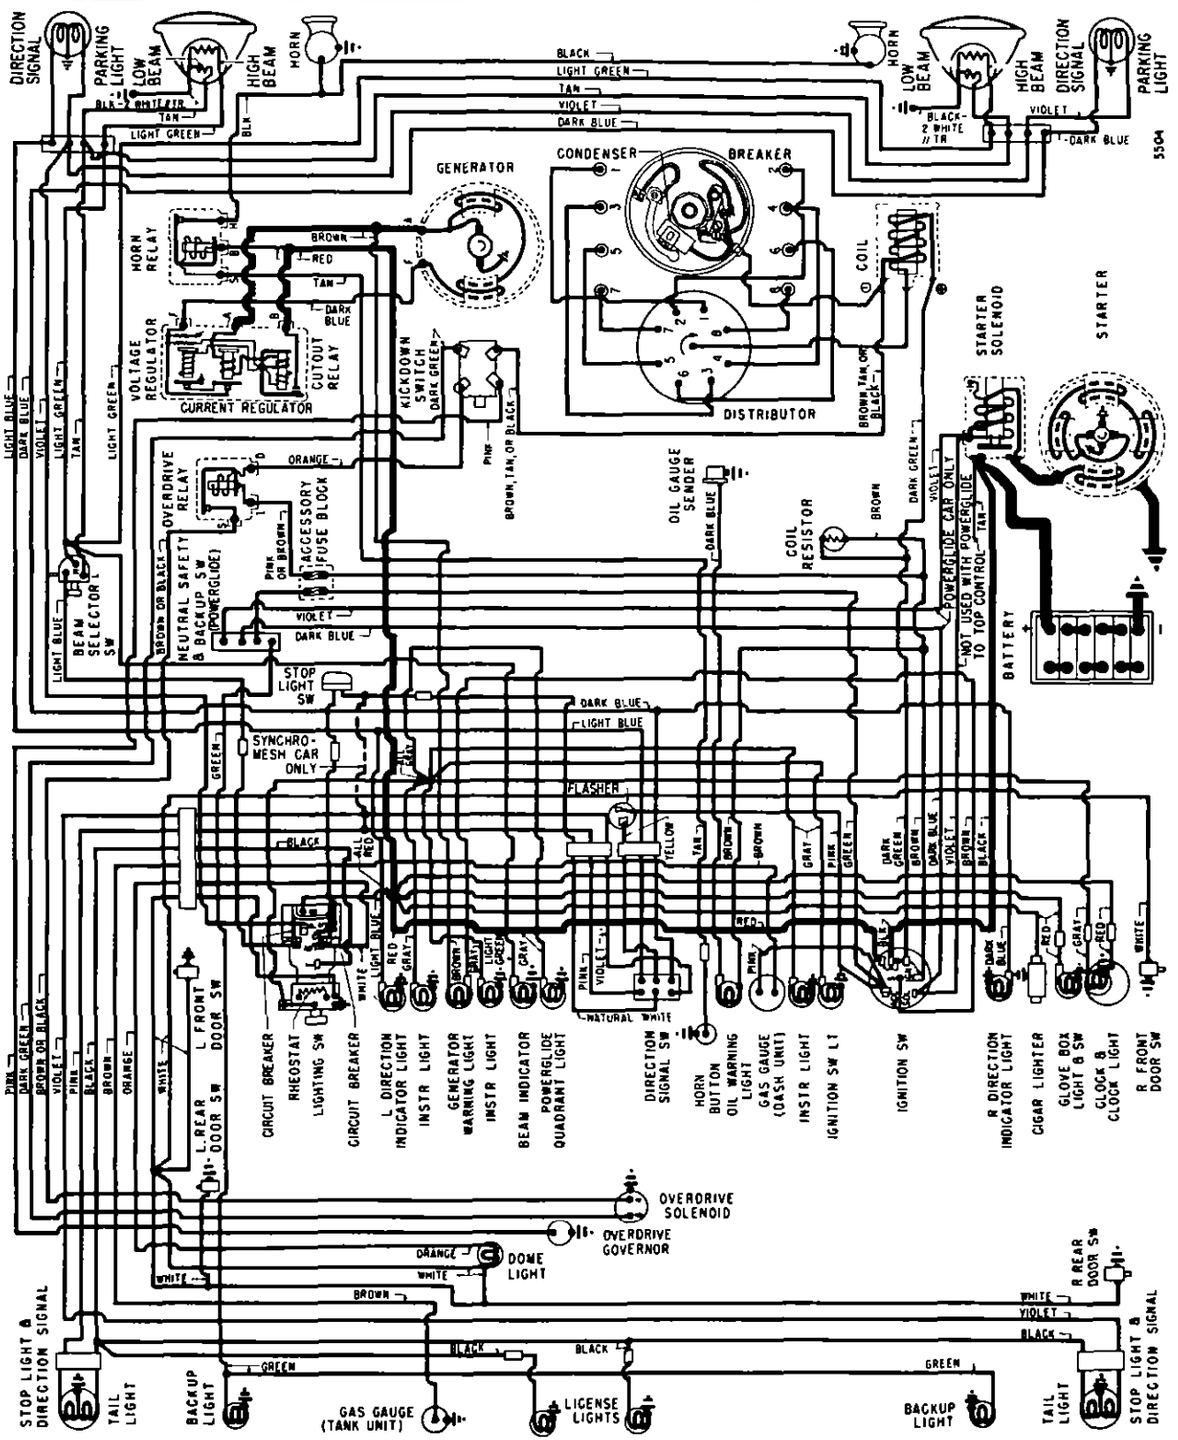
THROTTLE RETURN CHECK ADJUSTMENT (POWERGLIDE CARS): Have engine at full operating temperature. Align throttle return check adjusting screw with contact arm on throttle lever by bending return check bracket. With parking brake set tight, place selector lever in 'D' range and adjust throttle stop screw and idle adjusting screw in combination with each other for smooth idle at 425 RPM with stopscrew on low step of fast idle cam. Shut off engine, close choke valve so that stopscrew on high step of fast idle cam, adjust throttle check screw until it contacts throttle lever arm (use wrench to hold shaft).

ROCHESTER 2GC 2-BARREL

Rochester Model 2GC No. 7005810 (Early–Powerglide), 7008004 (Late–Powerglide), 7006825 (Early–Synchro-mesh), 7008005 (Late–Synchro-mesh).

►*LEAN SURGE CONDITION AT 55-75 MPH (First Cars with No. 7006825 & 7005810 Carburetors): See "Rochester 2GC" Carburetor in Carburetor Section.*

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*



Idle Setting–After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and engine RPM.

Idle Speed–450-500 RPM (Synchro-mesh), 400-450 RPM (Powerglide–with Selector lever in "D" range).

Float Level–1 5/32" *from air-horn gasket to top of* float with assembly inverted. Use Gauge BT-107 so it rests against power piston shaft with outer leg in line with center of float.

Float Drop–1 29/32" between air horn gasket and lowest point on bottom of float with air horn held up-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

right (Gauge BT-107). Adjust by bending float tang.

Fast Idle: No adjustment of fast idle speed is provided. It is necessary however, to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5921, small end of gauge must slide easily between upper edge of choke valve and bore of carburetor, with gauge held vertically. If necessary, bend choke rod until correct clearance is obtained.

Unloader Adjustment—With throttle in wide open position, wide end of Gauge J-5921 must slide freely between upper edge of choke valve and carburetor bore. Bend tang of throttle lever to obtain necessary clearance.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2GC Carburetor" in Carburetor Section.*

Fuel Pump Pressure: 4-5½ lbs., at 450-1000 RPM.

Powerglide Throttle Linkage Adjustment: *See "Carburetor" above.*

Throttle Return Check Adjustment (Powerglide Cars): *See "Carburetor" above.*

CARTER 4-BARREL WCFB 2218S & 2351S

►*HARD STARTING (AFTER FLOODING): See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*LOADING (WHEN STARTING PARTIALLY WARM ENGINE): See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

►*AIR CLEANER INSTALLATION CAUTION (CARS WITH 4-BARREL CARBURETORS):* Before installing air cleaner, the cutouts in the gasket should be matched up with the vent pipes to prevent blocking off vent.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—1/4—1-1/4 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—450-500 RPM (Synchro-mesh), 400-450 RPM (Powerglide—with Selector lever in "D" range).

►*OTHER DATA: See "Carter WCFB 4-Barrel Carburetor" in Carburetor Section.*

Powerglide Throttle Linkage Adjustment: *See "Carburetor" above.*

Throttle Return Check Adjustment (Powerglide Cars): *See "Carburetor" above.*

Fuel Pump Pressure: 4-5½ lbs., at 450-1000 RPM.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.

Replacement Fuel Pump—AC No. 4150 (Fuel only), No. 4141 (Fuel & Vacuum).

Pressure—4-5¼ lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit—AC No. 1519407.

Tank Unit—AC No. 1518158 (Exc. Sed. Del. & Sta. Wgn.). AC No. 1518180 (Sed. Del. & Sta. Wgn.).

See "Fuel Gauges" in Carburetion Equipment Section.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BATTERY

Delco 2SM50. *12 Volt.* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative terminal.
Engine Ground–Engine to cowl at rear head bolt.

STARTER

Delco-Remy 1107627 & 1107640. *12 Volt.*
Armature–Delco-Remy 1926626.
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise at commutator end.
***Brush Spring Tension**–35 ozs. minimum.*

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs	*6900*	*10.3*	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: Delco-Remy Solenoid Switch 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116512. Turn key full RIGHT against spring tension to start.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.
Neutral Safety & Back-up Light Switch: Delco-Remy 1998105 (Powerglide Cars only).
Adjustment–*See "Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Delco-Remy 1100310 (Std.), 1102020 (Power Steering). *12 Volt.*
Armature–Delco-Remy 1928952 (Gen 1100310), Delco-Remy 1929640 (Gen. No. 1102020).
Maximum Charging Rate–*See Voltage Regulator.*

Performance Data–Cold

Generator	Amperes	Volts	RPM
1100310	25	14.0	2780
1102020	30	14.0	2150

Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs.
Field Current–(1100310) 1.5-1.62 amps. (1102020) 1.48-1.62 amps. at 12 volts.
Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with a light pressure applied.

REGULATOR

Delco-Remy 1118945 (Use with Gen. 1100310), Delco-Remy 1118826 (Use with Gen. 1102020). *NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cut-Out Relay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
***Air Gap**–.020" (with contacts just closed).*

Voltage Regulator

Setting–13.8-14.8 volts (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

Current Regulator

Setting (1118945)–23-27 amperes (hot).
Setting (1118826)–27-33 amperes (hot).
Air Gap–.075" with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equipment Section.*
Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*
Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.
Stop Light Switch Location: Mechanical type mounted under instrument panel adjacent to brake pedal lever.
Adjustment–Adjust position of switch so that stop light goes out when brake pedal depressed 5/8" from fully released position.

FUSES: All accessory fuses except as indicated below are contained on the accessory fuse and junction block located on upper inside of dash panel to left of steering column.
Overdrive–14 amps. Located in Lucite cartridge in overdrive relay feed wire on engine side of dash panel to left of steering column.
Radio–In feed wire adjacent to radio.
Back-up Light–On accessory fuse block.

CIRCUIT BREAKER: Two 13 amp., circuit breakers located on main lighting switch, protects all lighting circuits.

HORNS: Delco-Remy 1999759 (Low Note), 1999760 (High Note).
Horn Relay: Delco-Remy 1116781.
Contacts Close–5.0-9.5 volts.
Contact Gap–.027".

ENGINE

►*TWO ENGINES ON PASSENGER CARS: "Conventional V8" (Early Synchro-mesh Cars–with "solid" valve lifters), and "Powerglide V8" (All Powerglide & Later Synchro-mesh Cars–hydraulic valve lifters).*

ENGINE SPECIFICATIONS: Own "V8" Valve-in-head.

Bore	Stroke	Displacement	Rated H.P.
3⅜"	3"	265 cu. ins.	45

Engine	Compr. Ratio	Developed H.P.
Standard	8.0-1	162 at 4400 RPM
With Power-Pack	8.0-1	180 at 4600 RPM

Compression & Vacuum Reading–*See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*
OIL PAN REMOVAL: Disconnect steering idler arm bracket from frame side rail and drop for clearance.
ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*
CYLINDER HEAD & MANIFOLDS: *See Chevrolet Special Data.*
TIGHTENING TORQUES: *See Chevrolet Special Data.*

PISTONS

Cast aluminum, slipper skirt, with piston pin offset 5/64".
Weight–18.77 ozs.
***Removal**–Pistons and rods removed from above.*
Replacement Pistons: Furnished Std. Size & .020", .030", .040" oversize.
►*STANDARD SIZE PISTON NOTE:* Standard pistons furnished in four sizes with size code stamped on piston. The sizes and codes are: **S4** (3.7500-3.7505"), **S5** (3.7505-3.7510"), **S6** (3.7510-3.7515"), **S7** (3.7515-3.7520").
Fitting New Pistons: Use .0015" x ½" feeler (part of Tool J-5513). With piston and cylinder clean and dry, insert feeler and inverted piston into cylinder to a point where center of piston pin hole is flush with top surface of block (feeler 90° from pin hole). Pull required to withdraw feeler must be 7-18 lbs.
Installing Pistons: Install pistons with cast depression in head and "F" mark cast in side of piston toward front of block. *See Rod Installation.*

PISTON PINS

Piston pin is pressed into connecting rod and retainers are not used.
Diameters–.9270-.9273". **Length**–3.1200".
Pin Fit in Piston–.00015-.00025". Pins should be capable of supporting own weight in either pin boss at 60°F.
Pin Fit in Connecting Rod–*NOTE–Special tools required for removal & installation. See "Piston Pins" in Chevrolet Special Data.*
Replacement Pins: Furnished only in assembly with piston. Oversizes not available.

PISTON RINGS

Upper compression ring is chrome plated and oil control ring is the four piece type (two steel rails, separator, and expander).

Ring	Width	End Gap	Side Clearance
Compr.	.077-.078"	.007-.020"	.001-.003"
Oil	.181-.188"	.015-.055" ①	.000-.008"

①–Gap on rails.
►*RING INSTALLATION CAUTION: Install compression rings with side marked "TOP" upward.*
Replacement Rings: Furnished in Standard size, .020", .030", .040" oversize.

CONNECTING RODS

Length–5.700" (center-to-center).
Crankpin Journal Diameter–1.999-2.000".
Lower Bearing–Replaceable precision type.
Clearance–.001-.003" (new), .001-.004" (used).
Sideplay–.008-.014" (both rods).
Replacement Bearings: Furnished Standard size, .001", .002", .010", .020" Undersize.
Installing Rods: Install rod in piston so that flange or heavy side of rod at bearing end will be toward front of piston (cast depression in head of piston and "F" mark on piston strut) on Nos. 1, 3, 5, and 7 pistons, and rod flange to rear of piston on Nos. 2, 4, 6, and 8 pistons. Install rod and piston assembly in cylinder with cast depression in piston head and "F" mark on strut toward front of cylinder block.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT

Journal Diameter–2.2978-2.2988".
►*NOTE: Journal runout at intermediate bearing .002" max.*
Clearance–.001-.003" (new bearings), .001-.004" (used).
End Thrust–Taken at No. 5 (rear) main bearing.
Endplay–.002-.006". Check at front of rear bearing.
Replacement Bearings: Furnished Standard size, .001", .002", .010", .020" Undersize.
Bearing Installation: Not necessary to remove crankshaft or engine from car. *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*
Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chevrolet Special Data.*
Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chevrolet Special Data.*
Vibration Dampener: *See "Vibration Dampener" in Chevrolet Special Data.*

CAMSHAFT

►*CAMSHAFT CAUTION: TWO camshafts used as follows:* **No. 3713453 (Cast No. 3713103)**–Cars with solid (conventional mechanical) valve lifters.
No. 3704212 (Cast No. 3703906)–Cars with hydraulic valve lifters.
Journal Diameters–1.8682-1.8692" (all journals).
Clearance–.0015-.0035".
Bearings–Steel backed babbitt lined bushing.
Replacement Bearings: "Precision" type (do not require reaming). Use Tool Set J-6098 to remove and install bearings.
Camshaft Setting: Both sprockets marked '0'. Install chain with sprocket marks adjacent and in line with straight edge across shaft centers.
►*CAUTION: When installing sprocket on camshaft, line up dowel holes in sprocket and shaft. DO NOT DRIVE SPROCKET ON SHAFT, use three mounting bolts and DRAW sprocket into place.*
Timing Chain: Silent Link Type.
Removal & Installation–*See "TIMING CHAIN" in Chevrolet Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chevrolet Special Data.*

VALVES

Tappet Clearance: *NOTE–"Solid" (conventional) lifters used on Early Synchro-mesh Cars, Hydraulic lifters used on all Powerglide and Later Synchro-mesh Cars.*
Cars with Conventional Lifters–.008" Intake, .016" Exhaust, with engine "normalized". *See "Valve System" in Chevrolet Special Data.*
Cars with Hydraulic Lifters–No adjustment required unless cylinder head removed or valve lifters replaced. *See "Valve System" in Chevrolet Special Data.*

Valve	Head Diam.	Stem Diam.	Length
Intake	1.720"	.3415-.3422"	4.902-4.922"
Exhaust	1½"	.3410-.3417"	4.913-4.933"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°③	①	.001-.0027"
Exhaust	45°③	②	.0015-.0032"

①–.336" (Solid lifters), .324" (Hydraulic lifters).
②–.343" (Solid lifters), .324" (Hydraulic lifters).
③–Seat angle in block is 46°.

Valve Seat Width–3/64"-1/16" (Intake), 1/16"-3/32" (Exhaust).
Valve Stem Oil Seal Installation: *See "Valve System" in Chevrolet Special Data.*
Valve Guides: Integral with cylinder head. Ream valve guide holes for oversize valves if valve stem clearance is excessive. Valves are furnished with .003", .015", .030" oversize stems. Use Reamer Set J-5830 for reaming guide holes.
Valve Springs: Install springs with closed coil end of spring toward cylinder head. On intake valve springs a baffle is used inside spring.
Valve Spring Specifications: 71-79 lbs. pressure when spring compressed to 1 45/64".
Free Length–2.03" **Installed Height**–1 11/16-1 47/64".
►VALVE SPRING INSTALLED HEIGHT CAUTION: Check installed height of valve spring after grinding valves by measuring the distance from spring seat in cylinder head to top of valve spring. If this dimension exceeds 1 47/64" install a valve spring seat shim approximately 1/16" thick.
Valve Lifters (Conventional "Solid" Type): Plain barrel type. Remove in same manner as hydraulic lifters. *See "Valve System" in Chevrolet Special Data.*
Valve Lifters (Hydraulic Type): Identified by rib in center of oil feed relief at center of body. *See "Valve System" in Chevrolet Special Data.*
Rocker Arms: Mounted individually on studs pressed into cylinder head.
Rocker Arm Stud Replacement–*See "Valve System" in Chevrolet Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Cars with Conventional Lifters
Intake Valves–Open 12° BTDC. Close 54° ALDC.
Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

Cars with Hydraulic Lifters
Intake Valves–Open 18° BTDC. Close 54° ALDC.
Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

OILING SYSTEM

Crankcase Capacity: 4 qts. (refill), 5 qts. (Dry).
Normal Oil Pressure: 35 lbs. (approx.).
Pressure Regulator Valve–In oil pump body. Not adjustable.
Oil Pressure Indicator–Light located at right side of instrument cluster, controlled by a pressure operated switch AC No. 1508245, located in main oil gallery on left side of engine. Switch closes at 4-6 lbs.
Oil Filter Element: AC P-115.
Oil Pump: Gear type. Located in crankcase, driven by distributor gear.
Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*
Crankcase Ventilation–Air intake through valve rocker arm cover, outlet through pipe on right side of engine.

COOLING

►*RADIATOR REMOVAL CAUTION (POWERGLIDE CARS): Transmission oil cooler is part of radiator lower tank, and must be TIGHTLY SEALED after removal or during repairs to avoid entrance of foreign material.*
Water Capacity: 16 qts. (17 qts. with heater).
Pressure Valve: AC No. 850549. In radiator cap. 7 lb. type.
Thermostat: Harrison. In water outlet in intake manifold.
Standard–No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.
Optional–No. 3123994 (stamped 160) 160°, No. 3133597 (stamped 170) 170°, No. 3123995 (stamped 180) 180°. *NOTE*–Do not use a 180° thermostat with 7 lb. radiator cap.
Temperature Gauge: AC No. 1512931. Not electric.
Water Pump: Packless type with sealed ball bearing shaft.
See "Chevrolet" in Water Pump Section.
Radiator Removal & Installation: *See "Cooling System" in Chevrolet Special Data.*

CLUTCH

Own (Exc. Powerglide Cars)–Diaphragm spring type. *See "Chevrolet (Own)" in Clutch Section.*

Model	Clutch Disc No.
Standard (Exc. O.D., Hvy. Duty)	3836708
Standard (Exc. O.D., H.D. & 4-Bbl. Carb.)	3836534
Overdrive (Exc. Hvy. Duty & 4-Bbl. Carb.)	3720227
Heavy Duty	3836119

Pedal Adjustment: Pedal free travel ¾-1". Loosen check nut at connecting link at clutch fork. Turn adjusting nut to remove all lash at fork, **then back off two turns.**
Removal: Remove transmission (see Transmission Removal below). Remove throw-out bearing. Remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch), loosen all six cover bolts evenly, remove cover assembly from below. *CAUTION*–Do not allow pressure plate to hang from retracting springs (support by hand). When installing clutch, align 'X' marks on cover and on flywheel.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chevrolet 3-Speed" in Transmission Section.
►*HARD SHIFTING CORRECTION: See "Chevrolet Transmission Control" and "Chevrolet 3-Speed" in Transmission Section for shift linkage rework and installation of new transmission parts.*
Transmission Control: *See "Transmission Controls" in in Transmission Section.*
Removal: Drain transmission and disconnect speedometer cable and shift rods. Disconnect propeller shaft at rear universal and slide shaft toward rear to disengage from transmission. Remove two top transmission to clutch housing screws and install Guide Pins J-1126. Remove the two lower screws and slide transmission back until clutch splines disengage. Remove transmission from below car.

OVERDRIVE

Warner Model AS1-R10H. Solenoid operated type with with governor control and throttle operated kickdown.
See "Warner R10 Overdrive" in Transmission Section.
Overdrive Control: *See "Overdrive Control" in Transmission Section.*
Removal: Same as for Synchro-mesh Transmission (above) after disconnecting control cable and wiring.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

POWERGLIDE TRANSMISSION

Powerglide Transmission–Torque converter and hydraulically operated planetary gear unit with manual controls.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Powerglide" in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*

Lubrication–Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID "Type A" bearing an "AQ-ATF" marking on container.

Capacity–5 qts. (refill), 11 qts. (after overhaul).

►*POWERGLIDE DRAINING CAUTION: There is no drain plug on converter. Drain transmission case only, add 5 qts, of fluid initially, recheck after idling engine.*

►*CHECKING FLUID LEVEL & FILLING TRANSMISSION NOTE:* A filler plug has been added to transmission side cover for use in checking fluid level and adding fluid to transmission. This change made necessary because filler tube and dipstick is not accessible from under hood on air conditioned cars.

Checking Fluid Level–Engine must be idling with parking brake set, transmission warm, and the selector lever in "N" position when taking dipstick readings (on cars without air conditioning), or checking level at filler plug on side of transmission (cars with air conditioning). Maintain fluid level to "F" mark on dipstick (cars without air conditioning), or to bottom of filler plug hole on side of transmission (cars with air conditioning).

►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Needle bearing type.

►*CAUTION:* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing adjustment is different than on previous models.

See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.

►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.

Car Model	Axle Ratio	Serial Prefix
Std. Transmission	3.70-1	AA or BA
Overdrive	4.11-1	AC or BC
Powerglide	3.55-1	AB or BB

Backlash–.005-.008".

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cable from clamps at frame. Disconnect hydraulic brake lines at rear axle housing Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach Axle Puller J-5748, with slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. *NOTE*–If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Serviced by replacement.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs and new spherical type joints connecting control arms and steering knuckles.

See "Chevrolet (Spherical Joint)" in Front Suspension Section.

Kingpin Inclination–3½° ±½°.

Caster–0° ±½°.

Camber–Pos. ½° ±½°.

►*CAMBER & CASTER ADJUSTMENT NOTE: Adjusted by shims located between upper control arm inner support shaft and support bracket.*

Toe-In–1/8-3/16".

Toe-Out on Turns–With outer wheel turned 20°, inner wheel should be 22½° ±2".

STEERING

Manual: Saginaw Ball Bearing Worm & Nut. Recirculating ball worm and nut.

See "Saginaw Ball Bearing Worm & Nut" in Steering Section.

Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section*

Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic, without anchor pin adjustment. Hand lever applies rear wheel service brakes.

See "Chevrolet-Bendix Hydraulic" in Brake Section.

►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding to the true diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE–If spindle mounted type grinder is used, the shoes should be ground to the true drum diameter.*

►*SLOW BRAKE PEDAL RETURN CORRECTION: See "Brake Notes" in Chevrolet Special Data.*

Drums–Diameter 11".

Wheel Cylinder Diameter–Front 1 1/8", Rear 1".

Lining	Width	Thickness
Front Whl.	2"	.187-.194"
Rear Whl.	1¾"	.187-.194"

Length Per Shoe–9.3125" (Primary), 11.6875" (Secondary).

Braking Power–55.9% (Front Wheels), 44.1% (Rear Wheels).

Clearance–Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

Standard Master Cylinder: Located on engine side of firewall in line with brake pedal.

Checking Fluid–Reservoir is integral with master cylinder. Maintain level in cylinder to lower edge of filler hole.

Removal–Disconnect hydraulic line from end of cylinder and remove bolted brass fitting. Remove four retaining nuts and lock washers holding master cylinder to firewall and remove cylinder.

Installation–Reverse removal procedure making sure that push rod clevis is straddling the brake pedal. Refill master cylinder and bleed all brake lines. Adjust push rod-to-main cylinder clearance as follows: Make sure brake pedal returns to fully released position with no binding, and that pedal retracting spring has not lost its tension, then adjust brake pedal clevis to give a barely perceptible end play between main cylinder piston and brake push rod (approximately 1/16" pedal clearance).

Power Brakes: Bendix Vacuum Type Power Unit replaces conventional master cylinder.

See "Bendix Power Unit" in Brake Section.

MISC. MECHANICAL

Air Conditioning: *See "Chevrolet Air Conditioning" in Miscellaneous Section.*

Windshield Wipers: *Cable operated type (Std.). Electric* type (Optional).

See "Windshield Wipers" in Miscellaneous Section.

Power Window Regulators: Electric type with reversible motor operating each door window assembly.

See "Power Window Regulators" in Miscellaneous Section.

Power Top Controls: Hydro-Lectric. *See "Power Top Controls" in Miscellaneous Section.*

Power Seat Adjuster: Reversible electric motor controls horizontal front seat movement. *See "Power Seat Adjusters" in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate attached to left front door hinge pillar post.
Serial Number Prefix–'VE' designating Series 2934.
►*SERIAL NUMBER NOTE: Serial Number example (VE55F 000000) includes following identification data in sequence.*

Series①	Year	Assy.Plant②	Serial No.
VE	55	F	000000

①–See Serial Number Prefix above.
②–Assembled only at the Flint Plant.

ENGINE NUMBER: Stamped on pad at right hand side of cylinder block behind water pump.
Starting Engine Number–All V8 engines (regardless of model) are numbered in sequence **starting with 001001.** Suffix letters and numerals indicate at which plant engine built ('F' for Flint), Model Year and Model Type (example 1001 F 55.FG).
Model Type Designation–'FG' (V8 Corvette Engine).

TUNE-UP

COMPRESSION PRESSURE: 130 lbs., minimum with all cylinders within 10 lbs., at cranking speed.
VACUUM READING: 17-21" at idling speed.
VALVE TAPPET CLEARANCE: .008" (Intake). .018" (Exhaust).
MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine.

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders–RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plugs–AC 43-5R. Tighten to 20-25 ft. lbs.
COIL: Delco-Remy 1115086. *12 Volt.*
Ignition Current–1.8 amps. idling, 4.0 stopped.
Resistor–Delco-Remy 1927809 (1.40-1.65 ohms). On firewall.
►*COIL RESISTOR NOTE:* Resistor is connected to ignition switch by two leads and is by-passed during cranking (2nd. lead provides direct connection to coil when key turned to "Start Engine" position).

DISTRIBUTOR: Delco-Remy 1110855. *12 Volt.*
Condenser–Delco-Remy 1869704. **Capacity** .18-.23 mfd.
Contact Point Set–Delco-Remy 1924499.
Breaker Gap–.019" (new points), .016" (used points).
Cam Angle–26-33° (with .016" gap).
Breaker Arm Spring Tension–19-23 ozs.
Rotation–Clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
0-2	400	0-4	800
8-10	1150	16-20	2300
15-17	1800	30-34	3600

Vacuum Spark Control: Delco-Remy 1116085.
Plunger Travel–19/64-5/16".

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
14	28	13.5-15.5

IGNITION TIMING

Setting–4° BTDC. *Set timing to 8° BTDC at 1000 Engine RPM using suggested procedure following:*
►*SUGGESTED TIMING SETTING PROCEDURE:* Disconnected distributor vacuum advance and run engine at 1000 RPM. Rotate distributor body until index line on harmonic balancer lines up with **8° BTDC** mark on indicator bolted to left side of timing chain cover.
Timing Mark–Mark on vibration dampener and an indicator on left side of valve chain cover. Indicator is marked with five lines on both sides of "0". Each line represents 2°.

CARBURETOR

Carter WCFB, No. 2218S or 2351S. 4-Barrel downdraft type with automatic choke.
►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*
►*HARD STARTING (AFTER FLOODING) CORRECTION: See "Carter WCFB" in Carburetor Section.*
►*CARBURETOR LOADING (WHEN STARTING PARTIALLY WARM ENGINE) CORRECTION: See "Carter WCFB" in Carburetor Section.*
►*AIR CLEANER INSTALLATION CAUTION:* When installing air cleaner, see that cutouts in gasket are lined up with vent pipes to prevent blocking off vent.
Idle Setting–¼-1¼ turns open. Adjust both screws alike. Turn screws out for richer mixture.
Idle Speed–400-450 RPM, with Selector lever in "D" range.
►*OTHER DATA: See "Carter WCFB" in Carburetor Section.*

THROTTLE LINKAGE ADJUSTMENT (Powerglide): *Adjust Accelerator Linkage and Powerglide Throttle Linkage in order as follows:*
Accelerator Linkage: Remove carpet from area around accelerator pedal, remove air cleaner and carburetor throttle pull back spring. Depress pedal to wide open position, check clearance between pedal and toeboard. This clearance should be 3/8". Adjust by shortening or lengthening accelerator rod at carburetor by turning trunnion nut. Install air cleaner and pull back spring.
Powerglide Throttle Linkage: Remove rod linking throttle lever on left side of transmission case to bellcrank on engine. Rotate transmission throttle valve outer lever assembly counter-clockwise to the open throttle position (against stop), measure distance from lower hole in lever to center of lower rear bolt in side cover (NOTE–Positioning Gauge J-5906 used on V8 Passenger car can be used for this purpose by setting the gauge at 2.88" and removing the bolt to allow installation of the gauge). Distance from lever to bolt should be 2.88". To adjust, loosen lever-to-clamp attaching screw and adjust outer lever as required. Install rod linking lever to bellcrank on engine. Disconnect rod linking bellcrank to carburetor. Pull upward on transmission throttle control rod so that transmission lever is against stop, see that carburetor throttle lever in wide open position, adjust swivel on rear end of carburetor-to-bellcrank rod so that rod can be connected without disturbing bellcrank or carburetor throttle lever position. Connect rod. Check adjustment by opening throttle fully and noting if further counter-clockwise rotation of the transmission throttle valve lever is possible. Lever should be against stop in this position.
Fuel Pump Pressure: 4-5½ lbs. at 450-1000 RPM.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type.
Replacement Fuel Pump–AC No. 4150 (Fuel only).
Pressure–4-5¼ lbs.
See "Fuel Pumps" in Carburetion Equipment Section.
Gasoline Gauge: AC Electric.
Dash Unit–AC No. 1517901.
Tank Unit–AC No. 1517911.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco 2SM50. *12 Volt.* 9 plate, 50 ampere hour capacity (20 hr. rate).
Battery Ground–Negative terminal.

STARTER

Delco-Remy 1107627 or 1107645. *12 Volt.*
Armature–Delco-Remy 1926626 (All Models).
Drive–Overrunning clutch (solenoid pinion shift).
Rotation–Counter-clockwise viewed from above.
Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs	6900	10.3	75
10.5 ft. lbs	Lock	5.8	435

Starting Switch: Delco-Remy Solenoid Switch 1119767 mounted on starter with separate relay Delco-Remy 1116904. Controlled by Ignition & Starter Switch 1116512.
See "Delco-Remy Starter Solenoid (Without Relay)" in Electrical Equipment Section.
Neutral Safety & Back-up Light Switch: Delco-Remy 1998112.
Adjustment–*See "Chevrolet Powerglide" in Transmission Section.*

GENERATOR

Delco-Remy 1102025. *12 Volt.* **Armature– 1929640.**
Maximum Charging Rate–*See Voltage Regulator.*

Performance Data

Amperes	Volts	RPM
30	14.0	2150

Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–28 ozs.
Field Current–1.48-1.62 amps. at 12 volts.
Belt Adjustment: 13/16" belt deflection midway between fan and generator pulleys with a light pressure applied.

REGULATOR

Delco-Remy 1118826. *12 Volt. NOTE–Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

Cutout Relay

Cuts In–11.8-13.5 volts (hot).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting–13.8-14.8 volts (hot).
Air Gap–.075" with points pressed down to point where contacts just touching.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking & Adjusting—*See "Delco-Remy 1118825 Series Regulator" in Electrical Equip. Section.*

Current Regulator

Setting—27-33 amperes (hot).

Air Gap—.075" with points pressed down to point where contacts just touching.

Checking & Adjusting—*See "Delco-Remy 1118825 Series Regulator" in Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equipment Section.*

Autronic Eye: *See "Autronic Eye" in Electrical Equipment Section.*

Direction Signal: *See "Direction Signals" in Electrical Equipment Section.*

Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel) and pull shaft and knob out. Remove switch retaining nut and switch assembly.

Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.

CIRCUIT BREAKER: Located in main lighting switch.

HORNS: Delco-Remy 1999759 (Low Note), 1999760 (High Note).

Horn Relay: Delco-Remy 1116781.

ENGINE

ENGINE SPECIFICATIONS: Own. "V8" Valve-in-head.

Bore	Stroke	Displacement
3¾"	3"	265 cu. ins.

Compr. Ratio	Rated HP	Developed HP
8.0-1	45	195 at 5000 RPM

TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1955 Chevrolet V8 Pass. Car Pages and note the following:*

CAMSHAFT: *CAUTION—The Corvette camshaft is different than the camshaft used in V8 Pass. Cars, and is identified by No. 3711354 cast into shaft.*

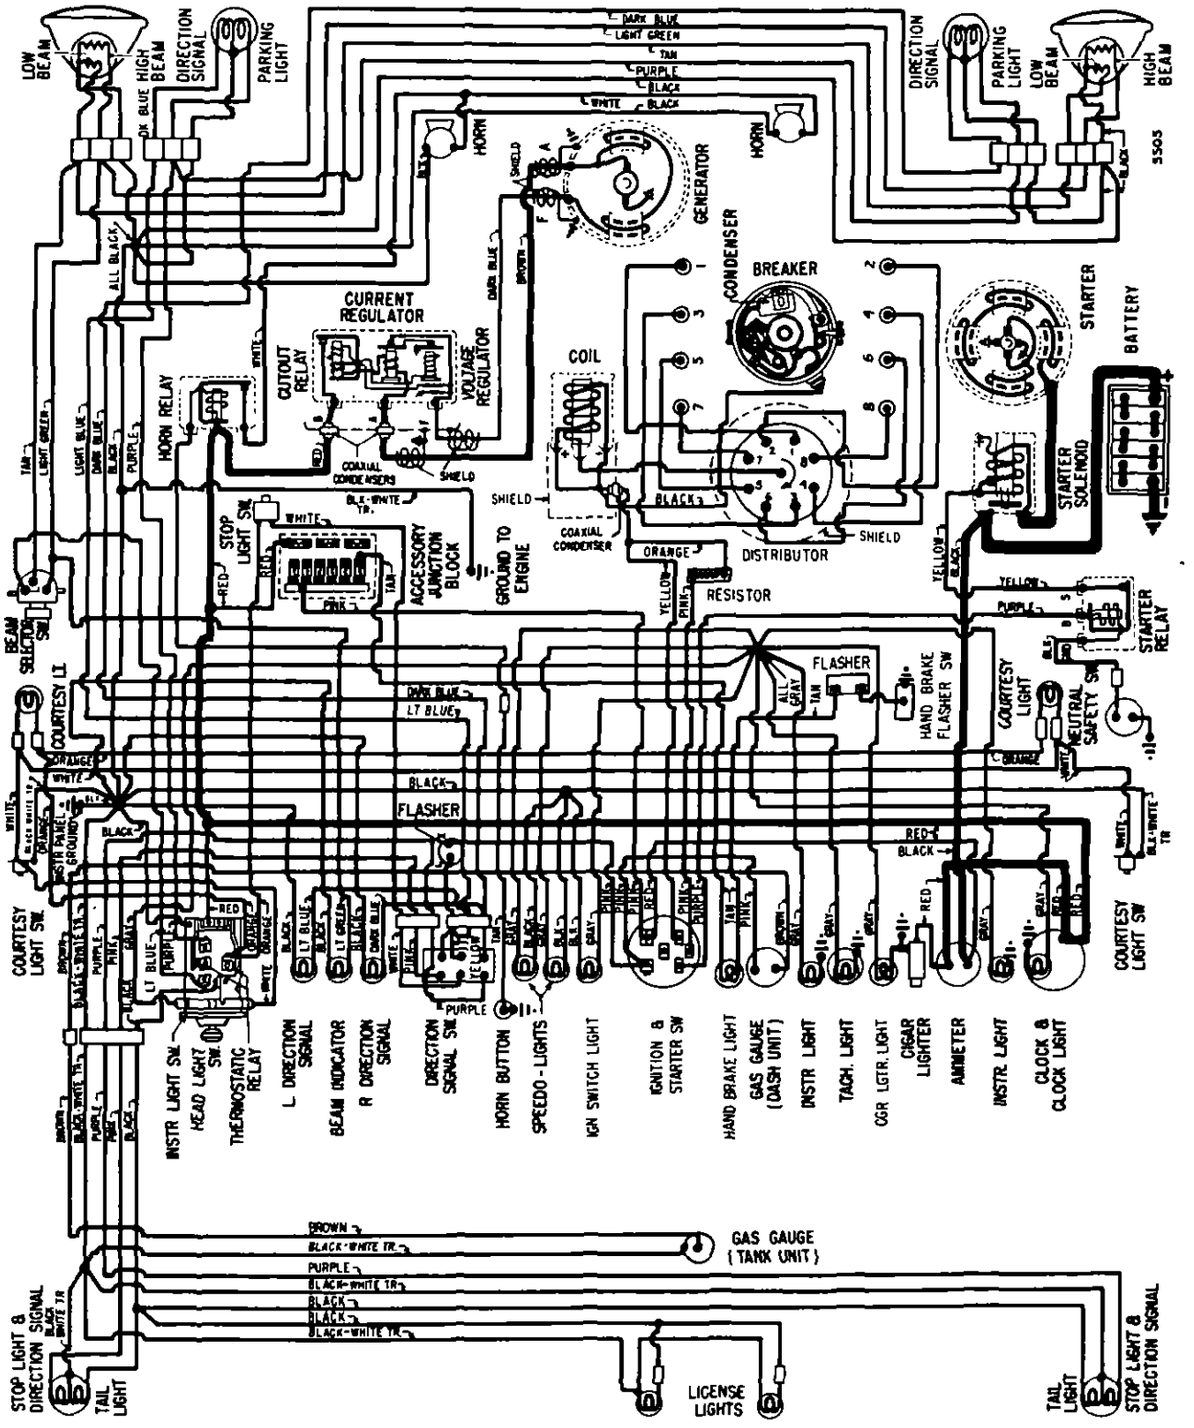
VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.720"	.3415-.3422"	4.902-4.922"
Exhaust	1½"	.3410-.3417"	4.913-4.933"

Valve	Seat Angle①	Lift	Stem Clearance
Intake	45°	.4043"	.001-.0027"
Exhaust	45°	.4136"	.0015-.0032"

①—Angle in head is 46°.

Valve Springs: Install springs with closed coil end down. Intake and exhaust springs are the same.

	Spring Pressure	Length
Valve Closed	65-72 lbs.	1.696"
Valve Open	151-161 lbs.	1.306"



Valve Lifters: Barrel type. Not hydraulic.

VALVE TIMING: *NOTE—Valve timing is different than on the V8 Passenger Car.*

Intake Valves—Open 21°30' BTDC. Close 63°30' ALDC.

Exhaust Valves—Open 62°30' BLDC. Close 23°30' ATDC.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OILING SYSTEM

Crankcase Capacity: 4 qts. (refill), 5 qts. (dry).
Normal Oil Pressure: 30 lbs. at 1170-1200 RPM.
Pressure Regulator Valve—In oil pump body. Not adjustable.
Oil Pressure Indicator: AC No. 1508063 (not electric).
Oil Pump: Gear type. Located in crankcase, driven by distributor.
Oil Pump Overhaul—*See "Oil Pump" in Chevrolet Special Data.*
Crankcase Ventilation: Air intake through valve rocker arm cover, outlet through pipe at right side of engine.

COOLING

Water Capacity: 16 qts. (17 qts. with heater).
Pressure Valve: AC Type RC-2. Opens at 6¼-7½ lbs.
Thermostat: Harrison. In water outlet in intake manifold.
Standard—No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.
Optional—No. 3123994 (stamped 160) 160°. No. 3133597 (stamped 170) 170°. No. 3123995 (stamped 180) 180°. *NOTE—Do not use a 180° thermostat with a 7 lb. radiator cap.*
Temperature Gauge: AC No. 1512756 (not electric).
See "Temperature Gauges" in Miscellaneous Section.
Water Pump: Packless type with sealed ball bearing.
See "Chevrolet V8 Water Pump" in Water Pump Section.

POWERGLIDE TRANSMISSION

Powerglide Transmission—Torque converter and hydraulically operated planetary gear unit with manual controls.
►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "Chevrolet Powerglide" in Transmission Section.*
►*TESTING & TROUBLE SHOOTING: See "Chevrolet Powerglide" in Transmission Section.*
Lubrication—Check fluid level in transmission every 1000 miles. Oil should be added only when level gets down to "Add One Quart" mark on dipstick. Change oil, remove and clean oil suction screen every 25,000 miles. Use only AUTOMATIC TRANSMISSION FLUID TYPE "A" bearing an "AQ-ATF" marking on container.
►*POWERGLIDE DRAINING CAUTION: There is no drain on converter. Drain transmission case only, add 5 qts., of fluid initially, recheck after idling engine.*
►*OTHER DATA: See "Chevrolet Powerglide" in Transmission Section.*

UNIVERSALS

Own. Needle bearing type.
See Universals Section for complete data.
►*CAUTION:* Rear bearing companion flange nut controls rear axle pinion bearing preload. Preload must be adjusted whenever companion flange nut loosened. *See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.*

REAR AXLE

Own. Semi-floating, hypoid gear type, with Hotchkiss Drive. Pinion bearing preload adjustment is different than on previous models.
See "Chevrolet Pass. Car (Hotchkiss Drive)" in Rear Axle Section.
►*PINION BEARING PRELOAD CAUTION:* Rear universal joint companion flange controls rear axle pinion bearing preload. Bearing preload must be adjusted whenever companion flange nut is loosened.
Ratio—3.55-1 (11-39).
Backlash—.005-.008".

Removal: Raise car and support with jack stands under frame side rails. Remove rear wheels and remove two trunnion bearing "U" bolts from rear universal yoke and separate the joint (tape bearings to trunnion). Disconnect hand brake cable and equalizer and remove cable from clamps at frame. Disconnect hydraulic brake lines at rear axle housing. Disconnect shocks. Support axle assembly on hydraulic jack and remove spring "U" bolts, nuts and anchor plate, and lower axle to floor.

Axle Shaft Removal: Raise car and place jack stands under axle housing. Remove tire, wheel and brake drum assembly. Remove four nuts and lockwashers from bearing retainer bolts (on inside of axle flange). Attach Axle Puller J-5748, with a slide hammer, to flange and remove axle shaft and bearing assembly. Be careful not to disturb backing plate. NOTE—If bearing retainer and parking brake strut interfere, raise strut slightly with screwdriver to obtain clearance.

SHOCK ABSORBERS

Delco. Direct acting non-adjustable. Service by replacement.

FRONT SUSPENSION

Independent type with direct acting shock absorbers within front coil springs, and new spherical type joints connecting control arms and steering knuckles.
See "Chevrolet (Spherical Joint)" in Front Suspension Section.
Kingpin Inclination—3½-4½°.
Caster—0° to Pos. 1°.
Camber—0° to Pos. 1°.
►*CAMBER & CASTER ADJUSTMENT NOTE: Adjusted by shims located between upper control arm inner* support shaft and support bracket.
Toe-In—0-1/8".
Toe-Out on Turns—With inner wheel at 20°, outer wheel should be 17°.

STEERING

Saginaw Worm & Roller. With push-pull adjustment.
See "Saginaw Worm & Roller" in Steering Section.

BRAKES

Chevrolet-Bendix. Duo-servo, single anchor hydraulic. Hand lever applies rear wheel service brakes.
See " Chevrolet-Bendix Hydraulic" in Brake Section.
►*REPLACEMENT BRAKE SHOE GRINDING CAUTION:* To compensate for lack of brake anchor adjustment, brake shoes are ground to a .057-.087" smaller diameter than the drum diameter. Grinding brake shoes to the true drum diameter on a bench grinder will cause heel and toe contact, resulting in faulty brake action. *NOTE—If spindle mounted type grinder is used, the shoes should be ground to the true diameter of the drum.*
Drums—Diameter 11".
Wheel Cylinder Diameter—Front 1 1/8", Rear 1".

	Width	Thickness
Front Whl.	2"	.187-.194"
Rear Whl.	1¾"	.187-.194"

Length Per Shoe—9.3125" (Primary), 11.6875 (Secondary).
Braking Power—55.9% (Front Wheels), 44.1% (Rear Wheels).
Clearance—Single adjusting screw located at bottom of backing plate. Back off adjusting screw 7 notches from slight drag position. Brakes must be free of any drag after adjustment.

MISC. MECHANICAL

Windshield Wiper: Vacuum, cable operated.
See "Windshield Wipers" in Miscellaneous Section.

MODEL IDENTIFICATION

Series	Serial Prefix	Wheelbase	Type
3100	H	114"	Half Ton
3200	M	123 1/4"	Half Ton
3400	F	104"	① 3/4 Ton
3500	G	125"	① 3/4 Ton

6500S	SX	172"	⑤ 1 1/2 Ton

①—Forward Control. ②—School Bus Chassis.
③—Low Cab Forward. ④—Low Cab Forward Special.
⑤—Special.

SERIAL NUMBER: Stamped on a metal plate and attached to the body as follows: **Forward Control Models**—On instrument panel support. **Flat Face Cowl Models**—On cowl inner panel. **All Other Models**—Left front door hinge pillar.

Starting Serial Number: 001001 at each assembly plant regardless of series.

►*SERIAL NUMBER NOTE: Serial number (example V255K 001083) includes following identification data in sequence.*

Series ①	Year	Assy. Plant ③	Serial No.
V	255②	K	001083

①—Serial Prefix for each model.
②—Second Series 1955.
③—See Assembly Plant Designation (below).

Assembly Plant Designation

A—Atlanta	K-Kansas City	S—St. Louis
B—Baltimore	L—Los Angeles	T—Tarrytown
F—Flint	N—Norwood	O—Oakland
J—Janesville		

ENGINE NUMBER (V8): Stamped on pad at front right hand side of cylinder block behind water pump.

ENGINE NUMBER (6 CYL.): Stamped on right side of block to rear of distributor.

Starting Engine Number: 0001001 (at each plant). Engine numbers will run concurrently with 1st Series Trucks. Suffix letters and numerals indicate plant at which engine built ("F" for Flint, "T" for Tonawanda, "C" for Canadian), Model Year, and Model Type. *See following for Series Type Designation.*

►*ENGINE NUMBER NOTE: Engine number (example 0001025 F 255 T) includes following identification data in sequence.*

Serial No.	Engine Plant ①	Year	Series ②
0001025	F	255③	T

①—See Starting Engine Number (above).
②—*See Series Type Designation (below).*
③—Second Series 1955.

Series Type Designation

Series	Engine	Designation
3100, 3200, 3600, 3800	Thriftmaster 235"	① X
3100, 3200, 3600, 3800	Thriftmaster 235"②	① M
3400, 3500, 3700	Thriftmaster 235"③	T
3400, 3500, 3700	Thriftmaster 235"④	L
4000	Thriftmaster 235"⑤	⑥ S
5000	Taskmaster V8	E
6000	Loadmaster 235"	P
6000	Jobmaster 261"	⑦ N

①—"A" stamped following suffix when this engine used in 3600 Series, and "B" when used in 3800 Series.
②—With Hydra-Matic Transmission.
③—With Updraft carburetor.
④—With Updraft carburetor and Hydra-Matic.
⑤—With Heavy Duty Clutch.
⑥—"A" stamped following suffix when this engine used in 3600 Series, "B" if used in 3800 Series, and "C" if used in 3100 & 3200 Series.
⑦—"A" stamped following suffix when this engine used in 4000 Series.

TUNE-UP

COMPRESSION PRESSURE: 6 Cyl. Engine—130 lbs. minimum with all cylinders equal within 5-10 lbs. at cranking speed.
V8 Engine—160 lbs. minimum with all cylinders equal within 10 lbs. at cranking speed.

VACUUM READING: 6 Cyl. Engine—17-21" at idling speed.
V8 Engine—Adjust to highest steady vacuum reading.

VALVE TAPPET CLEARANCE: *(NOTE—Conventional type lifters used on 6 Cyl. engines. Hydraulic valve lifters used on V8 Engines. See Production Change*

►*V8 ENGINE VALVE LIFTER PRODUCTION CHANGE:* Conventional type lifters used in Early V8 Trucks without Automatic Transmissions. All later trucks were equipped with hydraulic valve lifters.

6 Cyl. Engines—(3000 Series)—Intake .006". Exhaust .016". **(Other Series)**—Intake .006". Exhaust .020". with engine "normalized". *See "Valve System" in Chevrolet Special Data.*
V8 Engines (With Conventional Lifters)—.008" Intake, .016" Exhaust, with engine "normalized". *See "Valve System" in Chevrolet Special Data.*
V8 Engines (With Hydraulic Lifters)—No adjustment required unless cylinder head removed or valve lifters replaced *See "Valve System" in Chevrolet Special Data.*

MANIFOLD HEAT CONTROL: Thermostatic type. Check for free operation when tuning engine. On 6 Cyl. engines, ½ turn from unhooked position should be required to place spring in hooked position. Distorted springs should be replaced.

IGNITION

FIRING ORDER: 6 Cyl. Engines—1-5-3-6-2-4. gram.
V8 Engines—1-8-4-3-6-5-7-2. See diagram.

SPARK PLUG GAP: .035".
Spark Plug—AC No. 44-5 (Std.). AC 46-5 (Continuous operation). AC 43-5 (*Use for heavy duty operation*). 14mm. Torque to 20-25 ft. lbs.

COIL: Delco-Remy 1115087. *12 Volt.*
Ignition Current—1.8 amps. idling, 4.0 stopped.
Resistor—Delco-Remy 1931614. On firewall.

►*COIL RESISTOR NOTE:* Resistor is connected to ignition switch by two leads and is by-passed during cranking as follows: **(Trucks with Key Starting)**—2nd. lead provides direct connection to coil when key turned to "Start Engine" position. **(Trucks with Pedal Starting)**—2nd. lead provides direct connection to coil while starter cranking (feed through lead from starter switch to ignition switch—see diagram).

DISTRIBUTOR: Delco-Remy. (235" Eng.) 1112403, (261" Eng.) 1112407, (V8 Eng.) 1110847. *12 Volt.*
Condenser—Delco-Remy 1928111 (6 Cyl. Distr.), 1869704 (V8 Distr.). **Capacity**—.18-.23 mfd.
Contact Point Set—Delco-Remy 1924571 (6 Cyl. Distr.), 1924499 (V8 Distr.).
Breaker Gap—.019" (new points). .016" (used points).
Cam Angle—28-35° (6 Cyl. Distr.), 26-33° (V8 Distr.). all at .016" gap.

►*BREAKER GAP CAUTION: Manufacturer recommends final check with feeler gauge or dial indicator if dwell meter used to set points.*
Breaker Arm Spring Tension—19-23 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—1110847

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	400	0-4	800
8-10	1150	16-20	2300
15-17	1800	30-34	3600

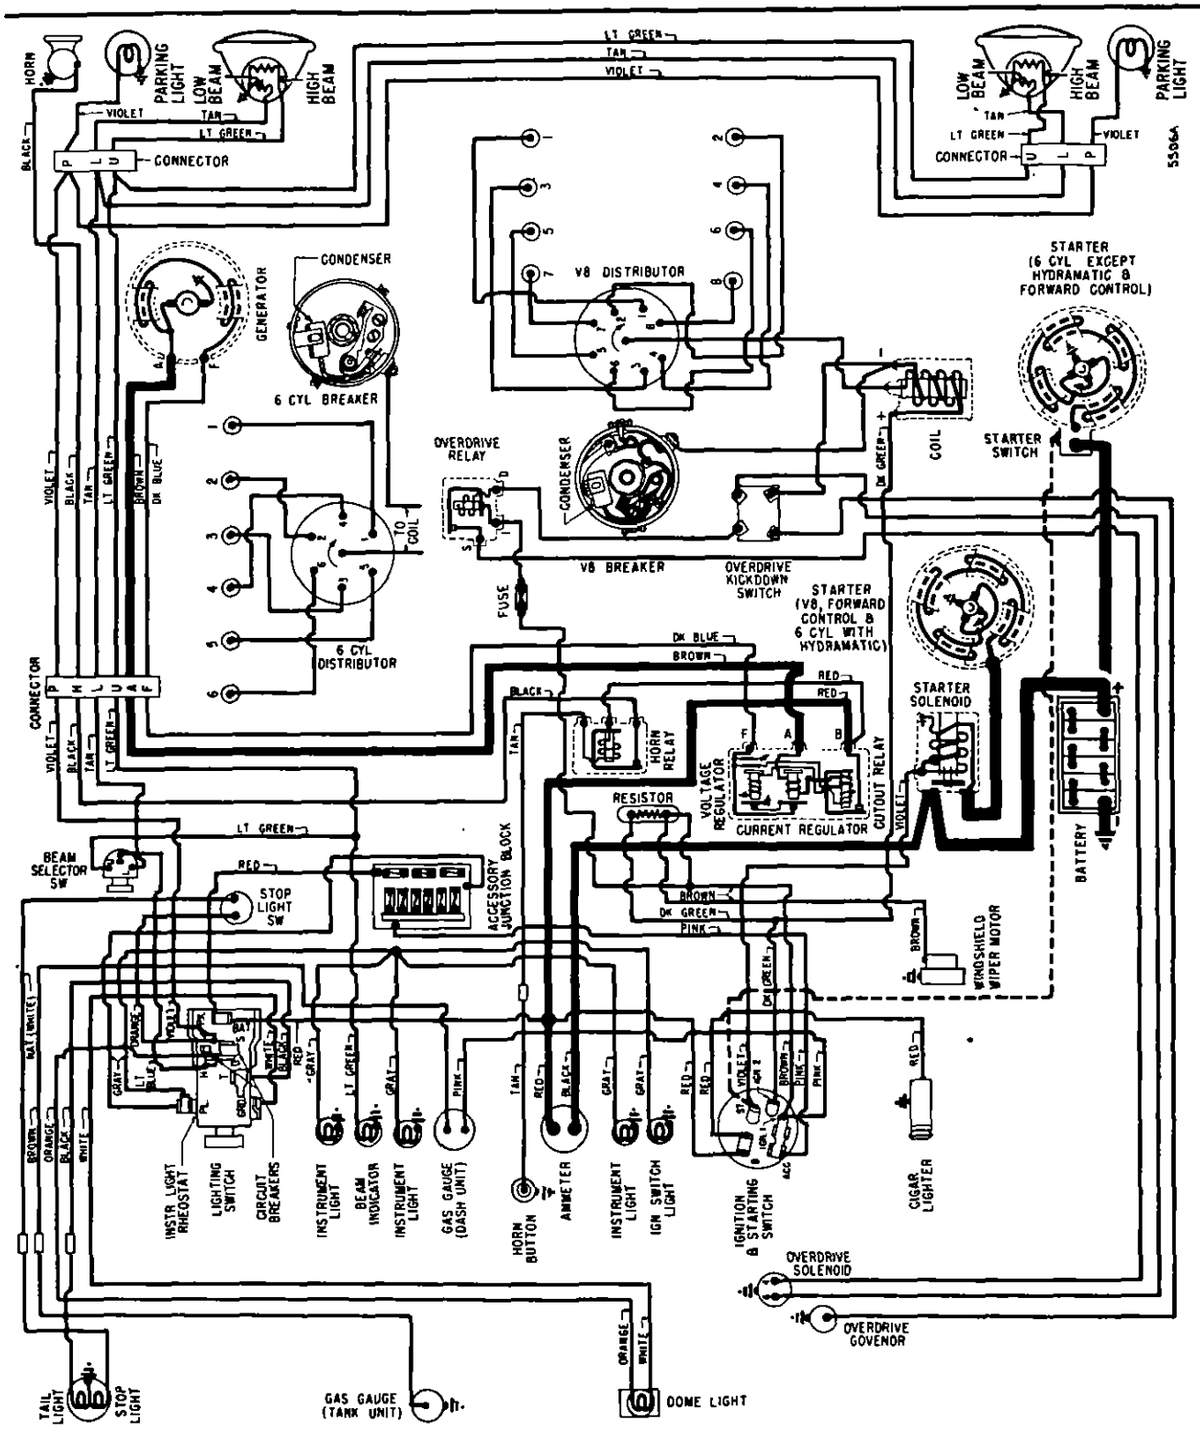
Automatic Advance—1112403

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	375	0-4	750
4-6	700	8-12	1400
9-11	1350	18-22	2700
12-14	1750	24-28	3500

Automatic Advance—1112407

Degrees	Distr. RPM	Degrees	Eng. RPM
0-2	350	0-4	700
7-9	750	14-18	1500
11-13	1200	22-26	2400
16-18	1800	32-36	3600

Vacuum Spark Control: Delco-Remy 1116089 (6 Cyl. Distr.). 1116085 (V8 Distr.).
Plunger Travel—3/16-7/32" (1116089). 19/64-5/16" (1116085).



Vacuum Advance—1110847

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-7
14	28	13.5-15.5

Vacuum Advance—1112403 & 1112407

Start	0	4-6
7.5	15	7.5-10

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION TIMING

6 CYL. ENGINE

Setting (6 Cyl. Engines)–TDC (with engine at normal idle speed).

Timing Mark (6 Cyl. Engines)–Steel ball insert in flywheel lined up with pointer in inspection hole in right front face of housing, with Octane Selector set on "O". Then adjust Octane Selector as follows:

Octane Selector Setting (6 Cyl. Engines)–Set for slight ping when accelerating with wide open throttle.

V8 ENGINE

Setting (V8 Engines)–4° BTDC. *Set timing to 8°BTDC at 1000 Engine RPM using suggested procedure following.*

►*SUGGESTED TIMING SETTING PROCEDURE:* Disconnect vacuum advance and run engine at 1000 RPM. Rotate distributor body until index line on harmonic balancer lines up with **8° BTDC** mark on indicator bolted to left side of timing chain cover.

Timing Mark (V8 Engines)–Mark on vibration dampener and an indicator on left side of timing chain cover. Indicator is marked with five lines on both sides of "O". Each line represents 2°.

CARBURETOR

►*CARBURETOR APPLICATION NOTE: Rochester "B" & "BC" Carburetors are standard on all 6 Cyl. Models (except Forward Control). Rochester "2G" & "2GC" Carburetors are standard on all V8 Models. Carter Updraft Carburetor is standard on Forward Control Models.*

THROTTLE LINKAGE ADJUSTMENT (Hydra-Matic Drive Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

ROCHESTER "B" & "BC"

Downdraft types with manual choke (Rochester Model "B"), and automatic choke (Rochester Model "BC").

Models	Rochester No.
235" Engine ①	②7004468
235" Engine ③	④7007181
261" Engine	②7005140

①–Except Forward Control & Automatic Transmission models.

②–With Manual Choke.

③–With Automatic Transmission (Except Forward Control models).

④–With Automatic Choke.

Idle Setting (Exc. 7005140)–1 to 2½ turns open, (turn screw out for richer mixture).

Idle Setting (7005140)–1 to 1½ turns open, (turn screw out for richer mixture).

Idle Speed–400-450 RPM. (Exc. Automatic Trans. models), 425 RPM. with Selector Lever in "N" position (Automatic Transmission models).

Float Level (All Models)–1 5/16" from bottom of each float to cover gasket (do not remove gasket) with cover inverted so that needle closed. Use No. 3696192 gauge to set float level and align floats (twisted floats may hang up or rub on bowl). Check float drop or travel by turning cover right side up so floats drop down.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Distance from gasket on cover to bottom of each float should be 1¾". Adjust by bending tang at rear of float assembly.

►*CAUTION: Both floats must be set alike and must not be twisted out of alignment.*

Accelerating Pump–No seasonal adjustment.

Fast Idle (7007181): To check setting, hold throttle in wide open position, check choke valve opening or clearance between lower edge of valve and air horn wall. This clearance should be .073" (Gauge BT-64 or Chevrolet Gauge J-5120). If clearance not correct, adjust by bending connector rod using tool BT-18 or Chevrolet Tool J-4552.

Unloader Adjustment (7007181): With throttle valve in wide open position, clearance between lower edge of choke valve and carburetor bore should be .166" (large end of Gauge BT-64 or Chevrolet Gauge J-5120). Bend tang of throttle lever with tool J-4552 to obtain necessary clearance.

Automatic Choke Setting (7007181): Centered setting. Scribe mark on cover in line with long mark on housing.

Throttle Kicker (Not used on 7007181): Operated by cam on choke lever. Opens throttle when choke closed. No adjustment.

►*OTHER DATA: See "Rochester B & BC Carburetor" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 3½ -4¼ lbs.

ROCHESTER "2G" & "2GC"

Dual downdraft type with manual choke (Rochester Model "2G"), automatic choke (Rochester "2GC").

Models	Rochester No.
265" Engine (V8) ①	②7006770
265" Engine (V8) ③	④7008399

①–Except Forward Control models and models equipped with Overdrive or governor.
②–With Automatic Choke.
③–Models equipped with Overdrive.
④–Manual Choke.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting–After idle speed set to correct specifications (see Idle Speed below), turn both idle mixture screws for smooth idle with highest vacuum reading and engine RPM.

Idle Speed–475 RPM (Synchro-mesh) Trans.). 425 RPM (Hydra-Matic–with selector lever in "N").

Float Level–1 5/32" from air horn gasket to top of float with assembly inverted. Use Gauge BT-107 or Chevrolet Gauge J-5915 so it rests against power piston shaft with outer leg in line with center of float. Adjust by bending float arm between pivot and float with Tool BT-69.

Float Drop–1 29/32" between air horn gasket and lowest point on bottom of float with air horn held upright (Gauge BT-107). Adjust by bending float tang.

Fast Idle: No adjustment of fast idle speed is provided, it is necessary, however, to have correct relationship between fast idle cam position and choke valve position. Check & adjust as follows: Place end of idle adjusting screw on next to highest step of fast idle cam. Using Gauge J-5921, small end of gauge must slide easily between upper edge of choke valve and bore of carburetor, with gauge held vertically. If necessary, bend choke rod for correct clearance.

Unloader Adjustment: With throttle in wide open position, wide end of Gauge J-5921 must slide freely between upper edge of choke valve and carburetor bore. Bend throttle lever tang for correct clearance.

Automatic Choke Setting: Centered (at index).

►*OTHER DATA: See "Rochester 2G & 2GC Carburetor" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 4-5¼ lbs.

CARTER

Carter (BB) 871SB (Forward Control Models). Single barrel updraft type with manual choke control.

Idle Setting–½-1½ turns open (turn screw out for richer mixture).

Idle Speed–450-500 RPM (Synchro-mesh), 400-450 RPM (Hydra-Matic).

Float Level–Top of float (not seam) 0" to 1/32" below top of bowl with needle valve seated. Use Gauge J-818-13A on top edge of bowl (gasket removed). Press float lever lip firmly against needle.

Accelerating Pump–Inner holes (in plunger shaft and throttle lever) Summer. Outer hole Winter.

►*OTHER DATA: See "Carter (BB) Carburetors" in Carburetor Section.*

Throttle Linkage Adjustment (Hydra-Matic Trucks): *See "Hydra-Matic Drive" in Transmission Section.*

Fuel Pump Pressure: 3½-4¼ lbs.

CARB. EQUIPMENT

Fuel Pump: AC Diaphragm type. **Replacement Pump**–As follows:

Model	AC Pump No.
6 Cyl. (exc. School Bus)	①4149
6 Cyl. (exc. School Bus)	②4138
6 Cyl. (School Bus)	②9797
V8	①4150
V8	②4141

①–Fuel only. ②–Fuel & Vacuum.

Pressure–3½-4¼ lbs. (6 Cyl.), 4-5¼ lbs. (V8).

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: AC Electric.

Dash Unit–AC No. 1518461.

Tank Unit–AC No. 1518235 (Cab Models, except Forward Control). No. 1518236 (Forward Control Models & Utility Models with Cowl). No. 1518258 (Cowl–Single Unit Models). No. 1518234 (School Bus Chassis).

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Delco–2SM50 (Exc. School Bus). 12 Volt, 9 plate, 50 ampere hour capacity (20 hr. rate).

Delco–3SM70 (School Bus). 12 Volt, 11 plate, 70 ampere hour capacity (20 hr. rate).

Battery Ground–Negative ground.

Engine Ground–Engine to frame (6 Cyl.). Engine to dash (V8).

STARTER

Model	Delco-Remy No.
6 Cyl. (Exc. Fwd. Cont. & Hydra-Matic)	①1107634
6 Cyl. (With Hydra-Matic)	②1107633
6 Cyl. (Fwd. Cont. W/O Hydra-Matic)	②1107626
V8 (Exc. Hydra-Matic)	②1107627
V8 (With Hydra-Matic)	②1107643

①–Manual Pinion Shift. ②–Solenoid Pinion Shift.

Armature–Delco-Remy 1926626 (all models).

Drive (6 Cyl. Synchro-mesh Trans., Exc. Fwd. Cont.)–Overrunning clutch (pedal operated pinion shift).

Drive (6 Cyl. Fwd. Control & Hydra-Matic, All V8 Models)–Overrunning clutch (solenoid pinion shift).

Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–35 ozs. minimum.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	6900	10.3	75
10.5 ft. lbs.	Lock	5.8	435

Starting Switch: (Solenoid Pinion Shift Models)–Delco-Remy Solenoid Switch No. 1119767 mounted on starter and controlled by Ignition & Starter Switch 1116522 (exc. Hydra-Matic), 1116514 (Hydra-Matic). Turn key full RIGHT against spring tension to start.

Starter Switch (Manual Pinion Shift Models): Delco-Remy. Mounted on starter and controlled by pedal operated lever. *NOTE*–Switch has small terminal on side connected to Ignition Switch for coil resistor by-passing while cranking.

Hydra-Matic Neutral Safety Switch Adjustment–*See "Hydra-Matic Drive" in Transmission Section.*

GENERATOR

Delco-Remy. Different generators used as follows:

Model	Generator No.	Armature No.
All Models (Std.)	1100310	1928952
Optl. (30 Amp.)	1105947	
Optl. (40 Amp.)	1106981	1929360
Optl. (Power Strg.)	1106982	

Performance Data–Cold

Generator	Amperes①	Volts	RPM
1100310	25	14.0	2780
1105947	32	14.0	1850
1106981	40	13.0	1500
1106982	40	13.0	1500

①–Not maximum output. See Current Regulator.

Rotation–Counter-clockwise at commutator end.

Brush Spring Tension–28 ozs.

Field Current–1.5-1.62 amperes (1100310), 1.54-1.67 amperes (1105947), 1.37-1.50 amperes (1106981, 2), all at 12.0 volts.

Belt Adjustment: ¾" (6 Cyl. Engine), 13/16" (V8 Engine) deflection midway between water pump and generator pulleys, with a light force applied to belt.

REGULATOR

Delco-Remy. Different regulators used as follows:

Regulator No.	For Generator No.
1118945	1100310
1118826	1105947
1118948	1106981 & 1106982

►*NOTE: Regulator is "1118825 Series". Specifications below are for "Normal" settings.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cut-Out Relay

Cuts In–11.8-13.5 volts (1118826 & 1118945). 11.5-13.0 volts (1118948).
Contact Gap–.020".
Air Gap–.020" (with contacts just closed).

Voltage Regulator

Setting (1118826 & 1118945)–13.8-14.8 volts hot.
Setting (1118948)–13.6-14.3 volts hot.
Air Gap–.075" (1118826 & 1118945). .063" (1118948) with armature pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electric Equipment Section.*

Current Regulator

Setting (1118945)–23-27 amperes hot.
Setting (1118826)–27-33 amperes hot.
Setting (1118948)–37-42 amperes hot.
Air Gap–.075" with contacts pressed down to point where contacts just touching.
Checking & Adjusting–*See "Delco-Remy 1118825 Series Regulator" in Electrical Equipment Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Lighting Switch Removal: Disconnect all wires from switch (make sure that all wires are tagged for identification). Depress switch shaft retainer on top side of switch assembly (rear of instrument panel). Remove switch retaining nut and switch assembly.
Stop Light Switch Location: Mechanical type mounted on underside of toeboard and operated by brake pedal.
CIRCUIT BREAKERS: Two 13 amperes circuit breakers located in main lighting switch.
HORNS: Delco-Remy 1999760 (High), 1999759 (Low).
Horn Relay: Delco-Remy 1116781.

ENGINE

►*FOUR ENGINES USED ON TRUCKS: 235" Thriftmaster, 235" Loadmaster, 261" Jobmaster. 265" Taskmaster. See Truck Model Identification for application.*

ENGINE SPECIFICATIONS: Own. 6 Cylinder &V8 valve-in-head engines.

Engine	Bore	Stroke	Displmnt
235" 6 Cyl. Thriftmaster	3 9/16"	3 15/16"	235.5"
235" 6 Cyl. Loadmaster	3 9/16"	3 15/16"	235.5"
261" 6 Cyl. Jobmaster	3 3/4"	3 15/16"	261.0"
265" V8 Taskmaster	3 3/4"	3"	265.0"

Engine	Comp. Ratio	Rated HP	Dev. HP
235" 6 Cyl. Thriftmaster	7.5-1	30.4	123 at 3800
235" 6 Cyl. Loadmaster	7.5-1	30.4	©123 at 3800
261" 6 Cyl. Jobmaster	7.17-1	33.7	140 at 4000
265" V8 Taskmaster	7.5-1	45.0	154 at 4200

©–119 at 3600 RPM on Forward Control models.

Compression & Vacuum Reading–*See Tune-Up.*

ENGINE REMOVAL: *See "Engine" in Chevrolet Special Data.*

OIL PAN REMOVAL: (V8 Engines)–Disconnect steering idler arm bracket from right frame side rail and drop for clearance.

ENGINE MOUNTINGS: *See "Engine Mountings" in Chevrolet Special Data.*

CYLINDER HEAD & MANIFOLDS: *See "Cylinder Head & Manifold" in Chevrolet Special Data.*

TIGHTENING TORQUES: *See Chevrolet Special Data.*

OTHER ENGINE DATA: *See 1955 Chevrolet Passenger Car pages for all engine data and note the following:*

►*LOADMASTER 235" & JOBMASTER 261" ENGINE PISTON RING NOTE: Upper compression ring is chrome plated and oil ring has spiral spring expander.*

►*VALVE ROTATOR NOTE: New type valve rotators are standard equipment on 235" Loadmaster, 261" Jobmaster & 265" Taskmaster Engines on 5000 & 6000 Series (special equipment on other trucks). See "Valve System" in Chevrolet Special Data.*

►*V8 ENGINE HYDRAULIC VALVE LIFTER PRODUCTION CHANGE:* Hydraulic valve lifters are standard equipment on all Late 1955 V8 Engines. Early 1955 V8 Engines when used with Synchro-mesh Transmissions were equipped with conventional type lifters.

TAPPET CLEARANCE: *NOTE–Conventional type lifters used on 6 Cyl. and Early V8 Engines, Hydraulic lifters used on Later V8 Engines.*

6 Cyl. Engine (3000 Series)–.006" Intake, .016" Exhaust. **(Other Series)**–.006" Intake, .020" Exhaust with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

V8 Engines (Conventional Lifters)– .008" Intake, .016" Exhaust with engine "normalized". *See "Valve System" in Chevrolet Special Data.*

V8 Engine (Hydraulic Lifters)–Adjustment required only when cylinder head removed or lifters replaced. *See "Tappet Clearance Adjustment" under VALVE SYSTEM in Chevrolet Special Data.*

VALVE TIMING: As indicated below:

235" Thriftmaster & 235" Loadmaster

Intake Valves–Open 1° ATDC. Close 39° ALDC.
Exhaust Valve–Open 42° BLDC. Close 9° ATDC.

261" Jobmaster

Intake Valves–Open 11°30'BTDC. Close 52°30'ALDC.
Exhaust Valves–Open 51° BLDC. Close 13° ATDC.

265" V8 Taskmaster (Conventional Lifters)

Intake Valves–Open 12° BTDC. Close 54° ALDC.
Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

265" V8 Taskmaster (Hydraulic Lifters)

Intake Valves–Open 18° BTDC. Close 54° ALDC.
Exhaust Valves–Open 52° BLDC. Close 14° ATDC.

Valve Timing Check (235" & 261" Engines): Remove all tappet clearance from No. 1 exhaust valve. Turn engine over until this valve opens and just starts to close and until triangular mark on flywheel lines up with pointer in flywheel housing opening. Mount dial indicator on rocker arm shaft support with stem contacting No. 1 exhaust valve adjusting screw, set dial indicator to .044" (Thriftmaster & Loadmaster), .063" (Jobmaster). Turn crankshaft until indicator hand just stops moving. Timing is correct if indicator reading is ZERO plus or minus .004". Reset No. 1 exhaust valve to correct running clearance.

OILING SYSTEM

Crankcase Capacity: (6 Cyl.)–5 qts. (refill). 5½ qts. (dry). **(V8)**–4 qts. (refill). 5 qts. (dry).
Normal Oil Pressure: (6 Cyl.–45 lbs. **(V8)**–35 lbs.
Pressure Regulator Valves–In oil pump body. Not adjustable.
Oil Pressure Indicator–AC No. 1508246. Not electric.
Oil Pump: Gear type. Located in crankcase, driven by distributor gear.
Oil Pump Overhaul–*See "Oiling System" in Chevrolet Special Data.*
Crankcase Ventilation (Standard): Air intake through valve rocker arm cover, outlet through pipe on right side of engine.
Servicing–On all models with air cleaner mounted on valve rocker arm cover, wash filter element with solvent and re-oil at 2000 mile intervals or more often if required by operating conditions.
Crankcase Ventilation (Optional): Positive Type. Vacuum operated ventilator consisting of a vacuum pipe from oil filler pipe to ventilator valve in fitting on intake manifold. Valve is spring loaded, variable opening type giving constant crankcase ventilation at all speeds. **Valve must close at idling to give proper air-fuel mixture.**
Servicing–Every 10,000 miles (or oftener if required), clean vacuum pipe, valve, and filler pipe thoroughly. Filler cap gasket must seal tightly.
►*VACUUM VALVE CAUTION:* If improper action of spring is suspected due to spring being distorted, or etched from corrosive action, the valve assembly should be replaced.

COOLING

Water Capacity: Standard–17 qts., (½, ¾, 1-Ton & Forward Control). 18 qts. (1½ & 2-Ton). Add one quart for heater on any model.
Optional–18.5 qts. (All except Forward Control). 17 qts. (2-Ton).
Pressure Valve: AC No. 850549. In radiator cap. 7 lb. type.
Thermostat: Harrison. In cylinder head water outlet (6 Cyl.). In water outlet in intake manifold (V8).
Standard–No. 3123993 (stamped 151), 151°. Can be used for alcohol anti-freeze.
Optional–No. 3123994 (stamped 160), 160°. No. 3133597 (stamped 170), 170°. No. 3123995(stamped 180), 180°. *NOTE*–Do not use 180° thermostat with 7 lb. radiator cap.
Temperature Gauge: AC No. 1512979. Not electric.
Water Pump: Packless type with sealed ball bearing shaft.
See "Chevrolet" in Water Pump Section.

CLUTCH

6 CYL. ENGINES

Own. Diaphragm spring, single plate, dry disc type. *See "Chevrolet (Own)" in Clutch Section.*

Clutch Disc	Diameter	Chevrolet No. Woven	Molded
Standard	10"	3826119	3836097
Heavy Duty ©	11"	3836021	...

©–Standard on Forward Control Models.

Pedal Adjustment: Pedal free travel ¾-1". To adjust, loosen checknut and turn adjusting nut on connecting link at clutch throwout fork. *NOTE*–Use finger pressure only when checking clutch free travel.
Removal: Remove transmission (see Transmission Removal). Remove throwout bearing, remove fork by prying fork off ball, remove fork mounting (use ¾" wrench). Install Clutch Pilot Tool K-411 (to support clutch).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

loosen all six cover bolts evenly, remove assembly from below. *CAUTION*–Do not allow pressure plate to hang on retracting springs (support by hand). When installing clutch align "X" mark on cover with "X" mark on flywheel.

V8 ENGINES

Borg & Beck 11A7. Chevrolet Part No. 3837155. Single plate.

See "Borg & Beck 11A7" in Clutch Section.

Clutch Disc–Chevrolet No. 3727585.

Pedal Adjustment: Adjust clutch pedal until free travel is 1". Make sure that pedal pad contacts toeboard when pedal pressed down.

Removal: Remove transmission (see Transmission Removal). Before removing clutch assembly, punch mark flywheel, clutch cover and one pressure plate lug so these parts may be assembled in their same relative positions. Loosen hold-down screws evenly and remove cover. *NOTE*–Mark flywheel side of driven plate for correct reassembly.

TRANSMISSION

3-SPEED LIGHT DUTY

Own. Three speed, all helical gear type. Constant mesh, synchro-mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Light Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever. *See "Transmission Controls" in Transmission Section.*

Removal (½ & ¼ Ton): Drain transmission. Disconnect speedometer cable at transmission and shift control rods from transmission levers. Remove propeller shaft. Remove the two top transmission to clutch housing capscrews and insert two transmission guide pins, Tool J-1126, in these holes. Remove the two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until clutch gear is free of splines in the clutch disc.

3-SPEED (HEAVY DUTY)

Own. Three speed, constant mesh (second & high), sliding gear (low & reverse).

See "Chevrolet 3-Speed (Heavy Duty)" in Transmission Section.

Transmission Control: Steering column mounted gearshift lever.

See "Transmission Control" in Transmission Section.

Removal: Same as for "3-Speed (Light Duty)" above.

4-SPEED

Own. Four-speed, constant mesh, synchro-mesh, helical gear (2nd, 3rd, & 4th), sliding spur gear (low & reverse). Floor mounted gearshift.

See "Chevrolet 4-Speed" in Transmission Section.

Transmission Control: (All Models exc. Forward Control)–Floor mounted gearshift lever.

Removal (½ & ¼-Ton): See "3-Speed (Light Duty)" above.

Removal (Other Trucks): Remove screws fastening steering jacket grommet and slide grommet up out of way. Remove accelerator pedal and floor mat. Remove sheet metal screws attaching transmission cover to body floor and remove cover. On Forward Control models remove both front and rear floor pans. Remove speedometer cable from transmission rear bearing retainer. On 1-Ton, remove cotter key and pin attaching parking brake pull rod to parking lever. On 1½ & 2-Ton, disconnect parking brake lever return spring from parking brake operating lever and remove cotter key and pin attaching inner and outer levers to parking brake operating lever. Remove parking brake lever lock, flat washer and spring and remove parking brake lever. Drain lubricant from transmission. On 1-Ton, break universal joint at transmission joint flange and tape trunnions and bearings together. On 1½ & 2-Ton, disconnect intermediate universal joint by removing two trunnion bearing "U" clamps, split joint and lower front end of rear propeller shaft to floor. Remove the four universal joint flange nuts. Remove nuts attaching propeller shaft bearing support bracket to frame cross member and remove front propeller shaft and bearing assembly. On all models, remove the two capscrews attaching transmission to clutch housing and insert two Guide Pins J-1126 in these holes. Remove flywheel underpan and remove two lower transmission to clutch housing capscrews. Slide transmission straight back on guide pins until transmission free of splines in clutch disc. Remove transmission.

OVERDRIVE

Warner R10. Used with Chevrolet Truck 3-Speed (Light Duty) Transmission.

See "Warner R10 Overdrive" in Transmission Section.

Overdrive Control: *See "Warner R10 & R11 Overdrive Control" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cables have been disconnected.

HYDRA-MATIC DRIVE

Dual Range. Four speed type with fluid coupling.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "Hydra-Matic Drive" in Transmission Section.*

Lubrication–Check fluid level in transmission every day. Drain & refill every 25,000 miles. Use only "Automatic Transmission Fluid" Type A.

Checking Fluid Level–With selector lever in "N" position, parking brake set, and transmission at normal operating temperature, remove access hole cover plate in floor pan, and **check fluid level with engine at idling speed.** Add sufficient fluid to bring level in transmission to "F" mark on dipstick.

Capacity–8½ qts. (refill), 9 qts. (after overhaul). *NOTE*–1 qt. additional with oil cooler.

►*OTHER HYDRA-MATIC SERVICE DATA–See "Hydra-Matic Drive" in Transmission Section.*

UNIVERSALS

Spicer. Needle bearing type.

REAR AXLE

SEMI-FLOATING (HALF-TON)

Own. Semi-floating, hypoid gear type with Hotchkiss drive. *NOTE*–Same design as passenger car axle.

See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.

Ratio–(Synchro-mesh & Hydra-Matic) 3.90-1 (39:10). **(Overdrive)** 4.11-1 (37:9).

►*AXLE SHAFT NOTE: Shafts unequal length (right shaft longer) and may be identified by mark stamped on shaft, or by length as follows:*

Axle	Part No.	Length
Left	3694769Ⓒ	29 5/8"
Right	3694770Ⓒ	30 5/8"

Ⓒ–Part No. stamped on axle for identification.

Backlash–.005-.008".

Removal of Rear Axle Assembly: Disconnect and remove parking brake pull back spring. Remove cotter pins and clevis pins from each parking brake cable clevis, and remove clevis. Remove springs and retaining clips from cables at frame brackets. Disconnect universal joint trunnion bearing "U" bolts and split rear universal joint. Disconnect shocks from anchor plates. Disconnect hydraulic brake line to connector at rear frame bracket. Remove spring "U" bolts, nuts and anchor plates. Raise rear of truck and roll assembly out toward rear. *CAUTION–Be careful when pulling parking brake cables through openings in frame.*

Axle Shaft Removal: *See "Chevrolet Hypoid Semi-Floating" in Rear Axle Section.*

Axle Shaft Endplay–Free fit to .014" maximum.

STANDARD FULL-FLOATING (1½ & 2-TON) (EXC. LCF MODELS)

Own. Full-floating hypoid gear (straddle mounted pinion) with Hotchkiss drive.

►*AXLE ASSEMBLY NOTE; ¾ & 1-Ton axle assemblies are different design than used on 1½ & 2-Ton with standard rear axle assemblies.*

See "Chevrolet Truck Hypoid Full-Floating" in Rear Axle Section.

►*AXLE RATIO IDENTIFICATION NOTE: Axle ratios are identified by prefix letters in rear axle numbers stamped on top of carrier housing between reinforcing ribs. See Axle Ratios following:*

Axle Ratio Identification

Ratio	Prefix Letters
5.14-1 (36:7)	CA, CB, CE, CF
4.57-1 (32:7)	CC, CD
6.17-1 (37:6)	CG, CH, CJ
7.2-1 (36:5)	CM

Backlash–.005-.008". Screw adjustment.

Removal of Axle Assembly: Remove differential cover and axle shafts (see below). Disconnect rear universal by removing two "U" bolts from rear yoke (wire trunnions to retain bearings). Slide shaft forward and lower to floor. Remove differential carrier mounting bolts.

Axle Shaft Removal (¾ & 1-Ton): Remove eight capscrews and lockwashers in axle shaft flange, install two ½"x13" screws in special threaded holes in flange (between regular mounting screw holes), turn these screws up evenly to loosen the shaft, withdraw shaft from housing, remove and discard gasket. *Use new gasket when installing shaft.*

►*CAUTION:* Thoroughly clean all lubricant from axle shaft flange and end of wheel hub before installing axle shaft. *Grease at this point will cause loosening of axle shaft flange capscrews.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Axle Shaft Removal (1½ & 2-Ton): Shaft flange is splined in wheel hub (tight fit) and requires special puller for removal. Remove five capscrews and lockwashers in hub cap, remove hub cap and gasket. Assemble special adapter J-1436-8 on Rear Axle Shaft Bearing & Oil Seal Remover J-1436 (remove jaws), thread adapter into hole in axle shaft flange, pull axle shaft. *NOTE*—When reinstalling axle shaft, tap flange splines into engagement with wheel hub splines (if necessary, rotate wheel slightly to align splines on shaft with both wheel hub and differential side gear splines), use new hub gasket.

►**Axle Shaft Note:** Shafts unequal length (rightshaft longer than left). Install in correct position.

¼ & 1-Ton Trucks

Axle Shaft	Part No.	Length
Left	3680977	31¼"
Right	3680978	37"

1½-Ton Trucks (27 Splines)

Axle Shaft	Part No.	Length
Left & Right	3714735	37½"

2-Ton Trucks, Exc. LCF (29 Splines)

Axle Shaft	Part No.	Length
Left & Right	3709890	39 3/8"

Wheel Bearing Adjustment: Remove wheels and axle shafts (see above). Bend back lip of lock in locknut notch, remove locknut and adjusting nut lock. Tighten adjusting nut tight, using special wrench J-2222 (¾ & 1-Ton), J-870 (1½ Ton), J-5670 (2-Ton) while turning hub by hand, then back off nut 45°, check for free turning, install adjusting nut lock with lock tangs aligned with slots in adjusting nut. Bend tang down into notch in adjusting nut, install locknut and tighten securely. Bend tang of lock down into notch of locknut.

HEAVY DUTY FULL-FLOATING (2-TON & LCF MODELS)

Own. Full floating, hypoid gear, roller pinion bearings (straddle mounted pinion), with Hotchkiss drive.
See "Chevrolet Truck Heavy Duty Hypoid Full Floating" in Rear Axle Section.
Ratios—Same as for "Standard Full-Floating" above.
Backlash—.005-.008".
Removal Of Rear Axle Assembly: Same as for "Standard Full-Floating" above.
Axle Shaft Removal: Same as for 1½ & 2-Ton "Standard Full-Floating" above.
►**Axle Shaft Note:** Shafts unequal length (right shaft longer than left). Install in correct position.

2-Ton & LCF Truck (29 Splines)

Axle Shaft	Part No.	Length
Left	3711457	38 9/64"
Right	3711458	40 9/16"

Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

PLANETARY 2-SPEED

Own. Full-floating, two-speed planetary reduction type. with hypoid primary pinion and ring gear.
See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.
►*NOTE: Two gear ratios available as follows:*
Power Ratio—6.40-1 (high), 8.72-1 (low). 32:5 Primary gears.
Speed Ratio—5.83-1 (high), 7.95-1 (low). 35:6 Primary gears.
Two-Speed Shift Control: Vacuum power type with control on gearshift lever.
Carrier Assembly Removal: *See "Chevrolet Truck Planetary 2-Speed" in Rear Axle Section.*
Axle Shaft Removal & Wheel Bearing Adjustment: Same as for "Standard Full-Floating" above.

SHOCK ABSORBERS

Delco. Direct Acting (Airplane Type) shock absorbers as follows:

Front Shocks

Model	Delco No.
½, ¾, 1-Ton	820R
1½ & 2-Ton (Except LCF)	682Z
Low Cab Forward	660AA

Rear Shocks

Model	Delco No.
½-Ton (114" W.B)	800W
½ & ¾-Ton (123¼" W.B.)	800Z
1½-Ton (Exc. School Bus Chassis)	660V
Utility	660U
Forward Control	684U

FRONT SUSPENSION

Conventional "I" Beam section, with Reverse Elliot ends and semi-elliptic springs.
Kingpin Inclination—6.16° to 8.16°.
Camber—1½° to 1¾°.
Caster (At designed load)—See table below.
Toe-In—See table below.

Model	Caster Ⓒ	Toe-In
3100, 3200	Pos. 3°	.132-.219"
3400, 3500, 3700	Pos. 2°	.26-.33"
3600	Pos. 1½°	.26-.33"
3800	Pos. 2¼°	.26-.33"
4000, 5000	Pos. 2°	.26-.33"
6000	Pos. 2¼°	.26-.33"

Ⓒ—At designed load, NOT curb weight.

STEERING

Manual: Saginaw Ball Bearing Worm & Nut (recirculating ball).
See "Saginaw Ball Bearing Worm & Nut" in Steering Section.
Power Steering: Own (Linkage Type). *See "Chevrolet Power Steering" in Steering Section.*
Steering Linkage: *See "Steering Linkage" in Steering Section.*
Steering Wheel & Horn Button Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*
Steering Gear Removal: *See "Saginaw Ball Bearing Worm & Nut" in Steering Section.*

BRAKES

►*NOTE: Two different type brakes used on trucks as indicated below.*
Chevrolet-Bendix (Except Rear Wheels of 1½ & 2-Ton Models—Duo-servo, single anchor, hydraulic (without eccentric adjustment).
See "Chevrolet-Bendix Hydraulic" in Brake Section.
►*HALF-TON TRUCK BRAKE SHOE GRINDING CAUTION:* If bench type grinder used, grind shoes to .057" to .087" smaller diameter than drum size. If spindle type grinder used, grind shoe to drum diameter.
Chevrolet-Twinplex (Rear Wheels 1½ & 2-Ton Models)—Two-cylinder, four-anchor type hydraulic. Shoes are self-centering and self-energizing.
See "Chevrolet Twinplex" in Brake Section.
Wheel Cylinders—Size stamped on housing under adjusting lock spring.
Drums—Cast iron with steel web.

Drum Diameter

Model	Front	Rear
½-Ton	11"	11"
¾-Ton	12"	12"
1-Ton	12"	14"
1½ & 2-Ton	14"	15"

Lining—Molded type. Riveted on 1½ & 2-Ton Models and bonded on all others.

Thickness & Width

Model	Thickness	Width
½-Ton (Front Whl.)	.202-.222"	2"
½-Ton (Rear Whl.)	.202-.222"	1¾"
¾-Ton (Front & Rear)	.264-.284"	2"
1-Ton (Front Whl.)	.264-.284"	2"
1-Ton (Rear Whl.)	.267-.287"	2½"
1½ & 2-Ton (Front Whl.)	.267-.287"	2½"
1½ & 2-Ton (Rear Whl.)	.392-.412"	4"

Clearance—Adjust for clearance as follows:
All Models (Except 1½ & 2-Ton Rear Brakes)—Remove adjusting hole cover and turn brake adjusting screw until light drag is felt, then back off adjusting screw 7 notches (Half-Ton Models), or just enough to eliminate brake drag (Other Models), but not more than 7 notches.
Rear Wheels (1½ & 2-Ton Models)—Remove adjusting hole covers from flange plate and turn rear adjusting screw until slight drag is felt, then back off 3 notches. Repeat on front adjusting screw (2 adjustments on each wheel).
Parking Brakes: Hand lever applies rear wheel service brakes on Half-Ton & ¾-Ton Models, and an independent brake on propeller shaft on all other models.
Adjustment (½ & ¾-Ton Models)—*See "Chevrolet-Bendix Hydraulic" in Brake Section.*
Adjustment (1, 1½, 2-Ton Models & ¼-Ton with 4-Speed Transmission)—*See "Chevrolet Twinplex" in Brake Section.*
Master Cylinder: Located under floorboard on left hand side of truck.
Checking Fluid—Maintain fluid level to lower edge of filler hole.
Removal—Remove from below. *CAUTION*—On 1½ & 2 Ton Low Cab Forward, spacer between cylinder and body bracket will fall out when mounting bolts removed.
Installation—Reverse removal procedure. On LCF Models make sure the spacers are reinstalled.
Power Brakes: See "Hydrovac Power Unit" in Brake Section.

MISC. MECHANICAL

Windshield Wipers: Linkage type. Vacuum motor (Std. Equip.), Electric motor (Optional Equip.).
See "Windshield Wipers" in Miscellaneous Section.

ENGINE

1946-53 MODELS (EXC. V8)

ENGINE ASSEMBLY REMOVAL: Engine assembly, clutch and transmission assembly can be removed from car as a unit as follows: Remove hood and radiator core. Remove propeller shaft (cars with 2 propeller shafts see Propeller Shaft Center Bearing Removal following). On cars with Powershift remove the vacuum control unit. Disconnect the following: Fuel pump flexible line at pump, exhaust pipe at manifold, throttle controls, heat indicator tube and bulb at head, oil gauge line at flexible tube, generator wires, speedometer cable, hand brake, gear shift and selector rods at transmission, clutch pedal linkage and torque tube, windshield wiper vacuum hose (if so equipped). Remove crankcase ventilator breather pipe and front and rear engine support bolts. Connect hoist to engine (remove air cleaner and horns) lift assembly out of chassis. When re-installing assembly reverse procedure indicated above, check hood locks and hood alignment.

1954 6 CYL. MODELS

ENGINE ASSEMBLY REMOVAL: Engine assembly, clutch, and transmission assembly can be removed from car as a unit as follows: Remove hood and radiator core. Remove propeller shaft (cars with two propeller shafts see Propeller Shaft Center Bearing Removal following). On cars with power shift remove the vacuum control unit. Disconnect the following: Fuel pump flexible line at pump, exhaust pipe at manifold, throttle controls, heat indicator tube and bulb at head, oil gauge line at flexible tube, generator wires, speedometer cable, hand brake, gear shift and selector rods at transmission, clutch pedal linkage and torque tube, windshield wiper vacuum hose (if so equipped). Remove crankcase ventilator breather tube and front and rear engine support bolts. Connect hoist to engine (remove air cleaner and horns) lift assembly out of chassis. When re-installing assembly, reverse procedure indicated above, check hood alignment and hood lock operation.

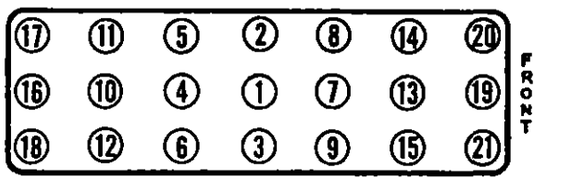
1954-55 V8 MODELS

ENGINE ASSEMBLY REMOVAL: Drain cooling system (both cylinder bank drain cocks and radiator). Disconnect propeller shaft at transmission and disconnect wires and linkage at transmission and clutch. Remove exhaust pipes, hood, and battery. Disconnect the usual items under hood such as fuel lines, radiator hoses, wires, etc. If using engine lifting fixture C-3162, remove carburetor assembly after disconnecting integral choke tube, fuel lines as listed above.. Remove radiator shroud (if so equipped). Attach lifting fixture to carburetor flange studs on intake manifold, and hook chain hoist to eyebolt. Place a jack under transmission to relieve weight. Then remove engine rear support mounting bolts and cross-member. Then remove engine front support mounting bolts. Lower jack at transmission and remove from under car. Raise engine and at the same time, work engine out of chassis toward the left front fender.

OIL PAN

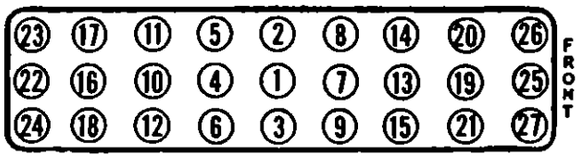
1946-54 MODELS (EXC. V8)

OIL PAN REMOVAL: Drain oil, replace oil pan drain plug. Remove clutch cover housing underpan to avoid damaging oil pan gaskets on underpan dust shield. (NOTE—On Eight cylinder cars (Except V-8), raise rear of engine slightly so that pan clears frame cross-member). Remove oil level indicator, drop oil pan on the tie rod. Pan can then be removed by reaching in under crankcase and raising oil strainer to clear baffle while sliding pan out to rear.



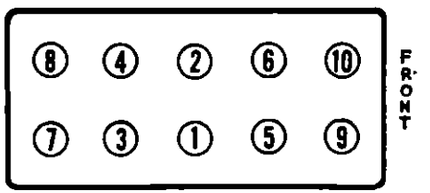
Installation (6 Cylinder Engines)—When installing new gaskets, end gasket should extend ¼" to ⅛" above level of oil pan (these ends must not be cut off). Side gasket installed with ends resting on top of protruding end gaskets. Gaskets will be compressed into place when pan screws tightened.

CYLINDER HEAD & MANIFOLD



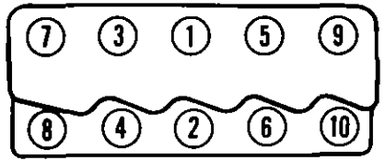
1946-55 MODELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car.



Tightening Torque—See Tightening (Torque Wrench) Specifications above.

CHRYSLER SIX CYLINDER HEAD



CHRYSLER 8-IN-LINE CYLINDER HEAD

V8 ENGINES (DOUBLE ROCKER ARM SHAFT) CYLINDER HEAD

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

V8 ENGINES (SINGLE ROCKER ARM SHAFT) CYLINDER HEAD

1946-54 6 CYL. MODELS

INTAKE & EXHAUST MANIFOLD INSTALLATION: Install the new gasket between intake and exhaust manifold (make sure that heat valve is free and operates freely), and insert the four bolts through exhaust manifold and into intake manifold. Draw bolts down snug but DO NOT TIGHTEN. Install thermostatic coil spring and counter-weight. Install manifold-to-engine block gaskets and install assembled manifolds. While holding manifold and gaskets evenly against engine block, install long center bolts and draw down snugly. (If bolts show signs of water leakage, coat threads with suitable sealer). Install remaining washer and nuts. *(CAUTION*—Be sure to install the four conical, brass washers and nuts on the extreme ends of exhaust manifold). Tighten manifold nuts and bolts, starting from center and working out towards ends, to 15-20 ft. lbs. torque. Tighten the four bolts holding exhaust manifold to intake manifold.

MANIFOLD HEAT CONTROL

1951-55 V8 MODELS

MANIFOLD HEAT CONTROL VALVE: Attached to right cylinder block exhaust manifold, and can be removed and repaired without removing manifold.

Removal: Remove the two exhaust manifold flange bolts and nuts and apply pressure to exhaust pipe to separate and remove the heat control valve. Remove counter-weight tightening bolt and nut and remove counter-weight. Remove thermostatic spring, spacer washer, then remove horseshoe lock and remove the anti-rattle spring.

►*CAUTION—Do not operate the engine without heat control valve in the manifold.*

Installation: Install the anti-rattle spring and horseshoe lock, and secure lock to shaft by squeezing end of horseshoe lock together. Check valve and shaft for free movement. Install spacer washer and place inner tongue of coil spring in shaft slot with outer tongue of spring toward forward side of valve and in a down position. Install bumpers on each side of counter-weight, and insert the counter-weight shaft key into counter-weight, securing it in position with the lock bolt. Hold heat control valve in the open position, and move the outer end of thermostatic spring around and up ¾ of a turn, hooking end of spring under forward stop screw. Hold valve in closed position and install counter-weight assembly on shaft. Center butterfly valve in valve body and line up bumpers to clear stop pin, then press counter-weight all the way onto the shaft, with the anti-rattle spring adjusted so that when the valve shaft is pulled up against anti-rattle spring there will be about 1/16" tensional drag on the shaft. Install manifold heat control valve assembly on exhaust manifold. Check assembly for free operation.

ORIGINAL BORE & PISTONS

1946-54 MODELS (EXC. V8)

ORIGINAL PISTON & CYLINDER BORE SIZES: Original production (new engine) piston and bore sizes indicated by letter located as follows:

Piston Size—Letter stamped on piston head.

Bore Size—Letter stamped on pad on distributor side of engine at top of block. Do not confuse this letter with "Special Standard" size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" oversize standard cylinder bore.

NOTE—When measuring piston diameter take readings at right angles to the pin hole and ¾" from bottom of skirt.

PISTONS

ALL MODELS

REPLACEMENT PISTONS: Finished (Aluminum Alloy) Pistons—Furnished in standard size and .005", .020", .030", .040", .060" oversize.

Semi-Finished (Aluminum Alloy) Pistons—These pistons furnished in two sizes: (1) for cylinder bores from standard to .023" oversize. (2) For bores .025-.060" oversize. Pistons are finished (head and ring grooves) except for skirt. **Pistons must be finished on cam grinding equipment.** Do not finish pistons circular. Skirt is elliptical (.010-.014"), with smaller diameter across pin bosses than across thrust faces, and piston is tapered (.0005-.0015"), with smaller diameter at top of piston.

IMPORTANT—Use same type pistons when replacing only a partial set. All pistons in engine must be of the same type.

PISTON RINGS

ALL MODELS

REPLACEMENT PISTON RINGS: Three types of piston ring sets furnished by car manufacturer for service replacement, as follows:

Mopar Oil Master Ring Sets—These ring sets are designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls are not to be reconditioned. No. 4 oil ring is special 4-piece type (upper and lower rail with stepped segment between rails and slotted expander). Mopar Oil Master Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Oil Saver Ring Sets—These ring sets are designed to be installed in cylinders with .005" or less taper, or where cylinder walls have been reconditioned. This set consists of same rings as used in Oil Master set except that No. 3 & No. 4 rings are alike (slotted oil ring with slotted expander). Mopar Oil Saver Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Chrome Master Ring Sets—These ring sets are designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls are not to be reconditioned. Top and Bottom rings are chromed.

Oil Ring Set Sizes—All piston ring sets are available in the following sizes: Standard (for standard to .009" oversize cylinders); **.010"** (for .010" to .019" oversize cylinders); **.020"** (for .020" to .029" oversize cylinders); **.030"** (for .030" to .039" oversize cylinders); **.040"** (for .040" to .049" oversize cylinders); .050" (for .050" to .060" oversize cylinders).

ORIGINAL BEARING SIZES

1946-54 MODELS (EXC. V8)

ENGINE NUMBER LETTERS ('SPECIAL STANDARD BORE & BEARING SIZES):—Letters used with engine number (not in circular pads) denote following 'special standard' sizes: 'A'—.020" larger standard cylinder bore. 'B'—.010" smaller standard main and connecting rod bearings. 'AB'—Cylinder bore, main and connecting bearings 'special standard'.

CONNECTING ROD & BEARINGS

►*CAUTION—See ORIGINAL BEARING SIZES for markings indicating production engines equipped with bearings other than standard size.*

ALL MODELS

CONNECTING ROD BEARINGS: Removal & Installation. Bearing shells can be removed after taking off bearing caps. When installing bearing shells, oil hole in rod and bearing must be aligned and ear on bearing halves fitted in notch in rod and cap.

Fitting Bearings—To check bearing clearance, place an oiled piece of shim stock, .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts. Bearing clearance is correct when slight drag is felt when turning crankshaft by hand. If no drag felt, and crankshaft out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (See Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT & MAIN BEARINGS

ALL MODELS

►*CAUTION—See ORIGINAL BEARING SIZES for markings indicating production engines equipped with bearings other than standard size.*

REPLACEMENT MAIN BEARING CAPS: Furnished for service where original cap damaged or broken. These replacement caps same as original caps except for stud holes being 1/64" larger and bearing cap length which is 1/16" shorter.

Fitting—Replacement caps must be fitted to engine by filing or shimming to obtain proper bearing clearance. This is only necessary when replacement cap originally fitted to engine (caps should not be shimmed or filed to compensate for wear.

ALL MODELS

MAIN BEARINGS: Removal & Installation (with engine in car). Bearing shells can be removed and installed without removing crankshaft as follows: Remove oil pan, and oil suction pipe and screen assembly. Punch mark bearing caps and crankcase to insure re-installation of caps to same position. Remove caps in pairs (2 front or 2 rear). Upper bearing halves can be removed by using tool C-584 inserted in oil hole in crankshaft and rotating crankshaft to turn bearing out.

Fitting Bearings—To check bearing clearance, place an oiled piece of shim stock, .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts. Bearing clearance is correct when slight drag is felt when turning crankshaft by hand. If no drag felt, and crankshaft out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (See Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

1946-54 MODELS (EXC. V8)

CRANKSHAFT OIL SEALS: Servicing—Car manufacturer recommends that new oil seals be installed if chain cover or rear bearing cap removed.

Front Oil Seal (6 Cyl.)—Oil seal located in timing chain cover. Consists of spring backed composition seal in a stamped steel housing pressed in chain case cover with composition gasket installed between seal and cover. To install proceed as follows: Insert new composition gasket in chain case cover, drive new seal in place with drift or similar tool slightly larger than seal (seal is press fit in cover). Center seal on crankshaft when installing chain case cover as follows: Install chain case cover on engine with cover screws tightened just enough to hold cover in place, install Centering Tool C-522 on end of crankshaft and hold it in place by tightening crankshaft starting jaw finger tight, tighten chain case cover screws and as cover is being compressed, tighten crankshaft starting jaw nut so as to maintain slight tension between centering tool and seal. Remove tool after chain case cover screws secured. Tighten starter jaw to 108 ft.lbs. torque.

Rear Oil Seal (2-Piece Type—6 Cyl.)—Located at rear main bearing. Consists of oil seal packing assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer assembled on rear face of bearing cap). Gaskets used on top face of bearing cap at each side, around oil slinger grooves and along shoulder across cap. Install new packing in retainer on crankcase and cap, place new gaskets on cap and install on engine without disturbing position of gaskets.

NOTE—Some models equipped with additional two-piece oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

Rear Oil Seal (2-Piece Type—Straight 8 Cyl.)—At rear main bearing. Consists of seal assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer asembled on rear face of bearing cap), and by rubber seals assembled in vertical grooves on each side of bearing cap. When installing rubber seals, upset grooves on each side of cap with prick punch to anchor seals in grooves and prevents seals sliding out when cap installed. These rubber seals also used on front bearing cap.

NOTE—Some models equipped with additional two-piece oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

Rear Oil Seal (1-Piece Type)—New one-piece type with lip on forward edge engaging shoulder in crankcase and bearing cap to rear of crankshaft oil slinger. This seal is split at the top.

Installation—Remove oil pan (see Oil Pan Removal following). Back off all main bearing capscrews three turns. Remove rear main bearing cap (use Puller C-305 for 8 cylinder). Pull out old seal with pliers. Coat one end of new seal with tire soap or cup grease (avoid getting any grease between ends of seal). Insert one end of seal over shoulder in crankcase, work up until end approximately at top, then work other end in same manner on other side until ends come together at top. Coat lower lip of seal so that bearing cap will seat on seal easily. Check rear bearing cap for holes (either sand holes or tapped holes for 2-piece type seal retainer). If holes extend through oil slinger groove shoulder, sand holes should be plugged by welding or tapped holes plugged by installing screws which have been coated with sealing compound. Re-assemble main bearing caps and oil pan.

REPLACEMENT NOTE—If one-piece seal to be installed on engine where two-piece type seal used, removal of transmission, clutch, and fluid drive may be required to remove both halves of old seal.

1951-55 V8 MODELS

CRANKSHAFT OIL SEALS: Front Seal—Remove old seal with tool C-3050. Place new seal on chain cover with projecting flange facing inside the cover. Insert seal gasket and drive into place with tool C-3051.

Rear Oil Seal—Rope type seal of braided asbestos. With bearing cap, bearing, and seal removed, install a new seal into position in cap so that both ends of seal protrude above cap. Tap seal into position with tool C-3131 until tool is seated in bore. Hold tool down and cut off protruding ends flush with cap. Install bearing insert and both cap seals. The long cap seal should be installed so that when the cap is in position the long seal will be on the oil filter side of engine.

ENGINE FRONT COVER

1951-55 V8 MODELS

(DOUBLE ROCKER SHAFT ENGINE)

ENGINE FRONT COVER (Double Rocker Shaft Engines): Proceed as follows:

Removal: Remove water pump. Remove vibration dampener retainer bolt and washer. Remove two of the vibration dampener pulley bolts and install puller Tool C-3033. Remove crankshaft pulley and vibration dampener as an assembly. Remove felt dust seal and vibration dampener hub key from crankshaft slot. Remove left cylinder bank exhaust pipe. Disconnect fuel lines at fuel pump, remove fuel pump. Remove oil level indicator. Remove starter using Tool C-455. Drain engine oil and remove oil pan. Remove chain case cover bolts and lockwashers, **including one inside the pump opening.** Drive chain case cover off the two dowel pins, using soft hammer.

Installation: Be sure mating surfaces of cylinder block and cover are clean. Apply moderate coat of sealing compound to block and cover faces, install new gasket. Make sure crankcase oil slinger is in proper position (flange end pointing toward seal). Position cover on two dowel pins and gently tap cover in place. Install cover bolts and lockwashers and tighten to 30 ft. lbs. Install other items be reversing removal procedure.

1955 V8 MODELS

(SINGLE ROCKER SHAFT ENGINE)

ENGINE FRONT COVER (Single Rocker Shaft Engines): Proceed as follows:

Removal: Drain and remove radiator. Disengage fan belt and remove generator. Install Tool C-3033 over pulley and force pulley off end of crankshaft. Support engine with suitable chain hoist fastened to intake manifold. Remove motor support "U" bolts and nuts. Remove fan blades and hub, then remove bolts that hold water pump housing to cylinder block and heads. Lift water pump housing, water pump, front motor support and insulator up and away from front of engine. Discard gaskets. Loosen bolts that hold oil pan to cylinder block. Drop pan slightly to clear chain case cover. Disconnect inlet and outlet fuel lines at fuel pump. Remove bolts that hold pump to chain case cover. Slide pump out and away from engine. Discard gasket. Remove bolts and washers from cover. Disengage cover from locating dowels, remove from engine. Discard gasket.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Installation: Be sure mating surfaces of cover and cylinder block are clean and free of burrs. Install new gasket and position cover locating dowels. Coat screws with suitable sealer and tighten to 15 ft. lbs. *NOTE*—Coat four center screws with sealer suitable for water. Coat other screws (upper and lower) with sealer suitable for oil.

1951-55 V8 MODELS

FRONT OIL SEAL: Remove old seal by driving it out with Tool C-3050. Place new seal on the chain case cover with the projecting flange facing the inside of the cover. Insert seal gasket and drive new seal in place with Tool C-3051.

CAMSHAFT & BEARINGS

1946-54 MODELS (EXC. V8)

CAMSHAFT REMOVAL: Remove Front End Assembly as a unit (see removal data on preceding pages). Remove cylinder head, fuel pump, oil pump, valve tappet cover plates, crankshaft pulley, front motor support (with front of engine jacked up), timing chain cover, camshaft sprocket and timing chain. If valves and valve springs are not to be removed, prop valves up by inserting wooden wedges at opposite sides under valve head. Raise tappets and hold in this position (use spring type clothes pins or similar tool to hold tappets up). Withdraw camshaft (rotate shaft to clear any obstructions). Chrysler 8 Note—In addition to instructions listed above, two oil feeder lines in valve chamber must be removed and #4 piston must be on top dead center in order to remove camshaft.

1951-55 V8 MODELS

(DOUBLE ROCKER SHAFT ENGINE)

CAMSHAFT REMOVAL: Remove valve tappet cover, cylinder head cover and rocker arm assemblies and push rods. Remove valve tappet assemblies, remove distributor. Remove timing chain cover case *(CAUTION*—One cover attaching bolt located in case back of water pump), timing chain and camshaft sprocket. Camshaft sprocket and timing chain can be removed by taking off the camshaft hub nut, fuel pump eccentric and dowel assembly. Chain and sprocket can then be removed. Remove four camshaft thrust plate screws, distributor and oil pump drive gear. Pull out the camshaft being careful not to damage camshaft bearings.

1955 V8 MODELS

(SINGLE ROCKER SHAFT ENGINE)

CAMSHAFT REMOVAL: Drain radiator, remove radiator and crankshaft pulley. Support engine with chain hoist attached to intake manifold. Remove engine support U-bolts. Remove fan, water pump, and water pump housing assembly. Loosen oil pan bolts sufficiently in order that oil pan clears chain case cover, camshaft gear hub nut, fuel pump eccentric and dowel. Then remove camshaft gear and timing chain. Support engine at front of oil pan. Then remove intake manifold, distributor, distributor drive gear, tappet chamber cover, rocker cover, rocker shaft assemblies and push rods. Use Tool C-3158 to pull out hydraulic tappets. If varnish build-up is excessive, use puller part of Tool C-3158 and work tappet out of bore. Remove four camshaft thrust bolts, then remove camshaft.

TIMING CHAIN

1946-54 MODELS (EXC. V8)

TIMING CHAIN REMOVAL: Remove water pump, hoses, radiator core, belt and front crankshaft pulley. Support engine from underneath and remove front engine support. Remove chain cover. Remove 4 cap screws holding camshaft sprocket to camshaft, and pull off sprocket. Chain can now be removed. Cap screw holes in sprocket are offset and gear can be installed in one position only on camshaft.

1951-55 V8 MODELS

TIMING CHAIN REMOVAL: Remove radiator (see Radiator Removal), remove fan and both belts, and water pump pulley. Remove the four water pump attaching capscrews and remove water pump. Remove bolts holding chain case cover to cylinder block. Attach Puller C-3072 by hooking it under chain case cover then installing two of the water pump mounting bolts. Pull cover off locating dowels by tightening up on puller bolt.

VALVE SYSTEM

1946-55 MODELS

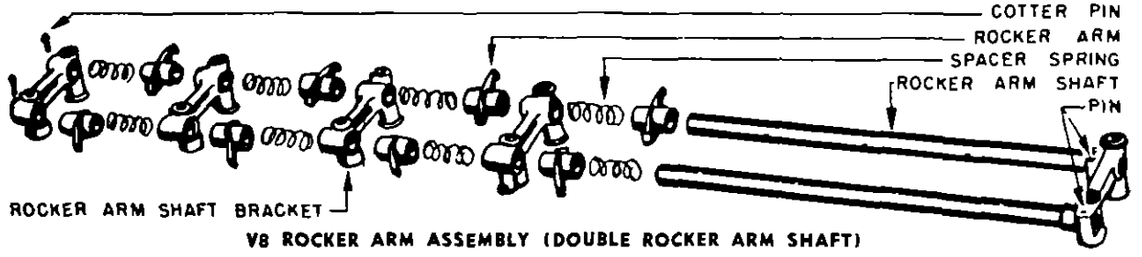
(EXC. SINGLE ROCKER SHAFT ENGINE)

EXHAUST VALVE SEAT INSERTS (Refacing): Exhaust valve seat inserts must be reground with special high speed grinding tool MTH-JB-41, using the correct size valve guide pilot. Check concentricity of valve seat using a dial indicator. Total runout should not exceed .002". Check valve seat with prussian blue to get seat centralized on valve face. Use a 20° stone at the top or a 60° stone at the bottom, whichever is necessary to centralized the valve seat. Width of valve seats should be 3/64" to 1/16".

Replacement Inserts—Furnished .010" Oversize. Use special tool C-732 (Exc. V8); C-3140 (Double Rocker Arm Shaft Engines) to remove inserts. After inserts have been removed from engine, smooth any roughness of seat with a blunt drift. Valve seat inserts should be .002-.004" larger than counterbore to insure correct fit. If inserts are found to be loose, enlarge counterbore with Tool MH-M-1 and install oversize insert. Place inserts in dry ice for approximately 10 minutes. Clean counterbore thoroughly and install a chilled insert with valve side up, and drive it into place with installing tool C-767.

ROCKER ARMS

1951-55 V8 MODELS



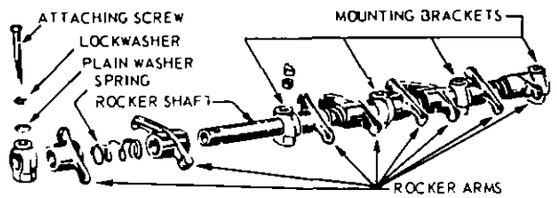
(DOUBLE ROCKER SHAFT ENGINE)

ROCKER ARM ASSEMBLY (Double Rocker Arm Shaft):

Removal: Remove rocker arm covers. Place cotter pins in holes of first and last rocker arm brackets to last rocker arm brackets (if not already there) to prevent springs on rocker from pushing assembly apart when cylinder bolts removed. Completely loosen ten bolts on each bank that attach rocker arm support brackets to cylinder head and block. Grasp support bracket at each end of head, pull rocker assemblies and bolts directly away from heads, then remove push rods and place in respective slots in holder C-3068. ***CAUTION—Use care when removing rocker assemblies in order not to jerk cylinder heads off locating dowels which would allow them to drop and become damaged.***

Installation: Insert cylinder head bolts in brackets, with **short** bolts in intake side. Insert push rods through push rod holes in heads (short rods in upper intake holes, long rods in lower exhaust holes). Place rocker arm assemblies in position on heads, lining up all push rods to their respective rocker arms. Starting at top center tighten all cylinder head bolts to torque indicated in Tightening Specifications above. ***When tappets are full, extreme care must be taken when tightening head bolts so that tappets have time to bleed down to their operating length.*** Bulged tappet bodies and permanent noisy operation will result if tappets are forced down too rapidly.

CONTINUED ON NEXT PAGE



V8 ROCKER ARM ASSEMBLY (DOUBLE ROCKER ARM SHAFT)

CONTINUED FROM PRECEDING PAGE

1955 V8 MODELS
(SINGLE ROCKER SHAFT ENGINE)

ROCKER ARM ASSEMBLY (Single Rocker Arm Shaft): Hold rocker arm shaft and end bracket in a horizontal position with oil grooves facing down. Slide an intake rocker arm over shaft and down against bracket, with diagonal slant of arm close to bracket. Then slide a spacer spring over shaft and down against intake rocker arm. Next, slide an exhaust rocker arm over shaft and down against spacer spring, followed by a shaft bracket Continue to slide first an intake rocker arm, then a spacer spring followed by an exhaust rocker arm and bracket, over shaft until last bracket has been installed. Slide push rods into push rod holes. Be sure that rocker arms are in a horizontal position, then lower rocker shaft assembly down on two locating studs on head. Install flatwashers and nuts.

ROCKER ARM ASSEMBLY (SINGLE ROCKER ARM SHAFT)

HYDRAULIC VALVE LIFTER

1950 8 CYL. C49 & C50 MODELS

►*NOTE: Hydraulic Valve Lifters used on some 1950 C49 & C50 models only (8 Cyl.). Can be identified by "X" after engine number.*

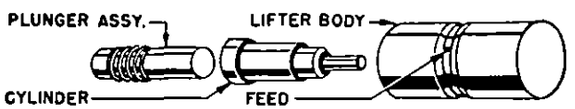
►**HYDRAULIC VALVE LIFTER CLEARANCE:** Required when valves are reconditioned or replaced (used on some C49 & C50 8 Cyl. Engines). Insert shank of a new 3/32" drill between valve face and seat. Hold valve tight on drill shank and check clearance between lifter and valve stem. A .016" feeler should pass freely, if not, grind off the end of valve stem until a .026" feeler will pass freely between lifter and valve stem. Lifter must be in down position when setting.

INSTALLING NEW OR SERVICED HYDRAULIC VALVE LIFTERS: After re-installing valve lifters run engine at fast idle until lifters become quiet. This may take as long as 1 hour of running. **Do not run over fast idle until lifters are quiet or damage to valve train may result.**

1950-53 8 CYL. MODELS

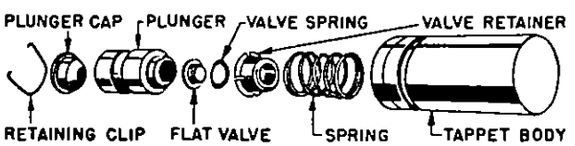
HYDRAULIC VALVE LIFTERS (Two Piece Type): Consists of three separate units: tappet body, cylinder, and plunger. Oil is introduced from pressure system to lower part of tappet body, then through a ball check valve to cylinder below plunger. When lifter is raised by engine cam, the ball check valve closes, preventing escape of oil, and the cam action is transmitted to the engine valve.

►*2-PIECE TYPE LIFTER REPLACEMENT NOTE: The "One Piece" integral type lifter can be used to replace the "Two Piece" type. See "One Piece Integral Type" below.*



Removal (1950 8 Cyl. Models): Remove valve spring chamber cover plate, and engine cylinder head. Remove valve, spring and retainer assembly over tappet unit which is being removed, being careful not to damage plunger return spring with the valve spring compressor tool. Remove cylinder and plunger assembly by lifting and sliding it out from under bottom of valve stem guide.

Removal (1951-53 V-8 Engines): To remove complete valve lifter assembly, remove cylinder head cover, rocker arm assembly, push rods and valve chamber cover. On early production engines the above procedure must also be followed to remove valve lifter plunger assembly from valve lifter body. On later engines the valve push rod hole has been enlarged, making it only necessary to remove the cylinder head cover, and then proceed as follows: Install valve spring compressing tool C-3034 over the rocker arm so heel of tool is resting on valve side. Make certain valve is seated on low part of cam lobe. (See following for camshaft position). Using handle of tool for leverage, compress valve springs sufficiently to raise rocker arm above push rod. While holding in this position, slide rocker arm to one side. Remove push rod, and insert tool C-3039 (standard spring jaw type holding tool) into push rod hole, positioning it over valve lifter plunger assembly. Pull the assembly from valve lifter body being careful not to pull body from lifter bore.



1951-55 V8 MODELS

HYDRAULIC LIFTERS (One-Piece Integral Type): Barrel type. Unit consists of plunger and valve assembly operating within a cylinder formed by valve lifter body or tappet. Oil is introduced to this unit through a hole in side of lifter plunger.

►***1951-53 V-8 VALVE LIFTER REPLACEMENT CAUTION***—The integral type lifter can be used to replace the former "Two-Piece" type lifter providing the correct valve push rods are also installed. Valve push rods for use with "Integral" type lifters are as follows: No. 1486907 (Exhaust), No. 1486906 (Intake). ***DO NOT REPLACE "INTEGRAL" TYPE LIFTERS WITH "TWO-PIECE" TYPE LIFTERS ON ENGINES AFTER SERIAL NO. C53-8-48654.***

CHRYSLER V8 TWO-PIECE VALVE LIFTER

CHRYSLER V8 ONE-PIECE VALVE LIFTER

Removal (All V-8 Engines): Remove cylinder head cover, rocker arm assembly, intake manifold, and valve chamber cover (NOTE—Lifters cannot be removed through cylinder head as with some previous lifters). Install valve spring compressor tool C-3034 over the rocker arm so heel of tool is resting on valve side. Make certain valve is seated on low part of cam lobe (see following Camshaft Position). Using handle of tool for leverage, compress valve spring sufficiently to raise rocker arm above push rod. While holding spring in this position, slide rocker arm to one side. Remove push rod and then remove valve lifter from lifter bore.

Disassembly: Depress lifter plunger with a push rod and remove plunger retaining spring clip, plunger cap, plunger, flat valve, valve spring, valve retainer, and plunger spring from lifter body. (CAUTION—Disassemble ONE valve lifter at a time to avoid the possibility of interchanging lifter parts. If lifter parts are interchanged, lifters should be replaced with new ones). Inspect plunger, valves, and valve seats for signs of scoring, wear or pitting. Check to see that the flat check valve exerts slight pressure on valve spring to insure valve closing. Clean lifter assembly in clean solvent and remove all traces of varnish and carbon. Blow parts dry with air. DO NOT USE A CLOTH AS LINT WILL CAUSE LIFTER TO OPERATE UNSATISFACTORILY.

Testing: Remove plunger cap and immerse lifter assembly in an upright position in a container of kerosene (*CAUTION*—Kerosene and container must be absolutely clean). Allow lifter to fill with kerosene, then remove and replace the plunger cap. Holding lifter in an upright position and using tool C-3160, compress plunger slightly a few times to fill lifter body. Then compress lifter firmly with testing pliers, and if plunger collapses instantly as pressure is applied, disassemble, inspect and clean again. If second cleaning fails to prevent lifter from collapsing instantly when compressing, replace the lifter. When cleaning and testing has been completed, remove kerosene and prime lifter lightly with clean engine oil before installing. This will prevent possible scoring of lifter plunger when engine is first started.

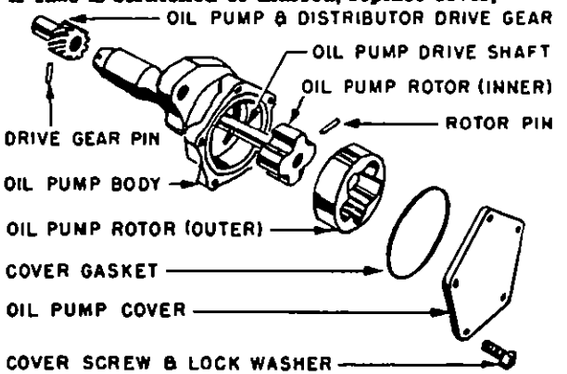
Reassembly: Reverse the disassembly procedure as noted above.

1951-55 V8 MODELS

LOW POINT OF CAMSHAFT LOBE: Remove distributor cap, noting position of rotor for Nos. 1 and 6 cylinders. Set timing mark "DC" located on crankshaft pulley to pointer. With rotor at No. 1 firing position, the following lifters will be on the low side of the cam lobe: No. 2 intake and exhaust, No. 4 exhaust, No. 7 intake, No. 8 intake and exhaust (*NOTE*—To remove No. 1 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed). With rotor at No. 6 position, following lifters will be on low side of cam lobe: No. 3 intake and exhaust, No. 4 intake, No. 5 intake and exhaust, No. 7 exhaust (*NOTE*—To remove No. 6 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE



OILING SYSTEM

OIL PUMP

1946-54 MODELS (EXC. V8)

ROTOR TYPE OIL PUMP: Removal—Take off distributor cap, turn engine over until #1 cylinder is at firing position (allow engine to remain in this position while pump off engine). Remove two oil pump Allen-head screws. Take pump off engine.

Pump Servicing—Disassemble pump by taking off cover and drive gear (drive out pin and press gear off shaft). Thoroughly clean parts and dry with compressed air. Check pump parts as follows: 1)—With rotors in pump body, turn shaft so that one lobe on inner rotor pushed into notch in outer rotor, check clearance between opposite lobe of inner rotor and inner face of outer rotor. If clearance greater than .010" replace both rotors. 2)—Height (or thickness) of both rotors should be at least .748". Diameter of outer rotor should be at least 2.245". Replace if measurements are less. 3)—With rotors in pump body, turn body up, place straightedge across face of body between screw holes. Clearance between straightedge and rotors should be .004" max. If greater, replace pump body. 4)—With outer rotor pressed to one side of body, clearance at opposite side should be .008" maximum. If greater, replace pump body. ..5)—Check cover by placing straightedge across inner face and if .001" feeler can be inserted between cover and straightedge, or if face is scratched or marred, replace cover.

CHRYSLER SIX OIL PUMP

Pump Assembly—If new rotor installed on shaft, it must be installed with rotor square to shaft and pressed on until flush with end of shaft. Pin rotor to shaft after drilling 5/32" pin hole. Drive gear should be pressed on shaft to give .003-.010" clearance between underside of gear and pump body with rotor (on opposite end of shaft) seated in pump body. Install pin. If necessary, drill new 5/32" hole at right angles to old hole. With rotors in place, install new cover gasket on body and install cover.

Pump Installation—Oil pump must be installed on engine with #1 piston in firing position with rotor on distributor opposite #1 terminal in cap.

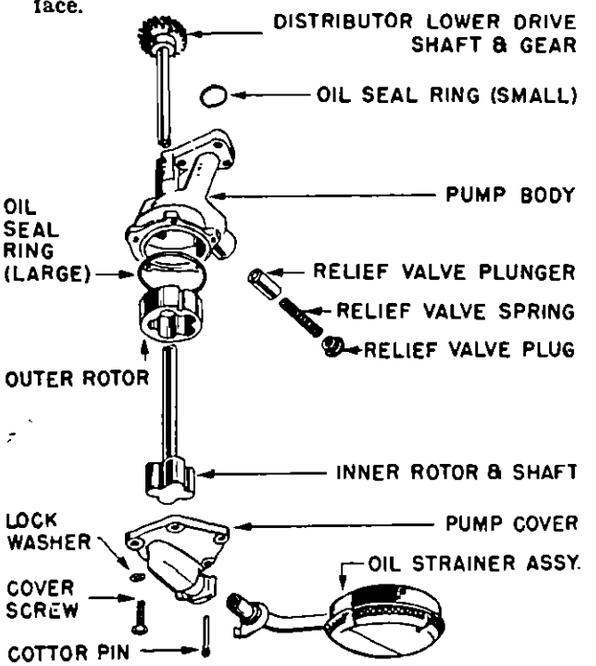
1951-55 V8 MODELS

ROTOR TYPE OIL PUMP: Removal—Drain engine oil, remove oil pan. Remove oil pump mounting bolts and lower pump straight down.

Disassembly & Inspection: Remove cotter pin holding oil strainer to oil pump suction pipe, then remove pipe. Remove cover bolts and cover. Discard oil seal ring. Remove pump rotor shaft and lift out pump outer rotor. Remove oil pressure relief valve plug and lift out spring and plunger. Wash all parts in a suitable solvent and inspect for damage or excessive wear. Check all pump parts as follows:

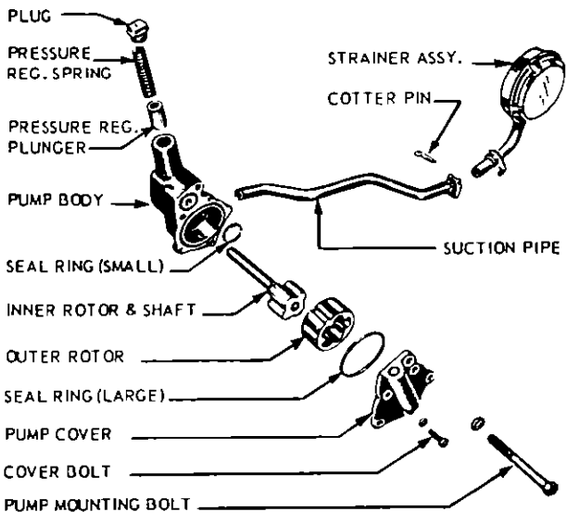
Outer Rotor—Measure diameter and thickness of rotor with micro-calipers. If diameter less than 2.244" or thickness less than .998", replace both inner and outer rotors.

Inner Rotor—Measure thickness of inner rotor with micro-calipers. If thickness measures less than .998", replace both inner and outer rotors.



Rotor Depth—Slide rotors in pump body. Place a straightedge across pump body. Use a feeler gauge and measure clearance between top of rotors and straightedge. If clearance in excess of .004", replace pump body.

Outer Rotor to Pump Body Clearance—To check rotors for excessive wear, measure clearance between lobes of inner and outer rotors. If clearance in excess of .010", replace both inner and outer rotors.



Reassembly: Use new oil seal ring between cover and body. Tighten cover bolts to 10-15 ft. lbs. Prime pump and then install new oil seal ring in pump mounting face.

Distributor-Oil Pump Drive Shaft Bushing: *See "Ignition Notes" below.*

Reassembly—Reverse disassembly instructions and install a new oil seal ring between cover and body. Tighten cover bolts to 10-12 ft. lbs. Prime the pump and place a new oil seal ring in the pump mounting face.

V8 OIL PUMP (DOUBLE ROCKER ARM SHAFT ENGINE)

V8 OIL PUMP (SINGLE ROCKER ARM SHAFT ENGINE)

COOLING SYSTEM

1946-54 MODELS (EXC. V8)

WATER DISTRIBUTOR TUBE: Removable one-piece tube installed between cylinders and valve ports (on six cylinder engines), on right side of engine just above valve spring chamber (on 8 cyl. engines) and distributes water from pump to exhaust valve ports through holes in tube.

Servicing—A new tube should be installed whenever engine overhauled or when rusted or corroded in order to provide correct water circulation in engine block. To replace tube proceed as follows: Remove front end assembly. On 6 cylinder engines remove water pump which will expose front end of tube. On eight cylinder engines, remove welch plug to right of water pump to expose front end of tube. Remove tube by using rod with hook formed on end and engage it in slot on upper edge of tube just inside block, pull tube out. NOTE—On 8 cylinder engines, see that front end of tube flared in same manner as tube which was removed from engine.

1946-55 MODELS

RADIATOR CORE REMOVAL: Raise hood, drain cooling system, disconnect hoses, free headlight wires from radiator, remove shroud (if used), take out nuts and capscrews in support at each side, lift core out, tilting top toward rear. *NOTE*—Fan blades on some models must be removed if additional clearance required.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION NOTES

1951-55 V8 MODELS

DISTRIBUTOR-OIL PUMP DRIVE SHAFT BUSHING: Removal—Insert Tool C-3052 and thread it into bushing. Holding puller head with wrench, tighten puller bolt and pull bushing out of bore in block.

Installation: Slide new bushing over burnishing end of Tool C-3053. Insert tool and bushing into bore of block. Drive bushing and tool down into position, using a soft hammer. As the burnisher is pulled through the bushing by pressure applied to puller nut, tool will wedge bushing tight in its bore and will burnish bore to correct size. ***DO NOT REAM THE BUSHING.***

1951-55 V8 MODELS

DISTRIBUTOR BASIC TIMING: Before installing distributor-oil pump drive shaft it will be necessary to time engine as follows: Rotate crankshaft until No. 1 cylinder is at TDC (or firing position). When cylinder is in this position, the pointer on chain case cover should be over "DC" on vibration dampener. Using Tool C-3027, position oil pump shaft so that it lines up with slot in drive gear. Coat shaft of drive gear with engine oil. Install it so that, after the gear spirals into place, it will index with oil pump shaft (slot in top of drive gear will be parallel with centerline of crankcase).

CLUTCH NOTES

1946-48 MODELS

CLUTCH OVER-CENTER SPRING: Serviced only if linkage disturbed or spring bracket on frame bent. Original setting can be obtained by using Miller Gauge C-705 as follows: Check spring bracket on frame and straighten if necessary, install gauge over linkage pivot pins with lower end engaging coil spring bracket on frame (turn pedal rod turnbuckle until gauge fits properly). Then re-set pedal position and free travel as directed on car page.

1949-54 MODELS

CLUTCH OVER-CENTER SPRING: Use Miller Gauge C-853. Place gauge on the pin at lower end of pedal and against spring hook. Raise or lower the vertical spring bracket until it just contacts the gauge. Move pointer on gauge to setting marked for the car model being worked. Adjust eyebolt until the inside edge is in line with the pointer where spring makes contact with eyebolt.

Adjusting Over-center Spring Tension—Adjustment is made by turning the sleeve nut on the spring eyebolt. If pedal is soft and sluggish on return, back off the sleeve nut. If pedal requires excessive effort to depress, tighten sleeve nut until desired action is obtained.

PROPELLER SHAFT

1946-55 MODELS

PROPELLER SHAFT CENTER BEARING: To remove assembly, remove nuts and lockwashers from differential and transmission companion flanges to free propeller shafts at front and rear. Take out four center bearing housing-to-frame crossmember mounting bolts, remove propeller shaft and center bearing as an assembly

REAR AXLE NOTES

1946-55 MODELS

REAR AXLE SHAFT OIL SEAL: Leather type seal mounted on brake support and bearing on axle shaft.

Installation—With brake support removed and old seal driven out of support, new seal can be installed as follows: Soak new seal in thin oil for 30 minutes. Roll leather with smooth bar until pliable. Check seal bearing surface on axle shaft making sure surface is smooth. Install seal on front side of support and stake to support at three points on outer edge. Install sleeve (Tool C-745) in seal (protects seal from damage while installing support). Assemble brake support on housing. CAUTION—Lip of seal must not be folded when installing in support.

BRAKE NOTES

1946-55 MODELS

HAND BRAKE ADJUSTMENT (Internal Type): Place transmission shifting lever in neutral and be sure the hand brake is released. Disconnect front end of propeller shaft and remove adjusting screw cover plate. Loosen brake cable guide clamping screw and back off cable adjusting nut. Turn brake shoe adjusting nut to decrease shoe-to-drum clearance until a slight drag is felt on drum. Back off adjusting nut one full notch (using spanner wrench C-3014) to give approx. .010" clearance. (NOTE—be sure the two raised shoulders on the adjusting nut are seated in the grooves on adjusting sleeve). The cable length adjusting nut should be positioned against cable housing so there is at least .005" (but not more than .010") clearance between operating lever and brake shoe cable. To lock the adjustment, tighten cable housing clamp securely and then tighten cable adjusting nut against housing. Test hand brake lever for travel. When properly adjusted, 4 to 6 clicks of ratchet should be obtained to hold car. Install adjusting screw cover plate and connect propeller shaft.

HAND BRAKE ADJUSTMENT (External Type): The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

NOTE—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise or place on block and tap lightly with a hammer.

MODEL IDENTIFICATION

STARTING SERIAL NUMBERS

	Royal	Windsor Twn. & Country
1946	70,011,001	70,515,001 71,000,001
1947	70,023,023	70,564,429 71,000,128
1948	70,029,674	70,633,017 71,002,880

Location—On left front door hinge post.

ENGINE NUMBER: Stamped on boss on left side of cylinder block between #1 & #2 cylinders.

TUNE-UP

COMPRESSION: Pressure—125-135 lbs. (100 lbs. min.) at cranking speed of 150 RPM. or 155-165 lbs. at 1000 RPM. (for Std. 6.6-1 Cast Iron Head).

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUGS: Auto-Lite Type A5. 14 mm. Metric. Gaps—.030" ± .002".

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.020" Cam Angle—38° (closed).
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: See Ignition Timing.
Std. Setting—2° After top dead center.
Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 2° graduation after DC mark at pointer on chain case then set manual (octane selector) adjustment:
Manual (Octane Selector) Adjustment—Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ¾-1¼ turns open), turn screw out for richer mixture. Idle speed 6 MPH. (450-475 Eng. RPM. with Hydraulic Trans.).
Float Level—Top of float (not soldered seam) 5/64" (for EX1 carburetor on cars with Std. Trans.), 1/16" (for EV1 carburetor on cars with Hydraulic Transmission), plus or minus 1/64" below top edge of bowl.
Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.
Fuel Pump Pressure—3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. ¾ turn, not over one turn or under ½ turn, hook end on stop stud.

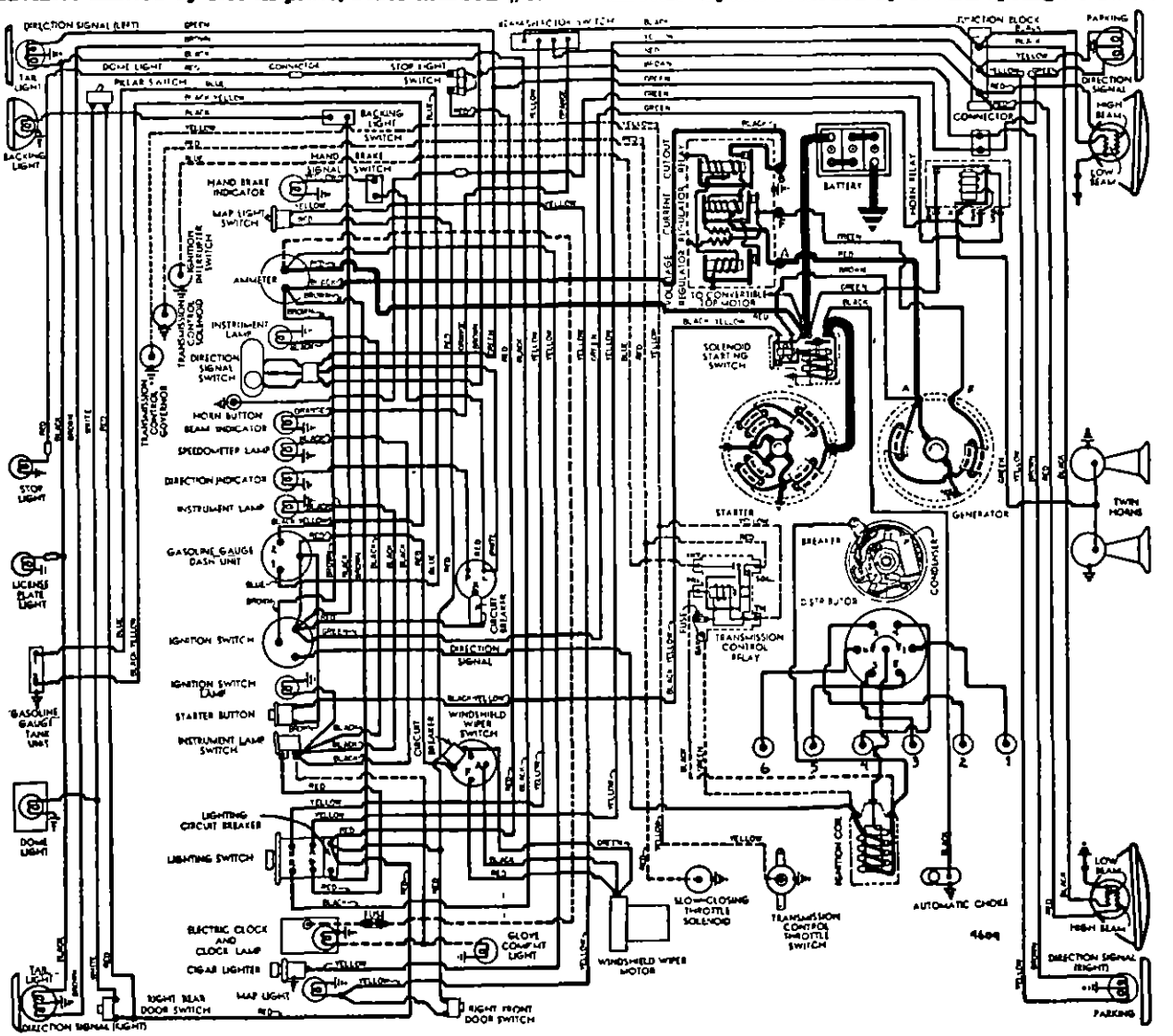
VALVES: See Valve Timing.
Tappet Clearance—.008" Intake. .010" Exhaust, Hot.
NOTE—Tappet adjusting screws are self-locking type (no locknuts).

STARTING: See Battery, Starter, Generator, and Regulator.

IGNITION

IGNITION SWITCH: Briggs & Stratton or Mitchellock. NOTE—No armored cable used.
Briggs & Stratton—B & S Switch No. 85985.
Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).
Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800)

COIL: Auto-Lite No. IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket.
Ignition Current—2.25 amperes idling, 5 stopped.



CONDENSER: Auto-Lite Part No. IG-3927A.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IGS-4208A-1. Full automatic advance type with auxiliary vacuum spark control and manual (octane selector) adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #9.
Breaker Gap—Set at .020".
Cam Angle or Dwell—38° closed, 22° open (distr. °).
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Clockwise viewed from above.

Automatic Advance

Distributor Degrees	Distributor R.P.M.	Engine Degrees	Engine R.P.M.
Start	350	0	700
3	400	6	800
6	780	12	1560
9	1160	18	2320
12	1530	24	3060

Vacuum Spark Control: Auto-Lite Unit. On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7¼"
4°	8°	9⅜"
6°	12°	11⅝"
9°	18°	15"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing

Distributor Removal:—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	2° ATDC	.002" ATDC

NOTE—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

CARBURETOR

Carter (B&B) EX1, 2, 3.....No Fluid Drive

Carter (B&B) EV1, 2....Fluid Dr. & Hydraulic Trans.

1½" single barrel, downdraft type with Sisson automatic choke control. NOTE—EV1 has Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

See Carburetor Section for complete data.

Idle Adjustment—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH min. (Std.), 450-475 Eng. RPM (for Cars with Hydraulic Transmission). Adjust idle adjusting screw for smooth idle (¾-1¼ turns open, turn screw in for leaner mixture). Recheck idle speed.

NOTE—If vacuum gauge used, adjust for highest obtainable vacuum (see Vacuum Gauge data above).

Accelerating Pump Setting—Pump lever has three holes for pump link engagement. Set as follows: Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.

Center Hole (med. stroke)—Normal summer setting.

Outer Hole (max. stroke)—Winter temperatures.

Float Level—5/64" (EX1 carburetor), 1/16" (for EV1), from top of float (not seam) to top edge of bowl with valve seated. Check with tool C-449 (exc. EV1).

Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

NOTE—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).

Slow-closing Throttle (EV1): Electro-magnetic dashpot type. No adjustment required.

See Carburetion Equipment Section for complete data.

Fast Idle: Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

Automatic Choke:—Sisson Type AC-758B.

See Carburetion Equipment Section for complete data.

Setting—With throttle ⅓ open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

CARB. EQUIPMENT

Air Cleaner: AC No. 1542284 Heavy Duty Oil-bath type. Filter Element AC No. 1544091.

Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in *SAE No. 50* engine oil at 1000 mile intervals.

Fuel Pump: AC No. 1539042 or Carter Type M594S or M639S. Diaphragm type fuel pumps.

Replacement Pump—AC No. 577 (for 1539042).

Pressure—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

Fuel Tank Filter: New Ollite metal filter in tank.

Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit—Auto-Lite NG-10896D (block lettering), No. NG-11238D (with script lettering).

Tank Unit—Auto-Lite No. NG-10862-T.

See Carburetion Equipment Section for complete data.

BATTERY

Willard Type WHT-2-17R. 6 Volt, 17 Plate, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—152 amperes for 20 minutes.
Zero Capacity—300 amperes for 5.0 minutes. Five second voltage 4.4 volts.
Grounded Terminal—Positive (+) to engine.
Dimensions—Length 10¼". Width 7". Height 9⅜".
Location—Under hood in left fender shield.

STARTER

Auto-Lite Model MAX-4050. Armature MAW-2030.
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 RPM, 175 amperes, 5.4 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5300	5.5	65
2.75 "	1630	5.0	200
5.5 "	970	4.5	300
8.7 "	600	4.0	400
12.0 "	300	3.5	500
16.5 "	Lock	3.0	640
25.0 "	Lock	4.0	880

Removal: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).

Starting Switch: Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.

See Electrical Equipment Section for complete data.

GENERAT R

Std.—Auto-Lite GDZ-4801A. Armature GDZ-2006F.
Spec. Equip.—Auto-Lite GEG-4823A or GEG-4823B
Armature No. GEG-2006F (both).
Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.
SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

REGULAT R

Std.—VRP-4401A, VRP-4501A, or VRP-4503A. (VRP-4001A used on Canadian cars).
Spec. Equip.—VRP-4001F (for GEG-4823A), VRP-4401B (for GEG-4823B). VRP-4005E used for negative ground.
SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. Beam selector switch on toeboard controls upper and lower beams.

See Electrical Equipment Section for complete data.

Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).

Beam Indicator—Lighted when Country (upper) beams in use. Located above center of speedometer face on early cars, in upper left corner of speedometer face on later cars.

Direction Signal: Two types used (see Indicators).

See Electrical Equipment Section for complete data.

Direction Signal Indicators—In upper edge of speedometer face. Early type has LEFT and RIGHT arrow. Later type use one jewel light in upper right corner only (left jewel light on these cars is High Beam Indicator).

Direction Signal Flasher—Chrysler No. 1161586.

Direction Signal Circuit Breaker—Chrysler No. 1161568.

Switches

Lighting—Chrysler No. 1163581.
Beam Selector—Chrysler No. 859974.
Instrument—Chrysler No. 1235694.
Map Light—Chrysler No. 1154278.
Stop Light—Chrysler No. 920355.
Hand Brakes—Chrysler No. 867077.
Dome Lamp Pillar—Chrysler No. 317180.
Door Switches—Chrysler No. 882943.
Direction Signal—Chrysler No. 1163984.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 watts	Sealed Beam
Front Dir. Sig. & Parking	21-3	1158

Clock, Glove Compt.	1½	55
Beam & Dir. Sig. Ind., Ign. Sw.	1	51
Rear Dir. Sig. & Tail	21-3	1158
Stop Light, Map Light	21	1129
Rear License	3	63
Dome①	15	87

①—Town & Country and Convertibles (Quarter Lights) 6 cp. No. 81. 7-Pass. (Pillar Lights) 3 cp. No. 63.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal
Windshield Wiper—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

FUSES: Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender.
Clock—2 ampere. In clock lead wire.

HORNS: Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite Model HRL-4101. Connected through ignition switch, operates only with ignition "on".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head. **Bore** 3 7/16". **Stroke**—4½".
Displacement—250.6 cu. ins. **Rated H.P.**—28.36.
Developed Horsepower—114 at 3600 RPM.
Compression Ratio—6.6-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See Chrysler Shop Notes.*

ENGINE REMOVAL: *See Chrysler Shop Notes.*

TIGHTENING TORQUES: *See Chrysler Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Chrysler Shop Notes.*

PISTONS: Aluminum alloy, U-slot, cam ground type. NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See Chrysler Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0008" on thrust face ¾" from bottom of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons:—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70° F).

Replacement Pistons: *See "Pistons" in Chrysler Shop Notes.*
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Installing Pistons:—Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: *See "Piston Rings" in Chrysler Shop Notes.*

PISTON PIN: Diameter 55/64". Length 2⅞". Floating type with locking ring at each end.
Pin Fit in Piston—Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: Length 7⅞". Weight 32.4 ozs. with bolts less bearings. NOTE—Piston pin hole (upper bearing) bronze bushed.
Crankpin Journal Diameter—2.124-2.125". *See "Original Bearing Sizes" in Chrysler Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps. *See "Connecting Rods & Bearings" in Chrysler Shop Notes.*

Replacement Bearings: *See "Connecting Rods & Bearings" in Chrysler Shop Notes.*

Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearings, 9 integral counterweights with vibration dampener on front end.
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in Chrysler Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.001-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in Chrysler Shop Notes.*

Replacement Bearings: *See "Crankshaft and Main Bearings" in Chrysler Shop Notes.*

End Thrust:—Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in Chrysler Shop Notes.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Shop Notes.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Timing Chain Removal & Installation: *See Chrysler Special Data.*

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.002-.004"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in Chrysler Shop Notes.*

Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs:—Install with closely coiled end to top.

Free length 2".	Spring Pressure	Length
Valve Closed	40- 45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters:—Mushroom type (remove from below). Stem diam. ⅜". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing:—See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump used.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—55-65 lbs. above 30 MPH. with warm oil. CAUTION—Pressure of 35-45 lbs. at driving speeds indicates oil filter may be clogged and should be replaced.
Oil Pressure Relief Valve—Under plug ahead of starter. Has new bleed duct which connects with new idle oil line to provide additional oil at idling speeds. Adjustable by replacing spring. 3 types: 1) Plain—unpainted. 2) Light—painted Red. 3) Heavy—painted Green. CAUTION—Install replacement spring of same color as original spring.

Oil Pump: New "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in Chrysler Shop Notes.*

Oil Filter: New "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 55-65 lbs. above 30 MPH.

Oil Pressure Gauge: Auto-Lite G-10893 (block lettering), No. G-11235 (script lettering). Not electric.

C LING

Cooling System: Positive circulation with pump on front of engine, by-pass type thermostat, and water distribution tube in cylinder block behind pump.
Capacity—17 quarts.
Radiator Core Removal: *See "Radiator" in Chrysler Shop Notes.*
Water Distribution Tube Servicing: *See "Cooling System" in Chrysler Shop Notes.*
Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: By-pass type in cyl. head water outlet.
Setting—Starts to open 157-162°F. Fully open 183°F.
Temperature Gauge: Auto-Lite H-10895 (block lettering), No. H-11237 (script lettering). Not electric.

CLUTCH

Borg & Beck Models 10A7 (Std.), 9A7 (With Fluid Drive), 11A6 (Taxicab). Single plate, dry disc.
See Clutch Section for complete data.
Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).
Clutch Over-Center Spring—*See "Clutch Notes" in Chrysler Shop Notes for setting procedure.*
Removal:—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine. Optl.
See Transmission Section for complete data.
Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*
Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.
Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION

SYNCHRO-MESH

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*
►*HARD SHIFTING CORRECTION—See "Chrysler, De Soto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*
Transmission Control: Manual steering col. shift.
See Transmission Section for complete data.
Removal:—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Shop Notes for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to clutch housing capscrews and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

TRANSMISSION

AUTOMATIC

Hydraulically Operated Type (with Fluid Drive). New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.
Transmission Oil—3 pints, 10-W engine oil.
►**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Transmission Control: See Transmission article for adjustment instructions.
See Transmission Section for complete data.
Kickdown Solenoid—Auto-Lite No. SSS-4002.
Kickdown Relay—Auto-Lite No. HRM-4102.
Governor—Auto-Lite No. TG-4202R, 3R, or 4R.
Kick-down Switch—Part of carburetor assembly.
See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.
Ignition Interrupter Switch—On right side of transmission above Governor.
Fuse—30 ampere. On Kickdown Relay.
Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupt switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.
INSTALLATION CAUTION—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7200. Cross type with roller bearings.

Propeller Shaft Center Bearing: Used on 7 Passenger.
See "Propeller Shaft" in Chrysler Shop Notes.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Axle Ratio	Std. Trans.	Hydr. Trans.
All exc. T&C & 7 Pass.	3.9-1①	3.54-1②
T&C & 7 Pass.	4.3-1③	3.91-1④

①—Special Ratios: 4.1-1, 4.3-1 (Exp.), 4.56-1 (Exp.), 4.78-1 (Exp.).
②—Special Ratios: 3.9-1 (Exp.).
③—Special Ratios: 4.1-1, 4.56-1 & 4.89-1 (Exp.).
④—Special Ratios: 4.1-1 (Exp.).
Backlash—.006-.010". Screw adjustment.
Removal:—Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.
Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate)
Oil Seal Servicing—*See "Rear Axle" in Chrysler Shop Notes.*
Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Delco—Model 1030-C (Front), 1030-T (Rear).
Monroe—Model K-11148 (Front), K-11149 (Rear).
Direct acting, hydraulic types.
Hydraulic Transverse Sway Absorber: Rear sway bar with built-in shock absorber used on Conv. Coupe, Town & Country, and 7 Passenger models.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6°.
Camber—Positive ¼°. Limits 0° to Pos. ¾°.
Caster—Negative 1° to Positive 1°. Not adjustable.
Toe In—0-1/16". Turn both tie rods equally.
Steering Geometry—Inner wheel 22½°. Outer 20°.

STEERING GEAR

Own Make. Similar to Gemmer models as follows:
All (except later Town & Country & 7 Pass.)—305.
7 Passenger and Town & Country (After Serial No. 71,000,965)—Model 335.
NOTE—See Gemmer 305 & 335 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic
See Brake Section for complete data.
►**Brake Squeek Correction**—*See "Chrysler Brakes" in Brake Section.*
Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).
Drums—Centrifuse. Diameter 11" (12" on Town & Country and 7 Passenger models).
Lining—Molded Asbestos. 2" wide. 13/64" thick. Length per shoe: 11" type—8⅞" (rear wheel rear shoe), 11½" (all others). 12" type—9⅝" (rear wheel rear shoe), 12 9/16" (all others).
Clearance—.006" at each end of all shoes.
Braking Power—60% front wheels, 40% rear.
Hand Brake: On drum at rear of transmission.
Adjustment—*See "Hand Brake Notes" in Chrysler Shop Notes.*
Drum—Cast-iron. 6" (7" on cars with Hydraulic trans. and all Town & Country and 7 Pass.).
Lining—Width 2" (2½" on 7" type). Thickness 5/32". Length 16 11/16" (20" on 7" type).
Clearance—.015-.020" around band.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.
See Miscellaneous Section for complete data.
Circuit Breaker—Vibrating, thermostatic type.
CONVERTIBLE TOP CONTROL: Electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

STARTING SERIAL NUMBERS

	Saratoga	New Yorker	Town & Country	Crown Imperial
1946	6,765,001	7,025,001	7,400,001	7,810,001
1947	6,766,546	7,037,249	7,402,037	7,810,167
1948	6,768,486	7,062,598	7,405,174	7,810,908

Location—On left front door hinge post.

ENGINE NUMBER: Stamped on boss on left side of crankcase between #2 and #3 cylinders.

TUNE-UP

COMPRESSION: Pressure—125-135 lbs. at cranking speed of 150 RPM. for Std. 6.7-1 Cast Iron head.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4.

SPARK PLUGS: Auto-Lite Type A5. 14 mm. Metric. Gaps—.030" ± .002".

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.018" Cam Angle—27° (closed).
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: See Ignition Timing.
Std. Setting—2° After top dead center.
Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with 2° graduation after DC mark at pointer on chain case cover, then set manual (octane selector) adjustment:
Manual (Octane Selector) Adjustment—Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ¾-1¼ turns open on Carter B&B), turn screw out for richer mixture. Idle speed 7-8 MPH. or 500 RPM (450-475 RPM. on cars with Hydraulic Transmission).
Float Level (Stromberg)—Fuel level ⅝" below top of bowl (even with bottom of inspection hole plug on left side of bowl with engine idling.
Float Level (Carter B&B)—Top of float (not soldered seam) 1/16" ± 1/64" below top edge of bowl. Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer. Outer Hole—Winter. Center hole not used on Stromberg Carburetors.
Fuel Pump Pressure—3½-5½ lbs

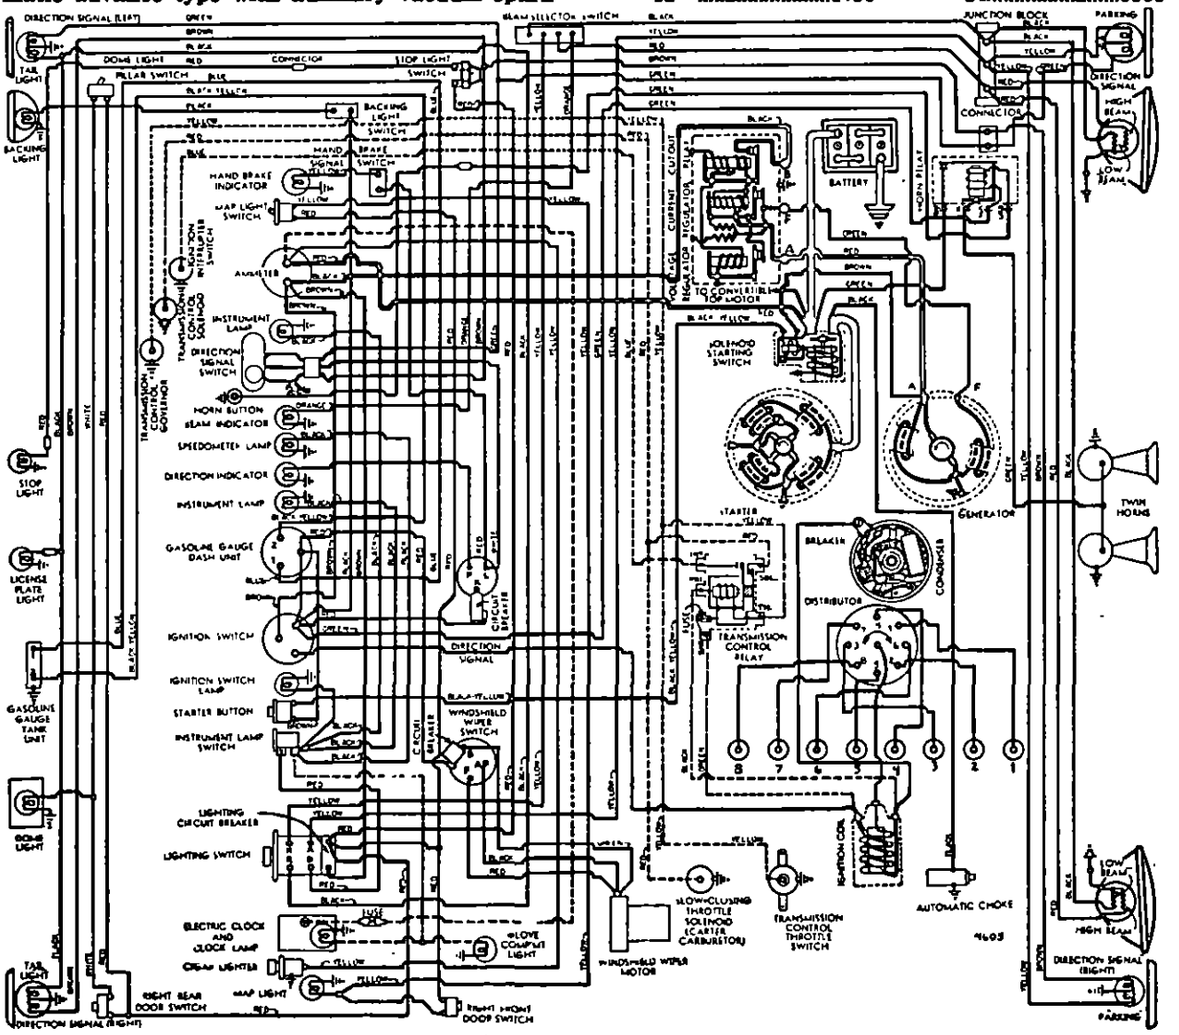
MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. 1¼ turns, not over 1½ turns or under 1 turn, hook end over stop stud.

VALVES: See Valve Timing.
Tappet Clearance—.008" Intake, .010" Exhaust, Hot
NOTE—Tappet adjusting screws are self-locking (no locknuts).

STARTING: See Battery, Starter, Generator, and Regulator.

IGNITION

IGNITION SWITCH: Briggs & Stratton or Mitchellock. NOTE—No armored cable used.
Briggs & Stratton—B & S Switch No. 85985.
Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).
Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800) or No. 80592 on Early cars (Key Series 1BP-1000BP).



COIL: Auto-Lite CE-4030 or CE-4034. Mounted directly above distributor on ignition cable bracket.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-3927.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IGT-4201-1. Full automatic advance type with auxiliary vacuum spark control and manual (Octane Selector) adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #8.
Breaker Gap—Set at .018." Limits .015-.019".
Cam Angle—27° closed, 18° open (.017" gap).
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Clockwise viewed from the top.

Automatic Advance

Distributor Degrees	Distributor R.P.M.	Engine Degrees	Engine R.P.M.
Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

CHRYSLER 8 MODEL C39

Vacuum Spark Control: Auto-Lite Unit. On distributor, linked directly to breaker plate. Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
	Vacuum Advance	
Start	0°	5"
2°	4°	8"
4°	8°	11"
6°	12°	14"
8°	16°	17"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing

Distributor Removal:—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position and rotor opposite #1 segment in cap.

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	2° ATDC	.002" ATDC

NOTE—Impulse neutralizer marked at TDC with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #8 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as above)

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

CHRYSLER CROWN IMPERIAL, MODEL C40

CARBURETOR

STROMBERG

Stromberg Model AAVS-2. Two types as follows:
1)—Square Air Horn. Stromberg No. 380165 marked with Code No. 4-111. Chrysler No. 1072857.
2)—Round Air Horn. Stromberg No. 380169 marked with Code No. 4-112. Chrysler No. 1122911.
Type—1¼" dual (double barrel) downdraft type with new single idle adjusting screw. NOTE—Cars with Fluid Drive have Throttle Guard and Transmission Kick-down Switch (part of carburetor). *See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up Data.*
Metering Jet—*See Stromberg Jet Table in Carburetor Section for complete jet data.*

Fast Idle (Stromberg): Rotary cam, adjustable type. *See Carburetion Equipment Section for complete data.* **Setting**—Adjust connector rod so choke valve ⅛" open with fast idle screw against first step on cam.

Automatic Choke:—Sisson Type AC-600. *See Carburetion Equipment Section for complete data.* **Setting**—Remove air cleaner and choke cover. Line up hole in armature and magnet core with shank end of ⅛" drill, holding armature tight against magnet (Tool AC-620 available for use in place of drill). Loosen automatic choke lever clampscrew. Hold throttle open approx. 1/3 open, move choke lever to close choke valve tight, tighten clampscrew.

Throttle Guard (on cars with Stromberg Carburetors): Vacuum operated throttle kicker. *See Carburetion Equipment Section for complete data.* **Setting**—.010" clearance between throttle valve lever adjusting screw and throttle control plunger with engine idling at correct hot or slow idling speed.

CARTER (B&B)

Carter (B&B) Model E7A1. 1½" single barrel, downdraft type with Slow-closing Throttle and Kick-down Switch for Hydraulic Transmission. *See Carburetor Section for complete data.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up Data.*
Metering Jet—*See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.*

Fast Idle (Carter B&B): Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

Automatic Choke: Sisson Type AC-600. See data under Stromberg Carburetor (above).

Slow-Closing Throttle (on Carter B&B Carburetors): Electro-magnetic dashpot type. No adjustment. *See Carburetion Equipment Section for complete data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Air Cleaner: AC No. 1543852 Heavy Duty oil-bath type. Filter Element AC No. 13.
Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump half-filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

Fuel Pump: AC No. 1539215. Diaphragm type.
Replacement Pump—AC No. 514 or 590.
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: New Oilite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.
Dash Unit—Auto-Lite NG-10896D (block lettering), No. NG-11238D (with script lettering).
Tank Unit—Auto-Lite No. NG-9330-T.
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type CF-2-19R. 6 volt, 19 plate, 135 Ampere Hour Capacity (20 hour rate).
Starting Capacity—170 amperes for 20 minutes.
Grounded Terminal—Positive (+) to engine.
Location—Under hood in left fender shield.

STARTER

Auto-Lite Model MAX-4050. Armature MAW-2030.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 RPM., 175 amperes, 5.4 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	5300	5.5	65
2.75 "	1630	5.0	200
8.7 "	600	4.0	400
16.5 "	Lock	3.0	640

Removal: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).
Starting Switch: Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

C-39—Auto-Lite GDZ-4801A. Armature GDZ-2006F.
C-38 & C-39 Spec. Equip.—Auto-Lite GEG-4823-A or GEG-4823B. Armature No. GEG-2006F (both).
C-40—Auto-Lite GEG-4823-1. Armature GEG-2006F.
Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—35 amperes (C39 GDZ Gen.), 8.0 volts, 2200 Gen. RPM or approx. 26 MPH, 40 amperes (C40 GEG Gen.), 8.0 volts, 1700 Gen. RPM or approx. 24 MPH and above with load or discharged battery (Current Regulator setting).

Performance Data—GDZ-4801A

Cold Amperes	Volts	R.P.M.	Hot Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
10	6.85	1200	10	6.85	1290
20	7.3	1480	20	7.3	1590
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

Performance Data—GEG-4823

0	6.4	780	0	6.4	820
10	6.8	960	10	6.8	990
20	7.2	1130	20	7.2	1170
30	7.6	1310	30	7.6	1380
40①	8.0	1520	40	8.0	1680

①—Current regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—53 ounces max. (GDZ Gen.), 64-68 ozs. (GEG Gen.) with new brushes.
Field Current—1.60-1.78 amperes at 6.0 volts (all).
Motoring Current—4.16-4.60 amps. (for GDZ Gen.), 4.7-5.2 amperes (GEG Gen.) at 6.0 volts.
Removal:—Pivot mounted at left side of engine at front. To remove, take out pivot and clamp bolts.
Belt Adjustment:—Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame

REGULATOR

C-39—VRP-4401A, VRP-4501A, VRP-4503A (for GDZ Generator), VRP-4001F (for GEG-4823A Gen.), VRP-4401B (for GEG-4823B Gen.). VRP-4005E for negative ground.
C-40—Auto-Lite VRP-4001F (for GEG Generator). Vibrating type Voltage and Current Regulators in case with Cutout Relay.
NOTE—VRP-4001A settings same as for VRP-4401A.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.
To Check (without breaking seals)—Connect ammeter in charging line at regulator 'B' terminal (use short heavy leads), voltmeter between 'B' terminal and ground. Operate generator at speed equivalent to 30 MPH., charging fully charged battery, until voltage is steady. Voltage reading should agree with setting given above.
To Adjust (with cover removed)—Change regulator armature spring tension by bending lower spring hanger slightly. See Electrical Equipment Section.
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting (VRP-4001A, 4401A)—34-36 amperes ("35").
Setting (VRP-4001F, 4005E, 4401B)—39-41 amperes, marked "40".
Setting (VRP-4501A, 4503A)—35 amperes (42 amperes at 70°F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—These current regulators are temperature-compensated and setting decreases with temperature rise in service as above.
To Check (without breaking seals)—Connect test meters as for voltage check (above). Operate generator at speed equivalent to 30 MPH. charging battery, turn on car lights and accessories or connect load (bank of headlamp bulbs etc.) between ammeter and battery so that generator charges at peak rate and Current Regulator operates. Current reading should agree with setting given above. If more than slight excess noted, regulator is defective.
To Adjust (with cover removed)—Same as for Voltage Regulator (above).
Contact Gap & Air Gap—Same as Voltage Regulator.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. Beam selector switch on toeboard controls upper and lower beams.
See Electrical Equipment Section for complete data.
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).
Beam Indicator—Lighted when Country (upper) beams in use. Located above center of speedometer face on early cars, in upper left corner of speedometer face on later cars.

Direction Signal: Two types used (see Indicators).
See Electrical Equipment Section for complete data.
Direction Signal Indicators—In upper edge of speedometer face. Early type has LEFT and RIGHT arrow. Later type use one jewel light in upper right corner only. (Left jewel light on these cars is High Beam Indicator).
Direction Signal Flasher—Chrysler No. 1161586.
Direction Signal Circuit Breaker—Chrysler No. 1161568.

Switches

Lighting—Chrysler No. 1163581.
Beam Selector—Chrysler No. 859974.
Instrument—Chrysler No. 1235694.
Map Light—Chrysler 1154278 (C39), 1232660 (C40).
Stop Light—Chrysler No. 920355.
Hand Brakes—Chrysler No. 867077.
Dome Lamp Pillar—Chrysler No. 317180.
Door Switches—Chrysler No. 882943.
Direction Signal—Chrysler No. 1163984.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects dir. signal circuit.
Windshield Wiper—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.
Window Lift (C40)—Mounted on dash alongside Window Lift Motor.
Convertible Top—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute
FUSES: Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender.
Clock—3 ampere. In clock lead.
Body Wiring (C40)—30 amp. Near ammeter.
HORNS: Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.
Horn Relay: Auto-Lite Model HRL-4101. Connected through ignition switch, operates only with ignition "on".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed). .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: 8 cylinder, "L" head type.
Bore—3¼". **Stroke**—4⅞".
Displacement—323.5 cu. ins. **Rated H. P.**—33.80.
Developed Horsepower—135 at 3400 RPM.
Compression Ratio—6.7-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See Chrysler Shop Notes.*

ENGINE REMOVAL: *See Chrysler Shop Notes.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Chrysler Shop Notes.*

PISTONS: Aluminum alloy, U-slot, cam ground type.
NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See Chrysler Special Data.*
Length—3⅞". **Weight**—16.5 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—.0008" on thrust face ¾" from bottom of skirt.

Fitting New Pistons: Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" from bottom of skirt. Fit piston in bore using .002" x ½" feeler, *insert piston upside down* in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler at 70° F.
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Replacement Pistons: *See "Pistons" in Chrysler Shop Notes.*

Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Rings	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3, 4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: *See "Piston Rings" in Chrysler Shop Notes.*

PISTON PIN: Diameter 55/64", Length 2¾". Floating type with locking ring at each end.
Pin Fit in Piston—Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: Length—9".
Crankpin Journal Diameter—2.1865-2.1875". *See "Original Bearing Sizes" in Chrysler Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015". Sideplay—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps. *See "Connecting Rods & Bearings" in Chrysler Shop Notes.*

Replacement Bearings: *See "Connecting Rods & Bearings" in Chrysler Shop Notes.*

Installing Rods: Offset type. Wide side of bearing to rear for #1, 3, 5, 7; to front for #2, 4, 6, 8. Oil spray hole in rod toward camshaft on all rods.

CRANKSHAFT: 5 bearings, 8 integral counterweights with vibration dampener on front end.
Journal Diameters—2.7025-2.7035". *See "Original Bearing Sizes" in Chrysler Special Data.*
Bearings—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.001-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in Chrysler Shop Notes.*

End Thrust: Taken by flange faces on rear (#5) main bearing. Endplay—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in Chrysler Shop Notes.*

CAMSHAFT: 6 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1⅜".
Bearings—Removable, steel-backed, babbitt-lined bushings (except #6—machined in crankcase).
Clearance—.001-.003" (#1), .0015-.0035" (all others).
NOTE—Replacement bearings are finished (reaming, scraping, or burnishing not required).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. Endplay—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Shop Notes.*

Timing Chain: Width 1¼". Pitch .500" (½"). Length 23½" or 47 links.
Timing Chain Removal & Installation—*See Chrysler Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "O" marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	5⅞
Exhaust	1 11/32"	.3395-.3405"	5⅞"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.0015-.0035"
Exhaust	45°	⅜"	.002-.004"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in Chrysler Shop Notes.*

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end 1" (Intake), 1 3/32" (Exhaust), below top of block. Ream guides to inside diameter of .3425-.3435" (Tool DD-849). Exhaust guides counterbored on upper end.

Valve Springs: Install springs with close-coil end to top. Spring Free Length 2".

	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅝". Service by reaming lifter holes (work from above piloting reamer Tool C-265 in valve guide) and installing oversize lifters. Clearance—.000-.001".
Replacement Lifters—.001", .008", .030", .060" oversize.

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust, Hot. Additional .002" Exhaust clearance recommended for sustained high speed driving. Self-locking tappet screws used. NOTE—Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" tappet clearance (Cold), #8 intake valve should open with #8 piston 5° to 17° or .012" to .135" BTDC. with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot running clearance.

LUBRICATION

Engine Oiling System: Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain.
Crankcase Capacity—6 quarts (refill).
Normal Oil Pressure—55-65 lbs. above 30 MPH. with warm oil. CAUTION—Pressure of 35-45 lbs. at driving speeds indicates oil filter may be clogged.
Oil Pressure Relief Valve—Under cap on lower left side of crankcase. Has new bleed duct which connects with new idle oil passage to provide additional oil at idling speeds. Valve has screw adjustment but seldom requires changing. Opens at 40-45 lbs.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in Chrysler Shop Notes.*

Oil Filter: New "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 55-65 lbs. above 30 MPH.

Oil Pressure Gauge: Auto-Lite G-10893 (block lettering), No. G-11235 (script lettering). Not electric.

COOLIN

Cooling System: Pressure type with pressure valve (relief valve) in filler cap, by-pass type thermostat, and water distribution tube in block.
Capacity—26 quarts.
Pressure Valve—In filler cap. Opens at 3 lbs.

Radiator Core Removal: *See "Radiator" in Chrysler Shop Notes.*

Water Distribution Tube Servicing: *See "Cooling System" in Chrysler Shop Notes.*

Water Pump: Packless type with shaft mounted on 2 ball bearings with lubricant fitting for bearing lubrication and grease nipple for seal lubrication. *See Water Pump Section for complete data.*
Removal—Drain cooling system. Remove fan blade assembly, fan belt, by-pass hose and elbow, inlet hose, pump mounting capscrews. Take pump off.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head water outlet.
Setting—Starts to open 157-162°F. Fully open 183°F.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, 2 ports to rear. Some thermostats equipped with heavy shield welded on bottom (for bellows protection at high speeds), this type thermostat cannot be installed on earlier cars.

Temperature Gauge: Auto-Lite H-10895 (block lettering), No. H-11237 (script lettering). Not electric.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck Model 10A6 with "Borglite" driven member. Single plate, dry disc type. NOTE—Cover Assembly No. 961 stamped on cover.
See Clutch Section for complete data.
Facings—Woven type, 2 used. Inside Diameter 6". Outside Diameter 10". Thickness .125" (⅛").
Pedal Adjustment: Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.
CAUTION—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).
Clutch Over-Center Spring—*See "Clutch Notes" in Chrysler Shop Notes for setting procedure.*
Removal: Remove Transmission (see TRANSMISSION). Remove clutch housing underpan and clutch release bearing and sleeve. Mark clutch and fluid drive clutch driving plate for re-assembly. Remove all clutch cover mounting screws evenly, lower cover and driven member out through opening in housing.

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine.
See Transmission Section for complete data.
Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*
Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.
Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION
SYNCHRO-MESH

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*
▷*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*
Transmission Control: Manual steering col. shift.
See Transmission Section for complete data.
Removal: Jack up front end of car. Disconnect front universal (loosen companion flange nut if transmission to be dismantled). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission. Remove transmission mounting screws and nuts at clutch housing, pull transmission straight back to free clutch shaft, and lower assembly out of car.

TRANSMISSION
AUTOMATIC

Hydraulically Operated Type (with Fluid Drive). New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.
▷**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Transmission Control: *See Transmission Section.*
Kickdown Solenoid—Auto-Lite No. SSS-4002.
Kickdown Relay—Auto-Lite No. HRM-4102.
Governor—Auto-Lite No. TG-4202R, 3R, or 4R.
Kick-down Switch—Part of carburetor assembly.
See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.
Ignition Interrupter Switch—On right side of transmission above Governor.
Fuse—30 ampere. On Kickdown Relay.
Transmission Oil—3 pints, 10-W engine oil.
Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, **replace drain plug.** Disconnect transmission mounting bolts and lower assembly out of car.
INSTALLATION CAUTION—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7300. Cross type with roller bearings. Two used (3 with center bearing on 7 Pass.).

Propeller Shaft Center Bearing: Used on 7 Passenger.
See "Propeller Shaft" in Chrysler Shop Notes.

REAR AXLE
MODEL C39

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.
See Rear Axle Section for complete data.
Ratio (Std. Trans.)—3.9-1 Std.; 4.3-1, 4.56-1, 4.89-1 Special Equip.
Ratio (Hydr. Trans.)—3.36-1 Std.; 3.9-1 (Spec. Exp.), 4.1-1 (Spec. Exp.).
Backlash—.006-.010". **Screw adjustment.**
Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.
Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle" in Chrysler Shop Notes.*
Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

REAR AXLE
MODEL C40

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.
See Rear Axle Section for complete data.
Ratio—3.58-1.
Ring Gear Thrust Pad Setting—Loosen locknut on left side of carrier housing, tighten thrust pad screw finger tight, back screw off ⅛ turn, tighten locknut.
ALL OTHER DATA SAME AS FOR C39 REAR AXLE

SHOCK ABSORBERS

C39 (Delco)—Model 1030-C (Front), 1030-T (Rear).
C39 (Monroe)—K-11148 (Front), K-11149 (Rear).
C40—Delco Model 942-D (Front), 940-W (Rear).
Direct acting, hydraulic types.
Hydraulic Transverse Sway Absorber: Rear sway bar with built-in shock absorber used on all models.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6°.
Camber—Positive ¼°. Limits 0° to Pos. ¾°.
Caster—Negative 1° to Positive 1°. Not adjustable.
Toe In—0-1/16". Turn both tie rods equally.
NOTE—Turn clamp bolt beneath tie rod on left end of long rod for clearance on extreme turns.
Steering Geometry—Inner wheel 22½°. Outer 20°.

STEERING GEAR

Own Make. (Gemmer design) Model 335 "3-tooth" type worm-and-roller with "push-pull" adjustment.
NOTE—See Gemmer 335 steering gear article.
See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic
See Brake Section for complete data.
▷**Brake Squeek Correction**—*See "Chrysler Brakes" in Brake Section.*
Wheel Cylinders—1¼" bore (front wheel front shoe—top cylinder), 1⅛" bore (all others). Single acting (front), double acting (rear wheels).
Drums—Centrifuse. Diameter 12".
Lining—Moulded asbestos. Width 2". Thickness 13/64". Length 9⅝" (rear wheel rear shoe), 12 9/16" (all other shoes).
Clearance—.006" at each end of all shoes.
Braking Power—60% front wheels, 40% rear.
Power Brake Unit (C40): New diaphragm type with internal valve.
See Brake Section for complete data.
Hand Brake: On drum at rear of transmission.
Adjustment—*See "Hand Brake Notes" in Chrysler Shop Notes.*
Drum—Cast-iron. Diameter 7".
Lining—Molded asbestos. Width 2½". Thickness 5/32". Length 20".

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.
See Miscellaneous Section for complete data.
CONVERTIBLE TOP CONTROL: Electric type.
See Miscellaneous Section for complete data.
WINDOW REGULATORS (C40): Hydro-electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATI N

SERIAL NUMBER: On left front door hinge post.

1949 Numbers	Detroit	Los Angeles
Royal	70,041, Up	65,002,001 Up
Windsor	70,725,001 Up	67,005,001 Up

TUNE-UP

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035". Limits plus or minus .001". **Plugs**—Auto-Lite Resistor Type AR5, 14 mm.

DISTRIBUTOR: Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.25-.28 microfarad.

IGNITION TIMING: At Top Dead Center (TDC).
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual (octane selector) adjustment.
Manual (Octane Selector) Adjustment—Set for slight ping with 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION:
Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.
Idle Speed—6 MPH. (450-475 Eng. RPM. with Hyd. Trans.).
Float Level—Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl.
Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter.

Choke Setting: Adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Thermostatic type. Wind free end ¾ turn to install.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust, Hot.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

COIL: Auto-Lite No. CR-4001 (U.S.), IG-4809 (Early & Canada). On bracket above distributor.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IG-3927G.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAP-4102C-1 (U.S.), IAP-4102B-1 (Canada). Automatic advance type with Vacuum Spark Control.

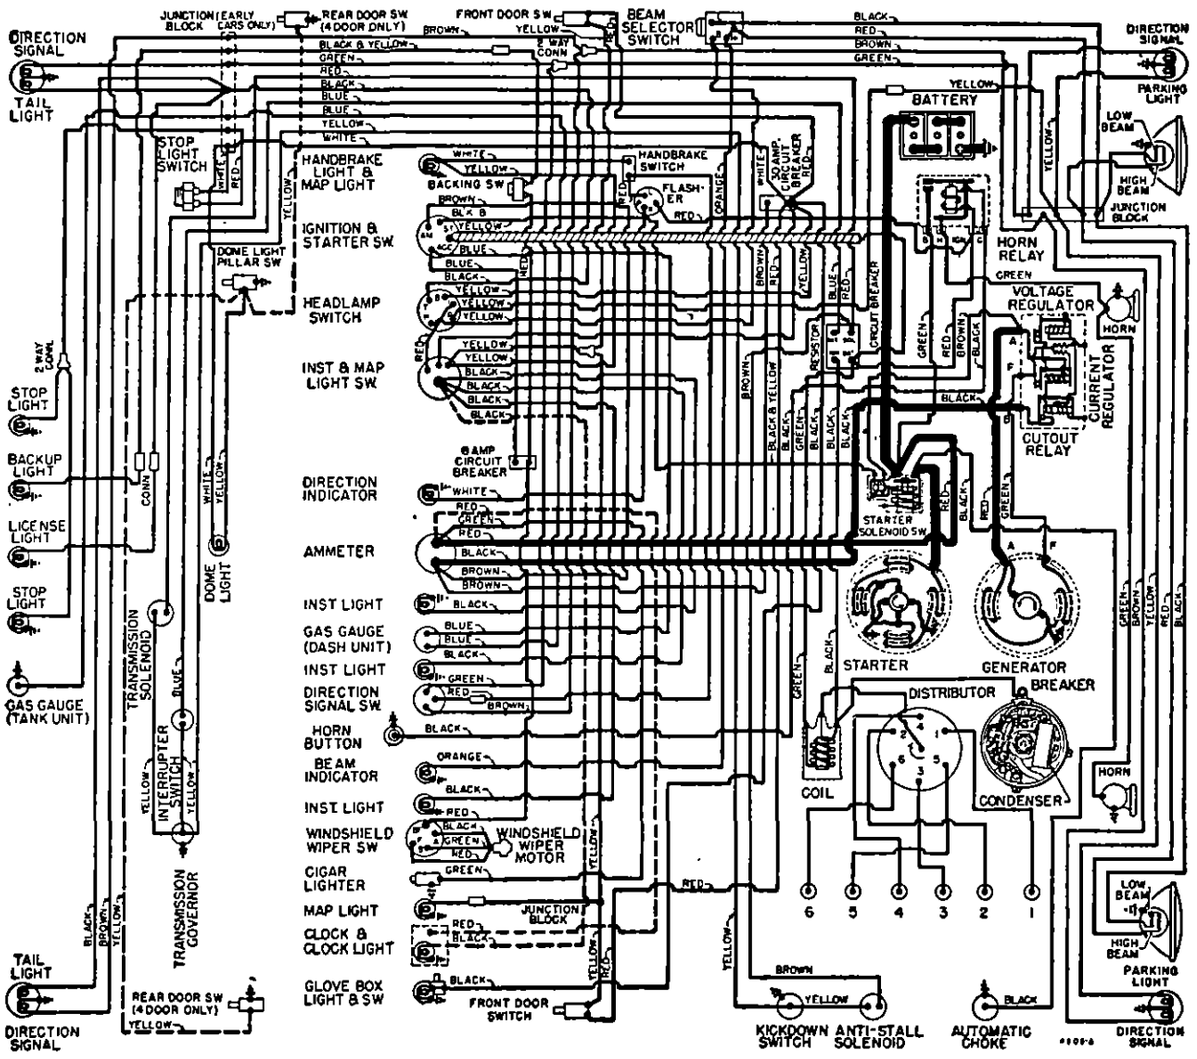
►***DISTRIBUTOR CAP POPPING OFF CORRECTION (Early IAP Distributors)—See "IAP" Distributors in Electrical Equipment Section.***

Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #9.
Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAP-4102B-1

Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	0	700
3	400	6	800
6	780	12	1560
9	1160	18	2320
12	1530	24	3060

Automatic Advance—IAP-4102C-1



Degrees Distr.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	0	700
1	450	2	900
5	800	10	1600
9	1300	18	2600
10	1425	20	2850

Vacuum Spark Control: Auto-Lite Unit. Integral type (on distributor, linked directly to breaker plate).

Vacuum Advance—IAP-4102B-1 & 4102C-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG
Start	0°	5"
2°	4°	7¼"
4°	8°	9⅜"
6°	12°	11⅝"
9°	18°	15"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

Distributor Removal: Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position.

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	At TDC	.000" TDC.

This setting supersedes previous data.

NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move the plate (not more than 4° before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

CARBURETOR

Carter (B&B) E7L1, L2, L3, or E7L4. 1½" Single barrel, downdraft type with Sisson automatic choke control, Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

Carter (B&B) EX3. 1½" Single barrel downdraft type with Sisson automatic choke control. Used on synchro-mesh cars.

See Carburetor Section for complete data.

▷**E7L1, L2 L3 Note**—*To bring these carburetors up to latest E7L4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.*

Settings (Idle, Choke, Float Level and Accelerating Pump): *See Tune-Up Data.*

Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

Slow-closing Throttle: Solenoid type. Non-adjustable. *See Carburetion Equipment Section for complete data.*

Fast Idle: No adjustment required.

Automatic Choke: Sisson type. *See Carburetion Equipment Section for complete data.*

CARB. EQUIPMENT

Air Cleaner: AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.

Fuel Pump: AC No. 1539042 or Carter M639SL, M639SZ. Diaphragm type fuel pump.

Replacement Pump—AC No. 577 or 588.

Pressure—3½-5½ lbs.

See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oillite metal filter in tank.

Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit—Auto-Lite No. 11821A.

Tank Unit—Auto-Lite No. 11538A.

See Carburetion Equipment Section for complete data.

BATTERY

Willard or Auto-Lite—17 Plate, 6 Volt, 120 Ampere Hour Capacity (20 hour rate).

Starting Capacity—152 amperes for 20 minutes.

Grounded Terminal—Positive (+) to engine.

Location—Under hood in left fender shield.

STARTER

Auto-Lite Models MCL-6101 (US), MAX-4090 (Canada after Eng. Nos. C45-1-1268C and C45-2-1619C). Armature—Auto-Lite Nos. MCH-2039 (MCL-6101), **MAW-2213** (MAX-4090).

Drive—Solenoid pinion shift & overrunning clutch.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" position.

See Electrical Equipment Section for complete data.

GENERATOR

	Auto-Lite No.	Armature No.
Standard	GGW-6001A	GGW-2006F
Early Cars	GDZ-4801R	GDZ-2006F
State Police	GGJ-6001B	GGJ-2101F
	GGU-6001E	GGU-2006F
City Police & Taxi	GGJ-6001A	GGJ-2101F
Auto Trans. Cars	GGU-6001A	GGU-2006F

Two brush type current-voltage regulators.

Maximum Charging Rate—See table below.

Charging Rate Adjustment—None. See Regulator.

Performance Data (GGW-6001A)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350

Performance Data (GDZ-4801R)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
35	8.0	1800-2000 — 2150-2350

Performance Data (GGJ-6001A, B)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750

Performance Data (GGU-6001A, E)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850

Rotation—Counterclockwise at commutator end.

Brush Spring Tension—(GGW, GDZ, GGU) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes).

Field Current—(GGW, GDZ) 1.6-1.8 amperes, (GGJ) 1.7-1.9 amperes, (GGU) 1.7-1.8 amperes, all at 6.0 volts.

Motoring Current—(GGW) 4.6-5.2 amps., (GDZ) 4.2-4.6 amps., (GGJ) 4.3-4.8 amps., (GGU) 5.5-6.5 amps., all at 6.0 volts.

Belt Adjustment: Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension secured on scale attached to field frame) or ¼" belt deflection between generator and pump.

REGULATOR

Auto-Lite Regulator No.	for Auto-Lite Generator
VRP-4503B, VRP-6004A	GGW-6001A
VRP-4503A	GDZ-4801R
①**VBA-4101A or VAV-4404A**	GGJ-6001A, B
②**VBA-4101B**	GGU-6001A, E

①—VBA-4104A for negative ground.

②—VAV-4404B (Early Cars), VBA-4104B (Neg. Gd.).

See Electrical Equipment Section for complete data.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken.

Cutout Relay

Cuts In (VAV)—6.4-6.9 volts. **(VBA, VRP)** 6.3-6.8 volts. Set to 6.4-6.6 volts.

Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. dis.)

Contact Gap (All)—.015" minimum.

Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting (VAV & VRP-4503A, 3B)—7.2-7.5 volts, **(VRP-6004A)** 7.1-7.4 volts, **(VBA)** 7.0-7.2 volts, all at 70°F. while charging at ½ max. rate (VAV), 10 amperes (VBA & VRP).

Air Gap (All)—.048-.052" with contacts just opening.

Checking (without breaking seals) & Adjustment: *See Electrical Equipment Section.*

Current Regulator

▷*CAUTION—"Temperature compensated" type. Set to following specifications at 70° F.*

	Test A—Operating Amperes	Test B
VAV-4404A	55	48-52
VAV-4404B	50	43-47
VBA-4101A	56	48-52
VBA-4101B, 4B	51	43-47
VRP-4503A	42	33-37
VRP-4503B, 6004A	46	38-42

Test A—After 15 minutes charging at ½ maximum rate (VAV), 10 amperes (VBA & VRP).

Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV), 6.7-7.0 volts (VRP), 6.7 volts (VBA).

Air Gap (All)—.048-.052" with contacts just opening.

Checking (without breaking seals) & Adjustment: *See Electrical Equipment Section.*

LIGHTING

Headlamps: Sealed Beam. *See Electrical Equipment Section.*

Direction Signal: *See Electrical Equipment Section.*

Direction Signal Flasher—Chrysler No. 1257223.

Switches

Lighting—Chrysler No. 1300601.

Beam Selector—Chrysler No. 1253460.

Map Light—Chrysler No. 1244605.

Direction Signal—Chrysler No. 1235606.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.

Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal.

Auxiliary Circuit Breaker—8 ampere. Protects the Windshield Wipers and Back-up Light.

Transmission Solenoid—Vibrating type mounted as an assembly with resistor unit.

FUSES: Clock—2 ampere. In clock lead.
Clock—2 ampere. In clock lead wire.

HORNS: Auto-Lite Models HT-4011 or HW-4201 (Low Pitch), HT-4012 or HW-4202 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite Models HRL-4103 or 4104. Connected through ignition switch, operates only when ignition "on."
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3 7/16". **Stroke**—4½".
Displacement—250.6 cu. ins. **Rated H.P.**—28.36.
Developed Horsepower—116 at 3600 RPM.
Compression Ratio—7.0-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN & ENGINE REMOVAL: *See Chrysler Special Data.*

TIGHTENING TORQUES: *See Chrysler Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Chrysler Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type. NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See Chrysler Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0008" on thrust face ¾" from bottom of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F.).

Replacement Pistons: .005", .020", .030", .040", .060" OS. *See "Pistons" in Chrysler Special Data.*
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: .005" .020" .030" .040" .050" .060" OS. *See "Piston Rings" in Chrysler Special Data.*

PISTON PIN: Diameter—55/64". **Length**—2⅞". Floating type with locking ring at each end.
Pin Fit in Piston—.0000" to .0005". Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" Oversize.

CONNECTING ROD: Length—7⅞". **Weight**—32.4 ozs. with bolts less bearings. NOTE—Piston pin hole (upper bearing) bronze bushed.
Crankpin Journal Diameter—2.124-2.125".

Original Bearing Sizes: *See Chrysler Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps. *See "Connecting Rods & Bearings" in Chrysler Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S. *See "Connecting Rod & Bearings" in Chrysler Special Data.*

Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearings, 9 integral counterweights with vibration dampener on front end.
Crankshaft Journal Diameter—2.4995-2.5005".

Original Bearing Sizes: *See Chrysler Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in Chrysler Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S. *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

End Thrust: Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in Chrysler Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Timing Chain Removal & Installation—*See Chrysler Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in Chrysler Special Data.*
Valve Seat Width (Max.) 7/64".

Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs: Install with closely coiled end to top. Free Length 2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below). Stem Diam. ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exh. (hot and idling). NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump used.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—45-60 lbs. at 45 MPH. with warm oil.
Oil Pressure Relief Valve—Opens at 40-45 lbs. Under plug on left side of crankcase ahead of the oil line to provide additional oil at idling speeds. Adjustable by replacing spring. 3 types: 1) Plain—unpainted. 2) Light—painted Red. 3) Heavy—painted Green. CAUTION—Install replacement spring of same color as original spring.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in Chrysler Special Data.*

Oil Filter: "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 45-60 lbs. above 45 MPH.

Oil Pressure Gauge: Auto-Lite No. 11823A. Not electric.

COOLIN

Cooling System: Circulated by pump through by-pass thermostat and water circulation tube.
Capacity—17 qts.

Radiator Core Removal: *See "Radiator" in Chrysler Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in Chrysler Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.

Thermostat: By-pass type in cyl. head water outlet.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. 11822A. Not elect.

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck. Model 10A7 (Royal with Synchro-mesh Trans.), 9A7 (Royal & Windsor with Fluid Drive & Auto. Trans.), 11A6 (Taxicab). Single plate, dry disc type.

Identification Note—Cover stamped 953 (9A7), 930 (10A7), 931 (11A6).

See Clutch Section for complete data.

Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) and have 1" free travel (adjusting nut on connector link at fork).

Clutch Over-Center Spring—*See "Clutch Notes" in Chrysler Special Data for setting procedure.*

Removal: Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine. Optl.

See Transmission Section for complete data.

Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*

Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION
SYNCHRO-MESH

Own Make—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

▷*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*

Transmission Control: Manual steering column shift.

See Transmission Section for complete data.

Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

TRANSMISSION
AUTOMATIC

Hydraulically Operated Type (with Fluid Drive). Semi-automatic, four-speed transmission with hydraulic actuation and electrical control.

See Transmission Section for complete data including Testing & Trouble Shooting.

Transmission Oil—3 pints, 10-W engine oil.

▷**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*

Transmission Control: See Transmission article for adjustment instructions.

See Transmission Section for complete data.

Kickdown Solenoid—Auto-Lite No. SSS-4003.

Governor—Auto-Lite No. TG-4205R.

Kick-down Switch—Part of carburetor assembly. *See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*

Ignition Interrupter Switch—On right side of transmission above Governor.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, **replace drain plug.** Disconnect transmission mounting bolts and lower assembly out of car.

▷*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal. Cross type with roller bearings. **(Royal)** Series 7200. **(Windsor)** Series 7300.

Propeller Shaft Center Bearing: Used on 7 Passenger.

See "Propeller Shaft" in Chrysler Special Data.

REAR AXLE

Own Make—Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Axle Ratio	Std. Trans.	Hydr. Trans.
Royal & Windsor	3.9-1 (39:10)	3.73-1 (41:11)①
Station Wagon	4.1-1 (41:10)	3.91-1 (43:11)
Long WB.	4.3-1 (43:10)	3.91-1 (43:11)

①—Optl. ratio 3.54-1 (39:11).

Backlash—.006-.010". Screw adjustment.

Removal: Disconnect rear universal, remove axle shafts (see below) and carrier assembly capscrews.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).

Oil Seal Servicing—*See "Rear Axle" in Chrysler Special Data.*

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

New "Hydra-Lizer" hydraulic, direct-acting, non-adjustable type.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

▷**Steering Knuckle Change (to use different type wheel bearings)**—Two types of steering knuckles have been used on 1949 C45 Models. Starting Serial No. 70041023 on Royal, and 70726716 on Windsor, the inner wheel bearing seat on the knuckle was changed to permit use of different type bearings. On cars prior to this change, original type bearings must be used otherwise bearings will not seat properly.

Kingpin Inclination—4¾° to 6° crosswise.

Camber—0° to Pos. ¾°. (¼-½° higher on left).

Caster—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.

Toe In—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.

Steering Geometry—Inner wheel 21½° plus or minus 1°. Outer 20°.

STEERING GEAR

Own Make—3 tooth Worm-and-Roller. Similar to Gemmer model 335.

NOTE—See Gemmer 305, 335 & 375 article for data.

See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic.

Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).

Rear Wheels—Double anchor type with single double-acting wheel cylinder.

See Brake Section for complete data.

▷**Brake Squeak Correction**—*See "Chrysler Brakes" in Brake Section.*

Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).

Drums—Centrifuse. Diameter 11".

Lining—Molded asbestos. 2" wide. 13/64" thick. Length per wheel, 23" (front), 20⅜" (rear wheels).

Clearance—.006" at each end of all shoes.

Braking Power—60% (front wheels), 40% (rear).

Hand Brake: On shaft at rear of transmission. External contracting type.

Adjustment—*See "Hand Brake Notes" in Chrysler Special Data.*

Drum—Cast iron. Diam. 6" (Royal), 7" (Windsor)

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Ext. Type	2 1/2"	5/32"	20"
7" Int. Type	2"	5/32"	13 1/8"

Clearance—.015-.020" around band.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See Miscellaneous Section for complete data.

CONVERTIBLE TOP CONTROL: Auto-Lite Model EWM-4001. Electric type.

See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1949 Numbers—
C-46—Saratoga 6,772,001
C-46—New Yorker 7,094,001
C-46—Town & Country 7,410,001
C-47—Imperial 7,813,001

1950 Numbers—
C-49—Saratoga 6,774,501
C-49—New Yorker 7,119,001
C-49—Town & Country 7,411,501
C-50—Imperial 7,813,501

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 2 and 3 cylinders. NOTE—Letter "X" after the engine number on some C49 and C50 models indicate engine is equipped with hydraulic valve lifters.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-6-2-5-8-3-7-4. See diagram.

SPARK PLUG GAPS: .035". Limits plus or minus .001". Plugs—Auto-Lite Resistor Type AR5, 14 mm.

DISTRIBUTOR: Breaker Gap—.018".
Cam Angle—27° to 30½° (closed).
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.25-.28 microfarad.

IGNITION TIMING: At Top Dead Center (TDC).

Timing Procedure—*See Ignition Timing.*

Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual. (octane selector) adjustment.

Manual (Octane Selector) Adjustment—Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION:

Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.

Idle Speed—450-475 RPM with warm engine.

Float Level—Top of float 5/64", ±1/64" below top surface of carburetor body casting.

Accelerating Pump—Center hole (med. stroke) Normal. Inner hole—Summer, Outer hole—Winter, for extreme temperatures.

Choke Setting: Adjust by inserting gauge pin (Tool C-723 or straight round pin fitting hole in choke unit shaft snugly) through hole in choke lever shaft and slot in base mounting flange to line up choke unit, loosen choke arm clampscrew, position carburetor choke valve so that it is fully closed, tighten clampscrew, remove gauge pin.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. 1¼ turns, not over 1½ turns or under 1 turn, hook end over stop stud.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust, Hot. NOTE—Self-locking tappet screws used.

►**HYDRAULIC VALVE LIFTERS USED ON SOME C49 & C50 MODELS:** Identified by "X" after engine number. No adjustment required except when valves are reconditioned.

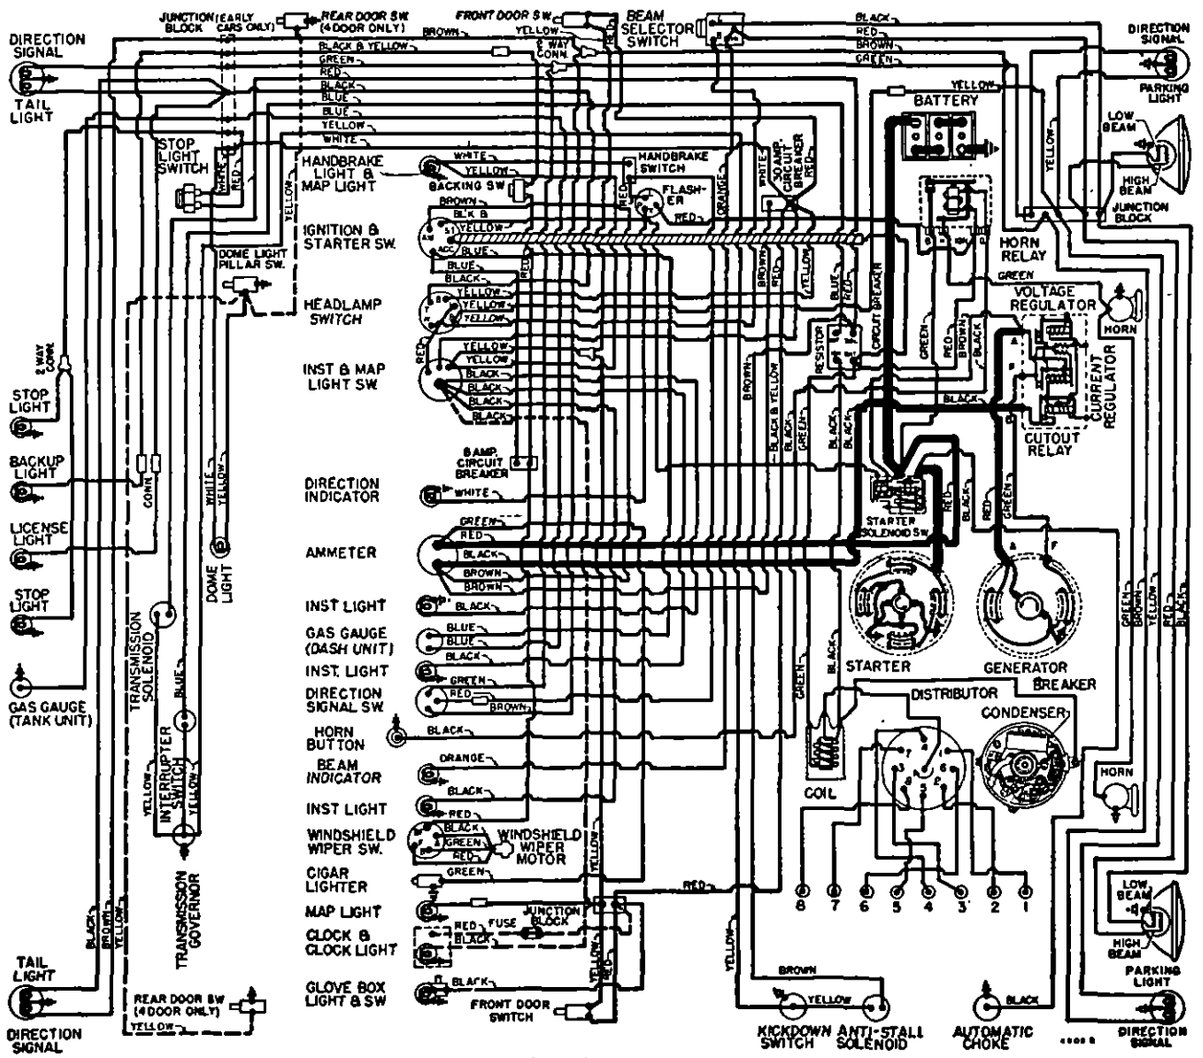
IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

COIL: Auto-Lite No. CR-4001. Mounted directly above distributor on ignition bracket.

Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IG-3927F.



Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAR-4101-L Automatic advance type with Vacuum Spark Control.

►***DISTRIBUTOR CAP POPPING OFF CORRECTION (Early "IAR" Distributors): See "Auto-Lite IAR Distributors" in Electrical Equipment Section.***

Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #10.

CONTINUED ON NEXT PAGE

1949 MODELS

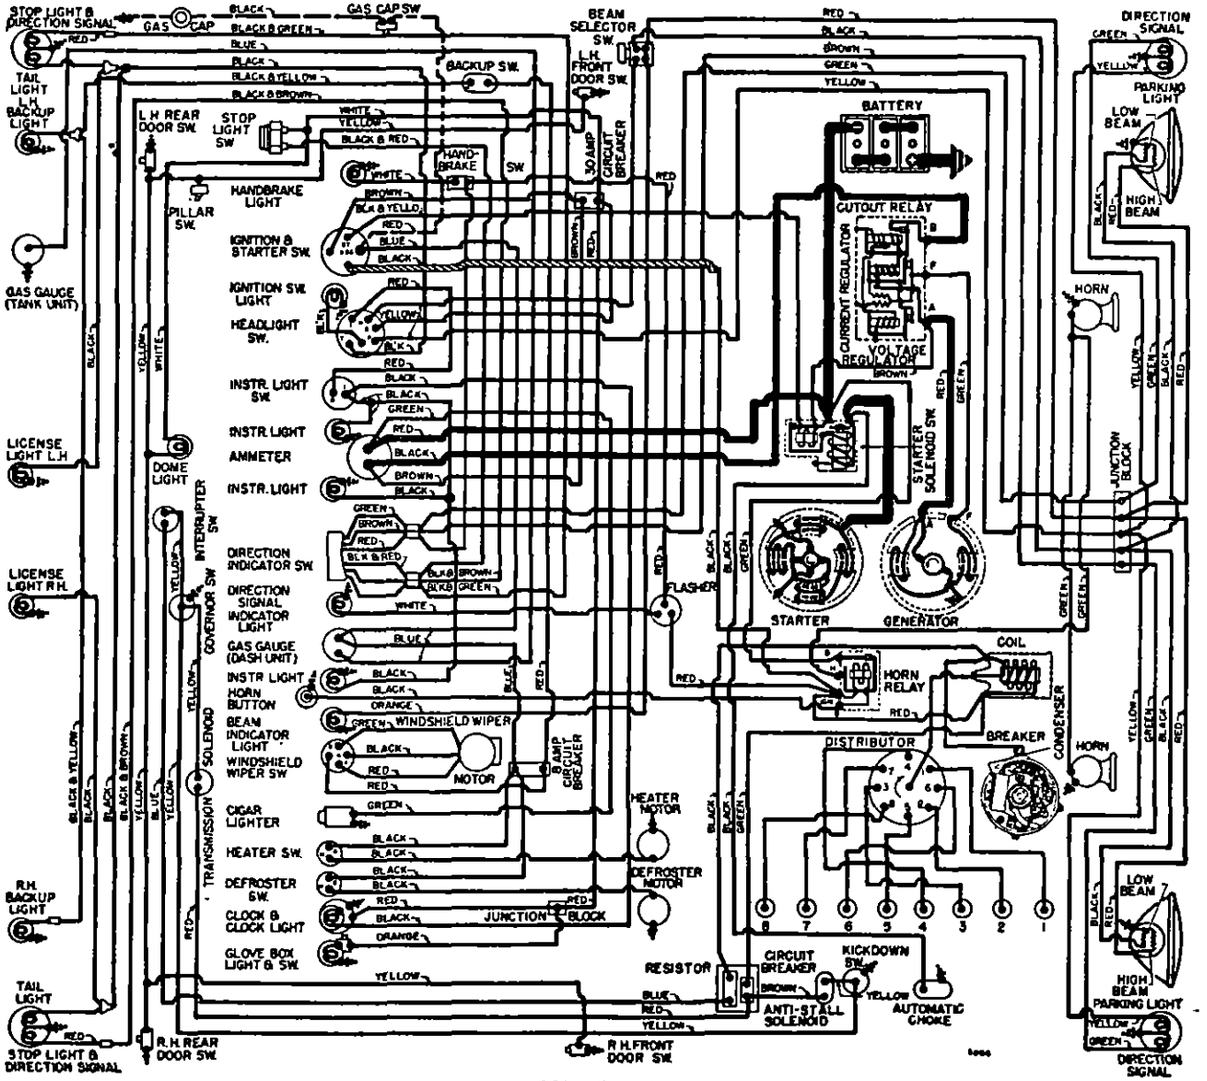
CONTINUED FROM PRECEDING PAGE

Breaker Gap—.018".
Cam Angle—27° to 30½° (closed).
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Clockwise viewed from the top.

Automatic Advance

Degrees Start	Distr. R.P.M.	Degrees Eng.	R.P.M.
1	350	0	700
5	450	2	900
9	800	10	1600
10	1400	18	2800
	1550	20	3100

Vacuum Spark Control: Auto-Lite Unit. On distributor, linked directly to breaker plate.



Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	8"
4°	8°	11"
6°	12°	14"
8°	16°	17"

Manual Adjustment: Provides for minor changes in ignition timing at distributor. See Ignition Timing.

IGNITION TIMING

Std. Setting.....**At TDC.**
Initial setting. See Manual Adjustment (below) for Final Setting.
NOTE—Impulse neutralizer marked at TDC with 12 (1°) graduations on either side.
Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as above).
Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move the plate (not more than 4° before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

1950 MODELS

CARBURETOR

Carter (B&B) E7J1, J2, J3, or E7J4. 1½" Single barrel downdraft type with Sisson Automatic choke control, Slow-closing Throttle and Step-Down Switch for hydraulically operated transmission.
See Carburetor Section for complete data.

►**E7J1, J2, J3 Note**—*To bring these carburetors up to latest E7J4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Jet—*See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specification Table.*

Slow-Closing Throttle: Solenoid type. Non-adjustable. *See Carburetion Equipment Section for complete data.*

Fast Idle: Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

Automatic Choke: Sisson type.
Setting—With throttle 1/3 open place pin gauge (Tool No. C-723 or a straight round pin that fits the hole in choke unit shaft snugly) so that pin lines up slot in choke base with hole in shaft. With choke lined up in this position the carburetor choke valve should be fully closed. If not, loosen the choke arm clamp screw (on choke) and set as above, and tighten screw to lock in this position.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544405 Heavy Duty oil-bath type. Filter Element AC No. 20.

Fuel Pump: AC No. 1539215. Diaphragm type.
Replacement Pump—AC No. 514 or 590.
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oilite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.
Dash Unit—Auto-Lite No. (C-46, C-47) 11821A, (C-49) 12136A, (C-50) 12137A.
Tank Unit—Auto-Lite No. (C-46, C-47, C-49) 11539A, (C-50) 11783A.
See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 2H-135RD. 6 volt, 19 plate, 135 Ampere Hour Capacity (20 hour rate).
Grounded Terminal—Positive (+) to engine.
Location—Under hood in left fender shield.

STARTER

Auto-Lite Model MCL-6101. Armature MCH-2039.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 RPM., 175 amperes, 5.4 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" *See Electrical Equipment Section for complete data.*

GENERATOR

Auto-Lite—2-brush. Voltage & Current regulation.

Model	Auto-Lite Generator No.
1949 C-46 Synchro-mesh Tr.	GGW-6001A
1949 C-46 Automatic Trans.	GGU-6001A
1949 C-47	GGJ-6001A
1950 (Early) C-49 Synchro-mesh Tr.	GGW-6001A
1950 (Late) C-49 Synchro-mesh Tr.	GGW-6001J①
1950 (Early) C-49 Automatic Trans.	GGU-6001A
1950 (Late) C-49 Automatic Trans.	GGU-6001G①
1950 (Early) C-50	GGJ-6001A
1950 (Late) C-50	GGJ-6001F①

①—Narrow Groove Pulley.
For State Police, City Police & Taxi, see 1950-51 Chrysler 6.
Charging Rate Adjustment—None. See Regulator.

Performance Data (*GGU-6001A, G*)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850

Performance Data (GGJ-6001A, J)

0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750

Performance Data (GGW-6001A, J)

0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGU, GGW) 35-53 ozs. (new brushes), (GGJ) 30-37 ozs. (new brushes).
Field Current—(GGU) 1.7-1.8 amperes, (GGW) 1.6-1.8 amperes, (GGJ) 1.7-1.9 amperes, all at 6.0 volts.
Motoring Current—(GGU) 5.5-6.5 amps., (GGJ) 4.3-4.8 amps., (GGW) 4.6-5.2 amps., all at 6.0 volts.
Belt Adjustment: Loosen pivot and clamp bolts, pull out on generator until belt is snug or 40-50 lbs. tension secured on scale attached to field frame.

REGULATOR

Auto-Lite Regulator No.	for Auto-Lite Generator
VBA-4104A, 4202A, or 4204A①	GGJ-6001A, F
VAV-4404B or VAV-6001A	GGU-6001A, G
VBA-4101B or VBA-4104B①	GGU-6001A, G
VRP-4503B or VRP-6004A	GGW-6001A, J

①—For Negative ground.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—(VRP, VBA, VAV exc. VAV-4404B)—6.3-6.8 volts. (VAV-4404B) 6.4-6.9 volts. Set all models to 6.4-6.6 volts.
Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. disch.).
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting (VRP-4503B, VAV-4404B) 7.2-7.5 volts, **(VRP-6004A, VAV-6001A, VBA-4202A & 4204A)** 7.1-7.4 volts, **(VBA-4101B, 4A, 4B)** 7.0-7.2 volts, all at 70° F. while charging at ½ maximum rate (VAV), 10 amperes (VRP & VBA).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

Current Regulator

➤*CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A—Operating Amperes	Test B
VRP-4503B, 6004A	46	38-42
VAV-4404B, 6001A	50	43-47
VBA-4101B, 4104B	51	43-47
VBA-4104 A	56	48-52
VBA-4202A, 4204A	56	48-52

Test A—After 15 minutes charging at ½ maximum rate (VAV), 10 amperes (VBA & VRP).
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV), 6.7-7.0 volts (VRP), 6.7 volts (VBA).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type with new "Bull's-eye lens". Beam selector switch on toeboard controls upper and lower beams.
See Electrical Equipment Section for complete data.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Flasher—Chrysler No. 1257223.

Switches

Lighting: Chrysler (1949) 1300601, (1950) 1339720.
Beam Selector—Chrysler No. 1253460.
Direction Signal—Chrysler No. 1235606.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—30 ampere. Vibrating type, protects lighting circuits.
Aux. Circuit Breaker—8 ampere. Protects Windshield Wipers and Back-Up Light.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects dir. signal circuit.
Convertible Top—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute

FUSES: Clock—3 ampere. In clock lead.

HORNS: Auto-Lite Model HW-4101 (Low Pitch), HW-4102 (High Pitch). Dual horns operated by relay.
Horn Relay: Auto-Lite No. HRL-4104. Connected through ignition switch, operated only with ignition "ON".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: 8 cyl., "L" head type.
Bore—3¼". **Stroke**—4⅞".
Displacement—323.5 cu. ins. **Rated H.P.**—33.86.
Developed Horsepower—135 at 3200 RPM.
Compression Ratio—7.25-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-Up data.*

OIL PAN & ENGINE REMOVAL: *See Chrysler Special Data.*

CYLINDER HEAD & TIGHTENING TORQUE: *See Chrysler Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type.
Original Bore & Pistons—*See Chrysler Special Data.*
NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).
Length—3⅞". **Weight**—16.5 ozs. (stripped).
Removal—Pistons and rods removed from above.
Clearance—.0005" to .0015" on thrust face at center of skirt.
Fitting New Pistons: Measure piston size with micrometer across thrust faces (right angles to pin bosses) ¾" from bottom of skirt. Fit piston in bore using .002" x ½" feeler, insert piston upside down in bore with feeler 90° from pin bosses on side opposite slot. Clearance correct when 5-7 lbs. pull required to withdraw feeler, bore and piston at 70°F.
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.
Replacement Pistons: .005", .020", .030", .040", .060" OS.
Installing Pistons: "U" slot away from valves.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	.5/32"	.007-.015"	.001-.0025"

***Installing Rings**—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.*
Replacement Rings: .005" .020" .030" .040" .050" .060" OS.

PISTON PIN: Diameter—55/64". **Length**—2¾". Floating type with locking ring at each end.
Pin Fit in Piston—.0000" to .0005". Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.
Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: Length—9". **Weight**—34 ozs. with bolts less bearings.
NOTE—Pin hole in rod bronze-bushed.
Crankpin Journal Diameter—2.1865-2.1875".
Original Bearing Sizes—*See Chrysler Special Data.*
Lower Bearing—Removable, precision type.
Clearance—.0005-.0015". **Endplay**—.006-.011".
Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.
Replacement Bearings: .001", .002", .010", .012" U.S.
Installing Rods: Offset type. Wide side of bearing to rear for #1, 3, 5, 7; to front for #2, 4, 6, 8. Oil spray hole in rod toward camshaft on all rods.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

CRANKSHAFT: 5 bearing, 8 integral counterweights with vibration dampener on front end.
Journal Diameters—2.7025-2.7035". *See "Original Bearing Sizes" in Chrysler Special Data.*
Bearings—Removable, precision type.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or bearing caps.

Replacement Bearings: .001", .002", .010", .012" U.S.

End Thrust: Taken by flange faces on rear (#5) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

CAMSHAFT: 6 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2 1/16"; #2, 2 1/32"; #3, 2"; #4, 1 31/32"; #5, 1 15/16"; #6, 1 3/8".
Bearings—Removable, steel-backed, babbitt-lined bushings (except #6—machined in crankcase).
Clearance—.001-.003" (#1), .0015-.0035" (all others). NOTE—Replacement bearings are finished (reaming, scraping, or burnishing not required).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Timing Chain: Width 1¼". Pitch .500" (½"). Length 23½" or 47 links.
Timing Chain Removal & Installation—*See Chrysler Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that "0" marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 17/32"	.340-.341"	5 7/8"
Exhaust	1 11/32"	.3395-.3405	5 7/8"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.0015-.0035"
Exhaust	45°	⅜"	.002-.004"

Exhaust Valve Seat Inserts—*See Chrysler Special Data.*
Valve Seat Width (Max.) 7/64".

Valve Guides: Remove from above. Press new guides in with stepped end down and upper end 1" (Intake), 1 3/32" (Exhaust), below top of block. Ream guides to inside diameter of .3425-.3435" (Tool DD-849). Exhaust guides counterbored on upper end.

Valve Springs: Install springs with close-coil end to top. Spring Free Length 2".

	Spring Pressure	Spring Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below with camshaft out of engine). Stem diameter ⅜". Service by reaming lifter holes (work from above piloting reamer Tool C-265 in valve guide) and installing oversize lifters. **Clearance**—.000-.001".
Replacement Lifters—.001", .008", .030", .060" oversize.

HYDRAULIC VALVE LIFTERS: Used on some C-50 engines (marked by "X" following engine number). *See "Valve System" in Chrysler Special Data.*

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust, Hot. Self-locking tappet screws used. NOTE—Remove right front wheel and lower wheel housing panel for access to valves.

TAPPET ADJUSTMENT NOT REQUIRED ON HYDRAULIC VALVE LIFTERS: Except when valves are reconditioned. For initial adjustment, proceed as follows: Insert shank of ⅜" drill between valve face and valve seat. With the valve held tightly down on the drill shank, a .016" feeler must pass freely between the top of the plunger and the valve stem tip. If there is less than .016" clearance, grind valve stem tip in a suitable fixture until a .026" feeler will pass through freely.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" tappet clearance (Cold), #8 intake valve should open with #8 piston 5° to 17° or .011" to .122" BTDC. with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot running clearance.

LUBRICATION

Engine Oiling System: Pressure through Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump on right side of engine.
Crankcase Capacity—6 quarts (refill).
Normal Oil Pressure—45-60 lbs. above 45 MPH. with warm oil. CAUTION—Pressure of 40-45 lbs. at driving speeds indicates oil filter may be clogged and should be replaced.
Oil Pressure Relief Valve—Under cap on lower left side of crankcase. Has bleed duct which connects with new idle oil passage to provide additional oil at idling speeds. Valve has screw adjustment but factory setting seldom requires changing. Opens at 40-45 lbs.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in Chrysler Special Data.*

Oil Filter: "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 40-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 45-60 lbs. above 45 MPH.

Oil Pressure Gauge: Auto-Lite No. (1949) 11823A, (1950) 12138A. Not electric.

COOLING

Cooling System: Pressure type with pressure valve (relief valve) in filler cap, and positive circulation with pump on front of engine, by-pass type thermostat, and water distribution tube in block.
Capacity—21 quarts.
Pressure Valve—In filler cap. Opens at 3 lbs.

Radiator Core Removal: *See "Radiator" in Chrysler Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in Chrysler Special Data.*

Water Pump: Packless type with shaft mounted on 2 ball bearings with lubricant fitting for bearing lubrication and grease nipple for seal lubrication. *See Water Pump Section for complete data.*
Removal—Drain cooling system. Remove fan blade assembly, fan belt, by-pass hose and elbow, inlet hose, pump mounting capscrews. Take pump off. Spacer behind pump need not be taken off engine.

Thermostat: In cylinder head water outlet.
Setting—Starts to open 157-162°F. Fully open 183°F.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, 2 ports to rear. Some thermostats equipped with heavy shield welded on bottom (for bellows protection at high speeds), this type thermostat cannot be installed on earlier cars.

Temperature Gauge: Auto-Lite No. (1949) 11822A, (1950) 12139A. Not electric.

CLUTCH

Borg & Beck Model 10A6 with "Borglite" driven member. Single plate, dry disc type. NOTE—Cover Assembly No. 961 stamped on cover
See Clutch Section for complete data.
Facings—Woven type, 2 used. Inside Diameter 6". Outside Diameter 10". Thickness .125" (⅛").

Pedal Adjustment: Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.
CAUTION—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).
Clutch Over-center Spring Setting—*See "Clutch Notes" in Chrysler Special Data.*

Removal: Remove Transmission (see TRANSMISSION). Remove clutch housing underpan and clutch release bearing and sleeve. Mark clutch and fluid drive clutch driving plate for re-assembly. Remove all clutch cover mounting screws evenly, lower cover and driven member out through opening in housing.

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine.
See Transmission Section for complete data.

Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*

Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION

SYNCHRO-MESH

Own Make—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

▷*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*

Transmission Control: Manual steering column shift. *See Transmission Section for complete data.*

Removal: Jack up front end of car. Disconnect front universal (loosen companion flange nut if transmission to be dismantled). Disconnect speedometer cable, hand brake cable at brake band, gearshift control rod and selector rod at transmission. Remove transmission mounting screws and nuts at clutch housing, pull transmission straight back to free clutch shaft, lower transmission and remove from under car.
NOTE—When installing transmission, use pilot

studs installed in upper mounting screw holes to maintain alignment and prevent springing clutch driven member.

PRESTO-MATIC

Hydraulically Operated Type (with Fluid Drive). New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control. *See Transmission Section for complete data including Testing & Trouble Shooting.*

►**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*

Transmission Control: *See Transmission article for adjustment directions.*

Kickdown Solenoid—Auto-Lite No SSS-4003.

Governor—Auto-Lite No. TG-4205R.

Kick-down Switch—Part of carburetor assembly. *See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*

Ignition Interrupter Switch—On right side of transmission above Governor.

Transmission Oil—3 pints, 10-W engine oil.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, **replace drain plug.** Disconnect transmission mounting bolts and lower assembly out of car.

INSTALLATION CAUTION—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7300—Cross type with roller bearings. Two used (3 on Crown Imperial and other long-wheelbase cars with center bearing).

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Chrysler Special Data.*

REAR AXLE

C46 & C49

Own Make—Semi-floating, hypoid gear type with Hotchkiss Drive.

See Rear Axle Section for complete data.

Ratio—3.54-1 Std. (39-11). C49 Town & Country 3.91-1 (43-11).

Backlash—.006-.010". Screw adjustment.

Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

C47 & C50

Own Make—Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.

See Rear Axle Section for complete data.

Ratio—3.58-1 (43:12).

Ring Gear Thrust Pad Setting—Loosen locknut on left side of carrier housing, tighten thrust pad screw *finger tight*, back screw *off 1/8 turn.*

Removal, Oil Seal, & Wheel Bearing Adjustment: See C-49 Rear Axle above.

SHOCK ABSORBERS

New "Hydra-Lizer" hydraulic, direct acting type.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram, coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

Kingpin Inclination—(1949) 4¾-6°, (1950) 6¼-7½° crosswise.

Camber—0° to Pos. ¾°. (¼-½° higher on left).

Caster—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.

Toe In—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.

Steering Geometry—Inner wheel 21½°, plus or minus 1°. Outer 20°.

STEERING GEAR

Own Make—3 tooth Worm-and-Roller. Similar to Gemmer model 335.

NOTE—See Gemmer 305, 335 & 375 article for data.

See Steering Gear Section for complete data.

BRAKES

L CKHEED

Service: Chrysler "Safe-guard" Lockheed Hydraulic. *See Brake Section for complete data.*

►*BRAKE SQUEAK OR SQUEAL CORRECTION—See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*

Drums—Centrifuse. Diameter 12".

Lining—Molded asbestos. Width 2". Thickness 13/64". Length per wheel—(1949 Frt. Whls) 25 1/8". (1949 Rear Whls) 20 3/8", (1950 All wheels) 25 1/8"

Clearance—.006" at each end of all shoes.

Braking Power—60% front wheels, 40% rear.

Power Brake (C-46, C-49)—Vacdraulic vacuum power unit.

See Brake Section for complete data.

Hand Brake: On shaft at rear of transmission. External type (1949 & Early 1950), Internal type (Late 1950).

Adjustment—*See "Hand Brake Notes" in Chrysler Special Data.*

Drum—Cast-iron. Diameter 7".

Lining—	Width	Thickness	Length
External Type	2 1/2"	5/32"	20"
Internal Type	2"	5/32"	13 1/8"

Clearance (External Type)—.015-.020" around band.

Clearance (Internal Type)—Adjusting nut on shoe link backed off one notch from point where shoes firm against drum.

DISC TYPE

Service: Hydraulic self-energizing, two-shoe, DISC type. NOTE—No power booster used.

See Brake Section for complete data.

Disc Face Diameter—I.D. 9", O.D. 12".

Lining—Molded Asbestos segments (12 used). Thickness .170".

Clearance—Brakes are self-adjusting.

►**Bleeding Disc Type Brakes**—Manufacturer recommends bleeding all four lower wheel cyls. first, then all four upper ones last. *See "Chrysler Disc Brake" in Brake Section for complete data.*

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.

See Miscellaneous Section for complete data.

CONVERTIBLE TOP CONTROL: Auto-Lite Model EWM-4001. Electric type.

See Miscellaneous Section for complete data.

WINDOW REGULATORS: Hydro-electric type.

See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1950 Numbers—	Detroit	Los Angeles
C-48S Royal	70,058,001	65,004,001
C-49W Windsor	70,794,001	67,011,001
1951 Numbers—		
C-51 Windsor	70,081,001	65,007,001
C-51 Windsor Deluxe	70,891,001	67,026,001

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035". Limits plus or minus .001". Plugs—Auto-Lite Resistor Type AR5 ('50), AR8 ('51).

DISTRIBUTOR: Breaker Gap—.020". Cam Angle—34½° to 38°. Do NOT exceed Breaker Gap limits (.018 to .022") to obtain cam dwell. Breaker Arm Spring Tension—17-20 ozs. Automatic & Vacuum Advance—*See Ignition.* Condenser Capacity—.25-.28 microfarad.

IGNITION TIMING: (1950) At TDC. (1951) 2° BTDC. Timing Procedure—*See Ignition Timing.* Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing at correct mark on dampener, then set manual (octane selector) adjustment. Manual (Octane Selector) Adjustment—Set for slight ping with 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION: Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture. Idle Speed—(Std. Trans.). Adjust to 6 MPH. (Automatic Trans.). (1950) 450-475 RPM., (1951) 475-500 RPM. Float Level—Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl. Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter. Choke Setting—(1950) Adjust by inserting a gauge pin through the hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjust carburetor choke valve lever so that choke valve is tightly closed. Choke Setting—(1951) Cover "mark" centered on index.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. ¾ turn, not over one turn or under ½ turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust, Hot.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

COIL: Auto-Lite No. CR-4001. On bracket above distributor.

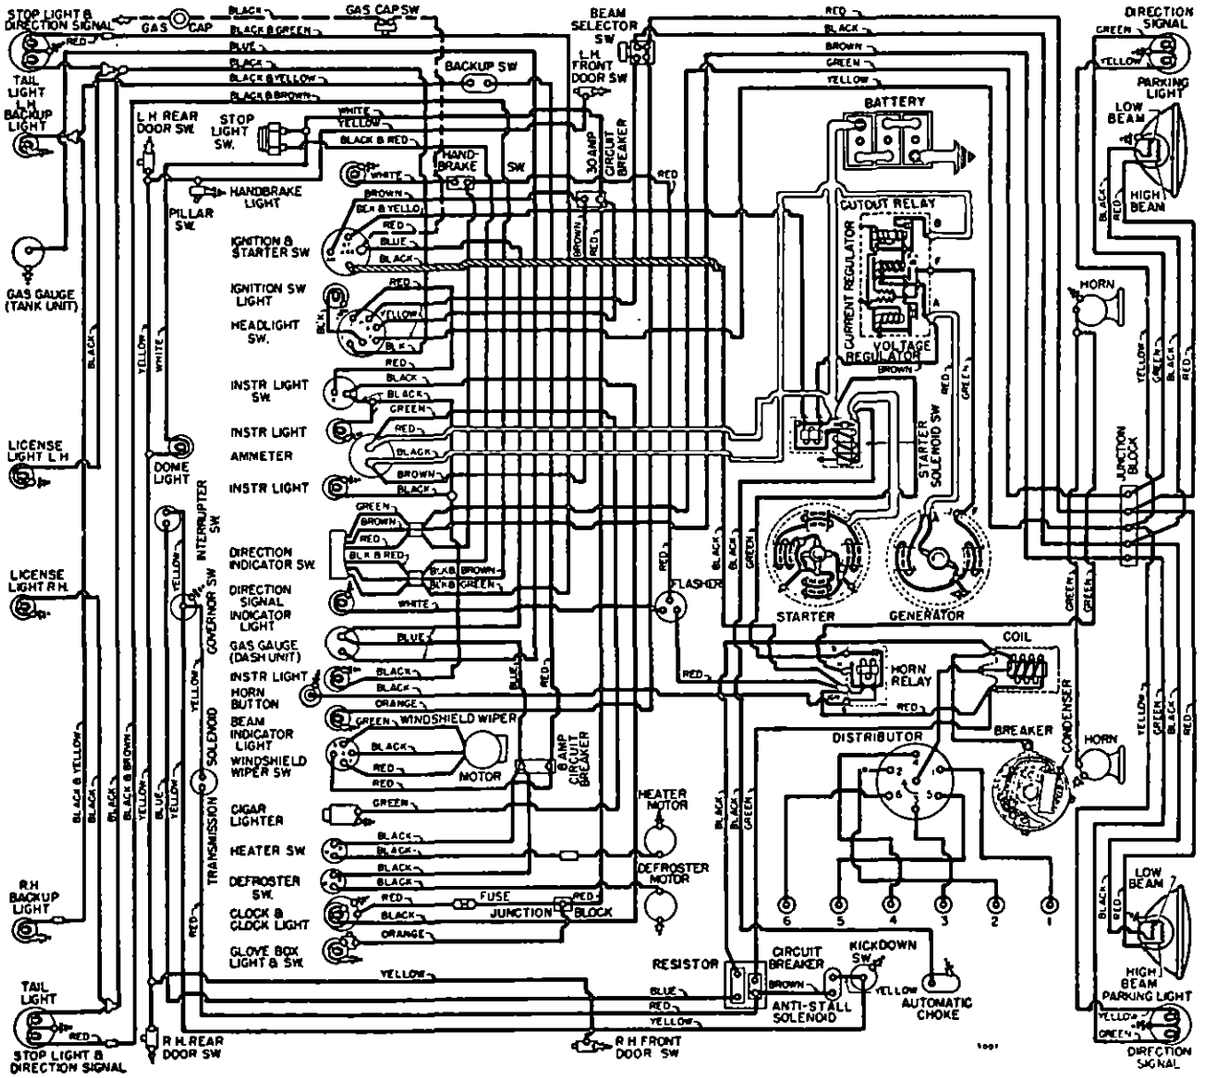
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IG-3927G. Capacity—.25-.28 microfarad.

DISTRIBUTOR:

Year	U. S. Prod. Auto-Lite No.	Canada Auto-Lite No.
1950 Early	IAP-4102C	IAP-4012B-1
1950 Late	IAT-4004	IAT-4004C
1951	IAT-4012	IAT-4012C

Automatic advance type with vacuum spark control.



▷*DISTRIBUTOR CAP POPPING OFF CORRECTION (Early "IAP" Distributors): See "Auto-Lite IAP Distributors" in Electrical Equipment Section.*

▷**"IAT" Distributor Note**—New "Pivoted Breaker Plate" type. *See Electrical Equipment Section for data.*

Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAP-4102B-1, IAT-4004C, IAT-4012C

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	350	0	700
3	400	6	800
6	780	12	1560
9	1160	18	2320
12	1530	24	3060

Vacuum Spark Control: Auto-Lite Unit. Integral type

Vacuum Advance—IAP-4102C, IAP-4012B-1, IAT-4004, IAT-4004C, IAT-4012, IAT-4012C

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7¼"
4°	8°	9⅜"
6°	12°	11⅝"
9°	18°	15"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

1951 MODELS

IGNITI N TIMIN

Standard Setting

1950 ..... At TDC.
1951 ..... 2° BTDC.

Initial setting. See Manual Adjustment (below) for Final Setting.

NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move the plate (not more than 4° before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

CARBURET R

Carter (Ball & Ball)—Used on all models. 1½" single barrel, downdraft type. Slow closing throttle and Kick-down switch used for hydraulic operated transmission.

Year	*Application*	*Carb. No.*
1950	Synchro-mesh Trans.	EX3①
1950	Automatic Trans.	E7L4
1951	Synchro-mesh Trans.	E9C1
1951	Automatic Trans.	E9A1

①—Superseded by Carb. No. EX3R.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

Slow-closing Throttle: Solenoid type. Non-adjustable. ***See Carburetion Equipment Section for complete data.***

Fast Idle: Setting—(EX3, E7L4) Throttle stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke closed for starting. No adjustment required.

Fast Idle: Setting—(E9C1, E9A1) .018" throttle opening with choke valve held closed and throttle stop screw backed off.

Automatic Choke: Sisson Type (1950). Carter Climatic Control (1951).

Setting—Sisson Type. With throttle 1/3 open, insert gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft), adjust carburetor choke valve lever so that choke valve is closed tightly.

Setting—Carter Climatic Control. Centered (coil housing at index mark). ***Do not change setting for hot or cold climate.***

See Carburetion Equipment Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CARB. EQUIPMENT

Air Cleaner: AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.

Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. *NOTE*—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

Fuel Pump: Carter No. M639SL, SZ. Vacuum diaphragm type.
Pressure—3½ to 5 lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Ollite metal filter in tank.

Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit (1950)—Auto-Lite No. 12129A.

Dash Unit (1951)—Auto-Lite No. 12462A. (Estate Wagon) 12463A.

Tank Unit—Auto-Lite No. 11538A.

See Carburetion Equipment Section for complete data.

BATTERY

Willard or Auto-Lite—17 Plate, 6 Volt, 120 Ampere Hour Capacity (20 hour rate).
Starting Capacity—152 amperes for 20 minutes.
Grounded Terminal—Positive (+) to engine.
Location—Under hood in left fender shield.

STARTER

Auto-Lite No. (1950) MCL-6101, MCL-6109, MCL-6108. (1951) MCL-6109. (Canada 1950) MAX-4090.
Armature—Auto-Lite No. MCH-2039 (MCL-6101), MAW-2213 (MAX-4090), MCH-2070 (MCL-6108,6109).
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data (MAX-4090)

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	5300	5.5	65
9.0 "	Lock	2.0	410

Performance Data (MCL-6101, MCL-6108, MCL-6109).

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid type controlled by turning ignition switch past "ON" position.

Switch No.	Use with Auto-Lite Starter
SS-4707	MAX-4090, MCL-6101
SSX-4001	MCL-6109
SSX-4101	MCL-6108

See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite—2-brush. Voltage & Current regulation.

Model	Auto-Lite Generator No.
1950 (Early) Synchro-mesh Trans.	GGW-6001A
1950 (Late) Synchro-mesh Trans.	GGW-6001J①

VBA-4101B, 4104B①	GGU-6001A, E, G, H

①—For negative ground.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover)

Cutout Relay

Cuts In—(All "VRP," "VBA," "VBE;" VAV-6001A & 2A) 6.3-6.8 volts, (VAV-4404A, 4B, 5A) 6.4-6.9 volts. Set all models to 6.4-6.6 volts.
Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. dis.)
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—(VRP-4503A, 3B; VAV-4404A, 4B, 5A) 7.2-7.5 volts, (VRP-6004A, VAV-6001A, 2A; VBE-6001A) 7.1-7.4 volts, (All "VBA") 7.0-7.2 volts at 70°F. while charging at 10 amperes (VRP & VBA), ½-maximum rate (VAV & VBE).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

Current Regulator

▷*CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Operating Amperes Test A	Test B
VRP-4503A	42	33-37
VRP-4503B, 6004A	46	38-42
VAV-4404A, 5A	55	48-52
VAV-4404B, 6001A, 2A	50	43-47
VBA-4101A, 2A, 4A	56	48-52
VBA-4101B, 4B	51	43-47
VBE-6001A	52	43-47

Test A—After 15 minutes operation charging at 10 ampres (VRP & VBA), ½ maximum rate (VAV & VBE).
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV & VBE), 6.7-7.0 volts (VRP), 6.7 volts (VBA).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type
See Electrical Equipment Section for complete data.
Beam Indicator—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.

Direction Signal: *See Electrical Equipment Section.*
Direction Signal Flasher—Chrysler No. 1257223.

Switches

Lighting—Chry. No. (1950) 1339720, (1951) 1339691.
Beam Selector—Chry. No. (1950) 1253460, (1951) 1253003.
Directional Signal—Chry. No. (1950) 1235606, (1951) 1370454.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal
Auxiliary Circuit Breaker—8 ampere. Protects the Windshield Wipers and Back-Up Light.

FUSES: Clock—2 ampere. In clock lead.

HORNS: Auto-Lite No. (1950) HW-4101 (Low Pitch), HW-4102 (High Pitch). (1951) HW-4107 (Low Pitch), HW-4108 (High Pitch).

Horn Relay: Auto-Lite No. 4104. Connected through ignition switch, operates only when ignition "ON".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". Air Gap—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3 7/16". **Stroke**—4½".
Displacement—250.6 cu. ins. **Rated H.P.**—28.36.
Developed Horsepower—116 at 3600 RPM.
Compression Ratio—7.0-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN & ENGINE REMOVAL: *See Chrysler Special Data.*

TIGHTENING TORQUES: *See Chrysler Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Chrysler Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type. NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See Chrysler Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0005" to .0015" on thrust face at center of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F).

Replacement Pistons: .005", .020", .030", .040", .060" OS. NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: .005" .020" .030" .040" .050" .060" OS.

PISTON PIN: Diameter—55/64", **Length**—2⅞". Floating type with locking ring at each end.
Pin Fit in Piston—.0000" to .0005". Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" Oversize.

CONNECTING ROD: Length—7⅞". **Weight**—32.4 ozs. with bolts less bearings. NOTE—Piston pin hole (upper bearing) bronze bushed.
Crankpin Journal Diameter—2.124-2.125".
Original Bearing Sizes—*See Chrysler Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: .001", .002", .010", .012" U.S.

Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearings, 9 integral counterweights with vibration dampener on front end.
Crankshaft Journal Diameter—2.4995-2.5005".
Original Bearing Sizes—*See Chrysler Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps.

Replacement Bearings: .001", .002", .010", .012" U.S.

End Thrust: Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Timing Chain Removal & Installation—*See Chrysler Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	3/8"	.001-.003"
Exhaust	45°	3/8"	.002-.004"

Valve Seat Width (Max.) 7/64".

Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs: Install with closely coiled end to top. Free Length 2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	110-120 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below). Stem Diam. ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exh. (hot and idling). NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure through new Full-flow oil filter to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump used.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—40-50 lbs. at 20 MPH. with warm oil.
Oil Pressure Relief Valve—Opens at 40-45 lbs. Under plug on left side of crankcase ahead of the oil line to provide additional oil at idling speeds. Adjustable by replacing spring. 3 types: 1) Plain—unpainted. 2) Light—painted Red. 3) Heavy—painted Green. CAUTION—Install replacement spring of same color as original spring.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in Chrysler Special Data.*

Oil Filter: "Full-flow" type. All oil under full pressure passes through filter before entering oil passage. Safety valve in filter opens if element is clogged allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time. **Checking:** If oil pressure drops to 35-45 lbs. with warm oil, filter element may be clogged and should be replaced, to bring oil pressure to normal 40-50 lbs. at 20 MPH.

Oil Pressure Gauge: Auto-Lite No. (1950) 12126A, (1951) 12461A. Not electric.

COOLING

Cooling System: Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.
Capacity—(1950) 17 qts., (1951) 15 qts.

Radiator Core Removal: *See "Radiator" in Chrysler Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in Chrysler Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: By-pass type in cyl. head water outlet.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. (1950) 12127A, (1951) 12459A. Not electric.

CLUTCH

Borg & Beck, Model 10A7 (Synchro-mesh Trans.), **9A7** (Fluid Drive & Automatic Trans.), **11A6** (Taxicab). Single plate, dry disc type.

Identification Note—Cover stamped 953 or 1329 (9A7), 930 or 1331 (10A7), 929 or 931 (11A6).

See Clutch Section for complete data.

Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) and have 1" free travel (adjusting nut on connector link at fork).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Clutch Over-center Spring Setting—*See "Clutch Notes" in Chrysler Special Data.*

Removal: Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine. Opti. *See Transmission Section for complete data.*

Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*

Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION

SYNCHRO-MESH

Own Make—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*

▷*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*

Transmission Control: Manual steering column shift. *See Transmission Section for complete data.*

Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see Chrysler Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

PRESTO-MATIC

Hydraulically Operated Type (with Fluid Drive). Semi-automatic, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.
Transmission Oil—3 pints, 10-W engine oil.

Transmission Control: See Transmission article for adjustment instructions.
See Transmission Section for complete data.
Kickdown Solenoid—Auto-Lite No. SSS-4003.
Governor—Auto-Lite No. (1950) TG-4205R, (1951) TGG-4001.
Kick-down Switch—Part of carburetor assembly. *See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Ignition Interrupter Switch—On right side of transmission above Governor.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.

▷*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal. Cross type with roller bearings. **(Royal)** Series 7200, **(Windsor)** Series 7300.

Propeller Shaft Center Bearing: Used on 7 Passenger. *See "Propeller Shaft" in Chrysler Special Data.*

REAR AXLE

Own Make—Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Car Model	Std. Trans.	Auto. Trans.
C-48 Royal	3.9-1 (39-10)	3.73-1 (41-11)
C-48 Royal (Limo.)	4.1-1 (41-10)	3.91-1 (43-11)
C-48 Windsor (5 Pass.)	3.73-1 (41-11)	——
C-48 Windsor (Limo.)	3.91-1 (43-11)	——
C-48 Sta. Wgn.	4.1-1 (41-10)	3.91-1 (43-11)
C-51 5 Pass.	3.9-1 (39-10)	3.9-1 (39-10)
C-51 Sta. Wgn.	4.1-1 (41-10)	3.9-1 (39-10)
C-51 8 Pass.	4.1-1 (41-10)	4.1-1 (41-10)

Removal: Disconnect rear universal, remove axle shafts (see below) and carrier assembly capscrews. **Axle Shaft Removal**—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

New "Oriflow" direct acting hydraulic type. Non-adjustable, non-refillable.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.

Kingpin Inclination—5° to 6½° crosswise.
Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).
Caster—Neg. 1° to Neg. 3°. Neg. 2° preferred.
Toe In—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.
Steering Geometry—Inner wheel 21½° plus or minus 1°. Outer 20°.

STEERING GEAR

Own Make—3 tooth Worm-and-Roller. Similar to Gemmer model 335.
NOTE—See Gemmer 305, 335 & 375 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: Chrysler "Safe-guard" Lockheed Hydraulic.
▷*BRAKE SQUEAK OR SQUEAL CORRECTION—See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*

Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).
Rear Wheels—Double anchor type with single double-acting wheel cylinder.
See Brake Section for complete data.

Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).
Drums—Centrifuse. Diameter 12".
Lining—Molded Asbestos. 2" wide. 13/64" thick.
Length per Wheel—25⅛".
Clearance—.006" at each end of all shoes.
Braking Power—60% (front wheels), 40% (rear).

Hand Brake: On shaft at rear of transmission. 6" External contracting band used with Synchro-mesh Transmission. 7" Internal expanding used with Automatic Transmission.
Adjustment—*See "Hand Brake Notes" in Chrysler Special Data.*
Drum—Cast Iron.

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Int. Type	2"	5/32"	13 1/8"

Clearance—**(External Type)** .015-.020" around band, **(Internal Type)**—Adjusting nut on shoe link backed off one notch from point where shoes firm against drum.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite electric type.
EWJ-4001—1950 (exc. Convt.) & 1951 8 Pass.
EWJ-4003—1950 Convt. & 1951 (exc. 8 Pass.).
See Miscellaneous Section for complete data.

CONVERTIBLE TOP CONTROL: Auto-Lite Model EWM-4001. Electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

Model	1951—Serial Nos.—1952
C-52 New Yorker	7,165,001 7,199,901
C-53 Crown Imperial	7,814,501 7,815,101
C-54 Imperial	7,736,501 7,753,601
C-55 Saratoga	①76,500,001 ..... ②76,512,101

①—66,500,001 for Los Angeles.
②—66,501,801 for Los Angeles.

ENGINE NUMBER: Stamped on boss on top front side of block just back of water pump.

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number)—Identified as follows:*
"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.
"MALTESE CROSS" (⅜" high)—ONE OR MORE Crankshaft Journals .001" Undersize. *See "Connecting Rods" & "Crankshaft" (below).*
"DIAMOND" (⅜" high)—On cars after Engine No. C52-8-18506. ALL Valve Lifters .008" oversize. *See "Valves" for identification before above engine number.*

TUNE-UP

►*ENGINE CUTTING OUT ON TURNS (1951 Cars with 830S & SA Carburetors): See "Carter WCD" in Carburetor Section.*

►*SLOW WARM-UP CORRECTION (Early 1951 Cars with 830S Carburetor): See "Carter WCD" in Carburetor Section.*

►*DIFFICULT STARTING WHEN HOT (1951-52 Cars): See "Carter WCD" in Carburetor Section.*

►*ACCELERATION HESITATION (1951-52 Cars with 931S & SA Carburetors): See "Carter WCD" in Carburetor Section.*

►*ENGINE STALLING ON QUICK STOPS (1951-52 Cars with 931S, SA & SB Carburetors): See "Carter WCD" in Carburetor Section.*

COMPRESSION PRESSURE: 135 to 165 lbs. at 150 RPM. cranking speed. Minimum allowable pressure of 90 lbs. with a 15 lb. maximum allowable variation between cylinders.

VACUUM READING: Steady 18-21" idling.

FIRING ORDER: 1-8-4-3-6-5-7-2. See wiring diagram.

SPARK PLUG GAPS: .035".
Plugs—Auto-Lite Resistor Type 4S140, 14 mm.

DISTRIBUTOR: Auto-Lite No. (1951) IAZ-4001 or IAZ-4001A. (1952) IAZ-4001B. Double breaker type with automatic advance and vacuum spark control.
Breaker Gap—.015" to .018".
Cam Angle—27½° to 30° (one set of points) 34° to 36° (Total dwell).

►*NOTE—Set both contacts alike. No other adjustment required.*
Breaker Arm Spring Tension—17 to 20 ozs.
Rotation—Clockwise viewed from above.
Automatic and Vacuum Advance—*See Ignition.*

COIL: Auto-Lite No. (1951) CR-4001. (1952) CR-6007B.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No.
Capacity—.25-.28 microfarad.

IGNITION TIMING: *CAUTION—DIFFERENT setting required for each type distributor:*

Distributor Type	Std. Ignition Setting
1951 IAZ-4001 & IAZ-4001A	At TDC.
1951-52 IAZ-4001B	4° BTDC.

See Manual Adjustment for final setting.

Timing Mark—Vibration dampener marked "DC" with 15-1° graduations on either side. Use "DC" mark (for TDC setting) or 4th. graduation before DC mark (for 4° BTDC. setting).

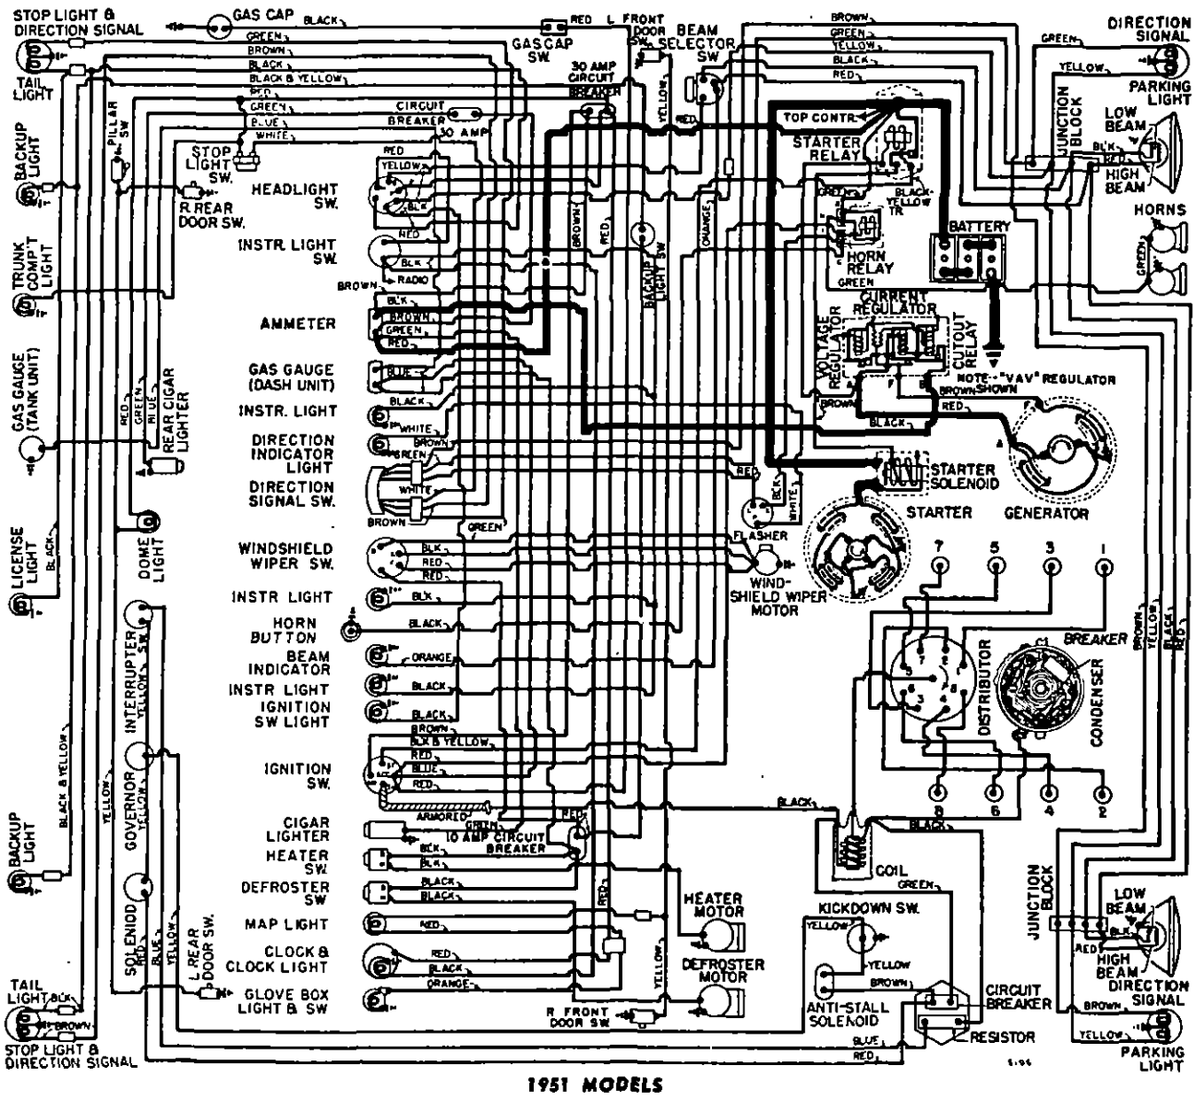
Manual Adjustment—Adjust distributor to give slight ping in 15-30 MPH. range when accelerating from 15 MPH. in fourth grear with wide open throttle. *CAUTION*—Do not set timing more than 4° earlier or later than specified setting.

Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter WCD (1951) Nos. 830S, SA, SB; (1951-52) Nos. 931S, SA, SB, SC. Dual downdraft type with Carter Climatic Control, slow-closing throttle, and kick-down switch for transmission control.

►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED CHANGES FOR IMPROVED PERFORMANCE: See "Carter WCD" in Carburetor Section.*

Idle Setting—Set idle adjustment screw for smooth idling with engine warm (idle screw ¾ to 1¼ turns open), turn screw out for richer mixture.



Idle Speed—475 to 500 RPM.

Float Level—11/64" between top of float and machined surface of cover casting. Use Gauge T109-205 for correct vertical and lateral adjustment.

Accelerating Pump—Outer hole (long stroke), Normal setting.

Fast Idle Setting: .017-.021" throttle opening (use Gauge T109-44—.018") with choke valve tightly closed. Adjust by turning fast idle screw.

CONTINUED ON NEXT PAGE

1951 MODELS

CONTINUED FROM PRECEDING PAGE

Choke Setting: Indicator mark on Climatic Control must line up with Center Index mark on air horn.

▷*CAUTION*—Do not change setting for hot or cold climates.

Fuel Pump Pressure: 3½ to 5 lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approx. 1¼ turns, not over 1½ turns or under 1 turn, hook end over stop stud. *NOTE*—If clearance between shaft and bushing exceeds .002-.005", replace parts.

See "Manifold Heat Control" in Chrysler Special Data.

▷***CAUTION—Do not install control valve with counterweight toward rear of engine.***

VALVE TAPPET CLEARANCE: Hydraulic valve lifters used. No adjustment required except when valves reconditioned.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable

COIL: Auto-Lite No. (1951) CR-4001, (1952) CR-6007B Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IAU-3076LA. Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite. (1951) No. IAZ-4001 or IAZ-4001A, (1952) IAZ-4002B. Double breaker type with automatic advance and vacuum spark control.

▷*1951-52 DISTRIBUTOR & IGNITION TIMING CAUTION:* Distributor No. IAZ-4001B (Chrysler No. 1479139) has different automatic advance and requires different Ignition Timing than 1951 No. IAZ-4001A (Chrysler No. 1345967). Distributors may be interchanged (or later type Cam & Stop Plate and Governor Weight Springs installed in previous type distributor) but ***Correct Ignition Timing and Advance specifications (for checking) must be used for each type distributor.***

Breaker Gap—.015" to .018".

Cam Angle—27½° to 30° (one set points) 34° to 36° (Total dwell). Both points to be set alike. No other adjustment required.

Breaker Arm Spring Tension—17 to 20 ozs.

Rotation—Clockwise viewed from above.

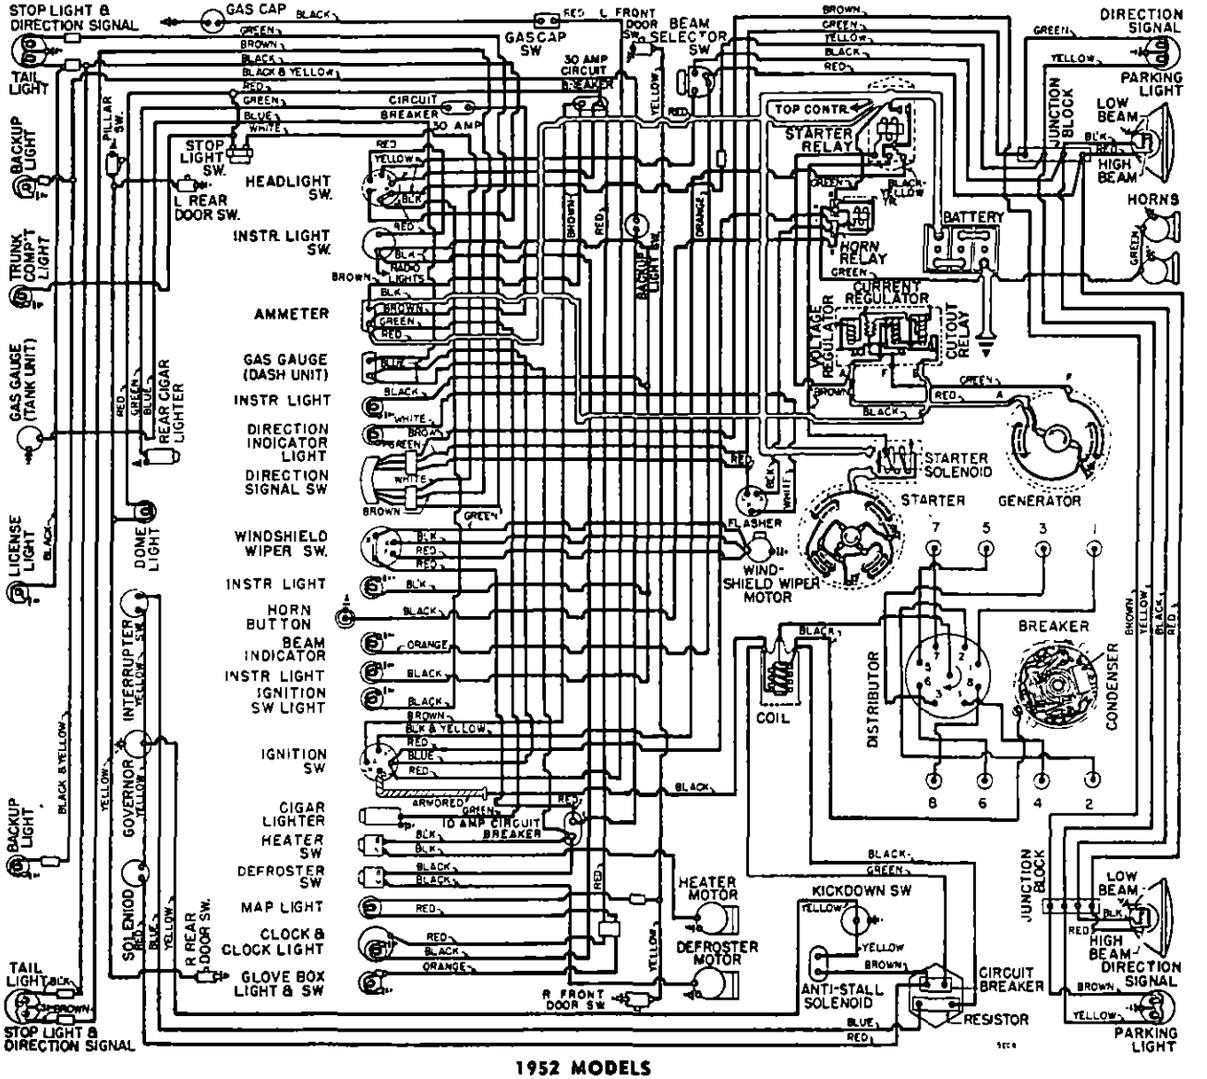
▷***DISTRIBUTOR INSTALLATION CAUTION:*** Drive gear slot position changed during 1951 production. To insure correct distributor drive position on all cars (if drive gear and shaft disturbed), ***see OIL PUMP & DISTRIBUTOR DRIVE GEAR INSTALLATION in Chrysler Special Data.***



IGNITION TIMING

CAUTION—DIFFERENT setting required for each type distributor:

Distributor Type	Std. Ignition Setting
1951 IAZ-4001 & IAZ-4001A	At TDC.
1951-52 IAZ-4001B	4° BTDC.

See Manual Adjustment below for final setting.

Timing Mark—Vibration dampener marked "DC" with 15-1° graduations on either side. Use "DC"

1952 MODELS

mark (for TDC setting) or 4th graduation before DC mark (for 4° BTDC setting).

Timing (Using Synchroscope)—Mark correct graduation on vibration dampener with white chalk. Connect one lead of Synchroscope to #1 spark plug wire at the distributor (Using Tool C-3066 Adapter). Connect other lead to negative terminal of battery and direct the light on vibration dampener. Idle engine and loosen distributor lock plate. Rotate distributor (clockwise to retard, counter-clockwise to advance) until pointer is aligned with chalk mark on vibration dampener. Tighten lock plate clamp.

Manual Adjustment—Adjust distributor to give slight ping when accelerating from 15 MPH, with wide open throttle in fourth speed. NOTE—Do not set timing more than 4° early or 4° later than initial setting.

CARBURETOR

Carter WCD (1951) Nos. 830S, SA, SB (1951-52) Nos. 931S, SA, SB, SC. Dual downdraft types with Carter Climatic Control, slow-closing throttle, and kick-down switch for transmission control.

►*CARBURETOR PRODUCTION CHANGES & RECOMMENDED CHANGES FOR IMPROVED PERFORMANCE: See "Carter WCD" in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*

Metering Jet—*See Carburetor Section for "Carter (WCD) Downdraft" Carburetor Jet Specification Table.*

Slow Closing Throttle: Solenoid type. Adjustable.
See Carburetion Equipment Section for complete data.

Fast Idle: Carter Dual (WCD) Carburetor type.
Setting—.017-.021" throttle opening (use Gauge T109-44—.018") with choke valve tightly closed. Adjust by turning fast idle screw.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control (Dual Carburetor).
Setting—Centered with index mark on air horn.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Fuel Pump: Carter No. M-840-S. Diaphragm type.
Pressure—3½-5½ lbs.
See Carburetor Equipment Section for complete data.

Fuel Tank Filter: Oillite metal filter in tank.
Servicing—If more than 2 pints of water in tank, fuel will not pass filter. Remove filler cap and drain plug, drain tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric type.

See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 2H-135RD or Willard MW-2-135R, 6 volt, 19 plate, 135 Ampere Hour capacity (20 hour rate).
Starting Capacity—170 Amperes for 20 minutes.
Grounded Terminal—Positive (+) grounded.
Location—Under hood in left fender shield.

STARTER

Auto-Lite No. (1951-52) MCL-6109, (Late 1952) MCL-6119. Armature No. MCH-2070 (All).
Drive—Overrunning Clutch. (Solenoid Pinion Shift)
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (New brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Removal: Special box wrench C-455 is required.
Starting Switch: Auto-Lite Solenoid No. (1951) SSX-4001, (1952) SSX-4003 for Starter MCL-6109, SSX-4002 for Starter MCL-6119. Used with separate relay, Auto-Lite No. (1951-52) HRW-4001, (1952) HRW-4001A. Controlled by turning ignition switch past "ON" position.
See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite. Two-brush types with voltage and current regulation.

Model	Auto Lite Gen.
1951—C52, C54, C55 (Early)	GGU-6001T
1951-52—C52, C54, C55	GGU-6001R
1951—C53 (Early)	GGJ-6003A

Performance Data—(GGW)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350
45	8.0	1925-2125 — 2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGU, GGW) 35-53 ozs. **(GGJ)** 30-37 ozs. (with new brushes).
***Field Current*—(GGJ & GGU)** 1.4-1.6 amperes, **(GGW)** 1.4-1.5 amperes, all at 5.0 volts.
Motoring Current—(GGJ) 4.1-4.6 amperes, **(GGU)** 5.0-6.0 amperes, **(GGW)** 4.8-5.3 amperes, all at 5.0 volts.

Belt Adjustment: Loosen pivot and clamp bolts, adjust generator so that ¾" slack will be obtained when pressure is applied between pulleys.
Fan Belt Adjustment—*See "Cooling" for belt adjustment.*

REGULATOR

Auto-Lite. Voltage and current types.

Auto-Lite Regulator No.	For Generator
VBA-4202A or ①VBA-4204A	"GGJ" Gen.
VBF-6001A or ①VBF-6002A	"GGJ" Gen.
VAV-6001B or ①VAV-6002B	"GGU" Gen.
VBE-6001A	"GGW" Gen.

①—For Negative Ground.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seal not broken (to remove cover).

Cutout Relay

Cuts In (All)—6.3-6.8 volts. Set to 6.4-6.6 volts.
Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. disch).
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—(VAV, VBA, VBE) 7.1-7.4 volts, **(VBF)** 7.15-7.45 volts at 70°F. while charging at ½-maximum rate (VAV & VBE), 10 amperes (VBA & VBF). *See Electrical Equipment Section for settings at other temperatures.*
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

Current Regulator

►*CAUTION—"Temperature Compensated" types. Set to following specifications at 70°F. See Electrical Equipment Section for settings at other temperatures.*

Regulator	Operating Amperes Test A	Test B
VAV-6001A, 2B	55	50 (48-52)
VBA-4202A, 4A	56	50 (48-52)
VBE-6001A	52	45 (43-47)
VBF-6001A, 2A	66	55 (53-57)

Test A—After 15 minutes run at 10 amperes (VBA, VBF), at ½ maximum output (VAV, VBE).
Test B—After additional 15 minutes operation with current regulator operating and with load applied to hold voltage down to 6.7-6.9 volts (VAV, VBE), 6.7 volts (VBA), 6.7-7.0 volts (VBF).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type with "Bull's Eye" lense.
See Electrical Equipment Section for complete data.
Beam Indicator—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.
Directional Signal: *See Electrical Equipment Section.*
Directional Signal Indicator—In lower left corner of speedometer face.
Directional Signal Flasher—Chrysler No. 1257223.

Switches

Lighting—Chrysler No. 1339691.
Beam Selector—Chrysler No. 1253003.
Direction Signal—Chrysler No. 1370454 (exc. following models), No. 1370455 (C53 8-Pass. Sedan & C54 4-Dr.), No. 1345562 (C53 Limo).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

MISC. ELECTRICAL

CIRCUIT BREAKERS Lighting—30 ampere. Vibrating type, protects lighting circuits.
Aux. Circuit Breaker—8 ampere. Protects Windshield Wipers and Back-Up Light.
Transmission Solenoid—Vibrating type mounted as an assembly with resistor unit.
Convertible Top—Mounted near control switch. Thermostatic type. Opens at 80 amperes in 1 minute or less.

FUSES: Clock—3 amperes. In clock lead.
Radio—14 amperes. In fuse connector at radio.

HORNS: Auto-Lite No. (1951) HW-4107 (Low Pitch), HW-4108 (High Pitch); (1952) No. HW-4203 (Low Pitch), HW-4204 (High Pitch).

Horn Relay: Auto-Lite Model HRL-4104. Connected through ignition switch. Operated only with ignition "on".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATION: 8 cyl. "V" type, valve-in-head.
Bore—3 13/16". **Stroke**—3 5/8".
Displacement—331.1 cu. in. **Rated HP.**—46.5.
Developed Horsepower—180 at 4000 RPM.
Compression Ratio—7.5-1 Std. cast iron head.
Compression & Vacuum Reading—*See Tune-Up data.*

ENGINE REMOVAL: Work engine out toward left front fender. Not necessary to remove heater assembly or transmission.

OIL PAN REMOVAL: Remove oil level indicator, drain oil, and remove starter motor and exhaust crossover pipe. Remove oil pan attaching bolts and drop pan straight down and away from engine. To install, reverse removal procedure.

TIGHTENING TORQUES: *See Chrysler Special Data.*

CYLINDER HEAD: Tightening Torque & Cylinder Head Diagram—*See Chrysler Special Data.*

PISTONS: Aluminum alloy, Steel-strut, Slipper type, cam ground and tin plated.

▷*OVERSIZE CYLINDER BORE & PISTON CAUTION*—*Engine with letter "A" following engine number indicates that cylinder bore and pistons .020" Oversize. See "Original Bore & Pistons" in Chrysler Special Data.*
Length—3 7/8". **Weight**—20.8 ozs.
Removal—Pistons and rods removed from above.
Clearance—.0005 to .0015" between the thrust face of the piston and the cylinder wall measured ¾" from bottom of piston.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 5-12 lbs., at room temperature (70°F.).

▷*CAUTION—Letter "F" embossed in side of piston near piston pin hole must face front of engine when installed.*

▷*NOTE*—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Replacement Pistons: Standard, .010", .020", .030", .040", .050", .060" Oversize. *See "Pistons" in Chrysler Special Data.*

Installing Pistons: Letter "F" embossed in side of piston near piston pin hole must face front of engine.

PISTON RINGS: Two compression, one slotted oil control, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.010-.020"	.002-.0035"
Oil Control	3/16"	.010-.020"	.001-.0025"

Replacement Piston Rings: *See Chrysler Special Data.*

PISTON PIN: Diameter—63/64". **Length**—3 9/64".
Floating type with locking ring at each end.
Pin Fit in Piston—Thumb push fit in piston at normal room temperature (70°F.).
Pin Fit in Rod—.0001-.0004". Tight thumb push fit at normal room temperature (70°F.).

Replacement Pins: Standard and .003", .008" Oversize.

CONNECTING ROD: Length—6⅝". **Weight**—25.2 ozs. with bolts less bearings.
Crankpin Journal Diameter—2.249-2.250".

▷*JOURNAL DIAMETER CAUTION (ONE OR MORE Journals machined UNDERSIZE). See "CRANKSHAFT" below.*

Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005" to .0015".
End Play—.006-.011" total endplay for two rods.

Bearing Adjustment: None (no shims). Replace bearings. *See "Connecting Rods & Bearings" in Chrysler Special Data.*

Replacement Bearings: Standard size and .001", .002", .010" Undersize.

Installing Rods: Rods are chamfered on one side at bearing insert and must be installed with chamfer toward crankshaft fillet.

▷*CAUTION*—Rods are **interchangeable**, however, when rods are assembled to piston the assemblies of one engine bank are **not interchangeable** with the other bank.

▷*CONNECTING ROD BEARING CAP CAUTION*—The "V" slot across one bolt hole of each bearing cap is an oil passage for lubricating the opposite cylinder wall and piston pin. When installing the bearing cap make certain the "V" slot oil passage is toward the top of engine.

CRANKSHAFT: 5 bearing with vibration dampener on front end.
Journal Diameter—2.4995" to 2.5005".

▷*CRANKSHAFT JOURNAL UNDERSIZE CAUTION*—*Engines with undersize journals identified as follows:* **.010" UNDERSIZE (All Main & Connecting Rod Journals)**—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (⅜" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counter-weight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearings—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005" to .0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

Replacement Bearings: Standard and .001", .002", .010", .012" undersize.
End Thrust—Taken on flange faces of center (#3) main bearing. **Endplay**—.002" to .007".

Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

CAMSHAFT: 5 bearing. Non adjustable chain drive.
JournalDiameters—Nos. 1-2-3-4, 1.998-1.999". No. 5, 1.4355-1.4365".
Bearings—Removable, steel backed, babbitt lined bushings.
Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

Timing Chain: Width 1⅛". Pitch .375". Length 68 links.
Chain Removal & Installation: *See "Timing Chain" in Chrysler Special Data.*

Camshaft Setting: Place crankshaft sprocket "Zero" mark exactly in line with center of camshaft. Temporarily install camshaft sprocket (less chain) and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft sprocket "Zero" mark exactly in line with center of crankshaft. (Use a straight edge to check accuracy of alignment). Remove camshaft sprocket and position it in timing chain and reinstall assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" marks should be in line with shaft centers. Install fuel pump eccentric and camshaft nut. Tighten to 120-130 ft. lbs.

▷*TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing case cover.*

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 13/16"	.3725"	5"
Exhaust	1 1/2"	.3715"	4 29/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.378"	.001-.003"
Exhaust	45°	.362"	.002-.004"

Valve Seat Width—.060-.085" (Int.) .040-.060" (Exh.)
Exhaust Valve Seat Inserts—*See Chrysler Special Data.*
Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of the hole. Ream guide to .374-.375" with tool C-741.
NOTE—If Valve Guide Tool C-3150 is not available,

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

drive guides in, measuring from top of valve seat as follows: **Intake**—31/32". **Exhaust**—1 7/32".

►*CAUTION*—When installing exhaust valve guide, make certain the oil holes in the top of the guide are facing up.

Valve Springs: Two springs used per valve. Install with closed coil toward cylinder head.
Free Length—Outer 2". Inner 1⅞".

Outer	Spring Pressure	Length
Valve Closed	46-51 lbs.	1 11/16"
Valve Open	124-132 lbs.	1 5/16"
Inner	**Spring Pressure**	**Length**
Valve Closed	12-14 lbs.	1 9/16"
Valve Open	35-40 lbs.	1 3/16"

►*CAUTION—Spring ends must be square within 1/16" (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION*—If valves or seats are reground, check installed height of spring. If height is 1 23/32" or greater, install a 1/16" spacer (Part No. 1400482) in the head counter-bore to bring spring height back to normal 1⅝-1 11/16".

►*VALVE SPRING LOAD CAUTION—Hydraulic lifter "pump up" will restrict engine speed and cause valves to burn if valve spring loads are not maintained.*

Valve Lifters: Hydraulic type.
Diameter—.9040-.9045". **Clearance**—.0005-.0015".
See "Valve System" in Chrysler Special Data.

►*VALVE LIFTER OVERSIZE CAUTION—.008" OVERSIZE valve lifters used in some engines.* On engines before Engine No. C52-8-18506 the numeral "8" stamped on the machined face of the cylinder block at the right front corner of the valve chamber; and on engines after above number, with a "Diamond" (⅜" high) stamped in engine number pad following engine numbers, indicates that all valve lifters are .008" OVERSIZE.

Removal: *See "Valve System" in Chrysler Special Data.*

►*VALVE GRINDING CAUTION*—If the position of the valve in the head has been changed (due to valve or seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from the valve spring seat in the head to the tip of the valve should be checked with gauge C-3061. If the tip exceeds the maximum, grind tip to approach (but do not go below) the minimum allowable on the gauge. Improper valve clearance at high speed will result if this condition is not corrected.

VALVE TIMING

Tappet Clearance: No adjustment required, except when valves are reconditioned.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 15° BTDC. Close 57° ALDC.
Exhaust Valves—Open 49° BLDC. Close 15° ATDC.
Valve Timing Check—Turn crankshaft until #1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at Zero, turn crankshaft until dial indicator shows that valve has lifted .016". Pointer on chain cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft counter-clockwise until lifter backed down and valve closed, remove spacer from valve stem.

►*CAUTION—Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

►*TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing case cover.*

LUBRICATION

Engine Oiling System: Pressure through "Full-Flow" oil filter to main and connecting rod bearings, camshaft bearings, timing chain and hydraulic valve lifters. "Rotor" type oil pump mounted below rear main bearing cap. Floating type oil strainer is used.
Crankcase Capacity—5 quarts, (add one quart when "Full-Flow" oil filter element is replaced).
Normal Oil Pressure—40-65 lbs. at 40 to 50 MPH.

►*CLOGGED OIL FILTER CAUTION—An oil pressure drop of 15-20 lbs. below normal oil pressure indicates a clogged "Full-Flow" oil filter. Replace filter element.*
Oil Pressure Relief Valve—Mounted in oil pump.

Oil Filter: "Full-Flow" type. All oil enters the lubricating system of engine through filter at full pump pressure. Safety valve in filter opens if element is clogged allowing oil to pass into lubricating system under a reduced pressure of 25-45 lbs.
Filter Element—Chrysler No. 1324999.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is replaced.

Oil Pump: Rotor type. Mounted on rear main bearing cap in crankcase.
Servicing—*See Chrysler Special Data.*

►*OIL PUMP & DISTRIBUTOR DRIVE GEAR INSTALLATION CAUTION: See Chrysler Special Data.*
Priming Oil Pump (After Installation)—Before installing filter assembly, introduce about ½ pint of engine oil into the lower hole of the filter pad with a pressure gun or long nosed oil can.

►*CAUTION—When first starting a new engine or one that has been overhauled, DO NOT EXCEED 650 RPM until oil pressure registers on gauge.*

Oil Pressure Gauge: (1951) Auto-Lite No. (C52) 12479A, (C53, C54) 12466A, (C55) 12461A; (1952) All 12482A. Not electric.

COOLING

Cooling System: Non-Pressure type (under ordinary operating conditions). A pressure vent type radiator cap is used. Under normal operating conditions, pressure is not built up in the system. However, if an abnormal condition develops, such as overheating, or car is driven at excessively high speeds, the valve at the bottom closes, seating against gasket. This action pressurizes the system up to approximately 4 lbs., at which time the valve and seat raise and allow the built-up pressure to escape through the overflow tube.
Pressure Valve—Chrysler No. 1373136. Radiator Filler Cap. Operates at 4 lbs. (see above).
Capacity—25 qts. (without heater).

Water Pump: Packless type with shaft mounted on two ball bearings with lubricant fitting for bearing lubrication.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belts and belt pulley. Remove four bolts attaching pump to water manifold and remove pump.

►*NOTE*—Three drain cocks. One on radiator, one on each engine bank.
Fan Belt Adjustment—Loosen idler pulley pivot bolts and adjust fan to have ½" slack when applying pressure midway between pulleys.
Generator Belt Adjustment—*See "Generator" for adjustment.*

Thermostat: In cylinder head water outlet.

Temperature Gauge: Auto-Lite. Not electric.
C52—(1951 exc. Estate Wagon) No. 12478A & 12600A, (1951 Estate Wagon) No. 12478A, (1952 All) No. 12839A.
C53—(1951 Early) No. 12465A & 12570A, (1951 Late) No. 12596A, (1952) No. 12853A.
C54—(1951) No. 12465A & 12599A, (1952) 12839A.
C55—(1951) No. 12533A & 12601A, (1952) 12839A.

CLUTCH

Borg & Beck Model No. 9.5E (Fluid Drive C52, C54, C55). 10E (Torque Converter—All Models). Single plate, dry disc type.
Identification Note—Assembly No. (9.5E) 1213, (10E) 1211, stamped on cover.
See Clutch Section for complete data.
Facings—Woven type. 2 used. Inside diameter (9.5E) 6", (10E) 6½". Outside diameter (9.5E) 9½", (10E) 10¼". Thickness .125".

Pedal Adjustment: Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.

►*CAUTION*—Do not disturb turnbuckle on pedal link (controls pedal over-center spring tension).
Clutch Over-center Spring—*See "Clutch Note" in Chrysler Special Data.*

Removal (with Fluid-Matic Drive): Remove transmission (see TRANSMISSION) and unhook clutch release fork pull-back spring. Disconnect one end of clutch fork rod assembly from fork by removing cotter key, pin and two washers. Disconnect other end from clutch release bearing torque shaft by removing cotter key, pin and three washers. (*CAUTION*—As soon as rod assembly is removed, push clutch pedal until over-center spring brings it to floor board. This will avoid danger of injury should pedal be pushed in while linkage is disconnected.) To remove release bearing from clutch fork, do not force bearing and pull-back springs straight off from fork prongs. Pivot the release bearing away from the fork. Assembly and springs will slide off easily. Remove two screws holding shaft pivot bracket assembly to clutch housing. Remove opposite end of pivot bracket assembly from torque shaft. Place jack under engine oil pan to support engine (block of wood between jack and pan). Remove clutch housing-to-cross member bolts, then cross member-to-frame bolts and drop cross member from frame. Jack engine down about three inches so clutch housing is far enough below floorboard to permit removal of housing cap screws. Remove cap screws and housing, and remove clutch assembly from clutch drive plate.

Removal (with Fluid-Torque Drive): Remove oil reservoir from bottom of clutch housing and oil lines from converter support plate before proceding as outlined above.
See Chrysler Fluid-Torque Drive in Transmission Section.

CONTINUED FROM PRECEDING PAGE

AUTOMATIC TRANSMISSION

Hydraulically Operated Type (with Fluid Drive & Fluid Torque). New design semi-automatic, four speed transmission with hydraulic actuation and electrical control.

▷*TESTING & TROUBLE SHOOTING: See "Chrysler Automatic" Transmission in Transmission Section.*

▷**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*

Transmission Control: *See Transmission article for adjustment directions.*
Kickdown Solenoid—Auto-Lite No. SSS-4003.
Governor—Auto-Lite No. TGG-4001.
Kick-down Switch—Part of carburetor assembly. *See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Ignition Interrupter Switch—On right side of transmission above Governor.
Transmission Oil—3 pints, 10-W engine oil.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.
INSTALLATION CAUTION—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

▷*OTHER DATA: See "Chrysler Automatic" Transmission in Transmission Section.*

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine.
See Transmission Section for complete data.

Slippage Test—*See 'Fluid Drive" in Transmission Section for complete data.*

Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

FLUID-TORQUE DRIVE

Own Make. Torque Converter (four element, single stage type). *NOTE—This type has SEPARATE OIL SYSTEM.*

Oil Level: Bottom of filler plug hole. Replenish to this point if fluid is low.
Capacity—10½ qts.

Draining & Refilling: Check every 1000 miles and change oil every 20,000 miles using MOPAR Fluid Drive Fluid. *NOTE—This supersedes previous change interval of 10,000 miles.*
See Transmission Section for complete data.

Removal: *See "Chrysler Fluid-Torque Drive" in Transmission Section.*

UNIVERSALS

Detroit Universal Series 7300—Cross type with roller bearings. Two used (3 on C53, 8 pass., and Limo.).

Propeller Shaft Center Bearing: Used on C53.
See "Propeller Shaft" in Chrysler Special Data.

REAR AXLE

Own Make—Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.
See Rear Axle Section for complete data.
Ratio—(C52, C53, C54) 3.73-1 (C53) 3.54-1
Backlash—.006-.010". Screw adjustment.
Ring Gear Thrust Pad Setting—Loosen locknut on left side of carrier housing, tighten thrust pad screw finger tight, back screw off ⅛ turn, tighten locknut.

Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030", thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow" hydraulic, direct acting, non-adjustable type. Service by replacement.

FRONT SUSPENSION

Front Suspension: Independent linked parallelogram type with coil springs and direct acting shock absorbers.

▷*FRONT SUSPENSION PRODUCTION CHANGE & "SHIMMY" CORRECTION—See Front Suspension Section for complete data.*

Kingpin Inclination—(C52, C54, C55) 5° to 6½° (C53) 6½° to 8° crosswise.
Camber—Neg. ⅜° to Pos. ⅜°. (¼-½° higher on left).
Caster—Neg. 1° to Neg. 3°, (Neg. 2° preferred).
Toe-In—0" to 1/16", (0" preferred).
Toe-Out on Turns—Inner wheel 21½° with outer wheel at 20°.

STEERING GEAR

Own Make. Standard (C52, C54, C55), 3 tooth worm-and-roller. Similar to Gemmer Model 335.
See "Gemmer 335" steering gear in Steering Gear Section for complete data.

Power Steering (Hydraguide): Gemmer. Standard (C53), Optional (All others). Gemmer hydraulic steering unit. Oil pump on generator operates piston connected to steering cross-shaft. Controlled through a valve block assembly actuated by steering shaft. *See Steering Gear Section for complete data.*

▷*FRONT WHEEL SHIMMY CORRECTION (Power Steering Cars): See "Chrysler, DeSoto, Dodge, Plymouth Front Suspension" in Front Suspension Section.*

▷*PRODUCTION & REPLACEMENT PARTS CHANGES FOR IMPROVED PERFORMANCE: See "Gemmer Hydraguide" in Steering Section.*

BRAKES

SAFE GUARD TYPE

Service: Chrysler "Safe-guard" Lockheed Hydraulic.
See Brake Section for complete data.

▷*BRAKE SQUEAK OR SQUEAL CORRECTION—See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*
Drums—Centrifuse. Diameter 12".
Lining—Molded asbestos, bonded to shoe. Width 2". Thickness (1951) 3/16", (1952) 13/64". Length per wheel 25⅛".
Clearance—.006" at each end of shoes.
Braking Power—60% front wheels, 40% rear.

Power Brake: Vacu-Ease vacuum power unit.
See Brake Section for complete data.

Hand Brake: On shaft at rear of transmission. Internal type.
Adjustment—*See "Hand Brake Notes" in Chrysler Special Data.*
Drum—Cast iron. Diameter 7".
Lining—Width 2". Thickness 5/32". Two shoes, total length 13 1/16".
Clearance—Adjusting nut on shoe link backed off one notch from point where shoes firm against drum.

DISC TYPE

Service: Hydraulic self-energizing, two-shoe, DISC type. NOTE—No power booster used.
See Brake Section for complete data.
Disc Face Diameter—I.D. 9", O.D. 12".
Lining—Molded asbestos segments (12 used).
Lining—Molded asbestos segments bonded to disc. Thickness (1951) 3/16", (1952) 5/32".

▷**Bleeding Disc Type Brakes**—Manufacturer recommends bleeding all four lower wheel cyls. first, then all four upper ones last.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite "EWJ" electric type.
1951 (Early)—Auto-Lite No. EWJ-4003 (exc. 8 Pass. & Limo.), No. EWJ-4001A (8 Pass. & Limo. only).
1951 (Late) & 1952 (Early)—Auto-Lite EWJ-4001A.
1952 (Late)—Auto-Lite No. EWJ-4007A.
See Miscellaneous Section for complete data.

WINDOW REGULATORS: Auto-Lite Electric type. Windows are individually powered.
See Miscellaneous Section for complete data.

CONVERTIBLE TOP CONTROL: Hydro-Lectric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post. First Serial Nos. as follows:

	Detroit	Los Angeles
1952 Models:		
C51-1 Windsor	70,094,301	65,008,901
C51-2 Windsor Deluxe	70,952,301	67,033,301
1953 Models:		
C60-1 Windsor	70,110,001	65,011,001
C60-2 Windsor Deluxe	71,005,001	67,040,001

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

►***ENGINE NUMBER LETTERS (Following Engine Number)—Identified as follows:***
"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21 idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .035". Limits plus or minus .001". **Plugs**—Auto-Lite Resistor Type AR8 (1952-53), Type 4S140 (Late 1953), 14 mm. *NOTE*—4S140 is in same heat range as AR8 and can be used for replacement.

DISTRIBUTOR: Auto-Lite (1952) No. IAT-4012, (1953) No. IAT-4102 (U.S. Cars), No. IAT-4012 (Canada). Automatic and vacuum advance type with "pivoted breaker plate."
Breaker Gap—.018-.022" (Set at .020" maximum).
Cam Angle—36-42°. DO NOT exceed breaker gap limits to obtain dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

►***DISTRIBUTOR REMOVAL CAUTION—To avoid damage to No. 3 & No. 4 pistons when removing distributor, make sure that No. 3 & No. 4 pistons are at the top of their stroke.***

COIL: Auto-Lite CR-4001 (U.S. Cars), CR-6007B (Canada), On bracket above distributor.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IAT-3076RA.
Capacity—.25-.28 microfarad.

IGNITION TIMING: TDC (Standard Setting). Distributor may be advanced 4° or retarded 4° depending on fuel and altitude.
Timing Mark—On vibration dampener.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter (B&B) Model E9C1 (Synchro-mesh Trans. Cars), Model E9A1 (Auto. Trans. Cars) Downdraft type with automatic choke control.

►***NOTE—Carburetor Specifications are the same for both carburetors, except where noted.***
Idle Setting—Set idle adjusting screw for smooth idling with engine warm (idle screw ½ to 1½ turns open). Turn screw out for richer mixture.
Idle Speed—**(Std. Trans).** Adjust to 6 MPH.
Automatic Transmission—475-500 RPM.
Float Level—Top of float (not soldered seam) 5/64" plus or minus 1/64", below top edge of bowl.
Accelerating Pump—**Normal Setting,** center hole. **Summer,** Inner hole. **Winter,** Outer hole.

Fast Idle: .018" throttle opening with choke valve held closed and throttle stop screw backed off.

Choke Adjustment: Cover 'mark' centered on index. *Do not change setting for hot or cold weather.*

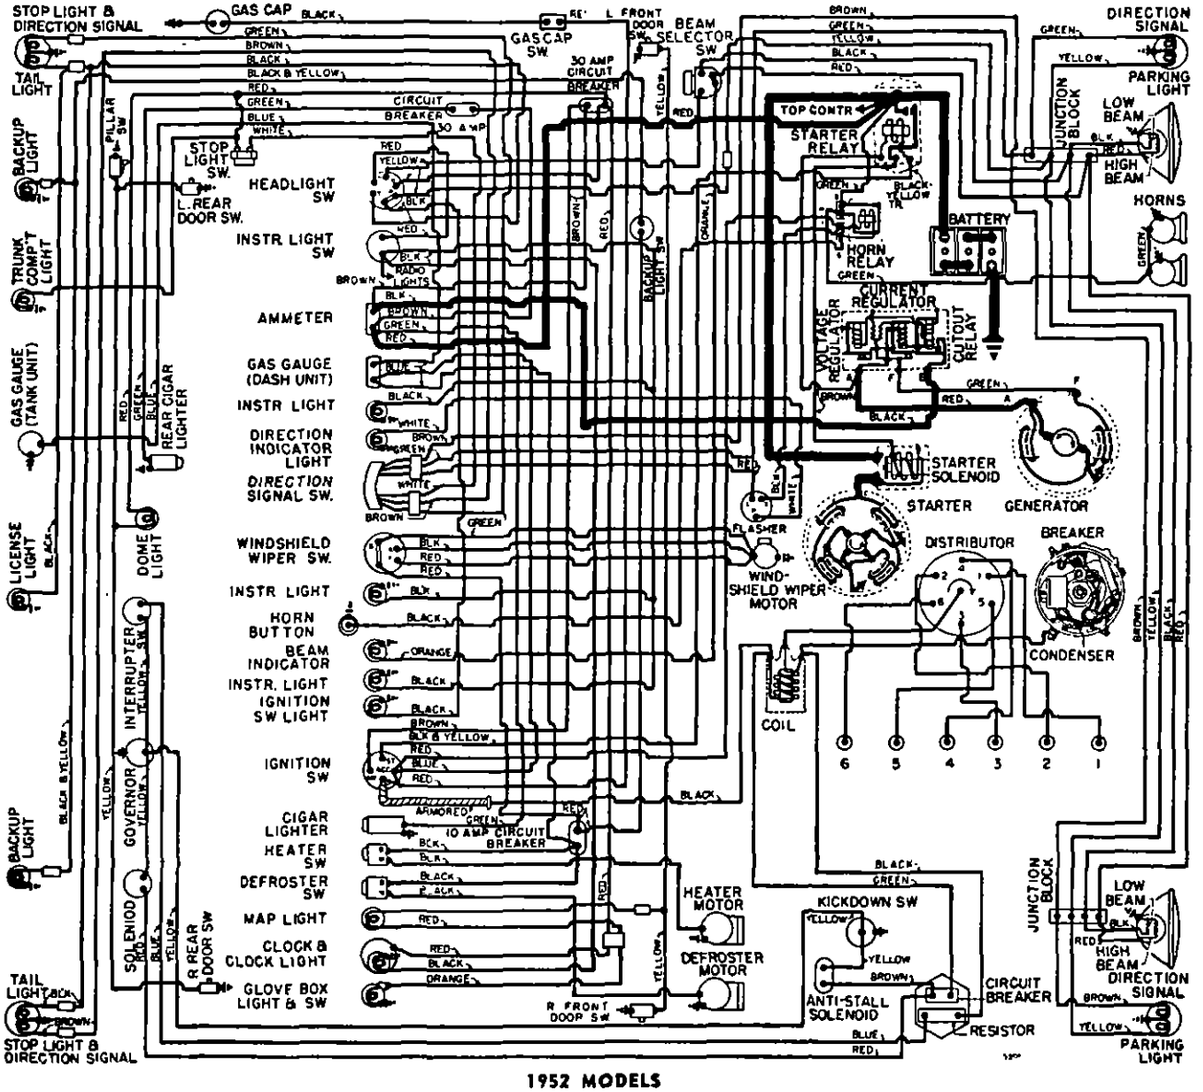
Slow-Closing Throttle: Solenoid type. Non-adjustable.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approximately ¾ turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake. .010" Exhaust. Engine must be hot and idling. NOTE—Tappet screws self locking. Remove right front wheel and lower wheel housing panel for access to valves.

IGNITION



IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "On" position when released.

COIL: Auto-Lite CR-4001 (U.S. Cars), CR-6007B (Canada). On bracket above distributor.
Ignition Current—2.25 amperes idling. 5 stopped.

CONDENSER: Auto-Lite No. IAT-3076RA.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite (1952) No. IAT-4012, (1953) No. IAT-4102 (U.S. Cars), No. IAT-4012 (Canada). Automatic and vacuum advance type with "pivoted breaker plate."
Breaker Gap—.018-.022" (Set at .020" maximum).
Cam Angle—36-42°. DO NOT exceed breaker gap limits to obtain dwell.

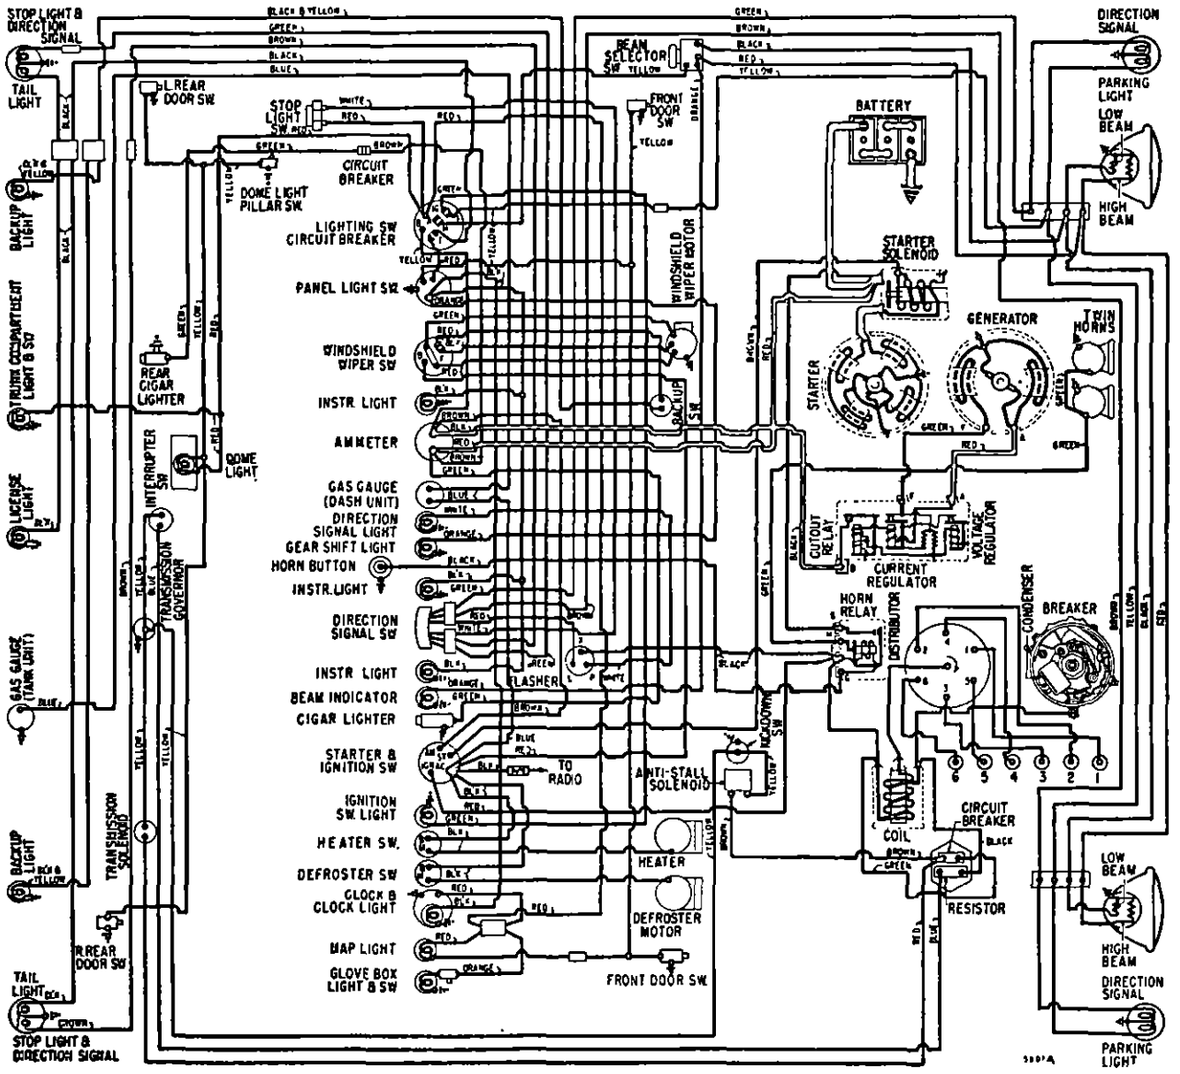
1952 MODELS

CONTINUED FROM PRECEDING PAGE

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise view from above.

Automatic Advance—IAT-4012, 4102



Distributor Degrees	RPM	Engine Degrees	RPM
Start	350	0	700
1	450	2	900
5	800	10	1600
9	1300	18	2600
10	1425	20	2850

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance—IAT-4012, 4102

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7¼"
4°	8°	9⅜"
6°	12°	11⅝"
9°	18°	15"

▷***DISTRIBUTOR REMOVAL CAUTION—To avoid damage to No. 3 & No. 4 pistons when removing distributor, make sure that No. 3 & No. 4 pistons are at the top of their stroke.***

1953 MODELS

IGNITION TIMING

Setting ..... **TDC**

NOTE—This is standard setting for regular non-premium fuel at sea level. See Manual Adjustment (following):

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor by loosening lockplate hold-down screw and centering pointer on scale, tighten screw. Loosen lock plate clamp bolt, rotate distributor until correct mark in line with pointer.

Manual Adjustment—Set to give slight ping between 10-30 MPH when accelerating from 10 MPH with wide open throttle. Adjust distributor (not over 4° before or after initial setting).

CARBURETOR

Carter (Ball & Ball)—Model E9C1 (Synchro-mesh Trans. Cars), Model E9A1 (Automatic Trans. Cars). 1½" single barrel down-draft type. Slow closing throttle and Kick-down Switch used for hydraulic operated transmission.

See Carburetor Section for complete data.

Settings (Idle Setting, Float Level and Accelerating Pump): ***See Tune-Up.***

Metering Jet—***See Carter (B&B) Jet Table in Carburetor Section for complete data.***

Slow Closing Throttle: Solenoid type. Non-adjustable.

See Carburetion Equipment Section for complete data.

Fast Idle: Setting .018" throttle opening with choke valve held closed and throttle stop screw backed off.

Automatic Choke: *Carter Climatic Control.*

Setting—Centered (coil housing at index mark). ***Do not change setting for hot or cold climate.***

See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC Heavy Duty Oil-bath type. Replacement Filter Element AC No. 21.

Fuel Pump: Carter No. M-639SL, SZ, SA. Vacuum diaphragm type.

Pressure—3½ to 5 lbs.

See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oillite metal filter in tank.

Servicing—If more than 2 pints of water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit—Auto-Lite No.	Early 1952	1952-53
All exc. Estate Wgn.	12462A	12841A
Estate Wagon	12463A	12847A
Tank Unit—Auto-Lite No.	1952	1953
All exc. Estate Wgn.	11538A	12617A
Estate Wagon	12195A	12195A
8 Pass. Sedan		11538A

See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite Type 2H-120-D or Willard HW-2-120C. 6 Volt, 17 Plate, 120 Ampere Hour (20 hr. rate).

Grounded Terminal—Positive to engine.

Location—Under hood on left fender shield.

STARTER

Auto-Lite MCL-6109 (First 1952 Cars), MCL-6116 (Late 1952 Cars), MCL-6117 (1952 Hydra-guide & All 1953 Cars).

Armature No.—Auto-Lite MCH-2070 (All models).
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—*42-53 ozs. (new brushes).*

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid No. SSX-4003 (Early 1952 & All 1953), SSX-4002 (Late 1952). Combination solenoid pinion shift and starting switch controlled by ignition switch (by turning key past "on" position) with SEPARATE relay on Fluid Torque Drive Cars only.
Starter Relay—Auto-Lite No. HRW-4001 (Early 1952), No. HRW-4001A (Late 1952 & 1953).
See Electrical Equipment Section for complete data.
►**Neutral Safety Switch (1953 Fluid Torque Drive Cars):** Connected in relay-to-regulator line so that starter operative only with gear selector lever in Neutral.

GENERATOR

Auto-Lite. Two brush type with voltage and current regulation.

Auto-Lite Gen. No.	1952	1953
Standard	GGW-6001J	GGW-6001K
Auto. Trans.	GGU-6001V	
Hydraguide (Early)	GGW-6007B	GGW-6008B,D GGJ-6004A,B,C,D GGU-6006B,C
Hydraguide (Later)	GGW-6008B	①GGW-6008G ①GGU-6006G,H
Police	GGJ-6001F,G GGU-6001G,R	GGJ-6001F,G GGU-6001G,H

①—With Single V-belt pulley.
Charging Rate Adjustment—None. See Regulator.

Performance Data—GGJ

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	600-700	650-750
50	8.0	1400-1600	1550-1750
55	8.0	1500-1700	1650-1850

Performance Data—GGU

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850
50	8.0	1550-1750	1750-1950

Performance Data—GGW

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGW, GGU) 35-53 ozs., (GGJ) 30-37 ozs. with new brushes.
Field Current—(GGW) 1.4-1.5 amperes, (GGJ & GGU) 1.4-1.6 amperes, all at 5.0 volts.
Motoring Current—(GGW) 4.8-5.3 amperes, (GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, all at 5.0 volts.
Belt Adjustment: ¼" belt deflection or 40-50 lbs. tension with scale attached to field frame.

REGULATOR

Auto-Lite—Voltage and current type, "Temperature Compensated" Current regulator.

Auto-Lite Regulator No.	Generator
VBE-6001A	All "GGW" Gen.
VBF-6001A & VBF-6002A①	All "GGJ" Gen.
VAV-6001B & VAV-6002B①	All "GGU" Gen.

①—For Negative Ground.

Cutout Relay
Cuts In—6.3-6.8 volts.
Cut Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—*.015" minimum.*
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator
Setting—(VBE & VAV) 7.1-7.4 volts (VBF) 7.15-7.45 volts at 70°F. after 15 minutes operation charging at ½ maximum rate (VBE & VAV), 10 amperes (VBF).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator
►***SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.***

Test A—Operating Amperes—Test B	
All "VBE" Reg.	52 — 45 (43-47)
All "VBF" Reg.	66 — 55 (53-57)
All "VAV" Reg.	55 — 50 (48-52)

Test A—After 15 minutes operation charging at 10 amperes (VBF), ½ maximum rate (VBE & VAV).
Test B—After aditional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-7.0 volts).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

►***EARLY 1953 CARS CAUTION: 1952 type Lighting Switch and SEPARATE Lighting Circuit Breaker used on some early 1952 cars. See data below and 1952 Wiring Diagram for these cars.***
Headlamps: "Sealed Beam" type with "Bulls-eye" lens. *See Electrical Equipment Section for data.*
Beam Indicator—Lighted when upper beam in use. Located on lower right corner of speedometer face.
Directional Signal: *See Electrical Equipment Section.*
Directional Signal Indicator—In lower left corner of speedometer dial.

Switches
Lighting—Chrysler (1952) 1339691, (1953) 1495860.
Beam Selector—Chrysler No. 1253003.
Instrument—Chrysler No. 1383903.
Directional Signal—Chrysler No. (1952) 1370454, (1953) 1495297.

MISC. ELECTRICAL

CIRCUIT BREAKERS (1952): Lighting—30 ampere. Mounted on rear of instrument panel to left of ammeter. Protects Headlights, Tail & Stop Lights, and Instrument panel lights.
Accessory Circuit Breaker—8 amperes. Mounted on rear of instrument panel to right of fuel gauge. Protects Back-up Light, and Windshield Wiper Motor.

CIRCUIT BREAKER (1953): In headlight switch assembly. Two 10 amperes, and one 20 amperes circuit breakers protect headlight, tail & stop light, accessory and interior lighting circuits. Back-up lights protected by windshield wiper circuit breaker.
►***CAUTION—See "Early Cars Caution" under LIGHTING for SEPARATE Circuit Breaker used on first cars.***

FUSES: Clock—2 amperes. In clock lead wire.
Radio—14 amperes. In fuse connector at radio.

HORNS: Auto-Lite. Twin horns with relay.

Auto-Lite No.	Low Pitch	High Pitch
1952	HW-4203	HW-4204
1953 (Early)	HW-4107	HW-4108
1953 (Late)	HAB-4103	HAB-4104

Horn Relay: Auto-Lite No. HRL-4104. Connected through ignition switch, operates only when ignition "ON."
Contacts Close—*1.5-3.0 volts (seal to core with 4.0 volts maximum).*
Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder "L" head
Bore—3 7/16". **Stroke**—4¾".
Displacement—264.5 cu.in. **Rated HP**—28.36.
Developed Horsepower—119 at 3600 RPM.
Compression Ratio—7.0-1.
Compression & Vacuum Reading—*See Tune-Up.*
ENGINE REMOVAL: *See Chrysler Special Data.*
OIL PAN REMOVAL: *See Chrysler Special Data.*
CYLINDER HEAD & TIGHTENING TORQUES: *See Chrysler Special Data.*
►***MANIFOLD INSTALLATION CAUTION: See "Manifolds" in Chrysler Special Data.***
►***CRANKSHAFT REAR MAIN BEARING PRODUCTION CHANGE & REPLACEMENT CAUTION: See CRANKSHAFT below.***
PISTONS: Aluminum alloy, U-slot, cam ground type.
►***CYLINDER BORE OVERSIZE CAUTION—Engines with letter "A" following engine number indicates that cylinder bore .020" oversize.***
Weight—18.5 ozs. (Stripped).
Clearance—.0005-.0010", ¾" from piston bottom.
Removal—Pistons and rods removed from above.
Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002 x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 6-9 lbs., at room temperature (70°F).
Replacement Pistons: Furnished Std., .005", .020", .030", .040", .060" Oversize. *See "Pistons" in Chrysler Special Data.*
►***NOTE***—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" requires reboring and honing to above limits.
Installing Pistons: Slot away from camshaft.
PISTON RINGS: Two compression, 2 slotted oil rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil (#3, 4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compression, with step on inner edge up. #2 Compression with step on inner edge up (step down if step on outer edge).
Replacement Rings: Std., .005", .020", .030", .040", .050", .060" Oversize. *See "Piston Rings" in Chrysler Special Data.*
PISTON PIN: Diameter—55/64". **Length**—2⅞". Floating type with locking ring at each end.
Pin Fit in Piston—.0000-.0005". DOUBLE THUMB push fit at room temperature (70°F.).
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at room temperature (70°F).
Replacement Pins: Std. & .003", .008" O.S.

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

CONNECTING ROD: Length—7⅞". Weight—32.4 ozs.
Crankpin Journal Diameter—2.124-2.125".
▷*JOURNAL DIAMETER CAUTION—(ONE OR MORE journals machined UNDERSIZE)—See "CRANKSHAFT" below.*
Lower Bearings—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015" desired. Maximum—.0025".
Sideplay—.006-.011".
Bearing Adjustment: None. Replace bearings. *See "Connecting Rods & Bearings" in Chrysler Special Data.*
Replacement Bearings: Std., .001", .002", .010", .012", .020", .030", .040", Undersize.
Installing Rods: Oil metering hole toward camshaft.
CRANKSHAFT: 4 bearings with vibration damper.
▷*REAR MAIN BEARING PRODUCTION CHANGE (Fluid Torque Drive Cars Beginning Eng. No. C-53-32527):* New type bearing (Part No. 1450665—Std.), used in production and MUST BE USED for replacement on Fluid Torque Drive Cars. This bearing should be installed in all replacement engines for cars with Fluid Torque Drive.
IDENTIFICATION NOTE—Bearing has single oil groove (in center of bearing surface) and upper and lower bearing halves are identical in appearance.
Journal Diameters—2.4995-2.5005".
▷*CRANKSHAFT JOURNAL UNDERSIZE CAUTION—Engines with undersize journals identified as follows:*
.010" UNDERSIZE (ALL Main & Connecting Rod Journals)—Letter "B" stamped with engine serial number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (⅜") stamped on the machined surface at the upper right hand corner of the block (adjacent to front cylinder exhaust port) to signify that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the crankshaft center counter-weight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearing Type—Removable, precision type, thin babbit on steel. No shims.
Clearance—.0005-.0015".
Bearing Adjustment: None. Replace bearings. *See "Crankshaft & Main Bearings" in Chrysler Special Data.*
Replacement Bearings: Furnished Std., .001", .002", .010", .012", .020", .030", .040", Undersize.
Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*
End Thrust: Taken by flanged faces on rear (#4) main bearing. **Endplay**—.003-.007".
CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—(1) 2"; (2) 1 31/32"; (3) 1 15/16"; (4) 1 1/4".
Bearing Type—Removable steel backed babbitt lined bushings (except #4 machined in block).
Clearance—.0015-.0035". NOTE—If clearance exceeds .005" (measure with dial indicator placed against cam lobe and pry cam toward indicator), install new camshaft for test and if clearance is greater than .0035", replace bearings.
Camshaft Removal—*See "Camshaft & Bearings" in Chrysler Special Data.*
End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".
Timing Chain: Width 1". Pitch .500". Length 24".
Timing Chain Removal—*See "Timing Chain" in Chrysler Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets so that "O" marks on sprockets are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.718"	.3405-.3415"	4 27/32"
Exhaust	1.531"	.3395-.3405"	4 27/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.365"	.001-.003"
Exhaust	45°	.365"	.002-.004"

Valve Seat Width—7/64" maximum.
Valve Seat Insert (Exhaust)—Removal & Installation. *See "Valve System" in Chrysler Special Data.*
Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to give correct valve stem clearance (See Valve Stem Clearance above).
Valve Springs: Install with closely coiled end up.
Free Length—2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	110-120 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below).
Stem Diameter—.6235-.6240". Ream holes from above (pilot in guide). **Oversizes** .001", .008", .030".
Lifter Clearance in Block—.0000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust (hot and idling). NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.
Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance, No. 6 intake valve should open with No. 6 piston with range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on timing chain cover case. Reset tappet clearance.

LUBRICATION

Engine Oiling System: Pressure through "Full-flow" oil filter to main and connecting rod bearings, camshaft bearings and timing chain.
Crankcase Capacity (Fl. Dr. Cars)—5 qts. refill.
Crankcase Capacity (Fluid-Torque Cars with COMBINED Fluid Torque & Eng. Oil System)—13 qts. *See "Chrysler Fluid-Torque Drive" in Transmission Section for complete Lubrication data.*
Normal Oil Pressure—40-60 lbs. at 40-50 MPH with warm oil. (40-65 lbs., with torque converter).
▷*OIL PRESSURE CAUTION—Oil pressure will drop to 25-40 lbs. WHEN FILTER ELEMENT IS CLOGGED. Replace filter element.*
Oil Pressure Relief Valve—Oil pressure relief valve opens at 40-60 lbs. Under plug on left side of crankcase ahead of the oil line to provide additional oil at idling speeds. Adjustable by replacing spring (3 types). (1) Standard Spring painted BLUE. (2) Lighter than Standard painted RED. (3) Heavier than Standard GREEN. *CAUTION—Replace spring with new spring of same color.*
Oil Pan Removal: *See Chrysler Special Data.*
Oil Pump: Rotor type on right side of crankcase.
Oil Pump Overhaul—*See Chrysler Special Data.*
Removal—Remove distributor cap and turn engine over until #1 cylinder is in firing position (allow engine to remain in this position while pump off engine). Remove two oil pump Allen-head screws.
Oil Filter: "Full-flow" type. All oil (including torque converter oil on Fluid Torque Drive Cars) passes through filter before entering engine oil channels. Safety valve in filter will open, if element is clogged, allowing oil to pass directly to engine.
Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required).
▷*OIL FILTER CAUTION—If oil pressure drops to 25-40 lbs., FILTER IS CLOGGED. Replace filter element.*
Oil Pressure Gauge: Auto-Lite (not electric).

Auto-Lite No.	First Cars	Later Cars
1952	12461A	12482A
1953	12842A	13209A

COOLING

Cooling System: Positive circulation with pump on front of engine. By-pass thermostat, and water distributor tube in cylinder block behind pump.
Pressure Valve—Chrysler No. (1952) 1346849, (1953) 1373136. Radiator Filler Cap. Opens at 7 lbs.
Capacity—15 quarts. (16 quarts with heater).
Radiator Removal: *See Chrysler Special Data.*
Water Pump: Packless type. Grease fitting for lubrication. *See Water Pump Section for complete data.*
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs. Remove pump.
Belt Adjustment: See Generator Belt Adjustment.
Thermostat: By-pass type in cyl. head water outlet.
Setting—Starts to open 157-162°. Fully open 183°
Temperature Gauge: Auto-Lite (not electric).
Auto-Lite No. (Early 1952) 12792A, (Late 1952 & 1953) 12839A.

CLUTCH

Borg & Beck	Model	Assy. No.
Synchro-mesh Cars	10A7	1331
Fluid Dr. & Auto. Trans.	9A7	1329
Fluid-Torque Drive	9.5E	1220

See Clutch Section for complete data.
Facings—Molded woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
9.5E	6"	9¼"	.125" (⅛")

Pedal Adjustment: Adjust stop screw on lower end of pedal and adjusting nut on connector link at fork.
Pedal Free Play (at outer end of clutch fork)—⅛" to 5/32". (At Pedal Pad)—1" to 1⅛".
Removal: Remove release fork pull-back spring. Remove Transmission (See Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, assembly.
Clutch Over-center Spring—*See "Clutch Notes" in Chrysler Special Data.*

FLUID DRIVE

Chrysler—Fluid coupling at rear of engine. Optl. *See Transmission Section for complete data.*
Slippage Test: Maximum engine RPM should be 1100

RPM in direct drive with car stationary and engine properly tuned up. If speed higher, check for leakage low oil level. Use Mopar Fluid Drive Oil.
See "Fluid Drive" in Transmission Section for data.
Removal: Remove Transmission and Clutch (See Transmission Removal), take off driver flange stud nuts (Tool C-589), lower fluid coupling out.

FLUID-TORQUE DRIVE

Own Make. Four element, single stage type Torque Converter used with hydraulically-operated transmission. *Torque Converter unit cannot be disassembled and should be replaced if repairs necessary.*
►*1953 FLUID TORQUE REACTION & TURBINE SHAFT PRODUCTION CHANGE & REPLACEMENT PARTS CAUTION: See "Chrysler Fluid-Torque Drive" in Transmission Section.*
►*FLUID TORQUE NOTE:* Oiling system is combined with that of the engine and no separate oil pump or oil reservoir is used. Torque converter is fed from engine oiling system through a main oil gallery opening at the rear of the block into the torque converter housing inlet oil passage. Pressure is regulated by ball regulator valve in turbine shaft.
See "Chrysler Fluid-Torque Drive" in Transmission Section for complete data.
Oil Level: Maintain engine oil level at correct level as indicated on engine oil level dipstick.
Draining & Refilling: Drain and refill twice each year (Spring and Fall) or as required by seasonal temperature changes. Special driving conditions will require more frequent oil changes.
►*CAUTION—CHANGE FILTER ELEMENT EVERY 5000 MILES. See Lubrication.*
Removal: *See "Chrysler Fluid-Torque Drive" in Transmission Section.*

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant-mesh, synchro-mesh (second & high), sliding gear (low & reverse). *See Transmission Section for complete data.*
Transmission Control: Manual steering column shift.
See Transmission Section for complete data.
Removal: Jack up front of car, disconnect front universal (loosen companion flange nut if disassembling transmission—See Chrysler Special Data for Propeller Shaft Center Bearing Removal on 8-pass.). Disconnect speedometer cable, hand brake cable, gear shift rods. Remove transmission-to-clutch housing cap screws and nuts. Pull unit to rear, down and out of car. NOTE—Use pilot studs when installing assembly.

AUTOMATIC TRANSMISSION

Fluid-Matic Drive (with Fluid Coupling), Fluid-Torque Drive (with Torque Converter). Semi-automatic 4-speed transmission with hydraulic actuation.
See Transmission Section for complete data.
►*TRANSMISSION SELECTOR LEVER ADJUSTMENT (To correct difficult shifting)—See Transmission Section for complete data.*
►*TESTING & TROUBLE SHOOTING: See Transmission Section.*
Capacity—3 pints, 10-W engine oil.
Transmission Control: *See Transmission Section.*
Kickdown Solenoid—Auto-Lite No. SSS-4003.
Governor—Auto-Lite No. TGG-4001.
Neutral Safety Switch (Fluid-Torque Drive)—Chrysler No. 1440209.
Kick-down Switch—Part of carburetor assembly.
Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gear shift rods at transmission. Drain Transmission, REPLACE DRAIN PLUG. Disconnect transmission mounting bolts and lower assembly out of car.
►*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting.
►*OTHER TRANSMISSION SERVICE DATA: See Transmission Section.*

UNIVERSALS

Detroit Universal. Cross type with roller bearings.

Propeller Shaft Center Bearing: Used on 8-Passenger.
See Chrysler Special Data.

REAR AXLE

Own Make. Semi-floating hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

1952 Ratios:	Except 8 Pass.	8 Pass. & Sta. Wgn.
Std. & Fluid-Matic	3.9-1 (39-10)	3.73-1 (41-11)
Fluid-Torque Cars	4.1-1 (41-10)①	3.73-1 (41-11)

1953 Ratios:	Except 8 Pass.	8 Pass. Cars
Std. & Fluid-Matic	3.9-1 (39-10)	4.1-1 (41-11)
Fluid-Torque Cars	3.73-1 (41-11)	3.91-1 (43-11)

①—3.54-1 (39-11) on Sta. Wgn. models.
Removal: Disconnect rear universal, remove axle shafts (see below), and carrier assembly capscrews. Withdraw carrier assembly from housing.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at brake cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (Use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.
Axle Shaft Outer Seal: Leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle Notes" in Chrysler Special Data.*
Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow." Direct acting, hydraulic type. Serviced by replacement.

Chrysler No.	Front	Rear
1952 (Early)	1321127	1321128
1952 (Late)	1326164	1321128
1953	1326164	1326165
1952-53 H.D. (exc. 8 Pass.)	1450041	1450039
1953 H.D. (8 Pass.)	1450346	1326166

FRONT SUSPENSION

Front Suspension: Independent linked parallelogram with coil springs, direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5° to 6½° with 0° camber.
Camber—Neg. ⅜° to Pos. ⅜° (left ¼°-½° higher).
Caster—Neg. 1° to Neg. 3°. (Neg. 2° preferred).
Toe-In—0" to 1/16". (0" preferred). Adjust both tie rods equally.
Toe-Out on Turns—Inner wheel 21½°, plus or minus 1°, with outer wheel turned 20°.

STEERING GEAR

Std. Steering Gear: Own (similar to Gemmer 335). Three-tooth Worm and Roller type.
See Steering Gear Section for complete data.
Power Steering (Hydraguide): Gemmer. Optional equipment on all models. Gemmer hydraulic steering unit with engine driven hydraulic pump.
►*POWER STEERING "HIGH SPOT" OR "LUMPY" FEELING AT OR NEAR STRAIGHT-AHEAD POSITION: See "Gemmer Hydraguide" in Steering Section for complete data.*
►*FRONT WHEEL SHIMMY CORRECTION (Power Steering Cars): See "Chrysler, DeSoto, Dodge, Plymouth Front Suspension" in Front Suspension Section.*
►*PRODUCTION & REPLACEMENT PARTS CHANGES FOR IMPROVED PERFORMANCE: See "Gemmer Hydraguide" in Steering Section.*

BRAKES

Service: Chrysler "Safe-Guard" Lockheed hydraulic.
Front Wheels—Two cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top, actuated by lower).
Rear Wheels—Double anchor with single cylinder.
See Brake Section for complete data.
Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).
Drums—Centrifuse. Diameter 12".
Lining—Molded Asbestos. 2" wide, 13/64" thick.
Length Per Wheel—25⅛".
Clearance—.006" at each end of all shoes.
Braking Power—60% (front), 40% (rear).
Hand Brake: On shaft at rear of transmission. 6" external contracting band used with Synchro-mesh Trans. 7" Internal expanding with Auto. Trans.

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Int. Type	2"	5/32"	13 1/16"

Clearance (External Type): .015-.020" around band.
Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".
Adjustment—*See "Hand Brake Notes" in Chrysler Special Data.*
Brake Power Unit: Chrysler Vacu-ease Vacuum Power unit.
See Brake Section for complete data.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite electric type.
1952 Models—Auto-Lite No. EWJ-4001A (First Cars), No. EWJ-4007A (Later Cars).
1953 Models—Auto-Lite No. EWJ-4008, EME-4001, or EMG-4101 (First Cars), No. EMG-4103 (Later Cars).
►*WINDSHIELD WIPER PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION ON EARLY TYPE: See "Auto-Lite Electric Windshield Wiper" in Miscellaneous Section.*
WINDOW REGULATORS: Auto-Lite Electric Type.
See Miscellaneous Section for complete data.
CONVERTIBLE TOP CONTROL: Hydro-Lectric type.
See Miscellaneous Section for complete data.

▷*MODEL C59 ELECTRICAL SYSTEM CAUTION—12 VOLT system used on this model and special 12-volt units used except as noted below.*

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

	Los Angeles	Detroit
C-56-1 New Yorker	67,040,001	76,540,001
C-56-2 New Yorker Deluxe	69,001,001	7,222,001
C-58 Custom Imperial		7,765,001
C-59 Crown Imperial		7,816,001

ENGINE NUMBER: Stamped on boss on top front side of block just back of water pump.

▷*ENGINE NUMBER LETTERS & MARKS (Following Engine Number)—Identified as follows:*
"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.
"MALTESE CROSS" (⅜" high)—ONE OR MORE Crankshaft Journals .001" Undersize. *See "Connecting Rods" & "Crankshaft" (below).*
"DIAMOND" (⅜" high)—All Valve Lifters .008" Oversize.

TUNE-UP

COMPRESSION PRESSURE: 135 to 165 lbs. at 150 RPM. cranking speed (min. pressure 90 lbs., max. variation between cylinders 15 lbs.).

VACUUM READING: Steady 18-21" idling.

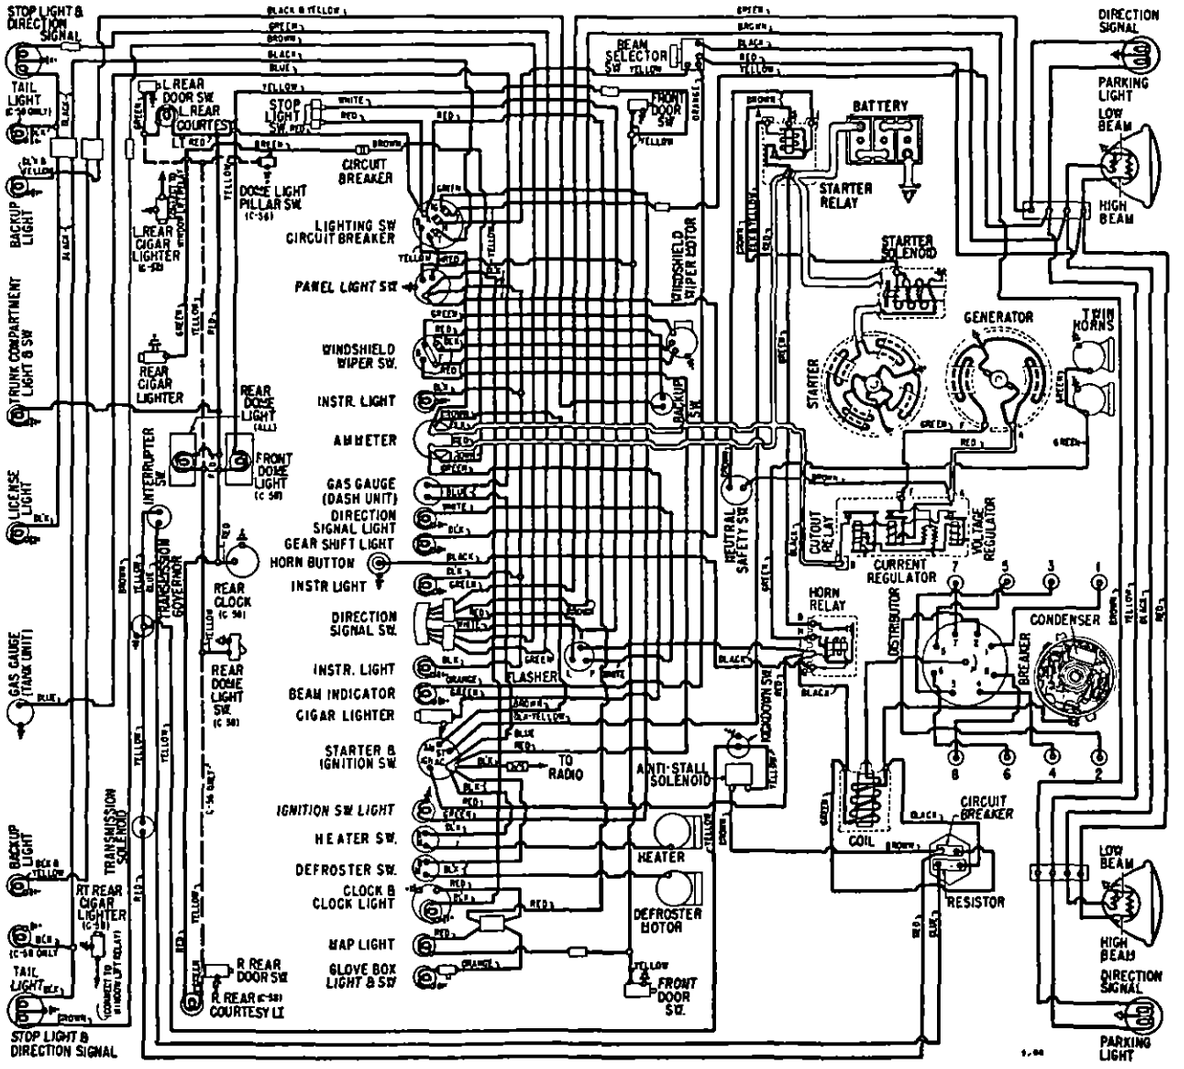
FIRING ORDER: 1-8-4-3-6-5-7-2. See diagram.
Cylinder Numbering—Left bank 1-3-5-7. Right bank 2-4-6-8.

SPARK PLUG GAPS: .035".
Plugs—Auto-Lite Resistor Type 4S140. 14 mm.

DISTRIBUTOR: Auto-Lite No. IAZ-4001B. Double breaker type with automatic advance and vacuum spark control. *NOTE—Same distributor used on 6 volt and 12 volt models.*
Breaker Gap—.015" to .018".
Cam Angle—26-28° (One set points). 32-36° (Total Dwell). Set both points alike.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Auto-Lite (6 volt Exc. C-59) CR-6015. (C-59) CZ-4001 *12 Volt Type.*
Ignition Current—(CR-6015 6 volt) 2.25 amperes idling, 5 amperes stopped. (CZ-4001 12 Volt) 2.2 amperes idling, 3 amperes stopped.

CONDENSER: Auto-Lite No. IAU-3076LA.
Capacity—.25-.28 microfarad.



IGNITION TIMING: 4° BTDC. See Man. Adjustment.
Timing Mark—4th graduation before "DC" mark on vibration dampener in line with pointer on chain case cover. NOTE—Dampener has 15-1° graduations on each side of top dead center "DC" mark.
Manual Adjustment—Adjust distributor to give slight ping in 15-30 MPH. range when accelerating from 15 MPH. in fourth gear with wide open throttle. CAUTION—Do not set timing more than 4° early or 4° later than specified setting.
Timing Procedure—*See Ignition Timing.*

CARBURETION: Carter WCD (C56 & C58) No. 935S & 935SA, (C59) No. 992S, (C58 & C59 with PowerFlite Trans.) No. 2039S & 2039SA. Dual downdraft type with Climatic Control, Fast Idle, and Slow-closing Throttle Dashpot.

▷*NOTE—Carter No. 992-S carburetor has a 12 volt dashpot magnet.*

▷*CARBURETOR REMOVAL CAUTION: Drain 3 to 4 gallons of water from cooling system before removing carburetor from engine.*
Idle Setting—Set idle adjustment screws for smooth idling with engine warm (idle screws ½ to 1 turn open), turn screws out for richer mixture. Adjust both screws alike.
Idle speed—500 RPM. Transmission shift lever in neutral position.
Float Level—11/64" between top of float and machined surface of cover casting. Use Gauge T109-205 for correct vertical and lateral adjustment.
Accelerating Pump—Outer hole (long stroke) Normal setting.
Fast Idle: .017-.021" throttle opening (Gauge T109-44) with choke valve tightly closed. Adjust by turning fast idle adjusting screw.
Slow Closing Throttle: After carburetor adjustments completed, turn dashpot travel adjusting screw (on actuating arm on throttle shaft) until dashpot plunger can be moved in approximately 1/16" from normal position against actuating arm. This will provide maximum dashpot action.
Choke Setting: Centered (at index).
Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. *NOTE*—Shaft must rotate freely in bushings without excessive free play. If clearance between shaft and bushing exceeds .002-.005" clearance, replace necessary parts.

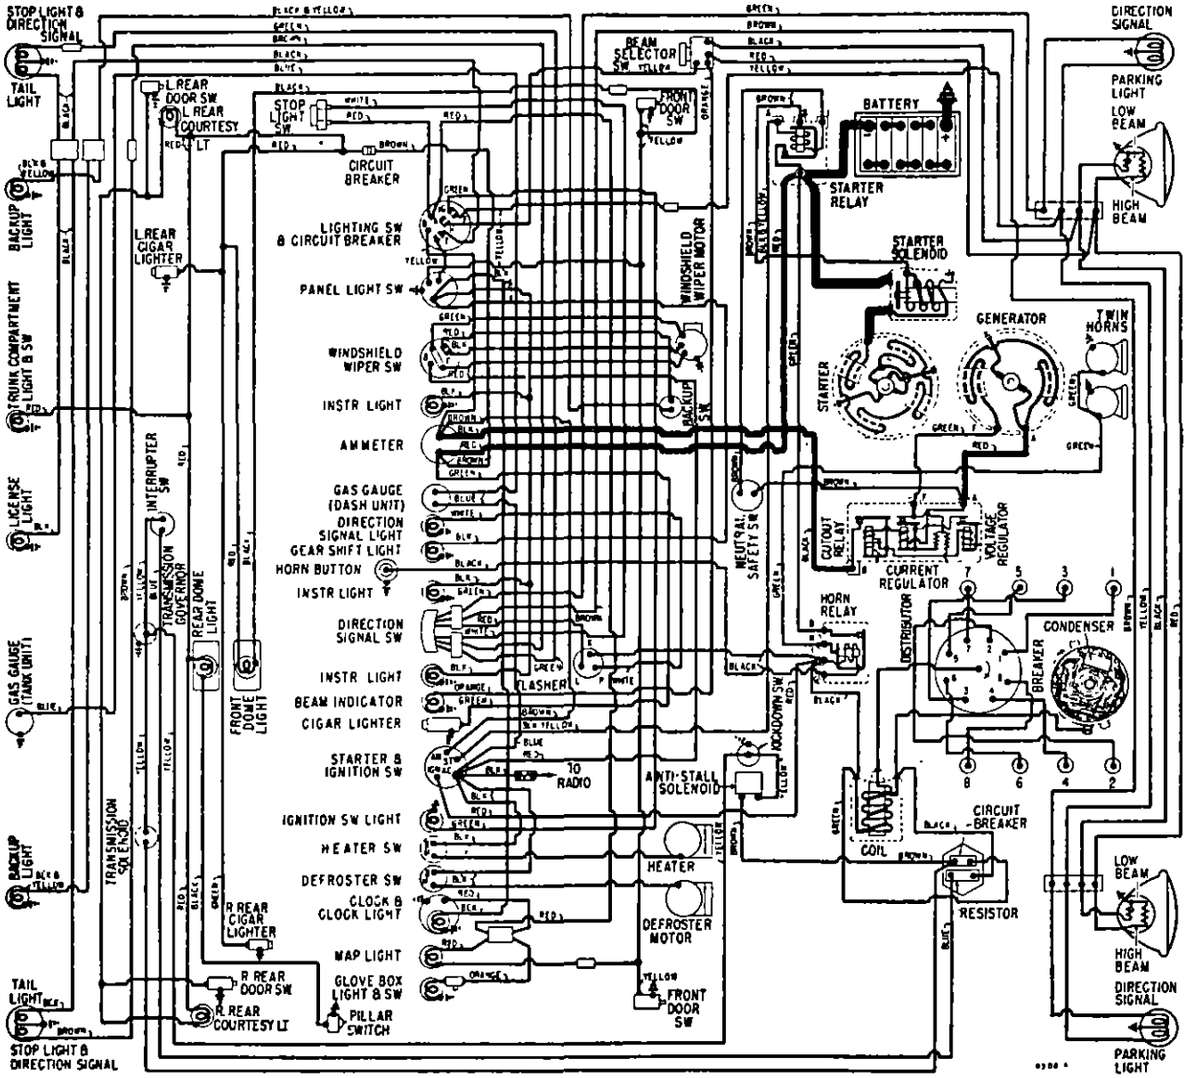
MODELS C56 & C58 V8 (6 VOLT SYSTEM)

►*CAUTION—Do not install control valve with counterweight toward rear of engine.*
See "Manifold Heat Control" in Chrysler Special Data.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition starter switch. Starter operates when key held fully right. Key automatically returns to "on" position when released.



COIL: Auto-Lite (C56 & C58-6 volt) No. CR-6015. (C59) No. CZ-4001. *12 Volt type.*
Ignition Current—(CR-6015 6 volt) 2.25 amperes idling, 5 amperes stopped. (CZ-4001 12 volt) 2.2 amperes idling, 3 amperes stopped.

CONDENSER: Auto-Lite No. IAU-3076LA.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAZ-4001B. Double breaker type with automatic advance and vacuum spark control.

►*12 VOLT NOTE—Same distributor used for both 6 volt and 12 volt systems.*

Breaker Gap—.015-.018".
Cam Angle—26-28° (one set points), 32° to 36° (Total Dwell). Set both points alike.
Breaker Arm Spring Tension—17-20 ozs.

MODEL C59 V8 (12 VOLT SYSTEM)

Rotation—Clockwise viewed from above.

Automatic Advance

Start	400	0°	800
1°	525	2°	1050
6°	1150	12°	2300
10°	1650	20°	3300
11°	1775	22°	3550

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5¼"
1°	2°	6"
5°	10°	9¼"
10°	20°	14⅞"
11.5°	23°	17"

Installation (and Basic Distributor Timing)—Rotate Crankshaft until No. 1 cylinder is at TDC (firing position) and pointer on timing chain case cover over "DC" mark on vibration damper. Use tool C-327 and position the oil pump shaft so that it lines up with the slot in the drive gear. Coat the drive gear shaft with engine oil and install so that after the gear spirals into place, it will index with the oil pump shaft, and the slot in the top of the drive gear will be parallel with the centerline of the crankshaft.

IGNITION TIMING

Std. Setting ..... **4° BTDC**
See Distributor Installation (and Basic Timing) above.

Timing Mark—4th graduation before "DC" mark on vibration damper in line with pointer on chain case cover. NOTE—Damper has 15-1° graduations on each side of top dead center "DC" mark.

Manual Adjustment—Adjust distributor to give slight ping in 15-30 MPH range when accelerating from 15 MPH in fourth gear with wide open throttle. CAUTION—Do not set timing more than 4° early or 4° later than specified setting.

Timing (Using Synchroscope)—Mark correct graduation on vibration dampener with white chalk. Connect one lead of synchroscope to #1 spark plug wire at the distributor (Using Tool C-3066 Adapter). Connect other lead to negative terminal of battery and direct the light on vibration damper. Idle engine and rotate distributor (clockwise to retard, counter-clockwise to advance) until pointer is aligned with chalk mark on vibration damper. Tighten lock plate clamp.

Manual Adjustment—Adjust distributor to give slight ping when accelerating from 15 MPH with wide open throttle in fourth speed. NOTE—Do not set timing more than 4° early or 4° later than initial setting.

CARBURETOR

Carter WCD (C56 & C58) No. 935S & 935SA, (C59) No. 992S, (C58 & C59 with PowerFlite Trans.) 2039S & 2039SA. Dual downdraft type with Climatic Control, Fast Idle, and Slow Closing Throttle Dashpot.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Jet—*See Carburetor Section for "Carter Carburetor Jet Specification Table."*

Slow Closing Throttle: Solenoid type. After carburetor adjustments completed, turn dashpot travel adjusting screw (on actuating arm on throttle shaft) until dashpot plunger can be moved in approxi-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

mately 1/16" from normal position against actuating arm. This will provide maximum dashpot action.
See Carburetion Equipment Section for complete data.

Fast Idle: Carter Dual (WCD) type.
Setting—.017-.021" throttle opening (Gauge T109-44 with choke valve tightly closed). Adjust by turning fast idle screw.
See Carburetion Equipment Section for complete data.

Automatic Choke: Carter Climatic Control.
Setting—Centered with index mark on air horn.
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Heavy Duty oil bath type.

Fuel Pump: Carter No. M-840-S. Diaphragm type.
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oilite metal filter in tank.
Servicing—If more than two pints of water in tank, fuel will not pass filter. Remove filler cap and drain plug, drain tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 12841A (C56 & C58 Exc. C56 Estate Wgn.), **No. 12847A** (C56 Estate Wgn.), **No. 13087A—12 Volt** (C59).
Tank Unit—Auto-Lite No. 12618A (C56 & C58 except C56 Estate Wgn. & 8 Pass.), **No. 12195A** (C56 Estate Wgn.), **No. 11538A** (C56 8-Pass.), **No. 13089A—12 Volt** (C59).
See Carburetion Equipment Section for complete data.

BATTERY

►*NOTE—12 Volt battery used on C59.*
C56 & C58)—Auto-Lite 2H-135-RD or Willard MW-135-R. 6 Volt, 19 Plate, 135 Ampere Hour.
(C59—12 Volt) Auto-Lite 12H-65-R. 12 Volt, 13 Plates, 65 Ampere Hour capacity.
Grounded Terminal—Positive.
Location—Under hood on left fender shield.

STARTER

►*NOTE—12 Volt starter used on C59.*

Model	Auto-Lite Starter	Armature
C56 & C58 (Early)	MCL-6116	MCH-2070
C56 & C58	MCL-6121	MCH-2110
C56 & C58 (Late)	MCL-6121A	MCH-2110
C59 (Early)	(12 V) MDB-6001	MDB-2006F
C59 (Late)	(12 V) MDB-6001A	MDB-2006F

Drive—Pinion shift and overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data—MCL

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Performance Data—MBD

Torque	RPM	Volts	Amperes
0 ft. lbs.	3600	10.0	31
4 "	Lock	4.0	145

Removal: Special box wrench C-455 required.
Starting Switch: Auto-Lite No. SSX-4002 (MCL-6116 Starter), No. SSX-4004 (MCL-6121 & 6121A Starter), No. SSY-4002 12 Volt (MDB-6001 & 6001A Starter). Solenoid pinion shift and starting switch used with Neutral Safety Switch (on Transmission) and SEPARATE relay. Controlled by starting-ignition switch.

Starter Relay—Auto-Lite No. HRW-4001A (6 Volt). No. RAA-4001 (12 Volt).

Cuts In—1.5-3.0 volts (HRW-4001A). 3.0-6.0 volts (RAA-4001).

Cuts Out—0.5 volts (HRW-4001A). 1.0 volts (RAA-4001).

Air Gap—.012-.020" with contacts closed.
Contact Gap—.020-.040".

GENERATOR

►*NOTE: 12 Volt Generator used on C59.*
Auto-Lite. Two brush types with voltage & current regulation.

Car Model	Auto-Lite Generator
C56	GGW-6001K
C56 (Hydraguide)	GGW-6008D
C58	GGU-6001R
C58 (Hydraguide)	GGU-6006C
C59	(12 Volt) GHM-6002A
C56 (Spec. Equip.)	GGU-6001V
C56 (Spec. Equip.-Hydraguide)	GGU-6006C
C56 (Spec. Equip.-Hydraguide)	GGJ-6004D
C56, C58 (Spec. Equip.-Hydraguide)	GGJ-6004A,C
C56 (Spec. Equip.)	GGW-6001J
C58 (Spec. Equip.-Hydraguide)	GGJ-6004D

Maximum Charging Rate—See Regulator.
Charging Rate Adjustment—None. See Regulator.

Performance Data—GGJ

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750
55	8.0	1500-1700 — 1650-1850

Performance Data—GGU

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850
50	8.0	1550-1750 — 1750-1950

Performance Data—GGW

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350
45	8.0	1925-2125 — 2350-2550

Performance Data—GHM—12 Volt

Amperes	Volts	R.P.M.—Cold
5.0	15.00	850-950
25.0	15.00	1400-1600

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—**(GGU, GGW, GHM)** 35-53 ozs. **(GGJ)** 30-37 ozs. (with new brushes).

Field Current—**(GGU, GGJ)** 1.4-1.6 amperes, **(GGW)** 1.4-1.5 amperes, all at 5.0 volts.
(GHM—12 Volt) 1.1-1.3 amperes at 10.0 volts.

Motoring Current—**(GGJ)** 3.9-4.4 amps., **(GGU)** 5.0-6.0 amps., **(GGW)** 4.1-4.6 amps., all at 5.0 volts.
(GHM—12 Volt type) 3.0-3.8 amps., at 10.0 volts.

Belt Adjustment: Adjust generator belt so there is ¼" deflection midway between pulleys.

REGULAT R

►*NOTE—12 Volt Regulator used on C59.*
Auto-Lite. Voltage & Current type "Temperature Compensated" Current Regulator.

Auto-Lite Regulator No.	Generator
VAV-6001B	GGU-6001R,V,6C
VBE-6001A	GGW-6001J,K,8D
VBF-6001A ①	GGJ-6004A, C, D
VRX-6003A (12 Volt)	GHM-6002A

①—VBF-6002A for Negative battery ground.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seal not broken (to remove cover).

Cutout Relay

Cuts In (VAV, VBE, VBF)—6.3-6.8 volts.
Cuts In—(VRX) 13.0-13.75 volts.
Cuts Out—(VAV, VBE, VBF)—4.1-4.8 volts (approx. 4-6 amps. disch.)
Cuts Out—(VRX) 8.2-9.3 volts (approx. 3-5 amps. disch.)
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.1-7.4 volts (VBE & VAV Reg.). 7.15-7.45 volts (VBF Reg.). 14.2-14.8 volts (VRX Reg.) after 15 minutes operation charging at 10 amperes (VBF & VRX), ½ maximum rate (VAV & VBE).
Air Gap (All)—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A—Operating Amperes	Test B
VAV	55	50 (48-52)
VBE	52	45 (43-47)
VBF	66	55 (53-57)
VRX	29	23 (21-25)

Test A—After 15 minutes operation charging at 10 amperes (VBF & VRX), ½ maximum rate (VAV & VBE).
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF), 13.6-13.8 volts (VRX).
Air Gap (All)—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

►*EARLY C56 CAUTION: If 1952 type Lighting Switch and SEPARATE Circuit Breaker used, see 1952 Chrysler V8 in 1952 Annual Data for wiring diagram and data.*
►*C59 LAMP BULB CAUTION—12 Volt type used.*

Headlamps: "Sealed Beam" type with "Bulls-eye" lens. *See Electrical Equipment Section for data.*
Beam Indicator—Lighted when upper beam in use. Located on lower right corner of speedometer face.

Directional Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—In lower left corner of speedometer dial.

Switches

Lighting—Chrysler No. 1495860 (C56, C58), 1495932 (C59).
Beam Selector—Chrysler No. 1253003.
Instrument—Chrysler No. 1383903.
Directional Signal—Chrysler No. 1495297.

Form 8B—1956-M

MISC. ELECTRICAL

CIRCUIT BREAKER: Located in headlight switch assembly. Two 10 amperes, and one 20 amperes (One 10 amp., and two 8 amp., on 12 volt system), protect headlight, tail & stop light, accessory and interior lighting circuits. Back-up lights protected by windshield wiper switch circuit breaker.

►*CAUTION—See "Early C56 Caution" under LIGHTING for SEPARATE Circuit Breaker used on first cars.*

Rear Seat Cigar Lighter—30 amperes.

FUSES: Clock—2 ampere. In clock lead wire.
Radio—14 amperes. In fuse connector at radio.

HORNS: *NOTE—12 Volt type used on C59.*

Car Model	Auto-Lite Horn No. Low Pitch	High Pitch
C56 & C58 (early)	HW-4107	HW-4108
C56 & C58 (late)	HAB-4617	HAB-4618
C59 (12 Volt)	HAA-4103	HAA-4104

►*NOTE*—Horns have resistance unit connected across circuit breaker points. Resistance for 6 volt horns should be 2.5-2.8 ohms, 12 volt horns 5.7-6.3 ohms.

Horn Relay: *NOTE—12 Volt type used on C59.*
Auto-Lite (C56 & C58) No. HRL-4104. (C59) No. RAB-4001. Connected through ignition switch, operates when ignition "ON".

Performance Data—No. HRL-4104

Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).

Contacts Open—.5 volts min. (open from seal).

Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Eight Cyl. "V" type, Valve-in-Head.

Bore—3 13/16". **Stroke**—3 5/8".

Displacement—331.1 cu. in. **Rated HP.**—46.5.

Developed Horsepower—180 at 4000 RPM.

Compression Ratio—7.5-1.

Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: (Not necessary to remove transmission). Work engine out of frame toward left front fender, (not necessary to remove heater assembly).

OIL PAN REMOVAL: Remove oil level indicator, drain oil, and remove starter motor and exhaust crossover pipe. Remove oil pan attaching bolts and drop pan straight down and away from engine. To install, reverse removal procedure.

CYLINDER HEAD & TIGHTENING TORQUES: *See Chrysler Special Data.*

PISTONS: Aluminum alloy, steel-strut, slipper type, cam ground and tin plated.

►*CYLINDER BORE OVERSIZE CAUTION—Engine with letter "A" following engine number indicates that cylinder bore .020" oversize.*

Length—3 7/8". **Weight**—20.8 ozs.

Removal—Pistons and rods removed from above.

Clearance—.0005-.0015" measured ¾" from bottom of piston between the thrust face and cylinder wall.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 5-12 lbs., at room temperature (70°F.).

►*CAUTION—Letter "F" embossed on side of piston near piston pin hole must face front of engine when installed.*

►*NOTE*—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to above limits.

Replacement Pistons: Standard, .010", .020", .030", .040", .050", .060" oversize.

Installing Pistons: Letter "F" embossed on side of piston near piston pin hole must face front of engine.

PISTON RINGS: Two compression, one slotted oil control, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compression	5/64"	.010-.020"	.002-.0035"
Oil Control	3/16"	.010-.020"	.001-.0025"

PISTON PIN: Diameter—63/64". **Length**—3 9/64".
Floating type with lock ring at each end.
NOTE—Pin is offset in piston toward right side of engine.
Pin Fit in Piston—Tight thumb push fit in piston at normal room temperature (70°F.).
Pin Fit in Rod—.0001-.0004". Tight thumb push fit at normal room temperature (70°F.).

Replacement Pins: Standard, .003", .008".

CONNECTING ROD: Length—6⅝". **Weight**—25.2 ozs. with bolts less bearings.
Crankpin Journal Diameter—*2.249-2.250".*

►*JOURNAL DIAMETER CAUTION—(ONE OR MORE journals machined UNDERSIZE). See "CRANKSHAFT" below.*

Lower Bearing—Removable precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".
Endplay—.006-.014" (total for both rods).

Bearing Adjustment: None. Replace bearings.

Replacement Bearings: Standard, .001", .002", .010" undersize.

Installing Rods: Rods are chamfered on one side at bearing insert and must be installed with chamfer toward crankshaft fillet.

►*CAUTION*—Rods are **interchangeable**, however when rods are assembled to piston, the assemblies of one engine bank are **not interchangeable** with the other bank.

►*CONNECTING ROD BEARING CAP CAUTION*—The "V" slot across one bolt hole of each bearing cap is an oil passage for lubricating the opposite cylinder wall and piston pin. When installing the bearing cap make certain the "V" slot oil passage is toward the top of engine.

CRANKSHAFT: Five bearing with vibration damper on front end.
Journal Diameter—2.4995-2.5005".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION—Engines with undersize journals identified as follows:* **.010" UNDERSIZE (All Main & Connecting Rod Journals)**—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.

.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (⅜" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counter-weight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearing Type—Removable, precision type, steel-backed, babbitt-lined. No shims.
Clearance—.0005-.0015".
End Thrust—Taken by No. 3 (center bearing).
Endplay—.002-.007".

Bearing Adjustment: None. Replace bearings.

Replacement Bearings: Standard, .001", .002", .010", .012" Undersize.

Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

CAMSHAFT: Five bearing. Non-adjustable chain drive.
Journal Diameters—Nos. 1-2-3-4, 1.998-1.999". No. 5, 1.4355-1.4365".
Bearings—Removable steel backed, babbitt lined bushings.
Clearance—.001-.003".

End Thrust—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

Timing Chain: Width 1⅛". Pitch .375". Length 68 links.

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with the center of the camshaft. Temporarily install camshaft sprocket less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove camshaft sprocket and position it in timing chain and reinstall assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" marks should be in line with shaft center. Install fuel pump eccentric and camshaft nut. Tighten to 120-130 ft.lbs.

►*TIMING CASE COVER REMOVAL CAUTION—Remove water pump before removing timing case cover. (Cover attaching bolt behind water pump).*

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 13/16"	.372-.373"	5"
Exhaust	1 1/2"	.371-.372"	4 29/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.378"	.001-.003"
Exhaust	45°	.361"	.002-.004"

Valve Seat Width—.060-.085" (In.); .040-.060" (Ex.).
Exhaust Valve Seat Inserts—*See Chrysler Special Data.*
Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

►*VALVE GRINDING CAUTION*—If the position of the valve in the head has been changed (due to valve or seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed

CONTINUED ON NEXT PAGE

ENGINE

CONTINUED FROM PRECEDING PAGE

position, the dimension from the valve spring seat in the head to the tip of the valve should be checked with gauge C-3061. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of the hole. Ream guide to .374-.375" with tool C-741.

▷***CAUTION—Oil hole in top of exhaust guide must face up.***

NOTE—If Valve Guide Tool C-3150 is not available, drive guides in, measuring from top of valve seat as follows: **Intake**—31/32". **Exhaust**—1 7/32".

Valve Springs: Two springs used per valve. Install with closed coil toward cylinder head.

Free Length—Outer 2". Inner 1⅞".

Outer Spring	Pressure	Length
Valve Closed	46-51 lbs.	1 11/16"
Valve Open	124-132 lbs.	1 9/16"
Inner Spring	**Pressure**	**Length**
Valve Closed	12-14 lbs.	1 9/16"
Valve Open	35-40 lbs.	1 3/16"

▷***CAUTION—Spring ends must be square within 1/16" (Use steel square on surface plate—revolve spring against square noting alignment of top coil).***

▷***VALVE SPRING HEIGHT CAUTION***—If valves or seats are reground, check installed height of spring. If height is 1 23/32" or greater, install a 1/16" spacer (Part No. 1400482) in the head counter-bore to bring spring height back to normal 1⅝-1 11/16".

▷***VALVE SPRING LOAD CAUTION—Hydraulic lifter "pump up" will restrict engine speed and cause valves to burn if valve spring loads are not maintained.***

Valve Lifters: Hydraulic type.

See Miscellaneous Section for complete data.

Diameter—.9040-.9045". **Clearance**—.0005-.0015".

▷***VALVE LIFTER OVERSIZE CAUTION—.008" OVERsize valve lifters used in some engines."*** "Diamond" (⅜" high) stamped in engine number pad following engine numbers, indicates that all valve lifters are .008" OVERSIZE.

Removal—*See "Valve System" in Chrysler Special Data.*

Rocker Arm Assembly Removal & Installation: *See "Valve System" in Chrysler Special Data.*

VALVE TIMING

Tappet Clearance: No adjustment required.

Valve Timing: See Camshaft Setting above.

Intake Valves—Opens 15° BTDC. Close 57° ALDC.

Exhaust Valves—Opens 49° BLDC. Close 15° ATDC.

Valve Timing Check—Turn crankshaft until #1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at Zero, turn crankshaft until dial indicator shows that valve has lifted .016". Pointer on chain cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft **counter-clockwise** until lifter backed down and valve closed, remove spacer from valve stem.

▷***CAUTION—Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.***

▷***TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing cover case.***

LUBRICATION

Engine Oiling System: Pressure through "Full-Flow" oil filter to main and connecting rod bearings, camshaft bearings, timing chain and hydraulic valve lifters. "Rotor" type oil pump mounted below rear main bearing cap. Floating type oil strainer is used.

Crankcase Capacity—5 quarts, (add one quart when "Full-Flow" oil filter element is replaced).

Normal Oil Pressure—60 lbs. at 30 MPH

▷***CLOGGED OIL FILTER CAUTION—An oil pressure drop of 15-20 lbs. below normal oil pressure indicates a clogged "Full-Flow" oil filter. Replace filter element.***

Oil Filter: "Full-flow" type. All oil enters lubrication system of engine through filter at full pump pressure. Safety valve in filter opens if element is clogged, allowing oil to pass into lubricating system under a reduced pressure (25-45 lbs.).

Filter Element—Install a new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is replaced.

Oil Pressure Relief Valve—Mounted in oil pump.

Oil Pump: "Rotor" type. Mounted on rear main bearing cap in crankcase.

Oil Pump Removal & Overhaul: *See Chrysler Special Data.*

Priming Oil Pump (After Installation)—Before installing filter assembly, introduce about ½ pint of engine oil into the lower hole of the filter pad with a pressure gun or long nosed oil can.

▷***CAUTION—When first starting a new engine or one that has been overhauled, DO NOT EXCEED 650 RPM until oil pressure registers on gauge.***

Oil Pressure Gauge: Auto-Lite No. 12842A (Early C56 only). No. 13209A (Later C56 & All C58, C59). Not electric.

COOLING

Cooling System: Non-pressure type, (under ordinary operating conditions). A pressure vent type radiator cap is used. Under normal operating conditions, pressure is not built up in the system, however if an abnormal condition develops, such as over-heating, or car is driven at excessively high speeds, the valve at the bottom closes, seating against gasket. This action pressurizes the system up to approximately 7 lbs., at which time the valve and seat raise and allow the built up pressure to escape through the overflow tube.

Pressure Valve—Chrysler No. 1373136. Radiator Filler Cap. Operates at 7 lbs. (see above).

Capacity—25 qts. (26 qts. with heater).

Water Pump: Packless type with shaft mounted on two ball bearings with lubricant fitting for bearing lubrication.

See Water Pump Section for complete data.

Removal: Drain cooling system, remove fan belts and belt pulley. Remove four bolts attaching pump to water manifold and remove pump.

NOTE—Three drain cocks, one on radiator and one on each engine bank.

Fan Belt Adjustment—*See "Generator" for adjustment.*

Thermostat: Bypass type. In cylinder head water outlet. Begins to open at 157-162° F.

Temperature Gauge: Auto-Lite No. 12839A (Exc. C58); No. 12853A (C58). Not electric.

See Miscellaneous Section for complete data.

CLUTCH

Borg & Beck Model 9.5E Assy. No. 1213 (C56 with Fluid-Matic Drive), 10E Assy. No. 1211 (C56 with Fluid-Torque Drive, All C58 & C59).

See Clutch Section for complete data.

Facings—Woven type. Inside Diameter (9.5E) 6"; (10E) 7". Outside Diameter (9.5E) 9½"; (10E) 10¼". Thickness .125".

Pedal Adjustment: Set pedal to just clear toeboard by loosening locknut and turning stopscrew at lower end of pedal arm above shaft. Set pedal for 1" free travel by turning clutch release fork adjusting nut on connector link at clutch release fork.

Removal (with Fluid-Matic Drive): Remove transmission (See TRANSMISSION) and unhook clutch release fork pull-back spring. Disconnect one end of clutch fork rod assembly from fork by removing cotter key, pin, and two washers. Disconnect other end from clutch release bearing torque shaft by removing cotter key, pin and three washers (CAUTION—As soon as rod assembly is removed, push clutch pedal until over-center spring brings it to toeboard. This will avoid danger of injury should pedal be pushed in while linkage is disconnected). To remove release bearing from clutch fork, do not force bearing and pull-back springs straight off from fork prongs. Pivot the release bearing away from the fork. Assembly and springs will slide off easily. Remove two screws holding shaft pivot bracket assembly to clutch housing. Remove opposite end of pivot bracket assembly from torque shaft. Place jack under engine oil pan to support engine (block of wood between jack and pan). Remove clutch housing-to-cross member bolts, then cross member-to-frame bolts and drop cross member from frame. Jack engine down about three inches so clutch housing is far enough below floor board to permit removal of housing capscrews and housing, and remove clutch assembly from clutch driven plate.

Removal (with Fluid-Torque Drive): Remove oil reservoir from bottom of clutch housing, and oil lines from converter support plate before proceeding as outlined above.

See Chrysler Fluid-Torque Drive in Transmission Section for complete data.

FLUID DRIVE

Chrysler. Fluid coupling at rear of engine.

See Transmission Section for complete data.

Slippage Test—*See "Fluid Drive" in Transmission Section for complete data.*

Removal: Remove transmission (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid assembly out of car.

FLUID-TORQUE DRIVE

Own Make. Four element, single stage type Torque Converter with SEPARATE oil system (oil reservoir, oil pump, and oil cooler). ***Torque converter unit cannot be disassembled. Replace assembly if repairs necessary.***

Lubrication: Maintain oil level to bottom of filler plug hole. Check every 1000 miles, drain and refill every 20,000 miles (once every two years, whichever occurs first).

Capacity—10½ quarts. Manufacturer recommends MOPAR Fluid Drive Fluid or a good grade of SAE 10W engine oil.

See Transmission Section for complete data.

Removal: ***See "Chrysler Fluid-Torque Drive" in Transmission Section for complete data.***

AUTOMATIC TRANSMISSION

Hydraulically Operated Type (with Fluid-Drive & Fluid-Torque). Semi-automatic, four speed transmission with hydraulic actuation and electrical control.

See Transmission Section for complete data.

►***TRANSMISSION SELECTOR LEVER ADJUSTMENT (to correct difficult shifting): See Transmission Section for complete data.***

►***TESTING & TROUBLE SHOOTING: See Transmission Section.***

Transmission Control: ***See Transmission Section for complete data.***

Kick-down Solenoid—Auto-Lite (C56, C58) No. SSS-4003 ***(6 Volt)*****; (C59) No. SSZ-4001.** ***12 Volt type.***

Neutral Safety Switch (Fluid-Torque Drive)—Chrysler No. 1440209.

Governor—Auto-Lite No. TGG-4001.

Kickdown Switch—Part of carburetor assembly.

Ignition Interrupter Switch—On right side of transmission above governor.

Transmission Oil—3 pints, 10W engine oil.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gear shift rods at transmission, ***replace drain plug.*** Disconnect transmission mounting bolts and lower assembly out of car.

►***INSTALLATION CAUTION***—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

►***OTHER TRANSMISSION SERVICE DATA: See Transmission Section.***

UNIVERSALS

Detroit Universal. Front universals are ball and trunnion type, rear cross type. C59 has center universal that is ball and trunnion type.

Propeller Shaft Center Bearing: Used on C56 8 Pass. Sedan and all C59. ***See Chrysler Special Data.***

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.

See Rear Axle Section for complete data.

Rear Axle Ratios

Car Model	Fluid-Matic	Fluid-Torque
C-56 (Exc. 8 Pass.)	3.54-1 (39-11)	3.36-1 (37-11)
C-56 (8 Pass.)	3.73-1 (41-11)	3.54-1 (39-11)
C-58, C-59		3.54-1 (39-11)

Backlash—.006-.010". Screw adjustment.

Ring Gear Thrust Pad Setting—Loosen locknut on left side of carier housing, tighten thrust pad screw finger tight, back screw off ⅛ turn, tighten locknut.

Removal: Disconnect rear universal, remove axle shafts (see below), take out carier capscrews, lift off carrier assembly.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Axle Shaft Outer Seal: Leather type mounted on brake support (backing plate).

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow" hydraulic, direct acting, non-adjustable type. Serviced by replacement.

Std. Shock Absorbers

Chrysler Part No.	Front	Rear
C56 (Club Coupe, 4-Dr.)	1326164	1326165
C56 (Others)	1326164	1326166
C58	1326164	1326165
C59	1326164	1326167

Heavy Duty Shock Absorbers

C56 8 Pass. & Est. Wgn	1450346	1450075
C56 (Others), C58	1450041	1450075
C59	1450041	

FRONT SUSPENSION

Front Suspension: Independent linked parallelogram type with coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

Kingpin Inclination—(C56, C58) 5-6½°, (C59) 6½-8° with 0° Camber.

Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).

Caster—Neg. 1° to Neg. 3° (Neg. 2° preferred).

Toe-In—0" to 1/16" (0" preferred).

Toe-Out on Turns—Inner wheel 20°, outside wheel 18¼°.

STEERING GEAR

Own Make. Standard (C56, C58), 3 tooth worm-and-roller. Similar to Gemmer Model 335.

See "Gemmer 335" steering gear in Steering Gear Section for complete data.

Power Steering (Hydraguide): Gemmer. Standard (C59) Optional (All Others). Gemmer hydraulic steering unit. Oil pump on generator operates piston connected to steering cross-shaft. Controlled through a valve block assembly actuated by steering shaft. ***See Steering Gear Section for complete data.***

►***POWER STEERING "HIGH SPOT" OR "LUMPY" FEELING AT OR NEAR STRAIGHT AHEAD POSITION—See "Gemmer Hydraguide" in Steering Section for complete data.***

BRAKES

SAFE-GUARD TYPE

Service: (C56, C58) Chrysler "Safe-Guard" Lockheed hydraulic.

See Brake Section for complete data.

Drums—Centrifuse. Diameter 12".

Wheel Cylinder Diameter—1⅛" (all).

Lining—Molded asbestos, bonded to shoe. Width 2". Thickness 13/64". Length 12.57" (each shoe).

Clearance—.006" at each end of shoes.

Braking Power—60% front, 40% rear.

Power Brake: Vacu-Ease vacuum power unit.

See Brake Section for complete data.

Hand Brake: On shaft at rear of transmission. Internal expanding type.

Adjustment—***See "Hand Brake Notes" in Chrysler Special Data.***

Drum—Cast iron. Diameter 7".

Lining—Width 2". Thickness 5/32". Two shoes, total length 13 1/16".

Clearance—Adjusting nut on shoe link backed off one notch from point where shoe firm against drum.

DISC TYPE

Service: (C59) Hydraulic, self-energizing, two-shoe, DISC type. NOTE—No power booster used.

See Brake Section for complete data.

Pressure Plate Diameter—I.D. 9½". O.D. 12".

Wheel Cyl. Diameter—1¼" (all).

Lining—Molded asbestos segments bonded to disc, 12 used (6 each side).

Bleeding Disc Type Brakes—Manufacturer recommends bleeding all four lower wheel cylinders first, then all four upper cylinders last.

Hand Brake: On shaft at rear of transmission. Internal expanding type. ***See C56 & C58 (above) for all data.***

MISC. MECHANICAL

AIR CONDITIONING: Chrysler Airtemp type. Optl. ***See "Chrysler Air-Conditioning" in Miscellaneous Section for complete data.***

WINDSHIELD WIPER: Auto-Lite Electric type.

C56, C58—EWJ-4008, EME-4001, EMG-4001, 4101, 4103.

C59 (12 Volt)—EMF-4001, EMK-4001, EMK-4102.

►***WINDSHIELD WIPER PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION ON EARLY TYPES: See "Auto-Lite Electric Windshield Wiper" in Miscellaneous Section.***

See Miscellaneous Section for complete data.

WINDOW REGULATORS: Auto-Lite Electric type. ***See Miscellaneous Section for complete data.***

CONVERTIBLE TOP CONTROL: Hydro-Lectric type. ***See Miscellaneous Section for complete data.***

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines. See "Chrysler, DeSoto, Dodge Air-temp" Air Conditioning in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
Windsor DeLuxe	C-62

SERIAL NUMBER: On metal plate attached to left front door hinge post.
Starting Serial Number—70,141,001 **(Detroit)**, 65,014,001 **(Los Angeles).**

ENGINE NUMBER: Stamped on boss on left front side of cylinder block.

►*ENGINE NUMBER LETTERS (Following Engine Number): Identified as follows:*
"A"—All Cylinders .020" oversize.
"B"—All Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 18-21" idling at 6 MPH.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up approximately 3/4 turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake. .010" Exhaust. Engine must be hot and idling. *NOTE*—Tappet screws are self locking. Remove right front wheel and lower wheel housing for access to valves.

►*CONTINUOUS HIGH SPEED TAPPET CLEARANCE:* An additional .002" clearance for **exhaust** tappets is desirable.

IGNITION

FIRING ORDER: 1-5-3-6-2-4. See diagram.
SPARK PLUG GAP: .035"
Plugs—Auto-Lite Resistor 4S-140. 14 mm.
COIL: Auto-Lite CR-4001 (U.S. Cars), CR-6007B (Canada).
Ignition Current—2.25 amps idling, 5.0 stopped.
DISTRIBUTOR: Auto-Lite No. IAT-4102 (U.S. Cars), **IAT-4012** (Canada).
Condenser—Auto-Lite IAT-3076RA. **Capacity**—.250-.285 microfarad.
Contact Point Set—Auto-Lite IGW-3028BS.
Breaker Gap—.018-.020".
Cam Angle—36-42°. DO NOT exceed breaker gap limits to obtain dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance - IAT-4012, 4102

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	350	0	700
1	450	2	900
5	800	10	1600
9	1300	18	2600
10	1425	20	2850

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance - IAT-4012, 4102

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5
2	4	7¼
4	8	9 3/8
6	12	11 5/8
9	18	15

►*DISTRIBUTOR REMOVAL CAUTION: To avoid damage to No. 3 & No. 4 pistons when removing distributor, make sure that No. 3 & No. 4 pistons are at the top of their stroke.*

IGNITION TIMING

Setting—2° BTDC.
Timing Mark—On crankshaft vibration damper.
►*IGNITION TIMING CAUTION: For accurate reading, be sure engine is at operating temperature and carburetor is at slow idle.*

CARBURETOR

Carter (Ball & Ball)—Model E9C1 (Synchro-mesh Trans. Cars), Model E9B1 (PowerFlite Trans. Cars).
Idle Setting—½-1½ turns open. For richer mixture turn screw out. Idle engine at 450-500 RPM. (E9C1), 500 RPM. (E9B1).
Idle Speed—450-500 RPM. (Synchro-mesh), 500 RPM. (PowerFlite).
Float Level—5/64" plus or minus 1/64" from top surface of body casting to top of float.
Accelerating Pump—(E9C1) Inner hole summer, center hole normal, outer hole winter. (E9B1) Long stroke for cold weather, short stroke for hot weather.
Fast Idle: .015-.019" clearance between throttle valve and bore of carburetor, side opposite idle port, with choke valve held closed and throttle stop screw backed off.
Slow Closing Throttle (Dashpot): (E9B1) Adjustment screw located on top of carburetor on side opposite thermostatic coil housing. To adjust, tighten adjustment screw, then turn counterclockwise 5 turns. Further adjustment outward will increase action of dashpot and lengthen its retarding effect.
Throttle Linkage Adjustment (E9B1): *See "PowerFlite Transmission" in Transmission Section for data.*
►*OTHER DATA: See "Carter (B&B)" in Carburetor Section for complete data.*
Fuel Pump Pressure: 3½-5 lbs.

CARB. EQUIPMENT

Fuel Pump: Carter M-639-S. Vacuum diaphragm type.
Pressure—3½-5 lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Auto-Lite Electric Type.
Dash Unit—Auto-Lite 13463A (Exc. Sub. & Estate Wgn.), 13466A (Sub. & Estate Wgn.).
Tank Unit—Auto-Lite 12617A (Exc. Sub. & Estate Wgn.), 12195A (Sub. & Estate Wgn.).

NOTE—Gauge on Suburban is "Two Wire" thermostatic type. Gauge on other models is "One Wire" type.

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Auto-Lite 2H-120-D or Willard HW-2-120-C. 6 Volt, 17 plate, 120 ampere hour capacity.
Grounded Terminal—Positive.
Engine Ground—Left front of engine.

STARTER

Auto-Lite MCL-6117. Armature MCH-2070.
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs, (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	410

Starting Switch: Auto-Lite SSX-4003 combination starting switch and solenoid pinion shift. Controlled by starter-ignition switch. PowerFlite cars have Neutral Safety Switch and Starter Relay. *See Chrysler V8 wiring diagram and starter data.*
Starter Relay (PowerFlite Cars): Auto-Lite HRW-4001A. *See "Auto-Lite Starter Controls" in Electrical Equipment Section.*

GENERATOR

Auto-Lite Generator No.	Armature No.

Performance Data - GGJ

Amperes	Volts	Cold — R.P.M. — Hot
0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750
55	8.0	1500-1700 — 1650-1850

Performance Data - GGU

Amperes	Volts	Cold — R.P.M. — Hot
0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850
50	8.0	1550-1750 — 1750-1950

Performance Data - GGW

Amperes	Volts	Cold — R.P.M. — Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350
45	8.0	1925-2125 — 2350-2550

Brush Spring Tension—(GGU, GGW) 35-53 ozs., (GGJ) 30-37 ozs., with new brushes.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Field Current—(GGW) 1.4-1.5 amperes, (GGJ, GGU) 1.4-1.6 amperes, all at 5.0 volts.
Motoring Current—(GGJ) 4.1-4.6 amperes,(GGU)5.0-6.0 amperes, (GGW) 4.8-5.3 amperes, all at 5.0 volts.
Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" slack (when pushed from a straight line, midway between fan and generator pulley).

Generator Charge Indicator Light: In lower cluster of instrument panel. Light glows when ignition turned on, goes out when generator charging properly.

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A	GGW

Cutout Relay

Cuts In—6.3-6.8 volts.
Cuts Out—4.1-4.8 volts.
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.1-7.4 volts *after 15 minutes operation charging at 1/2 maximum rate.*
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*

	Test A—Operating Amperes—Test B
VBF-6001A, 2A	.66 .55 (53-57)
VAV-6001B, 2B	55 . 50 (48-52)
VBE-6001A	.52 .45 (43-47)

Test A—After 15 minutes operation charging at ½ maximum rate.
Test B— After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF).

Air Gap-.048"-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Directional Signal: *See Electrical Equip. Section.*

Lighting Switch Removal: Remove knob (use small screwdriver to raise up small clip in knob or remove small cross-head screw depending on method used to hold knob). Remove hexagonal headed nut and collar holding assembly in place, remove switch (switch has threaded sleeve with two flat sides and sleeve is snug fit in switch hole in panel).

Stop Light Switch Location: In brake line fitting on left frame side rail.

►*IGNITION STARTER SWITCH CAUTION:* When installing accessories, use accessory terminal *only* on ignition starter switch and *not* the ammeter terminal post.
Removal & Installation of Ignition Lock Cylinder—Turn ignition key clockwise to "ON" position. Loosen set screw holding switch in instrument panel. Pull switch assembly out from dash towards firewall enough to allow lock cylinder locking pin to clear instrument panel. With ignition key in "ON" position, use pointed punch to push in on cylinder locking pin, while pulling on cylinder. Remove ignition lock cylinder. To install lock cylinder in switch, line up locking pin with slot in housing. Press in on cylinder lock assembly. Install switch in instrument panel and tighten locking screw.

FUSES: Clock—3 amperes. In clock lead wire.
Radio—14 amperes. Behind instrument panel.

CIRCUIT BREAKERS: Lighting System—One 30 ampere and one 20 ampere to protect lighting circuits. On lighting switch.
Windshield Wiper—10 ampere. On wiper switch. Backup lights protected by windshield wiper circuit breaker.

HORNS: Auto-Lite (Low Pitch) HAB-4659, (High Pitch) HAB-4664.

Horn Relay: Auto-Lite HRL-4104.
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

►*AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air-conditioning system. See "Chrysler, DeSoto, Dodge Airtemp" Air Conditioning in Miscellaneous Section.*

ENGINE SPECIFICATIONS: Six cylinder "L" head.
Bore—3 7/16". **Stroke**—4 3/4".
Displacement—264.5 cu. in. **Rated HP**—28.36.
Developed Horsepower—119 at 3600 RPM.
Compression Ratio—7.0-1.
Compression & Vacuum Reading—*See Tune-up.*

ENGINE REMOVAL: *See Chrysler Special Data.*

OIL PAN REMOVAL: Drain engine oil. Remove clutch housing pan to prevent damaging oil pan gaskets on clutch housing pan dust seal. Remove oil level indicator and drop pan on tie rod. Lift up oil strainer so it clears baffle inside pan. With strainer lifted, slide pan to rear and remove. NOTE—New end gaskets should protrude 1/4" to 1/8" above oil pan. *Ends must not be cut off.*

CYLINDER HEAD & TIGHTENING TORQUES: *See Chrysler Special Data.*

►*MANIFOLD (Intake & Exhaust) INSTALLATION CAUTION—See "Manifolds" in Chrysler Special Data.*

PISTONS

Aluminum alloy, U-slot, cam ground type.

►*CYLINDER BORE OVERSIZE CAUTION—Engines with letter "A" following engine number indicates that cylinder bore .020" oversize.*

Weight—18.5 ozs. (stripped).
Removal—Pistons and rods removed from above.
Fitting New Pistons: Clearance .0002-.0012" 1½" from bottom of skirt. Check piston size with micrometer across large diameter at bottom of skirt. Insert .002 x 1/2" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 6-9 lbs., at room temperature (70°F.)
Replacement Pistons: Std., .005", .020", .030", .040", .060" Oversize.

►*NOTE:* Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" requires reboring and honing to above limits.

Installing Pistons: Slot away from camshaft.

PISTON PINS

Full floating type.
Diameter—55/64". **Length**—2 7/8".
Pin Fit in Piston—.0000-.0005". DOUBLE THUMB push fit at room temperature (70°F.)
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at room temperature (70°F.).
Replacement Pins: .003", .008" oversize.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32".	.007-.017".	.0025-.004"
Compr. (#2)	3/32".	.007-.017"	.0020-.0035"
Oil (#3,4)	5/32"	.007-.017"	.0010-.0025"

Installing Rings—#1 Compression, with step on inner edge up. #2 Compression with step on inner edge up (step down if step on outer edge).
Replacement Rings: Std., .005", .020", .030", .040", .050", .060" Oversize.

CONNECTING RODS

Length (Center to Center)—7¾". **Weight**—32.4 ozs. with bolts, less bearings. *NOTE*—Piston pin hole is bronze bushed.
Crankpin Journal Diameter—2.124-2.125".Maximum out-of-round and taper limits—.001".

►*JOURNAL DIAMETER CAUTION: (ONE OR MORE journals machined UNDERSIZE)—See "CRANKSHAFT" below.*

Lower Bearings—Removable, precision type, thin babbitt *on steel. No shims.*

Clearance—.0005-.0015" desired. Maximum—.0025".
Sideplay—.003-.007" desired. Maximum—.010".
Bearing Adjustment: None. Replace bearings.
Replacement Bearings: Std., .001", .002", .010", .012", .020", .030", .040" Undersize.
Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT

Journal Diameter—2.4995-2.5005". Four bearing.

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*
.010" UNDERSIZE (All Main & Connecting Rod Journals)—Letter "B" stamped with engine serial number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (3/8") stamped on the machined surface at the upper right hand corner of the block (adjacent to front cylinder exhaust port) to signify that ONE OR MORE crankshaft main and connecting rod journals are machined. 001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the crankshaft center counter-weight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).

Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Replacement Bearings: Std., .001", .002", .003", .010", .012", .020", .030", .040" undersize. Upper and lower halves of Nos. 1, 2 and 3 are alike and interchangeable; Upper and Lower No. 4 are interchangeable.

Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*
End Thrust: Taken by flanged faces on rear (#4) main bearing. **Endplay**—.003-.007".

CAMSHAFT

Journal Diameters—(1) 2", (2) 1 31/32", (3) 1 15/16", (4) 1 1/4".
Bearing Type—Steel-backed babbitt.
Clearance—.0015-.0035". NOTE—If clearance exceeds .005"(measure with dial indicator placed against cam lobe and pry cam toward indicator), install new camshaft for test and if clearance is greater than .0035", replace bearings.
End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".
Timing Chain: Width 1". Pitch .500". Length 24" or 48 links.
Camshaft Setting: Sprockets marked. Mesh chain with sprockets so that "O" marks on sprockets are adjacent and in line with a straightedge across shaft centers.

VALVES

Tappet Clearance: .008" Intake. .010" Exhaust. Engine must be hot and idling.

Valve	Head Diam.	Stem Diam.	Length
Intake	1 23/32"	.3405-.3415"	4 27/32"
Exhaust	1 1/2"	.3395-.3405"	4 27/32"

Valve	Seat Angle	Lift	Stem Clearance
Intake	45°	.379"	.001-.003"
Exhaust	45°	.379"	.002-.004"

Valve Seat Width—7/64" maximum.

►*VALVE SEAT INSERT CAUTION: See "Valve System" in Chrysler Special Data.*

Valve Guides: Remove from above. Press new guides in with upper end 7/8" below top of block, finish ream to give correct valve stem clearance. (See Valve Stem Clearance above). *CAUTION*—Guides must be installed with counterbore end UP for exhaust valves and with counterbore end DOWN for intake valves.
Valve Springs: Install with closely coiled end up.
Free Length—2"

Valve Spring Specifications

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1 3/4"
Valve Open	110-120 lbs.	1 3/8"

Valve Lifters: Mushroom type (remove from below).
Stem Diameter—.6235-.6240". Ream holes from above (pilot in guide). Oversizes .001", .008", .030".
Lifter Clearance in Block—.000-.002".

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing

Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance, No. 6 intake valve should open with No. 6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on timing chain cover case. Reset tappet clearance at .008". Intake, ..010" Exhaust (hot and idling). *See "Camshaft Setting" under CAMSHAFT above.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

OILING SYSTEM

Crankcase Capacity—5 qts. refill. Add 1 additional quart when filter changed.

Normal Oil Pressure—40-60 lbs. at 40-50 MPH with warm oil (40-65 lbs. with PowerFlite).

►*OIL PRESSURE CAUTION—Oil pressure will drop to 25-40 lbs. WHEN FILTER ELEMENT IS CLOGGED. Replace filter element.*

Oil Pressure Relief Valve—Oil pressure relief valve opens at 40-60 lbs. Under plug on left side of crankcase ahead of oil line to provide additional oil at idling speeds. Adjustable by replacing spring (3 types). **(1)** Standard spring painted BLUE. **(2)** Lighter than standard painted RED. **(3)** Heavier than standard painted GREEN. *CAUTION—Replace spring with new spring of same color.*

Oil Pressure Warning Light: In lower cluster of instrument panel. Light glows when ignition turned on, goes out when oil pressure reaches 10 lbs.

Oil Pressure Switch—Auto-Lite No. 13411A.

Oil Pump: Rotor type on right side of crankcase.

Oil Pump Overhaul & Installation—*See Chrysler Special Data.*

Oil Filter: "Full-flow" type. All oil delivered under full pressure to working parts goes through the filter before entering oil passages in engine. Safety valve in filter opens if element is clogged, allowing oil to pass directly to engine.

Servicing—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required).

►*OIL FILTER CAUTION—If oil pressure drops to 25-40 lbs., FILTER IS CLOGGED. Replace filter element.*

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 15 quarts (16 quarts with heater).

Pressure Valve: Chrysler No. 1373136. Radiator filler cap. Opens at 7 lbs.

Thermostat: By-pass type in cyl. head water outlet. Starts to open 157-162°F.

Water Pump: Packless type. Grease fitting for lubrication. *See Water Pump Section for complete data.*

Pump Removal: Drain cooling system, remove fan belt and disconnect water pump hose. Remove bolts holding water pump to engine block and lift out water pump and fan assembly.

Temperature Gauge: Auto-Lite No. 13464A.

CLUTCH

Borg & Beck	Model	Assy. No.	Disc No.
Standard	10A7	1331	382151
Heavy Duty	11A6	1330	381850
Police, Taxi	11A6	929	381850

Clutch Disc No.—See clutch listing above.

See Clutch Section for complete data.

Pedal Adjustment: Adjust stop screw on lower end of pedal and adjusting nut on connector link at fork. **Pedal Free Play (at outer end of clutch fork)**—1/8" to 5/32". **(At Pedal Pad)**— 1" to 1 1/8".

Removal: Remove release fork pull-back spring. Remove Transmission (See Synchro-Mesh Transmission), and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel. Take out cover screws. Remove clutch assembly and clutch disc assembly from clutch housing.

SYNCHRO-MESH TRANSMISSION

Own Make. *See "Chrysler Synchro-mesh" Transmission in Transmission Section.*

Transmission Control: *See "Transmission Controls" in Transmission Section.*

Removal: Jack up front of car, disconnect front universal (loosen companion flange nut if disassembling transmission - See Chrysler Special Data for Propeller Center Bearing Removal on 8-pass.). Disconnect speedometer cable, hand brake cable, gear shift rods. Remove transmission-to-clutch housing cap screws and nuts. Pull unit to rear, down, and out of car. NOTE—Use pilot studs when installing assembly.

POWERFLITE TRANSMISSION

Torque Converter and hydraulically operated planetary Transmission.

See "PowerFlite" Transmission in Transmission Section for complete data.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section for data.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: *Check* fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).

Checking Fluid Level—Apply hand brake and place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.

Oil Filler Tube (Location)—At right rear of engine compartment.

Capacity—12 qts. (refill). 13 qts. (after overhaul).

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section.*

UNIVERSALS

Detroit Universal. Cross type with roller bearings.

Propeller Shaft Center Bearing: Used on 8-Passenger. *See "Propeller Shaft" in Chrysler Special Data.*

REAR AXLE

Own Make. Semi-floating types with hypoid gear and Hotchkiss Drive. Two types used as follows:

Model	Rear Axle Type
Synchro-mesh (Exc. 8-Pass. & Est. Wgn.)	Cage
Synchro-mesh (8 Pass. & Est. Wgn.)	Barrel
PowerFlite	Barrel

See "Chrysler Hypoid" in Rear Axle Section.

Ratios	Exc. 8 Pass. & Est. Wgn.	8 Pass. & Est. Wgn.
Synchro-mesh	3.9-1 (39-10)	4.1-1 (41-10)
PowerFlite	3.73-1 (41-11)	3.91-1 (43-11)

REAR AXLE NOTE—Thrust pad, screw and nut, has been eliminated on PowerFlite equipped cars.

Backlash—.006-.010".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), and carrier assembly capscrews. Withdraw carrier assembly from housing.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller - Tool C-675), block brake pedal, disconnect brake line at brake cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (Use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. Endplay—.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct acting, hydraulic type. Serviced by replacement.

Standard Shock Absorbers

Car Model	Chrysler Part No. Front	Rear
4-Door Sedan, Club Cpe.	1450630	1450633
Others	1450631	
8-Pass. Sedan, Est. Wgn.		1450635
Club Cpe., Conv.		1450634

Heavy Duty Shock Absorbers

8-Pass. Sedan, Est. Wgn.	1450346	
Others	1450041	1450635
All (Special)		1450075

FRONT SUSPENSION

Independent. Coil springs and direct acting shock absorbers.

See Front Suspension Section for complete data.

Kingpin Inclination—5° to 6½° with 0° camber.

Camber—Neg. 3/8° to Pos. 3/8° (left 1/4° greater than right within limits).

Caster—Neg. 1° to Neg. 3° (Neg. 2° preferred).

Toe-In—0" to 1/16" (0" preferred).

Toe-Out on Turns—Inner wheel 21½°, plus or minus 1°, with outer wheel turned 20°.

CONTINUED ON NEXT PAGE

CONTINUED ON NEXT PAGE

STEERING

Manual Steering Gear: Gemmer. Worm and three-tooth roller.
See Steering Gear Section for complete data.

Power Steering: Hydraulic steering unit with engine driven hydraulic pump. Two types used as follows:

Power Steering Unit	Type
Gemmer Hydraguide (Early)	Internal Oil Passage
Chrysler Full Time (Later)	Coaxial

See "Power Steering" in Steering Section for complete data.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

BRAKES

Service: Chrysler "Safe-Guard" Lockheed hydraulic. *See "Chrysler Safe-Guard" Brakes in Brake Section for complete data.*

Drums—Centrifuse. Diameter 12".

Wheel Cylinders—1 1/8" bore. Single acting (front), double acting (rear wheels).

Replacement Linings & Shoes—Linings or shoes with linings come in Standard and .030" oversize.

Linings—Molded asbestos (bonded to shoe). Length-12.57" per shoe. Width—2". Thickness—13/64".

Braking Power—60% Front. 40% Rear.

Clearance—.006" at each end of all shoes.

Master Cylinder: On frame bracket at base of brake pedal.

Checking Fluid—Access hole at left of front floor pan.

Removal—Remove floor mat and toe board. Disconnect push rod. Remove horse shoe clip and slide brake pedal off shaft. Disconnect brake line tubes at master cylinder fittings. Remove bolts from master cylinder body. Cylinder can then be lifted off frame bracket. When re-installing use new horse shoe clip.

Power Brakes: Chrysler "Vacu-Ease". Available on 8-Passenger and Town & Country Wagon.
See "Chrysler Vacu-Ease" Power Brakes in Brake Section.

Parking Brake: On shaft at rear of transmission. 6" external contracting band type used with Synchro-mesh Trans. 7" internal expanding used with Auto. Trans.

Adjustment—See "Hand Brake Notes" in Chrysler Special Data.

Lining	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Int. Type	2"	5/32"	13 1/16"

Clearance (External Type)—.015-.020" around band.

Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMG-4102. Electric Type.
See "Auto-Lite" Electric Windshield Wipers in Miscellaneous Section.

Air Conditioning: Chrysler "Airtemp". *See "Airtemp" Air Conditioning in Miscellaneous Section.*

Window Regulators: Auto-Lite Electric Type.
See "Auto-Lite Window Regulators" in Miscellaneous Section.

Convertible Top Control: Hydro-Lectric Type.
See "Hydro-Lectric" Power Operated Tops in Miscellaneous Section.

►*MODEL C66 ELECTRICAL SYSTEM CAUTION: 12 VOLT system used on this model and special 12-volt units used as noted below.*

►*1954 AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning equipment or lines. See "Chrysler, DeSoto, Dodge Airtemp" Air Conditioning in Miscellaneous Section.*

MODEL IDENTIFICATION

SERIAL NUMBER: On metal plate attached to left front door hinge post.

Starting Serial Nos.	Detroit	Los Angeles
C-63-1 New Yorker	76,591,001	66,510,001
C-63-2 New Yorker DeLuxe	7,249,001	69,005,001
C-64 Custom Imperial	7,775,001	
C-66 Crown Imperial	7,817,001	

ENGINE NUMBER: Stamped on boss on top front side of cylinder block just back of water pump.

Starting Engine Number—C54-8-1001.

►*ENGINE NUMBER LETTERS & MARKS (Following Number): Identified as follows:*

"A"—All Cylinders .020" oversize.

"B"—All Crankshaft Journals .010" undersize.

"AB"—BOTH above conditions exist.

"MALTESE CROSS"(3/8" high)—ONE OR MORE Crankshaft Journals .001" undersize. *See "Connecting Rods" and "Crankshaft" (below).*

"DIAMOND"—(3/8" high)—All Valve Lifters .008" oversize.

TUNE-UP

COMPRESSION PRESSURE: 135-165 lbs. at cranking speed of 150 RPM. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 18-21" idling.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in exhaust manifold of right cylinder block. Valve must operate freely. When installing coil, move outer end of thermostatic spring around and up ¾ turn, hooking end of spring under stop stud. *See Chrysler Special Data.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2. See diagram.

SPARK PLUG GAP: .035".

Spark Plug—Auto-Lite Resistor 4GS-150. 14 mm.

COIL: Auto-Lite (C-63, C-64 6 Volt) CR-6015, (C-66 12 Volt) CZ-4001.

Ignition Current—(CR-6015) 2.25 amperes idling, 5.0 amperes stopped. (CZ-4001) 1.8 amperes idling, 3.0 amperes stopped.

DISTRIBUTOR: Auto-Lite IAZ-4001C.

Condenser—Auto-Lite IBB-2015R. **Capacity**—.25-.28 microfarad.

Contact Point Set—Auto-Lite IGP-3028ZS.

Breaker Gap—.015-.018".

Cam Angle—26-28° (one set of points), 32-36° (total dwell). Set both points alike.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

Automatic Advance

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	350	0	700
1	425	2	850
6	825	12	1650
11	1900	22	3800
12	2100	24	4200

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance

Dist. Degrees	Eng. Degrees	Vacuum(" of HG)
Start	0	5¼
1	2	6
5	10	9¼
10	20	14 7/8
11.5	23	17

IGNITION TIMING

Setting—4° BTDC.

►*IGNITION TIMING CAUTION: For accurate reading, be sure engine is at operating temperature and carburetor is at slow idle.*

►*IGNITION SETTING CAUTION: Optional setting is up to 8° BTDC depending on octane rating of fuel being used. Do not exceed 8° limit to prevent harmful preignition.*

Timing Mark—On crankshaft vibration damper.

CARBURETOR

►*CARBURETOR APPLICATION: Carter WCD 2039SA, 2-Barrel Carburetor used on C-63-1. Carter WCFB 2041S, 4-Barrel Carburetor used on C-63-2, C-64, and C-66.*

CARTER 2-BARREL

Carter WCD 2039SA. Dual downdraft type with automatic choke.

►*1954 POPPING BACK ON ACCELERATION (Between 5-50 MPH. after hard run at high speed):* If not corrected by regular tune-up procedure, install special Vacuum Piston Spring No. 61-485. *See "Carter WCD" in Carburetor Section.*

Idle Setting: ½ to 1 turn open. Turn screws out for richer mixture. Set both screws alike.

Idle Speed—500 RPM.

Float Level—11/64" distance between top of floats and machined surface of casting (Gauge T109-205). Adjust by bending arms of floats. Floats should have a free movement of ½" at free end of float. Adjust by bending lip of float bracket.

Accelerating Pump—Install connector link in outer hole of pump arm for long stroke.

Fast Idle: *CAUTION—Two different settings required:*

1) Loosen choke lever clamp screw on choke shaft. Insert .040" feeler gauge (T109-193) between lip of fast idle cam and boss of flange casting. Hold choke valve tightly closed and take slack out of linkage by pressing choke lever toward closed position. Hold in place and tighten clamp screw.

2) With choke valve tightly closed, tighten fast idle adjusting screw until there is an .017-.021" opening (wire gauge T109-44 may be used) between throttle valve and bore of carburetor (side opposite idle port). Be sure fast idle adjusting screw is on high step of cam while making this adjustment.

Automatic Choke Setting: Centered (at index).

Slow Closing Throttle (Dashpot): Distance from end of diaphragm stud to diaphragm bracket should be 3/8". To adjust, loosen lock nut, turn diaphragm to specified amount and tighten lock nut. With dashpot operating lever adjusting screw backed out and throttle valves seated, fully depress diaphragm by pressing against dashpot operating lever. Tighten screw until it just contacts throttle shaft arm, then back out ¼ turn. With throttle valves in wide open position there should be 3/64" clearance between dashpot operating lever and stop. Adjust by bending stop (Tool T109-22).

Throttle Linkage Adjustment (PowerFlite Cars): *See "PowerFlite" Transmission in Transmission Section for data.*

►*OTHER DATA: See "Carter WCD" in Carburetor Section for complete data.*

Fuel Pump Pressure: 3½-5½ lbs.

CARTER 4-BARREL

Carter WCFB 2041S. Four barrel downdraft type with automatic choke.

Idle Setting: 1 to 2 turns open; For richer mixture, turn screws out. Do not idle engine below 500 RPM., with shift lever in neutral position.

Idle Speed—500 RPM.

►*OTHER DATA: See "Carter WCFB" in Carburetor Section for complete data.*

Fuel Pump Pressure: 3½-5½ lbs.

CARB. EQUIPMENT

Fuel Pump: Carter M-840-S. Vacuum diaphragm type.

Pressure: 3½-5½ lbs.

See "Fuel Pumps" in Carburetion Equipment Section.

Gasoline Gauge: Auto-Lite Electric Type.

Car Model	Dash Unit	Tank Unit
C63 (Exc.Sub. & Est. Wgn)	13463A	12618A
C63 (Sub. & Est. Wgn.)	13466A	12195A
C64	13463A	12618A
C66 (12V.)	13465A	13089A

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

►*NOTE: 12 Volt battery used on C66.*

C63 & C64 —Auto-Lite 2H-135-RD or Williard MW-2-135-R- 6 volt, 19 plate, 135 ampere hour capacity.

C66—Auto-Lite 12H-65-R. 12 volt, 13 plate, 65 ampere hour capacity.

Grounded Terminal—Positive.

Engine Ground—Left front of engine.

STARTER

►*NOTE: 12 Volt starter used on C66.*

Car Model	Auto-Lite Starter	Armature
C63, C64	MCL-6121A	MCH-2110
C66 (12 V.)	MDB-6001A	MDB-20006F

Drive—Overrunning clutch (solenoid pinion shift).

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

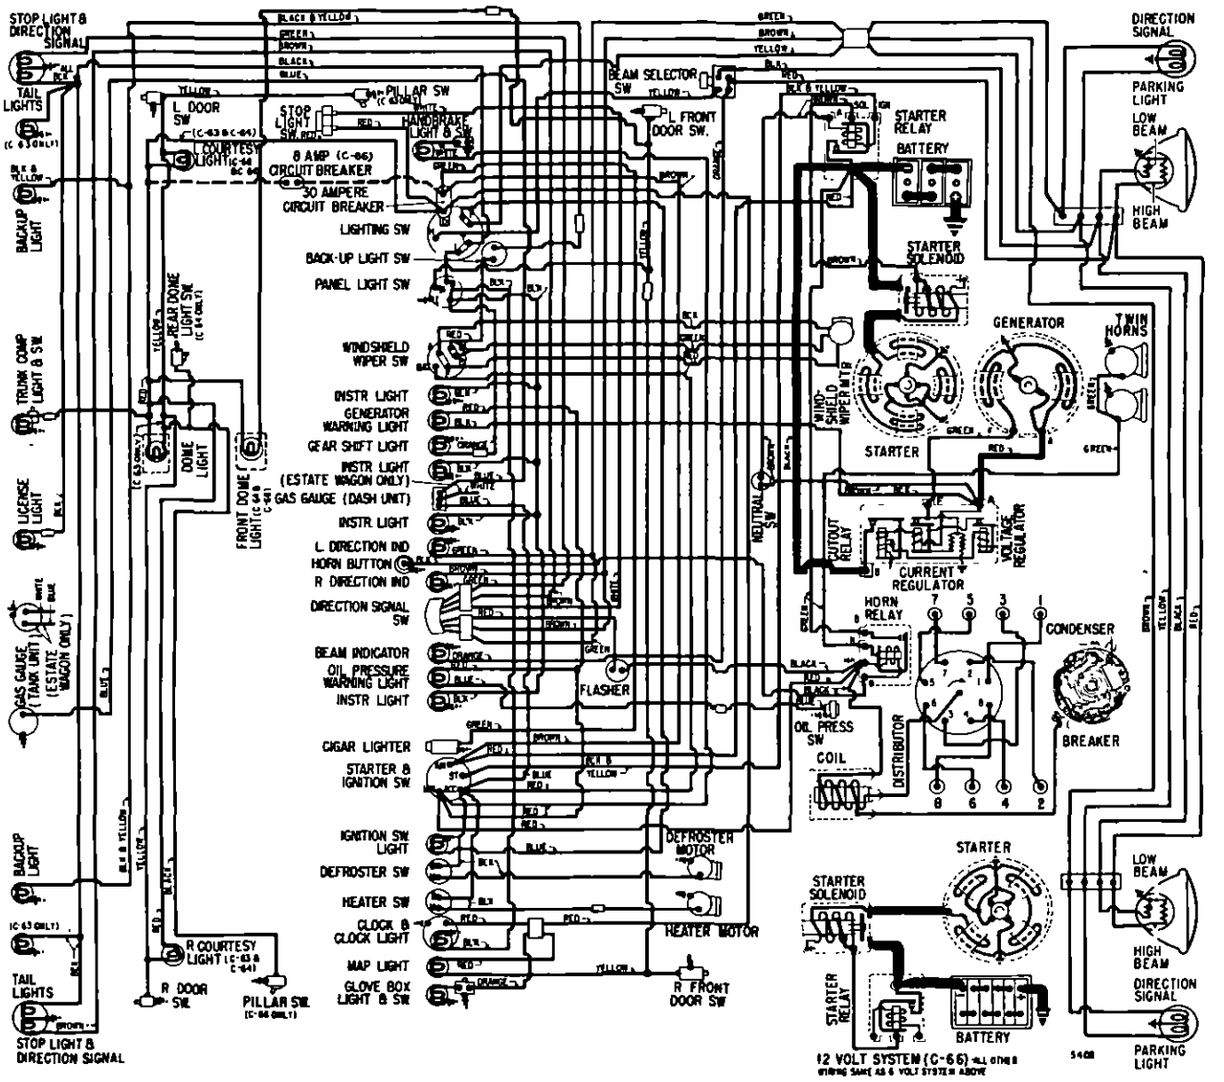
Performance Data—MCL

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	410

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data—MDB



Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	3600	10.0	31
4.0 ft. lbs.	Lock	4.0	145

Starting Switch: Auto-Lite SSX-4004 (MCL-6121A Starter), SSY-4002 12 Volt (MDB 6001A Starter). Solenoid pinion shift and starting switch used with neutral safety switch (on Transmission) and SEPARATE relay Auto-Lite HRW-4001 (6 volt), RAA-4001 (12 volt). *See "Starter Controls" in Electrical Equip. Section.*

Neutral Safety Switch Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

GENERATOR

Car Model	Auto-Lite Generator	Armature
C63, 64	GGW-6001K (S-M)①	GGW-2006F
C63, 64	GGW-6001J (S-M)①	GGW-2001F

45	8.0	1450-1650 1650-1850
50	8.0	1550-1750 1750-1950

Performance Data - GGW

Amperes	Volts	Cold - R.P.M.—Hot
0	6.4	870-970 950-1050
40	8.0	1800-2000 2150-2350
45	8.0	1925-2125 2350-2550

Performance Data—GHM—12 Volt

Amperes	Volts	R.P.M. — Cold
5.0	14.0	875
25.0①	14.0	1325
25.0①	15.0	1350

①—Do not operate at higher outputs and do not operate *at this output without ventilating fan for any length of* time. To do so may result in burned armature and fields.

Brush Spring Tension—(GGU. GGW, GHM) 35-53 ozs., (GGJ) 30-37 ozs. New brushes.

Field Current—(GGW) 1.4-1.5 amperes, (GGJ, GGU) 1.4-1.6 amperes, all at 5.0 volts. (GHM) 1.1-1.3 amperes at 10.0 volts.

Motoring Current—(GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, (GGW) 4.8-5.3 amperes, all at 5.0 volts. (GHM) 3.0-3.5 amperes at 10.0 volts with field terminal grounded to frame.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" slack (when pushed from a straight line midway between pulleys).

Generator Charge Indicator Light: In lower cluster of instrument panel. Light glows when ignition turned on, goes out when generator charging properly.

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A	GGW
VRX-6003A (12 V.)	GHM

Cutout Relay

Cuts In (VAV, VBE, VBF)—6.3-6.8 volts.
Cuts In (VRX)—13.0-13.75 volts.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Cuts Out (VAV, VBE, VBF)—4.1-4.8 volts (approx. 4-6 amps. disch.)
Cuts Out (VRX)—8.2-9.3 volts (approx. 3-5 amps.disch.)
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.1-7.4 volts (VAV, VBE, VBF), 14.2-14.8 volts (VRX), *after 15 minutes operation charging at ½ maximum rate.*
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*

	Test A - Operating Amperes	Test B
VAV-6001B, 2B	55	50 (48-52)
VBE-6001A	52	45 (43-47)
VBF-6001A, 2A	66	55 (53-57)
VRX-6003A	29	23 (21-25)

Test A—After 15 minutes operation charging at 10 amperes (VRX), ½ maximum rate (VAV, VBE, VBF).
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF), 13.6-13.8 volts (VRX).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
Lighting Switch Removal: Remove knob (use small screwdriver to raise up special clip in knob, or remove small cross-head screw, depending on method used to hold knob). Remove hex nut and collar that holds assembly in place. Pry out switch (switch has threaded sleeve with two flat sides. Sleeve fits snugly in switch hole in panel).
Stop Light Switch Location: In brake line fitting on frame left side rail.
►*IGNITION STARTER SWITCH CAUTION:* When installing accessories, use accessory terminal **only** on ignition-starter switch and **not** the ammeter terminal post.
FUSES: Clock—3 amperes. *In clock lead wire.*
Radio—(6 Volt) 14 amperes, (12 Volt) 9 amperes. Behind instrument panel.
CIRCUIT BREAKERS: Lighting System—(6 Volt) One 30 ampere protects lighting circuits. (12 Volt) One 15 ampere protects lighting circuits. On lighting switch.
Windshield Wiper—(6 Volt) 10 ampere, (12 Volt) 6 ampere. On wiper switch. Backup lights protected by windshield wiper circuit breaker.
HORNS: Auto-Lite. *12 Volt type used on C66.*

Car Model	Auto-Lite Horn No. Low Pitch	High Pitch
C63, C64	HAB-4659	HAB-4664
C66 (12 V.)	HAA-4103	HAA-4104

►*NOTE:* Horns have resistance unit connected across circuit breaker points. Resistance for 6 volt horns should be 2.5-2.8 ohms, 12 volt horns 5.7-6.3 ohms.
Horn Relay: (6 Volt) HRL-4104, (12 Volt)RAB-4001.

Performance Data—HRL 4104

Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

►*AIR-CONDITIONED CAR SERVICE CAUTION: Use extreme care when disconnecting any part of air conditioning system. See "Chrysler, DeSoto, Dodge Airtemp" Air Conditioning in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 (All Models).
Bore—3 13/16". **Stroke**—3 5/8".
Displacement—331.1 cu. ins. **Rated HP**—46.51.
Developed Horsepower—(C63-1) 195 at 4400 RPM., (C63-2, C64, C66) 235 at 4400 RPM.
Compression Ratio—7.5-1.
Compression & Vacuum Reading—*See "Tune-Up".*
ENGINE REMOVAL: *See Chrysler Special Data.*
OIL PAN REMOVAL: Remove oil level indicator, drain engine oil. Remove starting motor and exhaust pipe cross-over. Remove oil pan attaching bolts and drop oil pan straight down and away from engine.
CYLINDER HEAD & TIGHTENING TORQUES: *See Chrysler Special Data.*

PISTONS

Aluminum alloy, steel strut, slipper type, cam ground and tin plated.
►*CYLINDER BORE OVERSIZE CAUTION: Engines with letter "A" following engine number indicates that cylinder bore .020" oversize.*
Weight—*20.8 ozs.*
Removal—Pistons and rods removed from above.
Fitting New Pistons: Clearance .0005-.0015" measured 1½" from bottom of piston between thrust face and cylinder wall. Check piston size with micrometer across large diameter at bottom. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 5-12 lbs. at room temperature of 70° F.
►*NOTE:* Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .020" or out-of-round over .005" require reboring and honing to above limits.
Replacement Pistons: Standard, .010", .020", .030", .040", .060" oversize. Fitted pins are included with new pistons.
Installing Pistons: Letter "F" embossed on side of piston near piston pin hole must face front of engine. *See "Connecting Rods (Installation)" below.*

PISTON PINS

Floating type with lock ring in each end.
NOTE—Pin is offset in piston toward right side of engine.
Diameter—63/64". **Length**—3 9/64".
Clearance in Piston—.0000-.0005" or thumb press fit at 70° F.
Clearance in Rod—.0001-.0004". *Selective fit.*
Replacement Pins: Standard, .003". .008" oversize.
NOTE—Fitted pins are furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	5/64"	.010-.020"	.002-.0035"
Compr. (#2)	5/64"	.010-.020"	.001-.0025"
Oil (#3)	3/16"	.010-.020"	.001-.0030"

Replacement Rings: Furnished in sets Standard, .010", .020", .030", .040", .060" oversize.
Installing Rings: "Top" mark on each compression ring is to top of piston when ring is installed.

CONNECTING RODS

Length—6 5/8". **Weight** 25.2 ozs.
Crankpin Journal Diameter—2.249-2.250". Out-of-round and taper limits .001".
►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals machined UNDERSIZE). See "Crankshaft" below.*
Bearings (Lower)—Removable precision type, steel-backed babbitt. No shims.
Clearance—.0005-.0015".
Endplay—.006-.014" (total for both rods).
Replacement Bearings: Standard, .001", .002", .003", .010", .012" undersize.
Installing Rods: *See "Pistons (Installation)" above.* Rods are chamfered on one side at bearing insert and must be installed with chamfer toward crankshaft fillet. "V" slot across one bolt hole of each bearing cap is an oil passage for lubricating the opposite cylinder wall and piston pin. When installing bearing cap make certain "V" slot oil passage is toward top of engine.
►*CAUTION:* Rods are **interchangeable.** However, when rods are assembled to piston, the assemblies of one engine bank are **not interchangeable** with the other bank.

CRANKSHAFT

Journal Diameter—2.4995-2.5005". Five bearings. Out-of-round limit .001".
►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*
.010" UNDERSIZE (Main & Connecting Rod Journals)—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (3/8" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counterweight in following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearings—Removable, precision type, steel-backed, babbitt lined. No shims.
Clearance—.0005-.0015" .

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Replacement Bearings: Std., .001", .002", .003", .010", .012" undersize. Upper and lower halves of bearings Nos. 1, 2, and 4 are alike and interchangeable; Upper No. 3 is interchangeable with Lower No. 3; Upper & Lower No. 5 are **not interchangeable.**

End Thrust: Taken by center (#3) main bearing.

Endplay: .002-.007".

Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

CAMSHAFT

Journal Diameters—(Nos. 1, 2, 3, 4) 1.998-1.999. (No.5) 1.4355-1.4365".

Bearings—Removable, steel-backed, babbitt lined bushings.

Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub.

Endplay—.002-.006".

Timing Chain: Width 1 1/8". **Pitch** .375". **Length** 68 links.

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with the center of the camshaft. Temporarily install camshaft sprocket, less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove Remove camshaft sprocket and position it in timing chain and re-install assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" marks should be in line with shaft center. Install fuel pump eccentric and camshaft nut. Tighten to 130 ft. lbs. torque.

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

►*TIMING CASE COVER REMOVAL CAUTION: Remove water pump before removing timing case cover. (Cover attaching bolt behind water pump).*

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diameter	Stem Diameter	Length
Intake	1 15/16"	.372-.373"	5 1/32"
Exhaust	1 3/4"	.371-.372"	5 1/32"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	.375"	.001-.003"
Exhaust	45°	.358"	.002-.004"

Valve Seat Width—1/16-3/32" (In.), 3/64-1/16" (Ex.)

►*VALVE SEAT INSERT CAUTION: See "Valve System" in Chrysler Special Data.*

Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

►*VALVE GRINDING CAUTION:* If the position of the valve in the head has been changed (due to valve or seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from the valve spring seat in the head to the tip of the valve should be checked with gauge C-3061. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Springs: Two springs used for each valve. Install with closed coil toward cylinder head.

Free Length—Outer 2 3/64". Inner 2 1/16".

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Length	Lbs. Press.	Length
Closed	20-23	1 9/16"	52-58	1 11/16"
Open	40-45	1 3/16"	122-130	1 5/16"

►*CAUTION: Spring ends must be square within 1/16" (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are reground, check **installed** height of spring. If height is 1 23/32" or greater install a 1/16" spacer (Part No. 1400482) in the head counter-bore to bring height back to a nominal 1 5/8-1 11/16".

►*VALVE SPRING LOAD CAUTION: Hydraulic lifter "pump up" will restrict engine speed and cause valves to burn if valve spring loads are not maintained.*

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of the hole. Ream guide to .374-.375" with tool C-741.

►*CAUTION: Oil hole in top of exhaust guide must face up.*

NOTE—If Valve Guide Tool C-3150 is not available, drive guides in, measuring from top of valve seat as follows: Intake—31/32". Exhaust—1 7/32".

Hydraulic Valve Lifters: Integral flat-valve type.

►*VALVE LIFTER OVERSIZE CAUTION: .008" OVERSIZE Valve lifters used on some engines.* A "DIAMOND" 3/8" high stamped on engine number pad following engine number indicates that all lifters are .008" oversize.

Diameter—.9040-.9045". **Clearance in Block**—.0005-.0015".

Lifter Overhaul & Testing—*See "Valve System" in Chrysler Special Data.*

►*VALVE GRINDING CAUTION:* See Valves (above).

Rocker Arm Assembly: *See "Valve System" in Chrysler Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing

Intake Valves—Open 15° BTDC. Close 57° ALDC.

Exhaust Valves—Open 49° BLDC. Close 15° ATDC.

Valve Timing Check—Turn crankshaft until #1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at "Zero", turn crankshaft until dial indicator shows that valve has lifted .020". Pointer on cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft **counter-clockwise** until lifter is back down to the valve closed position. Remove spacer from between rocker arm and valve stem. *See "Camshaft Setting" under CAMSHAFT above.*

►*CAUTION: Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

►*TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing case cover.*

OILING SYSTEM

►*AIR-CONDITIONED CAR FILTER CARTRIDGE CHANGE NOTE:* Due to interference from fender skirt or air conditioning lines immediately above filter cover, filter assembly must be removed from engine to change filter cartridge.

Crankcase Capacity: 5 qts. (refill). Add one additional quart when filter changed..

Normal Oil Pressure: 40-65 lbs. with warm oil operating at 40-50 MPH.

►*OIL PRESSURE CAUTION: Oil pressure will drop to 25-45 lbs. when FILTER ELEMENT IS CLOGGED. Replace filter element.*

Oil Pressure Relief Valve—Mounted in oil pump.

Oil Pressure Warning Light: Located in lower cluster of instrument panel. Light glows when ignition turned on, goes out when oil pressure reaches 10 lbs.

Oil Pressure Switch—Auto-Lite 13411A.

Oil Pump: Rotary type. In crankcase at rear end. Driven by lower distributor drive shaft.

Oil Pump Overhaul—*See "Oil Pump" in Chrysler Special Data.*

Priming Oil Pump (After Installation)—Before installing filter assembly, introduce ½ pint of engine oil into the lower hole of the filter pad with a pressure gun or long nosed oil can.

Oil Filter: Full-flow. At right rear engine. All oil enters lubrication system of engine through filter at full pump pressure. Safety valve in filter opens if element is clogged, allowing oil to pass into lubrication system under a reduced pressure of 25-45 lbs.

Filter Element—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is changed.

►*AIR-CONDITIONED CAR FILTER CARTRIDGE CHANGE: See Note above.*

►*OIL LEAK AT FILTER BASE CORRECTION:* A new Oil Filter-to-Block Gasket, Part No. 1617786, is available to correct this condition on steel reservoir type Full-Flow filters. *CAUTION*—Both faces of aluminum adapter must be smooth.

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 25 qts. (26 qts. with heater).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Pressure Valve: Chrysler 1373136. Radiator filler cap. Opens at 7 lbs.

Thermostat: By-pass type in cylinder head water outlet. Starts to open 157-162° F.

Water Pump: Packless type. Grease fitting for lubrication. *See Water Pump Section for complete data.*

Pump Removal—Drain cooling system, remove fan belts and belt pulley. Remove four bolts attaching pump to water manifold and remove pump.

Temperature Gauge: Auto-Lite 13464A. Not electric.

POWERFLITE TRANSMISSION

Torque converter and hydraulically operated planetary transmission.

See "PowerFlite" Transmission in Transmission Section for complete data.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section for data.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Dashpot Setting: *See "Tune-Up".*

Throttle Linkage Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).

Checking Fluid Level—Apply hand brake and place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.

Oil Pan Filler Tube (Location)—At right rear of engine compartment.

Capacity—12 qts. (refill). 13 qts. (after overhaul).

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section for data.*

UNIVERSALS

Detroit Universals. Cross and Ball & Trunnion types used as follows:

Car Model	Front	Rear
C63-1 (Twn. & Ctry., 8-Pass.) Ⓓ	Cross	Cross
C63-1 (Others)	Ball & Trunnion	Cross
C63-2	Ball & Trunnion	Cross
C64	Ball & Trunnion	Cross
C66 Ⓓ	Cross	Cross

Ⓓ—Have center universal that is ball and trunnion type.

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Chrysler Special Data.*

REAR AXLE

Own. Semi-floating type with hypoid gear with Hotchkiss Drive. Barrel type differential with adjustable ring gear thrust pad used.

See "Chrysler Hypoid" in Rear Axle Section.

Axle Ratios: (C63) 3.36-1 (37-11), (C64, C66) 3.54-1 (39-11).

Backlash—.006-.010". Screw adjustment.

Ring Gear Thrust Pad Setting—Loosen locknut on left side of carrier housing, tighten thrust pad screw finger tight, back screw off 1/8 turn, tighten locknut.

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct acting, hydraulic, non-adjustable. Serviced by replacement.

Standard Shock Absorbers

Car Model	Chrysler Part No. Front	Rear
4-Door Sedan, Club Cpe	1450630	1450633
Others	1450631	
Club Cpe., Conv.		1450634
8-Pass., Est. Wgn., Limo		1450635

Heavy Duty Shock Absorbers

8-Pass., Est. Wgn., Limo. (exc. C66)	1450346	
Others	1450041	1450635
All (Special)		1450075

FRONT SUSPENSION

Independent. Coil springs and direct acting shock absorbers.

See "Chrysler" in Front Suspension Section for complete data.

Kingpin Inclination—(C63, C64) 5-6½°, (C66) 6½-8° with 0° Camber.

Camber—Neg. 3/8° to Pos. 3/8° (¼-½° higher on left).

Caster—Neg. 1° to Neg. 3° (Neg. 2° preferred).

Toe-In—0" to 1/16"" (0" preferred).

Toe-Out on Turns—Inner wheel 20°, outside wheel 18¼°.

STEERING

Manual Steering Gear: Gemmer. Worm and three-tooth roller.

See "Gemmer Worm & Roller" in Steering Section.

Power Steering: Hydraulic steering unit with engine driven hydraulic pump. Two types used as follows:

Power Steering Unit	Type
Gemmer Hydraguide (Early)	Internal Oil Passage
Chrysler Full Time (Later)	Coaxial

See "Gemmer Hydraguide" & "Chrysler Full Time" Power Steering in Steering Section for data.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" Steering Section.*

BRAKES (SAFEGUARD)

Service: (C63, C64) Chrysler "Safe-Guard" Lockheed hydraulic.

See "Chrysler Safe-Guard" Brakes in Brake Section for data.

Drums—Centrifuse. Diameter 12".

Wheel Cylinder Diameter—1 1/8" bore. Single acting (front), double acting (rear wheels)

Replacement Linings & Shoes—Linings or shoes with linings furnished in Standard & .030" oversize.

Lining—Molded asbestos (bonded to shoe). Length—12.57" per shoe. Width 2". Thickness 13/64".

Braking Power—60% Front. 40% Rear.

Clearance—.006" at end of all shoes.

Master Cylinder—On frame bracket at base of brake pedal.

Checking Fluid—Access hole at left of front floor pan.

Removal—Remove floor mat and toe board. Disconnect push rod. Remove horse shoe clip and slide brake pedal off shaft. Disconnect brake line tubes at master cylinder fittings. Remove bolts from master cylinder body. Cylinder can then be lifted off frame bracket. When reinstalling use new horse shoe clip.

Power Brakes: Chrysler "Vacu-Ease". *See "Chrysler Vacu-Ease" Power Brakes in Brake Section.*

Parking Brake: On shaft at rear of transmission. Internal expanding type.

Adjustment— *See "Hand Brake Notes" in Chrysler Special Data.*

Lining—Width 2". Thickness 5/32". Length 13 1/16".

Clearance—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

BRAKES (DISC)

Service: (C66) Hydraulic, self-energizing, two-shoe, DISC type. NOTE—No power booster used.

See "Chrysler Disc Brakes (Without Spider)" in Brake Section for data.

Pressure Plate Diameter—I.D. 9½". O.D. 12".

Wheel Cylinder Diameter—1¼" (front), 1" (rear).

Lining—Molded asbestos segments (6 on each plate) bonded to disc.

Bleeding Disc Type Brakes—Manufacturer recommends bleeding all four lower wheel cylinders first, then all four upper cylinders.

Parking Brake: On shaft at rear of transmission. *See C63 & C64 (above) for data.*

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMG-4102 (C63, C64), EMK-4101 (C66). Electric type.

See "Auto-Lite" Electric Windshield Wipers in Miscellaneous Section.

Air Conditioning: Chrysler "Airtemp". *See "Airtemp" Air Conditioning in Miscellaneous Section.*

Window Regulators: Auto-Lite Electric type. *See "Auto-Lite Window Regulators" in Miscellaneous Section.*

Convertible Top Control: Hydro-Lectric type. *See "Hydro-Lectric" Power Operated Tops in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section*

MODEL IDENTIFICATION

Series	Model Identification
Windsor Deluxe	C-67

SERIAL NUMBER: On metal plate attached to left front door body hinge post.

Starting Serial Nos.	Detroit	Los Angeles
Windsor Deluxe	W551001	W55L1001

ENGINE NUMBER: On boss on top front side of cylinder block just back of water pump.
Starting Engine Number—WE551001.

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number): Identified as follows:*
"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.
"MALTESE CROSS" (3/8" high)—ONE OR MORE Crankshaft Journals .001" undersize. *See "Connecting Rods" and "Crankshaft" (below).*
"DIAMOND" (3/8" high)—ALL Valve Lifters .008" oversize.

TUNE-UP

COMPRESSION PRESSURE: 130-160 lbs. at cranking speed of 150 RPM. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 18-21" idling.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in exhaust manifold of right cylinder block. Valve must operate freely. When installing coil, move outer end of thermostatic spring around and up 3/4 turn (counter-clockwise), hooking end of spring under right stop stud. *See Chrysler Special Data.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035".
Plugs—Auto-Lite Resistor Type 4S-165, 14mm. Torque to 30 ft. lbs.

COIL: Auto-Lite CAC-4001.
Ignition Current—2.25 amperes idling, 5.0 amperes stopped.

DISTRIBUTOR: Auto-Lite (U.S.) IAZ-4001D, (Can. Early) IAZ-4001D, (Can. Later) IAZ-4001E.
Condenser—Auto-Lite IBB-2015R. **Capacity**—.25-.28 microfarad.
Contact Point Set—Auto-Lite IGP-3028ZS.
Breaker Gap—.015-.018". Set maximum gap to .017".
Cam Angle—34° ± 3° with both sets of contacts. Do not adjust gap outside limits to obtain specified cam dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAZ-4001D

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	0	700
1	365	2	730
6	450	12	900
16	2125	32	4250
17	2300	34	4600

Automatic Advance—IAZ-4001E

Degrees	Distr. RPM	Degrees	Eng. RPM
Start	350	0	700
1	375	2	750
4	450	8	900
13	1900	26	3800
14	2050	28	4100

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance—IAZ-4001D, E

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0	5-1/4
1	2	6
5	10	9-1/4
10	20	14-7/8
11.5	23	17

Distributor Basic Timing & Drive Shaft Bushing: *See "Ignition Notes" in Chrysler Special Data.*

IGNITION TIMING

Setting—7° BTDC.
Timing Mark—On crankshaft vibration damper.
Manual Adjustment—Timing may be advanced with some premium fuels. Range of timing should not exceed plus or minus 4° from recommended factory setting.

CARBURETOR
CARTER BBD

Transmission	Carter Carb. No.
Standard	BBD-2180S, SA, SB
PowerFlite	BBD-2162S, SA, SB

►*HESITATION OR SAG ON LIGHT ACCELERATION* (BBD-2162S Carb.): *See "Carter BBD" in Carburetor Section for unitized Pkg. installation data.*

►*CARBURETOR CHANGE FOR IMPROVED GAS MILEAGE: See "Carter BBD" in Carburetor Section for Unitized Pkg. installation data.*

►*IDLE SPEED (AIR CONDITIONED CARS): Summer and winter Idle Speed Adjustments are different and must be made as follows:*

Winter Setting (Air Conditioner not in Operation)—Back off round adjusting nut on diaphragm shaft away from pawl to prevent interference with idle adjustment. Start engine, attach tachometer and with transmission control in neutral ("N") position and engine at operating temperature adjust engine idle to 475-500 RPM.
Summer Setting (Air Conditioner in Operation)—Adjust engine idle as for winter operation, then adjust fast idle device as follows:
Idle Speed-Up Control Adjustment (Cars with Air Conditioning)—Turn blower control switch to first position, temperature control switch to second position. Adjust round adjusting nut on fast idle diaphragm shaft to increase engine RPM to from 700 to 800 RPM. With hand brake on, move transmission control lever to drive ("Dr") range then back to neutral ("N") Readjust fast idle if necessary. Lock round nut with hex nut.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*
Idle Setting—1/4—1-1/4 turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—475-500 RPM. *For "Idle Speed Setting" and "Idle Speed-Up Control Adjustment" on Air Conditioned cars see CARBURETOR above.*

Float Level—7/32" (Gauge T109-239) from top surface of body casting to top of each float. If one float lower than other, equalize by bending float arm. If both floats require same correction, adjust by bending lip on float arm.
Accelerating Pump—Normal setting, outer hole (medium stroke).

Fast Idle: .015-.019" clearance between throttle valve and bore of carburetor (side opposite idle port), with throttle valve tightly closed. Adjust by bending choke connector rod at lower angle (Tool T109-213).
Automatic Choke Setting: Centered (set at index).
Unloader Adjustment: Make fast idle adjustment. With throttle valve held wide open and choke valve fully closed, clearance between upper edge of choke valve and inner wall of air horn should be 1/4". Adjust by bending arm on choke trip lever (Tool T109-214).
Slow Closing Throttle Dashpot Adjustment (2162S,SA,SB): Loosen lock nut and adjust dashpot unit so that plunger shaft can be bottomed with a 1/16" gauge placed between shaft and operating lever with throttle valves tightly closed. Tighten lock nut.
Throttle Linkage Adjustment: *See "PowerFlite" Transmission Data in Transmission Section.*
►*OTHER DATA: See "Carter BBD" in Carburetor Section.*
Fuel Pump Pressure: 5-6½ lbs.

CARB. EQUIPMENT

Fuel Pump: Auto-Lite FB-4006. Mechanical type.
Pressure—5-6½ lbs.
See "Fuel Pumps" in Carburetion Equip. Section.
Gasoline Gauge: Auto-Lite Electric Type.

Car Model	Dash Unit	Tank Unit
C67 (Exc. Sub. & Est. Wgn.)	13703A	13795A
C67 (Sub. & Est. Wgn.)	13705A	13872A

See "Fuel Gauges" in Carburetion Equip. Section.

BATTERY

Auto-Lite 2H-120-D or Willard MW-2-120-C. 6 volt, 17 plate, 120 ampere hour capacity (20 hr. rate).
Battery Ground—Positive.
Engine Ground—Left front of engine.

STARTER

Auto-Lite MCL-6304. Armature MCH-2110.
Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs.

Performance Data

Torque	RPM	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8 ft. lbs.	Lock	2.0	410

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Starting Switch: Auto-Lite SSX-4004. Solenoid pinion shift and starting switch used, with neutral safety switch (on Transmission) and SEPARATE relay Auto-Lite HRW-4001. *See "Starter Controls" in Electrical Equip. Section.*

Neutral Safety Switch Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

GENERATOR

Auto-Lite Generator No.	Armature No.
GGW-6001K (U.S. Std.)	GGW-2006F
GGW-6016D (U.S. Pow. St.)	GGW-2090F
GGW-6001J (Can. Std.)	GGW-2006F
GGW-6016F (Can. Pow. St.)	GGW-2090F
GGW-6001J (Spec. Equip.)	GGW-2006F
GGU-6001G (Spec. Equip.)	GGU-2006F
GGU-6001H (Spec. Equip.)	GGU-2006F
GGJ-6001F (Spec. Equip.)	GGJ-2101AF
GGJ-6001G (Spec. Equip.)	GGJ-2101AF
GGW-6016C (Spec. Pow. St.)	GGW-2090F
GGU-6013B (Spec. Pow. St.)	GGU-2071F
GGJ-6008A (Spec. Pow. St.)	GGJ-2107F
GGW-6017B (Air Cond.)	GGW-2098F
GGU-6008D (Air Cond.)	GGU-2063F
GGJ-6001L (Air Cond.)	GGJ-2101AF

►*GENERATOR BRACKET INTERFERENCE WITH GENERATOR WIRING HARNESS CAUTION:* It is possible that edge of generator bracket may interfere with generator wiring harness, causing a "short" in this wiring. If visual inspection shows this interference, re-route harness to rear of generator and generator bracket. Later production cars have this change made.

►*SPECIAL GENERATOR NOTE:* GGJ, GGU, and GGW type generators used. Performance specifications below apply equally to all generators, within any one of the three groups specified.

Performance Data—GGJ

Amperes	Volts	Cold —RPM—	Hot
0	6.4	600-700	650-750
50	8.0	1400-1600	1550-1750
55	8.0	1500-1700	1650-1850

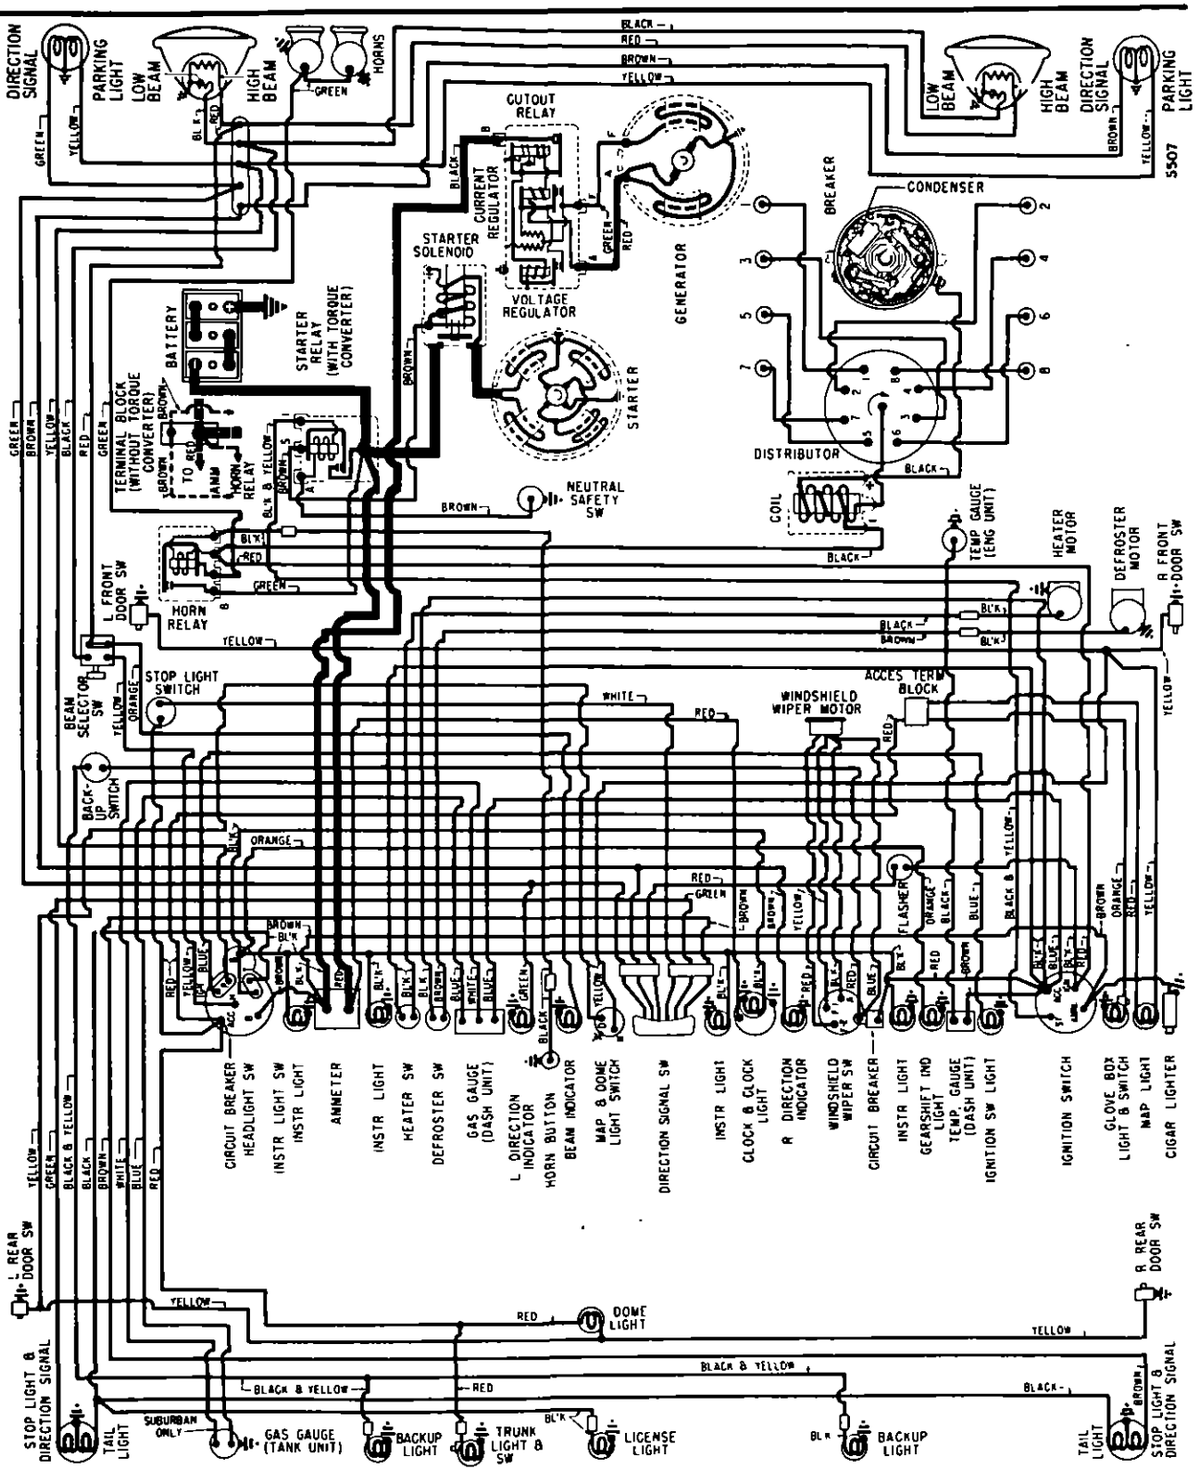
Performance Data—GGU

Amperes	Volts	Cold —RPM—	Hot
0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850
50	8.0	1550-1750	1750-1950

Performance Data—GGW

Amperes	Volts	Cold —RPM—	Hot
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Brush Spring Tension—(GGJ) 34-41 ozs., (CGU, GGW) 35-53 ozs., with new brushes.



Field Current—(GGJ) 1.4-1.7 amperes, (GGU) 1.4-1.6 amperes, (GGW) 1.6-1.7 amperes, all at 5.0 volts.

Motoring Current—(GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, (GGW) 5.0-5.5 amperes, all at 5.0 volts.

Rotation—Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" slack (when pushed from a straight line midway between pulleys).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A	GGW

Cutout Relay

Cuts In–6.3-6.8 volts.
Cuts Out–4.1-4.8 volts.
Contact Gap–.015" minimum.
Air Gap–.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting–7.1-7.4 volts *after 15 minutes operation charging at ½ maximum rate.*
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A	–Operating Amperes–	Test B
VBE-6001A	52		45 (43-47)
VBF-6001A	66		55 (53-57)
VAV-6001B,2B	55		50 (48-52)

Test A–After 15 minutes operation charging at ½ maximum rate.
Test B–After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF).
Air Gap–.048"-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
Lighting Switch Removal: Remove knob (use small screwdriver to raise up special clip in knob, or remove small cross-head screw, depending on method used to hold knob). Remove hex nut and collar that holds assembly in place. Pry out switch (switch has threaded sleeve with two flat sides. Sleeve fits snugly in switch hole in panel).
Stop Light Switch Location: On forward end of brake master cylinder.
►*IGNITION STARTER SWITCH CAUTION:* When installing accessories, use accessory terminal **only** on ignition-starter switch and **not** the ammeter terminal post.
FUSES: Clock–3 amperes. In clock lead wire. **Radio**–14 amperes. Behind instrument panel.
CIRCUIT BREAKERS: Lighting–Located in headlight switch assembly. Three in number, as follows:
27 Ampere Circuit Breaker–Protects headlights, high beam indicator light, and parking lights.
10 Ampere Circuit Breaker–Protects tail lights, license plate lights, clock light, and instrument panel light.
10 Ampere Circuit Breaker–Protects stop lights, map light, dome light, glove box light, courtesy light, and trunk compartment light.
Windshield Wiper: 10 amperes. On wiper switch.
HORNS: Auto-Lite. Dual horns with relay.
Low Pitch–A-L HAB-4029.
High Pitch–A-L HAB-4030.
Horn Relay: Auto-Lite RAF-4001.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE NOTE: Engine has polyspherical combustion chamber together with a single rocker shaft valve mechanism, and lateral valves.*

ENGINE SPECIFICATIONS: Spitfire. 90° V8 Valve-in-head.

Bore	Stroke	Displmt.
3 5/8"	3 5/8"	300 cu. ins.

Compr. Ratio	Rated HP	Developed HP
8.0-1	37.8	188 at 4400 RPM.

Compression & Vacuum Reading–*See TUNE-UP.*

ENGINE REMOVAL: *See "Engine" in Chrysler Special Data.*

OIL PAN REMOVAL: Remove oil level indicator. Remove crankcase plug and drain lubricating oil. Disconnect steering linkage at idler arm support bracket, and allow linkage to settle away from bottom of oil pan. Remove bolts that hold oil pan to cylinder block. Slide pan out and down away from engine.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chrysler Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chrysler Special Data.*

PISTONS

Aluminum alloy, elliptically turned, steel-banded, tin-coated with pin offset to right .06".

►*CYLINDER BORE OVERSIZE CAUTION: Engine with letter "A" following engine number indicates that cylinder bores are .020" oversize.*
Weight–20.1 ozs. (Std. through .060" oversize).
Removal–Pistons and rods removed from above.

Fitting New Pistons: Clearance .0005-.0015" measured 1½" from bottom of piston between thrust face and cylinder wall. Check piston size with micrometer across large diameter at bottom. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 5-12 lbs. at room temperature of 70°F.

►*NOTE:* Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .020" or out-of-round over .005" require reboring and honing to above limits.

Replacement Pistons: Standard, .010", .020", .030", .040", .060" oversize. Fitted pins are included with new pistons.

Installing Pistons: Assemble pistons to connecting rod on right hand cylinder bank (2-4-6-8) with indent on top of piston on side opposite to large chamfer at insert end of connecting rod. On left bank (1-3-5-7) assemble with indent on same side as large chamfer at insert end of connecting rod. *See Rod Installation.*

PISTON PINS

Floating type with lock ring in each end.
NOTE–Pin is offset in piston toward right side of engine.
Diameter–.9841-.9843". **Length**–3.040-3.050".
Clearance in Piston–.0000-.0005" or thumb press fit at 70°F.
Clearance in Rod–.0001-.0004". Selective fit.
Replacement Pins: Standard .003", .008" oversize.
NOTE–Fitted pins are furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0775-.0780"	.010-.020"	.0015-.003"
Compr. (#2)	.0775-.0780"	.010-.020"	.001-.0025"
Oil (#3)	140-.150"	.010-.020"	.001-.0025"

Replacement Rings: Furnished in sets Standard, .010", .020", .030", .040", .060" oversize.
Installing Rings: "Top" mark on each compression ring is to top of piston when ring is installed.

CONNECTING RODS

Length–6.621-6.625". **Weight**–25.2 ozs.
Crankpin Journal Diameter–2.249-2.250". Out-of-round and taper limits .001".

►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals machined UNDERSIZE). See "Crankshaft" below.*
Bearings (Lower)–Removable precision type, steel-backed babbitt. No shims.
Clearance–.0005-.0015".
Endplay–.006-.014" (total for both rods).
Replacement Bearings: Standard, .001", .002", .003", .010", .012" undersize.
Installing Rods: *See "Pistons (Installation)" above.* Install rod and piston assembly with indent on top of piston pointing toward front of engine. *NOTE*–Connecting rod bores are chamfered more on one side than the other. Large chamfer must be installed toward crankshaft journal fillet.

►*BEARING INSERT CAUTION:* When installing lower bearing insert, make certain that "V" groove in insert is in line with "V" groove in cap. Tighten bearing cap nuts to 45 ft. lbs. torque.

►*CAUTION:* Rods are **interchangeable.** However, when rods are assembled to piston, the assemblies of one engine bank are **not interchangeable** with the other bank.

CRANKSHAFT

Journal Diameter–2.4995-2.5005". Five bearings. Out-of-round limit .001".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*
.010" UNDERSIZE (Main & Connecting Rod Journals)–Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)–A "Maltese Cross" (3/8" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counterweight in following manner: "R" indicates connecting rod

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).

Bearings—Removable, precision type, steel-backed, babbitt lined. No shims.

Clearance—.0005-.0015".

Replacement Bearings: Std., .001". .002", .003", .010", .012" undersize Upper and lower halves of bearings Nos. 1, 2, and 4 are alike and interchangeable; Upper No. 3 is interchangeable with Lower No. 3, Upper & Lower No. 5 are **not interchangeable.**

End Thrust—Taken by center (No.3) main bearing.

Endplay—.002-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

Engine Front Cover (Removal & Installation): *See "Engine Front Cover" in Chrysler Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chrysler Special Data.*

CAMSHAFT

Journal Diameters—(Nos. 1, 2, 3, 4) 1.998-1.999.(No.5) 1.4355-1.4365".

Bearings—Removable, steel-backed, babbitt lined bushings.

Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub.

Endplay—.002-.006".

Timing Chain: Width 1 1/8". **Pitch** .375". **Length** 68 links.

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with the center of the camshaft. Temporarily install camshaft sprocket, less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove camshaft sprocket and position it in timing chain and re-install assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" marks should be in line with shaft center. Install fuel pump eccentric and camshaft nut.

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

►*TIMING CASE COVER INSTALLATION CAUTION:* **Install short bolt at oil filler pipe location.** Install bolts and washers after coating two top and four bottom bolts with suitable sealer for oil, and four center bolts with suitable sealer for water.

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diam.	Stem Diam.	Length
Intake	1 13/16"	.372-.373" ①	4 25/32"
Exhaust	1 1/2"	.371-.372" ①	4 3/4"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	.381"	.001-.003"
Exhaust	45°	.365"	.002-.004"

①—Standard. *See Valve Guides below.*

Valve Seat Width—1/16-3/32" (Intake), 3/63-1/16" (Exhaust).

►*VALVE OVERSIZE NOTE:* "I" or "E" stamped on cylinder head at rocker cover gasket boss, indicates that all intake or exhaust valves are oversize in that bank depending upon what letter is stamped.

Intake Valve Stem Oil Seal—Slide valve stem seal over stem (open end down) and down against valve guide (seals will automatically seat themselves in correct position when engine is first run).

►*VALVE GRINDING CAUTION:* If the position of the valve in the head has been changed (due to valve or seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from the valve spring seat in the head to the tip of the valve should be checked with gauge C-3436 If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Springs: Single spring used for each valve.
Free Length—2".
Specifications—Both intake and exhaust valve springs should have 134-146 lbs. pressure when compressed to 1 5/16". Discard springs that test less than 130 lbs. at 1 5/16".

►*CAUTION: Spring ends must be square within 1/16" (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are reground, check **installed** height of spring. If height is 1 23/32" or greater install a 1/16" spacer (Part No 1400482) In the head counter-bore to bring height back to a nominal 1 5/8-1 11/16".

►*VALVE SPRING LOAD CAUTION: Hydraulic lifter "pump up" will restrict engine speed and cause valves to burn if valve spring loads are not maintained.*

Valve Guides: Cast integral with cylinder head. Service as follows: When valve stem clearance excessive, use Reamer Tool Set to ream guides for NEXT OVERSIZE Valve as follows: Tool C-3433 (.005" O.S.), Tool C-3430 (.015" O.S.), Tool C-3427 (.030" O.S.). Valves furnished Std. and .005", .015", .030" Oversize.

Hydraulic Valve Lifters: One-piece integral type.

►*VALVE LIFTER OVERSIZE CAUTION: .008" OVERSIZE Valve lifters used on some engines.* A "DIAMOND" 3/8" high stamped on engine number pad following engine number indicates that all lifters are .008" oversize.

Diameter—.9040-.9045". **Clearance in Block**—.0005-.0015".

Lifter Overhaul & Testing—*See "Valve System" in Chrysler Special Data.*

►*VALVE GRINDING CAUTION:* See Valves (above).

Rocker Arm Assembly: *See "Valve System" in Chrysler Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Intake Valves—Open 15° BTDC. Close 57° ALDC.

Exhaust Valves—Open 49° BLDC. Close 15° ATDC.

Valve Timing Check—Turn crankshaft until No. 1 intake valve closed. Insert a .210" spacer between rocker arm and No. 1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at "Zero"., turn crankshaft until dial indicator shows that valve has lifted .024". Pointer on cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft **counter-clockwise** until lifter is back down to the valve closed position. Remove spacer from between rocker arm and valve stem. *See "Camshaft Setting under CAMSHAFT above.*

►*CAUTION: Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

OILING SYSTEM

►*AIR CONDITIONED CAR FILTER CARTRIDGE CHANGE NOTE:* Due to interference from fender skirt or air conditioning lines immediately above filter cover, filter assembly must be removed from engine to change filter cartridge.

Crankcase Capacity: 5 qts. (refill). Add one additional quart when filter changed.

Normal Oil Pressure: 40-65 lbs. with warm oil operating at 40-50 MPH.

►*OIL PRESSURE CAUTION: Oil pressure will drop to 25-45 lbs. when FILTER ELEMENT IS CLOGGED. Replace filter element.*

Oil Pressure Relief Valve—Mounted in oil pump. Adjustable.

NOTE—When replacing relief valve spring, use same color spring.

Oil Pressure Gauge—Auto-Lite 13700A. Not electric.

Oil Pump: Rotor type. In crankcase at rear end. Driven by lower distributor drive shaft.

Pump Overhaul—*See "Oiling System" in Chrysler Special Data.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Priming Oil Pump (After Installation)– Before installing filter assembly, introduce ½ pint of engine oil into the lower hole of the filter pad with a pressure gun or long nosed oil can.

Oil Filter: Full flow. At right rear of engine. All oil enters lubrication system of engine through filter at full pump pressure. Safety valve in filter opens if element is clogged, allowing oil to pass into lubrication system under a reduced pressure of 25-45 lbs.

Filter Element–Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is changed.

►*AIR CONDITIONED CAR FILTER CARTRIDGE CHANGE: See Note above.*

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 24 quarts (25 qts. with heater).

Pressure Valve: Chrysler 1373136 (Opens at 7 lbs.). Radiator filler cap. 14 lb. type used with Air Conditioning.

Thermostat: Choke type in cylinder head water outlet. Starts to open 159-165° F.

Water Pump: Ball bearing type. No lubrication required. *See "Chrysler" in Water Pump Section for data.*

Pump Removal–Drain cooling system. Remove radiator shroud assembly, fan belt, pulley and fan. Remove radiator outlet hose from thermostat housing. Remove wire from temperature gauge sending unit. Remove pump housing-to-cylinder block attaching bolts, remove pump housing assembly.

Temperature Gauge: Auto-Lite (Dash Unit) 13701A, (Engine Unit-mounted in pump housing assembly) 13550A. Electric type.

CLUTCH

Borg & Beck	Model	Assy. No.	Disc No.
Standard	10A7	361376	382366

See "Borg & Beck" Clutches in Clutch Section.

Pedal Adjustment: Turn clutch release fork rod adjusting nut until 3/16" free play at outer end of clutch fork is obtained. This adjustment will give necessary 1" free play at pedal.

Over-Center Spring Adjustment: With clutch pedal in fully released position, and with over-center spring eyebolt finger tight, hold spring eyebolt, spring and bracket assembly as a single unit and with an adjusting wrench tighten adjusting nut seven full turns.

Removal: Disconnect propeller shaft, speedometer cable, parking brake cable, and gearshift control rods. Remove transmission (See Synchro-mesh Transmission). Mark clutch cover and flywheel. Remove bolts that hold clutch cover to flywheel; loosening each bolt a few turns (in succession) until cover is free. Remove clutch disc and pressure plate assembly from clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. Three speed synchro-mesh.
See "Chrysler Synchro-mesh" in Transmission Section.

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Jack up car at front and place floor jacks under lower control arms. Disconnect propeller shaft at front end. If transmission is to be disassembled, loosen companion flange nut. Disconnect speedometer cable, and hand brake cable at brake band. Disconnect gearshift and gearshift selector control rods at transmission. Remove capscrews and nuts which attach transmission to clutch housing. Remove transmission assembly by pulling it back, down and out of car.

NOTE–When installing transmission use pilot studs to avoid springing clutch disc.

POWERFLITE TRANSMISSION

Torque converter and hydraulically operated planetary transmission.

See "PowerFlite" Transmission in Transmission Section for complete data.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section for data.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).

Checking Fluid Level–Apply hand brake and place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.

Oil Filler Tube (Location): At right rear of engine compartment.

►*CAUTION:* To prevent dirt from entering transmission, make sure oil level indicator is properly seated in filler tube.

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite Transmission" in Transmission Section.*

UNIVERSALS

Detroit Universals. Ball and Trunnion type used at front, Cross type used at rear.

REAR AXLE

Own. Separate carrier, semi-floating types with hypoid gear and Hotchkiss Drive. Two types used as follows:

Model	Rear Axle Type
Synchro-mesh	Cage
PowerFlite	Barrel

See "Chrysler Hypoid" in Rear Axle Section.

Ratios	Exc. Est. Wgn.	Est. Wgn.
Synchro-mesh	3.9-1 (39-10)	3.91-1 (43-11)
PowerFlite	3.54-1 (39-11)	3.73-1 (41-11)

Backlash–.006-.008".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, hub, and drum assembly (use screw type hub puller–Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE–Use puller C-293-C to remove bearing from shaft, Tool C-637 to remove inner oil seal, drift C-241 to install seal.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .005", .010", .0125", .015", .030" thick) equally at both wheels.
Endplay–.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct-acting, hydraulic Serviced by replacement.

Car Model	Chrysler Part No. Front	Rear
Conv. Cpe.	1614406	1450919
4-Door	1614405	1450918
Estate Wagon	1614406	1450920
Others	1614406	1450918
Heavy Duty		1450920
Heavy Duty (Spec.)		1450037

FRONT SUSPENSION

Independent. Coil springs and direct-acting shock absorbers. Shock absorbers located within coil springs. *See Front Suspension Section for data.*
Kingpin Inclination–5½° at 0° camber.
Caster–Neg. 2° to 0° (Neg. 2° preferred with Manual Steering, 0° with Power Steering with left side 0-¾° greater than right side within these limits).
Camber–Neg. 1/8° to Pos. 5/8° (Left side Pos. 1/2°, Right side 0° preferred).
Toe-In–0" to Pos. 1/16" (0" preferred).
Toe-Out on Turns–Inner wheel 20°, outer wheel 18½° ±½°.

STEERING

Manual: Gemmer. Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.
Power Steering: "Coaxial". Components encased in tubular housing which is located at bottom of, and concentrically around axis of steering column.
See "Coaxial" Power Steering in Steering Section.
Steering Linkage: *See "Steering Linkage" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Steering Wheel & Horn Button Removal: See *"Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: See *"Gemmer Worm & Roller" Steering Section.*

BRAKES

Service: Chrysler "Safe-Guard" Lockheed hydraulic. See *"Chrysler Safe-Guard" Brakes in Brake Section for data.*

Drums—Centrifuse. Diameter 12".

Wheel Cylinder Diameter—1 1/8" bore. Single acting (front), double acting (rear wheels).

Replacement Linings & Shoes—Linings or shoes with linings furnished in Standard & .030" oversize.

Lining—Molded asbestos (bonded to shoe). Length—12.57" per shoe. Width 2". Thickness 13/64".

Braking Power—60% Front. 40% Rear.

Clearance—.006" at each end of all shoes.

Master Cylinder: On engine side of dash panel opposite base of brake pedal.

Checking Fluid—Filler plug at top of master cylinder (on dash panel in engine compartment).

Removal—Disconnect pushrod. Disconnect brake line tubes at master cylinder fittings Remove four stud nuts from studs, remove master cylinder.

Power Brakes: Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces regular master cylinder. See *"Chrysler Power Unit" in Brake Section.*

Parking Brake: On shaft at rear of transmission. 6" external contracting type used with Synchro-mesh Trans. 7"internal expanding type is used with PowerFlite Transmission.

Adjustment—See *"Hand Brake Notes" in Chrysler Special Data.*

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	16 11/16"
7" Int. Type	2"	5/32"	13 1/16"

Clearance (External Type)—.015-.020" around band.

Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMZ-4001. See *"Auto-Lite Electric Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: Airtemp. See *"Chrysler Airtemp" Air-Conditioning in Miscellaneous Section.*

Power Window Regulators: Auto-Lite Electric Type. Reversible type motor in each window. Controlled by door switch and master control switch. See *"Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Auto-Lite Electric Type. See *"Power Seat Adjusters" in Miscellaneous Section.*

Convertible Top Control: Auto-Lite. Electrical-hydraulic type. See *"Chrysler Top Controls" in Miscellaneous Section.*

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
New Yorker DeLuxe	C-68
Imperial	C-69
Crown Imperial	C-70
"300"	C-300

SERIAL NUMBER: On plate attached to left front door hinge post.

►*SERIAL NUMBER NOTE: 1955 Serial Numbers (example N551001) include the following information: Model "N" (New Yorker), "C" (Imperial), "3N" (300). Year Built "55". Serial Number "1001". Los Angeles built cars will have an "L" following the year "55L".*

Starting Serial Numbers	Detroit	Los Angeles
C-68	N551002	N55L1001
C-69	C551001	
C-70	C551001	
C-300	3N551001	

ENGINE NUMBER: On boss on top front side of cylinder block just back of water pump.

►*ENGINE NUMBER NOTE: 1955 Engine Numbers (example NE551001) include the following information: Model "N" (New Yorker), "C" (Imperial), "3N" (300). Engine "E". Year Built "55" Serial Number "1001".*

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number): Identified as follows:*

"A"—ALL Cylinders .020" oversize.
"B"—ALL Crankshaft Journals .010" undersize.
"AB"—BOTH above conditions exist.
"MALTESE CROSS" (3/8" high)—ONE OR MORE Crankshaft Journals .001" undersize. *See "Connecting Rods" and "Crankshaft" below.*
"DIAMOND" (3/8" high)—ALL Valve Lifters .008" oversize.

TUNE-UP

COMPRESSION PRESSURE: 140-170 lbs. at cranking speed of 150 RPM. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 18-21' idling.

VALVE TAPPET CLEARANCE: (C-300 Models only)—.015" (Intake), .024" (exhaust), with engine hot. Set as follows for COLD engine: .015" (Intake), .028" (Exhaust). *Hydraulic valve lifters used on all other models and adjustment not required in service.*

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in exhaust manifold of right cylinder block. Valve must operate freely. When installing coil, move outer end of thermostatic spring around and up ¼ turn (counter-clockwise), hooking end of spring under right stop stud. *See Chrysler Special Data.*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.
Cylinders—RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.
SPARK PLUG GAP: .035".
Spark Plugs—Auto-Lite Resistor 4GS-200 (C-300) 4GS-175 (Others), 14mm. Torque to 30 ft. lbs.

COIL: Auto-Lite CZ-4001 (Early C-70 *12 V.*) **CAE-4001** (Later C-70 *12 V.*), **CAC-4001** (Others *6 V.*).

Ignition Current—1.8 amperes idling, 3.0 amperes stopped (CZ, CAE), 2.25 amperes idling, 5.0 amperes stopped (CAC).

DISTRIBUTOR: (Except C-300)—IAZ-4001E (Early), 4001F (Later), 4001G (Late). (C-300)—IAZ-4001G.

Condenser—Auto-Lite IBB-2015R. **Capacity** .25-.28 microfarad.
Contact Point Set—Auto-Lite IGP-3028ZS.
Breaker Gap—.015-.018". Set maximum gap to .017".
Cam Angle—34°±3° with both sets of contacts. Do not adjust gap outside limits to obtain specified cam dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAZ-4001E

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	350	0	700
1	375	2	750
4	450	8	900
13	1900	26	3800
14	2050	28	4100

Automatic Advance—IAZ-4001F

Degrees Distr.	RPM	Degrees Eng.	RPM
Start	350	0	700
1	375	2	750

Distributor Basic Timing & Drive Shaft Bushing: *See "Ignition Notes" in Chrysler Special Data.*

IGNITION TIMING

Setting (Except C-300)—6° BTDC.
Setting (C-300)—10° BTDC.
Timing Mark—On crankshaft vibration dampener.

►*C-300 TIMING CAUTION: When setting ignition timing, reduce engine idle speed to 500 RPM. After timing completed, reset idle speed to 600 RPM.*

Manual Adjustment—Timing may be advanced with some premium fuels. Range of timing should not exceed plus or minus 4° from recommended factory setting.

CARBURETOR

►*CARBURETOR APPLICATION: Carter 4-Barrel Carburetors used on all models. One carburetor used C-69, and C-70. Two carburetors used on C-300.*

Car Model	Carter Carb. No.
C-68, C-69., C-70	WCFB-2126S
C-300	(Two) WCFB-2317S

►*IDLE SPEED (AIR CONDITIONED CARS): Summer and winter Idle Speed Adjustments are different and must be made as follows:*

Winter Setting (Air Conditioner not in Operation)—Back off round adjusting nut on diaphragm shaft away from pawl to prevent interference with idle adjustment. Start engine, attach tachometer and with transmission control in neutral ("N") position and engine at operating temperature adjust engine idle to 475-500 RPM.

Summer Setting (Air Conditioner in Operation)—Adjust engine idle as for winter operation, then adjust fast idle device as follows:

Idle Speed-Up Control Adjustment (Cars with Air Conditioning)—Turn blower control switch to first position, temperature control switch to second position. Adjust round adjusting nut on fast idle diaphragm shaft to increase engine RPM to from 700 to 800 RPM. With hand brake on, move transmission control lever to drive ("Dr") range then back to neutral ("N") position. Readjust fast idle if necessary. Lock round nut with hex nut.

CARTER 4-BARREL WCFB

(C-68, C-69, C-70) No. 2126S

(C-300) Two No. 2317S

►*C-300 CARBURETOR NOTE:* Two 4-barrel carburetors used (front and rear). Linkage should be adjusted for balanced operation of both carburetors.

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*

Idle Setting—¾-1¾ turns open. Adjust both screws alike. Turn screws out for richer mixture.

Idle Speed—500 RPM (Exc. C-300), 600-650 RPM (C-300). *For "Idle Speed Setting" and "Idle Speed-Up Control Adjustment" on Air Conditioned Cars see CARBURETOR above.*

Throttle Linkage Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

►*OTHER DATA: See Carter "WCFB" in Carburetor Section.*

Fuel Pump Pressure: 5-6½ lbs.

CARB. EQUIPMENT

Fuel Pump: Auto-Lite FB-4006. Mechanical type.
Pressure—5-6½ lbs.
See "Fuel Pumps" in Carburetion Equip. Section.
Gasoline Gauge: Auto-Lite Electric Type.

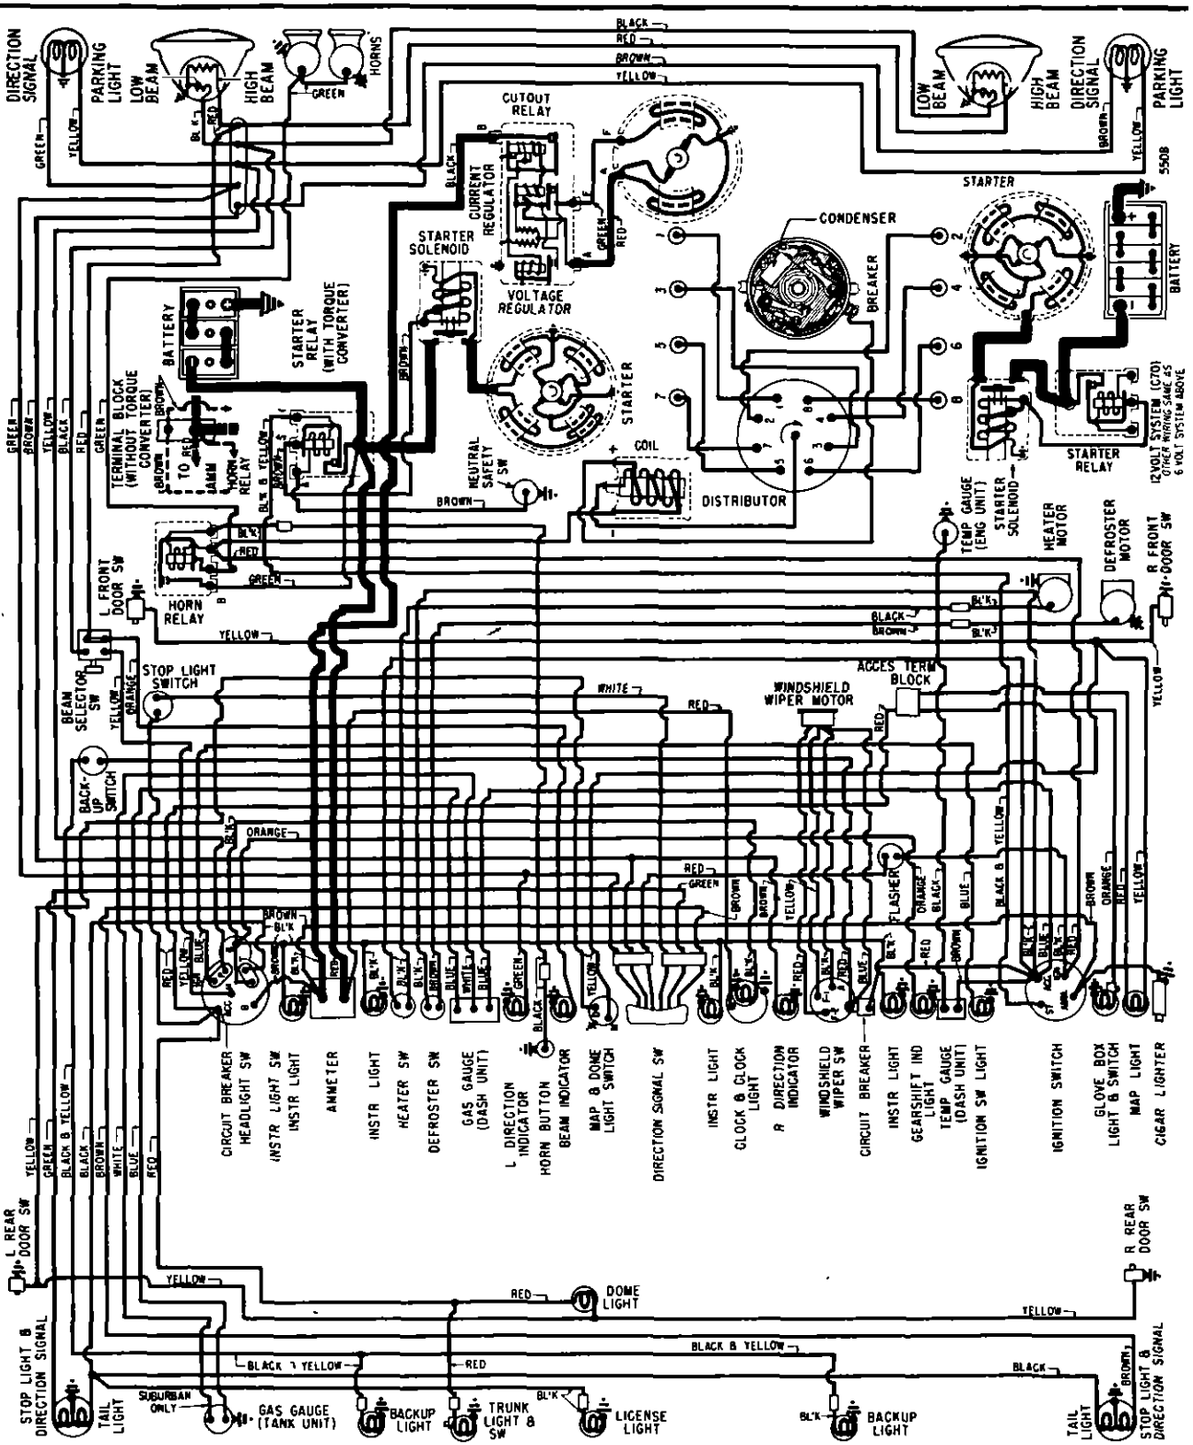
Car Model	Dash Unit	Tank Unit
C68 (Exc. Est Wgn.)	13703A	13795A
C68 (Est Wgn)	13705A	13872A
C69	13703A	13795A
C70 (12V)	13704A	13886A
C300	13703A	13795A

See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

►*NOTE: 12 volt battery used on C70 models.* **Auto-Lite 2H-135-RD or Willard MW-2-135-R (C68, C69, C300).** 6 volt, 19 plate, 135 ampere hour capacity (20 hr.rate). **Auto-Lite 12H-65-R (C70).** 12 volt, 13 plate, 65 ampere hour capacity (20 hr. rate).

Ground Terminal—Positive
Engine Ground—Left front of engine



STARTER

►*NOTE: 12 Volt starter used on C70.*

Car Model	Auto-Lite Starter	Armature
C68, C69, C300	MCL-6304	MCH-2110
C68 (Canada)	MCL-6121A	MCH-2110
C70 (12 V.)	MDC-6301	MDC-2006

Drive—Overrunning clutch (solenoid pinion shift).
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

C69 (Spec. Equip.)	GGJ-6008A	GGJ-2107F

►*GENERATOR BRACKET INTERFERENCE WITH GENERATOR WIRING HARNESS CAUTION:* It is possible that edge of generator bracket may interfere with generator wiring harness, causing a "short" in this wiring. If visual inspection shows this interference, re-route harness to rear of generator and generator bracket. Late production cars have this change made.

►***SPECIAL GENERATOR NOTE:* GGJ, GGU, GGW and GHM type generators used. Performance specifications below apply equally to all generators, within any one of the four groups specified.**

Performance Data–GGJ

Amperes	Volts	Cold - R.P.M.- Hot
0	6.4	600-700 . . 650-750
50	8.0	1400-1600 . 1550-1750
55	8.0	1500-1700 . . 1650-1850

Performance Data - GGU

Amperes	Volts	Cold - R.P.M.- Hot
0	6.4	750-850 . . . . 800 900
45	8.0	1450-1650 1650-1850
50	8.0	1550-1750 1750-1950

Performance Data - GGW

Amperes	Volts	Cold - R.P.M.–Hot
0	6.4	870-970 . . . 950-1050
40	8.0	1800-2000 . . 2150-2350
45	8.0	1925-2125 2350-2550

Performance Data–GHM–12 Volt

Amperes	Volts	R.P.M. - Cold
5.0	14.0	875
25.0 ①	14.0	1325
30.0 ①	15.0	1350

①–Do not operate at higher outputs and do not operate at this output without ventilating fan for any length of time. To do so may result in burned armature and fields.

Brush Spring Tension–(GGJ) 34-41 ozs., (GGU, GGW, GHM) 35-53 ozs., with new brushes.
Field Current–(GGJ) 1.4-1.7 amperes, (GGU) 1.4-1.6 amperes, (GGW) 1.6-1.7 amperes, all at 5.0 volts. (GHM) 1.1-1.3 amperes at 10.0 volts.
Motoring Current–(GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, (GGW) 5.0-5.5 amperes, all at 5.0 volts. (GHM) 3.0-3.5 amperes at 10.0 volts.
Rotation–Counter-clockwise at commutator end.

Belt Adjustment: Approximately ½" slack (when pushed from a straight line midway between pulleys).

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU
VBE-6001A (Early)	GGW
VBE-6201A (Late)	GGW
VRX-6003B (12 V.)	GHM

Cutout Relay

Cuts In (VAV, VBE, VBF)–6.3-6.8 volts.
Cuts In (VRX)–13.0-13.75 volts.

Cuts Out (VAV, VBE, VBF)–4.1-4.8 volts (approx. 4-6 amps. disch.)
Cuts Out (VRX)–8.2-9.3 volts (approx. 3-5 amps.disch.)
Contact Gap (All)–.015" minimum.
Air Gap (All)–.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting (VAV, VBF)–7.1-7.4 volts (at 70°), *after 15 minutes operation charging at ½ maximum rate.*
Setting (VBE)–7.1-7.4 volts (at 70°). Test with regulator in operation at 10 amperes output.
Setting (VRX)–14.2-14.8 volts (at 80°). Test with regulator in operation at 10 amperes output, or with a .25 ohm resistor between regulator and battery.
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70°F (VAV, VBF, VBE); 80° (VRX).*

Regulator	Test A–Operating Amperes–Test B
VAV-6001B, 2B	55 (48-52)
VBE-6001A, 6201A	52 (45 (43-47)
VBF-6001A, 2A	66 (55 (53-57)
VRX-6003B	36 (30 (28-32)

Test A–After 15 minutes operation charging at 10 amperes (VRX), ½ maximum rate (VAV, VBE, VBF).
Test B–After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF), 13.6-13.8 volts (VRX).
Air Gap–.048-.052" with contacts just opening.
Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL

Headlamps: Sealed Beam. *See Electrical Equip. Section.*
Direction Signal: *See Electrical Equip. Section.*
Lighting Switch Removal: Remove knob (use small screwdriver to raise up special clip in knob, or remove small cross-head screw, depending on method used to hold knob). Remove hex nut and collar that holds assembly in place. Pry out switch (switch has threaded sleeve with two flat sides. Sleeve fits snugly in switch hole in panel).

Stop Light Switch Location: On forward end of master cylinder.

►*IGNITION STARTER SWITCH CAUTION:* When installing accessories, use accessory terminal **only** on ignition-starter switch and **not** the ammeter terminal post.

FUSES: Clock–3 amperes. In clock lead wire.
Radio–(6 Volt) 14 amperes, (12 Volt) 9 amperes. Behind instrument panel.

CIRCUIT BREAKERS: Located in headlight switch assembly. Three in number, as follows:
27 Ampere Circuit Breaker–Protects headlights, high beam indicator light, and parking lights.
10 Ampere Circuit Breaker–Protects tail lights, license plate lights, clock light, and instrument panel light.
10 Ampere Circuit Breaker–Protects stop lights, map light, dome light, glove box light, courtesy light, and trunk compartment light.
Windshield Wiper: (6 volt) 10 ampere, (12 volt) 6 ampere. On wiper switch.

HORNS: Auto-Lite. (C68, C300) Dual horns with relay, (C69, C70) Triple horns with relay. *12 volt type used on C70.*

Car Model	Low Pitch	High Pitch
C68, C69, C300 (Early)	HAB-4029	HAB-4030
C68, C69, C 300 (Late)	HAB-4627	HAB-4644
C70 (12V)	HAD-4029	HAD-4030

Horn Relay: (6 volt) RAF-4001, (12 volt) RAH-4002.

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

►*ENGINE NOTE: Engines have hemispherical combustion chamber together with double rocker shaft valve mechanism and laterally inclined valves.*

ENGINE SPECIFICATIONS: 90° V8 (All Models). "FirePower" Engine.

Model	Bore	Stroke	Displacement
All Models	3 13/16"	3 5/8"	331.1 cu. ins.

Model	Compr. Ratio	Rated HP	Developed HP
C-300	8.5-1.	46.51	300 at 5200 RPM
Other Models	8.5-1	46.51	250 at 4600 RPM

Compression & Vacuum Reading–*See TUNE-UP.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

ENGINE REMOVAL: *See "Engine" in Chrysler Special Data.*

OIL PAN REMOVAL: Remove oil level indicator. Remove crankcase plug and drain lubricating oil. Disconnect steering linkage at idler arm support bracket, and allow linkage to settle away from bottom of oil pan. Remove bolts that hold oil pan to cylinder block. Slide pan out and down away from engine.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in Chrysler Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in Chrysler Special Data.*

PISTONS

Aluminum alloy, steel strut, slipper type, elliptically turned, tin plated. Pin offset to right .06".

►*CYLINDER BORE OVERSIZE CAUTION: Engines with letter "A" following engine number indicates that cylinder bore .020" oversize.*

Weight—20.8 ozs.

Removal—Pistons and rods removed from above.

Fitting New Pistons: Clearance .0005-.0015" measured 1½" from bottom of piston between thrust face and cylinder wall. Check piston size with micrometer across large diameter at bottom. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to remove feeler should be 5-12 lbs. at room temperature of 70° F.

►*NOTE:* Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .020" or out-of-round over .005" require reboring and honing to above limits.

Replacement Pistons: Standard, .005", .020",, .030", .040", .060" oversize. Fitted pins included with new pistons.

Installing Pistons: Assemble pistons to connecting rod on right hand cylinder bank (2-4-6-8) with indent on top of piston on side opposite to large chamfer at insert end of connecting rod. On left bank (1-3-5-7) assemble with indent on same side as large chamfer at insert end of connecting rod. *See Rod Installation.*

PISTON PINS

Floating type with lock ring in each end.

NOTE—Pin is offset in piston toward right side of engine.

Diameter—.9841-.9842". **Length**—3.140-3.150".

Clearance in Piston—.0000-.0005" or thumb press fit at 70° F.

Clearance in Rod—.0001-.0004". Selective fit.

Replacement Pins: Standard, .003", .008" oversize.

NOTE—Fitted pins are furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.020"	.002-.0035"
Compr. #2	.0775-.0780"	.010-.020"	.002-.0035"
Oil	.1860-.1865"	.010-.020"	.001-.0025"

Replacement Rings: Furnished in sets Standard, .010", .020", .030", .040", .060" oversize.

Installing Rings: "Top" mark on each compression ring is to top of piston when ring is installed.

CONNECTING RODS

Length—6 5/8". **Weight** 25.2 ozs.

Crankpin Journal Diameter—2.249-2.250". Out-of-round and taper limits .001".

►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals machined UNDERSIZE). See "Crankshaft" below.*

Bearings (Lower)—Removable precision type, steel-backed babbitt. No shims.

Clearance—.0005-.0015".

Endplay—.006-.014" (total for both rods).

Replacement Bearings: Standard, .001", .002", .003", .010", .012" undersize.

Installing Rods: *(NOTE*—Connecting rod bores are chamfered more on one side than other. This larger chamfer *must be installed toward crankshaft fillet). When* installing lower bearing shell, make certain that "V" groove in shell is in line with "V" groove in cap. This allows lubrication of cylinder wall. Bearing shells should always be installed so that small formed tang fits into machined grooves of rod. Oil ring expander gap should be toward outside of "V" of engine. Oil ring gap should be toward inside of "V" of engine. *See Piston Installation above.*

►*CAUTION:* Rods are **interchangeable.** However, when rods are assembled to piston, the assemblies of one engine bank are **not interchangeable** with the other bank.

CRANKSHAFT

Journal Diameter—2.4995-2.5005". Five bearings. Out-of-round limit .001".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*

.010" UNDERSIZE (Main & Connecting Rod Journals)—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.

.001" UNDERSIZE (ONE OR MORE *Main & Connecting* Rod Journals)—A "Maltese Cross" (3/8" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counterweight in following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).

Bearings—Removable, precision type, steel-backed, babbitt lined. No shims.

Clearance—.0005-.0015"

Replacement Bearings: Std., .001", .002", .003", .010", .012" undersize. Upper and lower halves of bearings Nos. 1, 2, and 4 are alike and interchangeable; Upper No. 3 is interchangeable with Lower No. 3; Upper & Lower No. 5 are **not interchangeable.**

End Thrust: Taken by center (#3) main bearing.

Endplay: .002-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in Chrysler Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in Chrysler Special Data.*

CAMSHAFT

Journal Diameters—(Nos. 1, 2, 3, 4) 1.998-1.999. (No.5) 1.4355-1.4365".

Bearings—Removable, steel-backed, babbitt lined bushings.

Clearance—.001-.003".

End Thrust: Taken by thrust plate behind camshaft sprocket hub.

Endplay—.002-.006".

Timing Chain: Width 1 1/8". **Pitch** .375". **Length** 68 links.

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with the center of the camshaft. Temporarily install camshaft sprocket, less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove Remove camshaft sprocket and position it in timing chain and re-install assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" marks should be in line with shaft center. Install fuel pump eccentric and camshaft nut. Tighten to 130 ft. lbs. torque.

Camshaft Removal: *See "Camshaft & Bearings" in Chrysler Special Data.*

Engine Front Cover (Removal & Installation): *See "Engine Front Cover" in Chrysler Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in Chrysler Special Data.*

►*TIMING CASE COVER REMOVAL CAUTION: Remove water pump before removing timing case cover. (Cover attaching bolt behind water pump).*

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diameter	Stem Diameter	Length
Intake	1 15/16"	.372-.373"	5 1/32"
Exhaust	1 3/4"	.371-.372"	5 1/32"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	.375"	.001-.003"
Exhaust	45°	.358"	.002-.004"

Valve Seat Width—1/16-3/32" (In.), 3/64-1/16" (Ex.)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

►*VALVE SEAT INSERT CAUTION: See "Valve System" in Chrysler Special Data.*

Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

►*VALVE GRINDING CAUTION:* If the position of the valve in the head has been changed (due to valve or seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from the valve spring seat in the head to the tip of the valve should be checked with gauge C-3061. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Springs: Two springs used for each valve. Install with closed coil toward cylinder head.

***Free Length**—Outer 2 3/64". Inner 2 1/64".*

Valve Spring Specifications

	Inner Spring		Outer Spring	
Valve	Lbs. Press.	Length	Lbs. Press.	Length
Closed	20-23	1 9/16"	52-58	1 11/16"
Open	40-45	1 3/16"	122-130	1 5/16"

►*CAUTION: Spring ends must be square within 1/16" (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are reground, check **installed** height of spring. If height is 1 23/32" or greater install a 1/16" spacer (Part No. 1400482) in the head counter-bore to bring height back to a nominal 1 5/8-1 11/16".

►*VALVE SPRING LOAD CAUTION: Hydraulic lifter "pump up" will restrict engine speed and cause valves to burn if valve spring loads are not maintained.*

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of the hole. Ream guide to .374-.375" with tool C-741.

►*CAUTION: Oil hole in top of exhaust guide must face up.*

NOTE—If Valve Guide Tool C-3150 is not available, drive guides in, measuring from top of valve seat as follows: Intake—31/32". Exhaust—1 7/32".

Hydraulic Valve Lifters: Integral flat-valve type.

►*VALVE LIFTER OVERSIZE CAUTION: .008" OVERSIZE Valve lifters used on some engines.* A "DIAMOND" 3/8" high stamped on engine number pad following engine number indicates that all lifters are .008" oversize.

Diameter—.9040-.9045". **Clearance in Block**—.0005-.0015".

Lifter Overhaul & Testing—*See "Valve System" in Chrysler Special Data.*

►*VALVE GRINDING CAUTION:* See Valves (above).

Rocker Arm Assembly: *See "Valve System" in Chrysler Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

Valve Timing—C68, C69, C70

Intake Valves—Open 15° BTDC, Close 57° ALDC.
Exhaust Valves—Open 49° BLDC. Close 15° ATDC.

Valve Timing—C300

Intake Valves—Open 35° BTDC. Close 65° ALDC
Exhaust Valves—Open 65° BLDC. Close 25° ATDC.

Valve Timing Check (Exc. C-300)—With No. 1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at "Zero", turn crankshaft until dial indicator shows that valve has lifted .020". Pointer on cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft **counter-clockwise** until lifter is back down to the valve closed position. Remove spacer from between rocker arm and valve stem. *See "Camshaft Setting" under CAMSHAFT above.*

►*CAUTION: Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

►*TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing case cover.*

OILING SYSTEM

►*AIR-CONDITIONED CAR FILTER CARTRIDGE CHANGE NOTE:* Due to interference from fender skirt or air conditioning lines immediately above filter cover, filter assembly must be removed from engine to change filter cartridge.

Crankcase Capacity: 5 qts. (refill). Add one additional quart when filter changed..

Normal Oil Pressure: 40-65 lbs with warm oil operating at 40-50 MPH.

►*OIL PRESSURE CAUTION: Oil pressure will drop to 25-45 lbs. when FILTER ELEMENT IS CLOGGED. Replace filter element.*

Oil Pressure Relief Valve—Mounted in oil pump. Adjustable. *NOTE*—When replacing relief valve spring, use same color spring.

Oil Pressure Gauge—Auto-Lite 13700A. Not Electric.

Oil Pump: Rotor type. In crankcase at rear end. Driven by lower distributor drive shaft.

Pump Overhaul—*See "Oiling System" in Chrysler Special Data.*

Priming Oil Pump (After Installation)—Before installing filter assembly, introduce ½ pint of engine oil into *the lower hole of the filter pad with a pressure gun or* long nosed oil can.

Oil Filter: Full-flow. At right rear engine. All oil enters lubrication system of engine through filter at full pump pressure. Safety valve in filter opens if element is clogged, allowing oil to pass into lubrication system under a reduced pressure of 25-45 lbs.

Filter Element—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is changed.

►*AIR-CONDITIONED CAR FILTER CARTRIDGE CHANGE NOTE:* Due to interference from fender skirt or air conditioning lines immediately above filter cover, filter assembly must be removed from engine to change filter cartridge.

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 25 qts. (26 qts. with heater).

Pressure Valve: Chrysler 1373136 (Opens at 7 lbs.). Radiator filler cap 14 lb. type used with Air Conditioning.

Thermostat: Choke type in cylinder head water outlet. Starts to open 159-165°F.

Water Pump: Ball bearing type. No lubrication required. *See "Chrysler" in Water Pump Section for data.*

Pump Removal—Drain cooling system Remove radiator shroud assembly, fan belt, pulley and fan. Remove radiator outlet hose from thermostat housing. Remove wire from temperature gauge sending unit Remove pump housing-to-cylinder block attaching bolts, remove pump housing assembly.

Temperature Gauge: Auto-Lite. Electric type.

Dash Unit—(C68, C69, C300) 13701A, (C70 12V.) 13702A.

Engine Unit—(All) 13550A. Mounted in pump housing assembly.

POWERFLITE TRANSMISSION

Torque converter and hydraulically operated planetary transmission.
See "PowerFlite" Transmission in Transmission Section for complete data.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section for data.*

►*TESTING & TROUBLE SHOOTING:* See *"PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Checking Fluid Level—Apply hand brake and place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.

Oil Pan Filler Tube (Location)—At right rear of engine compartment.

►*CAUTION:* To prevent dirt from entering transmission, make sure oil level indicator is properly seated in filler tube.

Linkage Adjustments: *See "PowerFlite" Transmission in Transmission Section.*

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section for data.*

UNIVERSALS

Detroit Universals. (C68, C69, C300) Ball and Trunnion type used at front, Cross type used at rear. (C70) Cross type used at front, rear, and center bearing joints.

Propeller Shaft Center Bearing: *See "Propeller Shaft" in Chrysler Special Data.*

REAR AXLE

Own. Semi-floating type with hypoid gear and Hotchkiss Drive. Barrel type. *NOTE*—Axle gear thrust screw and pad no longer used.

See "Chrysler Hypoid" in Rear Axle Section.

Axle Ratios	Est. Wgn.	Standard
C68	3.54-1 (39-11)	3.36-1 (37-11)
C69		3.54-1(39-11)
C69 Optl.		3.36-1 (37-11)
C70		3.54-1(39-11)
C300		3.54-1 (39-11)

Backlash—.006-.008".

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft. Tool C-637 to remove inner oil seal, drift C-241 to install seal.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .005", .010", .0125", .015", .030" thick) equally at both wheels.

Endplay—.003-.008"

SHOCK ABSORBERS

"Oriflow". Direct acting, hydraulic, non-adjustable. Serviced by replacement.

Car Model	Chrysler Part No. Front	Rear
C68 Conv.	1614406	1450919
C68 4-Door	1614405	1450918
C68 Est. Wgn	1614406	1450920
C69	1614406	1450919
C70	1614406	1450920
C300	1614406	1450920
Others	1614406	1450918
Heavy Duty (Exc. C70).		1450920
Heavy Duty (Spec.-Exc. C70)		1450037

FRONT SUSPENSION

Independent. Coil springs and direct acting shock absorbers.

See "Chrysler" in Front Suspension Section for complete data.

Kingpin Inclination—6½-8° (C70), 5-6½° (Others).

Caster—Neg. 2° to 0° (Neg. 2° preferred with Manual Steering, 0° with Power Steering. Left side should be 0° to ¾° greater than right side within these limits)

Camber—Neg 1/8° to Pos. 5/8° (Left side Pos. 1/2°, Right side 0° preferred)

Toe-In—0" to Pos. 1/16" (0" preferred).

Toe-Out on Turns—With outer wheel at 20°, inner wheel should be 21½°±1°.

STEERING

Manual: Gemmer. Worm and three-tooth roller

See "Gemmer Worm & Roller" in Steering Section.

Power Steering: "Coaxial". Components encased in tubular housing which is located at bottom of, and concentrically around axis of steering column.

See "Coaxial" Power Steering in Steering Section.

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" Steering Section.*

BRAKES (SAFEGUARD)

Service: (C68, C69, C300) Chrysler "Safe-Guard" Lockheed hydraulic.

See "Chrysler Safe-Guard" Brakes in Brake Section for data.

Drums—Centrifuse. Diameter 12".

Wheel Cylinder Diameter—1 1/8" bore. Single acting (front), double acting (rear wheels)

Replacement Linings & Shoes—Linings or shoes with linings furnished in Standard & .030" oversize.

Lining—Molded asbestos (bonded to shoe). Length—12.57" per shoe. Width 2". Thickness 13/64".

Braking Power—60% Front. 40% Rear.

Clearance—.006" at each end of all shoes.

Master Cylinder: On engine side of dash panel opposite base of brake pedal.

Checking Fluid—Filler plug at top of master cylinder (on dash panel in engine compartment).

Removal—Disconnect pushrod. Disconnect brake line tubes at master cylinder fittings. Remove four stud nuts from studs, remove master cylinder.

Power Brakes: Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces regular master cylinder. *See "Chrysler Power Unit" in Brake Section.*

Removal of Power Unit—Same as for standard master cylinder, after hydraulic lines and stop light wires removed.

Parking Brake: On shaft at rear of transmission. 7" Internal expanding type

Adjustment— *See "Hand Brake Notes" in Chrysler Special Data.*

Lining—Width 2". Thickness 5/32". Length 13 1/16".

Clearance—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010"

BRAKES (DISC)

Service: (C70) Hydraulic, self-energizing, two-shoe DISC type. *NOTE*—No power booster used.

See "Chrysler Disc Brakes (Without Spider)" in Brake Section for data.

Pressure Plate Diameter—I.D. 9½". O.D. 12".

Wheel Cylinder Diameter—1¼" (front), 1" (rear).

Lining—Molded asbestos segments (6 on each plate) bonded to disc.

Bleeding Disc Type Brakes—Manufacturer recommends bleeding all four lower wheel cylinders first, then all four upper cylinders.

Parking Brake: On shaft at rear of transmission. *See C68, C69, C300 (above) for data.*

MISC. MECHANICAL

Windshield Wipers: Auto-Lite (C68, C69, C300) EMZ-4001, (C70-12V.) EPF-4001. Electric type. *See "Auto-Lite" Electric Windshield Wipers in Miscellaneous Section.*

See "Auto-Lite" Electric Windshield Wipers in Miscellaneous Section.

Air Conditioning: Chrysler "Airtemp". *See "Airtemp" Air Conditioning in Miscellaneous Section.*

Power Window Regulators: Auto-Lite. Electric type. Reversible type motor in each window. Controlled by switch and master control switch. *See "Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjusters: Auto-Lite. Electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*

Convertible Top Control: Auto-Lite. Electrical-Hydraulic type. *See "Chrysler Top Control" in Miscellaneous Section.*

TIGHTENING SPECIFICATIONS

1946-52 MODELS

	In. Lbs.
Spark Plugs	225-250
Cyl. Block Hold-down Stud Nuts	125-165
Main Bearing Cap Stud Nuts	150-180
Connecting Rod Cap Stud Nuts	200-280
Camshaft Bearing Capscrew	75-100
Flywheel Mounting Capscrew	225-285
Flywheel Housing Capscrews	225-285
Clutch Mouting Capscrews	150-180
Oil Pump Housing Capscrews	50-80
Oil Pump Mounting Capscrews	125-165
Intake & Exhaust Manifold Capscrews	225-285

ENGINE REMOVAL

1946-52 MODELS

ENGINE REMOVAL (FOR SERVICING): Engine should be removed from chassis as follows: Remove hood, drain radiator. Disconnect battery cable at battery, disconnect and remove starting switch-to-starter cable. Disconnect all ignition leads at distributor, fuel line at fuel pump, throttle and choke cables at carburetor, oil pressure gauge line at right rear corner of engine, windshield wiper hose at manifold, generator wire at Cutout Relay, hose connections at engine block outlet and water pump, exhaust pipe at manifold connection, engine ground strap at flywheel housing, clutch release cable at release lever under flywheel housing, temperature indicator cable and bulb at engine outlet connection. Remove radiator brace rod connected to top of radiator, take out two base bolts under radiator and carefully lift radiator out of engine compartment. Remove hood latch cable. Slack off fan drive belt, remove fan assembly and belt. Place support jack under engine, split front & rear flywheel housing by taking out 5 bolts, remove nut and lock washer on right front engine mounting stud (goes through frame), remove left front engine mounting bolt. Attach lifting sling to engine (loop sling under oil pan), support engine weight with sling and hoist, move engine straight forward approximately 4" (to clear clutch shaft), lift engine out tilting the front end up slightly for clearance.

1946-52 MODELS

CYLINDER BLOCK REMOVAL (FOR VALVE SERVICING): With the engine out of the car (see Engine Removal), remove water pump, fuel pump, carburetor, manifolds, and spark plugs. Remove camshaft cover, take out mounting bolts in all camshaft bearings and lift off camshaft and bearings (oil metering tube in upper end of towershaft at front of camshaft will come out with camshaft). Unscrew and remove towershaft adjuster, lift out towershaft upper bevel gear. Remove oil pan, connecting rod caps, and oil pump. Turn crankshaft to top center. Remove 11 elastic stopnuts holding cylinder block on crankcase, lift off cylinder block and piston assembly.

Cylinder Block Installation: Install pistons (with ring gaps staggered) and connecting rods (with upper halves of bearings in place and rod numbers on distributor side) in block. Turn crankshaft to top center. Place block on crankcase. Install 11 plain washers and elastic nuts. Install connecting rod caps (with numbers on rod on cap on distributor side of engine). Install oil pump and towershaft gear. See Towershaft Assembly Servicing following.

Cylinder Block Installation—Before Eng. No. 31599 (With 3-ring Pistons): See that face of cylinder block and crankcase clean and that gasket is in good condition. Turn crankshaft until two pistons are at top dead center. Use "split" type ring compressor to compress rings on these two pistons, slide block half-way down over these pistons, then turn crankshaft until other two pistons are in contact with block, compress rings on these pistons, lower block into position on crankcase (use locating dowel), use plain washer under mounting stud nuts, tighten all nuts evenly (see Tightening Torques).

Cylinder Block Installation—After Eng. No. 31599 (With 4-ring Pistons): Disconnect piston and connecting rod assemblies from crankshaft and insert these in cylinder block before installing block on crankcase. See that face of cylinder block and crankcase are clean, use new gasket and elastic stop nuts. Install cylinder block on crankcase (use locating dowel) making certain that connecting rods turned so that rod markings are on distributor (left) side of engine. Use plain washer under cylinder block mounting stud nuts, tighten all nuts evenly (see Tightening Torque data). Install connecting rod bearing caps, install oil pan.

CRANKSHAFT & MAIN BEARINGS

1946-52 MODELS

CRANKSHAFT SERVICING: Crankshaft Removal— With engine out of car (see Engine Removal), remove oil pan, remove oil pump (see Oil Pump Servicing), remove gear on lower end of distributor shaft, remove all crankshaft bearing caps, lift crankshaft out (not necessary to remove clutch).

Crankshaft Installation—Reverse removal instructions (above), tighten bearing cap nuts evenly (see Tightening Torque Wrench data), use new lockwashers, palnuts and gaskets. Replace oil seals

BEFORE ENGINE NO. 60929

OIL SEALS: Front & Rear Main Bearing Seals—Carefully clean out seal groove, press new seal in groove with fingers and "roll" it in place with round tool (roll seal from both ends toward center to insure full seating in bottom of groove). Hold seal in place with wooden block and cut ends off flush with face of crankcase and bearing cap for rear seals.

NOTE—Front seal is installed in groove in crankcase and oil pan and bears on hub of crankshaft pulley. Ends should protrude 3/32" above & below.

AFTER ENGINE NO. 60929

CRANKSHAFT OIL SEALS: Front Seal. Metal enclosed neoprene seal. To remove, take off oil pan and crankshaft pulley, slide seal off. Coat outside of new seal with Permatex No. 2, slide into position against shoulder at rear of its groove. Install crankshaft pulley, adjust lower gear backlash.

Rear Seal. With crankshaft out of engine, remove old seal. Turn new one-piece seal on shaft with edge of internal lip to front. Use Permatex No. 3 in seal groove. Install crankshaft so that seal gap will be in the center of the rear bearing cap.

1947-48 MODELS

OIL PAN INSTALLATION: Re-inforcement strips must be installed under the pan flange at each front corner of the pan.

CAMSHAFT & BEARINGS

1946-52 MODELS

CAUTION—Each type towershaft serviced differently as detailed below.

Towershaft Assembly Servicing (Before Eng. No. 3708). This type is locked in crankcase by nut on shaft.

Disassembly—To remove towershaft and lower bevel gear (integral with shaft) with engine out of car and cylinder block removed, remove special nut and thrust washer on shaft in crankcase, pull towershaft out of the bushing from below.

Towershaft Assembly—Insert bushing in crankcase from below, insert towershaft (see Engine Assembly Note below for gear marks and meshing data), install thrust washer and special nut, tighten nut until endplay or clearance between back face of lower gear and face of bushing is .004". Towershaft clearance in bushings should be .0005-.002". Backlash in gears should be .001-.003" (lower bevel gears—see Towershaft Gear Backlash Adjustment below), .003-.005" (upper bevel gears—see Camshaft Endplay Adjustment below).

CAUTION—Install bushing in upper end of towershaft housing on cylinder block before installing upper towershaft gear (see Camshaft Drive Gear Meshing Data below).

Towershaft Assembly Servicing (After Eng. #3708). Disassembly—Towershaft and lower bevel gear (integral with shaft) can be withdrawn from below after towershaft adjuster has been unscrewed from upper end of shaft and upper bevel gear lifted out.

Towershaft Assembly—Insert bushing in crankcase from below, insert towershaft, install crankshaft and mesh bevel gears (see Camshaft Drive Gear Meshing Data below), check and adjust lower bevel gear backlash. After cylinder block installed on crankcase, see that upper bushing in place in upper end of towershaft housing, install towershaft upper bevel gear, install towershaft adjuster, tighten adjuster until clearance between shoulder on upper gear and face of upper bushing is .004" (measure with feeler gauge while prying upward on adjuster). Towershaft clearance in bushings should be .0005-.002" (lower bushing), .0005-.0015" (upper gear hub in upper bushing). Backlash in gears should be .003-.005" (lower bevel gears—see Towershaft Gear Backlash Adjustment below), .003-.005" (upper bevel gears—see Camshaft Endplay Adjustment).

Towershaft Lower Gear Backlash Adjustment: To check backlash, push crankshaft forward until thrust flange is against rear main bearing. Mount dial indicator so as to measure movement of towershaft lower bevel gear, rock towershaft back and forth. Backlash .003-.005" and adjusted as follows:

Backlash Adjustment (Before Engine No. 29880). With crankshaft pulley removed, add or remove shims from between pulley hub and shoulder on bevel gear until backlash correct. Shims furnished as follows: W-300159-1 (.003"), W-300159-2 (.005"), W-300159-3 (.015"). NOTE—See that gasket installed between pulley hub and adjusting shims.

Backlash Adjustment (After Engine No. 29880). When installing towershaft assembly, screw the crankshaft adjuster (slotted stud in forward end of crankshaft) in until lower bevel gears are snug. Start the engine. If gears are noisy, stop engine,

unscrew crankshaft adjuster slightly, repeat test. When gears run quietly, tighten nut on adjuster securely (hold adjuster with screwdriver to prevent change in adjustment).

Towershaft Upper Gear Backlash Adjustment: See Camshaft Endplay Adjustment (below).

1946-52 MODELS

CAMSHAFT ENDPLAY ADJUSTMENT: To check endplay with camshaft installed on engine, push camshaft forward as far as possible, measure clearance between rear face of camshaft gear hub and front bearing with a feeler gauge. Endplay should be .003-.005". Adjust camshaft endplay as follows:

Adjustment (Before Serial No. CC-24199): Remove camshaft assembly from engine, remove camshaft gear (remove nut and lockwasher, press gear off shaft, using care not to damage oil hole in shaft), install thrust washer of correct thickness behind gear, re-install camshaft assembly.

Adjustment (After Serial No. CC-24199): Not necessary to remove camshaft or camshaft gear (horseshoe type thrustwasher). To adjust endplay, loosen front camshaft bearing capscrews, slip bearing strap up on capscrews for access to thrust washer, lift thrustwasher out and replace with washer of correct thickness.

CAUTION—Make certain that closed end of thrustwasher is upward (under bearing strap tab) and that bearing strap tab is forward so as to retain thrustwasher when bearing capscrews tightened.

1946-52 MODELS

CAMSHAFT DRIVE GEAR MESHING MARKS: With engine completely disassembled, install and mesh all gears of the valve system as follows:

Crankshaft Gear—Install gear on crankshaft splines with marked spline on shaft in line with punchmark on gear hub. NOTE—On first cars where gear hub not marked, marked spline on shaft should be on same side and in line with marked tooth on gear.

Tower Shaft Lower Gear—Gear is integral with shaft. The two punch-marked teeth on tower gear should straddle punch-marked tooth on crankshaft gear.

Tower Shaft Upper Gear—Install gear on shaft with punch marks in line. Mesh punch-marked tooth on gear between two punch-marked teeth of camshaft gear.

Camshaft Gear—Gear is keyed on shaft.

1946-52 MODELS

CAMSHAFT OIL METERING HOUSING ASSEMBLY: Install oil metering housing (90° fitting between upper end of towershaft and camshaft) in forward end of camshaft with camshaft off engine, then engage lower end of housing in upper end of towershaft as camshaft is placed in position on cylinder block. Housing clearance should be .0002-.0023" in camshaft and .0005-.0025" in towershaft gear adjuster. Backlash between camshaft and towershaft gears should be .003-.005".

TAPPET CLEARANCE ADJUSTMENT

1946-52 MODELS

TAPPET CLEARANCE ADJUSTMENT PROCEDURE:

First Cars without Adjusting Shims—Must be checked with camshaft and cam follower assemblies installed on engine. Turn camshaft until heel of cam is directly over cam follower, press valve in so that it rests firmly on seat, check clearance with feeler gauge. If clearance insufficient, grind valve stem tip. If clearance too great, replace valve. CAUTION—Valve stem tip must be ground square

Later Cars with Adjusting Shims—Check clearance in same manner as first cars (above), select adjusting shim pack of correct thickness for correct tappet clearance, insert shims through slot in head of cam follower (above spacer washer), lock shims in place by bending up ends. Shims furnished in following sizes:

Cam Follower Shims

Thickness	Part No.	Thickness	Part No.
.008"	209855-8	.022"	209855-22
.010"	209855-10	.024"	209855-24
.012"	209855-12	.026"	209855-26
.014"	209855-14	.028"	209855-28
.016"	209855-16	.030"	209855-30
.018"	209855-18	.032"	209855-32
.020"	209855-20		

Tappet Clearance

Intake—.004-.005" **Exhaust**—.005-.007".

VALVE SYSTEM

1946-52 MODELS

VALVE SERVICING: With engine removed from chassis, remove cylinder block (see Cylinder Block Removal above), lift out valve lifters (cam followers) and number these to insure re-installation in same positions (CAUTION—Do not lose tappet clearance adjusting shims and spacer washers on later cars). Use special bar type valve lifter to compress valve springs, remove split locks, spring retainer, and spring from each valve, remove valve from inside cylinder. Reface valves in usual manner (see data below for refacing valve seats), re-install assemblies, check tappet clearance.

Valve Seat Resurfacing—Special tools must be used to avoid marring cylinder walls (valve seats must be serviced from within cylinder). Use special Blue Point Stone Carrier, VG-10-2B, turned down to 1" diameter, and 5/16" pilot with following stones: SE-400-R Valve Seat Stone (Roughing), SE-400-F (finishing). Stones must be turned to 1 3/16" diameter for Intake Valves, 1 1/16" for Exhaust.

OIL PUMP

1946-52 MODELS

OIL PUMP OVERHAUL: Gear type assembly.

Disassembly—Take out center capscrew on the lower cover, remove cover, gasket, and screen. Take out four capscrews in pump cover, remove cover and gasket, lift out idler gear and shaft. To remove pump shaft and gear, file off end of pin in pump drive gear, drive pin out and remove gear.

Reassembly—Use new gaskets. Make certain that plain washer and lockwasher used on each cover screw and that lower cover (with oil inlet pipe) is tight. See Tightening Torque Wrench data for housing and mounting screw torques.

COOLING SYSTEM

1947-48 M DELS

WATER PUMP (GENERATOR BRACKET) ALIGNMENT: This procedure required for first type Water Pump C-205175, only (with Generator GAS-4190). NOTE—Later type Water Pump, C-207187, used with Generator GDZ-4806B, does not require alignment.

Water Pump Alignment—Whenever the generator bracket mounting bolts have been disturbed, bracket must be aligned with special fixture, No. 206923, as directed below to prevent water pump misalignment and rapid wear of water pump bushing.

Alignment (with Fixture 206923). Attach water pump to crankcase, tightening mounting bolts only finger tight. With generator mounting bracket bolts and clamp bolts loose, install special fixture No. 206923 on bracket in place of generator (slide water pump shaft into recessed hole in end of fixture). Tighten generator bracket mounting bolts securely (through slot in fixture), then tighten water pump attaching bolts. Remove fixture. Assemble water pump drive coupling and install generator.

MODEL IDENTIFICATION

SERIAL NUMBER: Stamped on plate on front face of dash panel in engine compartment.
1946 Numbers—CC-46-100 Up.
1947 Numbers—CC-47-10000 to CC-32434.
1948 Numbers—CC-32434 Up.
Car Body Model Designation—Body type letter as follows: A—Sedan, C—Convertible Sedan, D—Station Wagon, G—Sports Utility, E—Panel Delivery, B—Pick-up, F—Cab & Chassis.

ENGINE NUMBERS: Stamped on pad on left side of crankcase below #1 cylinder.
1946 Numbers—CC-46-100 Up.
1947 Numbers—CCE-7-5587 to CE-7-21999 (January 1947 to Sept. 24, 1947), No. 22000 to No. 28803 except as noted for 1948 (Sept. 24, 1947 to Jan. 1948).
1948 Numbers—No. 28,804 Up (and also the following earlier Nos.: 27270, 27611, 27677, 27689 to 97, 27699, 27704, 27711, 27725, 27763 to 65, 27924, 28153, 28317, 28711, 28712, 28720 to 24, 28726 to 29, 28731, 28732, 28734 to 38, 28740 to 43, 28745 to 47, 28749, 28752, 28754, 28757, 28758, 28760 to 63, 28765, 28767, 28770, 28771, 28773 to 78, 28781 to 83, 28788 to 94, 28796 to 99, 28800 to 28803.

TUNE-UP

COMPRESSION: Pressure—135 lbs. (110 lbs. min. hot) at cranking speed of 260 RPM. All cylinders must be equal within 10 lbs.

VACUUM READING: Steady 18-20" idling at 7 MPH.

FIRING ORDER: 1-3-4-2.

SPARK PLUG GAPS: .025".
Plug Type—Auto-Lite Type A5. 14 mm. Metric.

IGNITION: *See Coil, Condenser, and Distributor.*
Breaker Gap—.020". Limits .020-.024".
Cam Angle or Dwell—41° closed, 49° open.
Breaker Arm Spring Tension—17-20 ozs.
Automatic Advance—*See Distributor.*

IGNITION TIMING: 12° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—First flywheel mark (second mark is TDC) in inspection hole in right front face of flywheel housing.

CARBURETION: *See Carburetor & Carb. Equipment.*
Main (High Speed) Adjustment—Initial setting 2 full turns open of adjusting screw. With engine warm and running with 1/3 throttle opening, turn screw in until engine loses speed, then out until maximum speed secured (1½-2¼ turns open).
Idle Adjustment—After making Main Adjustment (above), close throttle and set stopscrew for slightly faster than normal idle speed, turn idle adjusting screw in until engine misses, then turn screw out until engine fires smoothly. Final setting ¾-1¼ turns open.
Idle Speed—7 MPH.
Float Level—Fuel level 23/32" below top edge of bowl or even with bottom of inspection plug hole on side of bowl. CAUTION—Remove idle adjusting screw, spring, and idle tube before removing air horn and float bowl cover assembly.
Accelerating Pump—None.
Fuel Pump Pressure—1½-3¼ lbs.

VALVE TAPPET CLEARANCE: .004-.005" Intake, .006-.007" Exhaust, Cold.
Tappet Clearance Adjustment Procedure—*See "Valve System" in Crosley Shop Notes.*
Valve Timing Check—*See Valve Timing.*

STARTING: *See Battery, Starter, Generator, Regulator.*

IGNITION

IGNITION SWITCH: Crosley No. 200102.

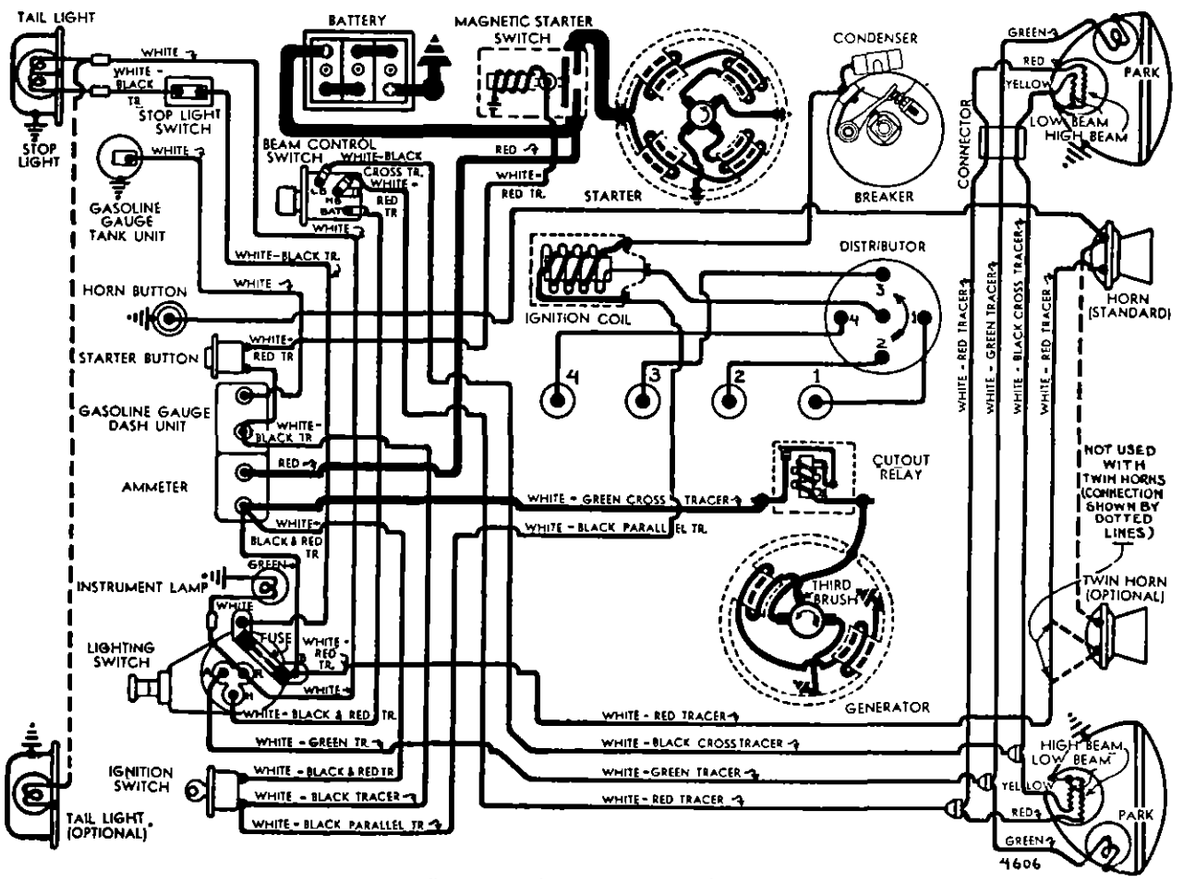
COIL: Auto-Lite Model IG-4065 or IG-6001. On dash.
Service Coil—IG-4070 with IG-1944 Service Bracket.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IGB-1025E (for IGW-4181), No. IGB-1025 (for IGW-4181A distributor).
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGW-4181 & IGW-4181A. Single breaker, four lobe cam, full automatic advance type (no vacuum control).
Rotation—Counter-clockwise viewed from above.
Distributor Settings—*See Tune-Up data.*

Distributor **Automatic Advance** Engine

Degrees	R.P.M.	Degrees	R.P.M.
Start	350	0	700
3	515	6	1030
6	675	12	1350
9	840	18	1680
12	1000	24	2000



Removal: Distributor mounted on crankcase at left front of engine. To remove distributor, drain engine oil, remove oil pan, remove distributor drive gear by removing palnut and regular nut on lower end of distributor shaft. (CAUTION—Do not lose Woodruff key in shaft). Then remove hold-down screw in advance arm, lift distributor out.

Distributor Installation Note—When installing distributor, first turn crankshaft to #1 cylinder firing position (#1 piston on compression, ignition timing mark on flywheel in center of inspection hole in right front face of housing), turn distributor shaft until rotor is at #1 segment in distributor cap (see diagram) with contacts just opening, install distributor on engine and tighten hold-down screw in advance arm. With oil pan removed, install drive gear on lower end of distributor shaft (CAUTION make certain that Woodruff key in place), being careful not to disturb relative position of distributor shaft and crankshaft when meshing gears, install regular nut and palnut on distributor shaft. Check Ignition Timing.

IGNITION TIMING

Std. Setting.....12° BTDC.

To Set Timing—With #1 piston on compression, turn engine over until piston reaches firing position

CARS WITH THIRD-BRUSH GENERATOR & CUTOUT RELAY

when first timing mark on flywheel is in center of inspection hole in right front face of housing. Loosen advance arm clamp bolt, rotate distributor housing until contacts begin to open, tighten clamp bolt. Check rotor and make certain it is at #1 segment in distributor cap, check spark plug connections

To Check Timing (with Neon Timing Light)—Attach neon timing light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Start engine and allow it to idle (speed must not exceed 700 RPM to avoid automatic advance action). Loosen distributor clamp bolt in advance arm, rotate distributor until timing mark (located 12° before TDC mark) appears to be in center of inspection hole, tighten clamp bolt.

CARBURETOR

Tillotson Model DY-9B (superseding DY-9A). ⅞", Single barrel, plain tube, downdraft type with manual choke control.

See Carburetor Section for complete data.

NOTE—This carburetor has Main (High Speed) adjustment as well as conventional Idling (Low Speed) adjustment.

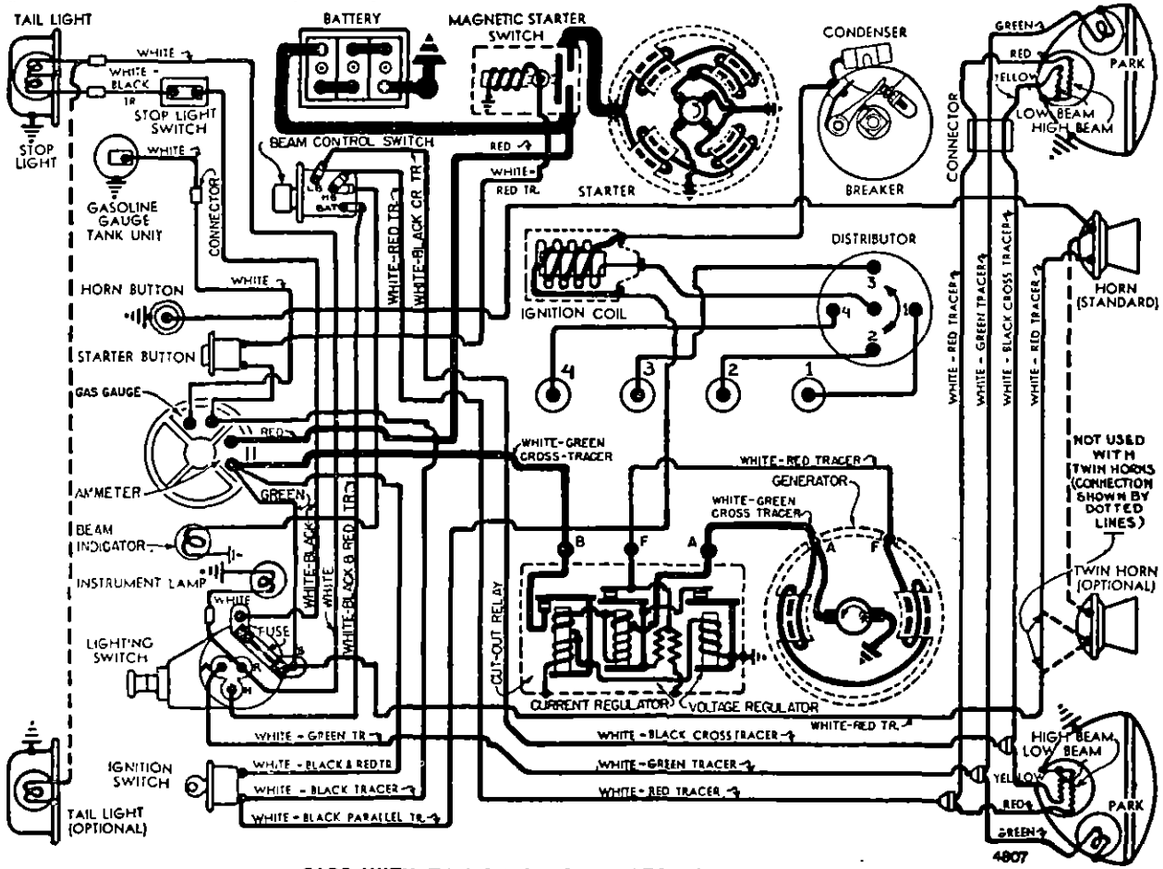
Adjustment & Float Level—***See Tune-up for data.***

Metering Jets—***See Tillotson DY-9A, B Carburetor article in Carburetor Section for complete data.***

CARB. EQUIPMENT

Air Cleaner: Oil-wetted type Std. Heavy duty oil-bath type available as an accessory.

Servicing (Oil-wetted type)—Remove cleaner, wash, dry, and re-oil filter element at 2000 mile intervals or more often if required by operating conditions.



Servicing (Oil-bath type)—Remove and disassemble cleaner, wash out with gasoline (including filter), refill reservoir with light engine oil to indicated level (approx. ¼ pint) every 5000 miles or more often if required (inspect every 1000 miles).

Fuel Pump: AC No. 1538923 (Crosley No. 300042).
Replacement Pump—AC No. 573.
See Carburetion Equipment Section for data.
Pressure—1½-3¼ lbs.

Gasoline Gauge: Stewart (Stewart-Warner) Electric
See Carburetion Equipment Section for data.

BATTERY

Auto-Lite Type AB-13 or 1M-80. 6 volt, 13 Plate, 80 Ampere Hour capacity (20 hour rate).
Starting Capacity—96 amperes for 20 minutes.
Zero Capacity—300 amperes for 2.0 minutes. Five second voltage 3.8 volts.

CARS WITH TWO-BRUSH GENERATOR & REGULATOR

Grounded Terminal—Positive (+) terminal.

Location—On left hand side in engine compartment.

Dimensions—Length 8 15/16". Width 7". Height 8⅝"

STARTER

Auto-Lite MAK-4027 (First Cars), MZ-4147 with No. B-206550 Adapter (Later Cars).
Armature—Auto-Lite No. MAK-2074 (MAK-4207).
Drive—Bendix Drive No. A2920.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—38-61 ozs. (MAK-4027), 42-53 ozs. (MZ-4147) with new brushes.

Performance Data—MAK-4027

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	5000	5.5	70
.3	"	3240	5.5	100
1.35	"	1880	5.0	200
3.1	"	1000	4.5	300
4.8	"	220	4.0	400
7.0	"	Lock	4.0	520

Performance Data—MZ-4147

Torque		R.P.M.	Volts	Amperes
0	ft. lbs.	4300	5.5	70
.65	"	2500	5.5	100
2.55	"	1325	5.0	200
4.95	"	750	4.5	300
7.65	"	220	4.0	400
7.8	"	Lock	3.0	420
4.4	"	Lock	2.0	280

Removal (MAK-4027): Starter flange mounted directly on left front face of flywheel housing. To remove, disconnect cable, take out flange mounting bolts.

Removal (MZ-4147): Starter flange mounted on adapter bolted on left front face of flywheel housing. To remove, disconnect cable, take out capscrews mounting starter on adapter (do not disturb adapter).

Starting Switch: Auto-Lite Model SS-4007 Magnetic Switch and Pushbutton Model XA-456 or XA-456E. Switch is mounted on dash and controlled by pushbutton on instrument panel.
See Electrical Equipment Section for complete data.

GENERAT R

THIRD-BRUSH TYPE

Auto-Lite Model GAS-4190. Armature GAS-2336.
Third brush control type with Cutout Relay mounted on generator mounting bracket.

Charging Rate Adjustment—Shift third brush by hand counter-clockwise to increase, or clockwise to decrease, charging rate. Brush is held in position by friction. NOTE—Std. third brush position is with space of 2 commutator bars (minimum), to 2 commutator bars plus 1 mica strip (maximum) between third brush and nearest (insulated) main brush.

Maximum Charging Rate—12 amperes at 8.0 volts.

Performance Data

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	880	0	6.4	975
2	6.6	985	2	6.8	1135
4	6.9	1100	4	7.0	1310
6	7.2	1230	6	7.35	1540
8	7.3	1420	8	7.7	1860
10	7.6	1650	10.2	8.0	2300
12	7.8	2000			
14	8.0	2300			

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—15-20 ounces.
Field Current—4.09-4.52 amperes at 6.0 volts.
Motoring Current—5.3-5.9 amperes at 6.0 volts.

Removal: Generator is cradle mounted on right side of engine with fan belt drive (water pump driven by armature shaft extension). To remove generator, disconnect water pump drive coupling and generator lead, slack off drive belt tension and remove belt, remove two bolts at lower end of mounting clamp band, slide generator out. NOTE—Generator has locating dowel pin on field frame which engages dowel pin hole in mounting band. Dowel must be disengaged when removing generator and dowel must be engaged in dowel pin hole in band when installing generator.

▷*CAUTION—Do not disturb the generator mounting bracket bolts. Bracket must be properly aligned (using fixture) to prevent water pump misalignment and rapid wear whenever bracket bolts loosened.*
Generator Bracket Alignment—*See Crosley Shop Notes.*

Belt Adjustment: Loosen nuts on two bolts mounting fan shaft bracket on front of engine, move fan upward (right hand bolt hole slotted) until belt deflection is ½" (thumb pressure) midway between generator and fan pulleys, tighten nuts and recheck NOTE—Two holes provided in bracket for left hand fan mounting bolt. Additional range of adjustment can be secured by shifting bolt to upper hole.

GENERATOR

TWO-BRUSH TYPE

Auto-Lite Model GDZ-4806-A or 4806B. Two brush type with voltage and current regulation.
Maximum Charging Rate—35 amperes at 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Cold Performance Data			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.55	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current Regulator setting. See Regulator data.

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.2-4.6 amperes at 6.0 volts.

Removal: Generator cradle mounted on right side of engine with fan belt drive (water pump driven by armature shaft extension). To remove generator, disconnect leads, slack off belt adjustment and remove fan belt, remove front bolt in water pump coupling. Remove two 5/16" elastic stop nuts on generator mounting band, lift generator out.

Belt Adjustment: Same as for 3-brush generators. See instructions above.

CUTOUT RELAY

USED WITH THIRD-BRUSH GENERATOR

Auto-Lite Model CB-4025. Mounted on generator mounting clamp band directly above generator.
See Electrical Equipment Section for complete data.
Cuts In—6.5-7.25 volts.
Cuts Out—.5-2.5 ampere discharge current (after charging at 15 amperes).
Contact Gap—.015-.045" (armature against stop).
Air Gap—.010-.030" (contacts closed).

REGULATOR

USED WITH TWO-BRUSH GENERATOR

Auto-Lite Model VRP-4004F. Voltage-current type. *See Electrical Equipment Section for complete data.* NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on cover).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Double filament, pre-focused type. Upper and lower beams controlled by Beam Selector Switch on toeboard.
Adjustment—Aim upper beams straight ahead with top of "hot spot" 3" below lamp center height at 25 feet.

Switches

Lighting—Crosley No. 205936.
Beam Selector—Crosley No. 205956.

Lamp Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	32-21	2320
Parking	1.5	55
Instrument, Beam Ind.	1.5	55
Stop & Tail (L. H.)	21-3	1158
Tail (R. H.)	3	67

MISC. ELECTRICAL

FUSE: Lighting—20 ampere. On lighting switch.

HORN: Crosley No. 205288. Single horn standard. Dual horns consists of two single horns.

ENGINE

ENGINE SPECIFICATIONS: Four cylinder, Overhead Valve type with Overhead Camshaft. Cylinder block (with integral Head) is built-up type bolted on aluminum crankcase with pressed steel oil pan.
Bore—2.5". **Stroke**—2.25".
Displacement—44 cu. ins. **Rated H. P.**—10.
Developed Horsepower—26.5 at 5400 RPM.
Compression Ratio—7.5-1.
Compression & Vacuum Reading—*See Tune-Up data.*

ENGINE SERVICE NOTE: Cylinder Heads are integral with cylinder barrels and cylinder block must be removed from crankcase for work on Valves, Pistons, Rings, etc.

ENGINE REMOVAL and Cylinder Block Removal: *See Crosley Shop Notes.*

TIGHTENING (TORQUE WRENCH) SPECIFICATIONS: *See Crosley Shop Notes.*

PISTONS: Aluminum alloy, heat treated, cam ground, three-ring type (Before Eng. No. 31599), four-ring type (Eng. No. 31599 Up). Length—1.906".
Weight (3-ring type)—4.92 ozs. (equal within ⅛ oz.)
Clearance—.002-.0035" (skirt). See Fitting New Pistons.
Removal—Pistons and rods removed through lower end of cylinder when cylinder block removed from crankcase (cylinder head integral with block).
See Crosley Shop Notes for Cylinder Block Removal.

Fitting New Pistons: Use .002" feeler gauge, ½" wide, to check clearance. Place feeler gauge 90° from piston pin holes in piston on maximum thrust side. Pull required to withdraw feeler should be 4-6 lbs.

Replacement Pistons: Furnished Std. Size and .005", .010", .020", .030" Oversize.

PISTON RINGS (Before Eng. No. 31599): Two compression, one oil control ring, all above pin. Drain holes provided in oil ring groove.

Ring	Width	End Gap	Side Clearance
Compr. (#1, 2)	1/16"	.007-.017"	.0025-.004"
Oil Cont. (#3)	3/32"	.007-.015"	.0015-.003"

Installing Rings—Compression rings have inner bevel which must be upward (mark "TOP" on side of rings upward).

PISTON RINGS (Eng. No. 31599 Up): Two compression, one oil control ring above pin, additional oil control ring below pin (4-ring type piston). Drain holes provided in both oil ring grooves.

Ring	Width	End Gap	Side Clear.
Compr. (#1,2)	.0620-.0625"	.007-.017"	.0025-.005"
Oil (#3, 4)	.1545-.1550"	.007-.015"	.0015-.003"

Installing Rings—Side marked "TOP" on compression rings must be upward.

Replacement Rings: Furnished Std. Size and .010", .020", .030" Oversize.

PISTON PIN: Floating type with aluminum plug insert in each end of pin. Pin hole in rod has lead-bronze bushing.
Pin Fit in Piston—.0001-.0006" clearance (3-ring type piston), .0004" Loose to .0003" Tight (4-ring type piston) at room temperature or 70°F.
CAUTION—Heat piston to 160°F. when inserting pin to avoid distorting piston skirt.
Pin Fit in Rod Bushing—.0000-.0005" clearance or tight thumb push fit at room temperature (70°F). NOTE—Bushing is split leaded-bronze type and of size for press fit in connecting rod hole (.6875-.6880"). Hone bushing for correct pin fit after installation (pressing bushing into place will close up gap and leave pin hole undersize).
Piston Pin Plugs—Must be snug fit in ends of pin.

Replacement Piston Pins: .001", .002", .003" Oversize.

CONNECTING ROD: Length—4.125". **Weight**—9.62 ozs. (all rods equal within ⅛ oz.).
NOTE—Bearing cap bolts are forged integrally with the connecting rod.
Crankpin Journal Diameter—1.374-1.375".

ENGINE

CONTINUED FROM PRECEDING PAGE

Lower Bearing Type—Replaceable, precision type steel-backed, babbitt-lined. No shims.

NOTE—Connecting rod bearings are interchangeable with the three intermediate lower main bearing halves (not interchangeable with crankshaft upper bearings).

Clearance—.0015-.003" **Sideplay**—.0175".

Bearing Adjustment: None (no shims). Replace bearings (precision type, no fitting required). Do not file bearing caps. NOTE—Palnuts used on connecting rod bolts. Always use new Palnuts.

Replacement Bearings: Furnished Std. Size and .001", .010", .020" Undersize.

Installing Rods: Numerical marking on rod and bearing cap together and on same side of engine as similar marking on bottom of crankcase (left hand or distributor side).

CRANKSHAFT: Five main bearing type with individually counterweighted crankpins.

Journal Diameters—1.374-1.375" (except rear bearing), 1.499-1.500" (rear bearing only).

Bearing Type—Replaceable, precision type, steel-backed, babbitt-lined. Rear bearing is flanged (for end thrust).

NOTE—The three intermediate main bearings are interchangeable and these lower bearing halves are interchangeable with connecting rod bearings. Upper and lower bearing halves are not interchangeable (upper halves may be identified by oil holes which must register with oil channels in crankcase).

Clearance—.0015-.003".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. Engine must be removed from chassis and crankshaft removed for main bearing work.

See Crosley Shop Notes for Engine Removal and Crankshaft Removal Instructions.

NOTE—When installing bearings, make certain that oil holes in bearing upper halves register with oil channels in crankcase (see Bearing Note above). Bearings are numbered (1 to 5) on left side of engine and cannot be interchanged.

Crankshaft Oil Seals—Replace rear main bearing oil seal whenever rear main bearing is disturbed.

►**Front Oil Seal Change (Beginning Eng. No. 60929):** One piece metal-enclosed neoprene type.

Oil Seal Replacement—*See "Crankshaft & Main Bearings" in Crosley Shop Notes.*

Replacement Bearings: Furnished Std. Size and .001", .010", .020" Undersize.

End Thrust: Taken by flanges on #5 (rear bearing). Replace rear main bearing when endplay exceeds .008". **Endplay**—.003-.008".

CAMSHAFT: Five bearing type mounted on top of engine and driven through bevel gears by vertical tower shaft at front of engine.

Bearing Type—Consist of five split aluminum bearings bolted individually on pads on top of engine. On first engines, integral studs provided on upper halves of all bearings except rear (#5) for camshaft cover retaining nuts. On later engines, top of all bearing upper halves are machined flat and a separate bearing strap is assembled on top of bearing under bearing capscrews. These bearing straps have stud for camshaft cover retaining nuts (except rear #5 bearing strap which is plain type).

Bearing Interchangeability—All lower bearing halves except front (#1) interchangeable on all engines. Intermediate (#2,3,4) upper halves of first type (with integral studs) interchangeable. All except front upper bearing halves of later type (with separate bearing straps) are interchangeable. Bearing straps used with this type are interchangeable on intermediate bearings (#2,3,4). Rear bearing strap is plain type.

Clearance—.0015-.0027".

Endplay—Taken by thrust washer between camshaft gear and front camshaft bearing. With correct endplay, backlash between camshaft gear and upper towershaft gear will be .003-.005".

Endplay Adjustment—*See "Camshaft & Bearings" in Crosley Shop Notes.*

Camshaft Drive (Towershaft) Assembly: *See "Camshaft & Bearings" in Crosley Shop Notes.*

Camshaft Setting: For correct valve timing, with camshaft out of engine, proceed as follows:

1) Turn engine over slowly until the following three conditions occur simultaneously: a) Top dead center mark on flywheel is in center of inspection hole in right front face of housing, b) Distributor rotor points toward #1 cylinder segment in distributor cap, c) Punch-marked tooth of upper tower gear (see below) points toward rear of engine and is in line with center-line of camshaft bearings.

2) With engine positioned as above, assemble the camshaft, pushing the oil metering housing into upper tower shaft gear and meshing punch-marked tooth of upper tower shaft gear between two punch-marked teeth of camshaft gear. Complete camshaft assembly by installing bearing caps.

3) Check camshaft endplay (see data above).

4) Turn engine over slowly by hand for at least two revolutions.

VALVES: Engine must be dismantled (removed from chassis, cylinder block taken off) for valve work.

Valve Servicing—*See "Valve System" in Crosley Shop Notes.*

	Head Diameter	Stem Diameter	Length
Intake	1 11/64"	.3135-.3140"	3.934"
Exhaust	1 3/64"	.3125-.3130"	3.934"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.225"	.0015-.003"
Exhaust	45°	.225"	.0025-.0040"

VALVE INSTALLATION CAUTION—(On Cars with new type guides). Valve spring washer (intake valves), Thompson Roto Cap (exhaust valves) must be installed below valve springs with cupped side of washer and extruded lip on Roto Cap up toward camshaft.

Valve Springs: Intake & exhaust valve springs interchangeable.

	Spring Pressure	Length
Before Engine No. 49500		
Valve Open	48 lbs.	1 7/32"
After Engine No. 49500		
Valve Closed	30 lbs.	1 1/2"
Valve Open (Intake)	46-51 lbs.	1 7/32"
Valve Open (Exh.)	46-51 lbs.	①1 5/64"

①—With Thompson Roto-Cap.

Valve Guides (Before Eng. No. 62725): Pressed in cylinder head. To remove guides, invert cylinder block on arbor press, use a shoulder drift pin (max. O. D. 13/32") to press guide out. Press new guides in place (coat stem with Permatex #3 or equivalent) from above until shoulder on guide seats solidly on bushing in cylinder head. Ream guides for correct valve stem clearance. NOTE—Reface valve seats using the new guide hole to pilot the facing tool, grind valves before installing.

CAUTION—Support Valve Guide Bushing when installing guide to prevent distorting ports.

Valve Guides (After Eng. No. 62725): Press old guide out from top to bottom. Press new guide in until top of guide protrudes ¾" above bottom of cam follower guide. Ream for .0015-.003" clearance (intake), .002-.004" (exhaust). Reface valve seats.

Valve Lifter (Cam Follower): Consists of an inverted cup operating in guide hole in cylinder block directly above each valve assembly (cam follower spacer and tappet clearance adjusting shims located within cam follower above valve stem).

Cam Follower Clearance—.0005-.0015".

VALVE TIMING

Tappet Clearance: .004-.005" Intake; .006-.007" Exhaust Cold. Clearance adjusted on first cars by grinding off end of valve stem, adjusting shims located within cam follower on later cars.

Tappet Clearance Adjustment Procedure—*See "Valve System" in Crosley Shop Notes.*

Valve Timing: See Camshaft Setting (above).

Engines before No. 51099①

Intake Valves—Open 5° BTDC. Close 50° ALDC.

Exhaust Valves—Open 50° BLDC. Close 5° ATDC.

①—Also Engines No. 105, 010 Up.

Engines No. 51099 to 105010

Intake Valves—Open 5° BTDC. Close 50° ALDC.

Exhaust Valves—Open 32½° BLDC. Close 5° ATDC.

Valve Timing Check—See Camshaft setting for assembly of valve gear.

LUBRICATI N

Engine Oiling System: Pressure to main bearings, connecting rod bearings, camshaft bearings, and timing gear bearings (oil flow to camshaft bearings is through hollow towershaft and hollow camshaft). Oil pump in crankcase at forward end of engine.

Crankcase Capacity—2 qts. (refill), 2.8 qts. (when filter drained or filter element replaced). NOTE—Capacity 3 qts. on first 1946 cars.

Normal Oil Pressure—40-50 lbs. at 30 MPH (hot oil). 7 lbs. minimum with engine idling.

Oil Pressure Regulator—Located under plug on right front corner of engine. Not adjustable.

Oil Pump: Disassembly—Take out center capscrew on lower cover, remove cover, gasket, and screen. Take out four capscrews in pump cover, remove cover and gasket, lift out idler gear and shaft. To remove pump shaft and gear, file off end of pin in pump drive gear, drive pin out and remove gear.

Reassembly—Use new gaskets. Make certain that plain washer and lockwasher used on each cover screw and that lower cover (with oil inlet pipe) is tight. See Tightening Torque Wrench data for housing and mounting screw torques.

Oil Filter: Replace filter element at 8000-10000 mile intervals. NOTE——Add .8 qt. of oil in crankcase when oil filter drained or element replaced.

Crankcase Ventilation: Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe located at rear of valve chamber.

Servicing—Wash filter element in kerosene and re-oil at 2000 mile intervals or more often if required by operating conditions.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLIN

Cooling System: Not pressurized (Pressure type Radiator Filler Cap available as accessory equipment).

Capacity—4 quarts (5 quarts with Heater).

NOTE—Capacity 5 qts. on first 1946 cars.

Water Pump (No. C-205175—Before Eng. No. 27637). Packless type. Mounted on right side of engine.

NOTE—This pump used with Generator GAS-4190. *See Water Pump Section for complete data.*

CAUTION—To prevent excessive pump bushing wear, generator mounting bracket must be aligned whenever alignment disturbed.

Water Pump (Generator Mounting Bracket) Alignment—*See "Cooling System" in Crosley Shop Notes.*

Removal—Disconnect drive coupling at water pump, drain cooling system by taking out plug in pump housing, disconnect two water hoses, take out two mounting bolts in flange at rear of pump, lift pump out.

Belt Adjustment—*See Generator Belt Adjustment.*

Water Pump (No. C-207187—After Eng. No. 27637). Adjustable packing type. Mounted on right side of engine.

NOTE—This pump used with Generator GDZ-4806B. *See Water Pump Section for complete data.*

Removal—Disconnect drive coupling at water pump, drain cooling system by taking out drain plug at bottom of radiator, disconnect two water hoses, take out two mounting bolts in flange in front of pump, lift pump out.

Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In engine outlet connection (blocker type). Opens at 170°F.

Temperature Gauge: Vapor pressure type (not electric).

CLUTCH

Rockford Model R-4608. Single plate, dry disc.
See Clutch Section for complete data.

Facings—Molded type. I. D. 4". O. D. 6" Thickness 7/64" (flywheel side), 9/64" (pressure plate side).

Pedal Adjustment: Pedal free travel should be 1". To adjust, turn clevis end in or out on cable.

Removal: Remove transmission (see Transmission Removal below). Working from below through the housing opening, remove two bolts in each of three release lever brackets, remove pressure plate and driven member through opening.

TRANSMISSION

Warner Model AS1-T92. Three-speed, sliding spur gear type with conventional shift lever mounted on transmission case cover.
See Transmission Section for complete data.

Removal: Raise rear of car until weight removed from rear springs, disconnect rear springs from axle. Disconnect brake cable and conduit at each rear wheel backing plate, disconnect speedometer cable, clutch release cable clamp from bottom of transmission case. Support rear end of engine on blocks remove rear engine mount (under transmission case at rear end). Remove transmission control housing and shift lever assembly. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and propeller shaft assembly to rear and clear of the transmission case (CAUTION—Do not lose spring and washer located between propeller shaft and speedometer gear). Remove four capscrews mounting transmission on flywheel housing, pull transmission straight back to clear clutch shaft and remove from car.

UNIVERSALS

Spicer Model 102 (First Cars), New England Products (Later Cars). One used. Plain bushing type. In ball housing at rear of transmission adapter.

REAR AXLE

Spicer Salisbury Model 11. Semi-floating, spiral bevel gear type with Torque Tube drive.
See Rear Axle Section for complete data.

Ratio—5.17-1 Std.

Backlash—.003-.008". Shim adjustment.

Removal: Disconnect brake cable clevis at brake cam lever and unfasten brake cable conduit at clamp on backing plate at each rear wheel. Raise rear of car until all weight removed from rear springs, disconnect rear springs from axle. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and torque tube assembly to rear until free from transmission. CAUTION—Do not lose spring and washer located between universal joint and speedometer gear in transmission.

Axle Shaft Removal: Remove rear wheel hub cap, rear wheel, and wheel hub (use Puller No. 202318). Disconnect brake cable from brake cam lever and free cable conduit from clamp on backing plate. Take out four capscrews mounting backing plate on axle housing, remove backing plate being careful not to lose bearing adjusting shims on housing flange. Pull axle shaft out of housing.

Wheel Bearing Adjustment: Check endplay at each wheel with dial indicator. Adjust by adding or removing shims located between backing plate and flange on axle housing (see Axle Shaft Removal for dismantling instructions).

Endplay—.002-.007" total for both wheels (between inner ends of shafts and thrust block in differential).

TORQUE TUBE & PROPELLER SHAFT ASSEMBLY:

Spicer No. 98-1182X. Torque tube assembly has flanged end at rear (bolted to rear axle housing flange) and thrust ball at forward end (cap assembly bolted on adapter on rear end of transmission). Propeller shaft is splined on pinion shaft (rear end) and in universal joint (forward end) and is positioned by spring located between universal joint and speedometer gear in transmission case. NOTE—A propeller shaft center bearing is located within the torque tube and is provided with a grease fitting on the tube at this point.

Propeller Shaft Removal: Remove Rear Axle and Torque Tube Assembly (see Rear Axle Removal above), withdraw propeller shaft through forward end of tube.

CAUTION—When installing assembly in car, make certain that spring and washer installed on transmission shaft ahead of universal joint. This spring takes up endplay in propeller shaft.

SHOCK ABSORBERS

Houde (Houdaille) Type—Before Serial No. 21135. Double acting, adjustable, hydraulic type.

Adjustment (Houde)—Handle on end of shaft (in center of lever) adjustable between end stops and should be turned clockwise for more control, or counter-clockwise for less control and softer ride. Do not change adjustment more than 1/32-1/16" from original factory setting.

NOTE—Original factory setting indicated by scribed line on end of shaft (pointer on adjusting handle aligned with this mark).

Refilling—Check fluid and fill to level of filler plug hole with Houdaille L-1404 fluid at 5000 miles intervals. CAUTION—Only L-1404 fluid should be used in this type shock absorber (may be identified by round-top filler plug).

Delco Model 1438-T,U (Front), 1438-V,W (rear)—After Serial No. 21135. Single acting, hydraulic type.

Adjustment—None (except by changing valves).

Refilling—Check fluid and fill to level of filler plug hole on cover plate (see Note) at 10000 mile intervals. NOTE—If cover plate does not have filler plug, this coverplate can be replaced by cover having filler hole and plug (for filling on car) or shock absorber can be removed and refilled on the bench.

FRONT SUSPENSION

Front Suspension: Conventional axle with semi-elliptic springs.

Kingpin Inclination—6½° crosswise.

Camber—2°. No adjustment (axle may be bent for minor adjustments).

Caster—7½°. Adjust by inserting wedge shims between spring and spring pad on axle.

NOTE—Caster 10° on first 1946 cars.

Toe In—3/64-1/16". Adjust in usual manner by changing length of tie rod.

STEERING GEAR

Ross Model S-12. Cam-and-Lever type.
See Steering Gear Section for complete data.

BRAKES

Service: Hawley. Four-Wheel, mechanical, two-shoe type. Hand lever applies all four service brakes.
See Brake Section for complete data.

Drums—Cast Iron. Diameter 6".

Clearance—.010" at both ends of each shoe (adjusting screw backed off approximately ¼ turn from point where wheels start to drag).

Lining—Molded type. Width 63/64". Thickness 5/32". Length per wheel 16".

NOTE—Bonded Lining used on some cars.

Hand Brake: See Service Brakes (above).

NOTE—Hand brake handle (on floor ahead of seat) is linked directly to hand brake lever on crossshaft.

Form 9B—1956-M

MODEL IDENTIFICATION

MODEL DESIGNATION: Regular "CD" and Sports "VC" models with model suffix letter as follows:

Model "CD-"		Model "VC-"	
Bus. Coupe	H	Hotshot	A
Super Sedan Del.	A	Super Sports	B
Super Conv't.	C		
Super Sta. Wgn.	D-4		
Std. Sta. Wgn.	D-3		
Panel Delivery	E		
Pick-up Trk.	B		

SERIAL NUMBER: Stamped on plate on front face of dash panel in engine compartment.

Beginning Serial Nos.

1949—100,000 Up.

1950—CD-200,000 (Deluxe & Super Deluxe CD), VC-20,000 (Hotshot & Super Sports VC).

1951—CD-300,000 (Deluxe & Super Deluxe CD), VC-30,000 (Hotshot & Super Sports VC).

ENGINE NUMBER: Stamped on pad on left side of crankcase.

TUNE-UP

COMPRESSION PRESSURE: 125-135 lbs. max. (110 lbs. min. hot) at cranking speed of 260 RPM. All cylinders must be equal within 10 lbs.

VACUUM READING: 18-20" Idling at 700 RPM.

FIRING ORDER: 1-3-4-2. See diagram.

SPARK PLUG GAPS: .025".
Plugs—Auto-Lite Type AN-7E. 14 mm. Metric.

DISTRIBUTOR: Breaker Gap—.020". Limits .018-.022"
Cam Angle—46° (closed).
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.20-.25 microfarad.

IGNITION TIMING: 12° BTDC.
Timing Procedure—*See Ignition Timing.*
Timing Mark—First flywheel mark (second mark is TDC) in inspection hole in right front face of flywheel housing.

CARBURETION: Tillotson Model DY-9C, ⅞" single barrel, plain tube, downdraft type with manual choke control.

Initial Setting (to warm up Engine)—Idle adjustment screw 1¼ turns open, Main (high speed) adjustment screw 2¾ turns open.

Main (High Speed) Adjustment—With engine warm and running at ½ throttle opening, turn screw in until engine begins to lose speed, then out until maximum speed and power secured (2-2⅛ turns open).

Idle Adjustment—After making Main Adjustment (above), close throttle and set stopscrew for slightly faster than normal idle speed, turn idle adjusting screw in until engine misses, then turn screw out until engine fires smoothly. Final setting 1 turn open.

Idle Speed—700 RPM or 7-8 MPH.

Float Level—Fuel level 23/32" below top edge of bowl or even with bottom of inspection plug hole on side of bowl.

►*CAUTION*—Remove idle adjusting screw, spring, and idle tube before removing air horn and float bowl cover assembly.

Accelerating Pump—None.

CARBURETION: Carter Model WO, No. 870S. 1", Single barrel, downdraft with manual choke control.
Idle Setting—¾-1¾ turns open (turn screw out for richer mixture).
Idle Speed—450-500 RPM.
Float Level—½" from top of float at free end to gasket seat on cover (invert assembly and allow float to hang freely). ***CAUTION—Do not compress spring in intake needle.***

Fast Idle: No adjustment required.

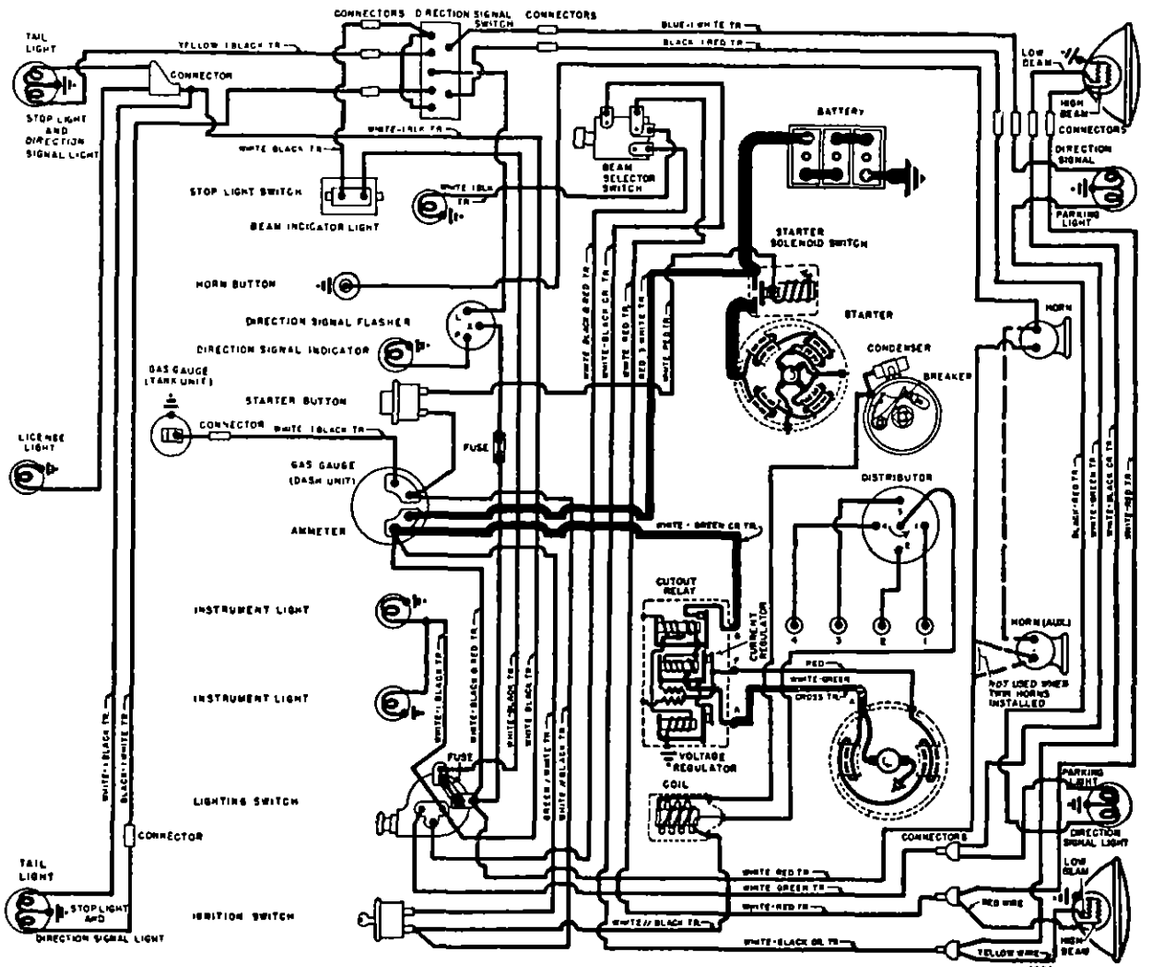
Choke: Manual type.

Fuel Pump Pressure: 3¼ lbs. maximum.

VALVE TAPPET CLEARANCE: (1949-51) .004-.005" Intake, .006-.007" Exhaust, (1952) .004-.006" Intake, .007-.009" Exhaust, COLD.

Tappet Clearance Adjustment Procedure—*See "Valve System" in Crosley Special Data.*

IGNITION



IGNITION SWITCH: Crosley No. 302199.

COIL: Auto-Lite Model IG-6001. On dash.
Service Coil—IG-4070 with IG-1944 Service Bracket.
Ignition Current—2 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IGB-1025.
Capacity—.20-.25 microfarad.

DISTRIBUTOR: Auto-Lite Model IGW-4181B or 4181C. Single breaker, four lobe cam, full automatic advance type (no vacuum control).
Breaker Gap—.020". Limits .018-.022".
Cam Angle—46° (closed).
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Counter-clockwise viewed from above.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Automatic Advance—IGW-4181B

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	400	0	800
1	490	2	980
6	890	12	1780
14	1550	28	3100
15	1625	30	3250

Automatic Advance—IGW-4181C

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	400	0	800
1	465	2	930
7	835	14	1670
16	1390	32	2780
17	1450	34	2900

Removal: Distributor mounted on crankcase at left front of engine. To remove distributor, drain engine oil, remove oil pan, remove distributor drive gear by removing palnut and regular nut on lower end of distributor shaft. (CAUTION—Do not lose Woodruff key in shaft). Then remove hold-down screw in advance arm, lift distributor out.

Distributor Installation Note—When installing distributor, first turn crankshaft to #1 cylinder firing position (#1 piston on compression, ignition timing mark on flywheel in center of inspection hole in right front face of housing), turn distributor shaft until rotor is at #1 segment in distributor cap (see diagram) with contacts just opening, install distributor on engine and tighten hold-down screw in advance arm. With oil pan removed, install drive gear on lower end of distributor shaft. (CAUTION—make certain that Woodruff key in place), being careful not to disturb relative position of distributor shaft and crankshaft when meshing gears, install regular nut and palnut on distributor shaft. Check Ignition Timing.

IGNITI N TIMING

Std. Setting.....12° BTDC.

To Set Timing—With #1 piston on compression, turn engine over until piston reaches firing position when first timing mark on flywheel is in center of inspection hole in right front face of housing. Loosen advance arm clamp bolt, rotate distributor housing until contacts begin to open, tighten clamp bolt. Check rotor and make certain it is at #1 segment in distributor cap, check spark plug connections.

To Check Timing (with Neon Timing Light)—Attach neon timing light to #1 spark plug, direct light on flywheel through inspection hole in right front face of housing. Start engine and allow it to idle (speed must not exceed 700 RPM. to avoid automatic advance action). Loosen distributor clamp bolt in advance arm, rotate distributor until timing mark (located 12° before TDC mark) appears to be in center of inspection hole, tighten clamp bolt.

CARBURETOR

TILLOTSON

Tillotson Model DY-9C—⅞", single barrel, plain tube, downdraft type with manual choke control.
See Carburetor Section for complete data.

NOTE—This carburetor has Main (High Speed) adjustment as well as conventional Idling (Low Speed) adjustment.

Adjustment & Float Level—*See Tune-up for data.*

Metering Jets—*See Tillotson DY-9C Carburetor article in Carburetor Section for complete data.*

CARTER

Carter Model WO, No. 870S. 1", single barrel, downdraft type with manual choke control.
See Carburetor Section for complete data.

Adjustment & Float Level—*See Tune-up for data.*

Metering Jets—*See Carter WO-870S Carburetor article in Carburetor Section for complete data.*

CARB. EQUIPMENT

Air Cleaner: Oil-bath type. Crosley No. 206894 (CD), 301631 (VC). *NOTE*—Dry felt type cleaner also used on 1952 cars.

Fuel Pump: AC No. 1538923 (Crosley No. 300042).
See Carburetion Equipment Section for data.

Pressure—1½-3¼ lbs.

Gasoline Gauge: Stewart (Stewart-Warner) Electric
See Carburetion Equipment Section for data.

BATTERY

Auto-Lite Type 1MS-65—6 volt, 11 plate, 65 ampere hour (20 hour rate).
Grounded Terminal—Positive (+) terminal.
Location—On left hand side in engine compartment.
NOTE—Battery on **Hotshot** located under right front fender.

STARTER

Auto-Lite Model MZ-4147. Armature No. MZ-2053.
Drive—Bendix Drive No. A2920.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. with new brushes.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4000	5.0	68
4.4 "	Lock	2.0	280

Starting Switch: Auto-Lite Model SS-4007 Magnetic Switch and Pushbutton Model XA-456 or XA-456E. Switch is mounted on dash and controlled by pushbutton on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite Model GDZ-4806B. Armature GDZ-2079F.
Two brush type with current and voltage regulation.
Maximum Charging Rate—35 amperes at 8.0 volts.
Charging Rate Adjustment—None. See Regulator.

Cold Amperes	Volts	Performance Data R.P.M.	Hot Amperes	Volts	R.P.M.
0	6.4	870-970	0	6.4	950-1050
35	8.0	1800-2000	35	8.0	2150-2350

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.2-4.6 amperes at 6.0 volts.

Belt Adjustment: Loosen nuts on two bolts mounting fan shaft bracket on front of engine, move fan upward (right hand bolt hole slotted) until belt deflection is ½" (thumb pressure) midway between generator and fan pulleys, tighten nuts and recheck.

NOTE—Two holes provided in bracket for left hand fan mounting bolt. Additional range of adjustment can be secured by shifting bolt to upper hole.

REGULATOR

Auto-Lite Model VRP-4004F-2. Voltage-current type.
See Electrical Equipment Section for complete data.

NOTE—Regulator cover sealed. Warranty void if seals broken.

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70°F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting—34-36 amperes (marked '35' on cover).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section for complete data.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: "Sealed Beam" type. Upper and lower beams controlled by Beam Selector Switch on toboard. Crosley No. 207371 (CD), 301351 (VC).
Adjustment—Aim upper beams straight ahead with top of "hot spot" 3" below lamp center height at 25 feet.

Direction Signal: Crosley No. 209355 used on "CD"—A, B, C, D, E, models. Crosley No. 301730 used on all "VC" models.
Direction Indicator—Single flasher light on lower edge of instrument panel to left of steering column.
See Electrical Equipment Section for complete data.

Switches

Lighting—Crosley No. 205936.
Beam Selector—Crosley No. 209446.
Directional—Crosley No. 209354.
Stop Light—Crosley No. 207800.

MISC. ELECTRICAL

FUSES: **Lighting**—20 ampere (1949-51), 25 ampere (1952). On lighting switch.
Direction Signal—14 ampere (1949-51), 10 ampere (1952). Located in lead wire back of instrument cluster to left of steering column.

HORN: Sparton or Auto-Lite No. HA-4037. Vibrator type. Single horn standard, dual horns optional.
Horn Current—7 amperes each.

ENGINE

ENGINE SPECIFICATIONS: "CIBA" cast-iron block engine. Four cylinder, Overhead Valve type with Overhead Camshaft. Cylinder block (with integral Head) is bolted on separate crankcase.
Bore—2.5". Stroke—2.25".
Displacement—44 cu. ins. **Rated H.P.**—10.
Developed Horsepower—(1949-50-51) 26.5 at 5400 RPM., (1952) 25.5 at 5200 RPM.
Compression Ratio—(1949-50-51) 7.8-1; (1952) 8.0-1 (Std.), 10-1 (Quicksilver engine used in Super Sports models).

ENGINE

CONTINUED FROM PRECEDING PAGE

Compression & Vacuum Reading—*See Tune-up data.*

►**ENGINE SERVICE NOTE:** Cylinder Heads are integral with cylinder barrels and cylinder block must be removed from crankcase for work on Valves, Pistons, Rings, etc.

ENGINE REMOVAL and Cylinder Block Removal: *See Crosley Special Data.*

TIGHTENING (TORQUE WRENCH) SPECIFICATIONS: *See Crosley Special Data.*

PISTONS: Aluminum alloy, four ring type, heat treated, cam ground, with aluminum oxide finish. **Weight**—6.5 ozs. stripped. **Length**—1 29/32". **Clearance**—.0025-.0035" (skirt). See Fitting New Pistons.

Removal—Pistons and rods removed through lower end of cylinder when cylinder block removed from crankcase (cylinder head integral with block). *See Crosley Special Data for Cylinder Block Removal.*

Fitting New Pistons: Use .002" feeler gauge, ½" wide, to check clearance. Place feeler gauge 90° from pin holes in piston on maximum thrust side. Pull required to withdraw feeler should be 4-6 lbs.

Replacement Pistons: Furnished Std. Size and .0025", .005", .010", .020", .030" Oversize.

NOTE—Std. piston furnished with pin and plugs.

PISTON RINGS: Two compression, one oil control ring above pin, additional oil control ring below pin.

Ring	Width	End Gap	Side Clearance
Compr. (#1,2)	.0620-.0625"	.007-.017"	.0025-.005"
Oil (#3,4)	.1545-.1550"	.007-.015"	.0015-.003"

Installing Rings—Inside bevel on compression rings upward. Top compression ring is chrome plated.

Replacement Rings: Furnished Std. Size and .010", .020", .030" Oversize.

PISTON PIN: Floating type with aluminum plug insert in each end of pin. Pin hole in rod has Cleveland Graphite Bronze #444 bushing.

Diameter—.6252". **Length**—2.260".

Pin Fit in Piston—.0004" Loose to .0003" Tight at room temperature or 70°F.

CAUTION—Heat piston to 160°F. when inserting pin to avoid distorting piston skirt.

Pin Fit in Rod Bushing—.0001-.0005" clearance or tight thumb push fit at room temperature (70°F.).

NOTE—Bushing is split leaded-bronze type and of size for press fit in connecting rod hole. Hone bushing for correct pin fit after installation.

Replacement Piston Pins: .001", .002", .003" Oversize.

CONNECTING ROD: Length—4.125-4.130". **Weight**—9.62 ozs. NOTE—Bearing cap bolts are forged integrally with the connecting rod.

Crankpin Journal Diameter—1.374-1.375".

Lower Bearing Type—Replaceable, precision type steel-backed, babbitt-lined. No shims.

►*NOTE*—Connecting rod bearings are interchangeable with the three intermediate lower main bearing halves (not interchangeable with crankshaft upper bearings).

Clearance—.0015-.003". **Sideplay**—.010-.025".

Bearing Adjustment: None (no shims). Replace bearings (precision type, no fitting required). Do not file bearing caps. NOTE—Palnuts used on connecting rod bolts. Always use new Palnuts.

Replacement Bearings: Furnished Std. Size and .001", .005", .010", .020" Undersize.

Installing Rods: Numerical marking on rod and bearing cap together and facing left side of engine.

CRANKSHAFT: Five main bearing type with individually counterweighted crankpins.

Journal Diameters—1.374-1.375" (except rear bearing), 1.499-1.500" (rear bearing only).

Bearing Type—Replaceable, precision type, steel-backed, babbitt-lined. Rear bearing is flanged (for end thrust).

►*NOTE*—The three intermediate main bearings are interchangeable and these lower bearing halves are interchangeable with connecting rod bearings. Upper and lower bearing halves are not interchangeable (upper halves may be identified by oil holes which must register with oil channels in crankcase).

Clearance—.0015-.003".

Bearing Adjustment: *None. See Crosley Special Data for Engine Removal and Crankshaft Removal.*

CAUTION—When installing bearings, make certain that oil holes in bearing upper halves register with oil channels in crankcase (see Bearing Note above). Bearing caps are numbered (1 to 5) on left side of engine and cannot be interchanged.

Crankshaft Oil Seals—Replace rear main bearing oil seal whenever rear main bearing is disturbed.

Oil Seal Replacement—*See "Crankshaft & Main Bearings" in Crosley Special Data.*

Replacement Bearings: Furnished Std. Size and .001", .005", .010", .020" Undersize.

End Thrust: Taken by flanges on #5 (rear bearing). Replace rear main bearing when endplay exceeds .008". **Endplay**—.003-.008".

CAMSHAFT: Five bearing type mounted on top of engine and driven through bevel gears by vertical tower shaft at front of engine.

Bearing Type—Consist of five split aluminum bearings bolted individually on pads on top of engine. Top of all bearing upper halves are machined flat and a separate bearing strap is assembled on top of bearing under bearing capscrews. These bearing straps have stud for camshaft cover retaining nuts (except rear #5 bearing strap which is plain type).

Bearing Interchangeability—All upper and lower bearing halves except front (#1) interchangeable on all engines. Bearing straps are interchangeable on intermediate bearings (#2, 3, 4). Rear bearing strap is plain type.

Clearance—.0015-.0027".

Endplay—Taken by thrust washer between camshaft gear and front camshaft bearing. With correct endplay, backlash between camshaft gear and upper towershaft gear will be .003-.005".

Endplay Adjustment—*See "Camshaft & Bearings" in Crosley Special Data.*

Camshaft Drive (Towershaft) Assembly: *See "Camshaft & Bearings" in Crosley Special Data.*

Camshaft Setting: For correct valve timing, with camshaft out of engine, proceed as follows:

1) Turn engine over slowly until the following three conditions occur simultaneously: a) Top dead center mark on flywheel is in center of inspection hole in right front face of housing, b) Distributor rotor points toward #1 cylinder segment in distributor cap, c) Punch-marked tooth of upper tower gear (see below) points toward rear of engine and is in line with center-line of camshaft bearings.

2) With engine positioned as above, assemble the camshaft, pushing the oil metering housing into upper tower shaft gear and meshing punch-marked tooth of upper tower shaft gear between two punch-marked teeth of camshaft gear. Complete camshaft assembly by installing bearing caps.

3) Check camshaft endplay (see data above).

4) Turn engine over slowly by hand for at least two revolutions.

VALVES: Engine must be dismantled (removed from chassis, cylinder block taken off) for valve work.

Valve Servicing—*See "Valve System" in Crosley Special Data.*

	Head Diameter	Stem Diameter	Length
Intake	1 11/64"	.3135-.3140"	3.934"
Exhaust	1 3/64"	.3125-.3130"	3.934"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.235"	.0015-.003"
Exhaust	45°	.235"	.0025-.0040"

►*VALVE INSTALLATION CAUTION*—Valve spring washer (intake valves), Thompson Roto Cap (exhaust valves) must be installed below valve springs with cupped side of washer and extruded lip on Roto Cap up toward camshaft.

Valve Springs (1949-50-51): Free Length (Inner) 2", (Outer) 2¾". Install with tightly wound coil down,

Outer "Booster" Springs
►(Engines No. 101374 to 101991)

	Springs Pressure	Length
Valve Closed	7.5 lbs. max.	1 23/32"
Valve Open	9 lbs. max.	1 7/16"

Inner Springs (All Engines)

	Springs Pressure	Length
Valve Closed	30 lbs.	1 1/2"
Valve Open (Intake)	46-51 lbs.	1 7/32"
Valve Open (Exhaust)	46-51 lbs.	①1 5/64"

①—With Thompson Roto-Cap.

Valve Springs (1952): Free length 2". Install with tightly wound coil down, using special spring compressor.

	Spring Pressure	Length
Valve Closed	44.5-44.8 lbs.	1.3125"
Valve Open	85-91 lbs.	①1.0781"

①—With Thompson Roto-Cap.

Valve Guides: Press old guide out from top to bottom. Press new guide in until top of guide protrudes ¾" above bottom of cam follower guide. Ream for .0015-.003" clearance (intake), .002-.004" (exhaust). Reface valve seats.

Valve Lifter (Cam Follower): Consists of an inverted cup operating in guide hole in cylinder block direcly above each valve assembly (cam follower spacer and tappet clearance adjusting shims located within cam follower above valve stem).

Cam Follower Clearance—.0005-.0015".

VALVE TIMING

Tappet Clearance: (1949-50-51) .004-.005" Intake, .006-.007" Exhaust; (1952) .004-.006" Intake, .007-.009" Exhaust. COLD.

►**Tappet Clearance Adjustment Procedure**—*See "Valve System" in Crosley Special Data.*

Valve Timing: See Camshaft Setting (above).

Engines before No. 105,010

Intake Valves—Open 5° BTDC. Close 59° ALDC.
Exhaust Valves—Open 32½° BLDC. Close 5° ATDC.

Engines after No. 105,010

Intake Valves—Open 5° BTDC. Close 50° ALDC.
Exhaust Valves—Open 50° BLDC. Close 5° ATDC.
Valve Timing Check—See Camshaft setting for assembly of valve gear.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

LUBRICATI N

Engine Oiling System: Pressure to main bearings, connecting rod bearings, camshaft bearings, and timing gear bearings (oil flow to camshaft bearings is through hollow towershaft and hollow camshaft).
Crankcase Capacity—2 qts. (refill), 2.8 qts. (when filter drained or filter element replaced).
Normal Oil Pressure—35-50 lbs. at 30 MPH. (hot oil). 7 lbs. minimum with engine idling.
Oil Pressure Regulator—Located under plug on right front corner of engine. Not adjustable.
Oil Pump: Gear type in front end of crankcase.
Oil Pump Overhaul: *See Crosley Special Data.*
Oil Filter: Replace filter element at 8000-10000 mile intervals. NOTE—Add .8 qt. of oil in crankcase when oil filter drained or element replaced.
Crankcase Ventilation: Oil-wetted type filter element in oil filler cap (air intake). Outlet pipe located at rear of valve chamber.

COOLING

Cooling System: Pressure type Radiator Filler Cap used on 1952 cars, can be installed on previous models.
Capacity—4 quarts (5 quarts with Heater).
Water Pump (No. C-207187): Adjustable Packing type. Mounted on right side of engine.
See Water Pump Section for complete data.
Removal—Disconnect drive coupling at water pump, drain cooling system by taking out drain plug at bottom of radiator, disconnect two water hoses, take out two mounting bolts in flange in front of pump, lift pump out.
Thermostat: In engine outlet connection (Choke type). Starts to open at 155°F.
Temperature Gauge: Vapor pressure type.

CLUTCH

Rockford Model No. 4608, Type 6TS (Before Serial No. CD-205500 & VC-20783). Model No. 165299, Type 6½TS (After Serial No. CD-205500 & VC-20783). Single plate dry disc type.
See Clutch Section for complete data.
Facings—(R4608) I.D. 4". O.D. 6". (165299) I.D. 4½" O.D. 6½". Thickness (both) ⅛"
Pedal Adjustment: Pedal free travel should be 1". To adjust, turn clevis end in or out on cable.
Removal: Remove transmission (see Transmission Removal below). Working from below through the housing opening, remove two bolts in each of three release lever brackets, remove pressure plate and driven member through opening.

TRANSMISSION

Warner Model AS1-T92. Three-speed, sliding spur gear type with conventional shift lever mounted on transmission case cover.
See Transmission Section for complete data.
Removal: Raise rear of car until weight removed from rear springs, disconnect rear springs and shock absorbers from axle. Disconnect brake cable and conduit at each rear wheel backing plate (mechanical brakes) or disconnect brake line and parking brake cable (hydraulic brakes). Disconnect speedometer cable and clutch release cable clamp from bottom of transmission case. Support rear end of engine on blocks, remove rear engine mount (under transmission case at rear end). Remove floor transmission cover. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle, and propeller shaft assembly to rear and clear of the transmission case (CAUTION—Do not lose spring and washer located between propeller shaft and speedometer gear). Remove four capscrews mounting transmission on flywheel housing, pull transmission straight back to clear clutch shaft and remove from car.

UNIVERSALS

New England Products. Crosley No. 207483. One used. Plain bushing type. In ball housing at rear of transmission adapter.

REAR AXLE

Spicer Salisbury Model 11. Semi-floating, spiral bevel gear type with Torque Tube drive.
See Rear Axle Section for complete data.
Ratio—5.17-1 Std.
Backlash—.003-.008". Shim adjustment.
Removal: "CD" Models—Disconnect hand brake cable at lever at the transmission adaptor. Disconnect hydraulic brake lines. Raise rear of car until all weight removed from rear springs, disconnect rear springs and shock absorbers from axle. Take out capscrews mounting torque tube on rear face of transmission adapter, pull rear wheels, rear axle and torque tube assembly to rear until free from transmission. CAUTION—Do not lose spring and washer located between universal joint and speedometer gear in transmission.
"VC" Models—Disconnect rear shocks and two radius springs at axle. Disconnect main hand brake rod at front and rear and rear brake hose at frame. Disconnect torque tube at rear axle and remove rear coil springs. Remove rear axle from car. Disconnect torque tube at universal joint and pull back until ball housing is as close as possible to front cross member. Turn torque tube to left to a point almost at right angle to the body. The ball housings will then come out of the tunnel over cross member.
Installation: Reverse removal procedure.
Axle Shaft Removal—Remove rear wheel hub cap, rear wheel, and wheel hub (use Puller M.T. 262). Disconnect brake hose from backing plate and free cable conduit from clamp on backing plate. Take out four capscrews mounting backing plate on axle housing, remove backing plate being careful not to lose bearing adjusting shims on housing flange. Pull axle shaft out of housing.
►*CAUTION*—On cars with Goodyear-Hawley Hydraulic Brakes, wheel brake unit must be disassembled before hub and brake disc can be removed. *See "Goodyear-Hawley Hydraulic" Brakes in Brake Section.*
Wheel Bearing Adjustment: Check endplay at each wheel with dial indicator. Adjust by adding or removing shims located between backing plate and flange on axle housing (see Axle Shaft Removal). Endplay—.002-.007" total for both wheels.
TORQUE TUBE & PROPELLER SHAFT ASSEMBLY: Spicer No. 98-1182X. Torque tube assembly has flanged end at rear (bolted to rear axle housing flange) and thrust ball at forward end (cap assembly bolted on adapter on rear end of transmission). Propeller shaft is splined on pinion shaft (rear end) and in universal joint (forward end) and is positioned by spring located between universal joint and speedometer gear in transmission case.
NOTE—A propeller shaft center bearing is located within the torque tube and is provided with a grease fitting on the tube at this point.
Propeller Shaft Removal: Remove Rear Axle and Torque Tube Assembly (see Rear Axle Removal above), withdraw propeller shaft through forward end of tube.
CAUTION—When installing assembly in car, make certain that spring and washer installed on transmission shaft ahead of universal joint. This spring takes up endplay in propeller shaft.

SHOCK ABSORBERS

Delco Model—Direct acting, hydraulic type.

	Crosley Numbers	
	Front	**Rear**
CD—301755		301754
VC—301166		301306

NOTE—Above shock absorbers used on 1949 "CD" model beginning Serial No. CD-201995.

FRONT SUSPENSION

Front Suspension: Conventional axle with semi-elliptic springs.
Kingpin Inclination—6½° crosswise.
Camber—2°. No adjustment (axle may be bent for minor adjustments).
Caster—7½°. Adjust by inserting wedge shims between spring and spring pad on axle.
Toe-In—(CD) 1/16". (VC) ⅛".
Toe-Out On Turns—Inner wheel turned 20°, outer wheel turned 18°.

STEERING GEAR

Ross Model S-12. Cam-and-Lever type.
See Steering Gear Section for complete data.

BRAKES

HAWLEY MECHANICAL

Before Serial No. 106,039

Service: Hawley. Four-wheel, mechanical two-shoe type, Hand lever applies all four service brakes.
See Brake Section for complete data.
Drums—Diameter 6". Cast iron.
Clearance—.006-.008" at both ends of each shoe (adjusting screws backed off approximately ¼ turn from point where wheel starts to drag).
Lining—Molded type. Width 31/32". Thickness 3/16" Length per wheel 14".

GOODYEAR-HAWLEY HYDRAULIC

Beginning Serial No. 106,039

Service: Goodyear-Hawley hydraulic four-wheel disc type. Hand lever applies rear wheel service brakes.
See Brake Section for complete data.
Disc Diameter—7½".
►*CAUTION*—Disc integral with wheel hub. Wheel brake unit must be disassembled before wheel hub can be removed.
Clearance—Compensating screw backed off ¼ turn from point where wheel locked.
Lining—Molded circular discs (2 used).
Hand Brake: See Service Brakes (above).

LOCKHEED HYDRAULIC

Service Brakes: Lockheed Hydraulic, 4-wheel, double anchor. Hand lever applies rear service brakes.
See Brake Section for complete data.
Drums—Cast-iron. Diameter 9".
Lining—Molded type. Width 1" Thickness 7/32".
Length—9 15/32" (fwd. shoe), 6 53/64" (rear shoe).
Clearance—Heel .005". Toe .008".
Hand Brake: See Service Brake data (above).

TIGHTENING SPECIFICATIONS

1946-54 6 CYL. MODELS

ENGINE

6 CYL. MODELS

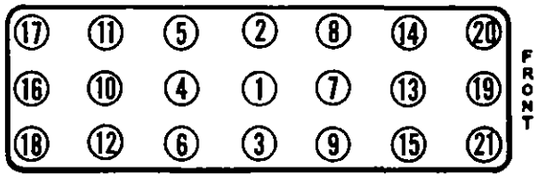
ENGINE ASSEMBLY REMOVAL: Engine assembly, clutch, and transmission assembly can be removed from car as a unit as follows: Remove hood and radiator core. Remove propeller shaft (cars with two propeller shafts see Propeller Shaft Center Bearing Removal following). On cars with power shift remove the vacuum control unit. Disconnect the following: Fuel pump flexible line at pump, exhaust pipe at manifold, throttle controls, heat indicator tube and bulb at head, oil gauge line at flexible tube, generator wires, speedometer cable, hand brake, gear shift and selector rods at transmission, clutch pedal linkage and torque tube, windshield wiper vacuum hose (if so equipped). Remove crankcase ventilator breather tube and front and rear engine support bolts. Connect hoist to engine (remove air cleaner and horns) lift assembly out of chassis. When re-installing assembly, reverse procedure indicated above, check hood alignment and hood lock operation.

V8 MODELS

ENGINE ASSEMBLY REMOVAL: Drain cooling system (both cylinder bank drain cocks and radiator). Disconnect propeller shaft at transmission and disconnect wires and linkage at transmission and clutch. Remove exhaust pipes, hood, and battery. Disconnect the usual items under hood such as fuel lines, radiator hoses, wires, etc. If using engine lifting fixture C-3162, remove carburetor assembly after disconnecting integral choke tube, fuel lines as listed above.. Remove radiator shroud (if so equipped). Attach lifting fixture to carburetor flange studs on intake manifold, and hook chain hoist to eyebolt. Place a jack under transmission to relieve weight. Then remove engine rear support mounting bolts and cross-member. Then remove engine front support mounting bolts. Lower jack at transmission and remove from under car. Raise engine and at the same time, work engine out of chassis toward the left front fender.

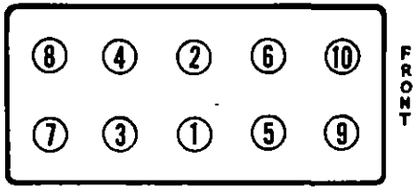
OIL PAN

6 CYL. MODELS



OIL PAN REMOVAL: Drain oil, replace oil pan drain plug. Remove clutch cover housing underpan to avoid damaging oil pan gaskets on underpan dust shield. Remove oil level indicator, drop oil pan on the tie rod. Pan can then be removed by reaching under crankcase and raising oil strainer to clear baffle while sliding pan out to rear.

CYLINDER HEAD & MANIFOLD



ALL MODELS

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car.

Tightening Torque—See Tightening (Torque Wrench) Specifications above.

6 CYL. CYLINDER HEAD

V8 CYLINDER HEAD

MANIFOLD HEAT CONTROL

V8 MODELS

MANIFOLD HEAT CONTROL VALVE: Attached to right cylinder block exhaust manifold, and can be removed and repaired without removing manifold.

Removal—Remove two exhaust manifold flange bolts and nuts and apply pressure to exhaust pipe to separate and remove the heat control valve. Remove counter-weight tightening bolt and nut and remove counter-weight. Remove thermostatic spring, spacer washer, then remove horseshoe lock and remove the anti-rattle spring.

►***CAUTION—Do not operate the engine without heat control valve in the manifold.***

Installation—Install anti-rattle spring and horseshoe lock, and secure lock to shaft by squeezing end of horseshoe lock together. Check valve and shaft for free movement. Install spacer washer and place inner tongue of coil spring in shaft slot with outer tongue of spring toward forward side of valve and in a down position. Install bumpers on each side of counter-weight, and insert the counter-weight shaft key into counter-weight, securing it in position with the lock bolt. Hold heat control valve in the open position, and move the outer end of thermostatic spring around and up ¾ of a turn, hooking end of spring under forward stop screw. Hold valve in closed position and install counter-weight assembly on shaft. Center butterfly valve in valve body and line up bumpers to clear stop pin, then press counter-weight all the way onto the shaft, with the anti-rattle spring adjusted so that when the valve shaft is pulled up against anti-rattle spring there will be about 1/16" tensional drag on the shaft. Install manifold heat control valve assembly on exhaust manifold. Check assembly for free operation.

ORIGINAL BORE & PISTONS

6 CYL. MODELS

ORIGINAL PISTON & CYLINDER BORE SIZES: Original production (new engine) piston and bore sizes indicated by letter located as follows:

Piston Size—Letter stamped on piston head.

Bore Size—Letter stamped on pad on distributor side of engine at top of block. Do not confuse this letter with "Special Standard" size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" oversize standard cylinder bore.

NOTE—When measuring piston diameter take readings at right angles to the pin holes and ¾" from bottom of skirt.

PISTONS

ALL MODELS

REPLACEMENT PISTONS: Finished (Aluminum Alloy) Pistons—Furnished in standard size and .005", .020", .030", .040", .060" oversize, for all models.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Semi-Finished (Aluminum Alloy) Pistons—These pistons furnished in two sizes (1) for cylinder bores from standard to .023" oversize. (2) For cylinder bores .025" to .060" oversize. Pistons are finished (head and ring grooves) except for skirt. Pistons must be finished on cam grinding equipment. Do not finish pistons circular. Skirt is elliptical (.010-.014"), with smaller diameter across pin bosses than across thrust faces, and piston is tapered (.0005-.0015"), with smaller diameter at top of piston.

IMPORTANT—Use same type pistons when replacing only a partial set. All pistons in engine must be of the same type.

PISTON RINGS

ALL MODELS

REPLACEMENT PISTON RINGS: Three types of piston ring sets furnished by car manufacturer for service replacement as follows:

Mopar Oil Master Ring Sets—These rings designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls are not to be reconditioned. No. 4 oil ring is special 4-piece type (upper and lower rails with stepped segment between rails and slotted expander). Mopar Oil Master Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Oil Saver Ring Sets—These ring sets are designed to be installed in cylinders with .005" or less taper, or where cylinder walls have been reconditioned. This set consists of the same size ring as used in Oil Master Set except that No. 3 & No. 4 rings are alike (slotted oil ring with slotted expander). Mopar Oil Saver Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Chrome Master Ring Sets—These ring sets are designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls are not to be reconditioned. Top and bottom rings are chromed.

Oil Ring Set Sizes—All piston ring sets are available in the following sizes: **Standard** (for standard to .009" oversize cylinders); **.010"** (for .010" to .019" oversize cylinders); **.020"** (for .020" to .029" oversize cylinders); **.030"** (for .030" to .039" oversize cylinders); **.040"** (for .040" to .049" oversize cylinders); **.050"** (for .050" to .060" oversize cylinders).

ORIGINAL BEARING SIZES

ALL MODELS

ENGINE NUMBER LETTERS ('SPECIAL STANDARD' BORE & BEARING SIZES): Letters used with engine number (not in circular pad) denote following 'special standard' sizes: **'A'**—.020" larger standard cylinder bore. **'B'**—.010" smaller standard main and connecting rod bearings. **'AB'**—Cylinder bore, main & connecting rod bearings 'special standard.'

CONNECTING ROD & BEARINGS

ALL MODELS

▷***CAUTION—See ORIGINAL BEARING SIZES for markings indicating engines equipped with bearings other than standard sizes.***

CONNECTING ROD BEARINGS: Removal & Installation. Bearing shells can be removed after taking off bearing caps. When installing bearing shells, oil hole in rod and bearing must be aligned and ear on bearing halves must be aligned and fitted in notch in rod and cap.

Fitting Bearings—To check bearing clearance, place oiled piece of feeler stock .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts. Bearing clearance is correct when slight drag is felt when turning crankshaft by hand. If no drag felt, and crankshaft out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" undersize for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" undersize bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

CRANKSHAFT & MAIN BEARINGS

ALL MODELS

▷***CAUTION—See ORIGINAL BEARING SIZES for markings indicating production engines equipped with bearings other than standard size.***

REPLACEMENT MAIN BEARING CAPS: Furnished for service where original cap damaged or broken. These replacement caps same as original caps except for stud holes being 1/64" larger, and bearing cap length which is 1/16" shorter.

Fitting—Replacement cap must be fitted to engine by filing or shimming to obtain proper bearing clearance. This is only necessary when replacement cap originally fitted to engine (cap should not be filed or shimmed to compensate for wear).

ALL MODELS

MAIN BEARINGS: Removal & Installation (with engine in car). Bearing shells can be removed and installed without removing crankshaft as follows: Remove oil pan, and oil suction pipe and screen assembly. Punch mark bearing caps and crankcase to insure re-installation of caps in same positions. Remove caps in pairs (2 front or 2 rear). Upper bearing halves can be removed by using tool C-584 inserted in oil hole in crankshaft and rotating crankshaft to turn bearing out.

▷***CAUTION***—When new bearings installed, always use complete bearing (do not use new bearing half with an old half). Upper and lower bearing halves for all bearings except rear are alike.

Fitting Bearings—To check bearing clearance, place an oiled piece of feeler stock, .0015" thick by ½" wide, and 1" long between bearing and crankshaft. Tighten bearing cap nuts or cap screws. Bearing clearance is correct when slight drag felt when turning crankshaft by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

1946-54 MODELS (EXC. V8)

CRANKSHAFT OIL SEALS: Car manufacturer recommends that new oil seals be installed when chain cover or rear main bearing cap removed.

Front Oil Seal (6 Cyl.)—Oil seal located in timing chain cover. Consists of spring backed composition seal in a stamped steel housing pressed in chain case cover with composition gasket installed between seal and cover. To install proceed as follows: Insert new composition gasket in chain case cover, drive new seal in place with drift or similar tool slightly larger than seal (seal is press fit in cover). Center seal on crankshaft when installing chain case cover as follows: Install chain case cover on engine with cover screws tightened just enough to hold cover in place, install Centering Tool C-522 on end of crankshaft and hold it in place by tightening crankshaft starting jaw finger tight, tighten chain case cover screws and as cover is being compressed, tighten crankshaft starting jaw nut so as to maintain slight tension between centering tool and seal. Remove tool after chain case cover screws secured. Tighten starter jaw to 108 ft.lbs. torque.

Rear Oil Seal (1-Piece Type—6 Cyl.)—Seal is one-piece type with lip on forward edge engaging shoulder in crankcase and bearing cap to rear of crankcase oil slinger. This seal is split at top. To install new seal, remove oil pan, and back off all main bearing cap screws three turns. Remove rear main bearing cap, and pull out old seal with pliers. Coat one end of new seal with tire soap or cup grease (avoid getting any grease between seal ends). Insert one end of seal over shoulder in crankcase, work up until end approximately at top, then work other end in same manner on other side until ends come together at top. Coat lower lip of seal so that bearing cap will seat on seal easily. Check rear bearing cap for holes (either sand holes or tapped holes). If holes extend through oil slinger groove shoulder, weld up the sand holes, or plug the tapped holes by installing screws that have been coated with sealing compound. Re-install main bearing caps.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Rear Oil Seal (2-Piece Type—6 Cyl.)—Located at rear main bearing. Consists of oil seal packing assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer assembled on rear face of bearing cap). Gaskets used on top face of bearing cap at each side, around oil slinger grooves and along shoulder across cap. Install new packing in retainer on crankcase and cap, place new gaskets on cap and install on engine without disturbing position of gaskets.

NOTE—Some models equipped with additional two-piece oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

1952-55 V8 MODELS

CRANKSHAFT OIL SEALS: Front Seal—Remove old seal with tool C-3050. Place new seal on chain cover with projecting flange facing inside the cover. Insert seal gasket and drive into place with tool C-3051.

Rear Oil Seal—Rope type seal of braided asbestos. With bearing cap, bearing, and seal removed, install a new seal into position in cap so that both ends of seal protrude above cap. Tap seal into position with tool C-3131 until tool is seated in bore. Hold tool down and cut off protruding ends flush with cap. Install bearing insert and both cap seals. The long cap seal should be installed so that when cap is in position, the long seal *will be on the oil filter side of engine.*

ENGINE FRONT COVER

V8 MODELS

ENGINE FRONT COVER (Double Rocker Shaft Engines): Proceed as follows:

Removal: Remove water pump. Remove vibration dampener retainer bolt and washer. Remove two of the vibration dampener pulley bolts and install puller Tool C-3033. Remove crankshaft pulley and vibration dampener as an assembly. Remove felt dust seal and vibration dampener hub key from crankshaft slot. Remove left cylinder bank exhaust pipe. Disconnect fuel lines at fuel pump. Remove fuel pump. Remove oil level indicator. Remove starter using Tool C-455. Drain engine oil and remove oil pan. Remove cover bolts and lockwashers. Drive chain case cover off the two dowel pins, using soft hammer.

Installation: Be sure mating surfaces of cylinder block and cover are clean. Apply moderate coat of sealing compound to block and cover faces, install new gasket. Make sure crankcase oil slinger is in proper position (flange end pointing toward seal). Position cover on two dowel pins and then gently tap cover in place. Install cover bolts and lockwashers and tighten to 30 ft. lbs. Install other items by reversing removal procedure.

FRONT OIL SEAL: Remove old seal by driving it out with Tool C-3050. Place new seal on the chain case cover with the projecting flange facing the inside of the cover. Insert seal gasket and drive new seal in place with Tool C-3051.

CAMSHAFT & BEARINGS

6 CYL. MODELS

CAMSHAFT REMOVAL: Remove Front End Assembly as a unit. Remove cylinder head, fuel pump, oil pump, valve tappet cover plates, crankshaft pulley, front motor support (with front of engine jacked up), timing chain cover, camshaft sprocket and timing chain. If valves and valve springs are not to be removed, prop valves up by inserting wooden wedges at opposite sides under valve head. Raise tappets and hold in this position (use spring type clothes pins or similar tool to hold tappets up). Withdraw camshaft (rotate shaft to clear any obstructions).

V8 MODELS

CAMSHAFT REMOVAL: Remove valve tappet cover, cylinder head cover and rocker arm assemblies and push-rods. Remove valve tappet assemblies, remove distributor. Remove timing chain case cover, timing chain and camshaft sprocket. Camshaft sprocket and timing chain can be removed by taking off the camshaft hub nut, fuel pump eccentric and dowel assembly. Chain and sprocket can then be removed. Remove four camshaft thrust plate screws, distributor and oil pump drive gear. Pull out the camshaft being careful not to damage camshaft bearings.

ALL MODELS

CAMSHAFT BEARINGS: Camshaft bearings are precision type and are a proper fit when installed. Bearings must be held in proper alignment when being pressed into block, otherwise they will be distorted resulting in a poor fit. Too much clearance in camshaft bearings will result in noise and excessive loss of oil pressure.

TIMING CHAIN

6 CYL. MODELS

TIMING CHAIN REMOVAL: Remove water pump, hoses, radiator core, belt and front crankshaft pulley. Support engine from underneath and remove front engine support. Remove chain cover. Remove 4 cap screws holding camshaft sprocket to camshaft, and pull off sprocket. Chain can now be removed. Cap screw holes in sprocket are offset and gear can be installed in one position only on camshaft.

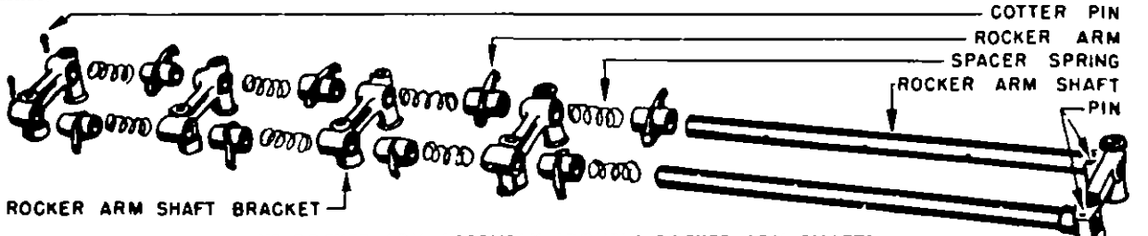
V8 MODELS

TIMING CHAIN REMOVAL: Remove radiator (see Radiator Removal), remove fan and both belts, and water pump pulley. Remove the four water pump attaching capscrews and remove water pump. Remove bolts holding chain cover to cylinder block. Attach Puller C-3072 by hooking it under chain case cover and then installing two of the water pump mounting bolts. Pull cover off locating dowels by tightening up on puller bolt.

VALVE SYSTEM

1946-55 MODELS

EXHAUST VALVE SEAT INSERTS (Refacing): Exhaust valve seat inserts must be reground with special high speed regrinding tool MTH-JB-41, using the correct size valve guide pilot. Check concentricity of valve seat using a dial indicator. Total runout should not exceed .002". Check valve seat with prussian blue to get seat centralized on valve face. Use a 20° stone at the top or a 60° stone at the bottom, whichever is necessary to centralize the valve seat. Width of valve seats should be 3/64" to 1/16".



Replacement Inserts—Furnished .010" Oversize. Use special tool C-732 (Exc. V8); C-3140 (V8) to remove inserts. After inserts have been removed from engine, smooth any roughness of seat with a blunt drift. Valve seat inserts should be .002-.004" larger than counterbore to insure correct fit. If inserts are found to be loose, enlarge counterbore with tool MH-H-1 and install oversize insert. Place inserts in dry ice for approximately 10 minutes. Clean counterbore thoroughly *and install a chilled insert with valve side up, and* drive it into place with installing tool C-767.

ROCKER ARMS

V8 MODELS

ROCKER ARM ASSEMBLY: Removal—Remove rocker arm covers. Place cotter pins in holes of first and last rocker arm brackets (if not already there) to prevent springs on rocker from pushing assembly apart when cylinder bolts removed. Completely loosen ten bolts on each bank that attach rocker arm support brackets to cylinder head and block. Grasp support bracket at each end of head, pull rocker assemblies and bolts directly away from heads, then remove push rods and place in respec-

CONTINUED ON NEXT PAGE

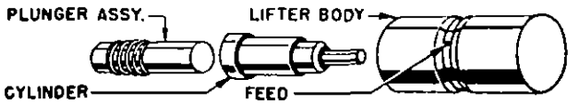
V8 ROCKER ARM ASSEMBLY (DOUBLE ROCKER ARM SHAFT)

CONTINUED FROM PRECEDING PAGE

tive slots in holder C-3068. ***CAUTION—Use care when removing rocker assemblies in order not to jerk cylinder heads off locating dowels which would allow them to drop and become damaged.***

Installation: Insert cylinder head bolts in brackets, with **short** bolts in intake side. Insert push rods through push rod holes in heads (short rods in upper intake holes, long rods in lower exhaust holes). Place rocker arm assemblies in position on heads, lining up all push rods to their respective rocker arms. Starting at top center tighten all cylinder head bolts to torque indicated in Tightening Specifications above. ***When tappets are full, extreme care must be taken when tightening head bolts so that tappets have time to bleed down to their operating length.*** Bulged tappet bodies and permanent noisy operation will result if tappets are forced down too rapidly.

HYDRAULIC VALVE LIFTER



1952-53 V8 MODELS

HYDRAULIC VALVE LIFTERS (Two Piece Type): Consists of three separate units: tappet body, cylinder, and plunger. Oil is introduced from pressure system to lower part of tappet body, then through a ball check valve to cylinder below plunger. When lifter is raised by engine cam, the ball check valve closes, preventing escape of oil, and the cam action is transmitted to engine valve.

►*1952-53 VALVE LIFTER REPLACEMENT CAUTION: Valve lifters must be replaced with the same type lifter used originally ("Two-Piece" or "Integral Type"). Different length pushrods are required for each type lifter.*

Removal: To remove complete valve lifter assembly, remove cylinder head cover, rocker arm assembly, push rods and valve chamber cover. On early production engines the above procedure must also be followed to remove valve lifter plunger assembly from valve lifter body. On later engines the valve push rod hole has been enlarged, making it only necessary to remove the cylinder head cover, and then proceed as follows: Install valve spring compressing tool C-3024 over the rocker arm so heel of tool is resting on valve side. Make certain valve is seated on low part of cam lobe. (See following for camshaft position). Using a handle of tool for leverage, compress valve spring sufficiently to raise rocker arm above push rod. While holding in this position, slide rocker arm to one side. Remove push rod and insert tool C-3039 (standard spring jawed type holding tool) into push rod hole, positioning it over valve lifter plunger assembly. Pull the assembly from body, being careful not to pull body from lifter bore.

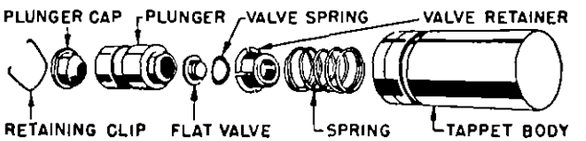
Disassembly: (Plunger and cylinder assembly removed from lifter body). ***NOTE—Disassemble one lifter at a time to avoid possibility of mixing the parts.*** Unlock plunger spring by twisting spring in a clockwise direction. Pull plunger and spring out of cylinder. It may be necessary to insert a thin wire through oil hole under ball check to raise ball and drain oil from cylinder. Wash all parts in clean solvent and dry with a clean dry cloth or blow dry with air. If plunger or cylinder unit scored, replace as a unit (old lifter body may be used providing clearance in block or guide bracket is not excessive). If there is evidence of scoring or foreign matter in oil, remove oil pan and thoroughly clean pan and inside of engine.

DE SOTO V8 TWO-PIECE VALVE LIFTER

Testing: Be sure there is no lubricating oil on lifter assembly and that it is completely dry. With cylinder held upright in one hand, start plunger into cylinder with the other. Depress plunger with the finger and release it quickly. The plunger should yield slightly to finger pressure. If no "kick-back" occurs, ball seat may be held open by dirt. Place finger over oil inlet and recheck. If "kick-back" occurs with oil inlet closed, clean plunger unit and retest. If there is still no "kick-back," it must be assumed that the ball check is scored or worn. Replace complete unit. If there is no "kick-back" when finger is held over oil inlet hole it is an indication that excessive wear exists between plunger and cylinder. Replace complete unit.

To Check Valve Tightness—Immerse lifter assembly in clean kerosene and pump plunger to fill cylinder, then note rate at which this leaks by ball check when unit is held in vertical position. Maximum allowable leakage is one drop per second. ***NOTE***—Car manufacturer provides tools for testing hydraulic valve lifters and these should be used whenever available.

Reassembly: ***(NOTE—Lifter will prime itself and air will be bled out more quickly if lifter is completely dry when installed).*** Insert plunger in cylinder, invert assembly so that ball check is off seat, or insert a small wire into oil inlet and raise ball check to allow plunger to move freely in cylinder. Lock plunger spring into cylinder by twisting spring clockwise direction. Insert lifter into tappet body.



1952-55 V8 MODELS

HYDRAULIC VALVE LIFTERS (One-Piece Integral Type) Barrel type. Unit consists of plunger and valve assembly operating within a cylinder formed by valve lifter body.. Oil is introduced to this unit through hole in side of lifter plunger.

►*1952-53 VALVE LIFTER REPLACEMENT CAUTION: Valve lifters must be replaced with the same type lifter used originally ("Two-Piece" or "Integral Type"). Different length pushrods are required for each type lifter.*

Removal: Drain cooling system to a point below level of intake manifold, and remove intake manifold. (CAUTION—cover intake port in cylinder head to avoid the entry of dirt). Remove crankcase ventilator pipe and valve chamber cover. Install rocker arm and valve compressor tool C-3024 over rocker arm so heel of tool rests on the valve stem side. Make certain that valve is seated and that valve lifter is on low side of camshaft lobe. (See "Low Point of Camshaft Lobe," following). Using handle of tool C-3024 for leverage, compress valve spring sufficiently to raise rocker arm above push rod end. While holding rocker arm in this position, slide rocker arm to one side along tube and remove push rod. Insert hooked portion of tool C-3158 into hole in lifter body (this portion of tool can be used to remove lifter without varnish build-up on lower end of lifter). Remove lifter from bore. If lifter sticks in bore, proceed as follows: Slide puller portion of tool C-3158 through cylinder head push rod holes and seat firmly in cap in lifter. Insert puller pin through lifter body and tool shaft in holes provided. Grasp tool handle and pull lifter out of bore with a twisting motion. As lifter clears bore, withdraw puller pin and remove puller. Remove lifter from chamber.

Disassembly: ***(CAUTION—Disassemble one lifter at a time to avoid the possibility of mixing lifter parts. It is very important that lifter parts not be interchanged.)*** Depress lifter plunger with a push rod and remove plunger retainer spring clip, plunger cap, plunger ball check (or flat type valve), valve springs, valve retainer, and plunger spring from lifter body. Inspect plunger, lifter body, valves and valve seats for signs of scoring, wear or pitting. Check to see that valve exerts a slight pressure on valve spring to insure valve seating. Clean lifter assembly in clean solvent and remove all traces of varnish and carbon. Blow parts dry with air. DO NOT USE A CLOTH AS LINT WILL CAUSE LIFTER TO OPERATE UNSATISFACTORILY.

DE SOTO V8 ONE-PIECE VALVE LIFTER

Testing: Remove plunger cap and immerse lifter assembly in an upright position in a container of kerosene. ***(CAUTION***—Container and kerosene must be absolutely clean). Allow lifter to fill with kerosene, then remove and replace the plunger cap. Holding lifter in an upright position and using tool C-3160, compress plunger slightly a few times to fill lifter body. Then compress lifter firmly with testing pliers, and if plunger collapses instantly as pressure is applied, disassemble, inspect and clean again. If second cleaning fails to prevent lifter from collapsing instantly when compressing, replace lifter. When cleaning and testing has been completed, remove kerosene and prime lifter lightly with clean engine oil before installing. This will prevent possible scoring of lifter plunger when engine is first started.

Reassembly: Reverse disassembly procedure as noted above.

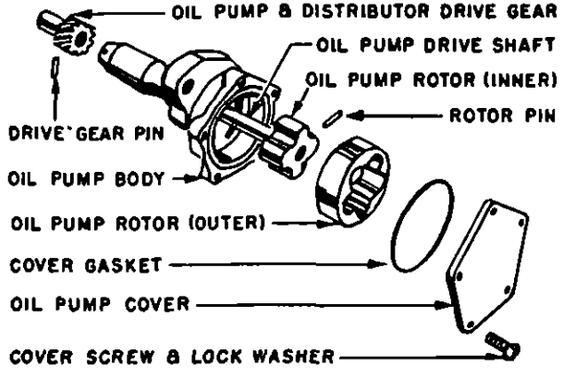
CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

1952-55 V8 MODELS

LOW POINT OF CAMSHAFT LOBE: Remove distributor cap, noting position of rotor for Nos. 1 and 6 cylinders. Set timing mark "DC" located on crankshaft pulley to pointer. With rotor at No. 1 firing position, the following lifters will be on the low side of the cam lobe: No. 2 intake and exhaust, No. 4 exhaust, No. 7 intake, No. 8 intake and exhaust *(NOTE*—To remove No. 1 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed). With rotor at No. 6 position, following lifters will be on low side of cam lobe: No. 3 intake and exhaust, No. 4 intake, No. 5 intake and exhaust, No. 7 exhaust *(NOTE*—To remove No. 6 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed).

OILING SYSTEM



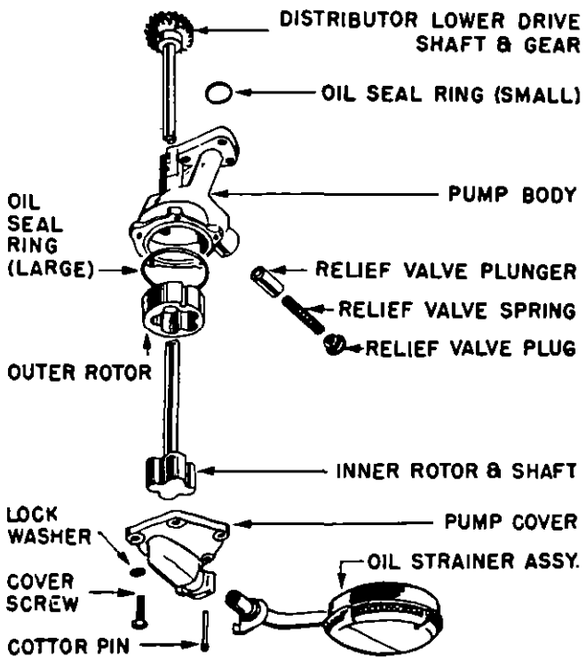
OIL PUMP

6 CYL. MODELS

ROTOR TYPE OIL PUMP: Removal—Take off distributor cap, turn engine over until No. 1 cylinder is at firing position (allow engine to remain in this position while pump is off engine). Remove two oil pump Allen type screws. Take pump off engine.

Pump Servicing—Disassemble pump by taking off cover and drive gear (drive out pin and press gear off shaft). Thoroughly clean parts and dry with compressed air. Check pump parts as follows: 1)—With rotors in pump body, turn shaft so that one lobe on inner rotor pushed into notch in outer rotor, check clearance between opposite lobe of inner rotor and inner face of outer rotor. If clearance greater than .010" replace both rotors. 2)—Height (or thickness) of both rotors should be at least .748". Diameter of outer rotor should be at least 2.245". Replace if measurements are less. 3)—With rotors in pump body, turn body up, place straightedge across face of body between screw holes. Clearance between straightedge and rotors should be .004" maximum. If greater replace pump body. 4)—With outer rotor pressed to one side of body, clearance at opposite side should be .008" maximum. If greater, replace pump body. 5)—Check cover by placing straightedge across inner face and .001" feeler can be inserted between cover and straightedge, or if face is scratched or marred, replace cover.

Pump Assembly—If new rotor installed on shaft, it must be installed with rotor square to shaft and pressed on until flush with end of shaft. Pin rotor to shaft after drilling 5/32" pin hole. Drive gear should be pressed on shaft to give .003-.010" clearance between underside of gear and pump body with rotor (on opposite end of shaft) seated in pump body. Install pin. If necessary, drill new 5/32" hole at right angles to old hole. With rotors in place, install new cover gasket on body and install cover.



DE SOTO SIX OIL PUMP

Pump Installation—Oil pump must be installed on engine with No. 1 piston in firing position with rotor on distributor opposite No. 1 terminal in cap.

V8 MODELS

ROTOR TYPE OIL PUMP: Removal—Drain engine oil, remove oil pan. Remove oil pump mounting bolts and lower pump straight down.

DE SOTO V8 OIL PUMP

Disassembly & Inspection: Remove cotter pin holding oil strainer to oil pump suction pipe, then remove pipe. Remove cover bolts and cover. Discard oil seal ring. Remove pump rotor shaft and lift out pump outer rotor. Remove oil pressure relief valve *plug and lift out spring and plunger. Wash all parts* in a suitable solvent and inspect for damage or excessive wear. Check all pump parts as follows:

Outer Rotor—Measure diameter and thickness of rotor with micro-calipers. If diameter less than 2.244" or thickness less than .998", replace both inner and outer rotors.

Inner Rotor—Measure thickness of inner rotor with micro-calipers. If thickness measures less than .998", replace both inner and outer rotors.

Rotor Depth—Slide rotors in pump body. Place a straightedge across pump body. Use a feeler gauge and measure clearance between top of rotors and straightedge. If clearance in excess of .004", replace pump body.

Outer Rotor to Pump Body Clearance—To check rotors for excessive wear, measure clearance between lobes of inner and outer rotors. If clearance in excess of .010", replace both inner and outer rotors.

Reassembly: Use new oil seal ring between cover and body. Tighten cover bolts to 10-15 ft. lbs. Prime pump and then install new oil seal ring in pump mounting face.

Distributor-Oil Pump Drive Shaft Bushing: *See "Ignition Notes" below.*

COOLING SYSTEM

6 CYL. MODELS

WATER DISTRIBUTOR TUBE: Removable one-piece tube installed between cylinders and valve *ports, and which distributes water from pump to* exhaust valve ports through holes in tube.

Servicing—A new tube should be installed whenever engine overhauled or when tube rusted and corroded, in order to provide correct water circulation in engine block. To replace tube, proceed as follows: Remove front end assembly. Remove water pump which will expose front end of tube. Remove tube by using rod with hook formed on end and engage hook in slot in upper side of tube just inside block, pull tube out.

ALL MODELS

RADIATOR CORE REMOVAL: Raise hood, drain cooling system, disconnect hoses, free headlight wires from radiator shroud (if used), take out nuts and capscrews in support at each side, lift core out, tilting top toward rear. *NOTE*—Fan blades on some models must be removed if additional clearance required.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

IGNITION NOTES

V8 MODELS

DISTRIBUTOR-OIL PUMP DRIVE SHAFT BUSHING: Removal—Insert Tool C-3052 and thread it into bushing. Holding puller head with wrench, tighten puller bolt and pull bushing out of bore in block.

Installation: Slide new bushing over burnishing end of Tool C-3053. Insert tool and bushing into bore of block. Drive bushing and tool down into position, using a soft hammer. As the burnisher is pulled through the bushing by pressure applied to puller nut, tool will wedge bushing tight in its bore and will burnish bore to correct size. *DO NOT REAM THE BUSHING.*

DISTRIBUTOR BASIC TIMING: Before installing distributor-oil pump drive shaft it will be necessary to time engine as follows: Rotate crankshaft until No. 1 cylinder is at TDC (or firing position). When cylinder is in this position, the pointer on chain case cover should be over "DC" on vibration dampener. Using Tool C-3027, position oil pump shaft so that it lines up with slot in drive gear. Coat shaft of drive gear with engine oil. Install it so that, after the gear spirals into place, it will index with oil pump shaft (slot in top of drive gear will be parallel with centerline of crankcase).

CLUTCH NOTES

1946-48 MODELS

CLUTCH OVER-CENTER SPRING: Service only if linkage disturbed or bracket on frame bent. Original setting can be obtained by using Miller Gauge C-705 as follows: Check spring bracket on frame and straighten if necessary, install gauge over linkage pivot pins with lower end engaging coil spring bracket on frame (turn pedal rod turnbuckle until gauge fits properly). Then re-set pedal position and free travel as directed on car page.

1949-55 MODELS

CLUTCH OVER-CENTER SPRING: Use Miller Gauge C-853. Place gauge on pin at lower end of pedal and against spring hook. Raise or lower the vertical spring bracket until it just contacts gauge. Move pointer on gauge to setting for car model being worked. Adjust eyebolt until the inside edge is in line with the pointer where spring makes contact with eyebolt.

Adjusting Over-Center Spring Tension—Adjustment is made by turning the sleeve nut on the spring eyebolt. If pedal is soft and sluggish on return, back off the sleeve nut. If pedal requires excessive pressure to depress, tighten sleeve nut until desired action is obtained.

PROPELLER SHAFT

1946-54 MODELS

PROPELLER SHAFT CENTER BEARING: Used on all passenger car models with two propeller shafts. Consists of ball-bearing mounted on rear end of front propeller shaft with an oil seal assembled to front and to rear of bearing, and this assembly (bearing and oil seals) enclosed in a housing which is flange mounted on rear side of frame cross-member. An insulator is assembled on front end of housing. To remove assembly, remove nuts and lockwashers from differential and transmission companion flanges to free propeller shafts at front and rear, take out 4 center bearing housing-to-frame cross-member mounting bolts, remove propeller shaft and center bearing as an assembly.

REAR AXLE NOTES

1946-55 MODELS

REAR WHEEL BRAKE AXLE SHAFT SEAL: Leather seal mounted on brake support and bears on axle shaft (former design secured by brake support bolts and contacted hub).

Installation—With brake support removed and old seal driven out of support, new seal can be installed as follows: Soak new seal in thin oil for 30 minutes. Roll leather with smooth bar until pliable. Check seal bearing surface on axle shaft and make sure surface is smooth. Install seal on front side of support and stake to support at three points on outer edge. Install sleeve (Tool C-745) in seal (protects seal from damage while installing support.) Assemble brake support on housing. *CAUTION*—Lip of seal must not fold when installing in support.

BRAKE NOTES

1946-55 MODELS

HAND BRAKE ADJUSTMENT (Internal Type): Place transmission shifting lever in neutral and be sure the hand brake is released. Disconnect front end of propeller shaft and remove adjusting screw cover plate. Loosen brake cable guide clamping screw and back off cable adjusting nut. Turn brake shoe adjusting nut to decrease shoe-to-drum clearance until a slight drag is felt on drum. Back off adjusting nut one full notch (using spanner wrench C-3014) to give approx. .010" clearance. (NOTE—be sure the two raised shoulders on the adjusting nut are seated in the grooves on adjusting sleeve). The cable length adjusting nut should be positioned against cable housing so there is at least .005" (but not more than .010") clearance between operating lever and brake shoe cable. To lock the adjustment, tighten cable housing clamp securely and then tighten cable adjusting nut against housing. Test hand brake lever for travel. When properly adjusted, 4 to 6 clicks of ratchet should be obtained to hold car. Install adjusting screw cover plate and connect propeller shaft.

HAND BRAKE ADJUSTMENT (External Type): The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

NOTE—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise or place on block and tap lightly with a hammer.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1946 Detroit Numbers—S11S Deluxe 6,154,001 Up, Custom S11C 5,784,001 Up, S11 Taxicab 5,102,501 Up.

1947 Detroit Numbers—S11S Deluxe 6,172,863 Up, Custom S11C 5,825,875 Up, S11 Taxicab 5,105,414 Up.

1948 Detroit Numbers—S11S Deluxe 6,190,370 Up, Custom S11C 5,885,816 Up, S11 Taxicab 5,110,108 Up.

ENGINE NUMBER: Stamped on boss on left side of block between #1 and #2 cylinders.

TUNE-UP

COMPRESSION: Pressure—125-135 lbs. (100 lbs. min.) at cranking speed of 150 RPM. or 155-165 lbs. at 1000 RPM. (for Std. 6.6-1 Cast Iron Head).

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4

SPARK PLUGS: Auto-Lite Type A5. 14 mm. Metric. Gaps—.030" ± .002".

IGNITION: See Coil, Condenser, and Distributor.

Breaker Gap—.020" **Cam Angle**—38° (closed).

Breaker Arm Spring Tension—17-20 ozs.

Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: See Ignition Timing.

Std. Setting—At Top Dead Center.

Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual (octane selector) adjustment as follows:

Manual (Octane Selector) Adjustment—Set for slight ping in 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION: See Carburetor & Carb. Equipment.

Idle Setting—Set idle adjusting screw for smooth idling with warm engine (Carter—¾-1¼ turns open), turn screw out for richer mixture. Idle speed 6 MPH. (450-475 Eng. RPM. with Hydraulic Trans.).

Float Level (Carter B&B)—Top of float (not seam) 5/64" (for EX1 carb. on cars with Std. Trans.), 1/16" (for EV1 carburetor on cars with Hydraulic Transmission), plus or minus 1/64" below top edge of bowl.

Float Level (Stromberg)—Fuel level ⅝" below top of bowl (even with bottom of inspection hole).

Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter, for *extreme temperatures.*

Fuel Pump Pressure—3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up **approx. ¾ turn,** not over one turn or under ½ turn, hook end on stop stud.

VALVES: See Valve Timing.

Tappet Clearance—.008" Intake, .010" Exhaust, Hot. NOTE—Tappet adjusting screws are self-locking

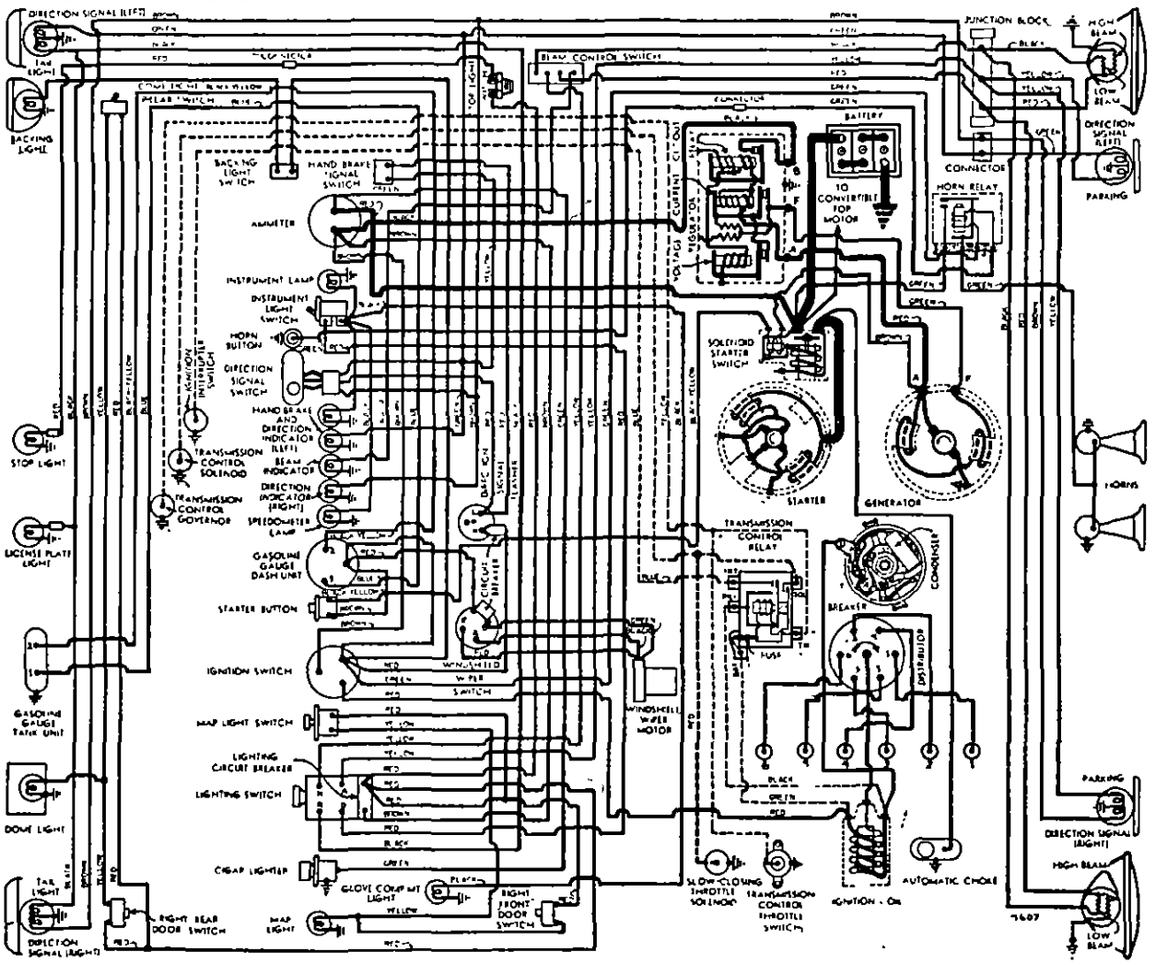
IGNITION

IGNITION SWITCH: Briggs & Stratton or Mitchellock. NOTE—No armored cable used.
Briggs & Stratton—B & S Switch No. 85985.
Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).
Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800)

COIL: Auto-Lite No. IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite Part No. IG-3927A.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IGS-4208-1. Full automatic advance type with auxiliary vacuum spark control and manual (octane selector) adjustment.
Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #6.
Breaker Gap—.020".
Cam Angle or Dwell—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.



Distr. Degrees	Automatic Advance R.P.M.	Eng. Degrees	R.P.M.
Start	350	0	700
3	400	6	800
6	770	12	1540
9	1150	18	2300
11	1400	22	2800

Vacuum Spark Control: Auto-Lite Unit. On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).

Vacuum Advance

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5½"
1°	2°	6½"
3°	6°	9⅝"
5°	10°	12½"
6°	12°	14"

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Distributor Removal:—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position (at TDC) and rotor opposite #1 segment in cap.

IGNITION TIMING

S&S. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	0° at TDC	.000" TDC

NOTE—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as directed above).

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping), clockwise to retard spark (if too severe).

CARBURETOR

CARTER (B&B)

Carter (B&B) EX1, 2, 3.....No Fluid Drive
Carter (B&B) EV1, 2.....Fluid Dr. & Tiptoe Shift
Carter (B&B) EL1.....Taxicab

1½" single barrel, downdraft type with Sisson automatic choke control. NOTE—EV1 has Slow-closing Throttle and Step-down Switch for Tiptoe Shift.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*

CARBURETOR

STROMBERG

Stromberg Model BXVD-3. Stromberg No. 380218. Code No. 3-82. 1½" single barrel, downdraft type.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Jet—*See Stromberg Jet Table in Carburetor Section for complete data.*

CARB. EQUIPMENT

Slow Closing Throttle (Fluid Drive Cars): Stromberg Adjustable Dashpot type or Carter (B&B) electromagnetic Dashpot type.
See Carburetion Equipment Section for complete data.
Setting (Carter B&B)—Not adjustable.
Setting (Stromberg)—With all slack removed from linkage, set adjusting screw on dash pot lever under float bowl so that piston travel is 5/16-11/32" (measured on dash pot rod on bowl cover). Turn screw out to lengthen stroke, in to shorten.

Automatic Choke:—Sisson Type AC-758B.
See Carburetion Equipment Section for complete data.
Setting—With throttle ⅓ open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

Air Cleaner: AC No. 1542284 Heavy-duty oil-bath type. Filter Element AC No. 1544091.
Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

Fuel Pump: AC No. 1539042 or Carter Type M594S or M639S. Diaphragm type fuel pumps.
Replacement Pump—AC No. 577 (for 1539042).
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: New Oillite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite electric. No. NG-10891D (dash unit), No. NG-10862T (tank unit).
See Carburetion Equipment Section for complete data.

BATTERY

Willard Type SW-2-110. 6 Volt, 17 Plate, 110 Ampere Hour Capacity (20 hour rate).
Grounded Terminal—Positive (+) to engine.
Dimensions—Lgth. 10 3/16", W. 6 15/16", H. 9 5/16".
Location—Under hood in left fender shield.

STARTER

Auto-Lite Model MAW-4025. Armature MAW-2030.
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).
Cranking Engine—150 RPM, 175 amperes, 5.4 volts.

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
5.45 "	820	4.5	300
8.50 "	400	4.0	400
11.55 "	110	3.5	500
11.5 "	Lock	3.	505
18. "	Lock	4.	670

Removal: Disconnect wires (tape battery lead), remove mounting bolts, withdraw starter (not necessary to disturb oil filter or oil lines).
Starting Switch: Auto-Lite Solenoid Type SS-4705 with pushbutton on instrument panel.
See Electrical Equipment Section for complete data.

GENERATOR

STANDARD

Auto-Lite Model GDZ-4801A. Armature GDZ-2006F. Two brush (shunt) type with voltage and current regulation. Ventilated by fan on drive pulley.
Charging Rate Adjustment—None. See Regulator.
Maximum Charging Rate—As given in table below reached at approx. 25 MPH. car speed and above with load or discharged battery (Current Regulator setting). Actual charging rate controlled by Voltage Regulator and dependent on battery condition.

Performance Data—GDZ-4801A

Cold			Hot		
Amperes	Volts	R.P.M.	Amperes	Volts	R.P.M.
0	6.4	925	0	6.4	1000
5	6.65	1060	5	6.65	1150
10	6.85	1200	10	6.85	1290
15	7.05	1340	15	7.05	1430
20	7.3	1480	20	7.3	1590
25	7.55	1620	25	7.58	1750
30	7.8	1760	30	7.8	1980
35①	8.0	1900	35	8.0	2250

①—Current regulator setting. See Regulator data.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—35-53 ozs. (new brushes).
Field Current—1.60-1.78 amperes at 6.0 volts.
Motoring Current—4.16-4.60 amperes at 6.0 volts.

Removal: Disconnect wires, take out adjusting strap bolt and mounting bracket bolts.
Belt Adjustment: Loosen adjusting strap bolt, pull generator out until belt just snug, tighten bolt.

GENERATOR

SPECIAL EQUIPMENT

Auto-Lite GEG-4823A or GEG-4823B. Armature No. GEG-2006F (both). Two brush (shunt) type with voltage and current regulation. Ventilated.
SEE CHRYSLER 8 C39 PAGE FOR ALL DATA.

REGULATOR

Std.—VRP-4401A, VRP-4501A, or VRP-4503A (VRP-4001A used on Canadian Cars).

Spec. Equip. (for GEG-4823A, B Gen.)—VRP-4001F or VRP-4401B. VRP-4005E used for negative ground. Vibrating type voltage and current regulators.
See Electrical Equipment Section for complete data.
NOTE—Regulator case cover sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—6.4-7.0 volts (set to 6.4-6.6 volts).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" Min. **Air Gap**—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.2-7.5 volts at 70° F. See Electrical Equipment Section for settings at other temperatures.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

Current Regulator

Setting (VRP-4001A, 4401A)—34-36 amperes ("35").
Setting (VRP-4001F, 4005E, 4401B)—39-41 amperes, marked "40".
Setting (VRP-4501A, 4503A)—35 amperes (42 amperes at 70°F. after 15 minutes run, 33-37 amperes at 70° after additional 15 minutes run). CAUTION—These current regulators are temperature-compensated and setting decreases with temperature rise in service as above.
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Contact Gap—.012" min. (armature against stop pin).
Air Gap—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type. *See Electrical Equipment Section for complete data.*
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).
Beam Indicator—Red light on upper edge of panel above speedometer. Lighted with upper beams on.

Direction Signal: Optl. *See Electrical Equipment Section.*
Direction Signal Indicators—In upper corners of speedometer face. Left for left turn, Right for right
Direction Signal Flasher—De Soto No. 1161586.

Switches

Lighting—De Soto No. 1149863.
Instrument—De Soto 976098 (early), 1154278 (late).
Beam Selector—DeSoto No. 859974.
Map Light—DeSoto No. 1149306.
Stop Light—DeSoto No. 920355.
Dome Lamp Pillar—DeSoto No. 317180.
Door Switches—DeSoto No. 882943.

Bulb Specifications

Position	Candlepower	Mazda No.
Headlamps	45-35 watts	Sealed Beam
Park & Tail (no Dir. Signal)	3	63
Front Dir. Sig. & Parking	21-3	1158
Rear Dir. Sig. & Tail	21-3	1158
Stop Light	21	1129
Rear License	3	63
Indicators, Ign. Sw., Glove	1	51
Instrument, Map Light	3	63
Dome①	15	87

①—Convertible (Quarter Lights) 6 cp. No. 81, 7 Pass. & Limo. (Pillar Lights) 3 cp. No. 63.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—On back of lighting switch. Vibrating type, protects lighting circuits.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal
Windshield Wiper—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

FUSES: Transmission Solenoid (Hydraulic Trans.)—30 ampere. Under transmission relay on left fender.
Clock—2 ampere. In clock lead wire.

Horns: Auto-Lite Model HT-4007 (Low Pitch), HT-4008 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite Model HRL-4101. Connected through ignition switch, operates only when "on".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3 7/16". **Stroke**—4¼".
Displacement—236.6 cu. ins. **Rated H.P.**—28.36.
Developed Horsepower—109 at 3600 RPM.
Compression Ratio—6.6-1 std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See De Soto Special Data.*

ENGINE REMOVAL: *See De Soto Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See De Soto Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type.
NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0005-.0015" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See De Soto Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0008" on thrust face ¾" from bottom of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons:—Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70° F.).

Replacement Pistons: *See De Soto Special Data.*
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .005" require reboring and honing to limits listed above.

Installing Pistons:—Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston ,all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	.5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge, install with step down.

Replacement Piston Rings: *See De Soto Special Data.*

PISTON PIN: Diameter 55/64". Length 2⅞". Floating type. Pin hole in rod bronze bushed.
Pin Fit in Piston—Thumb push fit (piston at 160°).
Pin Fit in Rod Bushing—Thumb push fit at 70° F.

Replacement Pins: Std., .0006", .003", .008" oversize.

CONNECTING ROD: Length 8". Weight 34.1 ozs. with bolts less bearings.
Crankpin Journal Diameter—2.124-2.125". *See "Original Bearing Sizes" in De Soto Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel.
Clearance—.0005-.0015". **Sideplay**—.005-.012".

Bearing Adjustment:— None (no shims). Replace bearings. *See "Connecting Rod & Bearings" in De Soto Special Data.*

Replacement Bearings: *See "Connecting Rods & Bearings" in De Soto Special Data.*

Installing Rods:—Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearing, 7 integral counterweights with vibration dampener on front end.
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in De Soto Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in De Soto Special Data.*

Replacement Bearings: *See "Crankshaft and Main Bearings" in De Soto Special Data.*

End Thrust:—Taken by flange faces on rear (#4) main bearing. **End Play**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in De Soto Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1¼".
Bearing Type—Removable, steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust:—Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in De Soto Special Data.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Chain Removal & Installation—*See "Timing Chain" in De Soto Special Data.*

Camshaft Setting:—Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3385-.3395"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.003-.005"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in De Soto Special Data.*

Valve Guides:—Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (tool CM-83), finish ream to .3425-.3435".

Valve Springs:—Install with closely coiled end to top.

Free length 2".	Spring Pressure	Length
Valve Closed	40- 45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters:—Mushroom type (remove from below). Stem diam. ⅜". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance:—.008" Intake, .010" Exh. (hot and idling), .002" additional exh. clearance desirable for sustained high speeds. NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.
Valve Timing:—See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to .008" Hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. New "Rotor" type oil pump mounted externally on right side of crankcase.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—45-55 lbs. above 30 MPH.
Oil Pressure Relief Valve Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

Oil Pump: New "Rotor" type on right side of engine. Servicing—*See "Oil Pump" in De Soto Special Data.*

Oil Filter: On left side of engine above starter.

Oil Pressure Gauge: Auto-Lite No. G-10888 (not elec.)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Cooling System: Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump. Capacity—17 quarts.

Radiator Core Removal: *See "Radiator" in De Soto Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in De Soto Special Data.*

Water Pump: Packless type with grease fitting. *See Water Pump Section for complete data.*
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head water outlet.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, and 2 ports facing rear.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. H-10890 (not elec.).

CLUTCH

Borg & Beck Model 10A7 (Std.), 9A7 (with Fluid Drive), 11A6 (Taxi). Single plate, dry disc type with "Borglite" driven member.
NOTE—Cover assembly marked 952 (9A7), 957 (10A7), 931 (11A6).
See Clutch Section for complete data.
Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).
Clutch Over-Center Spring—*See "Clutch Notes" in De Soto Special Data.*

Removal:—Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

DeSoto—Fluid coupling at rear of engine. Optl.
See Transmission Section for complete data.

Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*

Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.

Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION

STANDARD

Own Make. All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*
▷*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*

Transmission Control: Manual steering col. shift.
See Transmission Section for complete data.

Removal:—Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see De Soto Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods, vacuum and air hose (if Power Shift used). Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car.
NOTE—Use pilot studs when installing assembly.

TRANSMISSION

OPTIONAL EQUIPMENT

Tip-Toe Shift Type (with Fluid Drive). New design semi-automatic, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.

Transmission Control: See Transmission article for adjustment instructions.
See Transmission Section for complete data.

▷**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Kickdown Solenoid—Auto-Lite No. SSS-4002.
Kickdown Relay—Auto-Lite No. HRM-4102.
Governor—Auto-Lite No. TG-4202R, 3R, or 4R.
Kick-down Switch—Part of carburetor assembly. *See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Fuse—30 ampere. On Kickdown Relay.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, replace drain plug. Disconnect transmission mounting bolts and lower assembly out of car.
INSTALLATION CAUTION—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7200. Cross type with roller bearings.

Propeller Shaft Center Bearing: Used on 7 passenger
See "Propeller Shaft" in De Soto Special Data.

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive.
See Rear Axle Section for complete data.

Axle Ratios	Std. Trans.	Tip-Toe Trans.
All exc. Sub. & 7 Pass.	3.9-1①	3.73-1②
Pass. Cars	4.3-1③	3.91-1
Sub. Sedan	4.3-1③	4.1-1④

①—Special Ratios 3.54-1, 3.73-1, 3.91-1, 4.1-1, 4.3-1, 4.56-1 & 4.78-1 (Export).
②—Special Ratios 3.54-1 and 3.9-1.
③—Special Ratios 4.1-1, 4.89-1 (Export).
④—3.91-1 on cars before Serial No. 5824769 except Serial Nos. 5821234 to 5821693.
Backlash—.006-.010". Screw adjustment.

Removal:—Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Outer Seal: New leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle" in DeSoto Special Data.*

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Delco—Model 1030-C (Front), 1030-T (Rear).
Monroe—Model K-11148 (Front), K-11149 (Rear).
Export—Delco Model 942D (front), 940W (rear). Direct acting, hydraulic types.

FRONT SUSPENSION

Front Suspension:—Independent linked parallelogram type with coil springs.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6°.
Camber—Positive ¼°. Limits 0° to Pos. ¾°.
Caster—Negative 1° to Positive 1°. Not adjustable.
Toe In—0-1/16". Turn both tie rods equally.
Steering Geometry—Inner wheel 22½°, Outer 20°.

STEERING GEAR

Own Make. (Gemmer design) Model 305 (All except 7 Pass. & Suburban Sedan), Model 335 (7 Pass. & Suburban Sedan).
NOTE—See Gemmer 305 & 335 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: DeSoto "Safe-guard" Lockheed Hydraulic
See Brake Section for complete data.
▷*BRAKE SQUEAK OR SQUEAL CORRECTION: See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*
Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).
Drums—Cast-iron. Diameter 11" (12" on 7 pass.).
Lining—Molded Asbestos. 2" Wide. 13/64" thick. Length per shoe: 11" type—8⅞" (rear wheel rear shoe), 11½" (all others). 12" type—9⅝" (rear wheel rear shoe), 12 9/16" (all others).
Clearance—.006" at each end of all shoes.
Braking Power—60% front wheels, 40% rear.

Hand Brake:—On drum at rear of transmission.
Adjustment—*See "Hand Brake Notes" in De Soto Special Data.*
Drum—Cast-iron. 6" (7" Tip-Toe Shift & 7 Pass.).
Lining—Width 2" (2½" on 7" type). Thickness 5/32". Length 16 11/16" (20" on 7" type).
Clearance—.015-.020" around band.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWH-5001, EWH-5003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.
See Miscellaneous Section for complete data.
Circuit Breaker—Vibrating, thermostatic type. Starts to operate with current of 12 amperes.

CONVERTIBLE TOP CONTROL: Electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1949 Numbers	Detroit	Los Angeles
Custom	50,000,001 Up	62,004,001 Up
Deluxe	6,212,001 Up	60,002,001 Up

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035". Limits plus or minus .001". **Plugs**—Auto-Lite Resistor Type AR5. 14 mm.

DISTRIBUTOR: Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.25-.28 microfarad.

IGNITION TIMING: At Top Dead Center (TDC).
This setting supersedes previous data.
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point. Set timing with DC mark at pointer on chain case cover, then set manual (octane selector) adjustment.
Manual (Octane Selector) Adjustment—Set for slight ping with 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION:
Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.
Idle Speed—6 MPH. (450-475 Eng. RPM. with Tip-toe Shift Trans.).
Float Level—Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl.
Accelerating Pump—Center Hole (med. stroke) Normal, Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.

Choke Setting: Adjusted by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is tightly closed.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up **approx. ¾ turn,** not over one turn or under ½ turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust, Hot.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

COIL: Auto-Lite No. CR-4001 (U.S.), IG-4809 (Early & Canada). Mounted directly above distributor on ignition cable bracket.

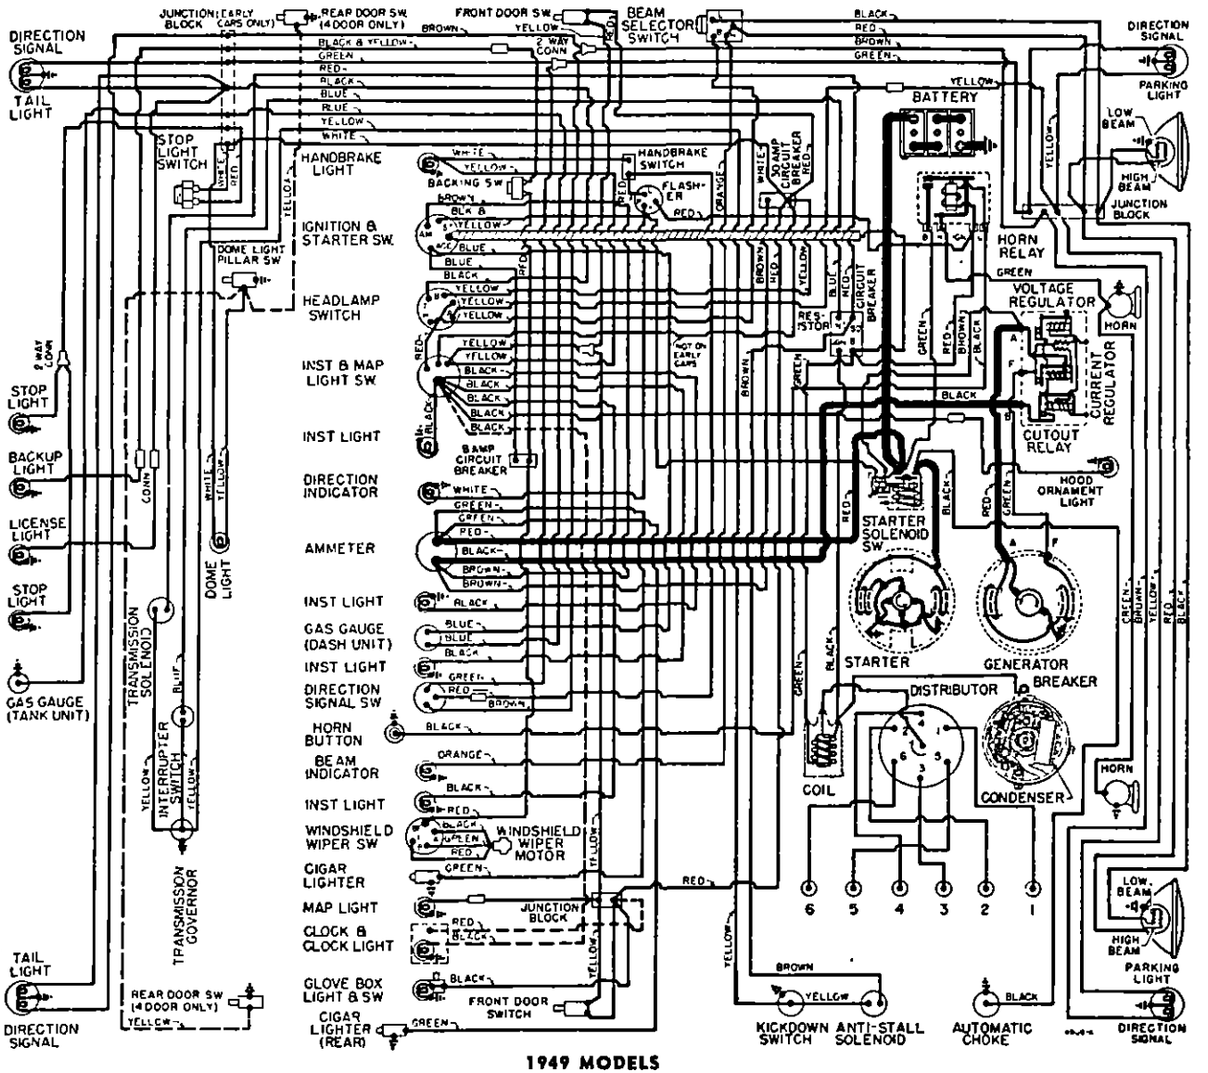
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IG-3927G.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAP-4102C-1 (U.S.), IAP-4102A-1 (Canada). Automatic advance type with vacuum Spark Control.

►***DISTRIBUTOR CAP POPPING OFF CORRECTION*** *(Early IAP Distributors)—See "IAP" Distributors in Electrical Equipment Section.*

Breaker Plate Identification—Maximum vacuum advance limited by a slot in plate. Plate marked #6 (IAP-4102A-1), #9 (IAP-4102C-1).
Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.



Automatic Advance—IAP-4102A-1

Degrees	Distr. R.P.M.	Degrees	Eng. R.P.M.
Start	350	0	700
3	400	6	800
6	770	12	1540
9	1150	18	2300
11	1400	22	2800

Automatic Advance—IAP-4102C-1

Start	350	0	700
1	450	2	900
5	800	10	1600
9	1300	18	2600
10	1425	20	2850

CONTINUED ON NEXT PAGE

1949 MODELS

CONTINUED FROM PRECEDING PAGE

Vacuum Spark Control: Auto-Lite Unit. Integral type (on distributor, linked directly to breaker plate).

Vacuum Advance—IAP-4102C-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7¼"
4°	8°	9¾"
6°	12°	11⅝"
9°	18°	15"

Vacuum Advance—IAP-4102A-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5⅛"
1°	2°	6⅝"
3°	6°	9⅝"
5°	10°	12½"
6°	12°	14"

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees—Piston Position
All Engines	At TDC.....000" TDC.

NOTE—Impulse neutralizer marked 'DC' at TDC. with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt.

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

CARBURETOR

Carter (B&B) E7V1, W1 (City Traffic)..No Fluid Dr.
Carter (B&B) E7L1, L2, L3, L4.....Hydr. Trans.
Carter (B&B) EX3①.....Synchro-mesh
①—Not equipped with Slow-closing throttle and Step-down switch.

1½" Single barrel, downdraft type with Sisson automatic choke control, Slow-closing Throttle and Step-down Switch for hydraulically operated transmission.

See Carburetor Section for complete data.

▷***E7L1, L2, L3 Note—To bring these carburetors up to latest E7L4 carburetor, see Carter (B&B) Carburetors in Carburetor Section.***

▷***E7V1, W1 HAVE THROTTLE RESTRICTOR: See Carburetor Section for complete data.***

Settings (Idle① Setting, Float Level, and Accelerating Pump): ***See Tune-Up data.***

Metering Jet—***See Carter (B&B) Jet Table in Carburetor Section for complete data.***

Slow-closing Throttle: Solenoid type. Non-adjustable. ***See Carburetion Equipment Section for complete data.***

Fast Idle: Throttle stopscrew stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.

Automatic Choke: Sisson type.
See Carburetion Equipment Section for complete data.
Setting—With throttle 1/3 open, adjust by inserting gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjusting carburetor choke valve lever so that choke valve is closed tightly.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.
Servicing—Clean filter element in kerosene, clean out oil reservoir and fill to indicated level with SAE No. 50 oil (20W oil below 32°F., approx. 1 pint required). Service cleaner whenever sump is half filled with oil and dust sludge. NOTE—Crankcase ventilator air cleaner in oil filler cap should be cleaned in kerosene and re-oiled by dipping in SAE No. 50 engine oil at 1000 mile intervals.

Fuel Pump: AC No. 1539042 or Carter M639SL, M639SZ. Diaphragm type fuel pump.
Replacement Pump—AC No. 577 or 588.
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oilite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaner. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. 11607A.
Tank Unit—Auto-Lite No. 11538A.
See Carburetion Equipment Section for complete data.

BATTERY

Willard or Auto-Lite. 6 Volt, 17 Plate, 114 Ampere Hour Capacity (20 hour rate).
Grounded Terminal—Positive (+) to engine.
Location—Under hood in left fender shield.

STARTER

Auto-Lite Models MCH-6102 (U.S.), MAW-4055 (Canada after Eng. Nos. S13-1543C).
Armature—Auto-Lite Nos. MCH-2039 (MCH-6102), MAW-2213 (MAW-4055).
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.5	65
2.75 "	1480	5.0	200
8.50 "	400	4.0	400
6.0 "	Lock	2.0	335

Starting Switch: Auto-Lite Solenoid Type SS-4707 controlled by turning ignition switch past "on" position.
See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite. Two-brush with voltage-current regulation.

	Auto-Lite No.	Armature No.
Std. (Early)	GDZ-4801A	GDZ-2006F
Std. (Later)	GGW-6001B	GGW-2006F
Auto. Trans. (Early)	GDZ-4801R	GDZ-2006F
Auto. Trans. (Later)	GGW-6001A	GGW-2006F
State Police	GGJ-6001B	GGJ-2101F
	GGU-6001E	GGU-2006F
City Police & Taxi	GGJ-6001A	GGJ-2101F
	GGU-6001A	GGU-2006F

Charging Rate Adjustment—None. See Regulator.

Performance Data (GGW-6001A, B)

Amperes	Volts	Cold—R.P.M.—Hot
0	6.4	870-970 — 950-1050
40	8.0	1800-2000 — 2150-2350

Performance Data (GDZ-4801A, R)

0	6.4	870-970 — 950-1050
35	8.0	1800-2000 — 2150-2350

Performance Data (GGJ-6001A, B)

0	6.4	600-700 — 650-750
50	8.0	1400-1600 — 1550-1750

Performance Data (GGU-6001A, E)

0	6.4	750-850 — 800-900
45	8.0	1450-1650 — 1650-1850

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGW, GDZ, GGU) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes).
Field Current—(GGW, GDZ) 1.6-1.8 amperes, (GGJ) 1.7-1.9 amperes, (GGU) 1.7-1.8 amperes, all at 6.0 volts.
Motoring Current—(GGW) 4.6-5.2 amps., (GDZ) 4.2-4.6 amps., (GGJ) 4.3-4.8 amps., (GGU) 5.5-6.5 amps., all at 6.0 volts.

Belt Adjustment: Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension accrued on scale attached to field frame) or ¼" belt deflection between generator and pump.

REGULATOR

Auto-Lite. Voltage-current type.

Auto-Lite Regulator No.	For Gen. No.
VRP-4503A	GDZ-4801A, R
VRP-4503B	GGW-6001A, B
VAV-4404A, VAV-4405A①	GGJ-6001A, B
VBA-4101A, VBA-4104A①	GGJ-6001A, B
VAV-4404B, VAV-4405B①	GGU-6001A, E
VBA-4101B, VBA-4104B①	GGU-6001A, E

①—For Negative Ground.

See Electrical Equipment Section for complete data.
NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In—(VRP & VBA) 6.3-6.8 volts, (VAV) 6.4-6.9 volts. Set all models to 6.4-6.6 volts.
Cuts Out (All)—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—(VRP & VAV) 7.2-7.5 volts, (VBA) 7.0-7.2 volts at 70°F. while charging at 10 amperes (VRP & VBA), ½ maximum rate (VAV).
Checking (without breaking seals) & Adjustment—***See Electrical Equipment Section.***
Air Gap (All)—.048-.052" with contacts just opening.

Current Regulator

►*CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A—Operating Amperes	Test B
VRP-4503A	42	33-37
VRP-4503B	46	38-42
VAV-4404A, 5A	55	48-52
VAV-4404B, 5B	50	43-47
VBA-4101A, 4A	56	48-52
VBA-4101B, 4B	51	43-47

Test A—After 15 minutes operation charging at 10 amperes (VRP & VBA), ½ maximum rate (VAV).
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage to 6.7-7.0 volts (VRP), 6.7-6.9 volts (VAV), 6.7 volts (VBA).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type *See Electrical Equipment Section for complete data.*
Beam Indicator—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.
Direction Signal: *See Electrical Equipment Section.*
Direction Signal Flasher—DeSoto No. 1257223.

Switches

Lighting—DeSoto No. 1300601.
Beam Selector—DeSoto No. 1253460.
Map Light—DeSoto No. 1244605.
Direction Signal—DeSoto No. 1235606.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—30 ampere. Vibrating type, protects lighting circuit.
Aux. Circuit Breaker—8 ampere. Protects Windshield Wipers and Back-Up Light.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal circuit.

FUSES: Clock—3 ampere. In clock lead.

HORNS: Auto-Lite Models HT-4011 or HW-4201 (Low Pitch), HT-4012 or HW-4202 (High Pitch). Dual horns operated by relay.

Horn Relay: Auto-Lite Models HRL-4103 or 4104. Connected through ignition switch, operates only when ignition "on."
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3 7/16". **Stroke**—4 1/4".
Displacement—236.6 cu. ins. **Rated H.P.**—28.36.
Developed Horsepower—112 at 3600 RPM.
Compression Ratio—7.0-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See De Soto Special Data.*

ENGINE REMOVAL: *See De Soto Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See De Soto Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type. *NOTE*—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See De Soto Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0008" on thrust face ¾" from bottom of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F.).

Replacement Pistons: .005", .020", .030", .040", .060" OS. *See "Pistons" in De Soto Special Data.*

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: .005" .020" .030" .040" .050" .060" OS *See "Piston Rings" in De Soto Special Data.*

PISTON PIN: Diameter—55/64". Length 2 7/8". Floating type. Pin hole in rod bronze bushed.
Pin Fit in Piston—.0000" to .0005". Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: Length—8". **Weight**—34.1 ozs. with bolts less bearings.
Crankpin Journal Diameter—2.124-2.125".
Original Bearing Sizes—*See De Soto Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: *None (no shims). Replace bearings. Do not file rods or caps. See "Connecting Rods & Bearings" in De Soto Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S. *See "Connecting Rod & Bearings" in De Soto Special Data.*

Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearing, 7 integral counterweights with vibration dampener on front end.
Journal Diameter—2.4995-2.5005".
Original Bearing Sizes—*See De Soto Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in De Soto Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S. *See "Crankshaft & Main Bearings" in De Soto Special Data.*

End Thrust: Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft & Main Bearings in De Soto Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Removal: *See "Camshaft & Bearings" in De Soto Special Data.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Chain Removal & Installation—*See "Timing Chain" in De Soto Special Data.*

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.002-.004"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in De Soto Special Data.*
Valve Seat Width (Max.) 7/64".

Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs: Install with closely coiled end to top. Free Length 2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exh. (hot and idling). *NOTE*—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump mounted externally on right side of crankcase.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—45-55 lbs. at 45 MPH.
Oil Pressure Relief Valve—Under plug below starter. Opens at 40-45 lbs. Spring painted red, green, or unmarked. If spring replaced, use same color spring.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in De Soto Special Data.*

Oil Filter: On left side of engine above starter.

Oil Pressure Gauge: Auto-Lite No. 11609A (not elec.).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

COOLING

Cooling System: Positive circulation with pump on front of engine, by-pass thermostat, and water distribution tube in cylinder block behind pump.
Capacity—17 quarts.
Radiator Core Removal: *See "Radiator" in De Soto Special Data.*
Water Distribution Tube Servicing: *See "Cooling System" in De Soto Special Data.*
Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—*See Generator Belt Adjustment.*
Thermostat: In cylinder head water outlet.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, and 2 ports facing rear.
Setting—Starts to open 157-162°F. Fully open 183°F.
Temperature Gauge: Auto-Lite No. 11610A (not elec.).

CLUTCH

Borg & Beck Model 10A7 (Deluxe with Synchro-mesh Trans.), 9A7 (Deluxe & Custom with Tip-Toe Shift Trans.), 11A6 (Taxicab). Single plate, dry disc type.
Identification Note—Cover stamped 952 (9A7), 957 10A7), 994 (11A6).
See Clutch Section for complete data.
Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	125" (⅛")
10A7	7"	10"	125" (⅛")
11A6	6½"	11"	125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) and have 1" free travel (adjusting nut on connector link at fork).
Clutch Over-Center Spring—*See "Clutch Notes" in De Soto Special Data.*
Removal: Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

DeSoto—Fluid coupling at rear of engine. Optl.
See Transmission Section for complete data.
Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*
Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.
Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

TRANSMISSION
SYNCHRO-MESH

Own Make—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*
►*HARD SHIFTING CORRECTION—See "Chrysler, DeSoto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*
Transmission Control: Manual steering column shift.
See Transmission Section for complete data.
Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see De Soto Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. *NOTE*—Use pilot studs when installing assembly.

TRANSMISSION
AUTOMATIC

Tip-Toe Shift Type (with Fluid Drive)—Semi-automatic design, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.
►**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Transmission Control: See Transmission article for adjustment instructions.
See Transmission Section for complete data.
Kick-down Solenoid—Auto-Lite No. SSS-4003.
Governor—Auto-Lite No. TG-4205R.
Kick-down Switch—Part of carburetor assembly.
See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.
Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, **replace drain plug.** Disconnect transmission mounting bolts and lower assembly out of car.
►*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7200—Cross type with roller bearings. Two used (3 on Long Wheelbase Cars).

Propeller Shaft Center Bearing: Used on 7 Passenger.
See "Propeller Shaft" in De Soto Special Data.

REAR AXLE

Own Make—Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Axle Ratio	Std. Trans.	Tip Toe Trans.
5-Passenger	3.9-1 (39:10) ①	②
Station Wagon	4.1-1 (41:10)	3.91-1 (43:11)
Long W.B. ('49)	4.3-1 (43:10)	③

①—4.1-1 (41:10) Optl.
②—3.73-1 (41:11) or 3.9-1 (39:10) Optl.
③—3.91-1 (43:11) or 4.1-1 (41:10) Optl.
Backlash—.006-.010". Screw adjustment.
Removal: Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.
Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). *NOTE*—Use puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.
Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle" in DeSoto Special Data.*
Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

Direct-acting, hydraulic, non-adjustable type.

FRONT SUSPENSION

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6° crosswise.
Camber—0° to Pos. ¾°. (¼-½° higher on left).
Caster—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.
Toe In—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.
Steering Geometry—Inner wheel 21½° plus or minus 1°. Outer 20°.

STEERING GEAR

Own Make—3 tooth Worm-and-Roller. Similar to Gemmer Model 335.
NOTE—See Gemmer 305, 335 & 375 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: DeSoto "Safe-guard" Lockheed Hydraulic.
See Brake Section for complete data.
►*BRAKE SQUEAK OR SQUEAL CORRECTION: See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*
Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear).
Drums—Centrifuse. Diameter 11".
Lining—Molded asbestos. 2" wide, 13/64" thick. Length per wheel—(front) 23", (rear) 20 3/8".
Clearance—.006" at each end of all shoes.
Braking Power—60% (front), 40% (rear).
Hand Brake: On shaft at rear of transmission. External contracting type.
Adjustment—*See "Hand Brake Notes" in De Soto Special Data.*
Drum—Cast Iron. Diam. 6" (Deluxe), 7" (Custom).

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Ext. Type	2 1/2"	5/32"	20"

Clearance (External Type)—.015-.020" around band.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.
See Miscellaneous Section for complete data.
CONVERTIBLE TOP CONTROL: Auto-Lite Model EWM-4001. Electric type.
See Miscellaneous Section for complete data.

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1950 Numbers	Detroit	Los Angeles
Custom	50,062,001 Up	62,011,501 Up
Deluxe	6,233,501 Up	60,005,001 Up
1951 Numbers		
Custom	50,155,001 Up	62,024,001 Up
Deluxe	6,269,001 Up	60,011,001 Up

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4. See diagram.

SPARK PLUG GAPS: .035". Limits plus or minus .001".
Plugs—Auto-Lite Resistor Type AR5 ('50), AR8 ('51)

DISTRIBUTOR: Breaker Gap—.020".
Cam Angle—34½° to 38°. **Do Not** exceed Breaker Gap limits (.018" to .022") to obtain cam dwell.
Breaker Arm Spring Tension—17-20 ozs.
Automatic & Vacuum Advance—*See Ignition.*
Condenser Capacity—.25-.28 microfarad.

IGNITION TIMING: At Top Dead Center (TDC).
Timing Procedure—*See Ignition Timing.*
Timing Mark—Vibration Dampener marked "DC" at top dead center position with 15-1° graduations before and after this point.
Manual (Octane Selector) Adjustment—Set for slight ping with 10-30 MPH. range when accelerating with wide open throttle. Do not vary initial timing more than 4° advance or retard.

CARBURETION:
Idle Setting—Set idle adjusting screw for smooth idling with warm engine (idle screw ½-1½ turns open), turn screw out for richer mixture.
Idle Speed—(Std. Trans.) Adjust to 6 MPH. (Tip-toe Shift Trans.). (1950) 450-475 RPM., (1951) 475-500 RPM.
Float Level—Top of float (not soldered seam) 5/64", plus or minus 1/64", below top edge of bowl.
Accelerating Pump—Center Hole (med. stroke) Normal. Inner Hole—Summer, Outer Hole—Winter, for extreme temperatures.

Choke Setting: (1950) Adjust by inserting a gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft) and adjust carburetor choke valve lever so that choke valve is tightly closed.

Choke Setting: (1951) Cover "mark" centered at index.

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil, wind free end up **approx. ¾ turn,** not over one turn or under ½ turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake, .010" Exhaust, Hot.

IGNITION

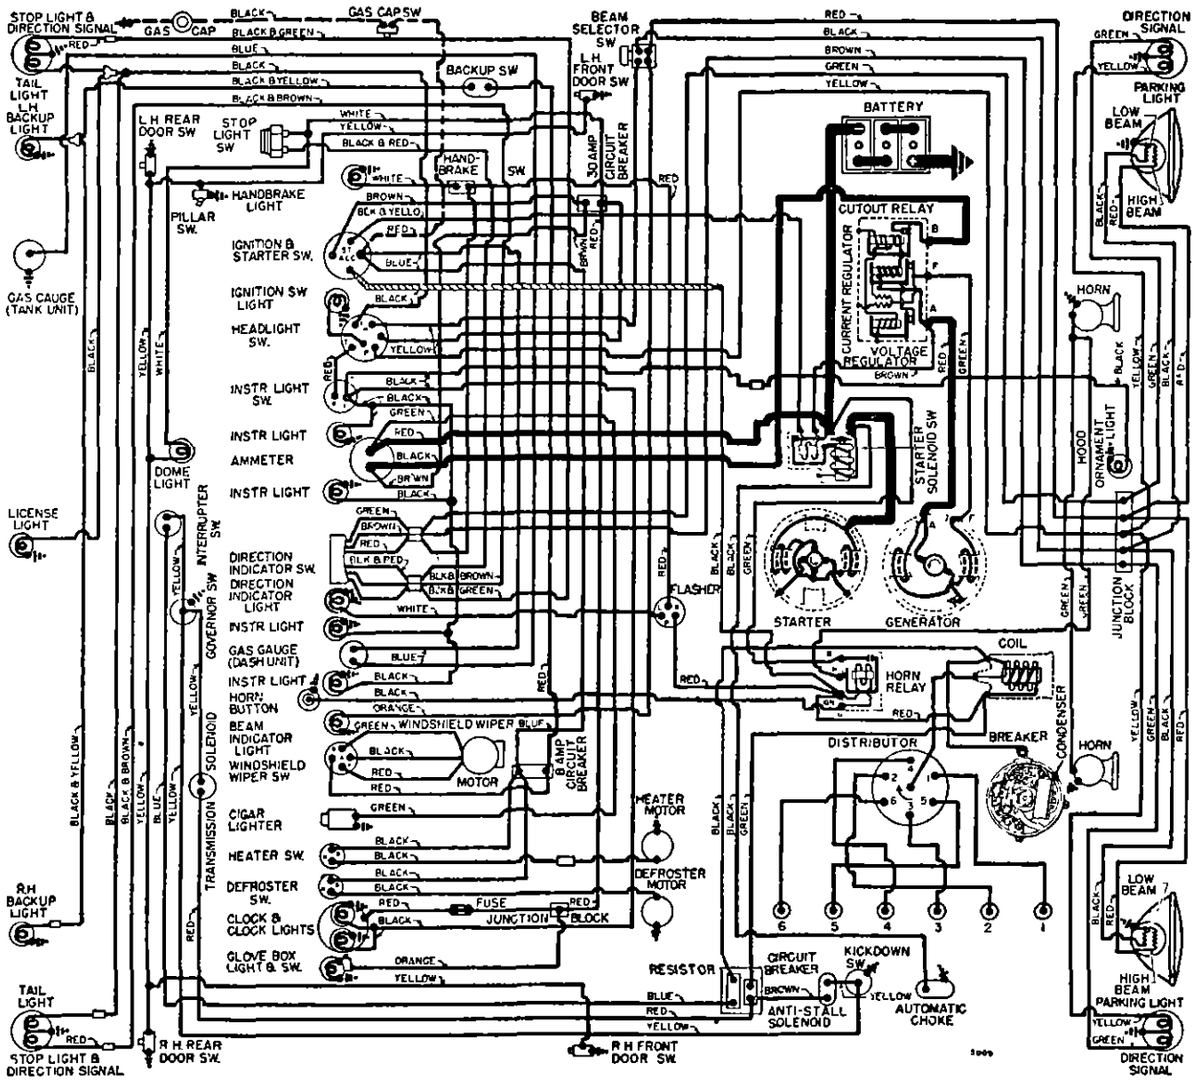
IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to the right. Key automatically returns to "on" position. Coil lead protected by armored cable through fire wall.

COIL: Auto-Lite No. CR-4001. Mounted directly above distributor on ignition cable bracket.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IG-3927G.
Capacity—.25-.28 microfarad.

DISTRIBUTOR:

Year	U. S. Prod. Auto-Lite No.	Canada Auto-Lite No.
1950 Early	IAP-4102C-1	IAP-4102A-1
1950 Late	IAT-4004	IAT-4004B
1951	IAT-4012	IAT-4012B



►***DISTRIBUTOR CAP POPPING OFF CORRECTION*** *Early "IAP" Distributors): See "Auto-Lite IAP Distributors" in Electrical Equipment Section.*

►**"IAT" Distributor Note**—New "Pivoted Breaker Plate" type. *See Electrical Equipment Section for data.*
Breaker Gap—.020".
Cam Angle—34½° to 38° Closed.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance—IAP-4102A-1, IAT-4004B

Distributor Degrees	Distributor R.P.M.	Engine Degrees	Engine R.P.M.
Start	350	0	700
3	400	6	800
6	770	12	1540
9	1150	18	2300
11	1400	22	2800

CONTINUED ON NEXT PAGE

1950 MODELS

CONTINUED FROM PRECEDING PAGE

Automatic Advance—IAP-4102C-1, IAT-4004, IAT-4012, IAT-4012B

Start	350	0	700
1	450	2	900
5	800	10	1600

Vacuum Spark Control: Auto-Lite Unit, Integral type

Vacuum Advance—IAP-4102A-1, IAT-4004B

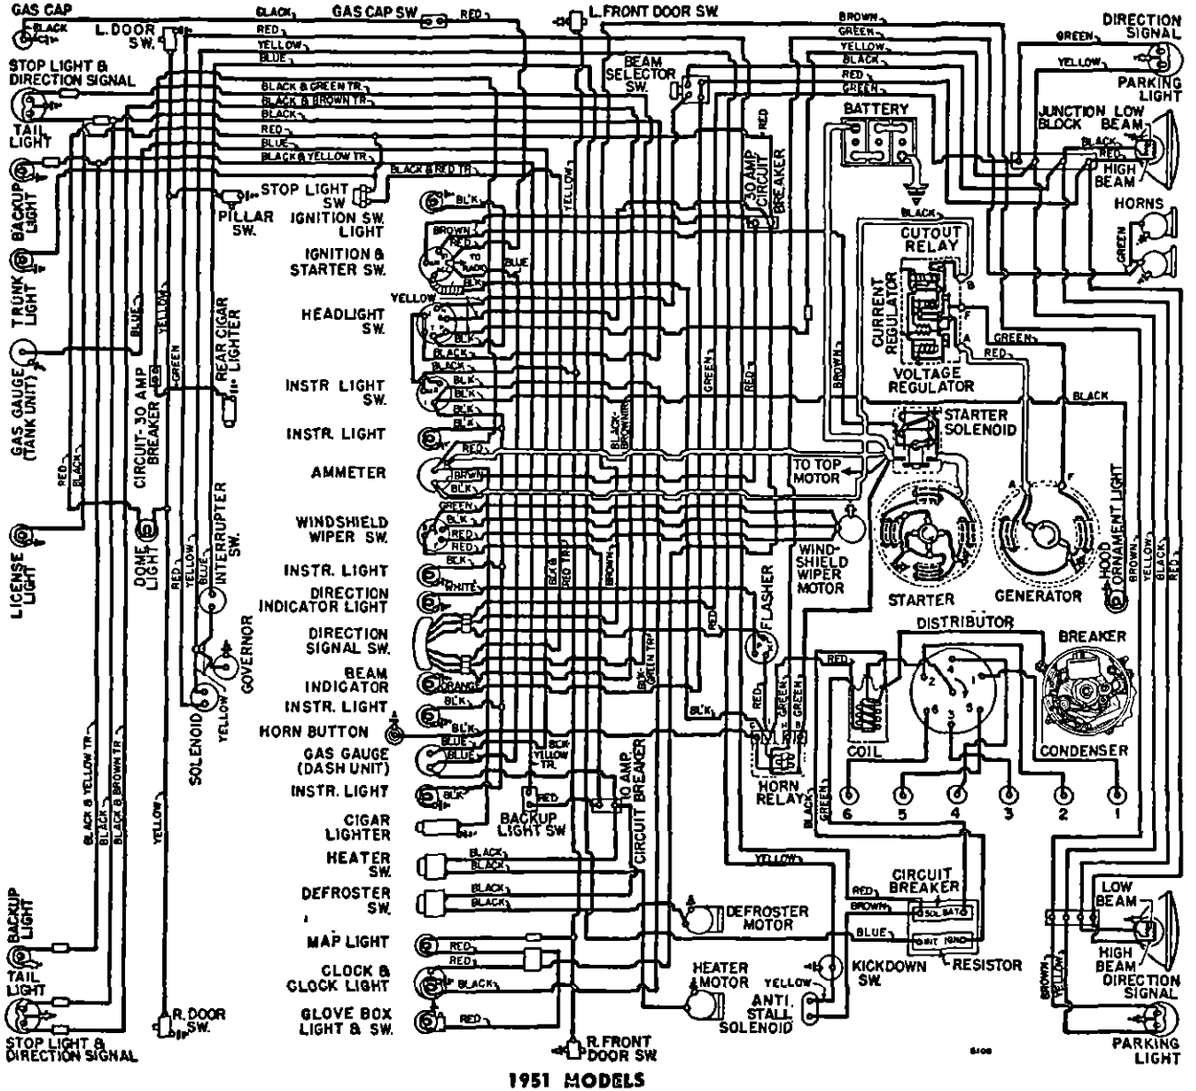
Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5⅛"
1°	2°	6⅝"
3°	6°	9⅝"
5°	10°	12½"
6°	12°	14"

Vacuum Advance—IAP-4102C-1, IAT-4004, IAT-4012, IAT-4012B

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7⅛"
4°	8°	9⅞"
6°	12°	11⅝"
9°	18°	15"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing.

IGNITION TIMING



Std. Setting.....At TDC. Initial setting. See Manual Adjustment (below) for Final Setting.

NOTE—Impulse neutralizer marked "DC" at TDC. with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor as directed above.

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

1951 MODELS

CARBURETOR

Carter (Ball & Ball)—Used on all models. 1½" single barrel, downdraft type. Slow closing throttle and Kick-down switch used for hydraulic operated transmission.

Year	Application	Carb. No.
1950	Synchro-mesh Trans.	EX3①
1950	Automatic Trans.	E7L4
1950-51	City Traffic	E7W1②
1951	Synchro-mesh Trans.	E9C1
1951	Automatic Trans.	E9A1

①—Superseded by Carb. No. EX3R.
②—With Throttle Restrictor.
See Carburetor Section for complete data.

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up data.*
Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*
NOTE—If lean metering jet (High Altitude calibration) used at lower altitudes for increased economy, speed and power are reduced (not recommended).
Slow-closing Throttle: Solenoid type. Non-adjustable. *See Carburetion Equipment Section for complete data.*
Fast Idle: Setting—(EX3, E7L4, E7W1) Throttle stop dog linked to choke valve so that stop dog rotated and throttle opened to fast idle position when choke valve closed for starting. No adjustment required.
Fast Idle: Setting—(E9C1, E9A1) .018" throttle opening with choke valve held closed and throttle lever stop screw backed off.
Automatic Choke: Sisson Type (1950). Carter Climatic Control (1951).
Setting—Sisson Type. With throttle 1/3 open, insert gauge pin through hole in automatic choke lever shaft and slot in base mounting flange (to position shaft), adjust carburetor choke valve lever so that choke valve is closed tightly.
Setting—Carter Climatic Control. Centered (coil housing at index mark). *Do not change for hot or cold climate.*
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC No. 1544349 Heavy Duty Oil-bath type. Filter Element AC No. 21.
Fuel Pump: AC No. 1539208 or Carter No. M639SL, SZ. Diaphragm type fuel pump.

Replacement Pump—AC No. 588.
Pressure—3½ to 5 lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oillite metal filter in tank.
Servicing—If more than 2 pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaner. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.
Dash Unit—Auto-Lite No. (1950) 12112A, (1951) 12341A, (1950 Sta. Wgn.) 12191A.
Tank Unit—Auto-Lite No. (1950-51) 11538A. (1950 Sta. Wgn.) 12157A (Early), 12195A (Late).
See Carburetion Equipment Section for complete data.

BATTERY

Willard or Auto-Lite. 6 volt, 17 plate, 120 ampere hour capacity (20 hour rate).
Grounded Terminal—Positive (+) to engine.
Location—Under hood in left fender shield.

STARTER

Year	Auto-Lite Models U. S.	Canada
1950 (Early)	MCH-6102	MAW-4055
1950 (Late)	MCH-6105	MCH-6105
1951	MCL-6109	MCL-6109

Armature—Auto-Lite No. MCH-2039 (MCH-6102), **MAW-2213** (MAW-4055), **MCH-2070** (MCL-6109, MCH-6105).
Drive—Solenoid pinion shift & overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data—MCH-6102, MCH-6105, MAW-4055

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	4300	5.0	65
6.0 "	Lock	2.0	335

Performance Data—MCL-6109

Torque	R.P.M.	Volts	Amperes
0 ft. lbs	4900	5.0	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite No. (Early 1950) SS-4707, (Late 1950 & 1951) SSX-4001. Solenoid type controlled by turning ignition switch past "on" position.
See Electrical Equipment Section for complete data.

GENERATOR

Auto-Lite. Two-brush with voltage-current regulation.

Year	Auto-Lite No.
1950 (Early) Automatic Trans.	GGW-6001A
1950 (Late) Automatic Trans.	GGW-6001J①

45	8.0	1925-2125	2350-2550

Performance Data (GDZ-4801R)

0	6.4	870-970	950-1050
35	8.0	1800-2000	2150-2350

Performance Data (GGJ-6001A, B, F, G)

0	6.4	600-700	650-750
50	8.0	1400-1600	1550-1750

Performance Data (GGU-6001A, E, G, H)

0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGW, GDZ, GGU) 35-53 ozs. (new brushes); (GGJ) 30-37 ozs. (new brushes).
Field Current—(GGW, GDZ) 1.6-1.8 amperes, (GGJ) 1.7-1.9 amperes, (GGU) 1.7-1.8 amperes, all at 6.0 volts.
Motoring Current—(GGW) 4.6-5.2 amps., (GDZ) 4.2-4.6 amps., (GGJ) 4.3-4.8 amps., (GGU) 5.5-6.5 amps., all at 6.0 volts.

Belt Adjustment: Loosen pivot and clamp bolts, pull out on generator until belt is snug (40-50 lbs. tension accrued on scale attached to field frame) or ¼" belt deflection between generator and pump.

REGULATOR

Auto-Lite. Voltage and current type.

Auto-Lite Regulator	Auto-Lite Generator
VRP-4503A	GDZ-4801R
VRP-6004A	GGW-6001A, B, J, K
VBE-6001A	GGW-6001J, K
VBA-4202A, 4204A①	GGJ-6001A, B, F, G
VAV-6001A, 6002A①	GGU-6001A, E, G, H
VAV-6001B, 6002B①	GGU-6001G

①—For Negative Ground.
See Electrical Equipment Section for complete data.

NOTE—Regulator case cover is sealed. Serviced on exchange basis if seals not broken (to remove cover).

Cutout Relay

Cuts In (All)—6.3-6.8 volts. Set to 6.4-6.6 volts.
Cuts Out (All)—4.1-4.8 volts (Approx. 4-6 amps. disch.).
Contact Gap (All)—.015" minimum.
Air Gap (All)—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—(VRP-4503A) 7.2-7.5 volts, (VRP-6004A) 7.1-7.4 volts, ((All VAV, VBA, VBE) 7.1-7.4 volts at 70°F. while charging at 10 amperes (VRA & VBA), ½-maximum rate (VAV & VBE).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

Current Regulator

►*CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

Test A—Operating Amperes	Test B
VRP-4503A 42	33-37
VRP-6004A 46	38-42
VAV-6001A, 2A 50	43-47
VAV-6001B, 2B 55	48-52
VBA-4202A, 4A 56	48-52
VBE-6001A 52	43-47

Test A—After 15 minutes operation charging at 10 amperes (VRP & VBA, ½-maximum rate (VAV & VBE).
Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage to 6.7-7.0 volts (VRP), 6.7-6.9 volts (VAV & VBE), 6.7 volts (VBA).
Checking (without breaking seals) & Adjustment—*See Electrical Equipment Section.*
Air Gap (All)—.048-.052" with contacts just opening.

LIGHTING

Headlamps: Corcoran-Brown "Sealed Beam" type with "Bull's-eye lens". Beam selector switch on toe-board controls upper and lower beams.
See Electrical Equipment Section for complete data.
Headlamp Adjustment—Aim upper beam straight ahead (hot spot center 3" below lamp center height).
Beam Indicator—Lighted when Country (upper) beams in use. Located on lower right corner of speedometer face.

Direction Signal: ***See Electrical Equipment Section.***
Direction Signal Indicator—In lower left corner of speedometer face.
Direction Signal Flasher—DeSoto No. 1257223.

Switches

Lighting—De Soto No. 1339720.
Beam Selector—DeSoto No. (1950) 1253460, (1951) 1253003.
Directional Signal—DeSoto No. (1950) 1257223, (1951) 1370454.
Map Light—DeSoto No. (1950) 1244605. (1951) 1253034.

MISC. ELECTRICAL

CIRCUIT BREAKERS: Lighting—30 ampere. Vibrating type, protects lighting circuit.
Aux. Circuit Breaker—8 ampere. Protects Windshield Wipers and Back-Up Light.
Direction Signal—On flasher behind instrument panel. Vibrating type. Protects direction signal circuit.
Transmission Solenoid—Vibrating type mounted as an assembly with resistor unit.

FUSES: Clock—3 ampere. In clock lead.
Radio—14 ampere. In fuse connector at radio.

HORNS: Auto-Lite No. (1950) HW-4201 (Low Pitch), HW-4202 (High Pitch). (1951) HW-4107 (Low Pitch), HW-4108 (High Pitch). Dual horns operated by relay. Amp. Draw—15 amps. each.

Horn Relay: Auto-Lite No. HRL-4104. Connected through ignition switch, operates only when ignition "ON".
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volt min. (open from seal).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

▷*LARGER ENGINE USED ON 1951 CARS.*

ENGINE SPECIFICATIONS: Six cylinder, "L" head.
Bore—3 7/16".
Stroke—(1950) 4¼", (1951) 4½".
Displacement—(1950) 236.6, (1951) 250.6 cu. ins.
Rated Horsepower—(1950-51) 28.36.
Developed Horsepower—At 3600 RPM. (1950) 112 HP. (1951) 116 HP.
Compression Ratio—7.0-1 Std. cast-iron head.
Compression & Vacuum Reading—*See Tune-up data.*

OIL PAN REMOVAL: *See De Soto Special Data.*

ENGINE REMOVAL: *See De Soto Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See De Soto Special Data.*

PISTONS: Aluminum alloy, U-slot, cam ground type.
NOTE—Skirt cam ground (.010-.014" smaller diameter across pin bosses) and tapered (.0002-.0012" smaller diameter at top of skirt than at bottom).
Original Bore & Piston Sizes—*See De Soto Special Data.*
Length—3⅞". **Weight**—18.5 ozs. (stripped).
Clearance—.0005" to .0015" on thrust face at center of skirt.
Removal—Pistons and rods removed from above.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (inverted, pin removed) on side opposite slot. Feeler pull 5-7 lbs. (with piston and block at 70°F.).

Replacement Pistons: .005", .020", .030", .040", .060" OS. *See "Pistons" in De Soto Special Data.*
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030" or out-of-round over .004" require reboring and honing to limits listed above.

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil control, coated rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil Contr. (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compr. with step on inner edge up. #2 Compr. with step on inner edge up or if step on outer edge install with step down.

Replacement Rings: .005" .020" .030" .040" .050" .060" OS. *See "Piston Rings" in De Soto Special Data.*

PISTON PIN: Diameter—55/64". Length 2 7/8". Floating type. Pin hole in rod bronze bushed.
Pin Fit in Piston—.0000" to .0005". Thumb push fit with piston heated to 160°F.
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at normal room temperature.

Replacement Pins: Standard size and .0006", .003", .008" oversize.

CONNECTING ROD: (1950) Length—8". Weight—34.1 ozs. (1951) Length—7 7/8". Weight—32.4 ozs., with bolts less bearing.
Crankpin Journal Diameter—2.124-2.125". *See "Original Bearing Sizes" in De Soto Special Data.*
Lower Bearing—Removable, precision type, thin babbitt on steel.
Clearance—.0005-.0015". **Sideplay**—.006-.011".

Bearing Adjustment: None (no shims). Replace bearings. Do not file rods or caps. *See "Connecting Rods & Bearings" in De Soto Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S.

Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearing with vibration dampener on front end.
Journal Diameters—2.4995-2.5005". *See "Original Bearing Sizes" in De Soto Special Data.*
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None (no shims). Replace bearings. Do not file bearing caps. *See "Crankshaft and Main Bearings" in De Soto Special Data.*

Replacement Bearings: .001", .002", .010", .012" U.S.

End Thrust: Taken by flange faces on rear (#4) main bearing. **Endplay**—.003-.007".

Crankshaft Front & Rear Oil Seals: *See "Crankshaft and Main Bearings" in De Soto Special Data.*

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—#1, 2"; #2, 1 31/32"; #3, 1 15/16"; #4, 1 1/4".
Bearing Type—Removable steel-backed, babbitt-lined bushings (except #4 machined in block).
Clearance—.001-.003" (#1), .0015-.0035" (all others).

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".

Camshaft Setting: Sprockets marked. Mesh chain with sprockets turned so that '0' marks are adjacent and in line with a straightedge across shaft centers.

Camshaft Removal: *See "Camshaft & Bearings" in De Soto Special Data.*

Timing Chain: Width 1". Pitch .500" (½"). Length 24" or 48 links.
Chain Removal & Installation—*See "Timing Chain" in De Soto Special Data.*

VALVES:	Head Diameter	Stem Diameter	Length
Intake	1 23/32"	.3405-.3415"	4 25/32"
Exhaust	1 17/32"	.3395-.3405"	4 25/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	⅜"	.001-.003"
Exhaust	45°	⅜"	.002-.004"

Exhaust Valve Seat Insert Servicing—*See "Valve System" in De Soto Special Data.*
Valve Seat Width (Max.) 7/64".

Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end ⅞" below top of block (Tool CM-83), finish ream to .3425-.3435".

Valve Springs: Install with closely coiled end to top. Free Length 2".

	Spring Pressure 1950	1951	Length
Valve Closed	40-45 lbs.	40-45 lbs.	1¾"
Valve Open	107-115 lbs.	110-120 lbs.	1⅜"

Valve Lifters: Mushroom type (remove from below). Stem diam. ⅝". Ream holes from above (pilot in valve guide). Oversizes .001", .008", .030" & .060".
Lifter Clearance in Block—.000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exh. (hot and idling). *NOTE*—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance #6 intake valve should open with #6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on chain case cover. Reset tappet clearance to running clearance .008" Hot.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump mounted externally on right side of crankcase.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—(1950) 45 to 55 lbs. at 30 MPH. (1951) 40 to 50 lbs. at 20 MPH.
Oil Pressure Relief Valve—Under plug below starter. Opens at (1950) 40-50 lbs. (1951) 45-55 lbs. Spring painted red, green or unmarked. If spring replaced, use spring of same color.

Oil Pump: "Rotor" type on right side of crankcase.
Servicing—*See "Oil Pump" in De Soto Special Data.*

Oil Filter: On left side of engine above starter.
Servicing—Replace element at 8000 mile intervals.
Oil Pressure Gauge—Auto-Lite No. 12340A (not electric).

COOLING

Cooling System: Positive circulation with pump on front of engine, by-pass thermostat, pressure vent cap, and water distribution tube in cylinder block behind pump.
Capacity—(1950) 17 qts. (1951) 15 qts.

Radiator Core Removal: *See "Radiator" in De Soto Special Data.*

Water Distribution Tube Servicing: *See "Cooling System" in De Soto Special Data.*

Water Pump: Packless type with grease fitting.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs, lift fan and pump off.
Belt Adjustment—*See Generator Belt Adjustment.*

Thermostat: In cylinder head water outlet.
INSTALLATION NOTE—Install thermostat with 2 ports facing front, and 2 ports facing rear.
Setting—Starts to open 157-162°F. Fully open 183°F.

Temperature Gauge: Auto-Lite No. 12343A (not elec.).

CLUTCH

Borg & Beck Model 10A7 (with Synchro-mesh Trans.), 9A7 (with Tip-Toe Shift Trans.), 11A6 (Taxicab). Single plate, dry disc type.
Identification Note—Cover stamped (1950) 952 (9A7), 957 (10A7), 994 (11A6). (1951) 953 (9A7), 930 (10A7), 994 (11A7).
See Clutch Section for complete data.
Facings—Woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125" (⅛")
10A7	7"	10"	.125" (⅛")
11A6	6½"	11"	.125" (⅛")

Pedal Adjustment: Should just clear toeboard (adjust stopscrew on lower end of pedal) & have 1" free travel (adjusting nut on connector link at fork).
Clutch Over-center Spring—*See "Clutch Notes" in De Soto Special Data.*
Removal: Remove release fork pull-back spring, Transmission (see Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

FLUID DRIVE

DeSoto—Fluid coupling at rear of engine. Optl.
See Transmission Section for complete data.
Slippage Test: *See "Fluid Drive" in Transmission Section for complete data.*
Oil Level: Keep to level of filler hole. Check at first 1000 miles and every 10,000 miles. Manufacturer recommends MOPAR Fluid Drive Fluid.
Removal: Remove transmission and clutch (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid drive assembly out.

SYNCHRO-MESH TRANSMISSION

Own Make—All helical gear, constant-mesh, synchro-mesh (Second & High), sliding gear (Low & Reverse). *See Transmission Section for complete data.*
►*HARD SHIFTING CORRECTION—See "Chrysler, De Soto, Dodge & Plymouth Synchro-Mesh" in Transmission Section for complete data.*
Transmission Control: Manual steering column shift.
See Transmission Section for complete data.
Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see De Soto Special Data for Propeller Shaft Center Bearing Removal on 7 pass.). Disconnect speedometer cable, hand brake cable, gear-shift rods. Remove trans.-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car. *NOTE*—Use pilot studs when installing assembly.

AUTOMATIC TRANSMISSION

Tip-Toe Shift Type (with Fluid Drive)—Semi-automatic design, four-speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data including Testing & Trouble Shooting.
Transmission Oil—3 pints, 10-W engine oil.
►**Kick-down Switch Change to improve Transmission Operation**—*See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.*
Transmission Control: See Transmission article for adjustment instructions.
See Transmission Section for complete data.
Kickdown Solenoid—Auto-Lite No. SSS-4003.
Governor—Auto-Lite No. TGG-4001.
Kick-down Switch—Part of carburetor assembly.
See "Chrysler, DeSoto, Dodge Kick-down Switch" in Electrical Equipment Section.
Ignition Interrupter Switch—On right side of transmission above Governor.
Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, **replace drain plug.** Disconnect transmission mounting bolts and lower assembly out of car.
►*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

UNIVERSALS

Detroit Universal Series 7200—Cross type with roller bearings. Two used (3 on Long Wheelbase Cars).

Propeller Shaft Center Bearing: Used on 7 Passenger.
See "Propeller Shaft" in De Soto Special Data.

REAR AXLE

Own Make—Semi-floating, hypoid gear type with Hotchkiss Drive.
See Rear Axle Section for complete data.

Axle Ratios—1950

Car Model	S-M Trans.①②	Auto Trans.②
5-Pass.	3.9-1 (39-10)③	3.73-1 (41-11)④
8-Pass.	4.1-1 (41-10)	3.91-1 (43-11)
Sta. Wgn.	4.1-1 (41-10)	3.91-1 (43-11)

Axle Ratios—1951

Car Model	S-M Trans.①②	Auto Trans.②
5-Pass.	3.9-1 (39-10)③	3.9-1 (39-10)
8-Pass.	4.3-1 (43-10)	4.1-1 (41-10)
Sta. Wgn.	4.1-1 (41-10)⑤	3.9-1 (39-10)

①—Synchro-mesh Transmission.
②—Standard Ratios.
③—4.1-1 (41-10) Optional.
④—3-9-1 (39-10), 4.1-1 (41-10) Optional.
⑤—3.9-1 (39-10) Optional.

Backlash—.006-.010". Screw adjustment.
Removal: Disconnect rear universal, remove axle shafts (see below) and carrier assembly cap screws.
Axle Shaft Removal—Remove wheel ,hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (use C-499 puller). *NOTE*—Use puller C-293-E to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.
Axle Shaft Outer Oil Seal: New leather type mounted on brake support (backing plate).
Oil Seal Servicing—*See "Rear Axle" in DeSoto Special Data.*
Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SH CK ABSORBERS

Own Make—New "Oriflow" type. Direct acting non-adjustable, non-refillable.

FR NT SUSPENSI N

Front Suspension: Independent, linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—4¾° to 6° crosswise.
Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).
Caster—Neg. 2° preferred. Limits Neg. 1° to Neg. 3°.
Toe In—0" preferred. Limits 0" to 1/16". Adjust both tie rods equally.
Steering Geometry—Inner wheel 21½° plus or minus 1°. Outer 20°.

STEERING GEAR

Own Make—3 tooth Worm-and-Roller. Similar to Gemmer Model 335.
NOTE—See Gemmer 305, 335 & 375 article for data.
See Steering Gear Section for complete data.

BRAKES

Service: DeSoto "Safe-guard" Lockheed Hydraulic.
Front Wheels—Two-cylinder type (front shoe anchored at bottom and actuated by upper cylinder, rear shoe anchored at top and actuated by lower cylinder).
Rear Wheels—Double anchor type with single double-acting wheel cylinder.
See Brake Section for complete data.
►*BRAKE SQUEAK OR SQUEAL CORRECTION—See "Lockheed-Chrysler Safe-guard Hydraulic" Brake in Brake Section.*
Wheel Cylinders—1⅛" bore. Single acting (front), double acting (rear wheels).
Drums—Centrifuse, 12" diameter.
Lining—Molded asbestos, 2" wide, 13/64" thick, Length per wheel—25 1/8". Bonded to shoe.
Clearance—.006" at each end of all shoes.
Braking Power—60% (front wheels), 40% (rear).
Hand Brake: On shaft at rear of transmission. 6" External contracting band used with Synchro-mesh Transmission. 7" Internal expanding used with Automatic Transmission.
Adjustment—*See "Hand Brake Notes" in De Soto Special Data.*
Drum—Cast Iron.

Lining—	Width	Thickness	Length
6" External	2"	5/32"	15 3/8"
7" Internal	2"	5/32"	13 1/8"

Clearance (External Type)—.015-.020" around band.
(Internal Type)—Adjusting nut on shoe link backed off one notch from point where shoes firm against drum.

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Model EWJ-4001, EWJ-4003 (Conv. Coupe). Electric type with circuit breaker mounted on control switch.
See Miscellaneous Section for complete data.
CONVERTIBLE TOP CONTROL: Auto-Lite Model EWM-4001. Electric type.
See Miscellaneous Section for complete data.

M DEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

First serial numbers are as follows:

	Detroit	Los Angeles
1952 Models:		
S15-1 Deluxe	6,283,601	60,013,001
S15-2 Custom	50,230,101	62,033,301
1953 Models:		
S18	50,266,001	62,039,001

ENGINE NUMBER: Stamped on boss on left side of cylinder block between Nos. 1 and 2 cylinders.

►***ENGINE NUMBER LETTERS & MARKS (Following Engine Number)—Identified as follows:***

"A"—ALL Cylinders .020" Oversize.

"B"—ALL Crankshaft Journals .010" Undersize.

"AB"—BOTH above conditions exist.

"MALTESE CROSS" (⅜" high—ONE OR MORE Crankshaft Journals .001" Undersize *(See "Connecting Rods" and "Crankshaft" under "ENGINE").*

TUNE-UP

COMPRESSION PRESSURE: 120-150 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21", idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUG GAPS: .035". Limits plus or minus .001". **Plugs**—Auto-Lite Resistor type AR8.

DISTRIBUTOR: Auto-Lite No. IAT-4012 (1952 U.S. & 1953 Canada), No. IAT-4102 (1953 U.S.), No. IAT-4012B (1952 Canada). Automatic & Vacuum advance type with "pivoted" breaker plate.
Breaker Gap—.018-.020".
Cam Angle—36°-42°. DO NOT exceed Breaker Gap Limits of .018-.020" to obtain dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.
Automatic & Vacuum Advance—*See Ignition.*

COIL: Auto-Lite No. CR-4001 (U.S. Cars), CR-6007B (Canada). On bracket above distributor.
Ignition Current—2.25 amperes idling. 5 stopped.

CONDENSER: Auto-Lite No. IAT-3076RA.
Capacity—.25-.28 microfarad.

IGNITION TIMING: 2° BTDC. *See Manual Adjustment*
Timing Mark—Vibration dampener marked "DC" at top dead center point with 15—1° graduations before and after this point.
Manual Adjustment—Set to give slight ping between 10-30 MPH when accelerating from 10 MPH with wide open throttle. Adjust distributor setting (not over 4° before or after this point).

CARBURETION: Carter (B&B) Model E9C1 (Synchro-mesh Trans. Cars), Model E9A1 (Auto. Trans. Cars), E7W1 (City Traffic). Downdraft type with automatic choke.
Idle Setting—Set idle adjusting screw for smooth idling with engine warm (idle screw ½ to 1½ turns open). Turn adjusting screw out for richer mixture.
Idle Speed (Std. Trans.)—Adjust to 6 MPH.
Idle Speed (Auto. Trans.)—475-500 RPM.
Float Level—Top of float (not soldered seam) 5/64" plus or minus 1/64", below top edge of bowl.
Accelerating Pump—Normal Setting, center hole. **Summer**, inner hole. **Winter**, outer hole.

Fast Idle: .018" throttle opening with choke valve held closed and throttle stop screw backed off.

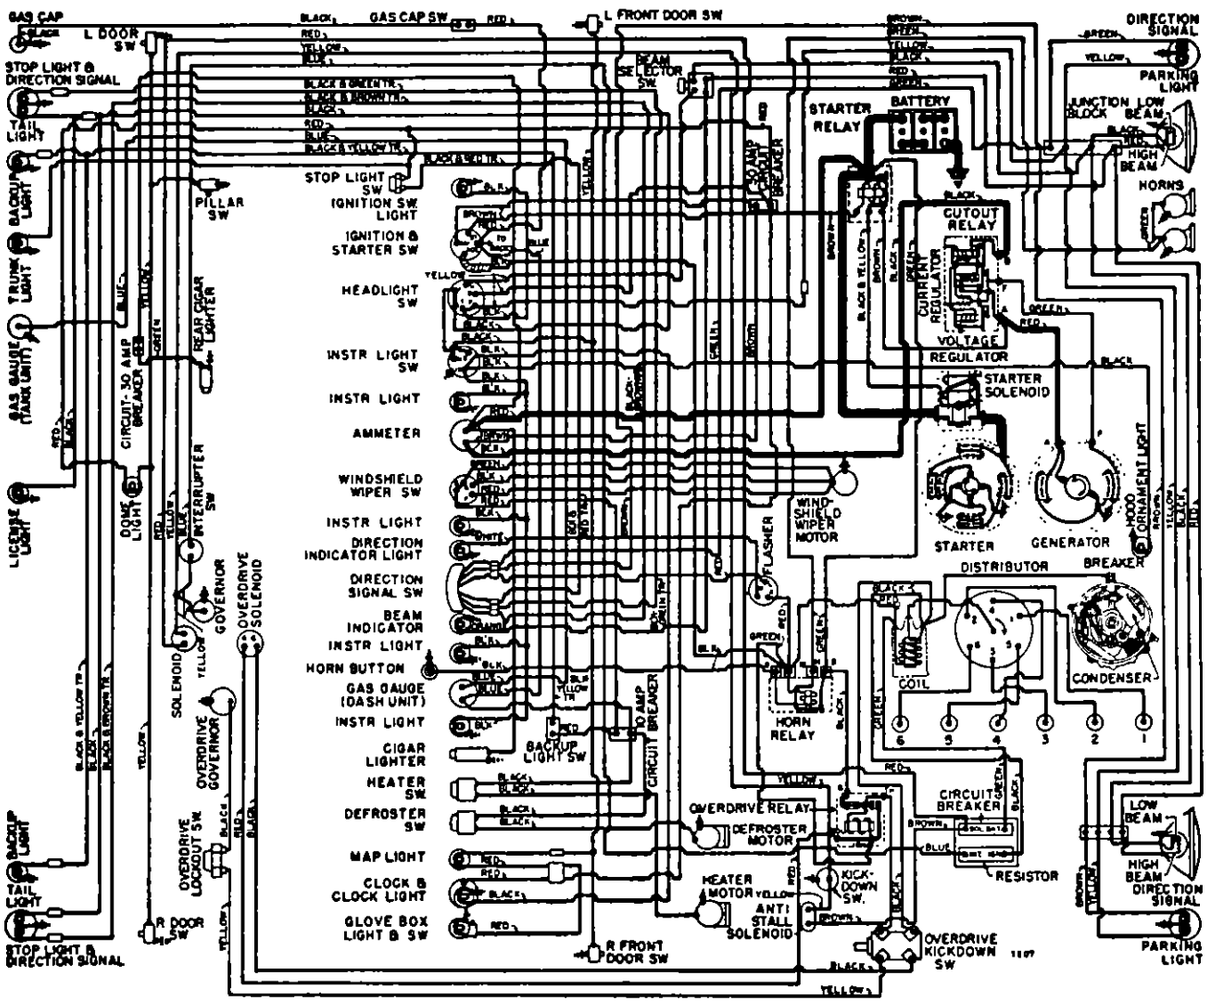
Slow-Closing Throttle: Solenoid type. Non-adjustable.

Choke Adjustment: Cover "mark" centered on index. *Do not change setting for hot or cold weather.*

Fuel Pump Pressure: 3½-5½ lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. See that valve operates freely. When installing coil wind free end up **approximately ¾ turn**, not over one turn or under ½ turn, hook end on stop stud.

VALVE TAPPET CLEARANCE: .008" Intake. .010" Exhaust. Engine must be hot and idling. NOTE—Tappet screws self locking. Remove right front wheel and lower wheel housing panel for access to valves.



IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully to right. Key automatically returns to "ON" position when released.

COIL: Auto-Lite No. CR-4001 (U.S. Cars), CR-6007B (Canada). On bracket above distributor.
Ignition Current—2.25 amperes idling. 5 stopped.

CONDENSER: Auto-Lite No. IAT-3076RA.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAT-4012 (1952 U.S. & 1953 Canada), No. IAT-4102 (1953 U.S.), No. IAT-4012B (1952 Canada). Automatic & Vacuum advance type with "pivoted" breaker plate.
Breaker Gap—.018-.020".
Cam Angle—36-42°. DO NOT exceed breaker gap limits of .018-.020" to obtain dwell.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Manual Adjustment—Provides for minor changes in timing at distributor. See Ignition Timing.

1953 MODELS

IGNITION TIMING

Setting ..... 2° BTDC
NOTE—This is standard setting for regular non-premium fuel at sea level. See Manual Adjustment
Timing Mark—Vibration dampener marked "DC" at top dead center point with I5—1° graduations before and after this point. Time engine with correct mark in line with pointer on chain case cover.
Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor by loosening lockplate hold-down screw and centering pointer on scale, tighten screw. Loosen lockplate clamp bolt, rotate distributor until correct timing secured.
Manual Adjustment—Set to give slight ping between 10-30 MPH when accelerating from 10 MPH with wide open throttle. Adjust distributor (not over 4° before or after initial setting).

CARBURET R

Carter (Ball & Ball)—Model E9C1 (Synchro-mesh Trans. Cars), Model E9A1 (Automatic Trans. Cars), E7W1 (City Traffic). 1½" single barrel downdraft with slow closing throttle and kick-down switch on E9A1. Throttle restrictor used on E7W1.
See Carburetor Section for complete data.
Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Jet—*See Carter (B&B) Jet Table in Carburetor Section for complete data.*
Slow-Closing Throttle: Solenoid type. Non-adjustable.
See Carburetion Equipment Section for complete data.
Fast Idle: Setting .018" throttle opening with choke valve held closed and throttle stop screw backed off.
Automatic Choke: Carter Climatic Control.
Setting—Centered (coil housing at index mark). *Do not change setting for hot or cold weather.*
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: AC. Heavy duty oil-bath type. Replacement Filter Element AC No. 21.
Fuel Pump: Carter No. M-639SL, SZ, SA. Vacuum diaphragm type.
Pressure—3½-5 lbs.
See Carburetion Equipment Section for complete data.
Fuel Tank Filter: Ollite metal filter in tank.
Servicing—If more than two pints water in tank, fuel will not pass filter. Remove filler cap and drain plug, draining tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.
Gasoline Gauge: Auto-Lite Electric type.
Auto-Lite Numbers:

Dash Unit	Early—1952—Late	1953
All exc. Est. Wgn.	12341A—12799A	13018A
Estate Wgn.	12529A—12800A	13019A
Tank Unit	**1952**	**1953**
All exc. Est. Wgn.	11538A	12617A
Estate Wagon	12195A	12195A
8 Pass. & Taxi	11539A	11538A

See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite 2H-120-B. Willard HW-2-120 Optl. 6 volt, 17 plate, 120 ampere hour capacity (20 hr. rate).
Grounded Terminal—Positive to engine.
Location—Under hood, on left fender shield.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

STARTER

Auto-Lite No. (1952 Std.) MCL-6117, (1952 Power Steering) MCL-6117, (1953) MCL-6117, (1953 Taxicab Early) MCL-6116, (1953 Taxicab Later) MCL-6121A.

Armature—Auto-Lite No. MCH-2070.

Drive—Solenoid pinion shift & overrunning clutch.

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Starting Switch: Auto-Lite Solenoid Switch No. SSX-4002 (MCL-6116 Starter), No. SSX-4003 (MCL-6117 Starter), No. SSX-4004 (MCL-6121A Starter). Combination solenoid pinion shift and starting switch controlled by ignition switch (by turning key past "on" position) with SEPARATE relay (on some Fluid Torque Drive cars only).

Starter Relay—Auto-Lite No. HRW-4001 (1952), No. HRW-4001A (1952-53). *See 1952 Wiring Diagram for relay connections.*

GENERATOR

Auto-Lite. Two brush type with voltage and current regulation.

Auto-Lite Gen. No. 1952	1953
Std. Equip. GGW-6001J,K	GGW-6001K
Power Steering GGW-6007B, 8B	GGW-6008B,D,G

40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Rotation—Counter-clockwise at commutator end.

Brush Spring Tension—(GGW, GGU) 35-53 ozs., (GGJ) 30-37 ozs., (with new brushes).

Field Current—(GGW) 1.4-1.5 amperes, (GGJ & GGU) 1.4-1.6 amperes, all at 5.0 volts.

Motoring Current—(GGW) 4.8-5.3 amperes, (GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, all at 5.0 volts.

Belt Adjustment: ¼" belt deflection or 40-50 lbs. tension with scale attached to field frame.

REGULATOR

Auto-Lite. Voltage and current type, "Temperature Compensated" Current regulator.

Auto-Lite Regulator No.	Generator
VBE-6001A	All "GGW" Gen.
VBF-6001A & VBF-6002A①	All "GGJ" Gen.
VAV-6001B & VAV-6002B①	All "GGU" Gen.

①—For Negative battery ground.

Cutout Relay

Cuts In—6.3-6.8 volts.
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator

Setting—7.1-7.4 volts (VBE & VAV), 7.15-7.45 volts (VBF), *after fifteen minutes operation charging at 10 amperes (VBF), ½ max. charging rate (VAV, VBE).*
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator

SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.

	Test A—Operating Amperes	Test B
VAV	55	50 (48-52)
VBE	52	45 (43-47)
VBF	66	55 (53-57)

Test A—After 15 minutes operation charging at 10 amperes (VBF), ½ maximum rate (VBE & VAV).

Test B—After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts).

Air Gap—.048-.052" with contacts opening.

Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: "Sealed Beam" type with "Bullseye" lens. *See Electrical Equipment Section for complete data.*
Beam Indicator—Lighted when upper beam in use. Located on lower right corner of speedometer face.

Directional Signal: *See Electrical Equipment Section.*
Directional Signal Indicator—In lower left corner of speedometer dial.

Switches

Lighting—DeSoto (1952) 1370138, (1953) 1495859.
Beam Selector—DeSoto No. 1253003.
Instrument—DeSoto No. 1369986.
Directional Signal—DeSoto No. (1952) 1440080, (1953) 1495297.

MISC. ELECTRICAL

CIRCUIT BREAKERS (1952): Lighting—30 amperes. Mounted on rear of instrument panel to left of ammeter. Protects Headlights, Tail & Stop Lights, and Instrument Panel Lights.
Accessory Circuit Breaker—8 amperes. Mounted on rear of instrument panel to right of fuel gauge. Protects Back-up Light, and Windshield Wiper Motor.

CIRCUIT BREAKERS (1953): In Headlight Switch assembly, protect headlight, tail & stop light, accessory and interior lighting circuits. Back-up lights protected by windshield wiper circuit breaker.

FUSES: Clock 2 amperes. In clock lead wire.
Radio—14 amperes. In fuse connector at radio.
Overdrive—20 ampere. On overdrive relay.

HORNS: Auto-Lite. Twin horns with relay.

Auto-Lite No.	Low Pitch	High Pitch
1952 Early	HW-4107	HW-4108
1952 Later	HW-4203	HW-4204
1953 Early	HAB-4617	HAB-4618
1953 Later	HAB-4659	HAB-4664

Horn Relay: Auto-Lite No. HRL-4104. Connected through ignition switch, operates only when ignition "ON."
Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Six cylinder "L" head type.
Bore—3 7/16". **Stroke**—4 1/2".
Displacement—250.6 cu. in. **Rated HP**—28.36.
Developed Horsepower—116 at 3600 RPM.
Compression Ratio—7.0-1.
Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: *See DeSoto Special Data.*

OIL PAN REMOVAL: *See DeSoto Special Data.*

CYLINDER HEAD & TIGHTENING TORQUES: *See DeSoto Special Data.*

PISTONS: Aluminum alloy, U-slot, cam-ground type.
▷***CYLINDER BORE OVERSIZE CAUTION—Engines with letter "A" following engine number indicates that cylinder bores .020" oversize.***
Weight—18.5 ozs.
Clearance—.0002-.0012" measured ¾" from bottom of piston on thrust side.
NOTE—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores with taper over .030" or out-of-round over .004" requires reboring and honing to above limits.
Removal—Pistons and rods removed from above.

Fitting New Pistons: With piston and cylinder clean and dry, piston should have a slight drag, but should travel through bore slowly of its own weight at 70°F.

Replacement Pistons: Furnished Standard, .005", .020", .030", .040", .060" Oversize. *See "Pistons" in De Soto Special Data.*

Installing Pistons: Slot away from camshaft.

PISTON RINGS: Two compression, two slotted oil rings per piston, all above pin. Oil ring grooves drilled for oil drainage (lower groove slotted).

Ring	Width	End Gap	Side Clearance
Compr. (#1)	3/32"	.007-.015"	.0025-.004"
Compr. (#2)	3/32"	.007-.015"	.002-.0035"
Oil (#3,4)	5/32"	.007-.015"	.001-.0025"

Installing Rings—#1 Compression, with step on inner edge up. #2 Compression with step on inner edge up or if step on outer edge, install with step down.

Replacement Rings: Std., .005", .020", .030", .040", .050", .060" Oversize. *See "Piston Rings" in DeSoto Special Data.*

PISTON PIN: Diameter—55/64". **Length**—2 7/8". Floating type with locking ring at each end.
Pin Fit in Piston—.0000-.0005". DOUBLE THUMB push fit at room temperature (70°F.).
Pin Fit in Rod Bushing—.0001-.0004". Tight thumb push fit at room temperature (70°F.).

ENGINE

CONTINUED FROM PRECEDING PAGE

Replacement Pins: Furnished Std., .003", .008" oversize.

CONNECTING ROD: Length—7⅞". Weight—32.4 ozs., with bolts, less bearings. NOTE—Piston pin hole is bronze bushed.
Crankpin Journal Diameter—2.124-2.125".

►*JOURNAL DIAMETER CAUTION—(ONE OR MORE journals machined UNDERSIZE)—See "Crankshaft" (below).*
Lower Bearing—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015" desired. Maximum—.0025".
Sideplay—.006-.011".

Bearing Adjustment: None. Replace bearings.
See "Connecting Rod & Bearings" in DeSoto Special Data.

Replacement Bearings: Standard, .001", .002", .010", .012", .020", .030", .040", undersize.
Installing Rods: Oil metering hole toward camshaft.

CRANKSHAFT: 4 bearing, with vibration damper.
Journal Diameters—2.4995-2.5005".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION—Engines with undersize journals identified as follows:*
.010" UNDERSIZE (ALL Main & Connecting Rod Journals)—Letter "B" stamped with engine number indicates that ALL Main & Connecting Rod Journals are .010" Undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (⅜" high) stamped on the machined surface at the upper right hand corner of the block (adjacent to front cylinder exhaust port) to signify that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the crankshaft center counterweight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearing Type—Removable, precision type, thin babbitt on steel. No shims.
Clearance—.0005-.0015".

Bearing Adjustment: None. Replace bearings.
See "Crankshaft & Main Bearings" in DeSoto Special Data.

Replacement Bearings: Standard, .001", .002", .010", .012", .020", .030", .040", undersize.
Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in DeSoto Special Data.*
End Thrust: Taken by flanged faces at rear (#4) main bearing. **Endplay**—.003-.007".

CAMSHAFT: 4 bearing. Non-adjustable chain drive.
Bearing Diameters—(1) 2"; (2) 1 31/32"; (3) 1 15/16"; (4) 1 1/4".
Bearing Type—Removable steel backed, babbitt lined bushings (except #4 machined in block).
Clearance—.0015-.0035". NOTE—If clearance exceeds .005" (measure with dial indicator placed against cam lobe and pry cam toward indicator), install new camshaft for test and if clearance is greater than .0035", replace bearings.
Camshaft Removal—*See "Camshaft & Bearings" in DeSoto Special Data.*

End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".
Timing Chain: Width 1". Pitch .500". Length 24" or 48 links.
Timing Chain Removal—*See "Timing Chain" in De Soto Special Data.*
Camshaft Setting: Sprockets marked. Mesh chain with sprockets so that '0' marks on sprockets are adjacent and in line with a straightedge across shaft centers.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1.718"	.341"	4 27/32"
Exhaust	1.501"	.340"	4 27/32"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.365"	.002"
Exhaust	45°	.365"	.003"

Valve Seat Width—(Max.) 7/64".

Valve Seat Insert (Exhaust)—Removal & Installation.
See "Valve System" in DeSoto Special Data.
Valve Guides: Remove from above. Press new guides in (stepped end down) with upper end 7/8" below top of block (Tool CM-83), finish ream to give correct clearance (see Valve Stem Clearance).
Valve Springs: Install with closely coiled end up.
Free Length—2".

	Spring Pressure	Length
Valve Closed	40-45 lbs.	1 3/4"
Valve Open	110-120 lbs.	1 3/8"

Valve Lifters: Mushroom type (remove from below).
Stem Diameter—.6235-.6240". Ream holes from above (pilot in guide). Oversizes .001", .008", .030".
Lifter Clearance in Block—.0000-.001".

VALVE TIMING

Tappet Clearance: .008" Intake, .010" Exhaust (hot and idling). NOTE—Tappet screws self-locking (no locknuts). Remove right front wheel and lower wheel housing panel for access to valves.
Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 44° ALDC.
Exhaust Valves—Open 50° BLDC. Close 6° ATDC.
Valve Timing Check—With .014" (cold) tappet clearance, No. 6 intake valve should open with No. 6 piston within range of 5° to 17° or .011" to .122" BTDC with 5th to 17th graduation before DC mark on impulse neutralizer aligned with pointer on timing chain cover case. Reset tappet clearance to standard.

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, camshaft bearings, and timing chain. "Rotor" type oil pump mounted externally on right side of crankcase.
Crankcase Capacity—5 quarts (refill).
Normal Oil Pressure—50 lbs. at 30 MPH.
Oil Pressure Relief Valve—Oil pressure relief valve opens at 40-60 lbs. Under plug on left side of crankcase ahead of oil line to provide additional oil at idling speeds. Adjustable by replacing spring (3 types. (1) Standard spring painted BLUE. (2) Lighter than Standard painted RED. (3) Heavier than Standard painted GREEN.

►*RELIEF VALVE SPRING CAUTION—Replace spring of same color as original spring.*

Oil Pan Removal: *See DeSoto Special Data.*
Oil Pump: Rotor type on right side of crankcase.
Oil Pump Overhaul—*See DeSoto Special Data.*
Removal—Remove distributor cap and turn engine over until #1 cylinder is in firing position (allow engine to remain in this position while pump off engine). Remove two oil pump Allen-head screws. Take pump off engine.
Installation—Oil pump must be installed on engine with #1 piston in firing position with rotor on distributor opposite #1 terminal in cap.
Oil Filter: Bypass type (full-flow cannot be used). Optl. On left side of engine above starter.
Servicing—Replace element at 8000 mile intervals.
Filter Cartridge—Mopar No. 861028.
Oil Pressure Gauge: Auto-Lite No. (1952 Early) 12340A, (1952 Later) 12801A, (1953) 13017A.

COOLING

Cooling System: Positive circulation with pump on front of engine, by-pass thermostat, pressure vent cap, and water distribution tube in cylinder block behind pump.
Pressure Valve—DeSoto No. 1346849. Radiator Filler Cap. Opens at 7 lbs.
Capacity—15 quarts (16 quarts with heater).
Water Distribution Tube Servicing: *See "Cooling System" in DeSoto Special Data.*
Radiator Removal: *See DeSoto Special Data.*
Water Pump: Packless type. Grease fitting for lubrication.
See Water Pump Section for complete data.
Removal—Drain cooling system, remove fan belt, disconnect hoses at pump, remove pump mounting studs. Remove pump.
Thermostat: By-pass type in cyl. head water outelt.
Setting—Starts to open at 157-162°. Fully open 183°.
Temperature Gauge: Auto-Lite. (1952 Early) 12715A, (1952 Later) 12797A, (1952 Taxi) 12885A, (1953) 13016A, (1953 Taxi) 13237A.

CLUTCH

Borg & Beck	Model	Assy. No.
Synchro-mesh Trans.	10A7	930
Fluid Drive	9A7	1329
Heavy Duty	11A6	929
Taxicab	11A6	1330

Single plate, dry disc type.
See Clutch Section for complete data.
Facings—Molded woven type, 2 required.

	Inside Diam.	Outside Diam.	Thickness
9A7	6"	9¼"	.125"
10A7	7"	10"	.125"
11A6	6½"	11"	.125"

Pedal Adjustment: Adjust stop screw on lower end of pedal and adjusting nut on connector link at fork.
Pedal Free Play (At outer end of clutch fork)—⅛" to 3/32". **(At Pedal Pad)**—1".
Over-Center Spring Adjustment: Tighten adjusting nut until within ¼" of end of adjusting screw (end of screw visible about half way through nut). Depress clutch pedal 1" and finish adjusting until over-center spring is on dead center.
See "Clutch Notes" in DeSoto Special Data.
Removal: Remove release fork pull-back spring. Remove Transmission (See Transmission) and housing underpan. Pull out clutch release bearing and sleeve. Mark cover and flywheel (or driving plate on Fluid Drive). Take out cover screws, remove assembly.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

FLUID DRIVE

DeSoto—Fluid coupling at rear of engine. Optl. *See Transmission Section for complete data.*

Slippage Test: Maximum engine RPM should be 1100 RPM in direct drive with car stationary and engine properly tuned up. If speed higher, check for leakage and low oil level. Use Mopar Fluid Drive Oil. *See "Chrysler Fluid Drive" in Transmission Section.*

Removal: Remove transmission and clutch (see Transmission and Clutch), take off driver flange studs (Tool C-589), lower fluid drive assembly out.

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant mesh, synchro-mesh (second & high), sliding gear (low & reverse). *See Transmission Section for complete data.*

Transmission Control: Manual steering column shift. *See Transmission Section for complete data.*

Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if disassembling transmission—see DeSoto Special Data for Propeller Shaft Center Bearing Removal on 8 Pass.). Disconnect speedometer cable, hand brake cable, gear shift rods. Remove transmission-to-clutch housing capscrews and nuts. Pull unit to rear, down and out of car.

NOTE—Use pilot studs when installing assembly.

OVERDRIVE

Warner Type R10. Optl. with Synchro-mesh transmission. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down. *See Transmission Section for complete data.*

Solenoid—Delco-Remy No. 1118155.

Governor—Auto-Lite (1952-53) No. TGE-4008, (1953) TGE-4010.

Control Relay—Auto-Lite (1952) No. HRT-4001 or HRT-4001A, (1953) No. HRT-4001A.

Overdrive Fuse—20 ampere. On relay.

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Tip-Toe Shift Type (with Fluid Drive)—Semi-automatic design, four-speed transmission with hydraulic actuation and electrical controls. *See Transmission Section for complete data.*

▷*TRANSMISSION SELECTOR LEVER ADJUSTMENT (To correct difficult shifting): See Transmission Section for complete data.*

▷*TESTING & TROUBLE SHOOTING: See Transmission Section.*

Transmission Control: *See Transmission Section for complete data.*

Kickdown Solenoid—Auto-Lite No. SSS-4003.

Governor—Auto-Lite No. TGG-4001.

Kickdown Switch—Part of carburetor assembly.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gearshift rods at transmission. Drain transmission, REPLACE DRAIN PLUG. Disconnect transmission mounting bolts and lower assembly out of car.

▷*INSTALLATION CAUTION*—Rear face clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

▷*OTHER TRANSMISSION SERVICE DATA: See Transmission Section.*

UNIVERSALS

Detroit Universal. Ball and Trunnion type.

Propeller Shaft Center Bearing: Used on 8 Passenger. *See DeSoto Special Data.*

REAR AXLE

Own Make. Semi-floating hypoid gear type with Hotchkiss drive.

1952 Ratios:	Est. Wgn.	8 Pass.	Others
Synchro-mesh	3.91-1	4.3-1②	3.9-1①
Auto. Trans.	3.91-1	4.1-1	3.73-1③
1953 Ratios:			
Synchro-mesh	4.1-1⑤	4.3-1⑥	3.9-1④
Auto. Trans.	3.91-1⑦	4.1-1⑤	3.9-1④

①—Optl. 3.73-1. Spec. Equip. 3.54-1 & 4.1-1.
②—Optl. 4.56-1.
③—Optl. 3.9-1 & 4.1-1.
④—Optl. 3.73-1 & 4.1-1.
⑤—Optl. 3.91-1 & 4.3-1.
⑥—Optl. 4.1-1 & 4.89-1.
⑦—Optl. 4.1-1 & 4.3-1.

Ratio Identification—Ratio stamped on underside of carrier on pinion bearing end. *See Rear Axle Section for complete data.*

Removal: Disconnect rear universal, remove axle shafts (see below), and carrier assembly capscrews.

Axle Shaft Removal—Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at brake cylinder, remove axle shaft key, install sleeve (Tool C-745) in oil seal, remove brake support (oil seal mounted in support), pull shaft and bearing (Use C-499 puller). NOTE—Use Puller C-293-C to remove bearing from shaft, Puller C-748 or C-358 to remove inner oil seal, drift C-201 to install seal.

Axle Shaft Outer Seal: Leather type mounted on brake support (backing plate).

Oil Seal Servicing—*See "Rear Axle Notes" in DeSoto Special Data.*

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel and hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow", direct acting hydraulic type. Non-adjustable. Serviced by replacement.

1952 Shock Absorbers

DeSoto Part No.	Front	Rear
Std.	1321127①	1321128
Heavy Duty	1450041	1450039

1953 Shock Absorbers

DeSoto Part No.	Front	Rear
Std. exc. 8 Pass. & Est. Wgn.	1326164	1326165
8 Pass. & Est. Wgn.	1450346	1326166
Heavy Duty	1450041	1450075

①—No. 1326164 on later cars.

FRONT SUSPENSION

Front Suspension: Independent linked parallelogram type with coil springs and direct acting shocks. *See Front Suspension Section for complete data.*

Kingpin Inclination—5° to 6½° with 0° camber.
Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).
Caster—Neg. 1° to Neg. 3°, (Neg. 2° preferred).
Toe-In—0" to 1/16". (0" preferred). Adjust both tie rods equally.
Toe-Out on Turns—Inner wheel 21½° plus or minus 1°, with outer wheel at 20°.

STEERING GEAR

Own Make (same as Gemmer Model 335). Three-tooth Worm and Roller type. *See Steering Gear Section for complete data.*

Power Steering (Hydraguide): Gemmer. Optional equipment on all models. Gemmer hydraulic steering unit. Oil pump on generator operates piston connected to steering cross-shaft. Controlled through a valve block assembly actuated by steering gear shaft. *See Steering Gear Section for complete data.*

▷*POWER STEERING "HIGH SPOT" OR "LUMPY" FEELING AT OR NEAR STRAIGHT AHEAD POSITION—See "Gemmer Hydraguide" in Steering Gear Section for complete data.*

▷*FRONT WHEEL SHIMMY CORRECTION (Power Steering Cars): See "Chrysler, DeSoto, Dodge, Plymouth Front Suspension" in Front Suspension Section.*

▷*PRODUCTION & REPLACEMENT PARTS CHANGES FOR IMPROVED PERFORMANCE: See "Gemmer Hydraguide" in Steering Section.*

BRAKES

Service: DeSoto "Safe-Guard" Lockheed hydraulic.
Front Wheels—Two cylinder type.
Rear Wheels—Double anchor type with single (double-acting) wheel cylinder. *See Brake Section for complete data.*
Wheel Cylinder Diameter—1⅛" (all).
Drums—Centrifuse. Diameter 12".
Lining—Molded asbestos. 2" wide, 13/64" thick.
Length per Shoe—12.57".
Clearance—.006" at each end of all shoes.
Braking Power—60% (Front), 40% (Rear).

Hand Brake: On shaft at rear of transmission. 6" external contracting type (with Std. Trans.), 7" internal expanding type (with Tip-Toe Shift).

Lining—	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15 3/8"
7" Int. Type	2"	5/32"	13 1/16"

Clearance (External Type)—.015-.020".
Internal Type—Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".
Adjustment—*See "Hand Brake Notes" in DeSoto Special Data.*

Brake Power Unit: Chrysler Vacu-ease Vacuum Power unit. *See Brake Section for complete data.*

MISC. MECHANICAL

WINDSHIELD WIPER: Auto-Lite Electric type.
1952 Models—Auto-Lite No. EWJ-4001A (Early), No. EWJ-4007A (Later).
1953 Models—Auto-Lite No. EME-4001A, EMG-4001A, EMG-4101A, or EMG-4103A (Early), No. EMG-4102A (Later).

▷*1953 WINDSHIELD WIPER PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION ON EARLY TYPES: See "Auto-Lite Electric Windshield Wiper" in Miscellaneous Section.*

WINDOW REGULATORS: Auto-Lite Electric type. *See Miscellaneous Section for complete data.*

MODEL IDENTIFICATION

SERIAL NUMBER: On left front door hinge post.

1952 Serial Numbers:	Detroit	Los Angeles
S-17	55,000,001	64,001,001
1953 Serial Numbers:		
S-16	55,050,001	64,008,001

ENGINE NUMBER: Stamped on boss on the top front side of block just back of water pump.

ENGINE NUMBER LETTERS & MARKS (Following Engine Number)—Identified as follows:

"A"—All Cylinders .020" Oversize.

"B"—ALL Crankshaft Journals .010 Undersize.

"AB"—BOTH above conditions exist.

"MALTESE CROSS" (⅜" high)—**ONE OR MORE** Crankshaft Journals .001" Undersize *(See "Connecting Rods" & "Crankshaft" below.)*

"DIAMOND" (⅜" high)—**ALL** Tappet bodies are .008" Oversize.

TUNE-UP

►*1952 ACCELERATION HESITATION (EARLY CARS WITH CARTER WCD 884S & 884SA CARB.): See "Carter WCD" in Carburetor Section.*

►*1952 IMPROVED ACCELERATION & ROUGH IDLE CORRECTION (LATER CARS WITH CARTER BBD 901S, 905S, 906S CARB.): See "Carter Dual BBD" in Carburetor Section.*

COMPRESSION PRESSURE: 135 to 165 lbs. at 150 RPM cranking speed (min. pressure 90 lbs., maximum variation between cylinders 15 lbs.).

VACUUM READING: Steady 18-21" idling.

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinder Numbering—Left Bank 1-3-5-7. Right Bank—2-4-6-8.

SPARK PLUG GAPS: .035".

Plugs—Auto-Lite Resistor type 4S140. 14 mm.

DISTRIBUTOR: Auto-Lite No. IAZ-4002. Double breaker type with automatic advance and vacuum spark control.

Breaker Gap—.015-.018".

Cam Angle—26° to 28° (one set points). 32° to 36° (Total Dwell). Set both points alike.

Breaker Arm Spring Tension—17-20 ozs.

Rotation—Clockwise viewed from above.

Automatic & Vacuum Advance—*See Ignition.*

COIL: Auto-Lite (1952) CR-6007B (1953) CR-6015.

Ignition Current—2.25 amperes idling. 5 stopped.

CONDENSER: Auto-Lite No. IAU-3076LA.

Capacity—.25-.28 microfarad.

IGNITION TIMING: 4° BTDC. See Man. Adjustment.

Timing Mark—Vibration dampener marked "DC" at top dead center point with 15—1° graduations before and after this point.

Manual Adjustment—Adjust distributor to give slight ping in 15-30 MPH range when accelerating from 15 MPH in fourth gear with wide open throttle. CAUTION— Do not set timing more than 4° early or 4° later than specified setting.

Timing Procedure—*See Ignition Timing.*

►***CARBURETOR REMOVAL CAUTION—Drain 3 to 4 gallons water from cooling system before removing carburetor from engine (throttle body water jacketed and water connecting tubes used).***

CARBURETION (EARLY 1952): CARTER WCD, No. 884S & 884SA Carburetors. Dual downdraft type.

Idle Setting—Both screws ¾-1¼ turns open (turn screws out for richer mixture).

Idle Speed—475-500 RPM. (shift lever in neutral).

Float Level—11/64" (Gauge T109-205) from top of floats to machined surface on bowl cover.

Accelerating Pump—Inner hole (short stroke) normal.

Fast Idle: .018" throttle valve opening (Gauge T109-44) with choke valve closed. Adjust fast idle screw.

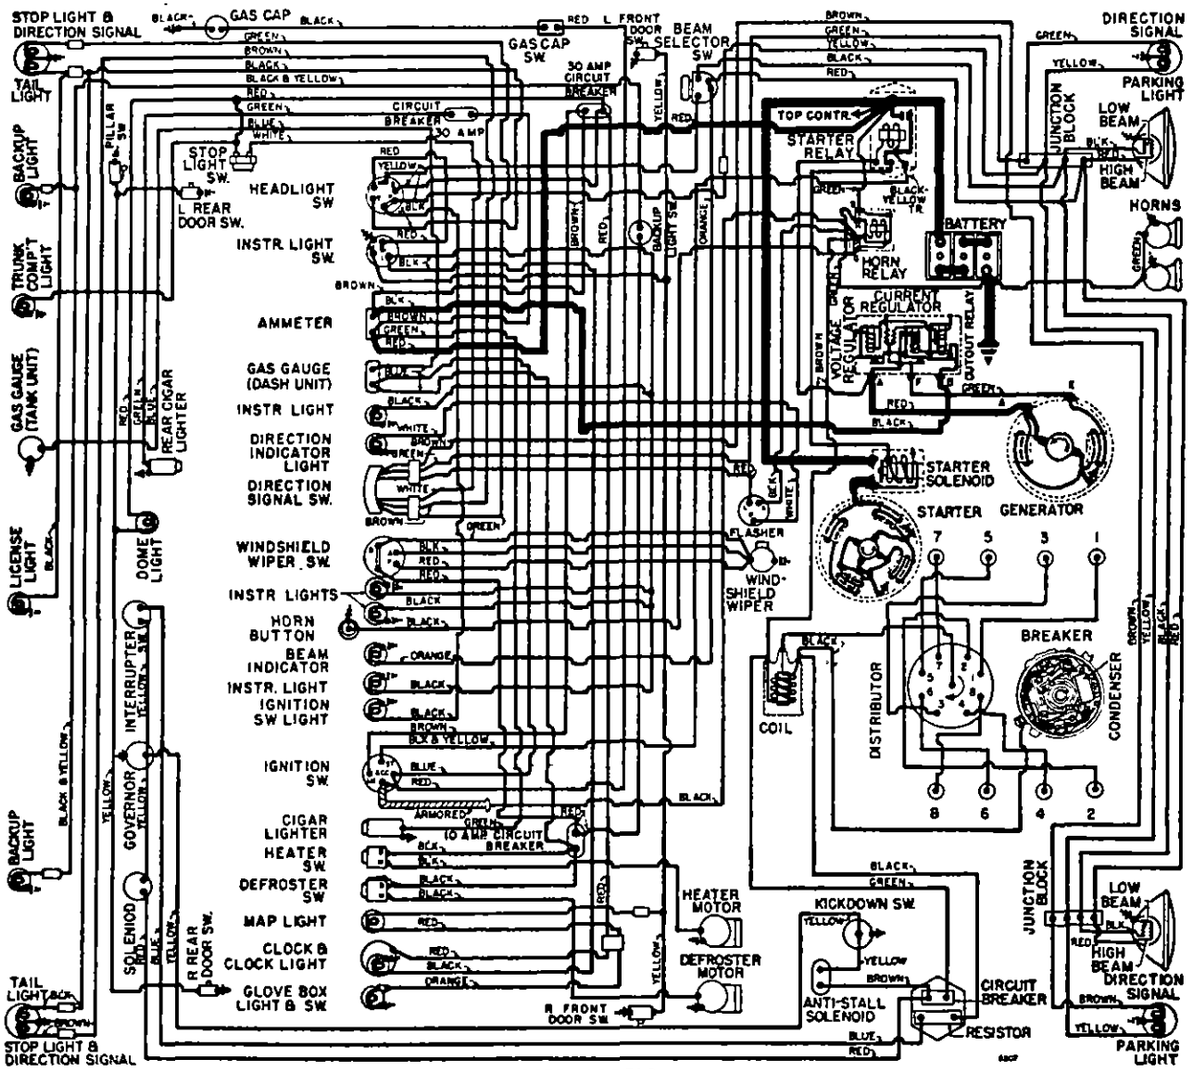
Slow Closing Throttle: After adjustments completed, turn dashpot adjusting screw until dashpot plunger can be moved in approximately 1/16" from normal position against actuating arm. This will provide maximum dashpot action.

Automatic Choke Setting: Centered.

CARBURETION (LATE 1952 & 1953) CARTER BBD (see Carburetor for various models used). Dual downdraft.

Idle Setting—Set idle adjustment screws for smooth idling with engine warm (idle screw ¼ to 1¼ turns open), turn screws out for richer mixture. Adjust both screws alike.

Idle Speed—475-500 RPM. (shift lever in neutral).



Float Level (901S, 905S, 906S)—5/16" (Gauge T109-230) plus 1/32" feeler thickness from top of floats to top edge of float bowl.

Float Level (908S, 909S, 910S)—9/32" (Gauge T109-230) from top of floats to top edge of float bowl.

►***FLOAT LEVEL SETTING CAUTION (Later 911S, 912S, 913S Carburetors)—TWO DIFFERENT types of floats (flat top and curved top) used on these models and DIFFERENT FLOAT SETTING used for each type***

Float Level (911S, 912S, 913S)—9/32" (flat top

CONTINUED ON NEXT PAGE

1952 MODELS

CONTINUED FROM PRECEDING PAGE

floats), 7/32" (curved top floats) from top of floats to top edge of float bowl with float pin at bottom of guide slots.

Accelerating Pump—Pump connector rod in outer hole—long stroke, pump arm pin in top hole of plunger shaft. Normal setting.

Fast Idle: .015-.019" throttle opening (Gauge T109-44) with choke valve tightly closed. With throttle adjusting screw backed out, adjust by bending choke connector rod at lower angle (Tool T109-213).

Dashpot Adjustment (901S, 8S, 11S): After carburetor adjustments completed, turn dashpot travel adjusting screw (on actuating arm on throttle shaft) until dashpot plunger can be moved in approximately 1/16" from normal position against actuating arm. This will provide maximum dashpot action.

Automatic Choke Setting: Centered (all models).

Fuel Pump Pressure: 3½-5 lbs.

MANIFOLD HEAT CONTROL: Automatic thermostatic type. *NOTE*—Shaft must rotate freely in bushings without excessive free play. If clearance between shaft and bushings exceeds .002-.005", replace necessary parts.

See "Manifold Heat Control" in DeSoto Special Data.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned.

IGNITION

IGNITION SWITCH: Mitchellock. Combination ignition-starter switch. Starter operates when key held fully right. Key automatically returns to "on" position when released.

COIL: Auto-Lite (1952) CR-6007B (1953) CR-6015.
Ignition Current—2.25 amperes idling, 5 stopped.

CONDENSER: Auto-Lite No. IAU-3076LA.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IAZ-4002. Double breaker type with automatic and vacuum advance.
Breaker Gap—.015-.018".
Cam Angle—26-28° (one set points), 32-36° (Total Dwell). Set both points alike.
Breaker Arm Spring Tension—17-20 ozs.
Rotation—Clockwise viewed from above.

Automatic Advance

Degrees Dist.	R.P.M.	Degrees Eng.	R.P.M.
Start	350	0°	700
1°	375	2°	750
2°	400	4°	800
13°	1775	26°	3550
14°	1900	28°	3800

Vacuum Spark Control: Auto-Lite. Integral type.

Vacuum Advance

Dist. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5¼"
1°	2°	6"
5°	10°	9¼"
10°	20°	14⅞"
11.5°	23°	17"

Distributor Installation & Basic Timing: Rotate crankshaft until No. 1 cylinder is at TDC (firing position) and pointer on timing chain case cover over "DC" mark on vibration damper. Use Tool C-3027 and position oil pump shaft so that it lines up with the slot in the drive gear. Coat the drive gear shaft with engine oil and install so that after the gear spirals into place, it will index with the oil pump shaft, and the slot in the top of the drive gear will be parallel with crankshaft centerline.

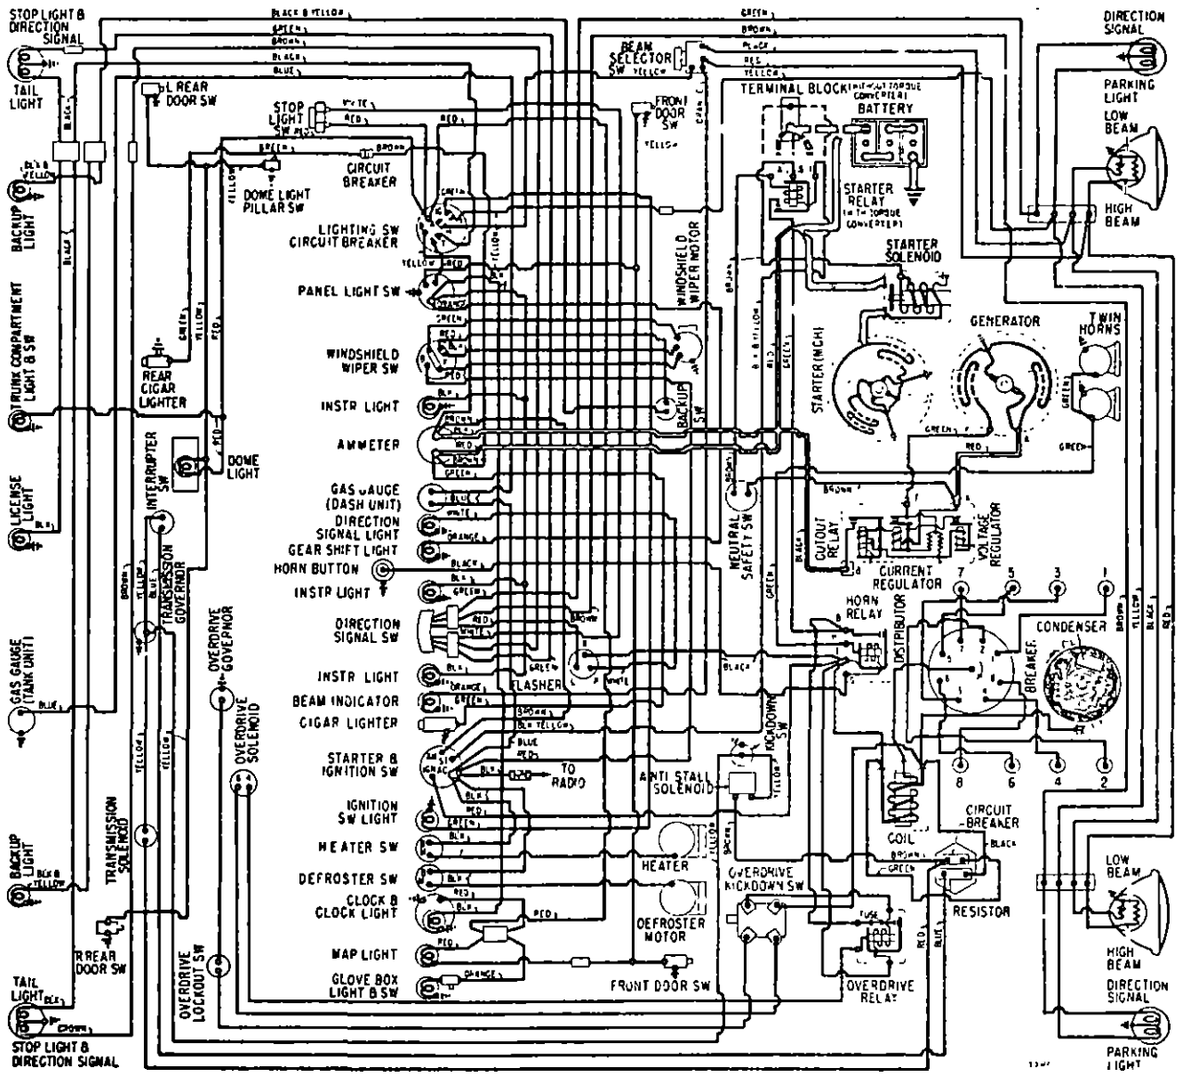
Distributor Driveshaft Bushing Removal & Installation: *See "Oil Pump & Distributor Drive Gear" in DeSoto Special Data.*

IGNITION TIMING

Std. Setting ..... **4° BTDC Idling.** *See Distributor Installation (and Basic Timing) above.*

Timing Mark—Vibration dampener marked "DC" with 15-1° graduations before and after this point (timing mark is 4th graduation before DC mark).

Timing (Using Synchroscope)—Mark correct graduation on vibration damper with white chalk. Connect one lead of synchroscope to #1 spark plug wire at the distributor (Using Tool C-3066 adapter). Connect other lead to negative terminal of battery and direct the light on vibration damper. Idle engine and rotate distributor (clockwise to retard, counter-clockwise to advance) until pointer is aligned with chalk mark on vibration damper.



Manual Adjustment—Adjust distributor to give slight ping when accelerating from 15 MPH with wide open throttle, in fourth speed. NOTE—Do not set timing more than 4° early or 4° later than initial setting.

CARBURETOR

CARTER "WCD"

(EARLY 1952) Carter WCD, No. 884S & 884SA. Dual downdraft type with automatic choke.

▷ *ACCELERATION HESITATION (Between 10-20 MPH. in 3rd. Gear or 25-35 MPH. in 4th. Gear):* *See "Carter WCD" in Carburetor Section.*

1953 MODELS

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*
Metering Jet—*See Carburetor Section for "Carter Carburetor Jet Specification Table."*

Fast Idle: Carter Dual (WCD) type.
Setting—.018" throttle opening (Gauge T109-44) with choke valve closed. Adjust fast idle screw.
See Carburetion Equipment Section for complete data.

Slow-Closing Throttle: *See TUNE-UP data.*

Automatic Choke: Carter Climatic Control.
Setting—Centered with index mark on air horn.
See Carburetion Equipment Section for complete data.

CARTER "BBD"

(LATE 1952 & 53) Carter BBD. Dual downdraft types with automatic choke.

Carburetor No.	1952	1952-53	Late 1953
Synchro-mesh	905S	909S	912S
Overdrive	906S	910S	913S
Auto. Trans.	901S	908S	911S

►*IMPROVED ACCELERATION & ROUGH IDLE CORRECTION (Carb. No. 901S, 905S, 906S): See "Carter BBD" in Carburetor Section.*

Settings (Idle Setting, Float Level, and Accelerating Pump): *See Tune-Up.*

Metering Jet—*See Carburetor Section for Carter (B&B) Downdraft Carburetor Jet Specifications.*

Fast Idle & Dashpot Adjustment: *See Tune-Up.*

Automatic Choke: Carter Climatic Control.
Setting—Centered (all models).
See Carburetion Equipment Section for complete data.

CARB. EQUIPMENT

Air Cleaner: Heavy Duty Oil Bath type.

Fuel Pump: Carter No. M-840S. Diaphragm type.
Pressure—3½-5½ lbs.
See Carburetion Equipment Section for complete data.

Fuel Tank Filter: Oillte metal filter in tank.
Servicing—If more than two pints of water in tank, fuel will not pass filter. Remove filler cap and drain plug, drain tank. Disconnect fuel line at some point between pump and tank, blow out line and filter with air, increasing pressure as filter is cleaned. Flush tank with clean gasoline.

Gasoline Gauge: Auto-Lite Electric type.

Dash Unit Nos.	1952	1953
All exc. Est. Wgn.	12799A	13018A
Estate Wagon	12800A	13019A
Tank Unit Nos.		
Exc. 8 Pass. & Est. Wgn.	11538A	12617A
8 Pass. Models	11538A	11538A
Estate Wagon	12195A	12195A

See Carburetion Equipment Section for complete data.

BATTERY

Auto-Lite No. 2H-120-B. Optl. Willard HW-2-120-C. 6 volt, 17 plate, 120 ampere hour capacity (20 hr. rate).
Grounded Terminal—Positive to engine.
Location—On left side under engine hood.

STARTER

Auto-Lite (1952-53) No. MCL-6116 (Late 1953) MCH-6113 & MCH-6113A. Armature No. MCH-2070.
Drive—Solenoid pinion shift and overrunning clutch.
Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—42-53 ozs. (new brushes).

Performance Data—MCL

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 "	Lock	2.0	410

Performance Data—MCH

Torque	R.P.M.	Volts	Amperes
0 ft. lbs.	4300	5.0	65
6.0 "	Lock	2.0	335

Removal: *Special box wrench C-455 required.*

Starting Switch: Auto-Lite No. SSX-4002 (MCL), SSX-4004 (MCH). Solenoid pinion shift and starting switch controlled by combination starting-ignition switch through Neutral Safety Switch and Starter Relay (Fluid-Torque Drive Cars only).
Starter Relay—(Fluid Torque Drive Cars)—Auto-Lite .No. HRW-4001A. *NOTE*—Starter Terminal Block used on other cars.

GENERATOR

Auto-Lite. Two brush type with voltage & current regulation.

Auto-Lite Gen. No.	1952	1953
Std. Equip.	GGW-6001Q,K	GGW-6001K,L
Pwr. Steering	GGW-6007A,8C	GGW-6008B,C,D,E,G GGJ-6004A,C,D
Spec. Equip.	GGW-6001L	GGW-6001J
City Police	GGJ-6001F	GGJ-6001F
State Police	GGJ-6001G	GGJ-6001G
Taxicab	GGU-6005A	GGU-6005A

Maximum Charging Rate—See Regulator.
Charging Rate Adjustment—None. See Regulator.

Performance Data—GGJ

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	600-700	650 750
50	8.0	1400-1600	1550-1750
55	8.0	1500-1700	1650-1850

Performance Data—GGW

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Performance Data—GGU

Amperes	Volts	Cold—R.P.M.—Hot	
0	6.4	750-850	800-900
45	8.0	1450-1650	1650-1850
50	8.0	1550-1750	1750-1950

Rotation—Counter-clockwise at commutator end.
Brush Spring Tension—(GGW, GGU) 35-53 ozs., (GGJ) 30-37 ozs. (with new brushes).
Field Current—(GGW) 1.4-1.5 amperes, (GGJ & GGU) 1.4-1.6 amperes, all at 5.0 volts.
Motoring Current—(GGW) 4.8-5.3 amperes, (GGJ) 4.1-4.6 amperes, (GGU) 5.0-6.0 amperes, all at 5.0 volts.

Belt Adjustment: Adjust generator belt so there is ¾" deflection midway between pulleys.

REGULATOR

Auto-Lite. Voltage & Current type. "Temperature Compensated" Current Regulator.

Auto-Lite Regulator No.	Generator
VBE-6001A	All "GGW" Gen.
VBF-6001A & VBF-6002A①	All "GGJ" Gen.
VAV-6001B & VAV-6002B①	All "GGU" Gen.

①—For Negative battery ground.
See Electrical Equipment Section for complete data.
NOTE—Regulator cover is sealed. Serviced on exchange basis, if seal not broken (to remove cover).

Cutout Relay
Cuts In—6.3-6.8 volts (All).
Cuts Out—4.1-4.8 volts (approx. 4-6 amps. disch.).
Contact Gap—.015" minimum.
Air Gap—.031-.034" with contacts open (check at hinge end of core).

Voltage Regulator
Setting—7.1-7.4 volts (VBE & VAV), 7.15-7.45 volts (VBF) after fifteen minutes operation charging at 10 amperes (VBF), at ½ maximum charging rate (VBE & VAV).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

Current Regulator
►*SETTING CAUTION—"Temperature Compensated" type. Set to following specifications at 70°F.*

	Test A—Operating Amperes	Test B
VAV	55	50 (48-52)
VBE	52	45 (43-47)
VBF	66	55 (53-57)

Test A—After 15 minutes operation charging at 10 amperes (VBF), ½ maximum rate (VAV & VBE).
Test B—After 15 minutes additional operation with current regulator operating (load applied to hold voltage to 6.7-6.9 volts).
Air Gap—.048-.052" with contacts just opening.
Checking & Adjusting—*See Electrical Equip. Section.*

LIGHTING

Headlamps: "Sealed Beam" type with "Bulls-eye" lens. *See Electrical Equipment Section for data.*
Beam Indicator—Lighted when upper beam in use. Located on lower right corner of speedometer dial.

Directional Signal: *See Electrical Equipment Section.*
Direction Signal Indicator—In lower left corner of speedometer dial.

Switches
Lighting—DeSoto (1952) 1370138, (1953) 1495859.
Beam Selector—DeSoto No. 1253003.
Instrument—DeSoto No. 1369986.
Directional Signal—DeSoto No. (1952) 1440080, (1953) 1495297.

MISC. ELECTRICAL

CIRCUIT BREAKERS (1952): Lighting—30 amperes. Mounted on rear of instrument panel to left of ammeter. Protects Headlights, Tail & Stop Lights, and Instrument Panel Lights.
Accessory Circuit Breaker—8 amperes. Mounted on rear of instrument panel to right of fuel gauge. Protects Back-up Light, and Windshield Wiper Motor.

CIRCUIT BREAKERS (1953): In Headlight Switch assembly. Consist of two 10 ampere and one 20 ampere circuit breakers protecting headlight, tail and stop light, accessory, and interior lighting circuits. Back-up lights protected by windshield wiper switch circuit breaker.

FUSES: Clock—2 amperes. In clock lead wire.
Overdrive—20 amperes. On overdrive relay.

HORNS: Auto-Lite. Twin horns with relay.

Auto-Lite No.	Low Pitch	High Pitch
1952 Early	HW-4107	HW-4108
1952 Later	HW-4203	HW-4204
1953 Early	HAB-4617	HAB-4618
1953 Later	HAB-4659	HAB-4664

Horn Relay—Auto-Lite No. HRL-4104. Connected through ignition switch.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Contacts Close—1.5-3.0 volts (seal to core with 4.0 volts maximum).
Contacts Open—.5 volts min. (open from seal).
Contact Gap—.026". **Air Gap**—.016-.020" (armature air gap with contacts closed but not sealed), .015-.018" (gap between armature leg and yoke with armature sealed to core).

ENGINE

ENGINE SPECIFICATIONS: Eight cylinder "V" type, Valve-in-Head.
Bore—3⅝". **Stroke**—3 11/32".
Displacement—276.1 Cu. in. **Rated HP**—42.05.
Developed Horsepower—160 at 4400 RPM.
Compression Ratio—7.1-1.
Compression & Vacuum Reading—*See Tune-Up.*

ENGINE REMOVAL: (Not necessary to remove transmission). Work engine out of frame toward left front fender (not necessary to remove heater).

OIL PAN REMOVAL: Remove oil level indicator, drain oil, and remove starter motor and exhaust crossover pipe. Remove oil pan attaching bolts and drop pan straight down and away from engine. To install, reverse removal procedure.

CYLINDER HEAD & TIGHTENING TORQUES: *See DeSoto Special Data.*

PISTONS: Aluminum alloy, T-slot, steel band, slipper type, cam ground, and tin-plated.

►*CYLINDER BORE OVERSIZE CAUTION—Engine with letter "A" following engine number indicates that cylinder bores are .020" oversize.*
Length—3 27/64". **Weight**—18.3 ozs.
Removal—Pistons and rods removed from above.
Clearance—.00075-.00125" at top of skirt.

►*NOTE*—Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .030", or out-of-round over .004" require reboring and honing to above limits.

Fitting New Pistons: Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x ½" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Feeler pull should be 5-12 lbs. at 70°F.

Replacement Pistons: Standard, .010", .020", .030", .040", .050", .060" Oversize. *See "Pistons" in DeSoto Special Data.*

Installing Pistons: Install with piston slot toward left side of engine (thrust side).

►*PISTON INSTALLATION CAUTION—Pistons must be assembled to the rods on the right hand cylinder bank (2-4-6-8) with the "V" slot in the rod aligned with the "T" slot in the piston. On left hand cylinder bank (1-3-5-7), assemble with "V" slot in rod opposite the "T" slot in piston.*

PISTON RINGS: Two compression, one slotted oil control, all above pin. Oil ring groove drilled for oil drainage.

Ring	Width	End Gap	Side Clearance
Compr. #1	.0775-.0780"	.010-.020"	.002-.0035"
Compr. #2	.0775-.0780"	.010-.020"	.0015-.003"
Oil #3	.1860-.1865"	.010-.020"	.001-.003"

Replacement Piston Rings: *See "Piston Rings" in DeSoto Special Data.*

PISTON PIN: Diameter—.9216-.9218". **Length**—3 1/16". Floating type with lock ring at each end.
NOTE—Piston pin is offset in piston toward right side of engine.
Pin Fit in Piston—.0000-.0005". Tight thumb press fit at normal room temperature (70°F).
Pin Fit in Connecting Rod—.0001-.0004". Tight thumb press fit at normal room temperature (70°F).
Replacement Pins: Std. and .003", .008" Oversize.

CONNECTING ROD: Length—6 1/16" (center to center). **Weight**—22.8 ozs.
Crankpin Journal Diameter—2.0615-2.0625".

►*JOURNAL DIAMETER CAUTION—(ONE OR MORE journals machined UNDERSIZE). See "CRANKSHAFT"*
Lower Bearing—Removable precision type, thin babbitt on steel, no shims.
Clearance—.0005-.0015".
Endplay—.006-.014". Total endplay for two rods.
Bearing Adjustment: None. *See "Connecting Rod & Bearings" in DeSoto Special Data.*
Replacement Bearings: Standard, .001", .002", .003", .010", .012" Undersize.
Installing Rods: Rods are chamfered on one side at bearing insert and must be installed with chamfer toward crankshaft fillet.

►*CAUTION*—Rods are **interchangeable,** however when rods are assembled to piston, the assemblies of one engine bank not interchangeable with other bank.

►*CONNECTING ROD BEARING CAP CAUTION*—The "V" slot across one bolt hole of each bearing cap is an oil passage for lubricating the opposite cylinder wall and piston pin. When installing the bearing cap make certain the "V" slot oil passage is toward the top of the engine.

CRANKSHAFT: Five bearing with vibration damper
Journal Diameter—2.3745-2.3755".

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION—Engines with undersize journals identified as follows:*
.010 UNDERSIZE (ALL Main & Connecting Rod Journals)—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.
.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A Maltese Cross (⅜" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of undersize journals are stamped on the machined surface of the center (No. 3) counterweight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).
Bearing Type—Removable, precision type, steel-backed, babbitt-lined. No shims.
Clearance—.0005-.0015".
End Thrust—Taken by No. 3 (center bearing).
Endplay—.002-.007".
Bearing Adjustment: None. *See "Crankshaft & Main Bearings" in DeSoto Special Data.*
Replacement Bearings: Furnished Std. and .001", .002", .003", .010", .012" Undersize.
NOTE—Nos. 1, 2, 4 bearings are interchangeable. No. 3 & 5 bearings not interchangeable.
Crankshaft Oil Seals: *See "Crankshaft & Main Bearings" in DeSoto Special Data.*

CAMSHAFT: Five bearing. Non-adjustable chain
Journal Diameters—(1) 1.998-1.999"; (2) 1.982-1.983"; (3) 1.967-1.968"; (4) 1.951-1.952"; (5) 1.4355-1.4365".
Bearings—Steel-backed, babbitt-lined bushings.
Clearance—.001-.003".
End Thrust: Taken by thrust plate behind camshaft sprocket hub. **Endplay**—.002-.006".
Camshaft Removal: *See "Camshaft & Bearings" in DeSoto Special Data.*

Timing Chain: Width 1⅛". Pitch .375". Lgth. 68 links.
Timing Chain Removal—*See DeSoto Special Data.*

►*TIMING CASE COVER REMOVAL CAUTION—Remove water pump before removing timing case cover. (Cover attaching bolt behind water pump).*

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with the center of the camshaft. Temporarily install camshaft sprocket less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove camshaft sprocket and position it in timing chain and reinstall assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" mark should be in line with shaft centers. Install fuel pump eccentric and camshaft nut. Tighten to 120-130 ft.lbs.

VALVES:	Head Diam.	Stem Diam.	Length
Intake	1 3/4"	.372-.373"	4 51/64"
Exhaust	1 13/32"	.371-.372"	4 3/4"

	Seat Angle	Lift	Stem Clearance
Intake	45°	.361"	.001-.003"
Exhaust	45°	.361"	.002-.004"

Valve Seat Width—.060-.085" (In.). .040-.060" (Ex.).
Exhaust Valve Seat Inserts—*See DeSoto Special Data.*
Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

►*VALVE GRINDING CAUTION*—If the position of the valve in the head has been changed (due to valve or valve seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from valve spring seat in the head should be checked with gauge C-3061. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of hole *with oil hole facing toward intake guide.* Top of guides should be 1" (intake) 1 3/32" (exhaust) from valve seat. Finish ream guides to .374-.375" using tool C-741.
NOTE—If Valve Guide Tool C-3150 is not available, drive guide in, measuring from top of valve seat as follows: **Intake**—1". **Exhaust**—1 3/32".

Valve Springs: Two springs used per valve. Install with closed coil toward cylinder head.
Free Length—(Outer) 2 1/32". (Inner) 1 7/8".

Outer	Spring Pressure	Length
Valve Closed	38-43 lbs.	1 11/16"
Valve Open	100-110 lbs.	1 5/16"
Inner	**Spring Pressure**	**Length**
Valve Closed	12-14 lbs.	1 9/16"
Valve Open	35-40 lbs.	1 3/16"

CONTINUED FROM PRECEDING PAGE

ENGINE

►*CAUTION—Spring ends must be square within 1/16". (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION*—If valves or seats are reground, check installed height of spring. If height of spring is 1 23/32" or greater, install a 1/16" spacer (Part No. 1400482) in the head counterbore to reduce spring height to 1⅝-1 11/16".

►*VALVE SPRING LOAD CAUTION—Hydraulic lifter "pump-up" will restrict engine speed and cause valves to burn if spring loads are not maintained.*

Valve Lifters: Hydraulic type. *TWO types used. See DeSoto Special Data for complete data.* **Diameter**—.9040-.9045". **Clearance**—.0005-.0015".

►*VALVE LIFTER OVERSIZE CAUTION—.008"OVERSIZE Valve lifters used in some engines.* A "DIAMOND" ⅜" high stamped on engine number pad following engine number indicates all lifters .008" O.S.

Rocker Arm Assembly Removal & Installation: *See "Valve System" in DeSoto Special Data.*

VALVE TIMING

Tappet Clearance: No adjustment required.

Valve Timing: See Camshaft Setting above.
Intake Valves—Open 12° BTDC. Close 52° ALDC.
Exhaust Valves—Open 50° BLDC. Close 14° ATDC.
Valve Timing Check—Turn crankshaft until #1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at Zero, turn crankshaft until dial indicator shows that valve has lifted .016". Pointer on chain cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft counter-clockwise until lifter backed down and valve closed, remove spacer from valve stem.

►*CAUTION—Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

►*TIMING CASE COVER REMOVAL CAUTION—One cover attaching bolt located in case back of water pump. Remove water pump before attempting to remove timing cover case.*

LUBRICATION

Engine Oiling System: Pressure to main and connecting rod bearings, timing chain and hydraulic valve lifters (through Optl. "Full-flow" filter).

►*CRANKCASE CAPACITY CAUTION: Later 1952 & 1953 Fluid-Torque Drive Cars have COMBINED engine and torque converter oil system (see below).*
Capacity (exc. Later Fluid-Torque Cars with combined oil system)—5 qts. (1 qt. addtl, when filter changed).
Capacity (Later Fluid-Torque Cars with COMBINED oil system)—12 qts. (1 qt. addtl. when filter changed). *CHANGE OIL TWICE EACH YEAR. See "Chrysler-Fluid Torque Drive" in Transmission Section for Draining & Refilling.*
Normal Oil Pressure—40-65 lbs. at 40-50 MPH.
Oil Pressure Relief Valve—Mounted in oil pump.

►*CLOGGED OIL FILTER CAUTION ("Full-Flow" type)—An oil pressure drop of 15-20 lbs., below normal oil pressure indicates clogged filter. Replace element.*

Oil Filter: *CAUTION—TWO types used:*
Oil Filter ("Shunt-Flow" Type—Std. Equip.)—A portion of the oil from the oil pump is directed through this filter and the remainder flows directly into the engine lubricating system.
Oil Filter ("Full-Flow" Type—Optl. Equip.)—All oil enters lubrication system of engine through filter at full pump pressure. Safety valve in filter opens if filter element is clogged, allowing oil to pass into engine oil system at reduced pressure of 25-45 lbs.
Filter Element ("Shunt-Flow" & "Full-Flow" types)—Install a new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is replaced.

Oil Pump: Rotor type. Mounted on rear bearing cap.
Oil Pump Removal & Overhaul—*See DeSoto Special Data.*

Oil Pressure Gauge: Auto-Lite. (1952) No. 12801A, (1953) No. 13017A. Not electric.

COOLING

Cooling System: Non-pressure type, (under ordinary operating conditions). A pressure vent type radiator cap is used which pressurizes system (up to 7 lbs.) under abnormal conditions where overheating occurs.
Pressure Valve—DeSoto No. 1373136. Radiator Filler Cap. Operates at 7 lbs. (see above).
Capacity—22 qts. One quart additional for heater.

Radiator Removal: *See DeSoto Special Data.*

Water Pump: Packless type with lubricant fitting for bushing lubrication.
See Water Pump Section for complete data.
Fan Belt Adjustment—Adjust fan belt so there is ½" deflection midway between pulleys.

Removal: *Drain cooling system, remove belts and belt pulley.* Remove four bolts attaching pump to manifold and remove pump.
NOTE—Three drain cocks, one on radiator and one on each engine bank.

Thermostat: Bypass type. In cylinder water outlet elbow. Starts to open at 157-162°F. Fully open at 183°F.

Temperature Gauge: Auto-Lite. (1952) No. 12798A, (1953) No. 13016A. Not electric.

CLUTCH

Borg & Beck. Single plate, dry disc type.

Borg & Beck	Model	1952—Assy. No.—1953
Synchro-mesh	10A6	930 1335
Fluid Drive	9.5E	953 1215
Fluid-Torque	9.5E	1221① 1221

①—Model 10E No. 1222 with 1st (12½") Torque Converter.
See Clutch Section for complete data.
Facings—Molded woven asbestos.
10A6—I.D. 6", O.D. 10", Thickness .125".
9.5E—I.D. 6", O.D. 9½", Thickness .125".
10E—I.D. 6½", O.D. 10½", Thickness .125".

Pedal Adjustment: Adjust stopscrew on lower end of pedal, and adjusting nut on link at clutch fork.
Pedal Free Play (At outer end of clutch fork)—1/8" to 3/32". **(At Pedal Pad)**—1".

Over-center Spring Adjustment: Tighten adjusting nut until within ¼" of end of adjusting screw (end of screw visible about half way through nut). Depress clutch pedal 1", adjust until over-center spring on dead-center. *See "Clutch Notes" in DeSoto Special Data.*

Removal (with Tip-Toe Shift): Remove transmission (see TRANSMISSION) and unhook clutch release fork pull-back spring. Disconnect one end of clutch fork rod assembly from fork by removing cotter key, pin, and two washers. Disconnect other end from clutch release bearing torque shaft by removing cotter key, pin, and three washers. (CAUTION—As soon as rod assembly is removed, push clutch pedal until over-center spring brings it to toeboard. This will avoid injury should pedal be pushed in while linkage is disconnected). To remove release bearing from clutch fork, do not force bearing and pull-back springs straight off from fork prongs. Pivot the release bearing away from the fork. Assembly and springs will slide off easily. Remove two screws holding shaft pivot bracket assembly to clutch housing. Remove opposite end of pivot bracket assembly from torque shaft. Place jack under engine oil pan to support engine (block of wood between jack and pan). Remove clutch housing-to-cross member bolts, then cross member-to-frame bolts and drop cross member from frame. Jack engine down about three inches so clutch housing is far enough below floor boards to permit removal of housing capscrews and housing, and remove clutch assembly from clutch driven plate.

FLUID DRIVE

DeSoto—Fluid coupling at rear of engine.
See Transmission Section for complete data.
Slippage Test—*See "Fluid Drive" in Transmission Section for complete data.*

Removal: Remove transmission (see TRANSMISSION and CLUTCH), take off driver flange stud nuts (Tool C-589), lower fluid assembly out of car.

SYNCHRO-MESH TRANSMISSION

Own Make. All helical gear, constant-mesh, synchro-mesh (second and high), sliding gear (low and reverse).
See Transmission Section for complete data.

Transmission Control: Manual steering column shift.
See Transmission Section for complete data.

Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if transmission to be disassembled). Disconnect speedometer cable, hand brake cable, gear shift rods. Remove transmission-to-clutch housing capscrews and nuts, pull unit to rear and down and out from under car. *NOTE*—Use pilot studs for installation.

OVERDRIVE

Warner Type R10. Optl. with Synchro-mesh transmission. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down.
See Transmission Section for complete data.
Solenoid—Delco-Remy No. 1118155.
Governor—Auto-Lite. (1952) No. TGE-4008, (1953) No. TGE-4008 or TGE-4010.
Control Relay—Auto-Lite No. HRT-4001A.
Overdrive Fuse—20 ampere. On relay.

Removal: Same as for Synchro-mesh transmission (above) after control wiring and cable have been disconnected.

AUTOMATIC TRANSMISSION

Hydraulically Operated Type (with Fluid-Drive or Fluid-Torque). Semi-automatic, four speed transmission with hydraulic actuation and electrical control.
See Transmission Section for complete data.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

▷*TRANSMISSION SELECTOR LEVER ADJUSTMENT (To correct difficult shifting): See Transmission Section for complete data.*

▷*TESTING & TROUBLE SHOOTING: See Transmission Section.*

Transmission Control: *See Transmission Section for complete data.*
Governor—Auto-Lite No. TGG-4001.
Kickdown Solenoid—Auto-Lite No. SSS-4003.
Kickdown Switch—Part of carburetor assembly.

Removal: Remove access cover on right rear side of floorboard under front floor mat, disconnect speedometer cable, and governor, solenoid, and interrupter switch wires at transmission. Remove governor and solenoid. Disconnect hand brake cable at brake band, remove cable and cable anchor bracket. Remove brake support, band, adjusting bolt bracket and lever as an assembly. Disconnect front universal (push yoke back), and gear shift rods at transmission, **replace drain plug.** Disconnect transmission mounting bolts, remove from beneath car.

▷*INSTALLATION CAUTION*—Rear face of clutch housing and lower pan must be in correct alignment. Misalignment can cause hard shifting when transmission installed.

▷*OTHER TRANSMISSION SERVICE DATA: See Transmission Section.*

FLUID-TORQUE DRIVE

1952-53 LATER TYPE

Own Make. Four element single stage Torque Converter with SEPARATE oil system (oil reservoir, oil pump, and oil cooler). Torque converter unit cannot be disassembled. Replace assembly if repairs necessary.

Lubrication: Maintain oil level at bottom of filler plug hole. Check every 1000 miles, drain and refill every 20,000 miles.
Capacity—10½ qts. Use Mopar Fluid Drive oil or good grade SAE 10W engine oil.
See Transmission Section for complete data.

Removal: *See "Chrysler Fluid Torque Drive" in Transmission Section for complete data.*

1952 EARLY TYPE

Own Make. Four element single stage Torque Converter with COMBINED oil system (combined with engine oil system—no separate oil reservoir or oil pump). *Torque converter unit cannot be disassembled. Replace assembly if repairs are necessary.*

Lubrication: Change engine and torque converter oil twice each year. *See Engine Lubrication (above) and "Chrysler Fluid-Torque Drive" in Transmission Section for complete data.*

Capacity—12 quarts (add one quart additional when filter element changed). Combined engine crankcase and torque converter capacity.

Removal: *See "Chrysler Fluid-Torque Drive" in Transmission Section for complete data.*

UNIVERSALS

Detroit. Cross-and-yoke type except front universal on Fluid-Torque Cars which is Ball-and-Trunnion.

Propeller Shaft Center Bearing: Used on 8 Pass. Cars. *See "Propeller Shaft" in DeSoto Special Data.*

REAR AXLE

Own Make. Semi-floating, hypoid gear type with Hotchkiss drive. Barrel type differential with adjustable ring gear thrust pad used.
See Rear Axle Section for complete data.

1952 Ratios:	Est. Wgn.	8 Pass.	Others
Synchro-mesh	3.73-1①	3.73-1②	3.54-1③
Auto. Trans. & Fluid-Torque	4.3-1④	3.73-1①	3.73-1⑥
	3.73-1①	3.36-1⑦	3.36-1⑧
1953 Ratios:			
Synchro-mesh	4.1-1⑨	4.1-1⑨	3.73-1⑩
Auto. Trans. & Fluid-Torque	3.91-1⑪	4.1-1⑨	3.73-1⑩
	3.73-1⑩	3.73-1⑩	3.54-1⑫

Optional Ratios

①—3.91-1.
②—4.1-1 & 3.54-1.
③—3.73-1, 4.1-1, 4.3-1.
④—3.91-1 & 4.1-1.
⑥—3.91-1, 3.54-1, 4.1-1.
⑦—3.54-1 & 3.73-1.
⑧—3.36-1, 3.54-1, 3.73-1, 3.91-1, 4.1-1.
⑨—3.91-1 & 4.3-1.
⑩—3.54-1 & 3.91-1.
⑪—4.1-1 & 4.3-1.
⑫—3.36 & 3.73-1.

Ratio Identification—Ratio stamped on underside of carrier on pinion bearing end.
Backlash—.006-.010". Screw adjustment.

Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel, hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in brake support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Axle Shaft Outer Seal: Leather type mounted on brake support (backing plate).
Axle Shaft Oil Seal Servicing—*See "Rear Axle Notes" in DeSoto Special Data.*

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow" hydraulic, direct acting, non-adjustable type. Serviced by replacement.

DeSoto Part No.	Front	Rear
Std. exc. 8 Pass. & Est. Wgn.	1326164	1326165
8 Pass. & Est. Wgn.	1450346	1326166
Heavy Duty	1450041	1450075

FRONT SUSPENSION

Front Suspension: Independent linked parallelogram type with coil springs and direct acting shock absorbers.
See Front Suspension Section for complete data.
Kingpin Inclination—5° to 6½° with 0° camber.
Camber—Neg. ⅜° to Pos. ⅜° (¼-½° higher on left).
Caster—Neg. 1° to Neg. 3° (Neg. 2° preferred).
Toe-In—0" to 1/16". (0" preferred). Adjust both tie rods equally.
Toe-Out on Turns—Inner wheel 21½° plus or minus 1° with outer wheel at 20°.

STEERING GEAR

Own Make (Standard)—3 tooth worm-and-roller.
See "Gemmer 335" steering gear in Steering Gear Section for complete data.

Power Steering (Hydraguide): Optional on all Models. Gemmer hydraulic steering unit. Oil pump on generator operates piston connected to steering cross-shaft. Controlled through a valve block assembly actuated by steering gear shaft.
See Steering Gear Section for complete data.

▷*POWER STEERING "HIGH SPOT" OR "LUMPY" FEELING AT OR NEAR STRAIGHT AHEAD POSITION—See "Gemmer Hydraguide" in Steering Gear Section for complete data.*

▷*FRONT WHEEL SHIMMY CORRECTION (Power Steering Cars): See "Chrysler, DeSoto, Dodge, Plymouth Front Suspension" in Front Suspension Section.*

▷*PRODUCTION & REPLACEMENT PARTS CHANGES FOR IMPROVED PERFORMANCE: See "Gemmer Hydraguide" in Steering Section.*

BRAKES

Service: DeSoto "Safe-Guard" Lockheed hydraulic.
See Brake Section for complete data.
Wheel Cylinders—1⅛" bore. Single acting (front) double acting (rear).
Drums—Centrifuse. Diameter 12".
Lining—Molded asbestos. 2" wide, 13/64" thick.
Length per shoe—12.57".
Clearance—.006" at each end of shoes.
Braking Power—60% (front wheels), 40% (rear wheels).

Hand Brake: Independent type on propeller shaft at rear of transmission. 6" External contracting type (Synchro-mesh Trans. Cars), 7" Internal expanding type (Tip-Toe Shift Trans. Cars).
Drum Diameter—6" (external), 7" (internal).
Lining—Width 2". Thickness 5/32". Two shoes, total length (6" Drum) 15⅜", (7" Drum) 13 1/16".
Clearance (External Type)—.015-.020" around band.
Clearance (Internal Type)—Approximately .010" between shoes and drum.
Adjustment—*See "Hand Brake Notes" in DeSoto Special Data.*

Brake Power Unit: Chrysler Vacu-ease Vacuum Power unit. *See Brake Section for complete data.*

MISC. MECHANICAL

AIR CONDITIONING: Chrysler Airtemp type Optl.
See "Chrysler Air Conditioning" in Miscellaneous Section for complete data.

WINDSHIELD WIPER: Auto-Lite Electric type.
1952 Models—EWJ-4001A (Early), EWJ-4007A (Later).
1953 Models—EME-4001A, EMG-4001A, EMG-4101A, or EMG-4103A (Early), EMG-4102A (Later).

▷*WINDSHIELD WIPER PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION ON EARLY TYPES: See "Auto-Lite Electric Windshield Wiper" in Miscellaneous Section.*

WINDOW REGULATORS: Auto-Lite Electric type. Windows are individually powered.
See Miscellaneous Section for complete data.

CONVERTIBLE TOP CONTROL: Hydro-Lectric type.
See Miscellaneous Section for complete data.

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

MODEL IDENTIFICATION

Model	Model Designation
1954 Firedome	S-19
1955 Fireflite	S-21
1955 Firedome	S-22

SERIAL NUMBER: On metal plate attached to left front door hinge pillar post.

Starting Serial Numbers	Detroit	Los Angeles
S-19	55130001	64017001
S-21	50330001	62045001
S-22	55185001	64022001

ENGINE NUMBER: Stamped on boss on top front side of cylinder block just back of water pump.

►*ENGINE NUMBER LETTERS & MARKS (Following Engine Number): Identified as follows:*

"A"–ALL Cylinders .020" oversize.

"B"–ALL Main & Connecting Rod Bearings .010" undersize.

"AB"–BOTH above conditions exist.

"MALTESE CROSS" (3/8" high)–ONE OR MORE Crankshaft Journals .001" undersize. *See "Connecting Rods & Crankshaft" (below).*

"DIAMOND" (3/8" high)–ALL tappet bodies are .008" oversize.

TUNE-UP

COMPRESSION PRESSURE: 135-165 lbs. at cranking speed of 150 RPM. Maximum variation between cylinders 15 lbs.

VACUUM READING: Steady 18-21" idling.

VALVE TAPPET CLEARANCE: No adjustment required, except when valves are reconditioned (hydraulic).

MANIFOLD HEAT CONTROL: Thermostatically controlled valve in exhaust manifold of right cylinder block. Valve must operate freely. When installing coil, move outer (tongue) end around (clockwise) ¾ turn, hooking end of spring under right (toward front of engine) stop stud. See *"Manifold Heat Control" in DeSoto Special Data*

IGNITION

FIRING ORDER: 1-8-4-3-6-5-7-2.

Cylinders–RIGHT BANK 2-4-6-8. LEFT BANK 1-3-5-7.

SPARK PLUG GAP: .035"

Plugs–Auto-Lite 4S-140 (S-19 & S-22); 4S-165 (S-21). Resistor type, 14mm. Tighten to 30-32 ft. lbs.

COIL: Auto-Lite CR-6015 (1954), CR-6012C (1955). **Ignition Current**–2.25 amps. idling. 5.0 amps. stopped.

DISTRIBUTOR: Auto-Lite. As follows:

Model	Auto-Lite No.
S-19 (Early)	IAZ-4002A
S-19 (Late)	IAZ-4002B
S-21	IAZ-4002D
S-22	IAZ-4002C

Condenser–Auto-Lite IBB-2015R. **Capacity**–.25-.28 microfarad.

Contact Point Set–Auto-Lite IGP-3028ZS.

Breaker Gap–.015-.018". Set maximum gap to .017".

Cam Angle–34° ± 3° with both sets of contacts. Do not adjust contact gap outside limits to obtain specified cam dwell.

Breaker Arm Spring Tension–17-20 ozs.

Rotation–Clockwise viewed from above.

Automatic Advance–IAZ-4002A

S-22 Overdrive	2177S, SA
S-22 Powerflite	2178S, SA

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrel feeds Cyl. 2-3-5-8, LEFT barrel 1-4-6-7.*

Idle Setting–1/4–1-1/4 turns open. Adjust both screws alike. Turn screw out for richer mixture.

Idle Speed–475-500 RPM (With selector lever in neutral).

Float Level–(1954) 9/32" (flat top floats), 7/32" (curved top floats). **(1955)** 7/32". Measure between top of each float and top surface of body casting. Use Gauge T109-239 for correct adjustment (gauge has both 9/32" & 7/32" dimensions). Equalize floats by bending lip on float arm.

Accelerating Pump–Install throttle connector rod in outer hole (medium stroke) of throttle lever and inner hole of pump arm.

Fast Idle: .022-.026" throttle opening (Gauge T109-44) with choke valve tightly closed. Adjust by bending choke connector rod at lower angle.

Unloader Adjustment: With throttle wide open there should be 1/4" clearance (Gauge T109-31) between upper edge of choke valve and inner wall of air horn. Adjust by bending arm on choke trip lever (use tool T109-214).

Automatic Choke Setting: Centered (at index).

Slow Closing Throttle (Dashpot): Loosen locknut and adjust dashpot unit so that dashpot plunger shaft can be moved inward approximately 1/16" with throttle valve tightly closed. Tighten locknut.

Overdrive Kick-down Switch Adjustment: With throttle valves in wide open position, adjust hex nuts on switch to have 1/64-3/64" clearance between kick-down lever and switch stem guide.

Throttle Linkage Adjustment: *See "PowerFlite" Transmission in Transmission Section.*

►*OTHER DATA: See Carter "BBD" in Carburetor Section.*

Fuel Pump Pressure: 3½-5 lbs.

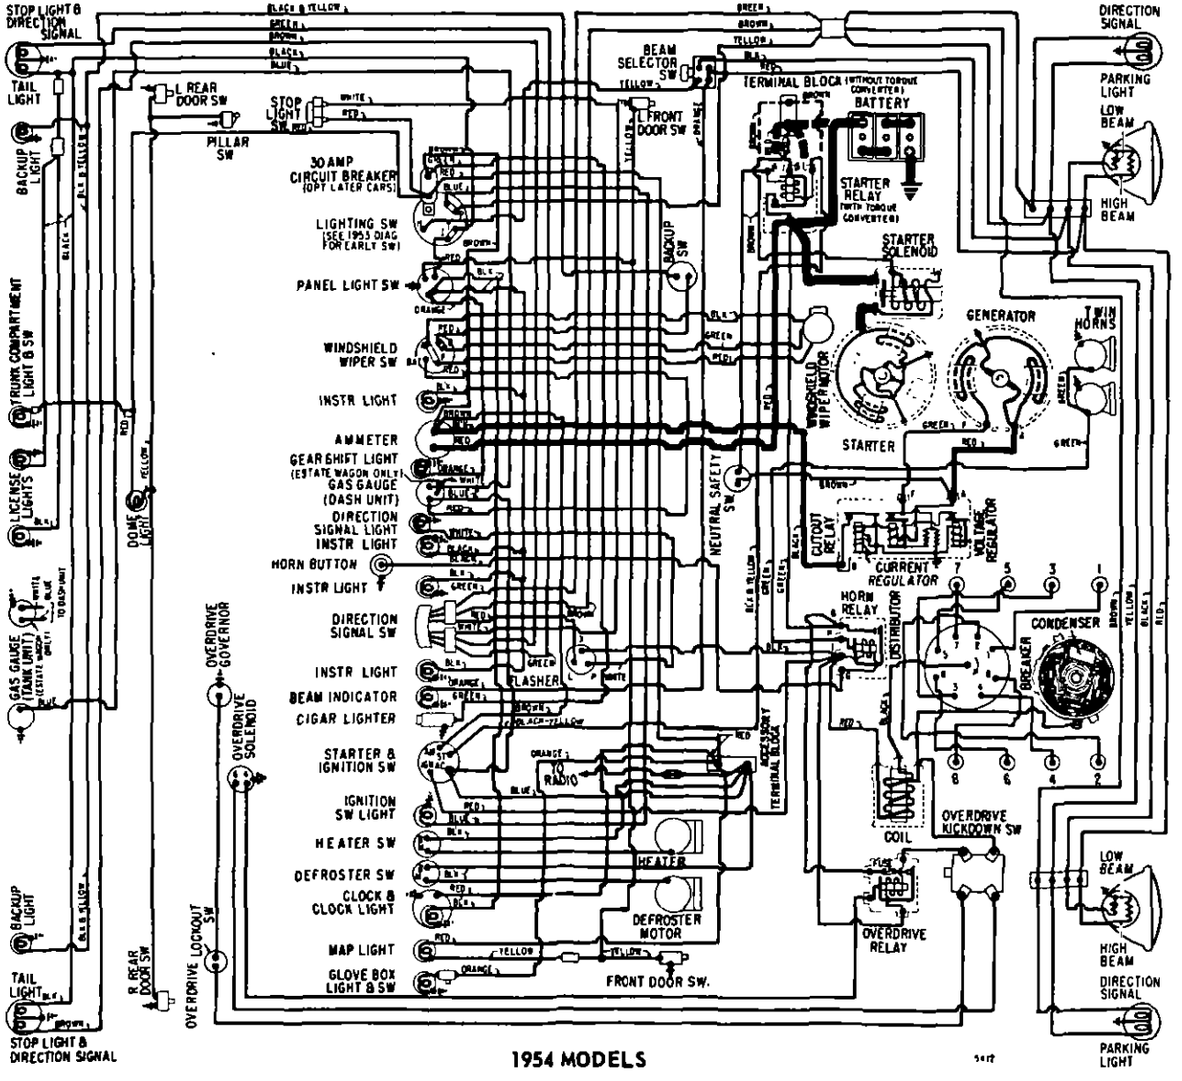
CONTINUED FROM PRECEDING PAGE

CARTER 4-BARREL WCFB No. 2210S

►*MANIFOLD FUEL DISTRIBUTION: Carburetor RIGHT barrels feed Cyl. 2-3-5-8, LEFT barrels 1-4-6-7.*
Idle Setting–1-2 turns open. Set both screws alike. Turn screws out for richer mixture.
Idle Speed–500 RPM. (With selector lever in neutral).
Throttle Linkage Adjustment: *See "PowerFlite" Transmission in Transmission Section*



►*OTHER DATA: See "Carter WCFB 4-Barrel" in Carburetor Section.*
Fuel Pump Pressure: 3½-5 lbs.

CARB. EQUIPMENT

Fuel Pump: Carter M840S (1954 & Early 1955). M2241S (*Late 1955*). Vacuum diaphragm type.
Pressure–3½-5 lbs.
See "Fuel Pumps" in Carburetion Equipment Section.
Dash Unit–**(1954)** Auto-Lite 13392A (Exc. Estate Wagon), 13531A (Estate Wagon). **(1955)** Auto-Lite 13728A.
Tank Unit–**(1954)** Auto-Lite 12617A (Exc. 8-Pass. & Est. Wgn.) 11538A (8-Pass.), 13535A (Est. Wgn.). **(1955)** Auto-Lite 13795A.
See "Fuel Gauges" in Carburetion Equipment Section.

BATTERY

Auto-Lite 2H-120-B or Willard HW-2-120-C. 6 volt, 17 plate, 120 ampere hour rate.

1954 MODELS

Grounded Terminal–Positive.
Engine Ground–Left front of engine.

STARTER

Auto-Lite MCH-6113A (1954), MCL-6304 (1955).
Armature–Auto-Lite MCH-2110.
Drive–Solenoid pinion shift and overrunning clutch.
Rotation–Counter-clockwise at commutator end.
Brush Spring Tension–42-53 ozs. (new brushes).

Performance Data–MCH-6113A

Torque	RPM	Volts	Amperes
0 ft. lbs.	4300	5.0	65
6.0 ft. lbs.	Lock	2.0	335

Performance Data–MCL-6304

Torque	RPM	Volts	Amperes
0 ft. lbs.	4900	5.0	65
8.0 ft. lbs.	Lock	2.0	410

Starting Switch: Auto-Lite SSX-4004. Solenoid pinion shift and starting switch combined. PowerFlite Cars have Neutral Safety Switch and SEPARATE starter relay Auto-Lite HRW-4001A. *See "Starter Controls" in Electrical Equip. Section.*

GENERATOR

1954 MODELS

Auto-Lite Generator No.	Armature No.
GGW-6001J, K (Std.)	GGW-2006F
GGW-6008F, G (Pow. St.)	GGW-2045S
GGU-6006G (Spec. Pow. St.)	GGU-2042F

GGW-6016F (Can. A C & P S)	GGW-2090F

►*SPECIAL GENERATOR NOTE:* GGJ, GGU, and GGW type generators used Performance specifications below apply equally to all generators, within any one of the three groups specified

Performance Data–GGJ

Amperes	Volts	Cold – RPM – Hot
0	6.4	600-700
50	*8.0*	*1400-1600*
55	8.0	1500-1700
		650-750
		1550-1750
		1650-1850

Performance Data–GGU

Amperes	Volts	Cold –R.P.M.– Hot
0	6.4	750-850 / 800-900
40	8.0	1450-1650 / 1650-1850
45	8.0	1550-1750 / 1750-1950

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Performance Data–GGW

Amperes	Volts	Cold –R.P.M.–	Hot
0	6.4	870-970	950-1050
40	8.0	1800-2000	2150-2350
45	8.0	1925-2125	2350-2550

Brush Spring Tension–(GGJ) 34-41 ozs., (GGU, GGW) 35-53 ozs., with brushes

Field Current–(GGJ) 1 4-1 7 amperes, (GGU), 1 4-1 6 amperes, (GGW) 1.6-1.7 amperes, all at 5.0 volts.

Motoring Current–(GGJ) 4 1-4.6 amperes, (GGU) 5.0-6 0 amperes, (GGW) 5.0-5.5 amperes, all at 5.0 volts.

Rotation–Counter-clockwise at commutator end

Belt Adjustment: Approximately ½" slack (when pushed from a straight line midway between pulleys).

REGULATOR

Auto-Lite Regulator No.	Generator
VBF-6001A	GGJ
VBF-6002A (Neg. Gd.)	GGJ
VBE-6001A	GGW
VAV-6001B	GGU
VAV-6002B (Neg. Gd.)	GGU

Cutout Relay

Cuts In–6.3-6.8 volts.

Cuts Out–4.1-4.8 volts.

Contact Gap–.015" minimum.

Air Gap–.031-.034" with contacts open (check at hinge end of core

Voltage Regulator

Setting (VAV, VBF)–7.1-7.4 volts (at 70°), *after 15 minutes operation charging at ½ maximum rate.*

Setting (VBE)–7.1-7.4 volts (at 70°). *Test with regulator in operation at 10 amperes output.*

Air Gap–.048-.052" with contacts just opening.

Checking & Adjusting–*See Electrical Equip. Section.*

Current Regulator

►*SETTING CAUTION: "Temperature Compensated" type. Set to following specifications at 70° F.*

	Test A – Operating Amperes –	Test B
VBE-6001A	52	45 (43-47)
VBF-6001A, 2A	66	55 (53-57)
VAV-6001B, 2B	55	50 (48-52)

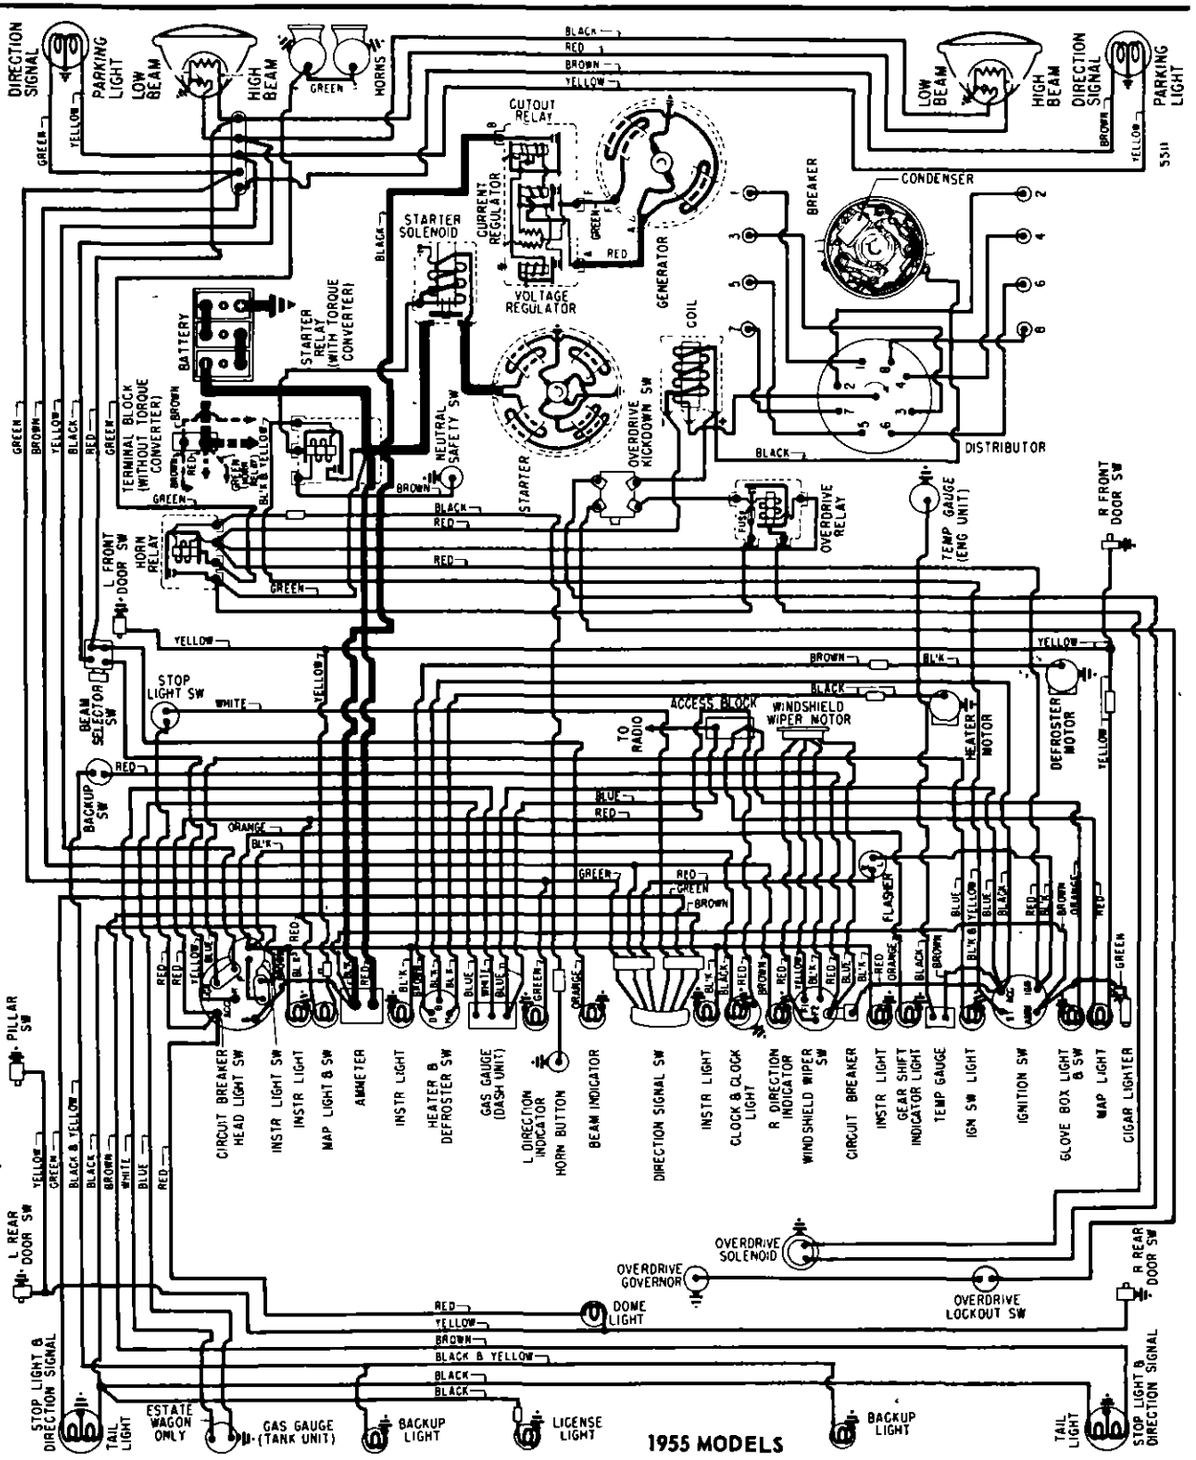
Test A–After 15 minutes operation charging at 1/2 maximum rate.

Test B–After additional 15 minutes operation with current regulator operating (load applied to hold voltage down to 6.7-6.9 volts (VAV, VBE), 6.7-7.0 volts (VBF)

Air Gap–.048-.052" with contacts just opening.

Checking & Adjusting–*See Electrical Equip. Section.*

MISC. ELECTRICAL



Headlamps: Sealed Beam. *See Electrical Equip. Section.*

Direction Signal: *See Electrical Equip. Section.*

►*IGNITION-STARTER SWITCH CAUTION: When installing accessories, use accessory terminal* **only** *on ignition-starter switch and* **not** *the ammeter terminal*

Lighting & Panel Switch Removal: Switches held in instrument panel by a common threaded sleeve and hex nut. Panel lamp knob indexes on its switch shaft by means of lugs in knob and slots in shaft. Headlamp

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

knob is held on its shaft by means of a recessed hex screw.

Stop Light Switch Location: On forward end of master cylinder.

CIRCUIT BREAKERS: (1954)—One 30 amps. circuit breaker located in headlight switch protects all lighting circuits. *NOTE—Some early 1954 models used the same headlight switch (with three circuit breakers) as 1953 models. See 1953 Wiring Diagram.*

CIRCUIT BREAKERS: (1955)—Three circuit breakers located in headlight switch as follows:

25 Amperes—Protects headlights

10 Amperes—Protects tail lights, license lights, parking, clock, and instrument panel lights.

10 Amperes—Protects stop, map, dome, glove box, courtesy and trunk compartment lights.

FUSES: Clock—3 amperes. In clock lead wire.

Radio—14 ampere. Behind instrument panel.

Overdrive—20 amperes. On overdrive relay.

HORNS: (1954)—Auto-Lite HAB-4659 (Low Pitch), HAB-4664 (High Pitch). **(1955)**—HAB-4704 (High Pitch), HAB-4703 (Low Pitch).

Horn Relay: HRL-4104 (1954), RAF-4001 (1955).

ENGINE

►*AIR CONDITIONED CAR SERVICE CAUTION: Before disconnecting any part of air conditioning equipment or lines for access to engine, see "Air Conditioning Service Cautions" in Miscellaneous Section.*

ENGINE SPECIFICATIONS: 90° V8 (All Models).

Model	Bore	Stroke	Displacement
S19 (1954)	3 5/8"	3 11/32"	276.1 cu. ins.
S21, S22 (1955)	3.720"	3.344"	291 cu. ins.

Model	Compr. Ratio	Rated HP	Dev. HP
S19 (1954)	7.5-1	42.05	170 at 4400
S21 (1955)	7.5-1	44.3	200 at 4400
S22 (1955)	7.5-1	44.3	185 at 4400

Compression & Vacuum Reading—*See TUNE-UP.*

ENGINE REMOVAL: *See DeSoto Special Data.*

OIL PAN REMOVAL: Remove oil level indicator, drain engine oil. Remove starting motor and exhaust pipe cross-over. Remove oil pan attaching bolts, and drop pan straight down and away from engine.

CYLINDER HEAD: *See "Cylinder Head & Manifolds" in DeSoto Special Data.*

TIGHTENING TORQUES: *See "Tightening Specifications" in DeSoto Special Data.*

PISTONS

Aluminum alloy, T-slot, steel band, slipper type, cam ground, and tin-plated.

►*CYLINDER BORE OVERSIZE CAUTION: Engines with letter "A" following engine number indicates that cylinder bores are .020" oversize.*

Weight—18.3 ozs. (stripped).

Removal—Pistons and rods removed from above.

Fitting New Pistons: .001" clearance at top desired. Check piston size with micrometer across large diameter at bottom of skirt. Insert .002" x 1/2" feeler between cylinder wall and piston (piston inverted, and pin removed) on side opposite slot. Pull to withdraw feeler should be 5-12 lbs. at 70° F.

►*NOTE*— Cylinder recondition limits .0005" taper and .0005" out-of-round. Badly scored bores or with taper over .020" or out-of-round over .005" require reboring and honing to above limits.

Replacement Pistons: Std., .005", .020", .030", .040", .060" oversize.

Installing Pistons: Install with piston slot toward left side of engine (thrust side).

►*PISTON INSTALLATION CAUTION: Pistons must be assembled to the rods on the right hand cylinder bank (2-4-6-8) with the "V" slot in the rod aligned with the "T" slot in the piston. On left hand cylinder bank (1-3-5-7), assemble with "V" slot in rod opposite the "T" slot in piston.*

PISTON PINS

Floating type with lock ring at each end.

Diameter—.9216-.9218". **Length**—3-1/16".

NOTE—Piston pin is offset in piston toward right side of engine.

Clearance in Piston—.0000-.0005" or thumb press fit at 70° F.

Clearance in Rod—.0001-.0004". Selective fit.

Replacement Pins: Standard, .003", .008" oversize.

NOTE—Fitted pins are furnished with new pistons.

PISTON RINGS

Ring	Width	End Gap	Side Clearance
Compr. (#1)	.0775-.0780"	.010-.020"	.002-.0035"
Compr. (#2)	.0775-.0780"	.010-.020"	.0015-.003"
Oil (#3)	.1860-.1865"	.010-.020"	.001-.003"

Replacement Rings: Furnished in sets Standard, .010", .020", .030", 040", .060" oversize.

Installing Rings: "Top" mark on each compression ring is to top of piston when ring is installed.

CONNECTING RODS

Length (Center to Center)—6-1/16". **Weight**—22.8 ozs.

Crankpin Journal Diameter—2.0615-2.0625".

Maximum out-of-round and taper limits—.001".

Lower Bearings—Removable, precision type, thin babbitt on steel. No shims.

►*JOURNAL DIAMETER CAUTION: (ONE OR MORE Journals Machined UNDERSIZE)—See "CRANKSHAFT" below.*

Clearance—.0005-.0015" desired. Maximum—.0025".

Endplay—.006-.014".

Bearing Adjustment—None. Replace bearings.

Replacement Bearings: Std., .001", .002", .003", .010", .012" undersize.

Installing Rods: *See "Pistons (Installation)" above.* Rods are chamfered on one side at bearing insert and must be installed with chamfer toward crankshaft fillet. "V" slot across one bolt hole of each bearing cap is an oil passage for lubricating the opposite cylinder wall and piston pin. When installing bearing cap make certain "V" slot oil passage is toward top of engine.

►*CAUTION:* Rods are **interchangeable.** However, when rods are assembled to piston, the assemblies of one engine bank are **not interchangeable** with the other bank.

CRANKSHAFT

Journal Diameter—2.3745-2.3755". 5 bearings.

►*CRANKSHAFT JOURNAL UNDERSIZE CAUTION: Engines with undersize journals identified as follows:*

.010" UNDERSIZE (Main & Connecting Rod Journals)—Letter "B" following engine number indicates that ALL Main & Connecting Rod Journals are .010" undersize.

.001" UNDERSIZE (ONE OR MORE Main & Connecting Rod Journals)—A "Maltese Cross" (3/8" high) stamped on the machined surface following the engine number indicates that ONE OR MORE crankshaft main and connecting rod journals are machined .001" UNDERSIZE. The position of the undersize journals are stamped on the machined surface of the center (#3) counterweight in the following manner: "R" indicates connecting rod journal, "M" indicates main bearing journal. The number following letter indicates main or connecting rod journal number (counting from front of engine).

Bearings—Removable, precision type, steel-backed, babbitt lined. No shims.

Clearance—.0005-.0015".

Replacement Bearings: Std., .001", .002", .003", .010", .012" undersize. Upper and lower halves of bearings Nos. 1, 2, and 4 are alike and interchangeable; Upper No. 3 is interchangeable with Lower No. 3; Upper & Lower No. 5 are **not interchangeable.**

End Thrust: Taken by center (#3) main Bearing.

Endplay—.002-.007".

Crankshaft Rear Main Bearing Oil Seal: *See "Crankshaft & Main Bearings" in DeSoto Special Data.*

Crankshaft Front Oil Seal: *See "Engine Front Cover" in DeSoto Special Data.*

CAMSHAFT

Journal Diameters—**(1)** 1.998-1.999", **(2)** 1.982-1.983", **(3)** 1.967-1.968", **(4)** 1.951-1.952", **(5)** 1.4355-1.4365".

Bearings—Removable, steel-backed, babbitt lined bushings.

Clearance—.001-.003"

End Thrust: Taken by thrust plate behind camshaft sprocket hub.

Endplay—.002-.006".

Timing Chain: Width—1-1/8". Pitch—.375". Length—68 links.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Camshaft Setting: Place crankshaft "Zero" mark exactly in line with center of camshaft. Temporarily install camshaft sprocket less chain, and line up dowel pin hole in hub with sprocket dowel pin hole, while at the same time positioning the camshaft "Zero" mark exactly in line with center of crankshaft. (Use straightedge to check accuracy of alignment). Remove camshaft sprocket and position it in timing chain and reinstall assembly, positioning timing chain on crankshaft sprocket. When properly installed, "Zero" mark should be in line with shaft centers. Install fuel pump eccentric and camshaft nut. Tighten to 120-130 ft. lbs.

Camshaft Removal: *See "Camshaft & Bearings" in DeSoto Special Data.*

Engine Front Cover (Removal & Installation): *See "Engine Front Cover" in DeSoto Special Data.*

Engine Front Cover Oil Seal (Crankshaft Front Seal): *See "Engine Front Cover" in DeSoto Special Data.*

VALVES

Tappet Clearance: None in service (hydraulic).

Valves	Head Diameter	Stem Diameter	Length
1954 Intake	1.75"	.372-.373"	4 55/64"
1955 Intake	1.84"	.372-.373"	4.81"
1954 Exhaust	1.407"	.371-.372"	4 13/16"
1955 Exhaust	1.50"	.371-.372"	4.80"

Valves	Seat Angle	Lift	Stem Clearance
Intake	45°	.361"	.001-.003"
Exhaust	45°	.361"	.002-.004"

Valve Seat Width—1/16-3/32" (In.), 3/64-1/16" (Ex.)

►*VALVE SEAT INSERT CAUTION: See "Valve System" in DeSoto Special Data.*

Intake Valve Stem Oil Seal—Seal ring installed in bore of spring seat on all intake valves (install rings after assembling springs and seat but before installing valve locks).

►*VALVE GRINDING CAUTION:* If the position of the valve in the head has been changed (due to valve or valve seat grinding) so as to shorten the operating length by 1/32" or more from its factory installed position, the dimension from valve spring seat in the head to valve tip should be checked with gauge C-3061. If the valve tip exceeds the maximum allowable on the gauge, grind the tip as necessary (do not go below the minimum allowable on the gauge). Improper valve clearance at high speed will result if this condition is not corrected.

Valve Springs: Two springs used for each valve. Install with closed coil toward cylinder head.

Valve Spring Specifications

1954 Models

Valve	Inner Spring Lbs. Press.	Inner Spring Length	Outer Spring Lbs. Press.	Outer Spring Length
Closed	13.	1.5625"	40.5	1.6875"
Open	37.5	1.875"	105	1.3125"

1955 Models

Valve	Lbs. Press.	Length	Lbs. Press	Length
Closed	22	1.56"	28	1.69"
Open	42	1.19"	92	1.31"

►*CAUTION: Spring ends must be square within 1/16". (Use steel square on surface plate—revolve spring against square noting alignment of top coil).*

►*VALVE SPRING HEIGHT CAUTION:* If valves or seats are reground, check **installed** height of spring. If height of spring is 1-23/32" or greater, install a 1/16" spacer (Part No. 1400482) in the head counterbore to bring spring height back to normal 1-5/8—1-11/16".

►*VALVE SPRING LOAD CAUTION: Hydraulic lifter "pump-up" will restrict engine speed and cause valves to burn if spring loads are not maintained.*

Valve Guides: Remove old guides by driving them out through top of head using tool C-3150. Install new guides by driving them up through valve port opening. To install INTAKE valve guide, place a steel scale across combustion chamber and drive valve guide in until punch mark on tool C-3150 is flush with face of cylinder head. To install EXHAUST valve guide, drive it in until it is flush with the machined face of the hole. Ream guide to .374-.375" with tool C-741.

►*CAUTION: Oil hole in top of exhaust guide must face up. Oil hole must face toward intake guide.*

►*VALVE GUIDE INSTALLATION NOTE:* If Valve Guide Tool C-3150 is not available, drive guide in, measuring from top of valve seat as follows: **Intake**—1". **Exhaust**—1 3/32".

Hydraulic Valve Lifters: Diameter—.9040-.9045". **Clearance**—.0005-0015".

►*VALVE LIFTER OVERSIZE CAUTION: .008" OVERSIZE Valve lifters used on some engines.* A "DIAMOND" 3/8" high stamped on engine number pad following engine number indicates that all lifters are .008" oversize.

Lifter Overhaul & Testing—*See "Valve System" in DeSoto Special Data.*

Rocker Arm Assembly: *See "Valve System" in DeSoto Special Data.*

VALVE TIMING

See "Camshaft Setting" under CAMSHAFT above.

S19 & S21 Valve Timing

Intake Valves—Open 12° BTDC. Close 52° ALDC.
Exhaust Valves—Open 50° BLDC. Close 14° ATDC.

S22 Valve Timing

Intake Valves—Open 4° BTDC. Close 76° ALDC.
Exhaust Valves—Open 54° BLDC. Close 10° ATDC.

Valve Timing Check—Turn crankshaft until #1 intake valve closed. Insert a .210" spacer between rocker arm and #1 intake valve stem, install dial indicator over this valve so that pointer contacts valve spring at a right angle. Wait until seat stops moving (indicating that plunger bottomed so that lifter is solid). Set dial indicator at Zero, turn crankshaft until dial indicator shows that valve has lifted .016". Pointer on chain cover should indicate between 5° BTDC to 7° ATDC if timing correct. Then turn crankshaft **counterclockwise** until lifter backed down and valve closed, remove spacer from valve stem.

►*CAUTION: Do not turn crankshaft further than indicated above, which might bottom spring and damage valve mechanism.*

OILING SYSTEM

Crankcase Capacity: 5 qts. (refill). Add one additional quart if filter changed.

Normal Oil Pressure: 40-65 lbs. with warm oil operating at 40-50 MPH.

Oil Pressure Regulator—In pump. Not adjustable.

Oil Pressure Gauge—Auto-Lite 13389A (1954); 13727A (1955).

Oil Pump: Rotary type. In crankcase at rear end. Mounted on rear bearing cap.

Overhaul—*See "Oiling System" in DeSoto Special Data.*

Priming Oil Pump (After Overhaul)—Before installing oil pump and strainer to rear main bearing cap, prime pump.

Oil Filter: Shunt type. A portion of oil from oil pump is directed through this filter and the remainder flows directly into engine lubricating system.

Filter Element—Install new filter element and cover gasket at 5000 mile intervals (or earlier if required). Change oil at same time filter element is replaced.

Crankcase Ventilation: Filter element in oil filler cap and air cleaner in crankcase ventilation outlet pipe.

COOLING

Water Capacity: 22 quarts (23 with heater).

Pressure Valve: DeSoto 1373136. Radiator filler cap. Opens at 7 lbs. 14 lb. type used with Air Cond.

Thermostat: By-pass type in cylinder head water outlet. Starts to open at 157-162° F.

Water Pump: Packless type. Grease fitting for lubrication. *See Water Pump Section for data.*

Pump Removal—Drain cooling system, remove fan belts and belt pulley. Remove four bolts attaching pump to water manifold and remove pump.

Temperature Gauge: Auto-Lite 13390A (1954); 13730A (1955).

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

CLUTCH

Borg & Beck	Model	Assy.No.	Disc No.
Std. & O.D. (S19, S21)	10A6	361353	382349
Std. & O.D. (S22)	10A7	361368	382346
Heavy Duty (S22)	11A6	361330	381850

See "Borg & Beck" Clutches in Clutch Section.

Pedal Adjustment: Adjust fork rod to secure 1/16" free movement of clutch fork outer end This adjustment will provide necessary 1" free play at pedal.

Over-Center Spring Adjustment: (*NOTE*—Over-center spring located above brake pedal and attached to pedal mounting bracket). Adjustment of over-center spring should not be disturbed.

Removal: Remove transmission (See Synchro-mesh Transmission). Remove clutch housing pan. Pull out clutch release bearing and sleeve. Mark clutch cover and flywheel. Remove cap screws, which hold clutch cover to flywheel, loosening each cap screw a few turns (in succession) until cover is free. Remove clutch assembly and clutch disc assembly from clutch housing.

SYNCHRO-MESH TRANSMISSION

Own. *See "DeSoto Synchro-mesh" Transmission in Transmission Section.*

Transmission Controls: *See "Transmission Controls" in Transmission Section.*

Removal: Jack up front end of car, disconnect front universal (loosen companion flange nut if transmission to be disassembled). Disconnect speedometer cable, hand brake cable, gear shift rods. Remove nuts holding transmission to clutch housing Then remove transmission by pulling it back, down, and out of car.

►*1954 8 PASS. CAR NOTE: See DeSoto Special Data for propeller shaft center bearing removal.*

OVERDRIVE

Warner Type R10. Planetary gear type with solenoid operation and accelerator pedal controlled kick-down. *See "Warner R10" Overdrive in Transmission Section.*

Overdrive Controls: *See "Overdrive Controls" in Transmission Section.*

Removal: Same as for Synchro-mesh Transmission (above) after control wiring and cable have been disconnected.

POWERFLITE TRANSMISSION

Torque converter and hydraulically operated planetary transmission.
See "PowerFlite" Transmission in Transmission Section.

►*PRODUCTION CHANGES & REPLACEMENT PARTS CAUTION: See "PowerFlite" Transmission in Transmission Section.*

►*TESTING & TROUBLE SHOOTING: See "PowerFlite" Transmission in Transmission Section.*

Lubrication: Check fluid level every 1000 miles, drain and refill every 20,000 miles with Automatic Transmission Fluid (Type A).

Checking Fluid Level—Apply hand brake, place selector lever in neutral position. Allow engine to idle until normal operating temperature is reached. Shift selector lever through all ranges. Shift selector lever back to neutral and add Automatic Transmission Fluid (Type A) to bring level to full mark on oil level indicator.

Oil Filler Tube (Location)—At right rear of engine compartment.

►*CAUTION:* To prevent dirt from entering transmission make sure oil level indicator is properly seated in filler tube.

►*OTHER "POWERFLITE" SERVICE DATA: See "PowerFlite" Transmission in Transmission Section.*

UNIVERSALS

Detroit. Ball & Trunnion type (Exc. S22 Est.Wgn.) Ball & Trunnion—front, Cross type—rear (S22 Est. Wgn.).

REAR AXLE

Own. Barrel Type. Semi-floating, Hypoid gear with Hotchkiss Drive.
See "DeSoto Hypoid" in Rear Axle Section.

Rear Axle Ratios

Backlash—.006-.010"

Carrier Removal: Disconnect rear universal, remove axle shafts (see below), take out carrier capscrews, lift off carrier assembly.

Axle Shaft Removal: Remove wheel hub, and drum assembly (use screw type hub puller—Tool C-675), block brake pedal, disconnect brake line at wheel cylinder, remove axle shaft key, install sleeve (Tool C-757) in oil seal, remove brake support (oil seal mounted in brake support), pull shaft and bearing (use C-499 puller). NOTE—Use puller C-293-C to remove bearing from shaft, puller C-748 or C-358 to remove inner oil seal, drift C-241 to install seal.

Wheel Bearing Adjustment: Shims between backing plate and axle housing. With wheel hub removed, check endplay with dial indicator. To adjust, remove backing plate (see above), add or remove shims (furnished .010", .0125", .015", .030" thick) equally at both wheels. **Endplay**—.003-.008".

SHOCK ABSORBERS

"Oriflow". Direct acting, hydraulic type. Serviced by replacement.

Car Model	DeSoto Part No. Front	Rear
1954 4-Dr. & Cl. Cpe	1450630	1450633

①—Except 8-Pass. & Estate Wagon.
②—8-Pass. & Estate Wagon.

FRONT SUSPENSION

Independent. Coil springs and direct acting shock absorbers.
See "DeSoto" in Front Suspension Section.

Kingpin Inclination—5-6½°.
Caster (1954)—Neg. 1° to Neg. 3° (Neg. 2° preferred).
Caster (1955)—0° to Neg. 2° (0° preferred with Power Steering. 2° preferred with Manual Steering).
Camber (1954)—Pos. 3/8° to Neg. 3/8°. Left side ¼° to ½° higher than right side within these limits.
Camber (1955)—Pos. ¼°±3/8° (Pos. ½° left side, 0° right side preferred).
Toe-In—0" to 1/16" (0" preferred).
Toe-Out on Turns—Inner wheel 21½°±1° with outer wheel at 20°.

STEERING

Manual Steering Gear: Gemmer. Worm and three-tooth roller.
See "Gemmer Worm & Roller" in Steering Section.

Power Steering (Early 1954): Gemmer Hydraguide (Internal Oil Passage Type). *See "Gemmer Hydraguide (Chrysler & DeSoto) Internal Passage Type" in Steering Section.*

Power Steering (Late 1954 & 1955): Co-axial type. *See "Chrysler, DeSoto, Dodge, Plymouth Co-axial" in Steering Section.*

Steering Linkage: *See "Steering Linkage" in Steering Section.*

Steering Wheel & Horn Button Removal: *See "Gemmer Worm & Roller" in Steering Section.*

Steering Gear Removal: *See "Gemmer Worm & Roller" in Steering Section.*

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

BRAKES

Service: DeSoto "Safe-Guard" Lockheed hydraulic. *See "DeSoto Safe-Guard" in Brake Section.*

Drums–Centrifuse. Diameter 12".

Wheel Cylinder Diameter–1-1/8" bore. Single acting (front), double acting (rear wheels).

Replacement Linings & Shoes–Linings or shoes with linings are furnished Standard and .030" oversize.

Lining–Molded asbestos (bonded to shoe). Length–12.57" per shoe. Width–2". Thickness–13/64".

Braking Power–60% Front. 40% Rear.

Clearance–.006" at each end of all shoes.

Master Cylinder: *On engine* side of dash panel opposite base of brake pedal.

Checking Fluid–Filler plug at top of master cylinder (on dash panel in engine compartment)

Removal–Disconnect pushrod. Disconnect brake line tubes at master cylinder fittings. Remove four stud nuts from studs, remove master cylinder.

Power Brakes: Combination vacuum power unit and master cylinder. Unit mounted on engine side of firewall and replaces regular master cylinder. *See "DeSoto Power Unit" in Brake Section.*

Removal of Power Unit–Same as for standard master cylinder, after hydraulic lines and stop light wires removed

Parking Brake: On shaft at rear of transmission. 6" external contracting type used with Synchro-mesh Trans. 7" internal expanding type used with PowerFlite.

Adjustment–*See "Hand Brake Notes" in DeSoto Special Data.*

Lining–	Width	Thickness	Length
6" Ext. Type	2"	5/32"	15-3/8"
7" Int. Type	2"	5/32"	13-1/16"

Clearance (External Type)– .015-.020" around band. **Internal Type**–Adjusting nut on shoe link backed off one notch from point where shoes just drag against drum, approximately .010".

MISC. MECHANICAL

Windshield Wipers: Auto-Lite EMG-4102A (1954), EMZ-4001 (1955). Electric type. *See "Auto-Lite Windshield Wipers" in Miscellaneous Section.*

Air Conditioning: DeSoto "Airtemp". *See "Airtemp" Air Conditioning in Miscellaneous Section.*

Power Window Regulators: *Electric type. Reversible type* motor in each window. Controlled by door switch and master control switch. *See "Electric Window Regulators" in Miscellaneous Section.*

Power Seat Adjuster: Electric type. *See "Power Seat Adjusters" in Miscellaneous Section.*

Convertible Top Control: Electrical-hydraulic type. *See "Power Top Control" in Miscellaneous Section.*

ENGINE

6 CYL. MODELS

ENGINE ASSEMBLY REMOVAL: Engine, clutch, and transmission assembly can be removed from car as an assembly, as follows: Remove hood and radiator core. Disconnect propeller shaft at transmission. Disconnect transmission controls at transmission (wires to overdrive controls), and speedometer cable. Disconnect clutch linkage at clutch housing. Disconnect fuel pump flexible line at pump, throttle and choke controls at carburetor, heat indicator tube at head. Disconnect wires from generator and starter, coil and distributor. Disconnect exhaust pipe at manifold. Disconnect oil gauge tube at flexible line. Remove crankcase breather pipe, and the front and rear engine support bolts. Disconnect hand brake linkage. Remove carburetor air cleaner. Connect hoist to engine and lift assembly out of chassis.

V8 MODELS

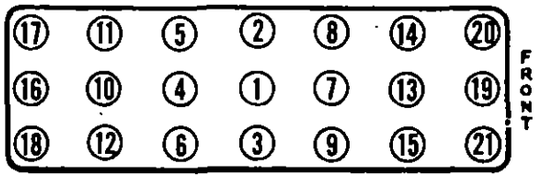
ENGINE ASSEMBLY REMOVAL: Drain cooling system (both cylinder bank drain cocks and radiator). Disconnect propeller shaft at transmission and disconnect wires and linkage at transmission and clutch. Remove exhaust pipes, hood, and battery. Disconnect the usual items under hood such as fuel lines, radiator hoses, wires, etc. If using engine lifting fixture C-3162, remove carburetor assembly after disconnecting integral choke tube, fuel lines as listed above.. Remove radiator shroud (if so equipped). Attach lifting fixture to carburetor flange studs on intake manifold, and hook chain hoist to eyebolt. Place a jack under transmission to relieve weight. Then remove engine rear support mounting bolts and cross-member. Then remove engine front support mounting bolts. Lower jack at transmission and remove from under car. Raise engine and at the same time, work engine out of chassis toward the left front fender.

OIL PAN

6 CYL. MODELS

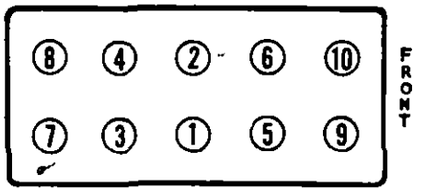
OIL PAN REMOVAL: Drain oil, replace oil pan drain plug. Remove clutch cover housing underpan to avoid damaging oil pan gaskets or underpan dust shield. Remove oil level indicator, drop oil pan to tie rod. Pan can then be removed by reaching in under crankcase and raising oil strainer to clear baffle while sliding pan out to rear.

Installation—(6 Cylinder Engines)—When installing new gaskets, end gaskets should extend ¼" to ⅛" above level of oil pan (these ends must not be cut off). Side gaskets installed with ends resting on top of protruding end gaskets. Gaskets will be compressed into place when oil pan screws tightened.



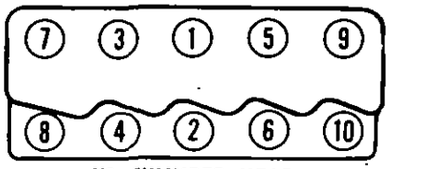
CYLINDER HEAD & MANIFOLD

CYLINDER HEAD INSTALLATION: Use Torque Indicating Wrench to tighten cylinder head bolt nuts and capscrews, tighten in correct sequence as shown in diagram for each car.



Tightening Torque—See Tightening (Torque Wrench) Specifications above

6 CYL. MODELS



CYLINDER HEAD INSTALLATION: When installing cylinder head, use new gasket. Coat threads of capscrews with sealer except the three screws that lead into intake manifold ports. If sealer used on these capscrews, there is a possibility that it will be drawn into carburetor or valves. Use torque indicating wrench to tighten cylinder head bolt nuts and capscrews. Tighten in sequence shown in diagram.

6 CYL. ENGINE CYLINDER HEAD

V8 CYLINDER HEAD
(DOUBLE ROCKER ARM SHAFT ENGINE)

V8 CYLINDER HEAD
(SINGLE ROCKER ARM SHAFT ENGINE)

6 CYL. MODELS

INTAKE & EXHAUST MANIFOLD INSTALLATION: Install the new gasket between intake and exhaust manifold (make sure that heat valve is free and operates freely), and insert the four bolts through exhaust manifold and into intake manifold. Draw bolts down snug but DO NOT TIGHTEN. Install thermostatic coil spring and counter-weight. Install manifold-to-engine block gaskets and install assembled manifolds. While holding manifold and gaskets evenly against engine block, install long center bolts and draw down snugly. (If bolts show signs of water leakage, coat threads with suitable sealer). Install remaining washer and nuts. *(CAUTION*—Be sure to install the four conical, brass washers and nuts on the extreme ends of exhaust manifold). Tighten manifold nuts and bolts, starting from center and working out towards ends, to 15-20 ft. lbs. torque. Tighten the four bolts holding exhaust manifold to intake manifold.

V8 MODELS

CYLINDER HEAD INSTALLATION (Single Rocker Shaft): Before cylinder head removed, remove rocker shaft assembly. Slide out push rods and place them in sequence in a suitable rack in order that each push rod can be reinstalled in its original position. When installing cylinder head, use new gaskets. Make sure all holes are punched out. Be certain cylinder head enters both dowel guide pins in cylinder block. Tighten cylinder head bolts in sequence shown in diagram. Slide push rods in position. Lower rocker shaft assembly down on two locating studs. Install all washers, nuts and bolts. *CAUTION*—Extreme caution must be exercised when tightening rocker shaft bolts and nuts so that hy-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

draulic tappets have time to bleed down to their operating length. If tappets are forced down too rapidly, damage to push rods, tappet bodies or rocker arms will result.

V8 MODELS

MANIFOLD HEAT CONTROL VALVE: Attached to right cylinder block exhaust manifold, and can be removed and repaired without removing manifold.

Removal: Remove the two exhaust manifold flange bolts and nuts and apply pressure to exhaust pipe to separate and remove the heat control valve. Remove counter-weight tightening bolt and nut and remove counter-weight. Remove thermostatic spring, spacer washer, then remove horseshoe lock and remove the anti-rattle spring.

►*CAUTION—Do not operate the engine without heat control valve in the manifold.*

Installation: Install the anti-rattle spring and horseshoe lock, and secure lock to shaft by squeezing end of horseshoe lock together. Check valve and shaft for free movement. Install spacer washer and place inner tongue of coil spring in shaft slot with outer tongue of spring toward forward side of valve and in a down position. Install bumpers on each side of counter-weight, and insert the counter-weight shaft key into counter-weight, securing it in position with the lock bolt. Hold heat control valve in the open position, and move the outer end of thermostatic spring around and up ¾ of a turn, hooking end of spring under forward stop screw. Hold valve in closed position and install counter-weight assembly on shaft. Center butterfly valve in valve body and line up bumpers to clear stop pin, then press counter-weight all the way onto the shaft, with the anti-rattle spring adjusted so that when the valve shaft is pulled up against anti-rattle spring there will be about 1/16" tensional drag on the shaft. Install manifold heat control valve assembly on exhaust manifold. Check assembly for free operation.

ORIGINAL BORE & PISTONS

ALL MODELS

ORIGINAL PISTON & CYLINDER BORE SIZES: Original production (new engine) piston and bore sizes indicated by letter located as follows:

Piston Size—Letter stamped on piston head.

Bore Size—Letter stamped on pad on distributor side of engine at top of block. Do not confuse this letter with "Special Standard" size letter indicating oversize bore.

"Special Standard" Size Bore—Letter "A" or "AB" following engine number indicates engine has .020" oversize standard cylinder bore.

NOTE—When measuring piston diameter take readings at right angles to the pin holes and ¾" from bottom of skirt.

PISTONS

ALL MODELS

REPLACEMENT PISTONS: Finished (Aluminum Alloy) Pistons—Furnished in standard sizes and .005", .020", .030", .040", .060" oversize, for all models.

Semi-Finished (Aluminum Alloy) Pistons—These pistons furnished in two sizes (1) For cylinder bores from standard to .023" oversize. (2) For cylinder bores .025" to .060" oversize. Pistons are finished (head and ring grooves) except for skirt. Pistons must be finished on cam grinding equipment. Do not finish pistons circular. Skirt is elliptical (.010-.014") with smaller diameter cross pin bosses than across thrust faces, and piston is tapered (.0005-.0015"), with smaller diameter at top of piston.

IMPORTANT—Use same type piston when replacing only a partial set. All pistons in engine must be of the same type.

PISTON RINGS

ALL MODELS

REPLACEMENT PISTON RINGS: Three types of piston ring sets furnished by car manufacturer for service replacement as follows:

Mopar Oil Master Ring Sets—These rings designed to be installed in cylinders with walls tapered .005" to .030" when cylinder walls not to be reconditioned. No. 4 oil ring is special 4-piece type (upper and lower rails with stepped segment between rails and slotted expander). Mopar Oil Master Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Oil Saver Ring Sets—These ring sets are designed to be installed in cylinders with .005" or less taper, or where cylinder walls have been reconditioned. This set consists of the same rings as used in Oil Master Set except that No. 3 and No. 4 rings are alike (slotted oil ring with slotted expander). Mopar Oil Saver Ring Sets are furnished with either a regular top ring or a chromed top ring.

Mopar Chrome Master Ring Sets—These ring sets are designed to be installed in cylinders with walls tapered .005-.030" when cylinder walls are not to be reconditioned. Top and bottom rings are chromed.

Oil Ring Set Sizes—All piston ring sets are available in the following sizes: **Standard** (for standard to .009" oversize cylinders); **.010"** (for .010" to .019" oversize cylinders); **.020"** (for .020" to .029" oversize cylinders); **.030"** (for .030" to .039" oversize cylinders); **.040"** (for .040" to .049" oversize cylinders); **.050"** (for .050" to .060" oversize cylinders).

ORIGINAL BEARING SIZES

ALL MODELS

ENGINE NUMBER LETTERS ('SPECIAL STANDARD' BORE & BEARING SIZES): Letters used with engine number (not in circular pad) denote following 'special standard' sizes: 'A'—.020" larger standard cylinder bore. 'B'—.010" smaller standard main and connecting rod bearings. 'AB'—Cylinder bore, main and connecting rod bearings 'special standard.'

CONNECTING ROD & BEARINGS

ALL MODELS

►*CAUTION—See ORIGINAL BEARING SIZES for markings indicating engines equipped with bearings other than standard sizes.*

CONNECTING ROD BEARINGS: Removal & Installation—Bearing shells can be removed after taking off bearing caps. When installing bearing shells, oil hole in rod and bearing must be aligned and ear on bearing halves must be aligned and fitted in notch in rod and cap.

Fitting Bearings—To check bearing clearance, place oiled piece of feeler stock .0015" thick, ½" wide, ¾" long between bearing and crankshaft. Tighten bearing cap nuts. Bearing clearance is correct when slight drag is felt when turning crankshaft by hand. If no drag felt, and crankshaft out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshaft which shows slight wear, .010" for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Size Notes above), .012" undersize bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

CRANKSHAFT & MAIN BEARINGS

ALL MODELS

►*CAUTION—See ORIGINAL BEARING SIZES for markings indicating production engines equipped with bearings other than standard size.*

REPLACEMENT MAIN BEARING CAPS: Furnished for service where original cap damaged or broken. These replacement caps same as original except for stud holes being 1/64" larger, and bearing cap length which is 1/16" shorter.

Fitting—Replacement caps must be fitted to engine by filing or shimming to obtain proper bearing clearance. This is only necessary when replacement cap originally fitted to engine (cap should not be filed or shimmed to compensate for bearing wear).

ALL MODELS

MAIN BEARINGS: Removal & Installation (with engine in car). Bearing shells can be removed and installed without removing crankshaft as follows: Remove oil pan, and oil suction pipe and screen assembly. Punch mark bearing caps and crankcase to insure re-installation of caps in same positions. Remove caps in pairs (2 front or 2 rear). Upper bearing halves can be removed by using tool C-584 inserted in oil hole in crankshaft and rotating crankshaft to turn bearing out.

►*CAUTION*—When new bearings installed, always use complete bearing (do not use new bearing half with an old half). Upper and lower bearing halves for all bearings except rear are alike.

Fitting Bearings—To check bearing clearance, place an oiled piece of feeler stock, .0015" thick by ½" wide, and 1" long between bearing and crankshaft. Tighten bearing cap nuts or cap screws. Bearing clearance is correct when slight drag felt when turning crankshaft by hand. If no drag felt, and crankshaft journal out-of-round and taper not over .001", install proper undersize bearing listed below.

Undersize Bearings—Finished bearing shells furnished .001", .002", .010", .012" undersize. Install .001" or .002" undersize bearings on standard crankshafts which show slight wear, .010" for 'Special Standard' .010" crankshafts (see Engine Lettering 'Special Standard' Bore & Bearing Sizes Note above), .012" bearings for 'Special Standard' .010" crankshafts which show slight wear. Bearing size correct when proper clearance obtained (see Fitting Bearings).

6 CYL. MODELS

CRANKSHAFT OIL SEALS: Car manufacturer recommends that new oil seals be installed when chain cover or rear main bearing cap removed.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

Front Oil Seal (6 Cyl.)—Oil seal located in timing chain cover. Consists of spring backed composition seal in stamped steel housing pressed in chain case cover with composition gasket installed between seal and cover. To install proceed as follows: Insert new composition gasket in chain case cover, drive new seal in place with drift or similar tool slightly larger than seal (seal is press fit in cover). Center seal on crankshaft when installing chain case cover as follows: Install chain case cover on engine with cover screws tightened just enough to hold cover in place, install Centering Tool C-522 on end of crankshaft and hold it in place by tightening crankshaft starting jaw finger tight, tighten chain case cover screws and as cover is being compressed, tighten crankshaft starting jaw nut so as to maintain slight tension between centering tool and seal. Remove tool after chain case cover screws secured. Tighten starter jaw nut to 108 ft. lbs. torque.

Rear Oil Seal (1-Piece Type—6 Cyl.)—Seal is one-piece type with lip on forward edge engaging shoulder in crankcase and bearing cap to rear of crankcase oil slinger. This seal is split at top. To install new seal, remove oil pan, and back off all main bearing cap screws three turns. Remove rear main bearing cap and pull out old seal with pliers. Coat one end of new seal with tire soap or cup grease (avoid getting any grease between seal ends). Insert one end of seal over shoulder in crankcase, work up until end approximately at top, then work other end in same manner on other side until ends come together at top. Coat lower lip of seal so that bearing cap will seat on seal easily. Check rear bearing cap for holes (either sand holes or tapped holes). If holes extend through oil slinger groove shoulder, weld up the sand holes or plug the tapped holes by installing screws that have been coated with sealing compound. Re-install main bearing caps.

Rear Oil Seal (2-Piece Type—6 Cyl.)—Located at rear main bearing. Consists of oil seal packing assembled on rear face of bearing cap and crankcase (upper half held by retainer assembled on rear face of crankcase, lower half by retainer assembled on rear face of bearing cap). Gaskets used on top face of bearing cap at each side, around oil slinger grooves and along shoulder across cap install new packing in retainer on crankcase and cap, place new gaskets on cap and install on engine without disturbing position of gaskets.

NOTE—Some models equipped with two piece (additional) oil gasket. This gasket assembled between seal retainer and crankcase (upper half), between retainer and bearing cap (lower half).

V8 MODELS

CRANKSHAFT OIL SEALS: Front Seal—Remove old seal with tool C-3050. Place new seal on chain cover with projecting flange facing inside the cover. Insert seal gasket and drive into place with tool C-3051.

Rear Oil Seal—Rope type seal of braided asbestos. With bearing cap, bearing, and seal removed, install a new seal into position in cap so that both ends of seal protrude above cap. Tap seal into position with tool C-3131 until tool is seated in bore. Hold tool down and cut off protruding ends flush with cap. Install bearing insert and both cap seals. The long cap seal should be installed so that when cap is in position, the long seal will be on oil filter side of engine.

ENGINE FRONT COVER

6 CYL. MODELS

FRONT COVER INSTALLATION: Use new gasket and position cover in place. Install screws but do not tighten. Install pulley and hub on crankshaft far enough so that seal can be evenly positioned on crankshaft. Tighten two screws on right side lightly. Then tighten remainder of screws in like manner. Repeat tightening procedure and torque screws to 15 ft. lbs.

FRONT OIL SEAL: To replace, drive old seal out with suitable drift. When installing seal, make sure seal is driven into place evenly to insure a tight fit. Use a new gasket and position cover in place.

V8 MODELS

ENGINE FRONT COVER (All Engines):

Removal: Drain and remove radiator. Disengage fan belt and remove generator. Install Tool C-3033 over pulley and force pulley off end of crankshaft. Support engine with suitable chain hoist fastened to intake manifold. Remove motor support "U" bolts and nuts. Remove fan blades and hub, then remove bolts that hold water pump housing to cylinder block and heads. Lift water pump housing, water pump, front motor support and insulator up and away from front of engine. Discard gaskets. Loosen bolts that hold oil pan to cylinder block. Drop pan slightly to clear chain case cover. Disconnect inlet and outlet fuel lines at fuel pump. Remove bolts that hold pump to chain case cover. Slide pump out and away from engine. Discard gasket. Remove bolts and washers from cover. Disengage cover from locating dowels, remove from engine. Discard gasket.

Installation: Be sure mating surfaces of cover and cylinder block are clean and free of burrs. Install new gasket and position cover locating dowels. Coat screws with suitable sealer and tighten to 15 ft. lbs. *NOTE*—Coat four center screws with sealer suitable for water. Coat other screws (upper and lower) with sealer suitable for oil.

FRONT OIL SEAL: Remove old seal by driving it out with Tool C-3050. Place new seal on the chain case cover with the projecting flange facing the inside of the cover. Insert seal gasket and drive new seal in place with Tool C-3051.

CAMSHAFT & BEARINGS

6 CYL. MODELS

CAMSHAFT REMOVAL: Remove Front End Assembly as a unit. Remove cylinder head, fuel pump, oil pump, valve tappet cover plates, crankshaft pulley, front motor support (with front of engine jacked up), timing chain cover, camshaft sprocket and timing chain. If valves and valve springs are not to be removed, prop valves up by inserting wooden wedges at opposite sides under valve head. Raise tappets and hold in this position (use spring type clothes pins or similar tool to hold tappets up). Withdraw camshaft (rotate shaft to clear any obstructions).

V8 MODELS

CAMSHAFT REMOVAL: Drain radiator, remove radiator and crankshaft pulley. Support engine with chain hoist attached to intake manifold. Remove engine support U-bolts. Remove fan, water pump, and water pump housing assembly. Loosen oil pan bolts sufficiently in order that oil pan clears chain case cover, camshaft gear hub nut, fuel pump eccentric and dowel. Then remove camshaft gear and timing chain. Support engine at front of oil pan. Then remove intake manifold, distributor, distributor drive gear, tappet chamber cover, rocker cover, rocker shaft assemblies and push rods. Use Tool C-3158 to pull out hydraulic tappets. If varnish build-up is excessive, use puller part of Tool C-3158 and work tappet out of bore. Remove four camshaft thrust bolts, then remove camshaft.

TIMING CHAIN

6 CYL. MODELS

TIMING CHAIN REMOVAL: Remove water pump, hoses, radiator core, belt and front crankshaft pulley. Support engine from underneath and remove front engine support. Remove chain cover. Remove four capscrews holding camshaft sprocket to camshaft, and pull off sprocket. Chain can now be removed. Capscrew holes in sprocket are offset and gear can be installed in one position only on camshaft.

V8 MODELS

TIMING CHAIN REMOVAL: Remove generator and mounting bracket. Remove fan belt and radiator. Install tool C-3033 and pull crankshaft pulley off crankshaft. Fasten a chain hoist to intake manifold, slightly relieve engine weight on front motor support, and remove support bolts and nuts. Remove fan blades and hub, and take off water pump, housing, front motor support and insulator. Loosen bolts holding oil pan to cylinder block and drop oil pan slightly to clear chain case cover. Remove fuel pump. Remove bolts and washers holding chain case cover to cylinder block and pull cover out and away from block. Slide crankshaft pulley off end of shaft, then remove camshaft sprocket hub nut and fuel pump eccentric. Pull camshaft sprocket off shaft and at the same time disengage and remove timing chain.

VALVE SYSTEM

1946-55 MODELS

(EXC. SINGLE ROCKER SHAFT ENGINE)

EXHAUST VALVE SEAT INSERTS (Refacing): Exhaust valve seat inserts must be reground with special high speed grinding tool MTH-JB-41, using the correct size valve guide pilot. Check concentricity of valve seat using a dial indicator. Total runout should not exceed .002". Check valve seat with prussian blue to get seat centralized on valve face. Use a 20° stone at the top or a 60° stone at the bottom, whichever is necessary to centralize the valve seat. Width of valve seat should be 3/64" to 1/16".

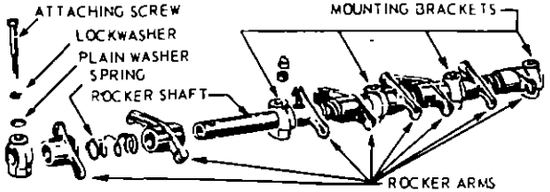
Replacement Inserts—Furnished in .010" Oversize. Use special tool C-732 (Exc. V8); C-3140 (Double Rocker Shaft Engines) to remove inserts. After in-

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

serts have been removed from engine, smooth any roughness of seat with a blunt drift. Valve seat inserts should be .002-.004" larger than counterbore. Enlarge counterbore with tool MH-M-1 and install oversize insert. Place inserts in dry ice for approximately 10 minutes. Clean counterbore thoroughly and install a chilled insert with valve side up, and drive it into place with installing tool C-767.

ROCKER ARMS
1953-55 V8 MODELS
(DOUBLE ROCKER SHAFT ENGINE)

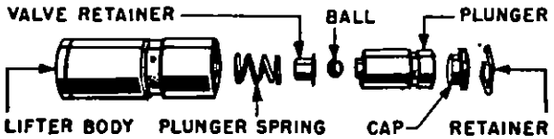


ROCKER ARM ASSEMBLY (Double Rocker Arm Shaft):

Removal: Remove rocker arm covers. Place cotter pins in holes of first and last rocker arm brackets to prevent springs on rocker from pushing assembly apart when cylinder bolts removed. Completely loosen ten bolts on each bank that attach rocker arm support brackets to cylinder head and block. Grasp support bracket at each end of head, pull rocker assemblies and bolts directly away from heads, then remove push rods and place in respective slots in holder C-3068. ***CAUTION—Use care when removing rocker assemblies in order not to jerk cylinder heads off locating dowels which would allow them to drop and become damaged.***

Installation: Insert cylinder head bolts in brackets, with **short** bolts in intake side. Insert push rods through push rod holes in heads (short rods in upper intake holes, long rods in lower exhaust holes). Place rocker arm assemblies in position on heads, lining up all push rods to their respective rocker arms. Starting at top center tighten all cylinder head bolts to torque indicated in Tightening Specifications above. ***When tappets are full, extreme care must be taken when tightening head bolts so that tappets have time to bleed down to their operating length.*** Bulged tappet bodies and permanent noisy operation will result if tappets are forced down too rapidly.

1955 V8 MODELS
(SINGLE ROCKER SHAFT ENGINE)



ROCKER ARM ASSEMBLY (Single Rocker Arm Shaft): Hold rocker arm shaft and end bracket in a horizontal position with oil grooves facing down. Slide an intake rocker arm over shaft and down against bracket, with diagonal slant of arm close to bracket. Then slide a spacer spring over shaft and down against intake rocker arm. Next, slide an exhaust rocker arm over shaft and down against spacer spring, followed by a shaft bracket. Continue to slide first an intake rocker arm, then a spacer spring followed by an exhaust rocker arm and bracket, over shaft until last bracket has been installed. Slide push rods into push rod holes. Be sure that rocker arms are in a horizontal position, then lower rocker shaft assembly down on two locating studs on head. Install flatwashers and nuts.

V8 ROCKER ARM ASSEMBLY (SINGLE ROCKER ARM SHAFT)

HYDRAULIC VALVE LIFTER
V8 MODELS

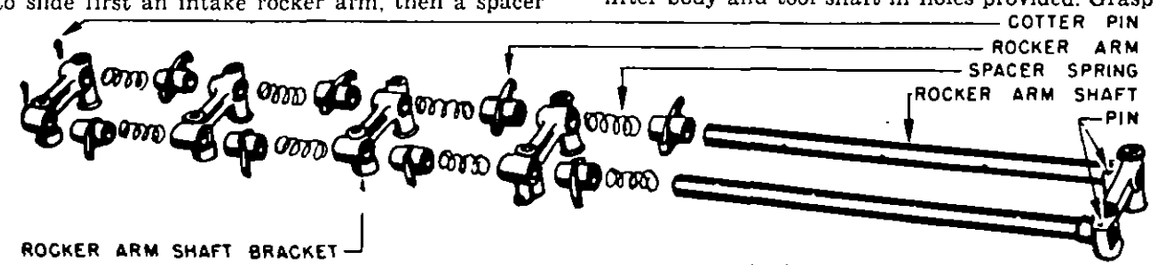
HYDRAULIC VALVE LIFTERS (One-Piece Integral Type) Barrel type. Unit consists of plunger and valve assembly operating within a cylinder formed by valve lifter body.. Oil is introduced to this unit through hole in side of lifter plunger.

DODGE V8 HYDRAULIC VALVE LIFTER

Removal: Drain cooling system to a point below level of intake manifold, and remove intake manifold. (CAUTION—cover intake port in cylinder head to avoid the entry of dirt). Remove crankcase ventilator pipe and valve chamber cover. Install rocker arm and valve compressor tool C-3024 over rocker arm so heel of tool rests on the valve stem side. Make certain that valve is seated and that valve lifter is on low side of camshaft lobe. (See "Low Point of Camshaft Lobe," following). Using handle of tool C-3024 for leverage, compress valve spring sufficiently to raise rocker arm above push rod end. While holding rocker arm in this position, slide rocker arm to one side along tube and remove push rod. Insert hooked portion of tool C-3158 into hole in lifter body (this portion of tool can be used to remove lifter without varnish build-up on lower end of lifter). Remove lifter from bore. If lifter sticks in bore, proceed as follows: Slide puller portion of tool C-3158 through cylinder head push rod holes and seat firmly in cap in lifter. Insert puller pin through lifter body and tool shaft in holes provided. Grasp tool handle and pull lifter out of bore with a twisting motion. As lifter clears bore, withdraw puller pin and remove puller. Remove lifter from chamber.

Disassembly: ***(CAUTION—Disassemble one lifter at a time to avoid the possibility of mixing lifter parts. It is very important that lifter parts not be interchanged.)*** Depress lifter plunger with a push rod and remove plunger retainer spring clip, plunger cap, plunger ball check (or flat type valve), valve springs, valve retainer, and plunger spring from lifter body. Inspect plunger, lifter body, valves and valve seats for signs of scoring, wear or pitting. Check to see that valve exerts a slight pressure on valve spring to insure valve seating. Clean lifter assembly in clean solvent and remove all traces of varnish and carbon. Blow parts dry with air. DO NOT USE A CLOTH AS LINT WILL CAUSE LIFTER TO OPERATE UNSATISFACTORILY.

Testing: Remove plunger cap and immerse lifter assembly in an upright position in a container of kerosene. ***(CAUTION***—Container and kerosene must be absolutely clean). Allow lifter to fill with kerosene, then remove and replace the plunger cap. Holding lifter in an upright position and using tool C-3160, compress plunger slightly a few times to fill lifter body. Then compress lifter firmly with testing pliers, and if plunger collapses instantly as pressure is applied, disassemble, inspect and clean again. If second cleaning fails to prevent lifter from collapsing instantly when compressing, replace lifter. When cleaning and testing has been completed, remove kerosene and prime lifter lightly with clean engine oil before installing. This will prevent possible scoring of lifter plunger when engine is first started.

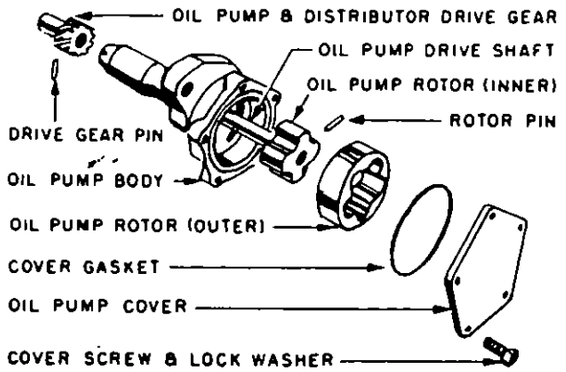


V8 MODELS

LOW POINT OF CAMSHAFT LOBE: Remove distributor cap, noting position of rotor for Nos. 1 and 6 cylinders. Set timing mark "DC" located on crankshaft pulley to pointer. With rotor at No. 1 firing position, the following lifters will be on the low side of the cam lobe: No. 2 intake and exhaust, No. 4 exhaust, No. 7 intake, No. 8 intake and exhaust ***(NOTE***—To remove No. 1 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed). With rotor at No. 6 position, following lifters will be on low side of cam lobe: No. 3 intake and exhaust, No. 4 intake, No. 5 intake and exhaust, No. 7 exhaust ***(NOTE***—To remove No. 6 intake and exhaust lifter, rotate crankshaft ¼ turn clockwise from above position after removing lifters listed).

OILING SYSTEM
6 CYL. MODELS

ROTOR TYPE OIL PUMP: Removal—Before removing oil pump, rotate crankshaft and make sure "DC" mark on crankshaft pulley lines up with pointer on timing chain case cover. Do not rotate engine with oil pump removed. Remove the attaching screws and remove pump from engine ***NOTE***—On some models it will be necessary to remove the two upper cover capscrews to obtain sufficient clearance to remove oil pump.



Disassembly & Inspection: Remove the oil pump cover and gasket. Hold hand over cover opening and with pump upside down, turn drive shaft until outer rotor slips out. Drive out the straight pin holding pump drive gear to shaft. Press the shaft

V8 ROCKER ARM ASSEMBLY (DOUBLE ROCKER ARM SHAFT)

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

6 CYL. OIL PUMP

out of drive gear and slide shaft and inner rotor assembly out of pump body. Wash all parts and dry with air. Inspect all parts and replace as necessary, then measure clearance between opposite lobe of inner rotor and outer rotor. Clearance should be .010" or less. If clearance is greater, replace both rotors. Measure thickness and diameter of outer rotor. If thickness is .748" or more and diameter is 2.245" or more, rotor is satisfactory. Thickness of inner rotor should be .748" or more. If either rotor is less than these dimensions, replace BOTH rotors. Insert both rotors into pump body and place a straight edge across pump body between bolt holes. Clearance between straight-edge and rotor should be .004" maximum. If greater, replace pump body. Press outer rotor to one side against pump body and measure clearance between rotor and body on opposite side. Maximum clearance should be .008". If greater, replace pump body. Cover should be smooth and flat. If it is scratched or grooved, replace cover. Check flatness by placing a straight-edge across inner surface of cover. If it is possible to insert a .001" feeler between cover and straight-edge, replace cover.

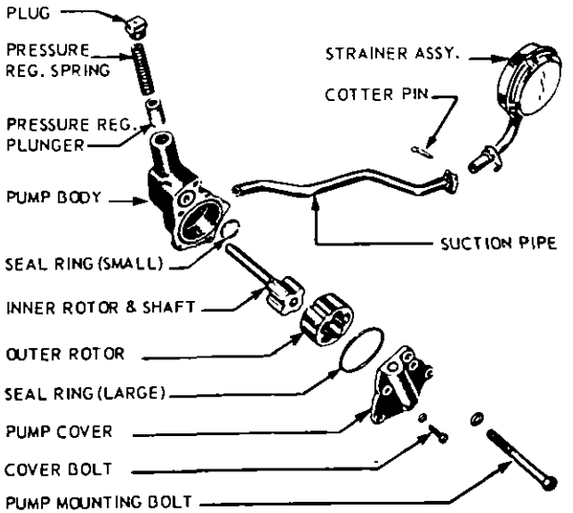
Reassembly: Slide the drive shaft and rotor assembly into pump body. Press drive gear on shaft until end play of shaft is from .003" to .010". Press rotor down in body with hand and measure clearance with feeler gauge. Install pin and peen over both ends. If pin holes do not line up, drill a new pin hole through gear and shaft, using a 5/32" drill. Slide outer rotor into place in pump body. Install new cover gasket and install cover and tighten screws evenly.

V8 MODELS

ROTOR TYPE OIL PUMP: Removal—Drain engine oil, remove oil pan. Remove oil pump mounting bolts and lower pump straight down.

Disassembly & Inspection: Remove cotter pin holding oil strainer to oil pump suction pipe, then remove pipe. Remove cover bolts and cover. Discard oil seal ring. Remove pump rotor shaft and lift out pump outer rotor. Remove oil pressure relief valve plug and lift out spring and plunger. Wash all parts in a suitable solvent and inspect for damage or excessive wear. Check all pump parts as follows:

Outer Rotor—Measure diameter and thickness of rotor with micro-calipers. If diameter less than 2.244" or thickness less than .998", replace both inner and outer rotors.



Inner Rotor—Measure thickness of inner rotor with micro-calipers. If thickness measures less than .998", replace both inner and outer rotors.

Rotor Depth—Slide rotors in pump body. Place a straightedge across pump body. Use a feeler gauge and measure clearance between top of rotors and straightedge. If clearance in excess of .004", replace pump body.

Outer Rotor to Pump Body Clearance—To check rotors for excessive wear, measure clearance between lobes of inner and outer rotors. If clearance in excess of .010", replace both inner and outer rotors.

Reassembly: Use new oil seal ring between cover and body. Tighten cover bolts to 10-15 ft. lbs. Prime pump and then install new oil seal ring in pump mounting face.

Distributor-Oil Pump Drive Shaft Bushing: *See "Ignition Notes" below.*

V8 OIL PUMP

COOLING SYSTEM

6 CYL. MODELS

WATER DISTRIBUTOR TUBE: Removable one-piece tube installed between cylinders and valve ports which distributes water from pump to exhaust valve ports through holes in tube.

Servicing—A new tube should be installed whenever engine overhauled or when tube rusted and corroded in order to provide correct water circulation in engine block. To replace tube, proceed as follows: Remove front end assembly. Remove water pump which will expose front end of tube. Remove tube by using rod with hook formed on end. Engage hook in slot in upper side of tube just inside block, pull tube out.

ALL MODELS

RADIATOR CORE REMOVAL: Raise hood, drain cooling system, disconnect hoses, free headlight wires from radiator shroud (if used), take out nuts and capscrews in support at each side, lift core out, tilting top toward rear. *NOTE*—Fan blades on some models must be removed if additional clearance required.

IGNITION NOTES

V8 MODELS

DISTRIBUTOR-OIL PUMP DRIVE SHAFT BUSHING: Removal—Insert Tool C-3052 and thread it into bushing. Holding puller head with wrench, tighten puller bolt and pull bushing out of bore in block.

Installation: Slide new bushing over burnishing end of Tool C-3053. Insert tool and bushing into bore of block. Drive bushing and tool down into position, using a soft hammer. As the burnisher is pulled through the bushing by pressure applied to puller nut, tool will wedge bushing tight in its bore and will burnish bore to correct size. *DO NOT REAM THE BUSHING.*

V8 MODELS

DISTRIBUTOR BASIC TIMING: Before installing distributor-oil pump drive shaft it will be necessary to time engine as follows: Rotate crankshaft until No. 1 cylinder is at TDC (or firing position). When cylinder is in this position, the pointer on chain case cover should be over "DC" on vibration dampener. Using Tool C-3027, position oil pump shaft so that it lines up with slot in drive gear. Coat shaft of drive gear with engine oil. Install it so that, after the gear spirals into place, it will index with oil pump shaft (slot in top of drive gear will be parallel with centerline of crankcase).

CLUTCH NOTES

1946-48 MODELS

CLUTCH OVER-CENTER SPRING: Service only if linkage disturbed or bracket on frame bent. Original setting can be obtained by using Miller Gauge C-705 as follows: Check spring bracket on frame and straighten if necessary, install gauge over linkage pivot pins with lower end engaging coil spring bracket on frame (turn pedal rod turnbuckle until gauge fits properly). Then reset pedal position and free travel as directed on car page.

1949-54 MODELS

CLUTCH OVER-CENTER SPRING: Use Miller Gauge C-853. Place gauge on pin at lower end of pedal and against spring hook. Raise or lower the vertical spring bracket until it just contacts gauge. Move pointer on gauge to setting for car model being worked. Adjust eyebolt until the inside edge is in line with the pointer where spring makes contact with eyebolt.

Adjusting Over-Center Spring Tension—Adjustment is made by turning sleeve nut on spring eyebolt. If pedal is soft and sluggish on return, back off sleeve nut. If pedal requires excessive pressure to depress, tighten sleeve nut until desired action is obtained.

CONTINUED ON NEXT PAGE

CONTINUED FROM PRECEDING PAGE

PROPELLER SHAFT

1946-54 MODELS

PROPELLER SHAFT CENTER BEARING: Used on all passenger car models with two propeller shafts. Consists of ball bearing mounted on rear end of front propeller shaft with an oil seal assembled to front and to rear of bearing, and this assembly bearing and seals) enclosed in a housing which is flange mounted on rear side of frame cross-member. An insulator is assembled on front end of housing. To remove assembly, remove nuts and lockwashers from differential and transmission companion flanges to free propeller shaft at front and rear, take out 4 center bearing housing-to-frame cross-member mounting bolts, remove propeller shaft and center bearing as an assembly.

REAR AXLE NOTES

ALL MODELS

REAR WHEEL BRAKE AXLE SHAFT SEAL: Leather seal mounted on brake support and bears on axle shaft (former design secured by brake support bolts and contacted hub).

Installation—With brake support removed and old seal driven out of support, new seal can be installed as follows: Soak new seal in thin oil for 30 minutes. Roll leather with smooth bar until pliable. Check seal bearing surface on axle shaft and make sure surface is smooth. Install seal on front side of support and stake to support at three points on outer edge. Install sleeve (Tool C-745) in seal (protects seal from damage while installing support). Assemble brake support on housing. *CAUTION*—Lip of seal must not fold when installing in support.

BRAKE NOTES

ALL MODELS

HAND BRAKE ADJUSTMENT (Internal Type): Place transmission shifting lever in neutral and be sure the hand brake is released. Disconnect front end of propeller shaft and remove adjusting screw cover plate. Loosen brake cable guide clamping screw and back off cable adjusting nut. Turn brake shoe adjusting nut to decrease shoe-to-drum clearance until a slight drag is felt on drum. Back off adjusting nut one full notch (using spanner wrench C-3014) to give approx. .010" clearance. (NOTE—be sure the two raised shoulders on the adjusting nut are seated in the grooves on adjusting sleeve). The cable length adjusting nut should be positioned against cable housing so there is at least .005" (but not more than .010") clearance between operating lever and brake shoe cable. To lock the adjustment, tighten cable housing clamp securely and then tighten cable adjusting nut against housing. Test hand brake lever for travel. When properly adjusted, 4 to 6 clicks of ratchet should be obtained to hold car. Install adjusting screw cover plate and connect propeller shaft.

HAND BRAKE ADJUSTMENT (External Type): The hand brake adjustments can be made from beneath car as follows: Fully release hand lever (cable length adjusted by means of clevis at lower end). Adjust anchor screw for .015-.020" band to drum clearance by bending back tab of anchor screw lock and turning screw (on lower right side of brake), then lock screw by bending tab against flat of screw. Loosen guide bolt locknut and adjust guide bolt adjusting nut for .015-.020" band to drum clearance (these two nuts located in front of release springs at left side), then tighten locknut. Turn large adjusting bolt nut (on lower end of bolt below springs) for .015-.020" band to drum clearance for upper half of band. Groove in upper end of this nut must contact ridge on band operating lever spacer above nut.

NOTE—Clearance between side of anchor bracket at center of band and anchor must not exceed .005" (if clearance excessive band may be distorted when brake applied). To correct, compress saddle in vise or place on block and tap lightly with a hammer.

M DEL IDENTIFICATION

SERIAL NUMBER: On right front door hinge post.
1946 Numbers—30,645,001 Up (Detroit).
1947 Numbers—30,799,738 Up (Detroit), 45,002,146 Up (Los Angeles).
1948 Numbers—31,011,766 Up (Detroit), 45,022,453 Up (Los Angeles).

ENGINE NUMBER: Stamped on boss on left side of engine between #1 and #2 cylinders.

TUNE-UP

COMPRESSION: Pressure—150-160 lbs. at 1000 RPM. or 125-135 lbs. at cranking speed of 150 RPM.

VACUUM READING: Steady 18-21" idling at 6 MPH.

FIRING ORDER: 1-5-3-6-2-4.

SPARK PLUGS: Auto-Lite Type A-5. 14 mm. Metric. Gaps—.030" ± .002".

IGNITION: See Coil, Condenser, and Distributor.
Breaker Gap—.020" Cam Angle—38° Closed.
Breaker Arm Spring Tension—17-20 ounces.
Automatic & Vacuum Advance—*See Distributor.*

IGNITION TIMING: See Ignition Timing.
Std. Setting—2° After top dead center.
Timing Mark—Second graduation after "DC" mark on vibration dampener aligned with pointer on chain case cover. Vary as follows:
Octane Selector—Set for slight ping when accelerating with wide open throttle between 10-30 MPH.

CARBURETION: See Carburetor & Carb. Equipment.
Idle Setting—With engine warm, set throttle stop-screw for 6 MPH. idle speed. Adjust idle adjusting screw for smooth idle (½-1½ turns open for Carter).
Float Level (Stromberg)—Fuel level ⅝" below top of bowl (even with bottom of inspection hole).
Float Level (Carter B&B)—Top of float (not soldered seam) 5/64" ± 1/64" below top edge of bowl.
Accelerating Pump—Center hole (medium) Normal.
Inner Hole—Summer, Outer Hole—Winter.
Fuel Pump Pressure—3½-5½ lbs.

MANIFOLD HEAT CONTROL: Thermostatic coil type. See that valve operates freely. When installing coil, wind free end up approx. one turn.

VALVES: See Valve Timing.
Tappet Clearance—.008" Intake, .010" Exh., Hot.

IGNITION

IGNITION SWITCH: Briggs & Stratton or Mitchellock. NOTE—No armored cable used.
Briggs & Stratton—B & S Switch No. 85985.
Mitchellock Type 42-R—No. E-10182 (Yale & Towne lock), No. E-10663 (Hurd lock).
Lock Cylinder—Yale & Towne, Hurd, or Briggs & Stratton. B & S No. 85915 (Key Series CA1-CA800) or No. 80592 on Early cars (Key Series 1BP-1000BP).

COIL: Auto-Lite IG-4806 or IG-4809. Mounted directly above distributor on ignition cable bracket.
Ignition Current—2¼ amperes idling, 5½ stopped.

CONDENSER: Auto-Lite Part No. IG-3927A.
Capacity—.25-.28 microfarad.

DISTRIBUTOR: Auto-Lite No. IGS-4207A-1 (U. S.) IGS-4208B-1 (Canada). Automatic advance type with Vacuum Spark Control and Octane Selector.

Breaker Plate Identification—Maximum vacuum advance limited by slot in plate. Plate marked #8½ (for IGS-4207A-1 distr.), #7 (for IGS-4208B-1).
Breaker Gap—.020". Limits .018-.022".
Cam Angle—38° closed, 22° open.
Breaker Arm Spring Tension—17-20 ounces.
Rotation—Clockwise viewed from above.

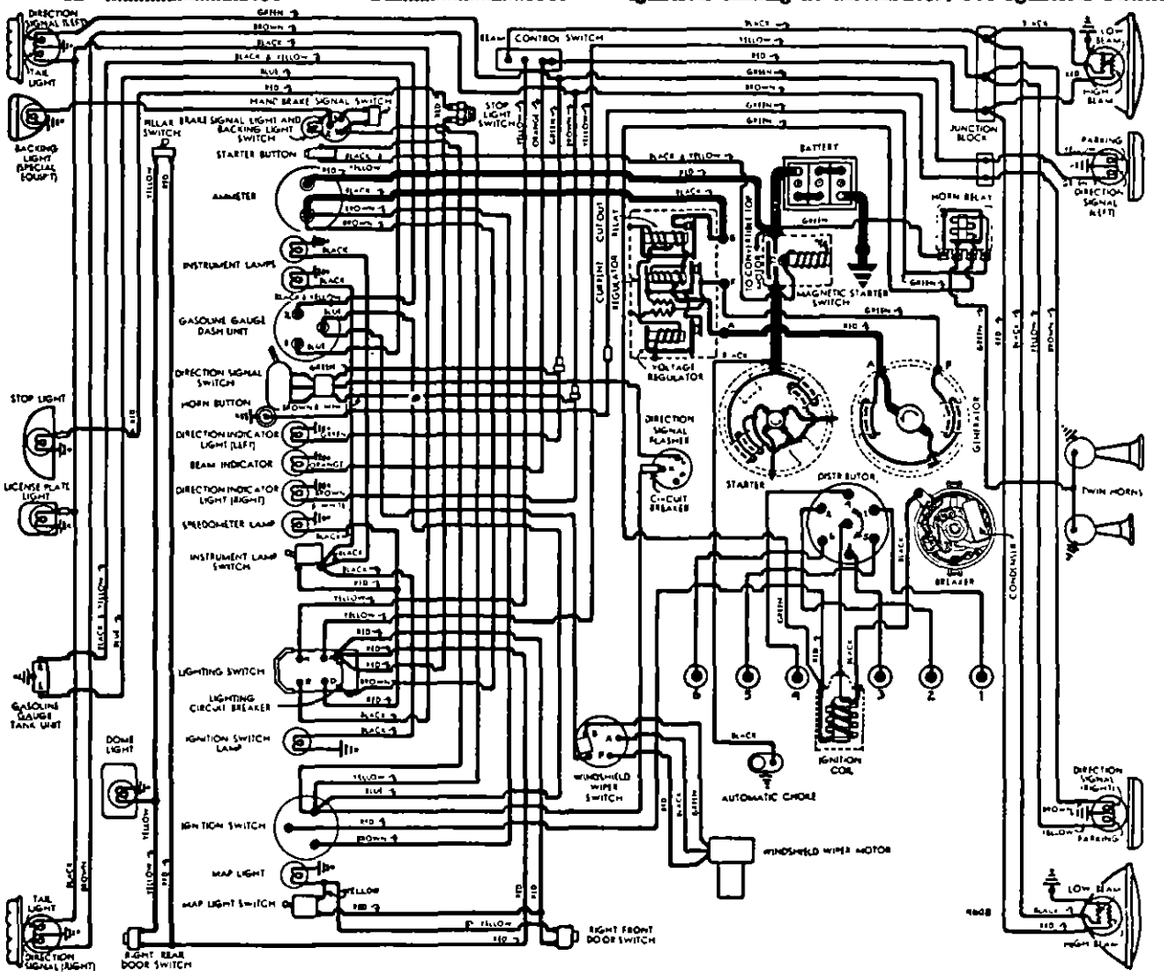
Automatic Advance—IGS-4207A-1

Distributor Degrees	R.P.M.	Engine Degrees	R.P.M.
Start	350	0	700
3	400	6	800
5	620	10	1240
8	940	16	1880
10	1150	20	2300

Automatic Advance—IGS-4208B-1

Start	350	0	700
3	400	6	800
6	850	12	1700
9	1300	18	2600
12	1750	24	3500

Vacuum Spark Control: Auto-Lite Units. On distributor, linked directly to breaker plate). Provides additional advance at speeds above idling except when engine accelerated or operated with wide open throttle (spark retarded by return spring in unit).



Vacuum Advance—IGS-4207A-1

Distr. Degrees	Eng. Degrees	Vacuum (" of HG)
Start	0°	5"
2°	4°	7⅝"
4°	8°	10½"
6°	12°	12¾"
8.5°	17°	16"

Vacuum Advance—IGS-4208B-1

Start	0°	5"
1°	2°	6½"
3°	6°	9⅛"
5°	10°	12½"
7°	14°	15"

Manual Adjustment—Provides for minor changes in ignition timing at distributor. See Ignition Timing

Distributor Removal:—Mounted on left side of crankcase. To remove, disconnect vacuum line, take out hold-down screw in lock plate. **Installation Note**—Install distributor with #1 piston in firing position (at TDC) and rotor opposite #1 segment in cap.

IGNITION TIMING

Std. Setting—Initial setting (for regular non-premium fuel) as shown below. See Manual Adjustment (following) for Final Setting.

	Flywheel Degrees	Piston Position
All Engines	2° ATDC	.002" ATDC

NOTE—Impulse neutralizer marked 'DC' at TDC point with 15 (1°) graduations on either side.

Timing (Using Timing Light)—Connect timing light between distributor primary terminal and battery terminal on generator regulator. Set #1 or #6 piston in firing position (see setting above) with correct mark on impulse neutralizer aligned with pointer on chain case cover. Loosen lock-plate hold-down screw, center pointer on scale, tighten screw. Loosen lock-plate clamp bolt, rotate distributor until timing light just goes out, tighten clamp bolt. Check Manual Adjustment (following).

Timing (Using Synchroscope)—Tool C-374. Clip lead to #1 spark plug, direct light on impulse neutralizer (mark correct graduation with paint), idle engine and adjust distributor (as directed above).

Manual Adjustment—Set to give slight ping from 10-30 MPH accelerating with wide open throttle from 10 MPH. To adjust, loosen lock-plate hold-down screw, move plate (not more than 4° or .007" before or after initial setting) counter-clockwise (if no ping noted), clockwise to retard spark (if ping too severe), tighten screw.

CARBURETOR

STROMBERG

Stromberg Model BXV-3 (Standard), BXVD-3 (with Fluid Drive). Stromberg No. 380158 (BXV-3), No. 380159 (BXVD-3) marked with Code No. 3-76 (BXV-3), 3-77 (BXVD-3). 1½" single barrel downdraft type with Sisson automatic choke.
NOTE—BXVD-3 type has Slow-closing Throttle.
See Carburetor Section for complete data.

Idle Adjustment—With engine warm and running at slow idle speed (choke valve wide open, fast idle inoperative), set throttle stopscrew for idle speed of 6 MPH min. Adjust idle adjusting screw for smooth idle (turn screw in for leaner mixture). Recheck idle speed. NOTE—If vacuum gauge used, adjust for maximum vacuum (see Vacuum Gauge data above).
Accelerating Pump Setting—Pump lever has three holes for pump link engagement. Set as follows:
Inner Hole (minimum stroke)—Extreme hot temperatures or altitudes above 3000 feet.
Center Hole (med. stroke)—Normal summer setting.
Outer Hole (max. stroke)—Winter temperatures.
Float Level—Fuel level 5/8" below top edge of bowl.
Metering Jet—*See Stromberg Jet Table in Carburetor Section for complete jet data.*

CARBURETOR

CARTER (B&B)

Carter (B&B) Model D6J1. 1½" single barrel, downdraft (with Slow-closing Throttle for Fluid Drive).
See Carburetor Section for complete data.
Idle Adjustment—Same as for Stromberg. Idle adjusting screw setting ½-1½ turns open.
Accelerating Pump Setting—Same as for Stromberg
Float Level—Top of float (not soldered seam) 5/64" ± 1/64" below top edge of bowl with valve seated.
